

## **ReadMeF 6.0.1 Release notes (11/18/2013)**

1. This version is 6.0.1 (as shown in the Help - About)
2. The same code runs on both Windows XP / SP3 and Windows 7
3. Fixes delivered in this release:
  - a. When you click too many times, app doesn't fail, also hourglass shows up immediately.
  - b. Work directory cleanup, drop menu item, and hot key implemented.
  - c. Read Mef populates foreign entity name for business returns.
  - d. Waiting hour glass shows up immediately for large files.
  - e. If stylesheets are not located at right path, pops up message with path/location details.
  - f. Print/Subsidiary Print issue with multiple forms of same name is fixed.
  - g. Read Mef fails to open for certain files, issue fixed.
  - h. IRS agent not able to open return on win7 machine, for 2009 return.
4. Known Issues
  - a. The Back button on the toolbar menu goes back to the previously displayed form. It does not go back to the last form when a push pin was clicked, or maintains the scroll bar position from a previous form.
  - b. Improve ReadMef Performance, current response is slow for larger files.
  - c. Populate supporting Schedules with Subsidiary information.
  - d. Populate forms (5472 and 8865) with entity name if they are multiple of same form name ( need more clarification).
  - e. Provide an option to configure temp files and stylesheet locations.
  - f. Fix sort mechanism of display items.
  - g. Fix recent files list.
