Important Changes for 1996

Limits on depreciation for business cars. The total section 179 deduction and depreciation you can take on a car that you use in your business and first place in service in 1996 is \$3,060. Your depreciation cannot exceed \$4,900 for the second year of recovery, \$2,950 for the third year of recovery, and \$1,775 for each later tax year. See *Special Rules for Passenger Automobiles*, later.

Property not qualifying for the section 179 deduction. Effective for property placed in service after 1990, the following types of property generally do not qualify for the section 179 deduction:

- 1) Property used predominantly outside the U.S.,
- 2) Property used predominantly to furnish lodging or in connection with furnishing lodging,
- 3) Property used by certain tax-exempt organizations,
- 4) Property used by governmental units or foreign persons or entities, and
- 5) Air conditioning or heating units.

For more information, see *Nonqualifying Property*, in chapter 2.

Recovery method and period for water utility property. Depreciate water utility property placed in service after June 12, 1996 (unless placed in service under a binding contract in effect before June 10, 1996, and at all times until the property is placed in service), using the straight line method over a 25-year recovery period. If you use ADS for this property, the recovery period is 50 years.

For more information, see *Water utility property* in chapter 3.

15-year recovery period for gas station convenience stores. Any real property that is a retail motor fuel outlet can be 15-year property under MACRS, even if food or other convenience items are also sold at the outlet. If you use ADS for this property, the recovery period is 20 years.

For more information, see *Gas station convenience stores*, in chapter 3.

Important Reminders

Major changes to Publications 946 and 534. This publication, as well as Publication 534, *Depreciating Property Placed in Service Before 1987* (formerly *Depreciation*), was changed. We expanded this publication by adding material taken from Publication 534. We added more detail to the discussions of the section 179 deduction, the modified accelerated cost recovery system (MACRS), and listed property. We replaced the partial MACRS percentage tables with the complete ones from Publication 534. We also added the *Table of Class Lives and Recovery Periods* from Publication 534.

We shortened Publication 534. It will no longer contain general information on MACRS and the section 179 deduction. It will contain a discussion of the accelerated cost recovery system (ACRS), the *ACRS Percentage Tables*, a discussion of other methods of depreciation, and a limited discussion of listed property.

We made these changes to eliminate most of the duplication that existed in the two publications. This will save money and make it easier for you to decide which publication you need. Use this publication to figure depreciation on property you placed in service after 1986; use Publication 534 to figure depreciation on property you placed in service before 1987.

General asset accounts. You can elect to place assets subject to MACRS in one or more general asset accounts. After you have established a general asset account, figure depreciation on the entire account by using the applicable depreciation method, recovery period, and convention for the assets in the account.

For more information, see *General Asset Accounts* in chapter 3.

Introduction

Publication 946 explains how you can recover the cost of business or income-producing property through depreciation. Its step-by-step approach will show you how to figure your depreciation deduction and fill out the required tax form. There are examples throughout the publication to help you understand the tax law.

This publication discusses only information on depreciating property placed in service after 1986. You should get Publication 534 for information about depreciating property placed in service before 1987.

Chapter 1 defines depreciation in general terms and describes types of property. It states what property can and cannot be depreciated, when depreciation begins and ends, and shows you how to claim depreciation on Form 4562.

Chapter 2 defines the section 179 deduction. It discusses what property costs can and cannot be deducted. It also explains when and how to claim the deduction, and how to figure the deduction. It has a worksheet to help you figure the maximum deduction you can take on section 179 property. It concludes with a discussion on when to recapture the deduction. You will note that rental property can be depreciated but does not qualify for the section 179 deduction.

Chapter 3 defines the Modified Accelerated Cost Recovery System (MACRS). It provides an introduction and explanation of the entire system. It has a worksheet to help you figure your deduction under MACRS. If you have already begun depreciating property under the Accelerated Cost Recovery System (ACRS) or another depreciation method, you will also need to refer to Publication 534.

Chapter 4 defines listed property. It explains the rules for listed property and the special limits on the amount of depreciation and section 179 deduction that you can claim for passenger automobiles. It also provides a separate worksheet to help you figure the maximum depreciation deduction for passenger automobiles.

Chapter 5 is a comprehensive example showing how to figure both the section 179 and depreciation deductions. It includes a sample filled-in Form 4562 and depreciation worksheet.

Chapter 6 tells you how to get information, free publications, and forms from the IRS.

Near the end of this publication are two appendices:

- Appendix A—MACRS Percentage Tables
- Appendix B—The Table of Class Lives and Recovery Periods

Definitions. Many of the terms used in this publication we define in the *Glossary* near the end of this publication.

Additional information. For more detailed information on residential rental property, office space in your home, and depreciating a car, see the following:

- Publication 463, *Travel, Entertainment, Gift, and Car Expenses*,
- Publication 527, *Residential Rental Property*, and
- Publication 587, *Business Use of Your Home (Including Use by Day-Care Providers)*.

We welcome your suggestions for future editions of this publication. Please send your ideas to:

- 2106** Employee Business Expenses
- 4562** Depreciation and Amortization

See chapter 6, *How To Get More Information*, for information about getting these publications and forms.

The discussions in this chapter give you the general rules on depreciating property. They explain tangible, intangible, real and personal property and provide examples of these types of property. They tell you when and how to claim depreciation using Form 4562.

Depreciation Defined

Depreciation is a loss in the value of property over the time the property is being used. Events that can cause property to depreciate include wear and tear, age, deterioration, and obsolescence. You can get back your cost of certain property by taking deductions for depreciation. This includes , such as equipment you use in your business or for the production of income by taking deductions for depreciation.

To determine if you can take a depreciation deduction for your property, you must be familiar with the types of property discussed next.

Types of Property

Property is either:

- Tangible property, or
- Intangible property.

Tangible Property

Tangible property is property that you can see or touch. Tangible property includes two main types:

- 1) Real property, and
- 2) Personal property.

Real property. Real property is land and buildings, and generally anything built or constructed on land, or anything growing on or attached to the land.

Personal property. Tangible personal property includes cars, trucks, machinery, furniture, equipment, and anything that is tangible except real property.

Intangible Property

Intangible property is generally any property that has value but that you cannot see or touch. It includes items such as copyrights, franchises, patents, trademarks, and trade names.

Who Can Claim Depreciation

To claim depreciation, you usually must be the owner of property and you must use the property in your trade or business or for producing income. The following examples show who owns the property.

Example 1. You bought rental property in 1987. You made a down payment and assumed the previous owner's mortgage. You own the property and you can depreciate it.

Example 2. This year you bought a new van that you will use it totally in your courier business. You will be making payments on the van over the next 5 years. You own the van and can depreciate it.

Rented property. Generally, if you pay rent on property, you cannot depreciate that property. Usually, only the owner can depreciate it. For more information on rented property, see *Rented property* under *What Cannot Be Depreciated*, later. If you make permanent improvements to business property you rent, you can depreciate those improvements.

If you rent property to another person, you can depreciate that property.

What Can Be Depreciated

You can depreciate many different kinds of property, for example, machinery, buildings, vehicles, patents, copyrights, furniture, and equipment.

You can depreciate property only if it meets all the following basic requirements:

- 1) The property must be used in business or held to produce income,
- 2) The property must have a determinable useful life longer than one year, and
- 3) The property must be something that wears out, decays, gets used up, becomes obsolete, or loses its value from natural causes.

Tangible Property

Terms you may need to know (see Glossary):

Basis
Business/investment use
Capitalized
Commuting
Useful life

As discussed earlier under *Types of Property in Depreciation Defined*, tangible property is property you can see or touch and includes both real and personal property. You can take a depreciation deduction only for the part of tangible property that wears out, decays, gets used up, becomes obsolete, or loses its value due to natural causes. Because nearly all tangible property loses value due to these causes, this discussion will focus on rules for depreciating property under certain circumstances.

Partial Business Use

If you use tangible property for business or investment purposes and for personal purposes, you can deduct only depreciation based on the business use and the use for the production of income.

Example. You own a passenger automobile and use it for both business and nonbusiness purposes. You can deduct only depreciation based on the business use. Nonbusiness uses include commuting, personal shopping trips, family vacations, and driving children to and from school and other activities.

Figuring business and investment use. You must keep records showing the business, investment, and nonbusiness use of your property. For more information on depreciating a passenger automobile and the records you must keep, see Publication 463.

Special Situations

You cannot depreciate some property except under certain circumstances. The following discussions will help you determine when to depreciate property in these cases.

Land preparation costs. You can depreciate certain costs incurred in preparing land for business use, such

as landscaping. These costs must be so closely associated with other depreciable property that you can determine a life for them along with the life of the associated property.

Example. You construct a new building for use in your business and pay amounts for grading, clearing, seeding, and planting bushes and trees. Some of the bushes and trees were planted right next to the building, while others were planted around the outer border of the building lot. If you replace the building, you would have to destroy the bushes and trees right next to it. Because these bushes and trees have a determinable useful life that is closely associated to the building, you can depreciate them as land preparation costs. Add your other land preparation costs to the basis of your land because they have no determinable life and are not depreciable.

Repairs and replacements. If a repair or replacement increases the value of your property, makes it more useful, or lengthens its life, capitalize and depreciate your repair or replacement cost. If the repair or replacement does not increase the value of your property, make it more useful, or lengthen its life, deduct the cost of the repair or replacement in the same way as any other business expense.

Example. If you completely replace the roof of a rental house, the replacement roof increases the value and lengthens the life of the property. You must capitalize and depreciate it. However, if you repair a small section on one corner of the roof, deduct the repair expense.

Improvements to rental property. Permanent improvements to business property you rent can be depreciated as discussed later in *Additions or improvements to property* under *Property Classes and Recovery Periods* in chapter 3.

Durable containers. You can depreciate some containers used to ship your products if all of the following requirements are met.

- They have a life longer than one year.
- They qualify as property used in your business.
- Title to the property does not pass to the buyer.

To determine if the above requirements apply and whether you can depreciate your containers, consider the following:

- 1) Does your sales contract, sales invoice, or other type of order acknowledgment indicate whether you have retained title,
- 2) Does your invoice treat the containers as separate items, and
- 3) Do any of your records state your basis in the containers?

Professional libraries. If you maintain a library for use in your profession, you can depreciate it. You can deduct the cost of any technical books, journals, and information services you use in your business that have a useful life of one year or less in the same way as any other business expense.

Videocassettes. If you are in the business of renting videocassettes, you can depreciate only those videocassettes bought for rental. However, you can deduct fully in the year of purchase the cost of any cassette having a useful life of one year or less.

Note. There are special rules about how to depreciate videocassettes. These rules are explained in Publication 534.

Idle property. You must claim a deduction for depreciation on property used in your business even if it is temporarily idle. For example, if you stop using a piece of machinery because there is a temporary lack of market for a product made with the machinery, continue to treat the machinery as used in your business for federal tax purposes.

Cooperative apartments. If you use your cooperative apartment in your business or for the production of income, you can deduct your share of the cooperative housing corporation's depreciation.

If you bought your stock as part of its first offering, figure your depreciation deduction as a tenant-stockholder in a cooperative housing corporation as follows:

- 1) Figure the depreciation for all the depreciable real property owned by the corporation.
- 2) Subtract from the amount figured in 1) any depreciation for space owned by the corporation that can be rented but cannot be lived in by tenant-stockholders. The result is the yearly depreciation, as reduced.
- 3) Divide the number of your shares of stock by the total number of shares outstanding, including any shares held by the corporation.
- 4) Multiply the yearly depreciation, as reduced (from 2)), by the number you figured in 3). This is your share of the depreciation.

If you bought your cooperative stock after its first offering, figure the basis of the depreciable real property to use in 1) above as follows:

- 1) Multiply your cost per share by the total number of shares outstanding,
- 2) Add to it the mortgage debt on the property on the date you bought the stock, and
- 3) Subtract from it the part of this sum that is not for the depreciable real property, such as the part for the land.

Your depreciation deduction for the year cannot be more than the part of your adjusted basis in the stock of the corporation that is allocable to your business or income-producing property.

Example. You figure your share of the cooperative housing corporation's depreciation to be \$30,000. Your adjusted basis in the stock of the corporation is \$50,000. You use one half of your apartment solely for business purposes. Your depreciation deduction for the year cannot be more than \$25,000 which is $\frac{1}{2}$ of \$50,000.

Change to business use. If you change your cooperative apartment to business use, figure your allowable depreciation as explained under *Cooperative apartments*. If you bought the stock as part of its first offering, your depreciable basis in all the depreciable real property owned by the cooperative housing corporation is the smaller of:

- 1) The fair market value on the date you change your apartment to business use, or
- 2) The corporation's adjusted basis on that date.

Do not subtract depreciation when figuring the adjusted basis. The fair market value is normally the same as the corporation's adjusted basis minus straight line depreciation, unless this value is unrealistic. See *Straight Line Method* under *Methods To Use* in Publication 534.

For a discussion of fair market value and adjusted basis, see Publication 551.

Intangible Property

Terms you may need to know (see Glossary):

Adjusted basis
Basis
Capitalized
Goodwill
Patent
Salvage value
Straight line method
Useful life

As discussed earlier in *Types of Property* under *Depreciation Defined*, intangible property has value but cannot be seen or touched. You must either amortize or depreciate it (using the straight line method) as discussed next.

Patents and copyrights. Unless you must amortize the costs of patents or copyrights (as explained next), you can recover the costs through depreciation. If you can depreciate the cost of a patent or copyright, use the straight line method over the useful life. The useful life of a patent or copyright is the life granted to it by the government. If it becomes valueless in any year before its useful life expires, you can deduct in full for that year any

of its remaining cost or other basis you have not yet depreciated.

Patents and copyrights subject to amortization. If you acquired patents or copyrights as part of the acquisition of a substantial portion of a business after August 10, 1993 (or after July 25, 1991, if elected), you generally have to amortize their costs over 15 years. If the patent or copyright is not acquired as part of an acquisition of a substantial portion of a business, depreciate the cost. For more information on amortization, see chapter 12 in Publication 535.

Agreement not to compete. Generally, if you bought a business before August 11, 1993, and part of its price is for an agreement not to compete for a fixed number of years, the agreement is depreciable property. However, because goodwill is often confused with an agreement not to compete, and because goodwill is not depreciable, you must be able to establish from the facts and circumstances that you have bought an agreement not to compete.

If you bought a business after August 10, 1993 (after July 25, 1991 if elected), you must amortize over 15 years that part of its price that is for an agreement not to compete. If you can amortize the cost of the agreement, you cannot depreciate it. For more information on amortization, see chapter 12 in Publication 535.

Designs and patterns. You can depreciate designs and patterns only if they have a determinable useful life and you cannot amortize them (as explained next).

Designs and patterns subject to amortization. You must amortize the cost of designs and patterns over 15 years if you acquired them after August 10, 1993 (after July 25, 1991, if elected), and you did not create them. However, if you created designs and patterns in connection with the acquisition of a substantial portion of a business after August 10, 1993 (after July 25, 1991, if elected), you must amortize their costs also. For more information, see chapter 12 in Publication 535.

Franchises. You can depreciate a franchise only if it has a determinable useful life and you can not amortize it (as explained next).

Franchises subject to amortization. If you acquired a franchise after August 10, 1993 (after July 25, 1991, if elected), you must amortize the cost of the franchise over 15 years. For more information, see chapter 12 in Publication 535.

Customer or subscription lists, location contracts, and insurance expirations. Generally, you can depreciate these intangible properties if all of the following apply:

- 1) You can determine their value separately from the value of any goodwill that goes with the business,

- 2) You can determine their useful life with reasonable accuracy, and
- 3) You can not amortize them (as explained next).

Lists, contracts, and expirations subject to amortization. You must amortize over 15 years customer or subscription lists, location contracts, and insurance expirations if you acquire them after August 10, 1993 (after July 25, 1991, if elected), and you did not create them. However, if after August 10, 1993 (after July 25, 1991, if elected), you created any of these items in connection with the acquisition of a substantial portion of a business, you must amortize their costs. For more information, see chapter 12 in Publication 535.

Computer software. Computer software includes all programs designed to cause a computer to perform a desired function. Computer software also includes any data base or similar item that is in the public domain and is incidental to the operation of qualifying software.

Software developed before August 11, 1993. If you developed software programs before August 11, 1993 (before July 26, 1991, if elected), you can choose to either treat the development costs as current expenses or capitalize the costs and depreciate them. If you choose to depreciate them, use the straight line method over 5 years (or any shorter life you can clearly establish). You cannot change methods without the approval of the IRS.

Software purchased before August 11, 1993. If you purchased software before August 11, 1993 (before July 26, 1991, if elected), your recovery of costs depends on how you were billed. If the cost of the software was included in the price of computer hardware and the software cost was not separately stated, treat the entire amount as the cost of the hardware. Then depreciate the entire amount under MACRS as explained in chapter 3. If the cost of the software was separately stated, you can depreciate the cost using the straight line method over 5 years (or any shorter life you can establish).

Software acquired after August 10, 1993. If you acquire software after August 10, 1993 (after July 25, 1991, if elected), you can depreciate it over 36 months if it meets all of the following requirements:

- 1) It is readily available for purchase by the general public,
- 2) It is not subject to an exclusive license, and
- 3) It has not been substantially modified.

Even if the software does not meet the above requirements, you can depreciate it over 36 months if it was not acquired in connection with the acquisition of a substantial portion of a business.

If you acquire software after August 10, 1993 (after July 25, 1991, if elected), you must amortize it over 15 years (rather than depreciate it) if it does not meet all of the requirements listed previously and you acquired it in connection with the acquisition of a substantial portion of a business.

Software leased. If you lease software, you can treat the rental payments in the same manner that you treat any other rental payments.

Straight Line Method

Generally, you use this method of depreciation for intangible property. It lets you deduct the same amount of depreciation each year.

To figure your deduction, first determine the adjusted basis, salvage value, and estimated useful life of your property. Subtract the salvage value, if any, from the adjusted basis. The balance is the total amount of depreciation you can take over the useful life of the property.

Divide the balance by the number of years remaining in the useful life. This gives you the amount of your yearly depreciation deduction. Unless there is a big change in adjusted basis, or useful life, this amount will stay the same throughout the time you depreciate the property. If, in the first year, you use the property for less than a full year, you must prorate your depreciation deduction for the number of months in use.

Example. In April Frank bought a patent. It was not acquired in connection with the acquisition of a trade or business (or a substantial part of a trade or business). He paid \$5,100 for it. He depreciates the patent under the straight line method, using a 17-year useful life and no salvage value. He takes the \$5,100 basis and divides that amount by 17 years ($\$5,100 \div 17 = \300 , a full year's use). He must prorate the \$300 for his 9 months of use during the year. This gives him a deduction of \$225 ($\$300 \times 9/12$). Next year, Frank can deduct \$300 for the full year.

For more information on the straight line method of depreciation, see *Straight Line Method* in Publication 534.

What Cannot Be Depreciated

To determine if you are entitled to depreciation, you must know not only what you can depreciate, but what you cannot depreciate.

Property placed in service and disposed of in the same year. You cannot depreciate on property placed in service and disposed of in the same taxable year. When property is considered placed in service is explained later.

Tangible Property

Terms you may need to know (see Glossary):

Basis
 Remainder interest
 Term interest
 Useful life

You can never depreciate some tangible property even although it is used in your business or held to produce income.

Land. You can never depreciate the cost of land because land does not wear out or become obsolete and it cannot be used up. The cost of land generally includes the cost of clearing, grading, planting, and landscaping because these expenses are all part of the cost of the land itself. You may be able to depreciate some land preparation costs. For information on these costs, see *Land preparation costs* in *What Can Be Depreciated*, earlier.

Inventory. You can never depreciate inventory. Inventory is any property held primarily for sale to customers in the ordinary course of business.

In some cases, it is not always clear whether the property is inventory or depreciable business property. If unclear, examine carefully all the facts in the operation of the particular business. The following example shows two similar situations where a careful examination of the facts in each situation results in different conclusions.

Example. Maple Corporation is in the business of leasing cars. At the end of their useful lives, when the cars are no longer profitable to lease, Maple sells them. Maple does not have a showroom, used car lot, or individuals to sell the cars. Instead, it sells them through wholesalers or by similar arrangements in which a dealer's profit is not intended or considered. Maple can depreciate the leased cars because the facts show that the cars are not held primarily for sale to customers in the ordinary course of business, but are leased.

If Maple buys cars at wholesale prices, leases them for a short time, and then sells them at retail prices or in sales in which a dealer's profit is intended, the cars are treated as inventory and are not depreciable property. In this situation, the facts show that the cars are held primarily for sale to customers in the ordinary course of business.

Containers. Containers are generally part of inventory and you cannot depreciate them. For information on some containers that you may depreciate in certain circumstances, see *Durable containers* under *What Can Be Depreciated*, earlier. For more information on inventory, see *Inventories* in Publication 538.

Equipment used to build capital improvements. You cannot deduct depreciation on equipment you are using to build your own capital improvements. You must add depreciation on equipment used during the period of construction to the basis of your improvements. See *Uniform Capitalization Rules* in Publication 551.

Rented property. Generally, a person who uses depreciable property in a trade or business or holds it for producing income is entitled to the depreciation deduction

for the property. This is usually the owner of the property. However, for rented property, this is usually the lessor. An owner or lessor is the person who generally bears the burden of exhaustion of capital investment in the property. This means the person who retains the incidents of ownership for the property. The incidents of ownership include:

- 1) The legal title,
- 2) The legal obligation to pay for it,
- 3) The responsibility to pay its maintenance and operating expenses,
- 4) The duty to pay any taxes, and
- 5) The risk of loss if the property is destroyed, condemned, or diminishes in value through obsolescence or exhaustion.

Term interests in property. Under certain circumstances, you cannot take a deduction for depreciation on a term interest in property created or acquired after July 27, 1989, for any period during which the remainder interest is held, directly or indirectly, by a person related to you. A person related to you includes your spouse, child, parent, brother, sister, half-brother, half-sister, ancestor, or lineal descendant.

Basis adjustments. If, except for this provision, you would be allowed a depreciation deduction for any term interest in property, reduce your basis in the property by any depreciation or amortization not allowed.

You generally increase your basis in a remainder interest in property by the amount of depreciation deductions not allowed. However, do not increase the basis of a remainder interest for any deductions not allowed for periods during which the term interest is held by an organization exempt from tax. Also, do not increase the basis for deductions not allowed for periods during which the interest was held by a nonresident alien individual or foreign corporation if the income from the term interest is not effectively connected with the conduct of a trade or business in the United States.

Intangible Property

Terms you may need to know (see Glossary):

Capitalized
Goodwill
Useful life

You can never depreciate some types of intangible property.

Goodwill. You can never depreciate goodwill because its useful life cannot be determined.

However, if you acquired a business after August 10, 1993 (after July 25, 1991, if elected), and part of the price included goodwill, you may be able to amortize the

cost of the goodwill over 15 years. For more information, see chapter 12 in Publication 535.

Trademark and trade name. In general, you must capitalize trademark and trade name expenses. This means you cannot deduct the full amount in the current year. You can neither depreciate nor amortize the costs of trademarks and trade names you acquired before August 11, 1993 (before July 26, 1991, if elected). You may be able to amortize over 15 years the costs of trademarks and trade names you acquired after August 10, 1993. For more information, see chapter 12 in Publication 535.

When Depreciation Begins and Ends

Terms you may need to know (see Glossary):

Basis
Disposed
Exchange
Placed in service

You begin to depreciate your property when you place it in service for use in your trade or business or for the production of income. You stop depreciating property either when you have fully recovered your cost or other basis or when you retire it from service. (See *Retired From Service*, later.) You have fully recovered your cost or other basis when you have taken section 179 and depreciation deductions that are equal to your cost or investment in the property.

Placed in Service

For depreciation purposes, property is considered placed in service when it is ready and available for a specific use, whether in trade or business, the production of income, a tax-exempt activity, or a personal activity. Even if the property is not being used, it is in service when it is ready and available for its specific use. However, you can begin depreciating property only when it is ready and available for a specific use in a trade or business or for the production of income.

Example 1. You bought a home and used it as your personal home several years before you converted it to rental property. Although its specific use was personal and no depreciation was allowable, you placed the home in service when you began using it as your home. However, you can claim a depreciation deduction in the year you converted it to rental property because its use changed to an income-producing use at that time.

Example 2. You bought a planter for your farm business late in the year after harvest was over. You take a

depreciation deduction for the planter for that year because it was ready and available for its specific use.

Retired From Service

You retire property from service when you permanently withdraw it from use in a trade or business or from use in the production of income. You stop depreciating property when you retire it from service.

You can retire property from service by selling or exchanging it, abandoning it, or destroying it.

Correct Depreciation Not Deducted

You generally cannot deduct unclaimed depreciation in any later tax year. However, you can claim the depreciation on a timely filed amended return for the year for which it should have been claimed. You must file an amended return within 3 years from the date you filed your original return, or within 2 years from the time you paid your tax, whichever is later. A return filed early is considered filed on the due date.

Basis adjustment for unclaimed depreciation. If you do not claim depreciation you are entitled to deduct, you must still reduce the basis of the property. Reduce the basis by the amount of depreciation you were entitled to deduct. If you deduct more depreciation than you should, you must decrease your basis by any amount deducted from which you received a tax benefit.

Changing Your Accounting Method to Deduct Unclaimed Depreciation

If you claimed less depreciation than allowable, you can change your accounting method to claim the proper depreciation allowed. You will then be able to take into account your unclaimed depreciation from years before the year of change.

You must have the consent of the Commissioner of Internal Revenue to change your method of accounting. You can follow the instructions in Revenue Procedure 92-20 to request permission to make the change or, in some instances, you can receive automatic consent. Revenue Procedure 92-20 is in Cumulative Bulletin 1992-1. Cumulative Bulletins are available at many libraries and IRS offices.

The situations in which you can receive automatic consent are explained next.

Automatic consent to change accounting. You can receive an automatic consent from the Commissioner of Internal Revenue to change your accounting method. This will enable you to claim previously unclaimed allowable depreciation. To do so, you must file Form 3115 requesting a change to a permissible method of accounting for depreciation. You generally can use this procedure for any depreciable property that meets the following two conditions.

- 1) Under your present accounting method, you claimed less than the depreciation allowable on the property.
- 2) You held the property at the beginning of the year of the change in accounting method.

Exceptions. You generally cannot use the automatic consent procedure for:

- 1) Any property held by a tax-exempt organization,
- 2) Any depreciable intangible property other than certain property that cannot be amortized,
- 3) Any property for which you are attempting to either revoke a timely election or make a late election under certain depreciation or amortization provisions,
- 4) Any depreciable property (other than certain property that cannot be amortized) for which you are changing only the estimated useful life,
- 5) Any depreciable property the use of which (but not ownership) changes,
- 6) Any property for which the depreciation that has been claimed is more than the amount allowable,
- 7) Any change in your accounting method that involves a change from deducting the cost (or other basis) of any property as an expense to capitalizing and depreciating the cost (or other basis),
- 8) Any change in your accounting method involving a change from one permissible accounting method for the property to another permissible accounting method for the property, and
- 9) Any change in your accounting method for an item of income or deduction other than depreciation.

Other restrictions. You cannot use the automatic consent procedure if a criminal investigation or proceeding is pending concerning either of the following.

- 1) Any issue related to your federal tax liability for any year.
- 2) The possibility that you made false or fraudulent statements about any issue related to your federal tax liability for any year.

More information. For more information on how to get this automatic consent to change your method of accounting in order to claim previously unclaimed allowable depreciation, see Revenue Procedure 96-31 Internal Revenue Bulletin 1996-20.

How To Claim Depreciation

Terms you may need to know (see Glossary):

Amortization
Listed property

Placed in service
Standard mileage rate

Use Form 4562 to elect the section 179 deduction discussed later in *Section 179 Deduction Defined* under *How To Make the Election*. Also use this form to claim depreciation and amortization deductions.

Individuals, partnerships, and S corporations must complete and attach Form 4562 to their tax returns if they are claiming:

- 1) A section 179 deduction for the current year or a section 179 carryover deduction from a prior year,
- 2) A depreciation deduction for property placed in service during the current year,
- 3) A depreciation deduction on any vehicle or other listed property, regardless of when it was placed in service,
- 4) A deduction for any vehicle if the deduction is reported on a form other than Schedule C or Schedule C-EZ, or
- 5) A deduction for amortization of costs if the amortization began in the current year.

Employees. If you are an employee claiming the standard mileage rate or actual expenses (including depreciation), you must use either Form 2106 or Form 2106-EZ instead of Part V of Form 4562. Use Form 2106-EZ if you are claiming the standard mileage rate and you are not reimbursed by your employer.

Corporations. All corporations, except S corporations, must complete and file Form 4562 to claim any depreciation or section 179 deduction. In addition, corporations must file Form 4562 for amortization if this is the first year of the amortization period. For more information on amortization, see chapter 12 in Publication 535.

Form 4562

Terms you may need to know (see Glossary):

Amortization
Listed property
Placed in service

This discussion offers a brief description of the purpose for each part of Form 4562. For more information on completing the form, you should refer to the instructions for Form 4562. Form 4562 has six parts.

Part I

Use this part of Form 4562 to elect the section 179 deduction. It is designed to help you figure the maximum section 179 deduction for the current year and any carryover to the next year. The section 179 deduction and any carryover are explained later in chapter 2.

Part II

Use this part of Form 4562 to report Modified Accelerated Cost Recovery System (MACRS) depreciation deductions for property (other than listed property) placed in service during the current year. MACRS is discussed in chapter 3 and listed property is discussed in chapter 4.

Part III

Use this part of Form 4562 to report MACRS depreciation deductions for property placed in service before this year. Also use it to report property being depreciated under the Accelerated Cost Recovery System (ACRS), which is discussed in Publication 534. In addition, use it to report depreciation deductions that were figured using other methods. If you elect to depreciate property under a method not based on a term of years as discussed in *What Cannot Be Depreciated Under MACRS*, later, report that depreciation deduction in this part.

Part IV

This part of Form 4562 is the summary. Add amounts from certain lines in other parts of the form to arrive at your total depreciation deduction.

Part V

Use this part of Form 4562 to report depreciation on automobiles and other listed property and to report information on the use of automobiles and other transportation vehicles. See chapter 4.

Part VI

Use this part of Form 4562 to report amortization deductions. For information on amortization, see chapter 12 in Publication 535.

2.

Section 179 Deduction

Topics

This chapter discusses:

- What the section 179 deduction is
- What costs can and cannot be deducted
- How to elect the deduction
- How to figure the deduction
- When to recapture the deduction

Useful Items

You may want to see:

Publication

- **537** Installment Sales
- **544** Sales and Other Dispositions of Assets
- **551** Basis of Assets

Form (and Instructions)

- **4562** Depreciation and Amortization
- **4797** Sales of Business Property

See chapter 6, *How To Get More Information*, for information about getting these publications and forms.

This chapter explains the rules for the section 179 deduction. It explains what the deduction is, what property qualifies for the deduction, what limits may apply, and how to claim a deduction. You can recover through depreciation certain costs that you do not recover through the section 179 deduction. Depreciation is discussed later in chapter 3.

Section 179 Deduction Defined

Section 179 of the Internal Revenue Code allows you to **elect** to deduct all or part of the cost of certain qualifying property in the year you place it in service. You can do this instead of recovering the cost by taking depreciation deductions over a specified recovery period. There are limits, however, on the amount you can deduct in a tax year. These limits are discussed in *Deduction Limits in How To Figure the Deduction*, later.

Estates and trusts cannot elect the section 179 deduction.

What Costs Can and Cannot Be Deducted

Terms you may need to know (see Glossary):

Adjusted basis
Basis
Placed in service

You can claim the section 179 deduction only on qualifying property acquired for use in your trade or business. You cannot claim the deduction on property you hold only for the production of income.

Acquired by Purchase

Only the cost of property you acquired for use in your business qualifies for the section 179 deduction. The cost of property acquired from a related person or group may not qualify. See *Nonqualifying Property*, later.

Acquired by Trade

If you purchase an asset with cash and a trade-in, part of the basis of the asset you buy is the basis of the trade-in. You cannot claim the section 179 deduction on this part of the basis of the purchased asset. For example, if you buy (for cash and a trade-in) a new truck to use in your business, your cost for the section 179 deduction does not include the adjusted basis of the truck you trade for the new vehicle. See *Adjusted Basis* in Publication 551.

Example. Silver Leaf, a retail bakery, traded two ovens having a total adjusted basis of \$680 for a new oven costing \$1,320. The bakery also traded a used van with an adjusted basis of \$4,500 for a new van costing \$9,000. Silver Leaf placed the new items in service this year. Silver Leaf was given an \$800 trade-in for the old ovens and paid \$520 cash for the new oven. The bakery was given a \$4,800 trade-in on the used van and paid \$4,200 cash for the new van.

Silver Leaf's basis in the new property includes both the adjusted basis of the property traded and the cash paid. However, only the portion of the new property's basis paid by cash qualifies for the section 179 deduction. The portion of the adjusted basis of the property traded that carries over to the basis of the new property is not treated as business cost for purposes of section 179. Silver Leaf has business costs that qualify for a section 179 deduction of \$4,720 (\$520+ \$4,200), the part of the cost of the new property not determined by the property traded.

Qualifying Property

Terms you may need to know (see Glossary):

Adjusted basis
Basis
Fungible commodities
Placed in service
Structural components

Property qualifying for the section 179 deduction is depreciable property and includes:

- 1) Tangible personal property,
- 2) Other tangible property (except most buildings and their structural components) used as:

- a) An integral part of manufacturing, production, or extraction, or of furnishing transportation, communications, electricity, gas, water, or sewage disposal services,
 - b) A research facility in any of the activities in (a) above, or
 - c) A facility in any of the activities in (a) for the bulk storage of fungible commodities.
- 3) Single purpose agricultural (livestock) or horticultural structures, and
 - 4) Storage facilities (except buildings and their structural components) used in distributing petroleum or any primary product of petroleum.

Leased property. Generally, you cannot claim a section 179 deduction based on property you lease to someone else. (This rule does not apply to corporations.) However, you can claim a section 179 deduction based on:

- 1) Property you lease to others that you manufactured, or
- 2) Property you lease to others if:
 - a) The term of the lease is less than half of the property's class life, and
 - b) For the first 12 months the property is transferred to the lessee, the total of the business deductions that you are allowed on the property (except rent and reimbursed amounts) are more than 15% of the rental income from the property.

Tangible Personal Property

Tangible personal property is any tangible property that is not real property. Machinery and equipment are examples of tangible personal property.

Land and land improvements, such as buildings and other permanent structures and their components, are real property. Swimming pools, paved parking areas, wharves, docks, bridges, and fences are examples of land improvements. They are not tangible personal property.

Business property. All business property, other than structural components, that is contained in or attached to a building is tangible personal property. Under certain local laws, some tangible personal property cannot be tangible personal property for purposes of section 179. Under certain local laws, some real property, such as fixtures, can be tangible personal property for section 179 purposes. Property such as refrigerators, grocery store counters, transportation and office equipment, printing presses, testing equipment, and signs are tangible personal property.

Gasoline storage tanks and pumps. Gasoline storage tanks and pumps at retail service stations are tangible personal property.

Livestock. Livestock is qualifying property. For this purpose, livestock includes horses, cattle, hogs, sheep, goats, and mink and other furbearing animals.

Single Purpose Agricultural (Livestock) or Horticultural Structures

For purposes of determining whether a structure is a single purpose agricultural structure, poultry is considered to be livestock.

Agricultural structure. A single purpose agricultural (livestock) structure is any building or enclosure specifically designed, constructed, and used to:

- 1) House, raise, and feed a particular type of livestock and its produce, and
- 2) House the equipment, including any replacements, needed to house, raise, or feed the livestock.

Because the full range of livestock breeding is included, special purpose structures are qualifying property if used to breed chickens or hogs, produce milk from dairy cattle, or produce feeder cattle or pigs, broiler chickens, or eggs. The facility must include, as an integral part of the structure or enclosure, equipment necessary to house, raise, and feed the livestock.

Horticultural structure. A single purpose horticultural structure is:

- 1) A greenhouse specifically designed, constructed, and used for the commercial production of plants, or
- 2) A structure specifically designed, constructed, and used for the commercial production of mushrooms.

Use of structure. A structure must be used only for the purpose which qualified it. For example, a hog pen will not be qualifying property if you use it to house poultry. Similarly, using part of your greenhouse to sell plants will make the greenhouse nonqualifying property.

If a structure includes work space, that structure is not a single purpose agricultural or horticultural structure unless the work space is used only for:

- 1) Stocking, caring for, or collecting livestock or plants or their produce,
- 2) Maintaining the enclosure or structure, and
- 3) Maintaining or replacing the equipment or stock enclosed or housed in the structure.

Business and Nonbusiness Use

When you use property for both business and nonbusiness purposes, you can elect the section 179 deduction

only if more than 50% of the property's use in the tax year you place it in service is for trade or business. You must figure the part of the cost of the property that reflects only its business use. You do this by multiplying the cost of your property by the percentage of business use. This is your business cost. Use it to figure your section 179 deduction.

Example 1. May Oak bought and placed in service an item of section 179 property. She paid \$11,000 for it. She used the property 80% for her business and 20% for personal purposes. The business part of the cost of her property is \$8,800 (80% × \$11,000).

Example 2. June Pine bought and placed in service computer equipment. She paid \$9,000 and received a \$1,000 trade-in allowance for her old computer equipment. She had an adjusted basis of \$3,000 in the old computer equipment. June used both the old and new equipment 90% for business and 10% for personal purposes. Her basis in the new computer equipment is \$12,000 (\$9,000 paid plus the adjusted basis of \$3,000 in the old computer equipment). However, her business cost for purposes of section 179 is limited to 90% (business use percentage) of \$9,000 (cash paid), or \$8,100.

Nonqualifying Property

Terms you may need to know (see Glossary):

Adjusted basis
Basis
Fiduciary
Grantor
Placed in service
Structural components

Generally, the section 179 deduction cannot be claimed on:

- 1) Property you hold only for the production of income,
- 2) Real property, including buildings and their structural components,
- 3) Property you acquired from certain groups or persons,
- 4) Air conditioning or heating units,
- 5) Certain property used predominantly outside the U.S.,
- 6) Property used predominantly to furnish lodging or in connection with the furnishing of lodging,
- 7) Property used by certain tax-exempt organizations,
- 8) Property used by governmental units,
- 9) Property used by foreign persons or entities, and
- 10) Certain property you leased to others (if you are a noncorporate lessor).

For the kind of property you lease on which you can claim the section 179 deduction, see *Qualifying Property*, earlier.

Production of Income

You hold property only for the production of income if it is investment property, rental property (if renting property is not your trade or business), or property that produces royalties. If you use property in the active conduct of a trade or business, you do not hold it **only** for the production of income.

Acquired From Certain Groups or Persons

Property does not qualify for the section 179 deduction if:

- 1) The property is acquired by one member of a controlled group from a member of the same group, or
- 2) The property's basis is either:
 - Determined in whole or in part by its adjusted basis in the hands of the person from whom it was acquired, or
 - Determined under stepped-up basis rules for property acquired from a decedent as discussed in Publication 448, or
- 3) The property is acquired from a related person.

Related persons. For the purpose of determining what property does not qualify for the section 179 deduction, related persons are:

- 1) An individual and his or her spouse, child, parent, or other ancestor or lineal descendant.
- 2) A corporation and any individual who owns directly or indirectly more than 50% of the value of the corporation's outstanding stock.
- 3) Two corporations that are members of the same controlled group.
- 4) A fiduciary of a trust and a corporation if more than 50% of the value of the outstanding stock of the corporation is owned directly or indirectly by or for the trust or the grantor of the trust.
- 5) The grantor and fiduciary, and the fiduciary and beneficiary, of any trust.
- 6) The fiduciaries or the fiduciaries and beneficiaries of two different trusts if the same person is the grantor of both trusts.
- 7) Certain educational and charitable organizations and any person (including members of the person's family) who directly or indirectly controls the organization.
- 8) A partnership and a person who owns directly or indirectly an interest of more than 50% of the partnership's capital or profits.
- 9) Two partnerships if the same persons directly or indirectly own more than 50% of the capital or profits of each.
- 10) Two S corporations if the same persons own more than 50% in value of the outstanding stock of each corporation.

- 11) An S corporation and a corporation that is not an S corporation if the same persons own more than 50% in value of the outstanding stock of each corporation.
- 12) A corporation and a partnership if the same persons own more than 50% in value of the outstanding stock of the corporation and more than 50% of the capital interest, or profits interest, in the partnership.

Example. Ken Larch is a tailor. He bought two industrial sewing machines from his father. He placed both machines in service in the same year he bought them. They do not qualify for section 179 because Ken and his father are related parties. He cannot claim a section 179 deduction for the cost of these machines.

Property Used for Lodging

The following types of property used predominantly in connection with the furnishing of lodging can qualify as section 179 property:

- 1) Nonlodging commercial facilities which are available to those who are not using the lodging facilities on the same basis as they are available to those using the lodging facilities.
- 2) Property used by a hotel or motel in connection with the trade or business of furnishing lodging where the predominant portion of the accommodations is used by transients.
- 3) Any energy property.

Energy property. This is property that is:

- 1) Equipment that uses solar energy to generate electricity, to heat or cool (or provide hot water for use in) a structure, or to provide solar process heat, or
- 2) Equipment used to produce, distribute, or use energy derived from a geothermal deposit, up to (but not including) the electrical transmission stage.

If you did not construct, reconstruct, or erect the equipment, the original use of the property must begin with you. The property must meet the performance and quality standards, if any, that have been prescribed by Income Tax Regulations and that are in effect at the time you get the property.

Energy property does not include any property that is public utility property as defined by section 46(f)(5) of the Internal Revenue Code (as in effect on November 4, 1990).

Electing the Deduction

The section 179 deduction is not automatic. If you want to take the deduction, you must elect to do so. See *How To Make the Election*, later.

Placed-in-Service Rule

For purposes of the section 179 deduction, your property is treated as placed in service in the tax year it is first made ready and available for a specific use. This use can be in a trade or business, the production of income, a tax-exempt activity, or a personal activity. If you place property in service in a use that does not qualify it for the section 179 deduction, it cannot later qualify in another tax year even if you change it to business use.

Example. Last year, you bought a new car and placed it in service for personal purposes. This year, you began to use it for business. That you changed its use to business use does not qualify the cost of your car for a section 179 deduction this year. However, you can claim a depreciation deduction for the business use of the car this year. To figure the depreciation deduction, see chapter 3.

How To Make the Election

You make the election by taking your deduction on Form 4562. You attach and file Form 4562 with:

- 1) Your original tax return filed for the tax year the property was placed in service (whether or not you file it timely), or
- 2) An amended return filed by the due date (including extensions) for your return for the tax year the property was placed in service.

You cannot make an election for the section 179 deduction on an amended return filed after the due date (including extensions).

Revoking an Election

Once you elect a section 179 deduction, you can revoke your election only with IRS consent. The IRS will grant you a consent only in extraordinary circumstances. You must file your request for consent with the:

Commissioner of Internal Revenue

Washington D.C. 20224

You must include in the request your name, address, and taxpayer identification number. You or your representative must sign the request. You must attach a statement to the request showing the year and property involved, and you must set forth in detail the reasons for your request.

Recordkeeping Requirements

You must keep records that show the specific identification of each piece of qualifying section 179 property. These records must show how you acquired the property, the person you acquired it from, and when you placed it in service. You must stay with your selection of section 179 property for which you claim a deduction when computing your taxable income for the tax year you make the election and for all later tax years.

How To Figure the Deduction

Terms you may need to know (see Glossary):

Active conduct of a trade/business
Adjusted basis
Basis
Placed in service

The total business cost you can elect to deduct under section 179 for 1996 cannot be more than \$17,500. This \$17,500 maximum dollar limit applies to each taxpayer, not to each business. You do not have to claim the full \$17,500. You can decide how much of the business cost of your qualifying property you want to deduct under section 179. You may be able to depreciate any cost you do not deduct under section 179. To figure depreciation, see chapter 3.

If you acquire and place in service more than one item of qualifying property during the year, you can divide the deduction between the items in any way, as long as the total deduction is not more than the limits. If you have only one item of qualifying property and it does not cost more than \$17,500, your deduction is limited to the lesser of:

- 1) Your taxable income from your trade or business (The taxable income limit is discussed later.), or
- 2) The cost of the item.

You must figure your section 179 deduction before figuring your depreciation deduction.

You must subtract the amount you elect to deduct under section 179 from the business/investment cost of the qualifying property. This result is called your unadjusted basis and is the amount you use to figure any depreciation deduction.

Example. In 1996, you bought a \$20,000 fork lift and a \$1,200 circular saw for your business. You placed both items in service in 1996. You elect to deduct \$16,300 for the forklift and the entire \$1,200 for the saw, a total of

\$17,500. This is the maximum dollar limit you can deduct. Your \$1,200 deduction for the saw completely recovered its cost. Your unadjusted basis is zero. The unadjusted basis of your forklift is \$3,700. You figure this by subtracting the amount of your section 179 deduction, \$16,300, from the cost of the forklift, \$20,000.

Deduction Limits

Your section 179 deduction cannot be more than the business cost of the qualifying property. In addition, in figuring your section 179 deduction, you must apply the following limits:

- 1) Maximum dollar limit,
- 2) Investment limit, and
- 3) Taxable income limit.

Maximum Dollar Limit

The total cost of section 179 property that you can elect to deduct for 1996 cannot be more than \$17,500. This maximum dollar limit is reduced if you go over the investment limit (discussed later) in any tax year.

The total cost of section 179 property that you can deduct increases as shown below:

Tax Year	Maximum Amount Deductible
1997	\$18,000
1998	18,500
1999	19,000
2000	20,000
2001 – 2002	24,000
After 2002	25,000

Joint returns. A husband and wife who file a joint return are treated as one taxpayer in determining any reduction to the maximum dollar limit, regardless of which spouse acquired the property or placed it in service.

Married individuals filing separate returns. A husband and wife filing separate returns for a tax year are treated as one taxpayer for the maximum dollar limit and the \$200,000 investment limit. Unless they elect otherwise, 50% of the maximum dollar limit (after applying the investment limit) will be allocated to each spouse. If the percentages elected by each spouse do not total 100%, 50 percent will be allocated to each spouse.

Example 1. Jack Elm is married. He and his wife file separate returns. Jack bought and placed in service \$200,000 of qualified farm machinery in 1996. His wife had her own business and she bought and placed in service \$5,000 of qualified business equipment. If Mr. and Mrs. Elm had filed a joint return for 1996, their maximum dollar limit would have been \$12,500. This is because

their \$17,500 maximum dollar limit would have been reduced by \$5,000 (the excess over the \$200,000 investment limit). They elect to allocate \$12,500 as follows: \$9,375 (75%) to Mr. Elm's machinery and \$3,125 (25%) to Mrs. Elm's equipment. If they did not make an election to allocate their costs, they would be limited to the \$12,500 multiplied by 50% or \$6,250 each on their separate returns.

Joint return after filing separate returns. If a husband and wife elect to file a joint return after the due date for filing the return, the maximum dollar limit on the joint return is the lesser of:

- 1) The maximum dollar limit (after applying the investment limit), or
- 2) The total cost of section 179 property they elected to expense on their separate returns.

Example 2. Assume Jack Elm and his wife in Example 1 had filed separate tax returns. On their separate returns, Jack elected to expense \$4,000 of section 179 property and his wife elected to expense \$2,000. If they subsequently file a joint return after the due date for that return, their maximum dollar limit for section 179 is \$6,000, the lesser of \$12,500 (the maximum dollar limit after applying the investment limit), or \$6,000 (the total amount they elected to expense on their separate returns).

Investment Limit

For each dollar of your business cost over \$200,000 for section 179 property placed in service in 1996, reduce the maximum dollar limit by one dollar (but not below zero). If your business cost of section 179 property placed in service during a tax year is \$217,500 or more, you cannot take a section 179 deduction and you are not allowed to carry over the cost that is more than \$217,500.

Example. In 1996, Jane Ash placed in service machinery costing \$207,000. Because this cost is \$7,000 more than \$200,000, she must reduce her maximum dollar limit of \$17,500 by \$7,000. If her taxable income is at least \$10,500 or more, she can claim a \$10,500 section 179 deduction for this year.

Increased section 179 deduction for enterprise zone businesses. The maximum deduction for section 179 property that is "qualified zone property" is increased to \$37,500 for "enterprise zone businesses."

Qualified zone property. Depreciable tangible property (including buildings), is qualified zone property if:

- 1) It is acquired (but not from a related party) after the zone designation is in effect,
- 2) Its original use in an empowerment zone begins with the person claiming the deduction, and

- 3) Substantially all of the property's use is in an empowerment zone and in the active conduct of a qualified trade or business in the zone.

Used property may be qualified zone property if it has not previously been used within an empowerment zone.

If property is substantially renovated by the person claiming the deduction, 1) and 2) above do not apply. Property has been substantially renovated if, during any 24-month period after the designation takes effect, the additions to the basis of the property are more than the greater of:

- 1) 100% of the adjusted basis at the beginning of the 24-month period, or
- 2) \$5,000.

Enterprise zone business. A corporation, partnership, or sole proprietorship is an enterprise zone business if for the tax year:

- 1) Every trade or business of a corporation or partnership is the active conduct of a "qualified business" within an empowerment zone. (This rule does not apply to sole proprietorships.)
- 2) At least 80% of the total gross income is from the active conduct of a "qualified business" within a zone.
- 3) Substantially all of its intangible property is within a zone.
- 4) Substantially all of its intangible property is used in, and exclusively related to, the active conduct of the business.
- 5) Substantially all of the employee's services are performed within a zone.
- 6) At least 35% of the employees are residents of an empowerment zone.
- 7) Less than 5% of the property owned by the business is certain financial property.
- 8) Less than 5% of the property owned by the business is collectibles not held primarily for sale to customers.

For a sole proprietorship, the term "employee" in 5) and 6) includes the proprietor.

Taxable Income Limit

The total cost that you can deduct each year is limited to the taxable income from the active conduct of any trade or business during the tax year. Generally, you are considered to actively conduct a trade or business if you meaningfully participate in the management or operations of the trade or business.

Figure taxable income for this purpose by totaling the net income (or loss) from all trades and businesses you actively conducted during the tax year. Items of income derived from a trade or business actively conducted by you include section 1231 gains (or losses) and interest

from working capital of your trade or business. Also include in total taxable income any wages, salaries, tips, or other pay earned as an employee. When figuring taxable income, do not take into account any unreimbursed employee business expenses you may have as an employee.

In addition, figure taxable income without regard to:

- 1) The section 179 deduction,
- 2) The self-employment tax deduction, and
- 3) Any net operating loss carryback or carryforward.

Any cost that is not deductible in one tax year under section 179 because of this limit can be carried to the next tax year.

Section 1231 gains and losses. Any recognized gains or losses from the following types of transactions are section 1231 gains or losses:

- 1) The sale or exchange of real property or depreciable personal property you used in a trade or business if you held it for more than 1 year,
- 2) The sale or exchange of cattle or horses you held for draft, breeding, dairy, or sporting purposes if you held them for 2 years or more,
- 3) The sale or exchange of livestock (other than cattle, horses, and poultry) you held for draft, breeding, dairy, or sporting purposes if you held it for 1 year or more,
- 4) The sale, exchange, or involuntary conversion of unharvested crops on land you used in farming if you sold, exchanged, or had to involuntarily convert the crop and land at the same time and to the same person and you held the land for more than 1 year,
- 5) The cutting of timber for sale or for use in your trade or business if you meet both of the following requirements:
 - a) You elect to treat the cutting as a sale or exchange.
 - b) You either owned the timber for more than 1 year or held a contract right to cut the timber for more than 1 year.
- 6) The disposal of timber held for more than 1 year under a cutting contract if you treat the disposal as a sale or exchange and you retain an economic interest in the timber.
- 7) The disposal of coal (including lignite) or iron ore (mined in the United States) you owned for more than 1 year under a contract in which you retain an economic interest in the coal or iron ore.

For more information about section 1231 gains and losses, see chapter 4 in Publication 544.

Two different taxable income limits. The section 179 deduction is subject to a taxable income limit. You also

may have to figure another deduction that has a limit based on taxable income. You may have to figure the limit for this other deduction taking into account the section 179 deduction. If so, complete the steps discussed next.

Step 1—Figure taxable income without either a section 179 deduction or the other deduction.

Step 2—Figure a hypothetical section 179 deduction using the taxable income figured in Step 1.

Step 3—Subtract the hypothetical section 179 deduction figured in Step 2 from the taxable income figured in Step 1.

Step 4—Figure a hypothetical amount for the other deduction using the amount figured in Step 3 as taxable income.

Step 5—Subtract the hypothetical other deduction figured in Step 4 from the taxable income figured in Step 1.

Step 6—Now figure your actual section 179 deduction using the taxable income figured in Step 5.

Step 7—Subtract your actual section 179 deduction figured in Step 6 from the taxable income figured in Step 1.

Step 8—Figure your actual other deduction using the taxable income figured in Step 7.

Example. XYZ is a corporation. During the tax year, the corporation purchased and placed in service qualifying section 179 property that cost \$10,000. It elects to expense as much as possible under section 179. The XYZ corporation also gave a charitable contribution of \$1,000 during the tax year. A corporation's deduction for charitable contributions cannot be more than 10% of its taxable income, figured after subtracting any section 179 deduction. The taxable income limit for the section 179 deduction is figured after subtracting any allowable charitable contributions. XYZ's taxable income figured without taking into account either any section 179 deduction or any deduction for the charitable contributions is \$12,000. XYZ figures its section 179 deduction and its deduction for charitable contributions as follows:

Step 1—Taxable income figured without either deduction is \$12,000.

Step 2—Using \$12,000 as taxable income, a hypothetical section 179 deduction of \$10,000 would be allowable.

Step 3—\$12,000 (from Step 1) minus \$10,000 (from Step 2) equals \$2,000.

Step 4—Using \$2,000 (from Step 3) as taxable income, a hypothetical charitable contribution (limited to 10% of taxable income) of \$200 is figured.

Step 5—\$12,000 (from Step 1) minus \$200 (from Step 5) equals \$11,800.

Step 6—Using \$11,800 (from Step 5) as taxable income, the actual section 179 deduction is figured.

Because the taxable income is at least \$10,000, XYZ can take a \$10,000 section 179 deduction.

Step 7—\$12,000 (from Step 1) minus \$10,000 (from Step 6) equals \$2,000.

Step 8—Using \$2,000 (from Step 7) as taxable income, the actual charitable contribution (limited to 10% of taxable income) of \$200 is figured.

Carryover of disallowed deduction. The amount you carry over will be taken into account in determining your section 179 deduction in the next tax year. In the tax year you place property in service, you can select the properties for which costs will be carried forward. You can allocate the portion of the costs to these properties provided your decisions are shown in your books and records.

If you do not make a selection, the total carryover will be allocated equally among the properties you elected to expense for the tax year. If you can deduct all or a portion of your total carryover in a subsequent year, you must deduct the costs being carried from the earliest tax year first.

Basis adjustment. Generally upon a sale or other disposition of section 179 property, or a transfer of section 179 property involving a transaction in which gain or loss is not recognized in whole or in part (including transfers at death), the adjusted basis of the property is increased before the sale or other disposition by the amount of disallowed section 179 deduction.

Neither the old nor the new owner can deduct any of the disallowed amount that is added to the basis of the property.

Partnerships and Partners

The section 179 deduction limits apply to both the partnership and to each partner. The partnership determines its section 179 deduction subject to the limits. It allocates the deduction among its partners.

Each partner adds the amount allocated from the partnership as shown on Schedule K-1 to his or her other nonpartnership business section 179 costs. Next the partner applies the maximum dollar limit to this total. This allows the partner to figure his or her section 179 deduction. To determine if a partner has passed the \$200,000 investment limit, the business cost of section 179 property placed in service by the partnership is not attributed to any partner. The total amount of each partner's (partnership and nonpartnership) section 179 deduction is subject to both the taxable income limit and the maximum dollar limit.

Figuring taxable income for a partnership. To figure taxable income (or loss) from the active conduct by a partnership of any trade or business, total the net income (or loss) from all trades or businesses actively conducted by the partnership during the tax year. To determine the total amount of partnership items, treat deductions and losses as negative income.

Partner's share of partnership taxable income. For purposes of section 179, if you are a partner engaged in the active conduct of one or more of a partnership's trades or businesses, you include some of the partnership's taxable income as your taxable income from the active conduct of a trade or business. You include your allocable share of taxable income derived from the partnership's active conduct of any trade or business.

For purposes of section 179, if the tax year of you and the partnership differ, the amount of the partnership's taxable income attributable to you for a tax year is determined by the partnership tax year that ends with or within your tax year.

Example. John Oak and James Oak are equal partners in Oak Company. Oak Company uses a tax year ending January 31. John and James both use a tax year ending December 31. For Oak Company's tax year ending January 31, 1996, it has taxable income from the active conduct of its trade or business of \$80,000, of which \$70,000 was earned during 1995. John and James each include \$40,000 of partnership taxable income in computing their taxable income limit.

Basis adjustment. You must reduce the basis of your partnership interest by the total amount of section 179 expenses allocated from the partnership regardless of whether you can currently deduct the full amount of allocated section 179 expense. If you dispose of your interest in a partnership, your basis for determining gain or loss is increased by any outstanding carryover of disallowed deduction of section 179 expenses allocated from the partnership.

The basis of a partnership's section 179 property must be reduced by the section 179 deduction elected by the partnership. This reduction of basis must be made even if a partner cannot deduct all or part of the section 179 deduction allocated to that partner by the partnership because of the limits.

Example. In 1996, Beech Partnership placed in service section 179 property with a total business cost of \$204,000. The partnership's income for the year was \$17,500. The partnership must reduce its maximum deduction allowed (\$17,500) by \$4,000 (\$204,000 - \$4,000). The maximum section 179 deduction for the partnership is \$13,500. The partnership allocates this \$13,500 equally to its two partners, Ann and Dean.

Ann had no other section 179 property placed in service this year. In addition to being a partner in the Beech Partnership, she also operates a business as a sole proprietorship. This business has taxable income of more than \$7,000. She can claim the \$6,750 allocated to her by Beech as a section 179 deduction.

In addition to being a partner in Beech Partnership, Dean also operates a business as a sole proprietorship. This year he placed \$15,500 of qualifying section 179 property in service in his sole proprietorship business. This business had taxable income of \$20,000. He is also a partner in the Cedar Partnership, which allocated him a section 179 amount of \$7,000. Because he has a total

section 179 deduction allocated from the partnerships of \$13,750 (\$6,750 from Beech and \$7,000 from Cedar), he can elect a section 179 deduction of only \$3,750 for the property from his sole proprietorship because his maximum section 179 deduction is \$17,500.

S Corporations

The rules that apply to a partnership and its partners also apply to an S corporation and its shareholders. The limits apply to an S corporation and to each shareholder. The corporation allocates the deduction to the shareholders who then take their section 179 deduction subject to the limits.

Figuring taxable income for an S corporation. To figure taxable income (or loss) from the active conduct by an S corporation of any trade or business, you add up the net income (or loss) from all trades or businesses actively conducted by the S corporation during the tax year.

To figure the net income or loss from a trade or business actively conducted by an S corporation, you take into account the items from that trade or business that are passed through to the shareholders and used in determining each shareholder's tax liability. However, you do not take into account any credits, tax-exempt income, and deductions for the pay of shareholder-employees. When figuring the amount of each item, disregard any limits that must be taken into account when figuring a shareholder's taxable income.

Other Corporations

A corporation's taxable income from its active conduct of any trade or business is its taxable income figured with the following changes:

- 1) It is figured before deducting any net operating loss deduction, or special deductions (as reported on the corporation's income tax return).
- 2) It is adjusted for items of income or deduction that were not derived from a trade or business actively conducted by the corporation during the tax year.

Passenger automobiles. For passenger automobiles placed in service in 1996, the total of the section 179 and depreciation deductions cannot be more than \$3,060 for 1996. For more information, see *Special Rule for Passenger Automobiles*, later.

Section 179 Worksheet

We designed the following worksheet to help you figure your section 179 deduction and carryover. It takes into account the limits discussed (except for the limit on passenger automobiles). However, to make the election to expense under section 179, you must complete and attach a Form 4562 to your return.

Section 179 Deduction Worksheet

Step 1: Maximum dollar limit \$ 17,500

Step 2: Enter total business cost of all qualifying property placed in service in tax year. \$ _____

Note. If Step 2 is \$217,500 or more, you cannot elect section 179 for this year.

Step 3: Threshold cost of section 179 property. \$ 200,000

Step 4: Subtract Step 3 from Step 2. If Step 2 is less than Step 3, enter -0-. \$ _____

Step 5: Subtract Step 4 from Step 1. This is your reduced maximum dollar limit. If Step 1 is less than Step 4, enter -0-. \$ _____

Step 6: Enter amount you elect to expense under section 179. (Do not enter more than Step 2.). \$ _____

Step 7: Enter the smaller of Step 5 or Step 6. This is your tentative deduction. \$ _____

Step 8: Enter any section 179 carryover from prior years. \$ _____

Step 9: Enter the smaller of your 1996 taxable income limit or the Step 5 amount. \$ _____

Step 10: Add Step 7 and Step 8. Do not enter more than your Step 9 amount. (No more than \$3,060 can be entered on this line for a passenger automobile.) This is your 1996 section 179 deduction. \$ _____

Carryover to 1997:

Step 11: Add Steps 7 and 8. \$ _____

Step 12: Enter Step 10 amount. \$ _____

Step 13: Subtract Step 12 from Step 11. This is your carryover to 1997. \$ _____

When To Recapture the Deduction

If you claim a section 179 deduction for the cost of property and, in a year after you place it in service, you do not use it predominantly for business, you may have to recapture part of the deduction. This can occur in any tax year during the recovery period for the property. Recovery periods for property are discussed later in *Property*

Classes and Recovery Periods under *How To Figure the Deduction Using Percentage Tables* in chapter 3.

If you elect a section 179 deduction, treat the amount deducted as depreciation for purposes of the recapture rules. You may have to treat any gain you realize from a sale, exchange or other disposition of the property as ordinary income up to the section 179 and depreciation deductions you claimed. Ordinary income is income that is entirely taxable.

Report any recapture of the section 179 deduction on Form 4797.

How To Figure the Recapture

To figure the amount to include in income, subtract the depreciation that would have been allowable on the section 179 amount for prior tax years and the tax year of recapture from the section 179 deduction claimed.

Example 1. Shirley Butler, a calendar year taxpayer, bought and placed in service in her business on February 12, 1994, an item of 3-year property costing \$5,000. She elected a section 179 deduction of \$5,000 for the property. Since she deducted the full cost of the property in 1994, she cannot claim any depreciation for it in 1994. She used the property in her business for all of 1995.

For all of 1996, Shirley used the property only for personal use. Because of the change from business to personal use, she must recapture the benefit she got from the section 179 deduction claimed in 1994. Shirley figures her recapture amount as follows:

Section 179 deduction claimed (1994)	\$5,000.00	
Allowable depreciation (instead of Section 179):		
1994 — \$5,000 × 33.33%*	\$1,666.50	
1995 — \$5,000 × 44.45%*	2,222.50	3,889.00
1996 — Recapture amount		<u>\$1,111.00</u>

*Rates from Table A-1 (3-Year Property)

She must include \$1,111 in income for the 1996 tax year. This is \$5,000 (the amount claimed in 1994) minus \$3,889 (the depreciation that would have been allowable in 1994 and 1995). Because she did not use the property for business or investment purposes in 1996, she cannot claim any depreciation for 1996.

Example 2. Paul Lamb, a calendar year taxpayer, bought and placed in service on August 1, 1994, an item of 3-year property costing \$10,000. The property is not listed property. He used the property only for business in 1994 and 1995. He elected a section 179 deduction of \$5,000 for it. During 1996, he used the property 40% for business and 60% for personal use. He figures his recapture amount as follows:

Section 179 deduction claimed (1994)	\$5,000.00	
Allowable depreciation (instead of section 179):		
1994 — \$5,000 × 33.33%*	\$1,666.50	
1995 — \$5,000 × 44.45%*	2,222.50	
1996 — \$5,000 × 14.81%* × 40%		
(business)	296.20	4,185.20
1996 — Recapture amount		<u>\$ 814.80</u>

*Rates from Table A-1 (3-Year Property)

Paul must include \$814.80 in income for 1996. This is \$5,000 – \$4,185.20 (\$1,666.50 + \$2,222.50 + \$296.20).

Dispositions. If you elect the section 179 deduction, treat the amount deducted as depreciation for purposes of the recapture rules. You must treat any gain you realize on disposition of your property as ordinary income up to the total of the section 179 and depreciation deductions taken. See *Depreciation Recapture on Personal Property* in Publication 544.

Installment sales. For an installment sale of qualifying property, you must generally include as ordinary income in the year of sale any depreciation recapture income up to the amount of gain even if you receive no payments in the year of sale. See Publication 537.

3.

Modified Accelerated Cost Recovery System (MACRS)

Topics

This chapter discusses:

- What MACRS is
- What can be depreciated under MACRS
- What cannot be depreciated under MACRS
- How to figure the deduction
- Dispositions
- General asset accounts

Useful Items

The Modified Accelerated Cost Recovery System (MACRS) is the name given to tax rules for getting back (recovering) through depreciation deductions the cost of property used in a trade or business or to produce income. These rules generally apply to tangible property placed in service after 1986. Exceptions to these rules may prevent certain individuals from using MACRS. These exceptions are discussed in *What Cannot Be Depreciated Under MACRS*, later.

MACRS Defined

Terms you may need to know (see Glossary):

Basis
 Class lives
 Convention
 Declining balance method
 Disposed
 Nonresidential real property
 Placed in service
 Property class
 Recovery period
 Residential rental property
 Straight line method

MACRS consists of two systems that determine how you depreciate your property. The main system is called the **General Depreciation System (GDS)** while the second system is called the **Alternative Depreciation System (ADS)**. Unless you are specifically required by law to use ADS or you elect it, you generally use GDS to figure your depreciation deduction. Property for which you are required by law to use ADS and how to elect ADS are discussed in *What Can Be Depreciated Under MACRS*, later. The main **difference between the two systems**

is that ADS generally provides for a longer recovery period and uses only the straight line method of depreciation to figure a deduction.

Both GDS and ADS have pre-established class lives for most property. Under GDS, most property is assigned to eight property classes based on these class lives. These property classes provide the recovery period to be used (that is, they establish the number of years over which you recover the cost of an item in a class). Property classes and recovery periods are discussed in *How To Figure the Deduction Using Percentage Tables*, later.

Both systems simplify the way you figure your deduction by providing three preset conventions. They determine how many months you can depreciate your property in the first year it is placed in service and in the year of disposition. These conventions are:

- 1) For all nonresidential real and residential rental property — the mid-month convention, and
- 2) For all other property,
 - a) Generally the half-year convention, or
 - b) If the basis of property placed in service during the last three months of the tax year (excluding residential rental, nonresidential real property and property placed in service and disposed of in the same year) is more than 40% of the total bases of all property placed in service for the entire year — the mid-quarter convention.

These conventions are discussed in *How To Figure the Deduction Using Percentage Tables*, later.

MACRS provides five ways to depreciate property.

- 1) The 200% declining balance methods over a GDS recovery period,
- 2) The 150% declining balance method over a GDS recovery period,
- 3) The 150% declining balance method over an ADS recovery period (if elected),
- 4) The straight line method over a GDS recovery period, and
- 5) The straight line method over an ADS recovery period.

You can elect to use ADS for property that qualified for GDS.

The IRS has established percentage tables to make it easier for you to figure your deduction for all MACRS methods. The various ways to depreciate property, elections you can make, and the percentage tables are discussed in *How To Figure the Deduction Using Percentage Tables*, later.

To use GDS or ADS to figure your depreciation deduction, you must first know what property can be depreciated under each system. This is discussed next.

What Can Be Depreciated Under MACRS

MACRS applies to most tangible depreciable property placed in service after 1986. Property for which you cannot use MACRS is discussed later in *What Cannot Be Depreciated Under MACRS*.

Use of real property changed. You must use MACRS to depreciate all real property you acquired before 1987 that you changed from personal use to a business or income-producing use after 1986.

When To Use GDS

Terms you may need to know (see Glossary):

Declining balance method
Recovery period

Most tangible depreciable property falls within the general rule of MACRS, also called the General Depreciation System (GDS). As discussed earlier in *MACRS Defined*, the major differences between GDS and ADS are the recovery period and method of depreciation you use to figure the deduction. Because GDS permits use of the declining balance method over a shorter recovery period, the deduction is greater in the earlier years.

However, the law requires you to use ADS for certain property as discussed under *When To Use ADS*, next.

Although your property may qualify for GDS, you can elect to use ADS. If you make this election, however, you can never revoke it. How to make this election is discussed in *Election of ADS*, later.

When To Use ADS

Terms you may need to know (see Glossary):

Placed in service
Recovery period
Straight line method
Tax-exempt

Under ADS, you determine your deduction by using the straight line method over a recovery period that generally is longer than the recovery period under GDS. The ADS system is required for:

- 1) Any tangible property used predominantly outside the United States during the year,
- 2) Any tax-exempt use property,
- 3) Any tax-exempt bond-financed property,
- 4) Any imported property covered by an executive order of the President of the United States, and

- 5) Any property used predominantly in a farming business and placed in service during any tax year in which you make an election not to apply the uniform capitalization rules to certain farming costs.

What Cannot Be Depreciated Under MACRS

Terms you may need to know (see Glossary):

Placed in service
Standard mileage rate
Unit-of-production method

You cannot use MACRS for certain property because of special rules that exclude it from MACRS. You can elect to exclude certain other property from being depreciated under MACRS.

Property that you cannot depreciate using MACRS includes:

- 1) Intangible property,
- 2) Any motion picture film or video tape,
- 3) Any sound recording,
- 4) Certain real and personal property placed in service before 1987, and
- 5) Property you elect to exclude from MACRS that is properly depreciated under a method of depreciation that is not based on a term of years.

Property Placed in Service Before 1987

There are special rules that may prevent you from using MACRS for property placed in service by you or anyone (for any purpose) before 1987 (before August 1, 1986, if MACRS was elected). These rules apply to both personal and real property. However, the rules for personal property are more restrictive.

For these rules, do not treat real or personal property as owned before you placed it in service. If you owned property in 1986 but did not place it in service until 1987, you do not treat it as owned in 1986.

Example. Sandra Coffee bought and took delivery of an item of personal property in November 1986. The property was not installed and operational until February 1987. Although she actually owned the property in 1986, it was not placed in service until 1987. For purposes of these rules, she does not consider the property as owned by her until 1987.

Personal property. You cannot use MACRS for most personal property (section 1245 property) that you acquired after 1986 (after July 31, 1986, if MACRS was elected) if:

- 1) You or someone related to you owned or used the property in 1986,
- 2) The property was acquired from a person who owned it in 1986 and as part of the transaction the user of the property did not change,
- 3) You lease the property to a person (or someone related to this person) who owned or used the property in 1986, or
- 4) The property was acquired in a transaction in which:
 - a) The user of the property did not change, and
 - b) The property was not MACRS property in the hands of the person from whom it was acquired because of 2) or 3).

Real property. You cannot use MACRS for certain real property. This includes real property acquired after 1986 (after July 31, 1986, if MACRS was elected) if:

- 1) You or someone related to you owned the property in 1986, or
- 2) You lease the property back to the person (or someone related to this person) who owned the property in 1986, or
- 3) You acquired the property in a transaction in which some of your gain or loss was not recognized. MACRS applies only to that part of your basis in the acquired property that represents cash paid or unlike property given up. It does not apply to the substituted portion of the basis.

This rule does not apply to nonresidential real property or residential rental property.

Special rule. The excluded property rules do not apply to any property if the allowable deduction for the property for the first tax year it is placed in service under ACRS is greater than the deduction under MACRS using the half-year convention.

For property placed in service before 1981 that is transferred to a related person or converted from personal to business use after 1986, use the straight line or declining balance method. These methods are based on salvage value and useful life. See Publication 534.

ACRS will apply to property you placed in service after 1980 and before 1987 if it was transferred to a related person or converted from personal to business use after 1986. However, you must depreciate this property under MACRS if ACRS produces a larger deduction than MACRS.

Example. On March 3, 1996, you bought machinery from your father, who bought it on November 1, 1986.

You used it only for business in 1996. Because your father owned and used the machinery in 1986, it is excluded property. Its depreciable basis is \$1,000. Under ACRS, your deduction would be \$150 (15%, first year ACRS percentage for 5-year property \times \$1,000). Under MACRS, the machinery is also 5-year property. The deduction would be \$200 [(40% \times \$1,000) \times 50%]. Because the depreciation for the machinery under MACRS is greater than that under ACRS, you must use ACRS to depreciate it.

More information. See Publication 534 for information on how to figure ACRS and other methods of depreciation.

Related Parties

In determining whether the owner or user of property has changed, a person is considered related to the owner or user if a relationship described in the following rules applied. You must make the determination of whether a person is related to another at the time you acquire the property involved. A partnership acquiring property from a terminating partnership must make its determination of whether it is related to the terminating partnership immediately before the event causing the termination. If a partnership terminates because of the sale or exchange, within 12 months, of 50% or more of its total interest in partnership capital or profits, this rule applies.

The law treats the following as related parties:

- 1) An individual and a member of his or her immediate family, including a spouse, child, parent, brother, sister, half-brother, or half-sister, or any ancestor or lineal descendant.
- 2) A corporation and an individual who owns directly or indirectly more than 10% of the value of the outstanding stock of that corporation.
- 3) Two corporations that are members of the same controlled group.
- 4) A fiduciary of a trust and a corporation, if more than 10% of the value of the outstanding stock is owned directly or indirectly by or for the trust or grantor of the trust.
- 5) The grantor and fiduciary of any trust, and the fiduciary and beneficiary of any trust.
- 6) The fiduciaries of two different trusts, and the fiduciaries and beneficiaries of two different trusts, if the same person is the grantor of both trusts.
- 7) Certain educational and charitable organizations and any person (if an individual, including the members of the individual's family) who directly or indirectly controls the organization.
- 8) A partnership and a person who owns directly or indirectly an interest of more than 10% of the capital or profits of the partnership.
- 9) Two partnerships, if the same persons directly or indirectly own more than 10% of the capital or profits of each.
- 10) The related person and a person who are engaged in trades or businesses under common control (see section 52(a) and (b) of the Internal Revenue Code).
- 11) Two S corporations if the same persons own more than 10% in value of the outstanding stock of each corporation.
- 12) An S corporation and a corporation that is not an S corporation if the same persons own more than 10% in value of the outstanding stock of each corporation.
- 13) A corporation and a partnership if the same persons own:
 - a) More than 10% in value of the outstanding stock of the corporation, and
 - b) More than 10% of the capital interest or profits interest in the partnership.

Constructive ownership of stock. To determine whether an individual constructively owns (or is considered to own) any of the outstanding stock of a corporation, apply the following rules:

- 1) Stock owned by or for a corporation, partnership, estate, or trust is constructively owned proportionately by or for its shareholders, partners, or beneficiaries,
- 2) An individual constructively owns the stock owned by or for the individual's family, and
- 3) An individual owning, except by applying rule 2), any stock in a corporation, constructively owns the stock owned by or for the individual's partner.

For purposes of rules 1), 2), and 3), a person is treated as owning stock that he or she constructively owns by applying rule 1). But if an individual constructively owns stock because of rule 2) or 3), he or she does not own the stock for purposes of applying either rule 2) or 3) to make another person the constructive owner of the same stock.

Constructive ownership of a partnership interest. Apply rules 1) and 2), just discussed, to determine if a person owns more than a 10% interest in the capital or profits of a partnership. A person is treated as owning an interest that he or she constructively owns when applying rule 1). But, if an individual constructively owns an interest because of rule 2), that individual is not treated as owning the interest for purposes of applying rule 2) to make another person the constructive owner of that interest.

Certain nontaxable transfers of property. MACRS does not apply to property involved in certain nontaxable transfers. This applies to property used before 1987 and

transferred after 1986 to a corporation or partnership if its basis is determined by reference to the basis in the hands of the transferor or distributor. If MACRS was elected, it also applies to property used before August 1, 1986, and transferred after July 31, 1986, to a corporation or partnership if its basis is determined by reference to the basis in the hands of the transferor or distributor.

The nontaxable transfers covered by this rule include:

- 1) A distribution in complete liquidation of a subsidiary,
- 2) A transfer to a corporation controlled by the transferor,
- 3) An exchange of property solely for corporate stock or securities in a reorganization,
- 4) A contribution of property to a partnership in exchange for a partnership interest, and
- 5) A partnership distribution of property to a partner.

When figuring depreciation, the transferee is treated as the transferor to the extent of the amount of the transferor's adjusted basis. The transferee is the person receiving the property and the transferor is the person giving up the property. The transferee cannot use MACRS for the adjusted basis carried over from the transferor. However, MACRS applies to that part of the new basis not represented by the carried-over adjusted basis.

Election To Exclude Property from MACRS

If you properly depreciate any property under a method not based on a term of years, such as the unit-of-production method, you can elect to exclude that property from MACRS. You must make this election by the return due date (including extensions) for the tax year you place your property in service. You make it by reporting your depreciation for the property on line 18 of Part III of Form 4562 and attaching a statement as described in the Instructions for Form 4562.

Use of Standard Mileage Rate

If you use the standard mileage rate to figure your tax deduction for your business automobile, you are treated as having made an election to exclude the automobile from MACRS. See Publication 463 for a discussion of the standard mileage rate.

How To Figure the Deduction Using Percentage Tables

Once you determine that your property can be depreciated under MACRS and whether it falls under GDS or ADS, you are ready to figure your deduction. To figure your MACRS deduction each year, you need to know the following information about your property:

- 1) Its basis,
- 2) Its property class and recovery period,

- 3) Its placed-in-service date,
- 4) Which convention to use, and
- 5) Which depreciation method to use.

Basis

Terms you may need to know (see Glossary):

Abstract fees
Adjusted basis
Basis
Business/investment use
Fair market value (FMV)
Nontaxable exchange
Taxable exchange

To figure your depreciation deduction, you must determine the basis of your property. To determine basis, you need to know the cost or other basis of your property. If you bought the property, your basis is the amount you paid for the property plus any sales tax, freight charges, and installation and testing fees. Other basis refers to basis that is determined by the way you received the property. For example, you may have received the property through a taxable or nontaxable exchange, for services you performed, as a gift, or as an inheritance. If you received property in this or some other way, see Publication 551 to determine your basis.

Cost as Basis

The basis for property is generally its cost. This includes any amount you pay for the property in cash, other property, or services.

Assumed debt. If you assume the seller's mortgage or other debt on the property, your cost includes the amount you assume.

Example. You pay a \$20,000 down payment and assume the seller's mortgage of \$120,000. Your total cost is \$140,000, the cash you paid plus the mortgage you assumed.

Settlement fees and other costs. The basis of real property also includes certain fees and charges you pay with the purchase. These fees are generally shown on your settlement statement.

If you buy real property and agree to pay taxes the seller owed on it, add the taxes you pay to the basis of your property. Other fees or charges you pay that you should add to the basis of your property include:

- 1) Legal and recording fees,
- 2) Abstract fees,
- 3) Survey charges,
- 4) Transfer taxes,
- 5) Title insurance, and

- 6) Amounts the seller owed that you pay, such as back taxes, interest, recording or mortgage fees, and sales commissions.

Property you construct or build. If you construct, build, or otherwise produce property for use in your business, you may have to use the uniform capitalization rules to determine the basis of your property. For information about the uniform capitalization rules, see Publication 551.

Adjusted Basis

After you determine your basis, you may have to make certain adjustments (increases and decreases) for items occurring between the time you acquired the property and the time you placed it in service. These items include: costs for having utility lines installed, costs for legal fees for perfecting the title, zoning costs, costs of barrier removal, and rebates. For a discussion of items that may affect the basis of your property before you put it in service, see *Adjusted Basis* in Publication 551.

Basis of Property Changed from Personal Use

If you held property for personal use and later change it to business use or use in the production of income, your basis is the lesser of:

- 1) The fair market value (FMV) of the property on the date you change it from personal use, or
- 2) Your original cost or other basis adjusted as follows:
 - a) Increased by the cost of any permanent improvements or additions and other costs that must be added to basis, and
 - b) Decreased by any tax deductions you claimed for casualty losses and other charges to basis claimed on earlier years' income tax returns.

Example. Several years ago Nia paid \$60,000 to have her home built on a lot that cost her \$10,000. Before changing the property to rental use last year, she paid \$20,000 for permanent improvements to the house and claimed a \$2,000 casualty loss deduction for damage to the house. Because land is not depreciable, she can only include the cost of the house when figuring the basis for depreciation.

Nia's adjusted basis in the house when she changes its use is \$78,000 ($\$60,000 + \$20,000 - \$2,000$). On the date of change in use her property has an FMV of \$80,000, of which \$15,000 is for the land and \$65,000 is for the house. The basis for depreciation on the house is the FMV on the date of change (\$65,000), because it is less than her adjusted basis (\$78,000).

Use of Property

If you use an item of property for more than one purpose, you must determine how much of your use of the property is for each of the following:

- 1) Business use,
- 2) Investment use, and
- 3) Personal use.

Combine investment use with business use to figure your depreciation deductions. Do not consider investment use, however, when determining whether listed property is used predominantly in a qualified business use. Listed property is discussed later in chapter 4.

Property Classes and Recovery Periods

Terms you may need to know (see Glossary):

Basis
Class life
Placed in service
Property class
Recovery period
Section 1250 property
Straight line method

Under MACRS, property is assigned to one of several property classes. These property classes establish the recovery periods (number of years) over which you recover the basis of your property. The class your property is assigned to is generally determined by its class life. For example, property with a class life of 4 years or less is in the 3-year property class. The complete list of class lives and recovery periods for property is in the *Table of Class Lives and Recovery Periods* in Appendix B.

GDS

Under GDS, most tangible property is assigned to one of eight main property classes. The following is a list of the eight property classes with examples of the property included in each.

3-year property. This class includes tractor units for over-the-road use and any race horse over 2 years old when placed in service. It also includes any other horse over 12 years old when placed in service.

5-year property. This class includes automobiles, taxis, buses, trucks, computers and peripheral equipment, office machinery (such as typewriters, calculators, copiers, etc.), and any property used in research and experimentation. It also includes breeding cattle and dairy cattle.

7-year property. This class includes office furniture and fixtures such as desks, files, safes, etc.

Any **property that does not have a class life** and that has not been designated by law as being in any other class is also 7-year property.

10-year property. This class includes vessels, barges, tugs, similar water transportation equipment, any single purpose agricultural or horticultural structure, and any tree or vine bearing fruits or nuts.

15-year property. This class includes certain depreciable improvements made directly to land or added to it, such as shrubbery, fences, roads, and bridges.

20-year property. This class includes farm buildings (other than agricultural or horticultural structures).

Nonresidential real property. This class includes section 1250 property that is not:

Residential rental property (defined next), or

Property with a class life of less than 27.5 years.

The recovery period for nonresidential real property is:

- 39 years for property you placed in service **after** May 12, 1993, or
- 31.5 years for property you placed in service **before** May 13, 1993.

However, property you placed in service before January 1, 1994, will not be subject to the longer recovery period if you or a “qualified person” entered into a binding written contract to purchase or construct the property before May 13, 1994, or you (or a qualified person) began construction of the property before May 13, 1993. A **qualified person** is anyone who transfers a contract or property to you so long as the property was not put in service by the transferor.

Residential rental property. This class includes real property such as a rental home or structure (including a mobile home) if 80% or more of its gross rental income for the tax year is from dwelling units. A dwelling unit is a house or apartment used to provide living accommodations in a building or structure. It does not include a unit in a hotel, motel, inn, or other establishment where more than half the units are used on a transient basis. If you occupy any part of the building or structure for personal use, its gross rental income includes the fair rental value of the part you occupy. The recovery period for this property is 27.5 years.

Office in the home. If you begin to use part of your home as an office after 1986, depreciate that part of your home as nonresidential real property over 39 years (31.5 years for property you placed in service **before** May 13, 1993) under GDS. See Publication 587 for a discussion of the tests you must meet to claim expenses, including depreciation, for the business use of your home.

Water utility property. Depreciate water utility property placed in service after June 12, 1996 (unless placed in service under a binding contract in effect before June 10, 1996, and at all times until the property is placed in service), using the straight line method over a 25 year recovery period.

Water utility property is:

- 1) Property that is an integral part of the gathering, treatment, or commercial distribution of water, and that, without regard to this provision, would have a 20-year recovery period, and
- 2) Any municipal sewer.

Gas station convenience stores. Property that is 15-year property includes service station buildings and other land improvements used in the marketing of petroleum and petroleum products (but not facilities related to petroleum and natural gas trunk pipelines).

Effective for property placed in service after August 19, 1996, 15-year property also includes real property that is depreciable under MACRS and that is a **retail motor fuels outlet**, even if food or other convenience items are sold at the outlet. You can choose to treat this property as 15-year property even if you placed it in service before August 20, 1996.

Retail motor fuels outlet. Real property is a retail motor fuels outlet if it meets any one of the following three tests.

- 1) It is a building of no more than 1,400 square feet.
- 2) 50% or more of the gross revenues that are generated from the property are derived from petroleum sales.
- 3) 50% or more of the floor space in the property is devoted to petroleum marketing sales.

However, a retail motor fuels outlet does not include any facility related to petroleum and natural gas trunk pipelines. It also does not include any real property not used to a substantial extent in the retail marketing of petroleum or petroleum products.

Personal homes changed to rental use. If you begin to rent a home after 1986 that was your personal home before 1987, you depreciate it as residential rental property over 27.5 years under GDS.

Additions or improvements to property. Treat additions or improvements you make to any property, including **leased property**, as separate property items for depreciation purposes. The recovery period for an addition or improvement to property begins on the later of:

- 1) The date you place the addition or improvement in service, or
- 2) The date you place the property to which the addition or improvement was made in service.

The class and recovery period of the addition or improvement is the one that would apply to the underlying property if you placed it in service at the same time as the addition or improvement.

Example. You own a rental home which you have been renting out since 1981. If you put an addition on the home which you place in service this year, use MACRS for it. Under GDS, the property class for the addition is residential rental property and its recovery period is 27.5 years because the home to which the addition is made would be residential rental property if you placed it in service this year.

Consumer durable property. If you are a rent-to-own dealer of consumer durable property, you must depreciate the property under MACRS. This property is included in asset class 57.0, *Distributive Trades and Services*, in the *Table of Class Lives and Recovery Periods* in *Appendix B* near the end of this publication. Consumer durable property is 5-year property. The recovery period is 5 years under GDS and 9 years under ADS. You **cannot use the income forecast method** of depreciation for consumer durable property subject to rent-to-own contracts.

Shorter Recovery Period for Property Used on Indian Reservations

You can use shorter recovery periods for qualified property that you placed in service on an Indian reservation after 1993. These recovery periods are discussed later under *Recovery periods*.

Qualified property. Property eligible for the shorter recovery periods is 3—, 5—, 7—, 10—, 15—, and 20— year property and nonresidential real property. You must use this property predominantly in the active conduct of a trade or business within an Indian reservation. Real property you rent to others that is located on an Indian reservation is eligible for the shorter recovery periods.

To be qualified property, the property must **not** be:

- 1) Used or located outside an Indian reservation on a regular basis,
- 2) Acquired directly or indirectly from a related person (discussed later), or
- 3) Placed in service for purposes of conducting or housing class I, II, or, III gaming (as defined in section 4 of the Indian Regulatory Act (25 U.S.C. 2703)).

Qualified property does not include any property you must depreciate under the Alternative Depreciation System (ADS). Determine whether property is qualified without regarding the election to use ADS and after applying the special rules for listed property not used predominantly in a qualified business (discussed later).

Qualified infrastructure property. Item 1 above does not apply to qualified infrastructure property located outside the reservation that is used to connect

with qualified infrastructure property within the reservation. To be qualified property, it must:

- 1) Meet the rules stated above under *Qualified property* (except that it can be outside the reservation),
- 2) Benefit the tribal infrastructure,
- 3) Be available to the general public, and
- 4) Be placed in service in connection with the active conduct of a trade or business within a reservation.

Infrastructure property includes, but is not limited to, roads, power lines, water systems, railroad spurs, and communications facilities.

Related persons. A related person is:

- 1) A person who bears a relationship to you as described in the list of related persons in chapter 2, except that 10% is substituted for 50% each place it appears and related persons also includes brothers and sisters, or
- 2) A person with whom you are engaged in trades or businesses that are under common control as described in section 52(a) and 52(b) of the Internal Revenue Code.

Indian reservation. The term “Indian reservation” means a reservation as defined in section 3(d) of the Indian Financing Act of 1974 (25 U.S.C. 1452(d)) or section 4(10) of the Indian Child Welfare Act of 1978 (25 U.S.C. 1903(10)).

Recovery periods. The applicable recovery periods for Indian reservation property are as follows:

Property Class	Recovery Period
3-year	2 years
5-year	3 years
7-year	4 years
10-year	6 years
15-year	9 years
20-year	12 years
Nonresidential real property	22 years

ADS

As discussed earlier in *When To Use ADS* under *What Can Be Depreciated Under MACRS*, you must use ADS for certain property. It was also pointed out that you can elect to use ADS even if property qualifies for GDS. This election is discussed later in *Election of ADS* under *Depreciation Methods*. If you use ADS, you will recover the cost of your property using the straight line method of depreciation. The recovery periods for most property are generally longer under ADS than they are under GDS. Some of the ADS recovery periods are as follows:

Property	Recovery Period
Nonresidential real and residential rental property	40 years
Automobiles and light duty trucks	5 years
Computers and peripheral equipment	5 years
High technology telephone station equipment installed on customer premises	5 years
High technology medical equipment	5 years
Single purpose agricultural and horticultural structures	15 years
Any tree or vine bearing fruit or nuts	20 years
Personal property with no class life	12 years

The ADS recovery periods for many items of property can be found in the tables at the end of this publication in Appendix B.

ADS recovery periods for property not listed in Appendix B tables. For all personal property that is not listed in Appendix B that has a class life, the recovery period is the class life. Any personal property without a class life has a recovery period of 12 years. For all section 1245 real property not listed in the tables, the recovery period is 40 years.

Placed-in-Service Date

As discussed in chapter 1 under *Placed in Service in When Depreciation Begins and Ends*, depreciation begins when you place your property in service in a trade or business or for the production of income. For example, if you place property in service for personal use, you cannot claim depreciation. If you change the property use to a business or income-producing activity, you begin to depreciate it at the time of the change in use.

Example 1. Donald Steep bought a machine for his business. It was delivered last year. However, it was not installed and operational until this year. Because it was not operational last year, it is considered placed in service this year. If the machine had been ready for use when it was delivered, it would be considered placed in service last year even if it was not actually used until this year.

Example 2. On April 6 Sue Thorn bought a house to use as residential rental property. She made several repairs and had it ready for rent on July 5. At that time, she began to advertise it for rent in the local newspaper. The house is considered placed in service in July when it was ready and available for rent. She can begin to depreciate it in July.

Example 3. James Elm is a building contractor who specializes in constructing office buildings. He bought a truck last year. It was delivered by the dealer to Reinforcements, Inc., for installing heavy duty lifting equipment. The truck had to be modified to lift materials to second-story levels. The installation of the lifting equipment was completed on January of this year. James accepted delivery of the modified truck on January 10. The truck was placed in service on January 10, the date it was ready and available to perform the function for which it was bought.

Conventions

Terms you may need to know (see Glossary):

- Basis
- Disposed
- Nonresidential real property
- Placed in service
- Residential rental property

To figure your depreciation deduction for both GDS and ADS, you use one of three conventions:

- 1) The half-year convention,
- 2) The mid-month convention, or
- 3) The mid-quarter convention.

The Half-Year Convention

Generally, you use this convention for property other than nonresidential real and residential rental property. In certain circumstances, you may have to use the mid-quarter convention (discussed later) for this property. Under the half-year convention, you treat all property placed in service or disposed of during a tax year as placed in service or disposed of at the midpoint of the year. This means that no matter when in the year you begin or end the use of the property, you treat it as if you began or ended its use in the middle of the year.

The Mid-Month Convention

This convention is used for:

- Nonresidential real property, and
- Residential rental property.

Under this convention, you treat all property placed in service or disposed of during a month as placed in service or disposed of at the midpoint of the month. This means that no matter when during a month you place property in service or dispose of it, you treat it as being placed in service or disposed of in the middle of the month.

The Mid-Quarter Convention

You must apply this convention to your property (other than nonresidential real property and residential rental property) under certain circumstances. These circumstances occur during any tax year when the total depreciable bases of MACRS property you placed in service during the last three months of that year are more than 40% of the total depreciable bases of all MACRS property you placed in service during the entire year. When that happens, you must use this convention for all MACRS property you placed in service during the year. To determine the total bases of property, do not include the basis of either:

- Nonresidential real property, or
- Residential rental property, or
- Property you placed in service and disposed of in the same year.

To determine whether you must use the mid-quarter convention, the depreciable basis of property is your basis multiplied by the percentage of business/investment use and then reduced by:

- 1) The amount of amortization taken on the property,
- 2) Any section 179 deduction claimed on the property, and
- 3) Any deduction claimed for clean-fuel vehicles or for clean-fuel vehicle refueling property.

Under the mid-quarter convention, you treat all property placed in service or disposed of during a tax year as placed in service or disposed of at the midpoint of the quarter. This means that no matter when during a quarter you place property in service or dispose of it, you treat it as being placed in service or disposed of in the middle of the quarter.

Depreciation Methods

Terms you may need to know (see Glossary):

Declining balance method
Listed property
Nonresidential real property
Placed in service
Property class
Recovery period
Residential rental property
Straight line method

The depreciation methods you use depend on whether you use GDS or ADS, which class your property is in, and what type of property it is.

Under MACRS, there are five methods you can use to depreciate your property.

- 1) The 200% declining balance method over the GDS recovery period which switches to the straight line method when that method provides a greater deduction,
- 2) The 150% declining balance method over the GDS recovery period which switches to the straight line method when that method provides a greater deduction,
- 3) The straight line method over the GDS recovery period,
- 4) The 150% declining balance method over fixed ADS recovery periods, which switches to the straight line method when that method provides a greater deduction, or

- 5) The straight line method over fixed ADS recovery periods.

If you use the MACRS percentage tables discussed later in MACRS Percentage Tables, you do not need to determine in what year your deduction is greater using the straight line method. The tables have the switch to the straight line method built into their rates.

Before choosing a method, you may wish to consider the following:

- 1) The declining balance methods provide greater deductions during the earlier recovery years with the deductions getting smaller each year after the second year,
- 2) The straight line method generally provides equal yearly deductions throughout the recovery period (except for the first and last years), and
- 3) The GDS recovery periods for most classes of property are generally shorter than the ADS recovery periods.

GDS

GDS uses different declining balance rates and the straight line method depending on property classes, the way the property is used, and the election you can make. The methods are as follows:

- 1) The 200% declining balance rate (also called double declining balance) over a GDS recovery period is used for nonfarm property in the 3-, 5-, 7-, and 10-year property classes,
- 2) The 150% declining balance rate over a GDS recovery period is used for all property used in farming businesses (except real property) and for all other property in the 15- and 20-year property classes,
- 3) The straight line method over a GDS recovery period is used for nonresidential real property and residential rental property, and if you elect it, property in the 3-, 5-, 7-, 10-, 15-, and 20-year classes, and
- 4) The 150% declining balance rate over an ADS recovery period is used, if you elect it, for property in the 3-, 5-, 7-, and 10-year property classes.

150% election. Instead of using the 200% declining balance method over the GDS recovery period for nonfarm property in the 3-, 5-, 7-, and 10-year property classes, you can elect to use the 150% declining balance method over the ADS recovery period. Some of the ADS recovery periods are provided earlier in ADS under *Property Classes and Recovery Periods*. For a list of ADS recovery periods, see the *Table of Class Lives and Recovery Periods* in Appendix B. If the property does not have an ADS recovery period specifically assigned to it, the recovery period is 12 years. If you elect this method,

you change to the straight line method when it provides a larger deduction.

Make the election by entering "150 DB" in column (f) of Part II of Form 4562. You must make the election by the tax return due date (including extensions) for the year you placed the property in service.

The election to use the 150% declining balance method for one item in a property class applies to all property in that class placed in service in the tax year of the election. Once made, you can not change the election to use the 150% declining balance method.

Straight line election. Instead of using either the 200% or 150% declining balance methods over the GDS recovery period, you can elect to use the straight line method over the GDS recovery period.

The election to use the straight line method for one item in a property class applies to all property in that class placed in service in the tax year of the election. Once you make the election, you can not change it.

Election of ADS. Although your property may come under GDS, you can elect to use ADS. ADS uses the straight line method of depreciation over fixed ADS recovery periods.

Make the election by completing line 16 of Part II of Form 4562. File Form 4562 with your tax return by the due date (including extensions) for the year you placed the property in service.

The election to use ADS for one item in a property class generally applies to all property in that class placed in service in the tax year of the election. However, you can make the election on a property-by-property basis for nonresidential real and residential rental property. Once made, you make the election to use ADS, you cannot change it.

Farm property. Instead of using the 150% declining balance rate over a GDS recovery period for property you use in a farming business, you can elect to depreciate it using:

- 1) The 150% declining balance rate over an ADS recovery period,
- 2) The straight line method over a GDS recovery period, or
- 3) The straight line method over the ADS recovery period.

ADS

As discussed earlier in *When To Use ADS* under *What Can Be Depreciated Under MACRS*, you are required to

use ADS for certain property. However, if your property comes under GDS, you can elect to use ADS. Under ADS, you use the straight line method of depreciation over generally longer recovery periods. Some of these recovery periods are listed under *ADS* under *Property Classes and Recovery Periods*, earlier.

You can find the ADS recovery periods for most classes of property in the *Table of Class Lives and Recovery Periods* in Appendix B. For personal property not listed in the table, the ADS recovery period is 12 years. For section 1245 real property not covered by the table, the recovery period is 40 years.

As discussed later in *Predominant Use Test* in chapter 4, you may have to use the straight line method for certain listed property. This does not mean you have to use it for any other depreciable property.

Special Rules

There are rules that require you to use a specific depreciation method for certain property.

Farm property. Depreciate personal property placed in service in a farming business after 1988 under GDS using any method other than the 200% declining balance method or under ADS using the 150% declining balance method or the straight line method. Depreciate real property under either GDS using the straight line method or under ADS using the straight line method.

For a quick reference to the MACRS methods, see the *Depreciation Methods Chart*, later.

Farming business. A farming business is any trade or business involving cultivating land or raising or harvesting any agricultural or horticultural commodity. A farming business includes:

- Operating a nursery or sod farm,
- Raising or harvesting crops,
- Raising or harvesting trees bearing fruit, nuts, or other crops,
- Raising ornamental trees, and
- Raising, shearing, feeding, caring for, training, and managing animals.

An evergreen tree is not an ornamental tree if it is more than 6 years old when it is severed from its roots.

Farming does not include processing commodities or products if the processing is not normally part of growing, raising or harvesting these products. It does include processing activities which are normally part of growing, raising or harvesting agricultural products.

Fruit or nut trees and vines. Depreciate trees and vines bearing fruit or nuts under GDS using the straight line method over a recovery period of 10 years.

ADS required for some farmers. If you elect not to apply the uniform capitalization rules to any plant produced in your farming business, you must use ADS. You must use of ADS for all property you place in service in any tax

year the election is in effect. See chapter 7 in Publication 225 for a discussion of the application of the uniform capitalization rules to farm property.

Depreciation Methods Chart

The following depreciation methods chart will help you determine the method to use for a specific property class. The declining balance method is abbreviated as DB and the straight line method is abbreviated as SL.

Depreciation Methods Chart

Property Class	Method-Recovery Period
3, 5, 7, 10-Year (nonfarm)	200% DB-GDS
	150% DB-ADS*
	SL-GDS*
	SL-ADS*
3, 5, 7, 10-Year (farm)	150% DB-GDS
	150% DB-ADS*
	SL-GDS*
	SL-ADS*
15, 20-Year (farm or nonfarm)	150% DB-GDS
	SL-GDS*
	SL-ADS*
Nonresidential real property	SL-GDS
Residential rental property	SL-ADS*
Trees or vines bearing fruit or nuts	
Tax-exempt use property	SL-ADS
Tax-exempt bond-financed property	
Imported property	
Foreign use property (used outside U.S.)	

*Elective method

MACRS Percentage Tables

Terms you may need to know (see Glossary):

Adjusted basis
Amortization
Basis
Business/investment use
Convention
Placed in service
Property class
Recovery period

Appendix A near the end of this publication contains percentage tables you can use to figure your depreciation under MACRS.

Special Rules Governing Use of the Tables

Before using the percentage tables, you should know the special rules that govern their use:

- 1) You must apply the rates in the percentage tables to your property's **unadjusted basis**,
- 2) You cannot use the percentage tables for a short tax year,
- 3) When using the percentage tables to figure your depreciation, you must continue to use them for the entire recovery period unless there are adjustments to the basis of your property for reasons other than:
 - a) Depreciation allowed or allowable, or
 - b) An addition or improvement to that property that is depreciated as a separate item of property, and
- 4) You cannot continue to use the tables if there is an adjustment to the basis of your property other than for a reason listed above in (3).

Figuring unadjusted basis. You must apply the table rates to your property's unadjusted basis each year of the recovery period. **Unadjusted basis** is the same amount you would use to figure gain on a sale, but you figure it without taking into account any depreciation taken in earlier years. However, you do reduce your original basis by:

- 1) The amount of amortization taken on the property,
- 2) Any section 179 deduction claimed,
- 3) Any deduction claimed for clean-fuel vehicle or clean-fuel vehicle refueling property, and
- 4) The amount of any qualified electric vehicle credit.

For business property you purchase during the tax year, the unadjusted basis is its cost minus any amortization, any section 179 deduction, any deduction claimed for clean-fuel vehicles or for clean-fuel vehicle refueling property, and any electric vehicle credit claimed for the property.

If you trade property, your unadjusted basis in the property received is the cash paid plus the adjusted basis of the property traded minus any amortization, any section 179 deduction, any deduction claimed for clean-fuel vehicles or clean-fuel vehicle refueling property and any electric vehicle credit are subject to recapture.

The deductions for clean-fuel vehicles or clean-fuel vehicle refueling property and any electric vehicle credit are subject to recapture. If the property is depreciable, and you must recapture part or all of the deduction or credit, you can increase the basis of the property by the amount of the deduction or credit recaptured. You can recover the additional basis over the remaining recovery period beginning with the tax year of recapture. However, if this occurs, you will no longer be able to use the percentage tables. Instead, for the year of adjustment and the remaining recovery period, you must figure the depreciation using the property's adjusted basis at the end of the year of adjustment and for the remaining recovery period. To determine your depreciation without the tables, see *How To Figure the Deduction Without Using the Tables*.

The clean-fuel vehicle and clean-fuel vehicle refueling property deductions and the credit for electric vehicles are discussed in chapter 15 of Publication 535.

Figuring MACRS deductions without the tables. If you are required or would prefer to figure depreciation without using the tables, see *How To Figure the Deduction Without Using the Tables*, later.

Adjustment due to casualty loss. If you reduce the basis of your property because of a casualty, it is an adjustment to basis other than those listed above in (3). You cannot continue to use the tables. For the year of adjustment and the remaining recovery period, figure the depreciation using the property's adjusted basis at the end of the year of adjustment and for the remaining recovery period.

Example. On October 26, 1995, Sandra Elm bought and placed in service in her business an item of 7-year property. She uses the calendar year as her tax year. This is the only item of property she placed in service in 1995. It cost \$27,500 and she elected a section 179 deduction of \$17,500. Her unadjusted basis after the section 179 deduction is \$10,000. Because she placed it in service during the last 3 months of her tax year, she had to use the mid-quarter convention. Her property is in the 7-year class, and she figures her deduction using the percentages in Table A-5. For 1995, her depreciation is \$357 ($\$10,000 \times 3.57\%$).

In July 1996, her property was vandalized and Sandra had a deductible casualty loss of \$3,000. She spent \$3,500 to put the property back in working order. Because she must adjust her property's basis for the casualty loss, she can no longer use the percentage tables. Her adjusted basis at the end of 1996, before figuring her 1996 depreciation, is \$10,143. She figures the adjusted basis by subtracting the 1995 depreciation of \$357 and the casualty loss of \$3,000 from the unadjusted basis of \$10,000. To this amount, she adds the \$3,500 repair cost. She can now figure her depreciation without the percentage tables for 1996.

Which Table To Use

There is a *MACRS Percentage Table Guide* in Appendix A near the end of this publication. This guide is designed to help you locate the correct percentage table to use for depreciating your property. The MACRS percentage tables immediately follow the guide.

MACRS Worksheet

Part I of the worksheet next is used to gather information you will need to figure your MACRS deduction in Part II. This worksheet is intended only to help you and does not replace Form 4562. Use the information from this worksheet to prepare Form 4562. Do not use this worksheet for automobiles. Use the *Worksheet for Passenger Automobiles* in chapter 4. Use a separate worksheet for each item of property.

MACRS Worksheet

Note. Do not use this worksheet for automobiles. Use the *Worksheet for Passenger Automobiles* in chapter 4.

Part I

1. Description of property
2. Date placed in service
3. MACRS method (GDS or ADS)
4. Property class and recovery period
5. Convention
6. Depreciation rate (from tables)

Part II

7. Cost or other basis* \$
8. Business/investment use %
9. Multiply line 7 by line 8 \$
10. Total claimed for section 179 deduction and clean-fuel vehicle refueling property \$
11. Subtract line 10 from line 9. This is your depreciable (unadjusted) basis \$
12. Depreciation rate (from tables)
13. Multiply line 11 by line 12. This is your depreciation deduction \$

*If real estate, do not include cost (basis) of land.

The following example shows you how to figure your MACRS depreciation deduction using the percentage tables and the MACRS worksheet.

Example. You bought office furniture which is 7-year property for \$10,000 and placed it in service on August 11, 1996. You use the furniture only for business. You did not elect a section 179 deduction. You use GDS under MACRS to figure your depreciation. This is the only property you placed in service this year. You use the half-year convention. You refer to the *MACRS Percentage Table Guide* in Appendix A and find that you should use Table A-1. Because you did not elect a section 179 deduction, your property's unadjusted basis is its cost, \$10,000. Multiply your property's unadjusted basis each year by the percentages for 7-year property given in Table A-1. You figure your depreciation deduction using the MACRS worksheet as follows:

MACRS Worksheet

Note. Do not use this worksheet for automobiles. Use the *Worksheet for Passenger Automobiles* in chapter 4.

Part I

1. Description of property	<u>Office furniture</u>
2. Date placed in service	<u>8/11/96</u>
3. MACRS method (GDS or ADS)	<u>GDS</u>
4. Property class and recovery period	<u>7-Year</u>
5. Convention	<u>Half-Year</u>
6. Depreciation rate (from tables)	<u>.1429</u>

Part II

7. Cost or other basis*	<u>\$ 10,000</u>
8. Business/investment use	<u>100%</u>
9. Multiply line 7 by line 8	<u>\$ 10,000</u>
10. Total claimed for section 179 deduction and clean-fuel vehicle refueling property	<u>\$ -0-</u>
11. Subtract line 10 from line 9. This is your depreciable (unadjusted) basis	<u>\$ 10,000</u>
12. Depreciation rate (from tables)	<u>.1429</u>
13. Multiply line 11 by line 12. This is your depreciation deduction	<u>\$ 1,429</u>

*If real estate, do not include cost (basis) of land.

If there are no adjustments to the basis of the property other than depreciation, your depreciation deduction for each subsequent year of the recovery period will be as follows:

<u>Year</u>	<u>Basis</u>	<u>Percentage</u>	<u>Deduction</u>
1997	\$10,000	24.49%	\$2,449
1998	10,000	17.49%	1,749
1999	10,000	12.49%	1,249
2000	10,000	8.93%	893
2001	10,000	8.92%	892
2002	10,000	8.93%	893
2003	10,000	4.46%	446

Examples

The following examples are provided to help you use the percentage tables and show you how to apply the conventions.

Example 1. You bought a building and land for \$120,000. The sales contract showed the building cost \$100,000 and the land \$20,000. You placed this property in service in your business on March 8. It is nonresidential real property. You use the calendar year as your

tax year. You do not elect to use ADS. You refer to the *MACRS Percentage Table Guide* in Appendix A and find that you should use Table 7a. The building's unadjusted basis is its original cost, \$100,000. As discussed earlier, you can never depreciate land.

Because March is the third month of your tax year, multiply the building's unadjusted basis, \$100,000, by the percentages for the third month in Table 7a. Your depreciation deduction for each of the first 3 years is as follows:

<u>Year</u>	<u>Basis</u>	<u>Percentage</u>	<u>Deduction</u>
1st year	\$100,000	2.033%	\$2,033
2nd year	100,000	2.564%	2,564
3rd year	100,000	2.564%	2,564

Example 2. During 1996, you bought a machine that is 7-year property for \$4,000, office furniture that is 7-year property for \$1,000, and a computer that is 5-year property for \$5,000. All of the properties are used only for business. You placed the machine in service in January, the furniture in September, and the computer in October. You do not elect a section 179 deduction for any of these items. You use the calendar year as your tax year.

You decide to use GDS over the GDS recovery period for all of the properties. Because you placed property in service during the last three months of the year, you must first determine if you have to use the mid-quarter convention. The total bases of all property you placed in service in 1996 is \$10,000. Because the basis of the computer (\$5,000), which you placed in service during the last 3 months (the fourth quarter) of your tax year, is more than 40% of the total bases of all property (\$10,000) you placed in service during 1996, you must use the mid-quarter convention for all three items.

You refer to the *MACRS Percentage Table Guide* in Appendix A to determine which table you should use under the mid-quarter convention. Because the machine is 7-year property, you must depreciate it using Table A-2. Because the furniture is also 7-year property, you depreciate it using Table A-4. Finally, because the computer is 5-year property, you must depreciate it using Table A-5. Knowing what table to use for each property, you figure the depreciation for the first 2 years as follows:

<u>Year</u>	<u>Property Item</u>	<u>Unadjusted Basis</u>	<u>Percentage</u>	<u>Depreciation Deduction</u>
1996	Machine	\$4,000	25.00	\$1,000
1997	Machine	4,000	21.43	857
1996	Furniture	1,000	10.71	107
1997	Furniture	1,000	25.51	255
1996	Computer	5,000	5.00	250
1997	Computer	5,000	38.00	1,900

How To Figure the Deduction Without Using the Tables

Instead of using the rates in the percentage tables to figure depreciation, you can actually compute the depreciation deduction each year. You must apply the appropriate convention for the first year and if applicable, the last year.

Figuring MACRS deductions without using the tables will generally result in a slightly different amount than using the tables.

Declining Balance Method

To figure your MACRS deduction, first determine your declining balance rate. You do this by dividing the specified declining balance percentage (150% or 200% changed to a decimal) by the recovery period. For example, for 3-year property depreciated using the 200% declining balance rate, divide 2 (200%) by 3 to get 0.6667, or 66.67%. For 15-year property that is depreciated at the 150% declining balance rate, divide 1.5 (150%) by 15 to get 0.10, or 10%.

When using a declining balance method, you must apply the appropriate convention and you may have to switch to the straight line method in a later year. The conventions are explained later under *Applying the Convention*. You must switch to the straight line method in the first year for which the straight line method will give an equal or greater deduction than the declining balance method. See *Declining Balance Rates*, later. The straight line method is explained later under *Straight Line Method*.

You figure depreciation for the year you place property in service as follows:

- 1) Multiply your adjusted basis in the property by the declining balance rate (figured as explained earlier), and
- 2) Apply the appropriate convention.

If you dispose of property before the end of its recovery period, see *Early Dispositions*, later, for information on how to figure depreciation for the year you dispose of it.

You figure depreciation for all other years (before the year you switch to the straight line method) as follows:

- 1) Reduce your adjusted basis in the property by the amount of depreciation claimed in earlier years, and
- 2) Multiply this adjusted basis by the same declining balance rate used in earlier years.

See *Straight Line Method*, later, for information on how to figure depreciation for years in which you must use the straight line method.

Figuring depreciation under both the declining balance method and the straight line method is illustrated in the example following *Straight Line Method*, later.

Declining Balance Rates

The following tables show the declining balance rate for each property class and the first year for which the straight line method gives an equal or greater deduction if GDS recovery periods are being used. For 3-, 5-, 7-, and 10-year property, the rate is based on the 200% declining balance method. For 15- and 20-year property, it is based on the 150% declining balance method.

If you are using ADS recovery periods, you must figure depreciation under both the declining balance method and the straight line method to determine the year to switch to the straight line method.

Class	Declining Balance Rate	Year
3	66.67%	3rd
5	40%	4th
7	28.57%	5th
10	20%	7th
15	10%	7th
20	7.5%	9th

Straight Line Method

When using the straight line method, you must determine a new depreciation rate for each tax year in the recovery period. Also, you must apply the appropriate convention. The conventions are explained later under *Applying the Conventions*.

You determine the depreciation rate for any tax year by dividing the number 1 by the years remaining in the recovery period at the beginning of your tax year. When figuring the number of years remaining, you must take into account the convention used in the year you placed the property in service. If the number of years remaining is less than 1, the depreciation rate for that tax year is 1.0 (100%).

You figure depreciation for the year you place property in service as follows:

- 1) Multiply your adjusted basis in the property by the depreciation rate (figured as explained earlier), and
- 2) Apply the appropriate convention.

If you dispose of property before the end of its recovery period, see *Early Dispositions*, later, for information on how to figure depreciation for the year you dispose of it.

You figure depreciation for all other years (including the first tax year you switch from the declining balance method to the straight line method) as follows:

- 1) Reduce your adjusted basis in the property by the amount of depreciation claimed in earlier years (under any method),

- 2) Determine the depreciation rate for the year as explained earlier (taking into account the convention used in the tax year you placed the property in service), and
- 3) Multiply the adjusted basis figured in 1) by the depreciation rate figured in 2).

Example. Karen Bell's tax year is the calendar year. In February, Karen placed in service depreciable property with a 5-year recovery period and a basis of \$1,000. She does not elect to take the section 179 deduction. There were no adjustments to the basis of the property between the time she bought it and the time she placed it in service. Karen did not place any property in service in the fourth quarter. She elects to use the 200% declining balance (DB) method of figuring depreciation. Because she did not place any property in service in the last three months of the year, she must use the half-year convention.

First year. Karen figures the depreciation rate under the 200% DB method by dividing 2 (200%) by 5 (the number of years in the recovery period). The result is 40%. Karen figures the depreciation rate for the first year under the straight line (SL) method by dividing 1 by 5, the number of years remaining in the recovery period at the beginning of her tax year. The result is 20%.

Karen multiplies the adjusted basis of the property (\$1,000) by the 40% DB rate. She applies the half-year convention by dividing the result (\$400) by 2. Depreciation for the first year under the 200% DB method is \$200.

Karen multiplies the adjusted basis (\$1,000) by the SL rate (20%). She applies the half-year convention by dividing the result (\$200) by 2. Depreciation for the first year under the SL method is \$100.

Because the SL method does not provide a larger deduction, Karen deducts the \$200 figured under the 200% DB method.

Second year. Karen reduces the adjusted basis (\$1,000) by the depreciation claimed in the first year (\$200). She multiplies the result (\$800) by the DB rate (40%). Depreciation for the second year under the 200% DB method is \$320.

Karen figures the SL depreciation rate for the second year by dividing 1 by 4.5, the number of years remaining in the recovery period at the beginning of her tax year. (Because of the half-year convention, Karen used only half a year of the recovery period in the first year.) Karen multiplies the reduced adjusted basis (\$800) by the result (22.22%). Depreciation under the SL method for the second year is \$178.

Because the SL method does not provide a larger deduction, Karen deducts the \$320 figured under the 200% DB method.

Third year. Karen reduces the adjusted basis (\$1,000) by the depreciation claimed in the first two years (\$520). She multiplies the result (\$480) by the DB rate (40%). Depreciation for the third year under the 200% DB method is \$192.

Karen figures the SL depreciation rate for the third year by dividing 1 by 3.5. She multiplies the reduced adjusted basis (\$480) by the result (28.57%). Depreciation under the SL method for the third year is \$137.

Because the SL method does not provide a larger deduction, Karen deducts the \$192 figured under the 200% DB method.

Fourth year. Karen reduces the adjusted basis (\$1,000) by the depreciation claimed in the first three years (\$712). She multiplies the result (\$288) by the DB rate (40%). Depreciation for the fourth year under the 200% DB method is \$115.

Karen figures the SL depreciation rate for the fourth year by dividing 1 by 2.5. She multiplies the reduced adjusted basis (\$288) by the result (40%). Depreciation under the SL method for the fourth year is \$115.

Because both methods provide the same deduction, it does not matter which Karen chooses. Her depreciation deduction for the fourth year is \$115.

Fifth year. Karen reduces the adjusted basis (\$1,000) by the depreciation claimed in the first four years (\$827). She multiplies the result (\$173) by the DB rate (40%). Depreciation for the fourth year under the 200% DB method is \$69.

Karen figures the SL depreciation rate for the fifth year by dividing 1 by 1.5. She multiplies the reduced adjusted basis (\$173) by the result (66.67%). Depreciation under the SL method for the fifth year is \$115.

Because the SL method provides a larger deduction, Karen deducts the \$115 figured under the SL method and switches to the SL method for the next year.

Sixth year. Karen reduces the adjusted basis (\$1,000) by the depreciation claimed in the first five years (\$942). Because there is less than one year remaining in the recovery period, the depreciation rate for the sixth year is 100%. She multiplies the reduced adjusted basis (\$58) by 100% to arrive at the depreciation deduction for the sixth year (\$58).

Applying the Convention

You must apply the appropriate convention in the following two years:

- 1) The year in which you place property in service, and
- 2) If you dispose of property before the end of the recovery period, the year of disposal.

Half-Year Convention

Under this convention, you treat property as placed in service (or disposed of) in the middle of the year. A half-year of depreciation is allowable for the year you place the property in service. This applies regardless of when during the tax year you place the property in service.

Unless you dispose of the property, you take a full year of depreciation in each of your tax years that includes 12 full months of the recovery period. If you hold the property for the entire recovery period, you take a half-year of depreciation (any unrecovered basis) in your

tax year that includes the final 6 months of the recovery period.

If you dispose of the property before the end of the recovery period, a half-year of depreciation is allowable for the year of disposition. This applies regardless of when during the year you dispose of the property.

First, figure the depreciation for a full tax year using the method you select. Then you apply the half-year convention by taking half of that amount. You do this by dividing the full amount of depreciation by 2. The result is your depreciation deduction for the first tax year or for the year of disposal.

Mid-Quarter Convention

Under the mid-quarter convention, you treat property placed in service (or disposed of) during any quarter as placed in service (or disposed of) in the middle of the quarter.

A quarter is a period of three months. The first quarter in a year begins on the first day of the tax year. The second quarter begins on the first day of the fourth month of the tax year. The third quarter begins on the first day of the seventh month of the tax year. The fourth quarter begins on the first day of the 10 month of the tax year. A calendar year is divided into the following quarters:

Quarter	Months
First	January, February, March
Second	April, May, June
Third	July, August, September
Fourth	October, November, December

To figure your MACRS deduction using the mid-quarter convention, you must first figure your depreciation for the full tax year. Then multiply by the following percentages for the quarter of the tax year the property is placed in service.

Quarter of Tax Year	Percentage
First	87.5%
Second	62.5%
Third	37.5%
Fourth	12.5%

Mid-Month Convention

Under the mid-month convention, you treat property placed in service (or disposed of) in any month as placed in service (or disposed of) in the middle of the month. First, figure the depreciation for a full tax year using the straight line method for residential rental or nonresidential real property. Then multiply this amount by a fraction. The numerator of the fraction is the number of full months in the tax year that the property is in service plus $\frac{1}{2}$ (or 0.5). The denominator is 12.

Example. You use the calendar year and place non-residential real property in service in August. The property is in service 4 full months (September, October, November, and December). Your numerator is 4.5 (4 full months plus 0.5).

Examples

The following examples show how to figure depreciation under MACRS without using the percentage tables. Figures are rounded for purposes of the examples.

Example 1. You bought for \$10,000 and placed in service on this year an item of 7-year property. You do not elect a section 179 deduction for this property. The adjusted basis of the property is \$10,000. You use GDS to figure your depreciation. This is the only item of property you placed in service during the year. You use the calendar year as your tax year. You apply the half-year convention.

The 200% declining balance rate for 7-year property is 28.57%. You determine this by dividing 2.00 (200% DB rate shown as a decimal) by 7 (years in the recovery period). You get .2857 or 28.57%.

You multiply the adjusted basis of \$10,000 by .2857. This gives you a full year's depreciation, \$2,857. You then apply the half-year convention by dividing \$2,857 by 2. This gives you a depreciation deduction for the first year of \$1,429.

For the second year, your depreciation deduction is \$2,449. You figure this by subtracting \$1,429 from \$10,000 to get the adjusted basis of \$8,571 for the property. Then you multiply the \$8,571 by .2857 (the full year rate for 7-year property using 200% DB).

For the third and fourth years, you follow the same procedure. Your deduction for the third year will be \$1,749 [$\$6,122 (\$8,571 - \$2,449) \times .2857$]. Your deduction for the fourth year will be \$1,249 [$\$4,373 (\$6,122 - \$1,749) \times .2857$].

For the fifth year of the recovery period, you change to the straight line method. You divide 1 by 3.5 (remaining years) to get .2857. That is the same as the 200% declining balance rate. Your deduction will be \$893 [$\$3,124 (\$4,373 - \$1,249) \times .2857$].

For the sixth year, you figure a straight line rate of .40 (1 divided by 2.5 remaining years). Your deduction will be \$892 [$\$2,231 (\$3,124 - \$893) \times .40$].

For the seventh year, you figure a straight line rate of .6667 (1 divided by 1.5 remaining years). Your deduction will be \$893 [$\$1,339 (\$2,231 - \$892) \times .6667$].

For the eighth year, your deduction will be your remaining basis of \$446 ($\$1,339 - \893). At the beginning this year the remaining recovery period (a half year) will be less than one year. The straight rate is 100%.

Example 2. You bought a building for \$100,000 that is nonresidential real property. You placed it in service in your business this year. You use the calendar year as your tax year. The adjusted basis of the building is its cost of \$100,000. You figure your MACRS depreciation for the building by dividing 1 by 39 years to get the straight line depreciation rate for a full year of .02564. The depreciation for a full year is \$2,564 ($\$100,000 \times .02564$). Under the mid-month convention, you treat the property as placed in service in the middle of January. You would get 11.5 months of depreciation for the year.

Expressed as a decimal, the fraction of 11.5 months divided by 12 months is .958. Your first year depreciation for the building is \$2,456 ($\$2,564 \times .958$).

For the second year, you subtract \$2,456 from \$100,000 to get your unrecovered basis of \$97,544 for the building. The straight line rate for the second year will be .02629. This is 1 divided by the remaining recovery period of 38.04. The remaining recovery period is the recovery period of 39 years reduced by 11.5 months or .958 and rounded to 38.04. Your depreciation for the building for the second year will be \$2,564 ($\$97,544 \times .02629$).

For the third year, the unrecovered basis will be \$94,980 ($\$97,544 - \$2,564$). The straight line rate will be .027 (1 divided by 37.04 remaining years). Your depreciation for the third year will be \$2,564 ($\$94,980 \times .027$).

Example 3. During the year, you bought a machine for \$4,000. You placed it in service in January. You also bought office furniture for \$1,000 that you placed in service in September. In October you bought and placed in service a computer that cost \$5,000 (not listed property). You do not elect a section 179 deduction and do not wish to use the tables. You use the calendar year as your tax year. You use GDS to figure the depreciation. The total basis of all property you placed in service this year is \$10,000. Because the basis of the computer (\$5,000) is more than 40% of the total bases of all property (\$10,000) placed in service during the year, you must use the mid-quarter convention. This convention will apply for all three items of property. The machine and office furniture are in the 7-year property class and the computer is in the 5-year property class.

The 200% declining balance rate for 7-year property is .2857. You determine this by dividing 2.00 (200% DB rate shown as a decimal) by 7 (years in the recovery period). You get .2857 or 28.57%. The depreciation for the machine for a full year is \$1,143. You get this by multiplying the cost of \$4,000 by the declining balance rate of .2857. Because you placed the machine in service in the first quarter of your tax year, you multiply \$1,143 by 87.5% (mid-quarter percentage for the first quarter). The result is your deduction of \$1,000 for depreciation on the machine for the first year.

For the second year, you must first figure your adjusted basis of the machine. You do this by subtracting the first year's depreciation (\$1,000) from the basis of the machine (\$4,000). Your depreciation deduction for the second year is \$857 [$\$3,000 (\$4,000 - \$1,000) \times .2857$].

Because the furniture is also 7-year property, you use the same 200% declining balance rate of .2857. You multiply the basis of the furniture (\$1,000) by .2857 to get the depreciation of \$286 for the full year. Because you placed the furniture in service in the third quarter of your tax year, you multiply \$286 by 37.5% (mid-quarter percentage for the third quarter). The result is your deduction of \$107 for depreciation on the furniture for the first year.

For the second year, you must first figure your adjusted basis of the furniture. You do this by subtracting the first year's depreciation (\$107) from the basis of the furniture (\$1,000). Your depreciation for this year will be \$255 [$\$893 (\$1,000 - \$107) \times .2857$].

The 200% declining balance rate for 5-year property is .40. You determine this by dividing 2.00 (200% DB rate shown as a decimal) by 5 (years in the recovery period). You get .40 or 40%. The depreciation for the computer for a full year is \$2,000. You get this by multiplying the basis of \$5,000 by the declining balance rate of .40. Because you placed the computer in service in the fourth quarter of your tax year, you multiply the \$2,000 by 12.5% (mid-quarter percentage for the fourth quarter). The result is your deduction of \$250 for depreciation on the computer for the first year.

For the second year, you must first figure the adjusted basis for the computer. You do this by subtracting the first year's depreciation (\$250) from the basis (\$5,000). Your depreciation deduction for the second year will be \$1,900 [$\$4,750 (\$5,000 - \$250) \times .40$].

Example 4. Last October 26th, you bought and placed in service in your business an item of 7-year property. You use the calendar year as your tax year. This is the only item of property you placed in service this year. The property cost \$20,000 and you elected a \$10,000 section 179 deduction for it. Your unadjusted basis for the property is \$10,000. Because you placed your property in service in the last 3 months of your tax year, you must use the mid-quarter convention. You figured your deduction using the percentages in Table A-5 for 7-year property. For the first year, your depreciation was \$357 ($\$10,000 \times 3.57\%$).

In July of the second year, your property was vandalized. You had a deductible casualty loss of \$3,000. You spent \$3,500 to put the property back in operational order. Your adjusted basis at the end of the second year is \$10,143. You figured this by subtracting the first year's depreciation (\$357) and the casualty loss (\$3,000) from the unadjusted basis of \$10,000. To this amount, you added the \$3,500 repair cost.

You cannot use the table percentages to figure your depreciation for this property for the second year because of the adjustments to basis. You must figure the deduction yourself. The declining balance rate for 7-year property is .2857. You determined this by dividing 2.00 (200% DB rate shown as a decimal) by 7 (years in the recovery period). The result is .2857 or 28.57%. You multiply the adjusted basis of your property (\$10,143) by the declining balance rate of .2857 to get your depreciation deduction of \$2,898 for the second year.

Example 5. You apply the straight line method to property with a 5-year recovery period as follows:

- 1) For the first year,
 - a) You determine the straight line rate for the first tax year. You divide the number 1 by 5 (the number of years in the recovery period). This gives you a straight line rate of .20 or 20% for a full tax

year. You then apply the half-year convention. Your first year rate is .10 or 10%.

- b) You multiply the rate obtained in a) by the cost or other basis of your property to get your MACRS deduction.
- 2) For all subsequent years except the final year,
- a) You determine the remaining recovery period at the beginning of the year. For the second year of recovery, it is 4.5 years because of applying the half-year convention in the first year. You divide the number 1 by the number of years remaining in the recovery period at the beginning of the tax year (4.5 for the second year). This gives you a straight line rate for the second year of .2222 or 22.22%.
 - b) Next, you determine the unrecovered basis of your property for the subsequent year. This is the cost or other basis of your property less the depreciation taken for the prior years.
 - c) You get your MACRS deduction by multiplying the subsequent year rate by the unrecovered basis of the property.
- 3) For the final year of recovery,
- a) For 5-year property, your final year is the sixth year because of applying the half-year convention in the first year.
 - b) You do not need to determine the rate for the final year because the remaining recovery period is less than 1 year. The rate for the final tax year is 1.0 or 100%.

MACRS Deduction in Short Tax Year

A short tax year is any tax year with less than 12 full months. This section discusses the rules for determining the depreciation deduction for tangible property you place in service in a short tax year. It also discusses the rules for determining depreciation when you have a short tax year during the recovery period other than the year the property is placed in service.

Determining Placed-in-Service Date in Short Tax Year

The half-year, mid-quarter, and mid-month conventions establish the date property is treated as placed in service and the disposition date. Depreciation is allowable only for that part of the tax year the property is treated as in service. The recovery period begins on the placed-in-service date. The recovery period at the beginning of the next tax year is the full recovery period less that part of the first tax year for which depreciation is allowable.

Mid-month convention. Under the mid-month convention, you always treat your property as placed in service on the midpoint of the month you place it in service. You apply this rule without regard to your tax year.

Half-year convention. Under the half-year convention, you treat property as placed in service on the midpoint of the tax year.

First or last day of month. For a short tax year beginning on the first day of a month or ending on the last day of a month, the tax year consists of the number of months in the tax year. If the short tax year includes part of a month, you generally include the full month in the number of months in the tax year. You determine the midpoint of the tax year by dividing the number of months in the tax year by 2. For the half-year convention, you treat property as placed in service on either the first day or the midpoint of a month. For example, a short tax year that begins on June 20 and ends on December 31 consists of 7 months. Because you use only full months for this determination, you treat the tax year as beginning on June 1 instead of June 20. The midpoint of the tax year is the middle of September (3 1/2 months from the beginning of the tax year).

Example. Tara Corporation, a calendar year taxpayer, was incorporated on March 15. For purposes of the half-year convention, it has a short tax year of 10 months, ending on December 31. During the short tax year, Tara placed property in service for which it uses the half-year convention. Tara treats this property as placed in service on the first day of the sixth month of the short tax year, or August 1, 1996.

Not on first or last day of month. For a short tax year not beginning on the first day of the month and not ending on the last day of a month, the tax year consists of the number of days in the tax year. You determine the midpoint of the tax year by dividing the number of days in the tax year by 2. For the half-year convention, you treat property as placed in service on either the first day or the midpoint of a month. If the result of dividing the number of days in the tax year by 2 is not the first day or the midpoint of a month, you treat the property as placed in service on the nearest preceding first day or midpoint of a month.

Mid-quarter convention. To determine if you must use the mid-quarter convention, compare the basis of property you place in service in the last 3 months of your tax year to that of property you place in service during the full tax year. The length of your tax year is does not matter. If you have a short tax year of 3 months or less, use the mid-quarter convention for all applicable property you place in service during that tax year.

You treat property under the mid-quarter convention as placed in service on the midpoint of the quarter of the tax year. Divide a short tax year into 4 quarters and determine the midpoint of each quarter.

For a short tax year of 4 or 8 full calendar months, determine quarters on the basis of whole months. The midpoint of each quarter is either the first or the midpoint of a month.

To determine the midpoint of a quarter for a short tax year of other than 4 or 8 full calendar months, complete the following steps:

- 1) Determine the number of days in your short tax year.
- 2) Determine the number of days in each quarter. This means you divide the number of days in your short tax year by 4.
- 3) Determine the midpoint of each quarter. This means you divide the number of days in each quarter by 2.

Note. If the result of 3) gives you a midpoint of a quarter that is on a day other than the first or midpoint of a month, treat the property as placed in service on the nearest preceding first or midpoint of that month.

Example. Tara Corporation, a calendar year taxpayer, was incorporated and began business on March 15. It has a short tax year of 9 ½ months, ending on December 31. During December it placed property in service for which it must use the mid-quarter convention. Because this is a short tax year of other than 4 or 8 full calendar months, it must determine the midpoint of each quarter.

- 1) First, it determines that its short tax year beginning March 15 and ending December 31 consists of 292 days.
- 2) Next, it divides 292 by 4 to determine the length of each quarter, 73 days.
- 3) Finally, it divides 73 by 2 to determine the midpoint of each quarter, the 37th day.

The following table shows Tara Corporation's quarters of its short tax year, the midpoint of each quarter, and the date in each quarter that Tara must treat its property as placed in service.

Quarter	Midpoint	Deemed Placed in Service Date
March 15– May 26	April 20	Middle of April
May 27– August 7	July 2	Beginning of July
August 8– October 19	September 13	Beginning of September
October 20– December 31	November 25	Middle of November

The last quarter of the short tax year begins on October 20, which is 73 days from December 31, the end of

the tax year. The 37th day of the last quarter is November 25. Because the midpoint of the quarter is not the first or the midpoint of November, Tara Corporation must treat the property as placed in service in the middle of November.

Figuring Depreciation in a Short Tax Year

You cannot use the MACRS percentage tables to determine depreciation for a short tax year. If you place property in service in a short tax year, you must first determine the depreciation for a full tax year. You do this by multiplying your basis in the property by the applicable depreciation rate. Then determine the depreciation for the short tax year. Do this by multiplying the depreciation for a full tax year by a fraction. The numerator of the fraction is the number of months (including parts of a month) the property is treated as in service during the tax year (applying the applicable convention). The denominator is 12. See *Depreciation in Recovery Years After Short Tax Year* for how to figure depreciation in later years.

Example 1. Tara Corporation, with a short tax year beginning March 15 and ending December 31 placed in service on March 16 an item of 5-year property. This 5-year property had a basis of \$100. This is the only property the corporation placed in service during the short tax year. The depreciation method for this property is the 200% declining balance method. The depreciation rate is 40% and Tara applies the half-year convention.

Tara treats the property as placed in service on August 1. The law allows Tara 5 months of depreciation for the short tax year that consists of 10 months. The corporation first multiplies the basis (\$100) by 40% (the declining balance rate) to get the depreciation for a full tax year of \$40. The corporation then multiplies \$40 by $\frac{5}{12}$ to get the short tax year depreciation of \$16.67.

Example 2. Tara Corporation, with a short tax year beginning March 15 and ending on December 31, placed in service on October 16 an item of 5-year property. This property has a basis of \$100. This is the only property the corporation placed in service during the short tax year. The depreciation method for this property is the 200% declining balance method. The depreciation rate is 40%. The corporation must apply the mid-quarter convention because the property was placed in service in the last 3 months of the tax year.

Tara treats the property as placed in service on September 1. MACRS allows Tara 4 months of depreciation for the short tax year that consists of 10 months. The corporation first multiplies the basis (\$100) by 40% (the declining balance rate) to get the depreciation for a full tax year of \$40. The corporation then multiplies \$40 by $\frac{4}{12}$ to get the short tax year depreciation of \$13.33.

Depreciation in Recovery Years After Short Tax Year

You can use either the “simplified method” or the “allocation method” to figure the depreciation for later tax years in the recovery period. You must use the method

you choose consistently until the year of change to the straight line method.

Simplified method. Under this method, you figure the depreciation for subsequent tax years in the recovery period by multiplying the unrecovered basis of your property at the beginning of the tax year by the applicable depreciation rate.

Example. Tara Corporation has a short tax year of 10 months, ending on December 31. It placed in service an item of 5-year property with a basis of \$100. It claimed depreciation of \$16.67 using a depreciation rate of 40% and the half-year convention. The unrecovered basis on January 1 of the next year is \$83.33 (\$100 – \$16.67). Tara's depreciation for that next tax year will be 40% of \$83.33, or \$33.33.

Short tax year after property in service. If a subsequent tax year in the recovery period is a short tax year, you figure depreciation for that year by multiplying the unrecovered basis of the property at the beginning of the tax year by the applicable depreciation rate, and then by a fraction. The fraction's numerator is the number of months (including parts of a month) in the tax year. Its denominator is 12.

Allocation method. Under this method, you figure the depreciation for each subsequent tax year by allocating to the tax year the depreciation attributable to each recovery year, or part of a recovery year, that falls within the tax year. Whether your tax year is a 12-month or short tax year, you figure the depreciation by determining which recovery years are included in the tax year. For each recovery year included, multiply the depreciation attributable to each recovery year by a fraction. The fraction's numerator is the number of months (including parts of a month) that are in both the tax year and the recovery year. Its denominator is 12. The allowable depreciation for the tax year is the sum of the depreciation figured for each recovery year.

Example. Assume the same facts as in Example 1 under *Figuring Depreciation in a Short Tax Year* for the Tara Corporation. Its second tax year is a full tax year of 12 months, beginning January 1 and ending December 31. A recovery year for the 5-year property placed in service during the short tax year extends from August 1 to July 31. Tara deducted 5 months of depreciation for the first recovery year on its short tax return. Seven months of the first recovery year and 5 months of the second recovery year fall within its second tax year. The depreciation for the second tax year will be \$33.33 which is the sum of:

\$23.33 — The depreciation for the short year ($\$40 \times \frac{7}{12}$), and

\$10 — The depreciation for the second tax year [$\$60 (\$100 - \$40) \times 40\%$] or $\$24 \times \frac{5}{12}$.

More information. For more information on figuring depreciation in a short tax year, see Revenue Procedure 89-15, 1989-1 CB 816.

Dispositions

Terms you may need to know (see Glossary):

Exchange

A disposition is the permanent withdrawal of property from use in your trade or business or in the production of income. A withdrawal can be made by sale, exchange, retirement, abandonment, involuntary conversion, or destruction. You generally recognize gain or loss on the disposition of property by a sale. However, nonrecognition rules may allow you to postpone some gain. See Publication 544.

For information on dispositions from a general asset account, see *Dispositions and Conversions* under *General Asset Accounts*, later.

Early Dispositions

Terms you may need to know (see Glossary):

Convention
Nonresidential real property
Placed in service
Recovery period
Residential rental property

If you dispose of your property before the end of its recovery period, it is called an early disposition. If you dispose of property depreciated under MACRS, you are allowed a depreciation deduction for the year of disposition. Determine your depreciation deduction for the year of disposition by using the applicable convention. As discussed earlier, always use a mid-month convention for residential rental and nonresidential real property. For all other property depreciated under MACRS, use either a half-year or mid-quarter convention depending on the convention used when the property was placed in service.

Mid-Month Convention Used

If you dispose of residential rental or nonresidential real property, you base your depreciation deduction for the year of disposition on the number of months in the year of disposal that the property was in service. Under the mid-month convention, you treat property disposed of anytime during a month as disposed of in the middle of that month. Count the month of disposition as half a month of service.

You determine the amount of depreciation to claim by determining the depreciation for the year and then multiplying by a fraction. The numerator of the fraction is the number of months (including partial months) in the tax year that the property is considered in service. The denominator is 12.

Example. On July 2, 1994, you purchased and placed in service residential rental property. The property cost \$100,000, not including the cost of land. You file your tax return based on the calendar year. You used Table A-6 to figure your MACRS depreciation for this property. You sold the property on March 2, 1996.

The depreciation for the 1996 full tax year is \$3,636. This is \$100,000 multiplied by .03636 (the percentage for the seventh month of the third recovery year), from Table A-6. You must then apply the mid-month convention for the 2 1/2 months of use in 1996. Multiply \$3,636 by 2.5 and divide by 12 to get your 1996 depreciation deduction of \$757.50.

Property placed in service in short tax year. If you placed property in service in a short tax year, you are using either the simplified method or the allocation method to figure your depreciation in later years in the recovery period. How you figure depreciation in the year of disposal depends on which method you are using.

Simplified method. If you are using the simplified method, you figure depreciation in the year of disposal by figuring depreciation for an entire year and then multiplying by a fraction. The numerator of the fraction is the number of months (including parts of months) that the property is in service in the tax year. The denominator is 12.

Allocation method. If you are using the allocation method, you figure depreciation for each recovery year that is included in the tax year. You multiply the depreciation figured for each recovery year by a fraction. The numerator of the fraction is the number of months (including parts of months) that the property was in service in the tax year. The denominator is 12. If there is more than one recovery year in the tax year, you add together the depreciation for each recovery year.

Half-Year Convention Used

For property for which you used a half-year convention, the deduction for the year of disposition is half the depreciation determined for the full year.

Property placed in service in full tax year and disposed of in short tax year. If you dispose of property in a short tax year, you must determine the midpoint of the year. See *Half-year convention*, earlier, under *MACRS Deduction in Short Tax Year* for how to determine the midpoint of a short tax year applying the half-year convention.

Property placed in service in a short tax year and disposed of in a later short tax year. If you dispose of

property in a short tax year that you had placed in service in an earlier short tax year, how you figure depreciation in the year of disposal depends on whether you are using the simplified method or the allocation method. First you must figure the midpoint of the tax year of disposal. See *Half-year convention*, earlier, under *MACRS Deduction in Short Tax Year* for how to determine the midpoint of a short tax year applying the half-year convention. See *Simplified method* or *Allocation method*, earlier, for information on how to figure depreciation for the tax year of disposal.

Mid-Quarter Convention Used

For property for which you used the mid-quarter convention, you must first determine the depreciation for the full year. Then you multiply the depreciation by the applicable percentage for the quarter of the tax year you disposed of the property. The percentages to use for each quarter of the tax year are shown in the following table.

Quarter of tax year	Percentage
First	12.5%
Second	37.5%
Third	62.5%
Fourth	87.5%

Property placed in service in full tax year and disposed of in short tax year. If you dispose of property in a short tax year, you must determine both the quarter in which you dispose of the property and the midpoint of that quarter. See *Mid-quarter convention*, earlier, under *MACRS Deduction in Short Tax Year* for how to determine the midpoint of a quarter in short tax year.

Property placed in service in a short tax year and disposed of in a later short tax year. If you dispose of property in a short tax year that you had placed in service in an earlier short tax year, how you figure depreciation in the year of disposal depends on whether you are using the simplified method or the allocation method. First you must figure the quarter in which you disposed of the property and the midpoint of that quarter. See *Mid-quarter convention* earlier under *MACRS Deduction in Short Tax Year* for how to determine the midpoint of a quarter in a short tax year. See *Simplified method* or *Allocation method* earlier for information on how to figure depreciation for the tax year of disposal.

Example. On December 2, 1994, you placed an item of 5-year property in service in your business. The property cost you \$10,000 and you did not claim a section 179 deduction for it. Your basis for the property is \$10,000. This is the only item of business property you placed in service in 1994. Because you placed the property in service during the last 3 months of your tax year, you had to use the mid-quarter convention for this item of property. Because your property is in the 5-year property class, you use Table A-5 to figure your depreciation deduction. Your deductions for 1994 and 1995 for the property were \$500 (5% of \$10,000) and \$3,800 (38%

of \$10,000). If you dispose of the property on April 6, 1996, figure your 1996 depreciation using the mid-quarter convention. First figure the deduction for the full year of 1996, which is \$2,280 (22.8% of \$10,000). Since April is in the second quarter of the tax year, you multiply \$2,280 by 37.5% to get your depreciation deduction of \$855 for 1996.

Depreciation Recapture

All gain on the disposition of property, other than residential rental and nonresidential real property, depreciated under MACRS is recaptured (included in income) as ordinary income up to the amount of previously allowed depreciation deductions. Under this rule, any section 179 deduction claimed on the property is treated as depreciation. Also, any deduction claimed for clean-fuel vehicles and clean-fuel vehicle refueling property is treated as depreciation. For residential rental and nonresidential real property depreciated under MACRS, there is no recapture of previously allowed depreciation. For more information, see Publication 544.

General Asset Accounts

Terms you may need to know (see Glossary):

Amount realized
Unadjusted depreciable basis

You can choose to group certain depreciable property subject to MACRS in one or more general asset accounts. After you have set up a general asset account, you generally figure the amount of depreciation for each general asset account by using the depreciation method, recovery period, and convention that applies to the property in the account. For each general asset account, record the depreciation allowance in a separate depreciation reserve account.

To figure depreciation on passenger automobiles in a general asset account, apply the deduction limits discussed later in chapter 4. Multiply the amounts determined using these limits by the number of automobiles originally included in the account reduced by the total number of automobiles disposed of (or changed to personal use) during the tax year and any previous tax year in any of the following types of transactions:

- 1) Qualifying dispositions (defined later),
- 2) Certain nonrecognition transactions (defined later),
- 3) Abusive transactions (defined later), and
- 4) Dispositions leading to the recapture of certain credits and deductions. (See *Property subject to recapture*, later.)

Property you cannot include. You cannot include property in a general asset account if you use it in both a trade or business (or for the production of income) and in a personal activity in the tax year in which you first place it in service.

Property generating foreign source income. For information on the general asset account treatment of property that generates foreign source income, see section 1.168(i)-1(f) of the Income Tax Regulations. You can read the regulations at many public libraries and IRS offices.

How To Group Property in General Asset Accounts

Each general asset account must include only property that:

- 1) Has the same asset class,
- 2) Has the same recovery period,
- 3) Has the same depreciation method,
- 4) Has the same convention, and
- 5) You placed in service in the same tax year.

The following rules also apply when you establish a general asset account:

- 1) Property without an asset class, but with the same depreciation method, recovery period, and convention, that you place in service in the same tax year, can be grouped into the same general asset account.
- 2) Property subject to the mid-quarter convention can only be grouped into a general asset account with property that is placed in service in the same quarter of the taxable year.
- 3) Property subject to the mid-month convention can only be grouped into a general asset account with property that is placed in service in the same month of the taxable year.
- 4) Passenger automobiles subject to the limits on passenger automobile depreciation must be grouped into a separate general asset account.

Dispositions and Conversions

When you transfer ownership of property in a general asset account or you permanently withdraw it from use in your trade or business or from the production of income, it is considered disposed of. You also dispose of property when you transfer it to a supplier, scrap, or similar account. You can dispose of property through sale, exchange, retirement, physical abandonment, or destruction of property. The retirement of a structural component of real property is not a disposal.

The unadjusted depreciable basis and the depreciation reserve of the general asset account are not affected by your disposition of property from the general asset account.

You must remove from the general asset account property you change to personal use. See *Change to personal use*, later.

Unadjusted depreciable basis. The unadjusted depreciable basis of an item of property in a general asset account is the same amount you would use to figure gain on the sale of the property, but it is figured without taking into account any depreciation taken in earlier years.

The unadjusted depreciable basis of a general asset account is the total of the unadjusted depreciable bases of all of the property in the account.

Adjusted depreciable basis. The adjusted depreciable basis of a general asset account is the unadjusted depreciable basis of the account minus any allowed or allowable depreciation based on the account.

Delay in basis recovery (loss not realized). For purposes of determining gain or loss, when you dispose of property in a general asset account, treat the property as having an adjusted basis of zero immediately before you dispose of it. No loss can result from its disposition. Also, if you transfer property to a supplies, scrap, or similar account, the basis of the property in the supplies, scrap, or similar account will be zero.

Treatment of amount realized. You must recognize as ordinary income, up to a limit, any amount you realize when you dispose of property in a general asset account. The limit is the amount by which the sum of the unadjusted depreciable basis of the general asset account (defined earlier) plus any expensed costs for property in the account that are subject to recapture as depreciation is more than the total of any amounts previously recognized as ordinary income upon the disposition of other property from the account. Expensed costs that are subject to recapture as depreciation include the section 179 and 179A deductions and any deduction for the removal of barriers to the elderly and disabled.

Example 1. Make and Sell, a calendar-year corporation, maintains one general asset account for ten machines. The machines cost \$10,000 and were placed in service in June 1996. One of the ten machines cost \$8,200 and the rest cost a total of \$1,800. This general asset account is depreciated under the 200 percent declining balance method with a 5-year recovery period and a half-year convention. Make and Sell does not claim the section 179 deduction on the machines. As of January 1, 1997, the depreciation reserve account is $\$2,000 ((\$10,000 - \$0) \times 40\%) \div 2$.

On February 8, 1997, Make and Sell sells the machine that cost \$8,200 to an unrelated person for \$9,000. The machine has an adjusted basis of zero.

On its 1997 tax return, Make and Sell recognizes the \$9,000 amount realized as ordinary income because it is

not more than: the unadjusted depreciable basis of the general asset account (\$10,000), plus any expensed cost (for example the section 179 or 179A deduction) for property in the account (\$0), minus any amounts previously recognized as ordinary income because of dispositions of other property from the account (\$0). Also, the unadjusted depreciable basis and depreciation reserve of the account are not affected by the sale of the machine. The depreciation allowance in 1997 is $\$3,200 ((\$10,000 - \$2,000) \times 40\%)$.

Example 2. Assume the same facts as in Example 1 except that on June 4, 1998, Make and Sell sells seven machines to an unrelated party for a total of \$1,100. These machines have an adjusted basis of zero.

On its 1998 tax return, Make and Sell recognizes \$1,000 as ordinary income (the unadjusted depreciable basis of \$10,000 plus the expensed costs (\$0), less the amount of \$9,000 previously recognized as ordinary income). The recognition and character of the remaining amount realized of \$100 ($\$1,100 - \$1,000$) is long-term capital gain. Also, the unadjusted depreciable basis and depreciation reserve of the account are not affected by the disposition of the machines. The depreciation allowance for the account in 1998 is $\$1,920 ((\$10,000 - \$5,200) \times 40\%)$.

Certain nonrecognition transactions. If you transfer property that is in a general asset account in one of the nonrecognition transactions discussed in *Nonrecognition transactions*, you must do all of the following:

- 1) Remove the property from the general asset account as of the first day of your tax year in which the transaction takes place;
- 2) Reduce the unadjusted depreciable basis of the general asset account by the unadjusted depreciable basis of the property as of the first day of your tax year in which the transaction takes place;
- 3) Reduce the depreciation reserve of the general asset account by the depreciation allowed or allowable for the property as of the end of the tax year immediately before the year of the transaction, figured by using the depreciation method, recovery period, and convention that applies to that general asset account; and
- 4) For purposes of figuring the amount of gain on any later disposition that is subject to ordinary income treatment because it is a disposition from a general asset account, do not take into account any expensed cost (such as a section 179 deduction) for the property being transferred.

Nonrecognition transactions. The above rules apply to the following nonrecognition transactions:

- 1) The distribution to one corporation of property in complete liquidation of another corporation,

- 2) The transfer of property to a corporation solely in exchange for stock in that corporation if the transferor is in control of the corporation immediately after the exchange,
- 3) The transfer of property by a corporation that is a party to a reorganization in exchange solely for stock and securities in another corporation that is also a party to the reorganization,
- 4) The contribution of property to a partnership in exchange for an interest in the partnership,
- 5) The distribution of property (including money) from a partnership to a partner, and
- 6) Any transaction between members of the same affiliated group during any tax year for which the group makes a consolidated return.

The transferee (the recipient of the property) must include at least part of the basis of the property in a general asset account. The amount that must be included is the adjusted basis of the property in your hands (the transferor). If you transferred all of the property, or the last item of property, in a general asset account, the transferee's basis in the property is the adjusted depreciable basis of the general asset account (defined earlier) as of the beginning of your tax year in which the transaction takes place minus the amount of depreciation allowable to you for the year of the transfer.

Abusive transactions. If a main purpose for disposing of property from a general asset account is to get a tax benefit or a result that would not be available without the use of a general asset account and the transaction is not one of those listed earlier under *Nonrecognition transactions*, the transaction is an abusive one. Examples of abusive transactions include:

- 1) A transaction with a main purpose of shifting income or deductions among taxpayers in a way that would not be possible without making a choice to use a general asset account so that you can take advantage of differing effective tax rates, or
- 2) A choice to use a general asset account with a main purpose of disposing of property from the general asset account so that you can use an expiring net operating loss or credit.

If you have a net operating loss carryover or a credit carryover and you transfer property to a related person or transfer property according to an arrangement in which the property continues to be used (or is available for use) by you under an agreement, this is an abusive transaction unless there is strong evidence to the contrary.

Anti-abuse rule. As of the first day of the taxable year in which you dispose of property in an abusive transaction, general asset account treatment for that property ends. You must determine the amount of gain, loss, or other deduction due to the disposition by taking into account the property's adjusted basis. The adjusted basis of the property at the time of the disposition equals

the unadjusted depreciable basis of the property minus the depreciation allowed or allowable for the property figured by using the depreciation method, recovery period, and convention that applied to the general asset account in which the property was included.

If there is a gain, the amount subject to recapture as ordinary income cannot be more than the lesser of:

- 1) The depreciation allowed or allowable for the property, including any expensed cost (such as section 179 or 179A deductions or the additional depreciation allowed or allowable for the property) or,
- 2) The amount by which:
 - a) The original unadjusted depreciable basis of the general asset account (plus, for section 1245 property originally included in the general asset account, any expensed cost) is more than
 - b) The total amount of gain previously recognized as ordinary income on the disposition of income from the general asset account.

If you dispose of property in an abusive transaction, you must also make the adjustments to the general asset account listed earlier under *Certain nonrecognition transactions*.

Dispositions of all property in a general asset account. If you dispose of all of the property, or the last item of property in a general asset account, you can recover the adjusted depreciable basis of the general asset account. Under this rule, the general asset account ends and you figure the amount of gain or loss for the general asset account by comparing the adjusted depreciable basis of the general asset account with the amount realized.

If the amount realized is more than the adjusted depreciable basis, the difference is a gain. If it is less, the difference is a loss.

If there is a gain, the amount that is subject to recapture as ordinary income is limited in the same way as explained earlier under *Anti-abuse rule*.

Example. Duforcelf, a calendar-year corporation, maintains a general asset account for 1,000 calculators. The calculators cost a total of \$60,000 and were placed in service in 1996. Assume this general asset account is depreciated under the 200 percent declining balance method, a recovery period of 5 years, and a half-year convention. Duforcelf does not claim the 179 deduction on any of the calculators. In 1997, Duforcelf sells 200 of the calculators to an unrelated person for \$10,000. The \$10,000 is recognized as ordinary income.

On March 26, 1998, Duforcelf sells the remaining calculators in the general asset account to an unrelated party for \$35,000. Duforcelf decides to recover the adjusted depreciable basis of the account.

On the date of disposition, the adjusted depreciable basis of the account is \$20,040 (unadjusted depreciable basis of \$60,000 minus the depreciation allowed or allowable of \$39,960). In 1998, Duforcelf recognizes a

gain of \$14,960 (amount realized of \$35,000 minus the adjusted depreciable basis of \$20,040). The gain of \$14,960 is subject to recapture as ordinary income up to the amount of the depreciation allowed or allowable minus the amounts previously recognized as ordinary income (\$39,960 – \$10,000 = \$29,960). The entire gain of \$14,960 is ordinary income.

Qualifying dispositions. If you dispose of property in a qualifying disposition (defined later), you can end general asset account treatment for the property as of the first day of the taxable year in which the qualifying disposition occurs. If you end the general asset account treatment, you must figure the amount of gain, loss, or other deduction for the property by taking into account the property's adjusted basis.

If there is a gain, the amount that is subject to recapture as ordinary income is limited in the same way as explained earlier under *Anti-abuse rule*.

A **qualifying disposition** is one that does not involve all the property, or the last item of property, remaining in a general asset account and that is:

- 1) A direct result of fire, storm, shipwreck, other casualty, or theft,
- 2) A charitable contribution for which a deduction is allowed,
- 3) A direct result of a cessation, termination, or disposition of a business, manufacturing or other income producing process, operation, facility, plant, or other unit (other than by transfer to a supplies, scrap, or similar account), or
- 4) A transaction in which gain, if any, is not recognized, such as a like-kind exchange or an involuntary conversion. However, this does not include a transaction in which gain is not recognized only because the transaction involves a disposition from a general asset account. Nor does it include any transaction between members of the same affiliated group during any tax year for which the group makes a consolidated return. It also does not include any of the following transactions in which gain is not recognized.
 - The receipt by a corporation of property distributed in complete liquidation of another corporation.
 - The transfer of property to a corporation solely in exchange for stock in that corporation if the transferor is in control of the corporation immediately after the exchange.
 - The transfer of property to a corporation that is a party to a reorganization in exchange solely for stock and securities in another corporation that is also a party to the reorganization.
 - The contribution of property to a partnership in exchange for an interest in the partnership.
 - The distribution of property (including money) from a partnership to a partner.

For purposes of figuring the basis of property you acquired in a like-kind exchange or an involuntary conversion, treat the amount of ordinary income recognized on the disposition of the property as the amount of gain recognized on the disposition.

Effect of qualifying disposition. If you choose to figure the amount of gain, loss, or other deduction for property disposed of in a qualifying disposition (discussed earlier) by taking into account the property's adjusted basis, you must make the adjustments to the general asset account listed earlier under *Certain nonrecognition transactions*.

Example. Sankofa, a calendar-year corporation, maintains one general asset account for 12 machines. Each machine costs \$15,000 and was placed in service in 1996. Of the 12 machines, nine cost a total of \$135,000 and are used in Sankofa's New York plant and three machines that cost \$45,000 are used in Sankofa's New Jersey plant. Assume this general asset account has a depreciation method of 200 percent declining balance, a recovery period of 5 years, and a half-year convention. Sankofa does not claim the section 179 deduction for any of the machines. As of January 1, 1998, the depreciation account for the general asset account is \$93,600.

On May 27, 1998, Sankofa sells its entire manufacturing plant in New Jersey to an unrelated party. The sales proceeds allocated to each of the three machines at the New Jersey plant is \$5,000. Because this transaction is a qualifying disposition, Sankofa chooses to figure the amount of gain, loss, or other deduction by taking into account the adjusted basis of the three machines.

For Sankofa's 1998 return, the depreciation allowance for the account is figured as follows. As of December 31, 1997, the depreciation allowed or allowable for the three machines at the New Jersey plant is \$23,400. As of January 1, 1998, the unadjusted depreciable basis of the account is reduced from \$180,000 to \$135,000 (\$180,000 minus the unadjusted depreciable basis of \$45,000 for the three machines), and the depreciation account is decreased from \$93,600 to \$70,200 (\$93,600 minus depreciation allowed or allowable of \$23,400 for the three machines as of December 31, 1997.) The depreciation allowance for the account in 1998 is \$25,920 (((\$135,000 – \$70,200) × 40%).

For Sankofa's 1998 return, gain or loss for each of the three machines at the New Jersey plant is determined as follows. The depreciation allowed or allowable in 1998 for each machine is \$1,440 (\$15,000 – \$7,800) × 40% ÷ 2. The adjusted basis of each machine is \$5,760 (the adjusted depreciable basis of \$7,200 removed from the account less the depreciation allowed or allowable of \$1,440 in 1998). As a result, the loss recognized in 1998 for each machine is \$760 (\$5,000 – \$5,760), which is subject to section 1231. See Publication 544 for information on section 1231.

Property subject to recapture. If the basis of an item of property in a general asset account is increased as a

result of the recapture of the investment credit, the credit for qualified electric vehicles, the section 179 deduction, or the deduction for clean-fuel vehicles and certain refueling property, general asset account treatment for the property ends as of the first day of the tax year in which the recapture event occurs. You must remove the property from the general asset account as of the first day of the tax year in which the recapture occurs and make the adjustments to the general asset account described in items (2) through (4) under *Certain nonrecognition transactions*, earlier.

Change to personal use. An item of property in a general asset account becomes ineligible for general asset account treatment if you use it in a personal activity. Once you have converted the property to personal use, remove it from the general asset account as of the first day of the tax year in which the change in use occurs and make the adjustments described in items (2) through (4) under *Certain nonrecognition transactions*, earlier.

Identification of property disposed of or converted. You can use any reasonable method that is consistently applied to your general asset account to determine the unadjusted depreciable basis of property that you either convert to personal use or dispose of in one of the following transactions.

- 1) Any qualifying disposition (defined earlier).
- 2) Any transaction listed earlier under *Nonrecognition transactions*.
- 3) Any abusive transaction (defined earlier).
- 4) Any transaction which results in the increase in the basis of an item of property in a general asset account as a result of the recapture of the investment credit, the credit for qualified electric vehicles, the section 179 deduction, or the deduction for clean-fuel vehicles and certain refueling property.

Effect of adjustments on earlier dispositions. The adjustments made to a general asset account because of a change to personal use, or because of any of the transactions listed earlier under *Identification of property disposed of or converted* have no effect on the recognition and character of prior dispositions in which the adjusted basis is considered to be zero. See *Delay in basis recovery*, earlier.

Electing To Use General Asset Accounts

You must make the election on a timely filed tax return (including extensions) for the taxable year in which you place in service the property included in the general asset account. Make the election by typing or printing at the top of Form 4562, "GENERAL ASSET ACCOUNT ELECTION MADE UNDER SECTION 168(i)(4)."

Records. You must maintain records that identify the property included in each general asset account, that establish the unadjusted depreciable basis and depreciation reserve of the general asset account, and that reflect the amount realized during the tax year upon dispositions from each general asset account. However, see the recordkeeping requirements for section 179 property discussed in chapter 2.

You can only revoke an election to use the general asset account if:

- 1) There is a substantial distortion of income because you include in a general asset account property that generates foreign source income, both United States and foreign source income, or combined gross income of an FSC, a DISC, or a possessions corporation and its related supplier,
- 2) You dispose of all property remaining in a general asset account,
- 3) You dispose of property in a qualifying disposition (defined earlier),
- 4) You dispose of property in a transaction listed earlier under *Nonrecognition transactions*,
- 5) There is a transaction with a principal purpose of shifting income or deductions among taxpayers in a way that would not be possible without using general asset accounts and the transaction is not listed earlier under *Nonrecognition transactions*,
- 6) The basis of an item of property is increased as a result of a recapture of an amount mentioned under *Property subject to recapture*, earlier, or
- 7) You convert property to personal use.

An election to include property in a general asset account must be made at the partnership or S corporation level and not by each partner or shareholder separately.

4. Listed Property

Topics

This chapter discusses:

- What listed property is
- The predominant use test
- Special rules for passenger automobiles
- What records must be kept

Useful Items

You may want to see:

Publication

- 463** Travel, Entertainment, Gift, and Car Expenses

Form (and Instructions)

- 2106–EZ** Unreimbursed Employee Business Expenses
- 2106** Employee Business Expenses
- 4255** Recapture of Investment Credit
- 4562** Depreciation and Amortization

See chapter 6, *How To Get More Information*, for information about getting these publications.

This chapter discusses special rules and the record-keeping requirements for listed property, including passenger automobiles.

If listed property is not used predominantly (more than 50%) in a qualified business use as discussed later in *Predominant Use Test*, the section 179 deduction is not allowed and the property must be depreciated using ADS (straight line method) over the ADS recovery period. A rule that applies only to passenger automobiles limits the amount of your section 179 and depreciation deductions. See *Special Rule for Passenger Automobiles*, later.

For information on listed property placed in service before 1987, see Publication 534.

Listed Property Defined

Terms you may need to know (see Glossary):

Capitalized
Recovery period
Straight line method

Listed property is any of the following.

- 1) Any passenger automobile (defined under *Special Rule for Passenger Automobiles*, later).
- 2) Any other property used for transportation.
- 3) Any property of a type generally used for entertainment, recreation, or amusement (including photographic, phonographic, communication, and video-recording equipment).
- 4) Any computer and related peripheral equipment, defined later, **unless** it is used only at a regular business establishment and owned or leased by the

person operating the establishment. A regular business establishment includes a portion of a dwelling unit, if (and only if) that portion is used both regularly and exclusively for business as discussed in Publication 587. Dwelling units are defined earlier in chapter 3 in *Residential rental property under Property Classes and Recovery Periods*.

- 5) Any cellular telephone (or similar telecommunication equipment) placed in service or leased in a tax year beginning after 1989.

Other Property Used for Transportation

Other property used for transportation includes trucks, buses, boats, airplanes, motorcycles, and any other vehicles for transporting persons or goods.

Listed property does **not** include:

- 1) Any vehicle which, by reason of its design, is not likely to be used more than a minimal amount for personal purposes, such as clearly marked police and fire vehicles, ambulances, or hearses used for those purposes,
- 2) Any vehicle that is designed to carry cargo and that has a loaded gross vehicle weight over 14,000 pounds, bucket trucks (cherry pickers), cement mixers, combines, cranes and derricks, delivery trucks with seating only for the driver (or only for the driver plus a folding jump seat), dump trucks (including garbage trucks), flatbed trucks, forklifts, qualified moving vans, qualified specialized utility repair trucks, and refrigerated trucks,
- 3) Any passenger bus used for that purpose with a capacity of at least 20 passengers and school buses,
- 4) Any tractor or other special purpose farm vehicle, and unmarked vehicles used by law enforcement officers if the use is officially authorized, and
- 5) Any vehicle, such as a taxicab, if substantially all its use is in the trade or business of providing services to transport persons or property for pay or hire by unrelated persons.

Computers and Related Peripheral Equipment

A computer is a programmable electronically activated device that:

- 1) Is capable of accepting information, applying prescribed processes to the information, and supplying the results of those processes with or without human intervention, and
- 2) Consists of a central processing unit with extensive storage, logic, arithmetic, and control capabilities.

Related peripheral equipment is any auxiliary machine which is designed to be controlled by the central processing unit of a computer.

Computer or peripheral equipment does **not** include:

- 1) Any equipment which is an integral part of property which is not a computer,
- 2) Typewriters, calculators, adding and accounting machines, copiers, duplicating equipment, and similar equipment, and
- 3) Equipment of a kind used primarily for the user's amusement or entertainment, such as video games.

Improvements to Listed Property

An improvement made to listed property that must be capitalized is treated as a new item of depreciable property. The recovery period and method of depreciation that apply to listed property as a whole also apply to the improvement. For example, if you must depreciate the listed property using the straight line method, you must also depreciate the improvement using the straight line method.

Predominant Use Test

Terms you may need to know (see Glossary):

Business/investment use
Commuting
Fair market value (FMV)
Placed in service
Recovery period
Straight line method

If you do not use listed property predominantly (more than 50%) in a qualified business use, you cannot take the section 179 deduction and you must depreciate the property using ADS (straight line method) over the ADS recovery period.

Listed property meets the predominant use test for any tax year if its business use is more than 50% of its total use. You must allocate the use of any item of listed property used for more than one purpose during the tax year among its various uses. You cannot use the percentage of investment use of listed property as part of the percentage of qualified business use to meet the predominant use test. However, you do use the combined total of business and investment use to figure your depreciation deduction for the property.

Note. Property does not stop being predominantly used in a qualified business use because of a transfer at death.

Example 1. Sarah Bradley uses a home computer 50% of the time to manage her investments. She also uses the computer 40% of the time in her part-time consumer research business. Sarah's home computer is listed property because it is not used at a regular business establishment. Because she does not use the computer more than 50% for business, she does not use it predominantly in a qualified business use for the taxable year. Because she does not meet the predominant use test, she cannot elect a section 179 deduction for this property. Her combined rate of business/investment use for determining her depreciation deduction using ADS is 90%.

Example 2. If Sarah in Example 1 uses her computer 30% of the time to manage her investments and 60% of the time in her consumer research business, her property meets the predominant use test. She can elect a section 179 deduction. Her combined business/investment use for determining her depreciation deduction using GDS is 90%.

Qualified Business Use

A qualified business use is any use in your trade or business. However, it does **not** include:

- 1) The use of property held merely to produce income (investment use),
- 2) The leasing of property to any **5% owner or related person** (to the extent that the property is used by a 5% owner or person related to the owner or lessee of the property),
- 3) The use of property as pay for services of a **5% owner or related person**, or
- 4) The use of property as pay for services of any person (other than a **5% owner or related person**) unless the value of the use is included in that person's gross income for the use of the property and income tax is withheld on that amount where required. See *Employees*, later.

5% owner. A 5% owner of a business, other than a corporation, is any person who owns more than 5% of the capital or profits interest in the business.

A 5% owner of a corporation is any person who owns, or is considered to own:

- More than 5% of the outstanding stock of the corporation, or
- Stock possessing more than 5% of the total combined voting power of all stock in the corporation.

Related person. A related person is anyone related to a taxpayer as discussed in chapter 2 in *Related persons*, under *Nonqualifying Property*.

Entertainment Use

Treat the use of listed property for entertainment, recreation, or amusement purposes as a qualified business

use only to the extent that you can deduct expenses (other than interest and property tax expenses) due to its use as an ordinary and necessary business expense. See Publication 463.

Leasing or Compensatory Use of Aircraft

If at least 25% of the total use of any aircraft during the tax year is for a qualified business use, treat the leasing or compensatory use of the aircraft by a 5% owner or related person as a qualified business use.

Commuting

The use of a vehicle for commuting is not business use, regardless of whether work is performed during the trip. For example, a business telephone call made on a car telephone while commuting to work does not change the character of the trip from commuting to business. This is also true for a business meeting held in a car while commuting to work. Similarly, a business call made on an otherwise personal trip does not change the trip from personal to business. The fact that an automobile is used to display material that advertises the owner or user's trade or business does not convert an otherwise personal use into business use.

Use of Your Passenger Automobile by Another Person

If someone else uses your automobile, do not treat that use as business use unless:

- 1) That use is directly connected with your business,
- 2) You properly report the value of the use as income to the other person and withhold tax on the income where required, or
- 3) You are paid a fair market rent.

Treat any payment to you for the use of the automobile as a rent payment for purposes of item (3) above.

Example 1. John Maple is the sole proprietor of a plumbing contracting business. John employs his brother, Richard, in the business. As part of Richard's pay, he is allowed to use one of the company automobiles for personal use. The company includes the value of the personal use of the automobile in Richard's gross income and properly withholds tax on it. Because the use of the property is pay for the performance of services by a related party, the use of the company automobile is not a qualified business use.

Example 2. John, in Example 1, allows unrelated employees to use company automobiles for personal purposes. He includes the value of the personal use of the company automobiles as part of their compensation. The employees, however, do not include the value of the personal use of the automobiles in their gross incomes and John does not withhold tax on the value of the use of the automobiles. This use of company automobiles by employees is not a qualified business use.

Example 3. James Company Inc. owns several automobiles which its employees use for business purposes. The employees are also allowed to take the automobiles home at night. This is commuting. However, the fair market value of the use of an automobile for any personal purpose, such as commuting to and from work, is reported as income to the employees and James Company withholds tax on it. This use of company automobiles by employees, even for personal purposes, is a qualified business use for the company.

Employees

Any use by an employee of his or her own listed property (or listed property rented by an employee) in performing services as an employee is not business use unless:

- The use is for the employer's convenience, and
- The use is required as a condition of employment.

Use for the employer's convenience. Whether the use of listed property is for the employer's convenience must be determined from all the facts. The use is for the employer's convenience if it is for a substantial business reason of the employer. The use of listed property during the employee's regular working hours to carry on the employer's business is generally for the employer's convenience.

Use required as a condition of employment. Whether the use of listed property is a condition of employment depends on all the facts and circumstances. The use of property must be required for the employee to perform duties properly. The employer need not explicitly require the employee to use the property. A mere statement by the employer that the use of the property is a condition of employment is not sufficient.

Example 1. Virginia Sycamore is employed as a courier with We Deliver, which provides local courier services. She owns and uses a motorcycle to deliver packages to downtown offices. We Deliver explicitly requires all delivery persons to own a small car or motorcycle for use in their employment. The company pays delivery persons for their costs. Virginia's use of the motorcycle is for the convenience of We Deliver and is required as a condition of employment.

Example 2. Bill Nelson is an inspector for Uplift, a construction company with many sites in the local area. He must travel to these sites on a regular basis. Uplift does not furnish an automobile or explicitly require him to use his own automobile. However, it pays him for any costs he incurs in traveling to the various sites. The use of his own automobile or a rental automobile is for the convenience of Uplift and is required as a condition of employment.

Example 3. Assume the same facts as in Example 2 except that Uplift furnishes a car to Bill, who chooses to use his own car and receive payment for using it. The

use of his own car is neither for the convenience of Uplift nor required as a condition of employment.

Example 4. Marilyn Lee is a pilot for Y Company, a small charter airline. Y requires pilots to obtain 80 hours of flight time annually in addition to flight time spent with the airline. Pilots can usually obtain these hours by flying with the Air Force Reserve or by flying part-time with another airline. Marilyn owns her own airplane. The use of her airplane to obtain the required flight hours is neither for the convenience of the employer nor required as a condition of employment.

Example 5. David Rule is employed as an engineer with Zip, an engineering contracting firm. He occasionally takes work home at night rather than work late in the office. He owns and uses a home computer which is virtually identical to the office model. David's computer is listed property because it is not used at a regular business establishment. His use of the computer is neither for the convenience of his employer nor a required condition of employment.

Employee deductions. Employees who meet the requirements for the use of listed property for both the employer's convenience and as a condition of employment can deduct depreciation, or rental expenses, for the business use of that property. Employees should report their expenses on Form 2106 or Form 2106—EZ and attach it to their individual income tax returns.

Method of Allocating Use

For passenger automobiles and other means of transportation, allocate the property's use on the basis of mileage. You determine the percentage of qualified business use by dividing the number of miles the vehicle is driven for business purposes during the year by the total number of miles the vehicle is driven for all purposes (including business miles) during the year.

For other items of listed property, allocate the property's use on the basis of the most appropriate unit of time. For example, you can determine the percentage of business use of a computer by dividing the number of hours the computer is used for business purposes during the year by the total number of hours the computer is used for all purposes (including business hours) during the year.

Applying the Predominant Use Test

You must apply the predominant use test for an item of listed property each year of the recovery period. For example, if you place an item of listed property in service this year, you must apply the predominant use test for that property each year of the ADS recovery period.

First Recovery Year

If you do not use an item of listed property predominantly in a qualified business use in the year you place it in service:

- 1) You cannot claim a section 179 deduction for the property, and
- 2) You must use ADS to figure depreciation on the property.

As discussed earlier in *When To Use ADS* under *What Can Be Depreciated Under MACRS*, using ADS means that you must figure your depreciation deduction with the straight line method over the ADS recovery period.

The required use of the straight line method for an item of listed property that does not meet the predominant use test is not the same as electing the straight line method. It does not mean that you have to use the straight line method for other property in the same class as the item of listed property.

Example. On July 1, James Wand bought and placed in service a computer, which is 5-year property, costing \$4,000. During the year, he uses the computer 40% in a qualified business use, 30% for investment purposes (to produce income), and 30% for personal use. James's computer is listed property because it is not used at a regular business establishment. Because the qualified business use is only 40%, he cannot elect any section 179 deduction and must use ADS to figure depreciation. Under ADS, he figures his depreciation deduction for the year using the straight line method over the ADS 5-year recovery period. To determine his deduction, he must first determine the business/investment portion of his property cost. He does this by multiplying the total cost by the combined business/investment use percentage ($\$4,000 \times 70\%$). He then figures his depreciation deduction for the year. He refers to Table A-8 and obtains the first-year rate of 10% using the half-year convention. He then multiplies the combined business/investment portion of the cost by the first-year straight line rate ($\$2,800 \times 10\%$). The result is his depreciation deduction for the year, \$280.

Years After the First Recovery Year

If, in a year after you place an item of listed property in service, you fail to meet the predominant use test for that item of property, you may be required to recapture part of the section 179 and depreciation deductions claimed. You will also be required to figure your depreciation in a different way. You must:

- 1) Figure depreciation using the straight line method. Do this for each year, beginning with the year you no longer use the property predominantly in a qualified business use, and

2) Figure any excess depreciation on the property and add it to:

- a) Your gross income, and
- b) The adjusted basis of your property.

See *Recapture of excess depreciation*, later.

Depreciation method. Beginning with the year you no longer use the property predominantly in a qualified business use, you determine the depreciation using the ADS method of straight line depreciation. The ADS recovery periods for many items of property are located in the tables in Appendix B of this publication.

Recapture of excess depreciation. You must include any excess depreciation in your gross income for the first tax year you no longer use the property predominantly in a qualified business use. You must also add excess depreciation to the adjusted basis of your property. Excess depreciation is:

- 1) The amount of depreciation allowable for the property (including any section 179 deduction claimed) for tax years before the first tax year you did not use the property predominantly in a qualified business use, minus
- 2) The amount of depreciation that would have been allowable for those years if you had not used the property predominantly in a qualified business use for the year you placed it in service. This means you figure your depreciation using the ADS method.

For information on investment credit recapture, see the instructions for Form 4255.

Example. On June 25, 1992, Ellen Rye purchased and placed in service a pickup truck that cost \$18,000. The pickup truck had a gross vehicle weight of 7,000 pounds. She used it only in a qualified business use for 1992 through 1995. Because the pickup truck weighed over 6,000 pounds, it was not subject to the limits that apply to passenger automobiles as discussed under *Special Rules for Passenger Automobiles*, later. Ellen claimed a section 179 deduction of \$10,000 based on the purchase of the truck. She began depreciating it using 200% DB over a 5-year GDS recovery period. If, during 1996, she had used the truck 50% for business and 50% for personal purposes, she would have had to include \$4,018 excess depreciation in her gross income. The excess depreciation would have been determined as follows:

Total section 179 deduction (\$10,000) and depreciation claimed (\$6,618). Depreciation is from Table A-1.	\$16,618
Depreciation allowable (Table A-8):	
1992—10% of \$18,000	1,800
1993—20% of \$18,000	3,600
1994—20% of \$18,000	3,600
1995—20% of \$18,000	3,600
	12,600
Excess depreciation	\$ 4,018

If her use of the truck did not change to 50% for business and 50% for personal purposes until 1998, she would not have to include any excess depreciation in income. This is because there would be no excess depreciation. The total depreciation allowable using Table A-8 through 1997 would be \$18,000 which equals the total depreciation plus the section 179 deduction she claimed.

Deductions After Recovery Period

When you use listed property (other than passenger automobiles) for business, investment, and personal purposes, you are never allowed a deduction for the personal use. In tax years after the recovery period, you must determine if there is any unrecovered basis remaining before you compute the depreciation deduction for that tax year. To make this determination, figure the depreciation for earlier tax years as if your property were used 100% for business or investment purposes, beginning with the first tax year in which you used it for business or investment purposes. See *Car Used 50% or Less for Business* in Publication 463.

Example. On October 1, 1990, Betty Oaks purchased and placed in service a home computer (5-year recovery property under MACRS). She installed the computer in her basement for use in her business that she operates out of her home. However, because she does not use her basement regularly and exclusively for business purposes, the home computer is listed property. Her business use for the computer in 1990 through 1995 was 80% each year. She claimed depreciation using regular MACRS percentages for these years based on her percentage of business use.

If, in 1996, Betty used the computer 100% in a qualified business use, she would not be entitled to claim any depreciation because there is no remaining basis to be recovered. The computer was 5-year property under MACRS. If she had used the property 100% in business, she would have depreciated it in full after 6 years using the regular MACRS percentage tables. This is because MACRS percentage tables had the use of conventions built into the table rates. Her unrecovered basis in 1996 would have been zero.

Leased Property

The limits on cost recovery deductions apply to the rental of listed property. The following discussion covers the rules that apply to the lessor (the owner of the property) and the lessee (the person who rents the property from the owner). See *Leasing a Car* in Publication 463 for a discussion of leased passenger automobiles.

Lessor

The limits on cost recovery generally do not apply to any listed property leased or held for leasing by anyone regularly engaged in the business of leasing listed property.

You are considered **regularly engaged in the business of leasing** listed property only if you enter into contracts for the leasing of listed property are entered into with some frequency over a continuous period of time. This determination is made on the basis of the facts and circumstances in each case and takes into account the nature of your business in its entirety. Occasional or incidental leasing activity is insufficient. For example, if you lease only one passenger automobile during a tax year, you are not regularly engaged in the business of leasing automobiles. An employer who allows an employee to use the employer's property for personal purposes and charges the employee for the use is not regularly engaged in the business of leasing the property used by the employee.

Lessee

A lessee of listed property (other than passenger automobiles) leased after 1986 must include an inclusion amount in gross income for the first tax year the property is not used predominantly in a qualified business use. For information on listed property leased before 1987, see Publication 534.

The inclusion amount for lease listed property is the sum of amount A and amount B.

Amount A. Amount A is the product of:

- 1) The fair market value of the property, multiplied by
- 2) The business/investment use for the first tax year the business use percentage is 50% or less, multiplied by
- 3) The applicable percentage from Table A-19 in Appendix A.

Amount B. Amount B is the product of:

- 1) The fair market value of the property, multiplied by
- 2) The average of the business/investment use for all tax years the property is leased that precede the first tax year the business use percentage is 50% or less, multiplied by
- 3) The applicable percentage from Table A-20 in Appendix A.

The **fair market value** is the value on the first day of the lease term. If the capitalized cost of an item of listed property is specified in the lease agreement, the lessee must treat that amount as the fair market value.

The average business/investment use of any listed property is the average business/investment use for the first tax year the business use percentage is 50% or less and all prior tax years the property is leased.

Inclusion Amount Worksheet

The following worksheet is provided to help you figure the inclusion amount for leased listed property.

Inclusion Amount Worksheet for Listed Property (Leased)

- | | |
|--|-------|
| 1. Fair market value | _____ |
| Business/investment use for first year | |
| 2. business use is 50% or less | _____ |
| 3. Multiply line 1 by line 2. | _____ |
| 4. Table rate (%) | _____ |
| 5. Multiply line 3 by line 4. This is Amount A. | _____ |
| 6. Fair market value | _____ |
| Average business/investment use for years
property leased before the first year business | |
| 7. use is 50% or less | _____ |
| 8. Multiply line 6 by line 7 | _____ |
| 9. Table rate (%) | _____ |
| 10. Multiply line 8 by line 9. This is Amount B. | _____ |
| Add line 5 and line 10. This is your inclusion
amount. Enter here and as "other income" on
the form or schedule on which you originally
took the deduction (i.e., Schedule C, F, Form | |
| 11. 1040, 1120, etc.) | _____ |

Example. On February 1, 1994, Larry House, a calendar year taxpayer, leased and placed in service a computer with a fair market value of \$3,000. The lease is for a period of five years. Because Larry does not use the computer at a regular business establishment, it is listed property. His qualified business use of the property is 80% in tax year 1994, 60% in 1995, and 40% in 1996. He must add an inclusion amount to gross income for 1996, the first tax year he does not use the computer more than 50% for business. The computer has a 5-year recovery period under both GDS and ADS. Because 1996 is the third tax year of the lease, the applicable percentage from Table A-19 is – 19.8%. The applicable percentage from Table A-20 is 22.0%. Larry uses the *Inclusion Amount Worksheet for Listed Property (Leased)* to figure the amount he must include in income for 1996. His inclusion amount is \$224, which is the sum of – \$238 (amount A) and \$462 (amount B).

**Inclusion Amount
Worksheet for
Listed Property (Leased)**

1. Fair market value	\$3,000
2. Business/investment use for first year business use is 50% or less	40%
3. Multiply line 1 by line 2.	1,200
4. Table rate (%)	- 19.8%
5. Multiply line 3 by line 4. This is Amount A.	- 238
6. Fair market value	3,000
7. Average business/investment use for years property leased before the first year business use is 50% or less	70%
8. Multiply line 6 by line 7	2,100
9. Table rate (%)	22.0%
10. Multiply line 8 by line 9. This is Amount B.	462
11. Add line 5 and line 10. This is your inclusion amount. Enter here and as "other income" on the form or schedule on which you originally took the deduction (i.e., Schedule C, F, Form 1040, 1120, etc.)	\$224

The **lease term** for listed property other than residential rental or nonresidential real property includes options to renew. You treat two or more successive leases that are part of the same transaction (or a series of related transactions) for the same or substantially similar property as one lease.

Special rules. The lessee adds the inclusion amount to gross income in the next tax year if:

- 1) The lease term begins within 9 months before the close of the lessee's tax year,
- 2) The lessee does not use the property predominantly in a qualified business use during that portion of the tax year, and
- 3) The lease term continues into the lessee's next tax year.

The lessee determines the inclusion amount by taking into account the average of the business/investment use for both tax years and the applicable percentage for the tax year the lease term begins.

If the lease term is less than one year, the amount included in gross income is the amount that bears the same ratio to the additional inclusion amount as the number of days in the lease term bears to 365.

Maximum inclusion amount. The inclusion amount cannot be more than the sum of the deductible amounts of rent for the tax year in which the lessee must include the amount in gross income.

Example 1. On August 1, 1995, Julie Rule, a calendar year taxpayer, leased and placed in service an item of listed property. The property is 5-year property with a fair market value of \$10,000. Her property has a recovery period of 5 years under the ADS method. The lease is for 5 years. Her qualified business use of the property is 50% in 1995 and 90% in 1996. She pays rent of \$3,600 for 1996 of which \$3,240 is deductible. She must include \$147 in gross income in 1996. The \$147 is the sum of amount A and amount B. Amount A is \$147 ($\$10,000 \times 70\% \times 2.1\%$), the product of the fair market value, the average business use for 1995 and 1996, and the applicable percentage for year one from Table A-19. Because the applicable percentage for year one from Table A-20 is 0%, amount B is zero.

Example 2. On October 1, 1995, John Joyce, a calendar year taxpayer, leased and placed in service an item of listed property that is 3-year property. This property had a fair market value of \$15,000 and a recovery period of 5 years under the ADS method. The lease term is 6 months (ending on March 31, 1996) during which he uses the property 45% in business. He must include \$70.88 in gross income in 1996. The \$70.88 is the sum of amount A and amount B. Amount A is \$70.88 ($\$15,000 \times 45\% \times 2.1\% \times 183/366$), the product of the fair market value, the average business use for both years, and the applicable percentage for year one from Table A-19, prorated for the length of the lease. Because the applicable percentage for year one from Table A-20 is 0%, amount B is zero.

Special Rule for Passenger Automobiles

Terms you may need to know (see Glossary):

Placed in service
Recovery period

In addition to the rules for all listed property, a passenger automobile is also subject to other special limits. For passenger automobiles, the total depreciation deduction (including the section 179 deduction) that you can claim is limited.

Maximum deduction for 1996. Determine the maximum depreciation deduction you can claim for a passenger automobile by the date you place the automobile in service. The maximum deductions for 1996, based on the year placed in service, are:

Maximum Depreciation Deduction

Year Placed in Service	1st Year	2nd Year	3rd Year	4th Year and Later
1996	\$3,060	\$4,900	\$2,950	\$1,775
1995		4,900	2,950	1,775
1994			2,850	1,675
1993				1,675
1992				1,575
Pre-1992				1,575

For automobiles you place in service during 1996, your depreciation, including the section 179 deduction, cannot be more than \$3,060 for 1996 (the first tax year of the recovery period). For 1997 and 1998 (second and third years), you are limited to a depreciation deduction of \$4,900 and \$2,950, respectively. The maximum depreciation in each succeeding tax year will be \$1,775.

You must reduce these limits further if your business/investment use is less than 100%.

You cannot take any depreciation or section 179 deduction for the use of listed property (including passenger automobiles) regardless of the date you placed the property in service, unless you can prove business/investment use with adequate records, or sufficient evidence to support your own statements. See *What Records Must Be Kept*, later.

Fully depreciated automobile. If you have fully depreciated a car that you are still using in your business, you can continue to claim your other operating expenses for

the business use of your car. Continue to keep records, as explained later.

Passenger Automobile Defined

A passenger automobile is any four-wheeled vehicle made primarily for use on public streets, roads, and highways and rated at 6,000 pounds or less of unloaded gross vehicle weight (6,000 pounds or less of gross vehicle weight for trucks and vans). It includes any part, component, or other item physically attached to the automobile or usually included in the purchase price of an automobile.

The following vehicles are **not** considered passenger automobiles for these purposes:

- 1) An ambulance, hearse, or combination ambulance-hearse used directly in a trade or business, and
- 2) A vehicle used directly in the trade or business of transporting persons or property for pay or hire.

Example. On April 15, 1995, Virginia Hart buys a car for \$10,000. She uses the car only in her business. She files her tax return based on the calendar year. She does not elect a section 179 deduction. Under MACRS, a car is 5-year property. Because she placed her car in service on April 15 and used it only for business, she uses the percentages in Table A-1 to figure her depreciation on the car. Virginia multiplies the unadjusted basis of her car (\$10,000) by 0.20 to get her depreciation of \$2,000 for 1995. This \$2,000 is below the maximum deduction of \$3,060 for passenger automobiles placed in service in 1996. She can deduct the full \$2,000.

Listed Property Worksheet for Passenger Automobiles

To assist you in computing your maximum depreciation deduction, the following worksheet is provided.

Worksheet for Passenger Automobiles (Subject to Special Limits)

Part I

1. Description of property
2. Date placed in service
3. MACRS method (GDS or ADS)
4. Property class and recovery period
5. Convention
6. Depreciation rate (from tables)
7. Passenger automobile deduction limit for this year (from the *Maximum Depreciation Deduction* table)
8. Business/investment use percentage
9. Multiply line 7 by line 8. This is your adjusted deduction limit
10. Section 179 deduction claimed this year (not more than line 9). Enter 0 if this is not the year you placed the car in service.

Note.

- 1) If line 10 is equal to line 9, stop here. Your combined section 179 and depreciation deduction is limited to line 9.
- 2) If line 10 is less than line 9, complete Part II.

Part II

11. Subtract line 10 from line 9. This is the maximum amount you can deduct for depreciation
12. Cost or other basis (reduced by any section 179A deduction* or by any amount claimed as credit for electric vehicles)
13. Multiply line 12 by line 8. This is your business/investment cost
14. Section 179 deduction claimed in year you placed the car in service
15. Subtract line 14 from line 13. This is your unadjusted basis for depreciation
16. Multiply line 15 by line 6. This is your maximum depreciation deduction
17. Enter the lesser of line 11 or line 16. This is your depreciation deduction

* **Note.** The section 179A deduction is for clean-fuel vehicles or clean-fuel vehicle refueling property. When figuring the amount to enter on line 12, do not reduce your cost or other basis by any section 179 deduction you claimed for your car.

The following example shows how to figure your maximum deduction using the worksheet.

Example On September 26, 1996, Donald Banks bought a car for \$18,000. He used the car 60% for business during 1996. He files his tax return based on the calendar year. Under GDS, his car is 5-year property. Donald is electing a section 179 deduction of \$1,000 on the car. He uses the Table A-1 rates to figure his depreciation. The unadjusted basis of his car is \$9,800 (60% × \$18,000) – \$1,000 section 179 deduction. He multiplies his unadjusted basis (\$9,800) by the Table A-1 rate (0.20) to get his tentative depreciation deduction of \$1,960. Because he used the passenger automobile only 60% for business, his depreciation deduction (including the section 179 deduction) is limited to \$1,836 (60% × \$3,060). Because Donald is claiming a section 179 deduction of \$1,000 in 1996, his depreciation deduction is limited to \$836.

**Worksheet for Passenger Automobiles
(Subject to Special Limits)**

Part I

1. Description of property	Automobile
2. Date placed in service	9/26/96
3. MACRS method (GDS or ADS)	GDS
4. Property class and recovery period	5-Year
5. Convention	Half-Year
6. Depreciation rate (from tables)20
7. Passenger automobile deduction limit for this year (from the <i>Maximum Depreciation Deduction</i> table)	\$ 3,060
8. Business/investment use percentage	60%
9. Multiply line 7 by line 8. This is your adjusted deduction limit	1,836
10. Section 179 deduction claimed this year (not more than line 9). Enter 0 if this is not the year you placed the car in service.	1,000

Note.

- 1) If line 10 is equal to line 9, stop here. Your combined section 179 and depreciation deduction is limited to line 9.
- 2) If line 10 is less than line 9, complete Part II.

Part II

11. Subtract line 10 from line 9. This is the maximum amount you can deduct for depreciation	\$ 836
12. Cost or other basis (reduced by any section 179A deduction* or by any amount claimed as credit for electric vehicles)	\$ 18,000
13. Multiply line 12 by line 8. This is your business/investment cost	\$ 10,800
14. Section 179 deduction claimed in year you placed the car in service	1,000
15. Subtract line 14 from line 13. This is your unadjusted basis for depreciation	\$ 9,800
16. Multiply line 15 by line 6. This is your maximum depreciation deduction	\$ 1,960
17. Enter the lesser of line 11 or line 16. This is your depreciation deduction	\$ 836

* **Note.** The section 179A deduction is for clean-fuel vehicles or clean-fuel vehicle refueling property. When figuring the amount to enter on line 12, do not reduce your cost or other basis by any section 179 deduction you claimed for your car.

For a detailed discussion of passenger automobiles, including leased passenger automobiles, see Publication 463.

What Records Must Be Kept

Terms you may need to know (see Glossary):

- Business/investment use
- Circumstantial evidence
- Documentary evidence

You cannot take any depreciation or section 179 deduction for the use of listed property (including passenger automobiles) unless you can prove your business/investment use with adequate records or sufficient evidence to support your own statements. The period of time you must keep these records is discussed later in *How Long To Keep Records*.

Adequate Records

To meet the adequate records requirement, you must maintain an account book, diary, log, statement of expense, trip sheet, or similar record or other documentary evidence that, together with the receipt, is sufficient to establish each element of an expenditure or use. You do not have to record information in an account book, diary, or similar record if the information is already shown on the receipt. However, your records should back up your receipts in an orderly manner.

Elements of Expenditure or Use

Your records or other documentary evidence must support:

- 1) The amount of each separate expenditure, such as the cost of acquiring the item, maintenance and repair costs, capital improvement costs, lease payments, and any other expenses,
- 2) The amount of each business and investment use (based on an appropriate measure, such as mileage for vehicles and time for other listed property), and the total use of the property for the tax year,
- 3) The date of the expenditure or use, and
- 4) The business or investment purpose for the expenditure or use.

Written documents of your expenditure or use are generally better evidence than oral statements alone. A written record you prepare at or near the time of the expenditure or use has greater value as proof of the expenditure or use. You do not have to keep a daily log. However, some type of record containing the elements of an expenditure or the business or investment use of listed property made at or near the time and backed up by other documents is preferable to a statement you prepare later.

Timeliness

You must record the elements of an expenditure or use at the time you have full knowledge of the elements. An expense account statement made from an account book, diary, or similar record prepared or maintained at or near the time of the expenditure or use is generally considered a timely record if in the regular course of business:

- 1) The statement is given by an employee to the employer, or
- 2) The statement is given by an independent contractor to the client or customer.

For example, a log maintained on a weekly basis, which accounts for use during the week, will be considered a record made at or near the time of use.

Business Purpose Supported

An adequate record of business purpose must generally be in the form of a written statement. However, the amount of backup necessary to establish a business purpose depends on the facts and circumstances of each case. A written explanation of the business purpose will not be required if the purpose can be determined from the surrounding facts and circumstances. For example, a salesperson visiting customers on an established sales route will not normally need a written explanation of the business purpose of his or her travel.

Business Use Supported

An adequate record contains enough information on each element of every business or investment use. The amount of detail required to support the use depends on the facts and circumstances. For example, a taxpayer whose only business use of a truck is to make customer deliveries on an established route can satisfy the requirement by recording the length of the route, including the total number of miles driven during the tax year and the date of each trip at or near the time of the trips.

Although, generally, you must prepare an adequate written record, you can prepare a record of the business use of listed property using a computer memory device using a logging program.

Separate or Combined Expenditures or Uses

Each use by you is normally considered a separate use. However, you can combine repeated uses as a single item.

Record each expenditure as a separate item. Do not combine it with other expenditures. If you choose, however, you can combine amounts you spent for the use of listed property during a tax year, such as for gasoline or automobile repairs. If you combine these expenses, you do not need to support the business purpose of each expense. Instead, you can divide the expenses based on the total business use of the listed property.

You can account for uses which can be considered part of a single use, such as a round trip or uninterrupted business use, by a single record. For example, you can account for the use of a truck, to make deliveries at several locations that begin and end at the business premises and can include a stop at the business in between deliveries, by a single record of miles driven. You can account for the use of a passenger automobile by a salesperson for a business trip away from home over a period of time by a single record of miles traveled.

Minimal personal use (such as a stop for lunch between two business stops) is not an interruption of business use.

Confidential Information

If any of the information on the elements of an expenditure or use is confidential, you do not need to include it in the account book or similar record if you record it at or near the time of the expenditure or use. You must keep it elsewhere and make it available as support to the district director on request.

Substantial Compliance

If you have not fully supported a particular element of an expenditure or use, but have complied with the adequate records requirement for the expenditure or use to the district director's satisfaction, you can establish this element by any evidence the district director deems adequate.

If you fail to establish that you have substantially complied with the adequate records requirement for an element of an expenditure or use to the district director's satisfaction, you must establish the element:

- 1) By your own oral or written statement containing detailed information as to the element, and
- 2) By other evidence sufficient to establish the element.

If the element is the cost or amount, time, place, or date of an expenditure or use, its supporting evidence must be direct, such as oral testimony by witnesses or a written statement setting forth detailed information about the element or the documentary evidence. If the element is the business purpose of an expenditure, its supporting evidence can be circumstantial evidence.

Sampling

You can maintain an adequate record for portions of a tax year and use that record to support your business and investment use for the entire tax year if it can be shown by other evidence that the periods for which you maintain an adequate record are representative of use throughout the year.

Example 1. Denise Williams, a sole proprietor and calendar year taxpayer, operates an interior decorating business out of her home. She uses her automobile for local business visits to the homes or offices of clients, meetings with suppliers and subcontractors, and to pick up and deliver items to clients. There is no other business use of the automobile, but she and family members also use it for personal purposes. She maintains adequate records for the first three months of the year showing that 75% of the automobile use was for business. Subcontractor invoices and paid bills show that

her business continued at approximately the same rate for the rest of the year. If there is no change in circumstances, such as the purchase of a second car for exclusive use in her business, the determination that her combined business/investment use of the automobile for the tax year is 75% rests on sufficient supporting evidence.

Example 2. Assume the same facts as in Example 1 except that Denise maintains adequate records during the first week of every month showing that 75% of her use of the automobile is for business. Her business invoices show that her business continued at the same rate during the later weeks of each month so that her weekly records are representative of the automobile's business use throughout the month. The determination that her business/investment use of the automobile for the tax year is 75% rests on sufficient supporting evidence.

Example 3. Bill Baker, a sole proprietor and calendar year taxpayer, is a salesman in a large metropolitan area for a company that manufactures household products. For the first three weeks of each month, he occasionally uses his own automobile for business travel within the metropolitan area. During these weeks, his business use of the automobile does not follow a consistent pattern. During the fourth week of each month, he delivers all business orders taken during the previous month. The business use of his automobile, as supported by adequate records, is 70% of its total use during that fourth week. The determination based on the record maintained during the fourth week of the month that his business/investment use of the automobile for the tax year is 70% does not rest on sufficient supporting evidence because his use during that week is not representative of use during other periods.

Loss of Records

When you establish that failure to produce adequate records is due to loss of the records through circumstances beyond your control, such as through fire, flood, earthquake, or other casualty, you have the right to support a deduction by reasonable reconstruction of your expenditures and use.

Reporting Information on Form 4562

If you claim a deduction for any listed property, you must provide the requested information on page 2, Section B of Form 4562. If you claim a deduction for any vehicle, you must answer certain questions on page 2 of Form 4562 to provide information about the vehicle use.

Employees. Employees claiming the standard mileage rate or actual expenses (including depreciation) must use Form 2106 instead of Part V of Form 4562. Employees claiming the standard mileage rate may be able to use Form 2106-EZ.

Employer who provides vehicles to employees. An employer who provides vehicles to employees must obtain enough information from those employees to provide the requested information on Form 4562.

An employer who provides more than five vehicles to employees does not need to include any information on his or her tax return. Instead, the employer must obtain the information from his or her employees and indicate on his or her return that the requested information was obtained and is being retained.

You do not need to provide the information requested on page 2 of Form 4562 if, as an employer:

- 1) You can satisfy the requirements of a written policy statement for vehicles either not used for personal purposes, or not used for personal purposes other than commuting, or
- 2) You treat all vehicle use by employees as personal use.

See the instructions for Form 4562.

How Long To Keep Records

For listed property, you must keep records for as long as any excess depreciation can be recaptured (included in income).

Recapture can occur in any tax year of the ADS recovery period.

5.

Comprehensive Example

Fields of Flowers, Inc. operates a retail florist shop. It files its corporate tax return based on a calendar year. The corporation began its operation in 1992. The corporation uses all of its property 100% for business purposes.

Depreciation Worksheet

The worksheet shows the information needed to figure depreciation on each item of property and the total depreciation for 1996. The corporation's books and records support the information on the worksheet. There is an account for each item of property. These accounts show:

- 1) The date of acquisition,
- 2) A description of the property,

- 3) The cost or other basis of the property,
- 4) The amount of section 179 deduction claimed,
- 5) The MACRS depreciation method used,
- 6) The property class and recovery period, and
- 7) The depreciation deducted each year.

For information on business recordkeeping, see Publication 583, *Starting a Business and Keeping Records*.

On February 2, 1993, the corporation bought and placed in service the building used as its place of business. It also bought and placed in service on that date a desk and chair, refrigeration equipment, work tables, and a cash register. Because all the property was placed in service after 1986, it is depreciated under MACRS. The corporation uses the MACRS percentage tables to figure its depreciation deduction.

The building is nonresidential real property. Fields of Flowers depreciates it using the straight line method and mid-month convention over a recovery period of 31.5 years. The corporation uses Table A-7.

The corporation put in use the desk and chair, refrigeration equipment, work tables, and cash register in 1993. The desk and chair are 7-year property. The other items are 5-year property. Because no property was placed in service in the last quarter of the tax year, the corporation uses the half-year convention for this property. The corporation uses Table A-1. It claimed a section 179 deduction for the full cost of the desk and chair. It takes no depreciation for this property.

In 1994, Fields of Flowers bought a delivery truck and a typewriter. The truck and typewriter placed in service in 1995 are 5-year property. The corporation chose to use the 150% declining balance method over the ADS recovery period for these property items. The recovery period for the truck is 5 years. The recovery period for the typewriter is 6 years. The corporation applied the half-year convention for both items. The corporation uses Table A-14. It claimed a \$17,500 section 179 deduction for the truck whose basis for depreciation is \$13,500. This is the cost of \$31,000 reduced by the \$17,500 section 179 deduction claimed. The typewriter cost \$300.

In 1996, Fields of Flowers bought and placed in service a computer, file cabinets, store counters, and a USA 280F van. All items are used totally for the business.

The total bases of all property placed in service in 1996 is \$30,145. The bases of the counters and van placed in service during the last three months of the corporation's tax year is \$26,670. This amount is more than 40% of the total bases of all property placed in service during 1996. The corporation must apply the mid-quarter convention for all four items.

The computer is 5-year property for which the corporation uses Table A-3. The van is 5-year property for which it uses Table A-5.

The file cabinets are 7-year property. The counters are 5-year property. The corporation elects to use the

ADS method for these property items. The recovery period is 10 years for the cabinets and 9 years for the counters. The corporation uses Table A–11 for the file cabinets and Table A–12 for the store counters.

Form 4562

Because Fields of Flowers is a corporation, it reports depreciation on Form 4562. The corporation enters the total depreciation deduction (\$5,210.47) for the property placed in service before 1996 on line 17 in Part III.

The delivery truck has seating only for the driver. It is not listed property. If it was listed property, its depreciation would have been reported on page 2 of Form 4562.

The corporation reports the depreciation for the computer on line 15(b) in Part II. It uses GDS for this property and applies a mid-quarter convention. It enters “MQ” in column (e) to show the mid-quarter convention is applied and enters “200DB” in column (f) to show they are using the 200% declining balance method. It enters the depreciation deduction of \$750 in column (g).

The corporation reports the depreciation for the file cabinets and the store counters on line 16(a). They have an ADS recovery period and class life assigned to them in the *Table of Class Lives and Recovery Periods*, in Appendix B. Because they have two different class lives

and neither is 12 years or 40 years, the corporation lists them on a separate schedule (not shown here). It enters the depreciation deduction of \$43.80 in column (g).

The van is listed property. The corporation reports the depreciation for it on page 2 of Form 4562. Fields of Flowers has taxable income of \$25,389. It elects to take a section 179 deduction of \$17,500 on the van. The van weighs over 6,000 pounds. It is not a passenger automobile for the limits discussed under *Special Rules for Passenger Automobiles*, earlier.

The corporation reduces the cost of the van by the amount of the section 179 deduction. It enters “5” in column (f) to show the recovery period in years and “200DB” and “MQ” in column (g) to show they are using the 200% declining balance method and that they are applying the mid-quarter convention. It enters the depreciation deduction of \$365 in column (h) and the section 179 deduction of \$17,500 in column (i).

The corporation enters the amount from line 26 on line 20 and the amount from line 27 on line 7. It completes Part I to determine its allowable section 179 deduction. It adds the amounts on lines 12, 15(b), 16(a), 17, and 20 and enters the total of \$23,869.27 on line 21. It rounds the total to \$23,869 and enters it on the depreciation line of its tax return.

Depreciation Worksheet

Description of Property	Date Placed in Service	Cost or Other Basis	Business/Investment Use %	Section 179 Deductions	Depreciation Prior Years	Basis for Depreciation	Method/Convention	Recovery Period	Rate or Table %	Depreciation Deduction

Part I Election To Expense Certain Tangible Property (Section 179) (Note: If you have any "listed property," complete Part V before you complete Part I.)

1	Maximum dollar limitation. If an enterprise zone business, see page 2 of the instructions	1	\$17,500
2	Total cost of section 179 property placed in service. See page 2 of the instructions	2	<i>30,145</i>
3	Threshold cost of section 179 property before reduction in limitation	3	\$200,000
4	Reduction in limitation. Subtract line 3 from line 2. If zero or less, enter -0-	4	<i>-0-</i>
5	Dollar limitation for tax year. Subtract line 4 from line 1. If zero or less, enter -0-. If married filing separately, see page 2 of the instructions	5	<i>17,500</i>
(a) Description of property		(b) Cost (business use only)	(c) Elected cost
6			
7	Listed property. Enter amount from line 27.	7	<i>17,500</i>
8	Total elected cost of section 179 property. Add amounts in column (c), lines 6 and 7	8	<i>17,500</i>
9	Tentative deduction. Enter the smaller of line 5 or line 8	9	<i>17,500</i>
10	Carryover of disallowed deduction from 1995. See page 2 of the instructions	10	<i>-0-</i>
11	Business income limitation. Enter the smaller of business income (not less than zero) or line 5 (see instructions)	11	<i>17,500</i>
12	Section 179 expense deduction. Add lines 9 and 10, but do not enter more than line 11	12	<i>17,500</i>
13	Carryover of disallowed deduction to 1997. Add lines 9 and 10, less line 12 ▶	13	<i>-0-</i>

Note: Do not use Part II or Part III below for listed property (automobiles, certain other vehicles, cellular telephones, certain computers, or property used for entertainment, recreation, or amusement). Instead, use Part V for listed property.

Part II MACRS Depreciation For Assets Placed in Service ONLY During Your 1996 Tax Year (Do Not Include Listed Property.)

Section A—General Asset Account Election

14 If you are making the election under section 168(f)(4) to group any assets placed in service during the tax year into one or more general asset accounts, check this box. See page 2 of the instructions

Section B—General Depreciation System (GDS) (See page 3 of the instructions.)

(a) Classification of property	(b) Month and year placed in service	(c) Basis for depreciation (business/investment use only—see instructions)	(d) Recovery period	(e) Convention	(f) Method	(g) Depreciation deduction
15a 3-year property						
b 5-year property		<i>3,000</i>	<i>5 YRS</i>	<i>MQ</i>	<i>200 DB</i>	<i>750.00</i>
c 7-year property						
d 10-year property						
e 15-year property						
f 20-year property						
g 25-year property			<i>25 yrs.</i>		<i>S/L</i>	
h Residential rental property			<i>27.5 yrs.</i>	<i>MM</i>	<i>S/L</i>	
			<i>27.5 yrs.</i>	<i>MM</i>	<i>S/L</i>	
i Nonresidential real property			<i>39 yrs.</i>	<i>MM</i>	<i>S/L</i>	
				<i>MM</i>	<i>S/L</i>	

Section C—Alternative Depreciation System (ADS) (See page 4 of the instructions.)

16a Class life		<i>2,345</i>	<i>X</i>	<i>X</i>	<i>S/L</i>	<i>43.80</i>
b 12-year			<i>12 yrs.</i>		<i>S/L</i>	
c 40-year			<i>40 yrs.</i>	<i>MM</i>	<i>S/L</i>	

Part III Other Depreciation (Do Not Include Listed Property.) (See page 4 of the instructions.)

17	GDS and ADS deductions for assets placed in service in tax years beginning before 1996	17	<i>5,210.47</i>
18	Property subject to section 168(f)(1) election	18	
19	ACRS and other depreciation	19	

Part IV Summary (See page 4 of the instructions.)

20	Listed property. Enter amount from line 26.	20	<i>365.00</i>
21	Total. Add deductions on line 12, lines 15 and 16 in column (g), and lines 17 through 20. Enter here and on the appropriate lines of your return. Partnerships and S corporations—see instructions	21	<i>23,869.27</i>
22	For assets shown above and placed in service during the current year, enter the portion of the basis attributable to section 263A costs	22	<i>-0-</i>

For Paperwork Reduction Act Notice, see page 1 of the separate instructions.

Part V Listed Property—Automobiles, Certain Other Vehicles, Cellular Telephones, Certain Computers, and Property Used for Entertainment, Recreation, or Amusement

Note: For any vehicle for which you are using the standard mileage rate or deducting lease expense, complete only 23a, 23b, columns (a) through (c) of Section A, all of Section B, and Section C if applicable.

Section A—Depreciation and Other Information (Caution: See page 5 of the instructions for limitations for automobiles.)

23a Do you have evidence to support the business/investment use claimed? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No				23b If "Yes," is the evidence written? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No					
(a) Type of property (list vehicles first)	(b) Date placed in service	(c) Business/ investment use percentage	(d) Cost or other basis	(e) Basis for depreciation (business/investment use only)	(f) Recovery period	(g) Method/ Convention	(h) Depreciation deduction	(i) Elected section 179 cost	
24 Property used more than 50% in a qualified business use (See page 5 of the instructions.):									
USA ZDF Van	11-16-96	100%	24,800	7,300	5	20018/MG	365.00	17,500	
		%							
		%							
25 Property used 50% or less in a qualified business use (See page 5 of the instructions.):									
		%				S/L -			
		%				S/L -			
		%				S/L -			
26 Add amounts in column (h). Enter the total here and on line 20, page 1							26	365.00	
27 Add amounts in column (i). Enter the total here and on line 7, page 1							27	17,500	

Section B—Information on Use of Vehicles

Complete this section for vehicles used by a sole proprietor, partner, or other "more than 5% owner," or related person. If you provided vehicles to your employees, first answer the questions in Section C to see if you meet an exception to completing this section for those vehicles.

	(a) Vehicle 1		(b) Vehicle 2		(c) Vehicle 3		(d) Vehicle 4		(e) Vehicle 5		(f) Vehicle 6	
	Yes	No										
28 Total business/investment miles driven during the year (DO NOT include commuting miles)												
29 Total commuting miles driven during the year												
30 Total other personal (noncommuting) miles driven												
31 Total miles driven during the year. Add lines 28 through 30.												
32 Was the vehicle available for personal use during off-duty hours?												
33 Was the vehicle used primarily by a more than 5% owner or related person?												
34 Is another vehicle available for personal use?												

Section C—Questions for Employers Who Provide Vehicles for Use by Their Employees

Answer these questions to determine if you meet an exception to completing Section B for vehicles used by employees who are not more than 5% owners or related persons.

	Yes	No
35 Do you maintain a written policy statement that prohibits all personal use of vehicles, including commuting, by your employees?	<input checked="" type="checkbox"/>	
36 Do you maintain a written policy statement that prohibits personal use of vehicles, except commuting, by your employees? See page 6 of the instructions for vehicles used by corporate officers, directors, or 1% or more owners	NA	
37 Do you treat all use of vehicles by employees as personal use?	NA	
38 Do you provide more than five vehicles to your employees, obtain information from your employees about the use of the vehicles, and retain the information received?	NA	
39 Do you meet the requirements concerning qualified automobile demonstration use? See page 6 of the instructions	NA	

Note: If your answer to 35, 36, 37, 38, or 39 is "Yes," you need not complete Section B for the covered vehicles.

Part VI Amortization

(a) Description of costs	(b) Date amortization begins	(c) Amortizable amount	(d) Code section	(e) Amortization period or percentage	(f) Amortization for this year
40 Amortization of costs that begins during your 1996 tax year.					
41 Amortization of costs that began before 1996				41	
42 Total. Enter here and on "Other Deductions" or "Other Expenses" line of your return				42	

6.

How To Get More Information

You can get help from the IRS in several ways.

Free publications and forms To order free publications and forms, call 1-800-TAX-FORM (1-800-829-3676). You can also write to the IRS Forms Distribution Center nearest you. Check your income tax package for the address. Your local library or post office also may have the items you need.

For a list of free tax publications, order Publication 910, *Guide to Free Tax Services*. It also contains an index of tax topics and related publications and describes other free tax information services available from IRS, including tax education and assistance programs.

If you have access to a personal computer and modem, you also can get many forms and publications electronically. See *It Is Easy To Get Information and Forms* in your income tax package for details. If space permitted, this information is at the end of this publication.

Tax questions You can call the IRS with your tax questions. Check your income tax package or telephone book for the local number, or you can call 1-800-829-1040.

TTY/TDD equipment If you have access to TTY/TDD equipment, you can call 1-800-829-4059 to ask tax

questions or to order forms and publications. See your income tax package for the hours of operation.

Special Help to Resolve Your Problems

We have a Problem Resolution Program for taxpayers who have been unable to resolve their problems with the IRS. If you have a tax problem that you cannot clear up through normal channels, write to the Problem Resolution Office in the district or Service Center with which you have the problem. You may also reach the Problem Resolution Office by calling the IRS taxpayer assistance number for your area. If you are hearing-impaired with Teletype-writer/Telephone (TTY) access, you may call 1-800-829-4059.

If your tax problem causes (or will cause) you to suffer a significant hardship, additional assistance is available. A significant hardship may occur if you cannot maintain necessities such as food, clothing, shelter, transportation, and medical treatment.

There are two ways you can apply for relief. You can submit Form 911, *Application for Taxpayer Assistance Order to Relieve Hardship*, which you can order by calling 1-800-TAX-FORM (829-3676). You can choose instead to call 1-800-829-1040, to request relief from your hardship. The Taxpayer Ombudsman, Problem Resolution Officer, or other official will then review your case and may issue a Taxpayer Assistance Order (TAO), to suspend IRS action.

Appendix B

The *Table of Class Lives and Recovery Periods* has two sections. The first section, *Specific Depreciable Assets Used In All Business Activities, Except As Noted*;, generally lists assets used in all business activities. The second section, *Depreciable Assets Used In The Following Activities*;, describes assets used only in certain activities.

How To Use the Table

The first section is shown as Table B-1 and the second section is shown as B-2.

Table B-1

You read the bold headings in the first section to see if your property is listed. Then look under each heading for a description of the assets included in the asset class. To the right of this description you will see three figures. The first figure is the class life of the property included in that asset class. The second figure is the recovery period for the property under GDS. It is also the MACRS property class for the property. The third figure is the recovery period under ADS, discussed earlier. If you find your property described in an asset class, use the second figure after the description. This is the property class and recovery period for the property. The class life figure is generally the same as the recovery period under ADS. However, it differs for a few items of property because the law specifies the recovery period for them.

Table B-2

If your property is not described in the first section, Table B-1, use the second section, Table B-2. This section is

based on various activities and the type of property used in those activities. This section is like the first except that the asset classes are based on activities. If you do not find your property listed in the first section, Table B-1, read the bold headings in the second section to see if your activity is listed. A description of the type of property included in the asset class for an activity is shown under each heading. The three figures after the dotted line are the class life, recovery period under GDS and the recovery period under ADS.

Property not in table. Any property not described in either the first section, Table B-1, or the second section, Table B-2, is assigned to the 7-year property class for GDS and a 12-year recovery period for ADS.

Example 1. Richard Green bought a desk to use in his business. He reads the headings and descriptions in the first section, Table B-1. He finds “desks” in the description of asset class 00.11 *Office Furniture, Fixtures, and Equipment*. The property in this asset class is 7-year property and has a recovery period of 7 years for GDS. If he elects to use the ADS method, the recovery period is 10 years, which is the third figure in the table.

Example 2. Sam Plower is a building contractor. During the current year, he buys and places a backhoe in service in his business. Reading the tables, Sam comes to asset class 15.0 for construction assets. The backhoe is in the 5-year property class. The GDS recovery period for the backhoe is 5 years and the ADS recovery period is 6 years.

Table B-1. Table of Class Lives and Recovery Periods

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
SPECIFIC DEPRECIABLE ASSETS USED IN ALL BUSINESS ACTIVITIES, EXCEPT AS NOTED:				
00.11	Office Furniture, Fixtures, and Equipment: Includes furniture and fixtures that are not a structural component of a building. Includes such assets as desks, files, safes, and communications equipment. Does not include communications equipment that is included in other classes.	10	7	10
00.12	Information Systems: Includes computers and their peripheral equipment used in administering normal business transactions and the maintenance of business records, their retrieval and analysis. Information systems are defined as: 1) Computers: A computer is a programmable electronically activated device capable of accepting information, applying prescribed processes to the information, and supplying the results of these processes with or without human intervention. It usually consists of a central processing unit containing extensive storage, logic, arithmetic, and control capabilities. Excluded from this category are adding machines, electronic desk calculators, etc., and other equipment described in class 00.13. 2) Peripheral equipment consists of the auxiliary machines which are designed to be placed under control of the central processing unit. Nonlimiting examples are: Card readers, card punches, magnetic tape feeds, high speed printers, optical character readers, tape cassettes, mass storage units, paper tape equipment, keypunches, data entry devices, teleprinters, terminals, tape drives, disc drives, disc files, disc packs, visual image projector tubes, card sorters, plotters, and collators. Peripheral equipment may be used on-line or off-line. Does not include equipment that is an integral part of other capital equipment that is included in other classes of economic activity, i.e., computers used primarily for process or production control, switching, channeling, and automating distributive trades and services such as point of sale (POS) computer systems. Also, does not include equipment of a kind used primarily for amusement or entertainment of the user.	6	5	5
00.13	Data Handling Equipment; except Computers: Includes only typewriters, calculators, adding and accounting machines, copiers, and duplicating equipment.	6	5	6
00.21	Airplanes (airframes and engines), except those used in commercial or contract carrying of passengers or freight, and all helicopters (airframes and engines)	6	5	6
00.22	Automobiles, Taxis	3	5	5
00.23	Buses	9	5	9
00.241	Light General Purpose Trucks: Includes trucks for use over the road (actual weight less than 13,000 pounds).	4	5	5
00.242	Heavy General Purpose Trucks: Includes heavy general purpose trucks, concrete ready mix-trucks, and ore trucks, for use over the road (actual unloaded weight 13,000 pounds or more).	6	5	6
00.25	Railroad Cars and Locomotives, except those owned by railroad transportation companies	15	7	15
00.26	Tractor Units for Use Over-The-Road	4	3	4
00.27	Trailers and Trailer-Mounted Containers	6	5	6
00.28	Vessels, Barges, Tugs, and Similar Water Transportation Equipment, except those used in marine construction	18	10	18
00.3	Land Improvements: Includes improvements directly to or added to land, whether such improvements are section 1245 property or section 1250 property, provided such improvements are depreciable. Examples of such assets might include sidewalks, roads, canals, waterways, drainage facilities, sewers (not including municipal sewers in Class 51), wharves and docks, bridges, fences, landscaping shrubbery, or radio and television transmitting towers. Does not include land improvements that are explicitly included in any other class, and buildings and structural components as defined in section 1.48-1(e) of the regulations. Excludes public utility initial clearing and grading land improvements as specified in Rev. Rul. 72-403, 1972-2 C.B. 102.	20	15	20
00.4	Industrial Steam and Electric Generation and/or Distribution Systems: Includes assets, whether such assets are section 1245 property or 1250 property, providing such assets are depreciable, used in the production and/or distribution of electricity with rated total capacity in excess of 500 Kilowatts and/or assets used in the production and/or distribution of steam with rated total capacity in excess of 12,500 pounds per hour for use by the taxpayer in its industrial manufacturing process or plant activity and not ordinarily available for sale to others. Does not include buildings and structural components as defined in section 1.48-1(e) of the regulations. Assets used to generate and/or distribute electricity or steam of the type described above, but of lesser rated capacity, are not included, but are included in the appropriate manufacturing equipment classes elsewhere specified. Also includes electric generating and steam distribution assets, which may utilize steam produced by a waste reduction and resource recovery plant, used by the taxpayer in its industrial manufacturing process or plant activity. Steam and chemical recovery boiler systems used for the recovery and regeneration of chemicals used in manufacturing, with rated capacity in excess of that described above, with specifically related distribution and return systems are not included but are included in appropriate manufacturing equipment classes elsewhere specified. An example of an excluded steam and chemical recovery boiler system is that used in the pulp and paper manufacturing equipment classes elsewhere specified. An example of an excluded steam and chemical recovery boiler system is that used in the pulp and paper manufacturing industry.	22	15	22

Table B-2. Table of Class Lives and Recovery Periods

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
DEPRECIABLE ASSETS USED IN THE FOLLOWING ACTIVITIES:				
01.1	Agriculture: Includes machinery and equipment, grain bins, and fences but no other land improvements, that are used in the production of crops or plants, vines, and trees; livestock; the operation of farm dairies, nurseries, greenhouses, sod farms, mushroom cellars, cranberry bogs, apiaries, and fur farms; the performance of agriculture, animal husbandry, and horticultural services.	10	7	10
01.11	Cotton Ginning Assets	12	7	12
01.21	Cattle, Breeding or Dairy	7	5	7
01.221	Any breeding or work horse that is 12 years old or less at the time it is placed in service**	10	7	10
01.222	Any breeding or work horse that is more than 12 years old at the time it is placed in service**	10	3	10
01.223	Any race horse that is more than 2 years old at the time it is placed in service**	*	3	12
01.224	Any horse that is more than 12 years old at the time it is placed in service and that is neither a race horse nor a horse described in class 01.222**	*	3	12
01.225	Any horse not described in classes 01.221, 01.222, 01.223, or 01.224	*	7	12
01.23	Hogs, Breeding	3	3	3
01.24	Sheep and Goats, Breeding	5	5	5
01.3	Farm buildings except structures included in Class 01.4	25	20	25
01.4	Single purpose agricultural or horticultural structures (within the meaning of section 168(i)(13) of the Code)	15	10***	15
10.0	Mining: Includes assets used in the mining and quarrying of metallic and nonmetallic minerals (including sand, gravel, stone, and clay) and the milling, beneficiation and other primary preparation of such materials.	10	7	10
13.0	Offshore Drilling: Includes assets used in offshore drilling for oil and gas such as floating, self-propelled and other drilling vessels, barges, platforms, and drilling equipment and support vessels such as tenders, barges, towboats and crewboats. Excludes oil and gas production assets.	7.5	5	7.5
13.1	Drilling of Oil and Gas Wells: Includes assets used in the drilling of onshore oil and gas wells and the provision of geophysical and other exploration services; and the provision of such oil and gas field services as chemical treatment, plugging and abandoning of wells and cementing or perforating well casings. Does not include assets used in the performance of any of these activities and services by integrated petroleum and natural gas producers for their own account.	6	5	6
13.2	Exploration for and Production of Petroleum and Natural Gas Deposits: Includes assets used by petroleum and natural gas producers for drilling of wells and production of petroleum and natural gas, including gathering pipelines and related storage facilities. Also includes petroleum and natural gas offshore transportation facilities used by producers and others consisting of platforms (other than drilling platforms classified in Class 13.0), compression or pumping equipment, and gathering and transmission lines to the first onshore transshipment facility. The assets used in the first onshore transshipment facility are also included and consist of separation equipment (used for separation of natural gas, liquids, and in Class 49.23), and liquid holding or storage facilities (other than those classified in Class 49.25). Does not include support vessels.	14	7	14
13.3	Petroleum Refining: Includes assets used for the distillation, fractionation, and catalytic cracking of crude petroleum into gasoline and its other components.	16	10	16
15.0	Construction: Includes assets used in construction by general building, special trade, heavy and marine construction contractors, operative and investment builders, real estate subdividers and developers, and others except railroads.	6	5	6
20.1	Manufacture of Grain and Grain Mill Products: Includes assets used in the production of flours, cereals, livestock feeds, and other grain and grain mill products.	17	10	17
20.2	Manufacture of Sugar and Sugar Products: Includes assets used in the production of raw sugar, syrup, or finished sugar from sugar cane or sugar beets.	18	10	18
20.3	Manufacture of Vegetable Oils and Vegetable Oil Products: Includes assets used in the production of oil from vegetable materials and the manufacture of related vegetable oil products.	18	10	18
20.4	Manufacture of Other Food and Kindred Products: Includes assets used in the production of foods and beverages not included in classes 20.1, 20.2 and 20.3.	12	7	12
20.5	Manufacture of Food and Beverages—Special Handling Devices: Includes assets defined as specialized materials handling devices such as returnable pallets, palletized containers, and fish processing equipment including boxes, baskets, carts, and flaking trays used in activities as defined in classes 20.1, 20.2, 20.3 and 20.4. Does not include general purpose small tools such as wrenches and drills, both hand and power-driven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices.	4	3	4

* Property described in asset classes 01.223, 01.224, and 01.225 are assigned recovery periods but have no class lives.

** A horse is more than 2 (or 12) years old after the day that is 24 (or 144) months after its actual birthdate.

*** 7 if property was placed in service before 1989.

Table B-2. **Table of Class Lives and Recovery Periods**

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
21.0	Manufacture of Tobacco and Tobacco Products: Includes assets used in the production of cigarettes, cigars, smoking and chewing tobacco, snuff, and other tobacco products.	15	7	15
22.1	Manufacture of Knitted Goods: Includes assets used in the production of knitted and netted fabrics and lace. Assets used in yarn preparation, bleaching, dyeing, printing, and other similar finishing processes, texturing, and packaging, are elsewhere classified.	7.5	5	7.5
22.2	Manufacture of Yarn, Thread, and Woven Fabric: Includes assets used in the production of spun yarns including the preparing, blending, spinning, and twisting of fibers into yarns and threads, the preparation of yarns such as twisting, warping, and winding, the production of covered elastic yarn and thread, cordage, woven fabric, tire fabric, braided fabric, twisted jute for packaging, mattresses, pads, sheets, and industrial belts, and the processing of textile mill waste to recover fibers, flocks, and shoddies. Assets used to manufacture carpets, man-made fibers, and nonwovens, and assets used in texturing, bleaching, dyeing, printing, and other similar finishing processes, are elsewhere classified.	11	7	11
22.3	Manufacture of Carpets and Dyeing, Finishing, and Packaging of Textile Products and Manufacture of Medical and Dental Supplies: Includes assets used in the production of carpets, rugs, mats, woven carpet backing, chenille, and other tufted products, and assets used in the joining together of backing with carpet yarn or fabric. Includes assets used in washing, scouring, bleaching, dyeing, printing, drying, and similar finishing processes applied to textile fabrics, yarns, threads, and other textile goods. Includes assets used in the production and packaging of textile products, other than apparel, by creasing, forming, trimming, cutting, and sewing, such as the preparation of carpet and fabric samples, or similar joining together processes (other than the production of scrim reinforced paper products and laminated paper products) such as the sewing and folding of hosiery and panty hose, and the creasing, folding, trimming, and cutting of fabrics to produce nonwoven products, such as disposable diapers and sanitary products. Also includes assets used in the production of medical and dental supplies other than drugs and medicines. Assets used in the manufacture of nonwoven carpet backing, and hard surface floor covering such as tile, rubber, and cork, are elsewhere classified.	9	5	9
22.4	Manufacture of Textured Yarns: Includes assets used in the processing of yarns to impart bulk and/or stretch properties to the yarn. The principal machines involved are false-twist, draw, beam-to-beam, and stuffer box texturing equipment and related highspeed twisters and winders. Assets, as described above, which are used to further process man-made fibers are elsewhere classified when located in the same plant in an integrated operation with man-made fiber producing assets. Assets used to manufacture man-made fibers and assets used in bleaching, dyeing, printing, and other similar finishing processes, are elsewhere classified.	8	5	8
22.5	Manufacture of Nonwoven Fabrics: Includes assets used in the production of nonwoven fabrics, felt goods including felt hats, padding, batting, wadding, oakum, and fillings, from new materials and from textile mill waste. Nonwoven fabrics are defined as fabrics (other than reinforced and laminated composites consisting of nonwovens and other products) manufactured by bonding natural and/or synthetic fibers and/or filaments by means of induced mechanical interlocking, fluid entanglement, chemical adhesion, thermal or solvent reaction, or by combination thereof other than natural hydration bonding as occurs with natural cellulose fibers. Such means include resin bonding, web bonding, and melt bonding. Specifically includes assets used to make flocked and needle punched products other than carpets and rugs. Assets, as described above, which are used to manufacture nonwovens are elsewhere classified when located in the same plant in an integrated operation with man-made fiber producing assets. Assets used to manufacture man-made fibers and assets used in bleaching, dyeing, printing, and other similar finishing processes, are elsewhere classified.	10	7	10
23.0	Manufacture of Apparel and Other Finished Products: Includes assets used in the production of clothing and fabricated textile products by the cutting and sewing of woven fabrics, other textile products, and furs; but does not include assets used in the manufacture of apparel from rubber and leather.	9	5	9
24.1	Cutting of Timber: Includes logging machinery and equipment and roadbuilding equipment used by logging and sawmill operators and pulp manufacturers for their own account.	6	5	6
24.2	Sawing of Dimensional Stock from Logs: Includes machinery and equipment installed in permanent or well established sawmills.	10	7	10
24.3	Sawing of Dimensional Stock from Logs: Includes machinery and equipment in sawmills characterized by temporary foundations and a lack, or minimum amount, of lumberhandling, drying, and residue disposal equipment and facilities.	6	5	6
24.4	Manufacture of Wood Products, and Furniture: Includes assets used in the production of plywood, hardboard, flooring, veneers, furniture, and other wood products, including the treatment of poles and timber.	10	7	10
26.1	Manufacture of Pulp and Paper: Includes assets for pulp materials handling and storage, pulp mill processing, bleach processing, paper and paperboard manufacturing, and on-line finishing. Includes pollution control assets and all land improvements associated with the factory site or production process such as effluent ponds and canals, provided such improvements are depreciable but does not include buildings and structural components as defined in section 1.48-1(e)(1) of the regulations. Includes steam and chemical recovery boiler systems, with any rated capacity, used for the recovery and regeneration of chemicals used in manufacturing. Does not include assets used either in pulpwood logging, or in the manufacture of hardboard.	13	7	13

Table B-2. **Table of Class Lives and Recovery Periods**

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
26.2	Manufacture of Converted Paper, Paperboard, and Pulp Products: Includes assets used for modification, or remanufacture of paper and pulp into converted products, such as paper coated off the paper machine, paper bags, paper boxes, cartons and envelopes. Does not include assets used for manufacture of nonwovens that are elsewhere classified.	10	7	10
27.0	Printing, Publishing, and Allied Industries: Includes assets used in printing by one or more processes, such as letter-press, lithography, gravure, or screen; the performance of services for the printing trade, such as bookbinding, typesetting, engraving, photo-engraving, and electrotyping; and the publication of newspapers, books, and periodicals.	11	7	11
28.0	Manufacture of Chemicals and Allied Products: Includes assets used to manufacture basic organic and inorganic chemicals; chemical products to be used in further manufacture, such as synthetic fibers and plastics materials; and finished chemical products. Includes assets used to further process man-made fibers, to manufacture plastic film, and to manufacture nonwoven fabrics, when such assets are located in the same plant in an integrated operation with chemical products producing assets. Also includes assets used to manufacture photographic supplies, such as film, photographic paper, sensitized photographic paper, and developing chemicals. Includes all land improvements associated with plant site or production processes, such as effluent ponds and canals, provided such land improvements are depreciable but does not include buildings and structural components as defined in section 1.48-1(e) of the regulations. Does not include assets used in the manufacture of finished rubber and plastic products or in the production of natural gas products, butane, propane, and by-products of natural gas production plants.	9.5	5	9.5
30.1	Manufacture of Rubber Products: Includes assets used for the production of products from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, such as tires, tubes, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries; and in the recapping, retreading, and rebuilding of tires.	14	7	14
30.11	Manufacture of Rubber Products—Special Tools and Devices: Includes assets defined as special tools, such as jigs, dies, mandrels, molds, lasts, patterns, specialty containers, pallets, shells; and tire molds, and accessory parts such as rings and insert plates used in activities as defined in class 30.1. Does not include tire building drums and accessory parts and general purpose small tools such as wrenches and drills, both power and hand-driven, and other general purpose equipment such as conveyors and transfer equipment.	4	3	4
30.2	Manufacture of Finished Plastic Products: Includes assets used in the manufacture of plastics products and the molding of primary plastics for the trade. Does not include assets used in the manufacture of basic plastics materials nor the manufacture of phonograph records.	11	7	11
30.21	Manufacture of Finished Plastic Products—Special Tools: Includes assets defined as special tools, such as jigs, dies, fixtures, molds, patterns, gauges, and specialty transfer and shipping devices, used in activities as defined in class 30.2. Special tools are specifically designed for the production or processing of particular parts and have no significant utilitarian value and cannot be adapted to further or different use after changes or improvements are made in the model design of the particular part produced by the special tools. Does not include general purpose small tools such as wrenches and drills, both hand and power-driven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices.	3.5	3	3.5
31.0	Manufacture of Leather and Leather Products: Includes assets used in the tanning, currying, and finishing of hides and skins; the processing of fur pelts; and the manufacture of finished leather products, such as footwear, belting, apparel, and luggage.	11	7	11
32.1	Manufacture of Glass Products: Includes assets used in the production of flat, blown, or pressed products of glass, such as float and window glass, glass containers, glassware and fiberglass. Does not include assets used in the manufacture of lenses.	14	7	14
32.11	Manufacture of Glass Products—Special Tools: Includes assets defined as special tools such as molds, patterns, pallets, and specialty transfer and shipping devices such as steel racks to transport automotive glass, used in activities as defined in class 32.1. Special tools are specifically designed for the production or processing of particular parts and have no significant utilitarian value and cannot be adapted to further or different use after changes or improvements are made in the model design of the particular part produced by the special tools. Does not include general purpose small tools such as wrenches and drills, both hand and power-driven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices.	2.5	3	2.5
32.2	Manufacture of Cement: Includes assets used in the production of cement, but does not include any assets used in the manufacture of concrete and concrete products nor in any mining or extraction process.	20	15	20
32.3	Manufacture of Other Stone and Clay Products: Includes assets used in the manufacture of products from materials in the form of clay and stone, such as brick, tile, and pipe; pottery and related products, such as vitreous-china, plumbing fixtures, earthenware and ceramic insulating materials; and also includes assets used in manufacture of concrete and concrete products. Does not include assets used in any mining or extraction processes.	15	7	15

Table B-2. **Table of Class Lives and Recovery Periods**

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
33.2	Manufacture of Primary Nonferrous Metals: Includes assets used in the smelting, refining, and electrolysis of nonferrous metals from ore, pig, or scrap, the rolling, drawing, and alloying of nonferrous metals; the manufacture of castings, forgings, and other basic products of nonferrous metals; and the manufacture of nails, spikes, structural shapes, tubing, wire, and cable.	14	7	14
33.21	Manufacture of Primary Nonferrous Metals—Special Tools: Includes assets defined as special tools such as dies, jigs, molds, patterns, fixtures, gauges, and drawings concerning such special tools used in the activities as defined in class 33.2, Manufacture of Primary Nonferrous Metals. Special tools are specifically designed for the production or processing of particular products or parts and have no significant utilitarian value and cannot be adapted to further or different use after changes or improvements are made in the model design of the particular part produced by the special tools. Does not include general purpose small tools such as wrenches and drills, both hand and power-driven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices. Rolls, mandrels and refractories are not included in class 33.21 but are included in class 33.2.	6.5	5	6.5
33.3	Manufacture of Foundry Products: Includes assets used in the casting of iron and steel, including related operations such as molding and coremaking. Also includes assets used in the finishing of castings and patternmaking when performed at the foundry, all special tools and related land improvements.	14	7	14
33.4	Manufacture of Primary Steel Mill Products: Includes assets used in the smelting, reduction, and refining of iron and steel from ore, pig, or scrap; the rolling, drawing and alloying of steel; the manufacture of nails, spikes, structural shapes, tubing, wire, and cable. Includes assets used by steel service centers, ferrous metal forges, and assets used in coke production, regardless of ownership. Also includes related land improvements and all special tools used in the above activities.	15	7	15
34.0	Manufacture of Fabricated Metal Products: Includes assets used in the production of metal cans, tinware, fabricated structural metal products, metal stampings, and other ferrous and nonferrous metal and wire products not elsewhere classified. Does not include assets used to manufacture non-electric heating apparatus.	12	7	12
34.01	Manufacture of Fabricated Metal Products—Special Tools: Includes assets defined as special tools such as dies, jigs, molds, patterns, fixtures, gauges, and returnable containers and drawings concerning such special tools used in the activities as defined in class 34.0. Special tools are specifically designed for the production or processing of particular machine components, products, or parts, and have no significant utilitarian value and cannot be adapted to further or different use after changes or improvements are made in the model design of the particular part produced by the special tools. Does not include general purpose small tools such as wrenches and drills, both hand and power-driven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices.	3	3	3
35.0	Manufacture of Electrical and Non-Electrical Machinery and Other Mechanical Products: Includes assets used to manufacture or rebuild finished machinery and equipment and replacement parts thereof such as machine tools, general industrial and special industry machinery, electrical power generation, transmission, and distribution systems, space heating, cooling, and refrigeration systems, commercial and home appliances, farm and garden machinery, construction machinery, mining and oil field machinery, internal combustion engines (except those elsewhere classified), turbines (except those that power airborne vehicles), batteries, lamps and lighting fixtures, carbon and graphite products, and electromechanical and mechanical products including business machines, instruments, watches and clocks, vending and amusement machines, photographic equipment, medical and dental equipment and appliances, and ophthalmic goods. Includes assets used by manufacturers or rebuilders of such finished machinery and equipment in activities elsewhere classified such as the manufacture of castings, forgings, rubber and plastic products, electronic subassemblies or other manufacturing activities if the interim products are used by the same manufacturer primarily in the manufacture, assembly, or rebuilding of such finished machinery and equipment. Does not include assets used in mining, assets used in the manufacture of primary ferrous and nonferrous metals, assets included in class 00.11 through 00.4 and assets elsewhere classified.	10	7	10
36.0	Manufacture of Electronic Components, Products, and Systems: Includes assets used in the manufacture of electronic communication, computation, instrumentation and control system, including airborne applications; also includes assets used in the manufacture of electronic products such as frequency and amplitude modulated transmitters and receivers, electronic switching stations, television cameras, video recorders, record players and tape recorders, computers and computer peripheral machines, and electronic instruments, watches, and clocks; also includes assets used in the manufacture of components, provided their primary use is in products and systems defined above such as electron tubes, capacitors, coils, resistors, printed circuit substrates, switches, harness cables, lasers, fiber optic devices, and magnetic media devices. Specifically excludes assets used to manufacture electronic products and components, photocopiers, typewriters, postage meters and other electromechanical and mechanical business machines and instruments that are elsewhere classified. Does not include semiconductor manufacturing equipment included in class 36.1.	6	5	6
36.1	Any Semiconductor Manufacturing Equipment Includes equipment used in the manufacturing of semiconductors if the primary use of the semiconductors so produced is in products and systems of the type defined in class 36.0.	5	5	5

Table B-2. **Table of Class Lives and Recovery Periods**

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
37.11	Manufacture of Motor Vehicles: Includes assets used in the manufacture and assembly of finished automobiles, trucks, trailers, motor homes, and buses. Does not include assets used in mining, printing and publishing, production of primary metals, electricity, or steam, or the manufacture of glass, industrial chemicals, batteries, or rubber products, which are classified elsewhere. Includes assets used in manufacturing activities elsewhere classified other than those excluded above, where such activities are incidental to and an integral part of the manufacture and assembly of finished motor vehicles such as the manufacture of parts and subassemblies of fabricated metal products, electrical equipment, textiles, plastics, leather, and foundry and forging operations. Does not include any assets not classified in manufacturing activity classes, e.g., does not include any assets classified in asset guideline classes 00.11 through 00.4. Activities will be considered incidental to the manufacture and assembly of finished motor vehicles only if 75 percent or more of the value of the products produced under one roof are used for the manufacture and assembly of finished motor vehicles. Parts that are produced as a normal replacement stock complement in connection with the manufacture and assembly of finished motor vehicles are considered used for the manufacture assembly of finished motor vehicles. Does not include assets used in the manufacture of component parts if these assets are used by taxpayers not engaged in the assembly of finished motor vehicles.	12	7	12
37.12	Manufacture of Motor Vehicles—Special Tools: Includes assets defined as special tools, such as jigs, dies, fixtures, molds, patterns, gauges, and specialty transfer and shipping devices, owned by manufacturers of finished motor vehicles and used in qualified activities as defined in class 37.11. Special tools are specifically designed for the production or processing of particular motor vehicle components and have no significant utilitarian value, and cannot be adapted to further or different use, after changes or improvements are made in the model design of the particular part produced by the special tools. Does not include general purpose small tools such as wrenches and drills, both hand and powerdriven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices.	3	3	3
37.2	Manufacture of Aerospace Products: Includes assets used in the manufacture and assembly of airborne vehicles and their component parts including hydraulic, pneumatic, electrical, and mechanical systems. Does not include assets used in the production of electronic airborne detection, guidance, control, radiation, computation, test, navigation, and communication equipment or the components thereof.	10	7	10
37.31	Ship and Boat Building Machinery and Equipment: Includes assets used in the manufacture and repair of ships, boats, caissons, marine drilling rigs, and special fabrications not included in asset classes 37.32 and 37.33. Specifically includes all manufacturing and repairing machinery and equipment, including machinery and equipment used in the operation of assets included in asset class 37.32. Excludes buildings and their structural components.	12	7	12
37.32	Ship and Boat Building Dry Docks and Land Improvements: Includes assets used in the manufacture and repair of ships, boats, caissons, marine drilling rigs, and special fabrications not included in asset classes 37.31 and 37.33. Specifically includes floating and fixed dry docks, ship basins, graving docks, shipways, piers, and all other land improvements such as water, sewer, and electric systems. Excludes buildings and their structural components.	16	10	16
37.33	Ship and Boat Building—Special Tools: Includes assets defined as special tools such as dies, jigs, molds, patterns, fixtures, gauges, and drawings concerning such special tools used in the activities defined in classes 37.31 and 37.32. Special tools are specifically designed for the production or processing of particular machine components, products, or parts, and have no significant utilitarian value and cannot be adapted to further or different use after changes or improvements are made in the model design of the particular part produced by the special tools. Does not include general purpose small tools such as wrenches and drills, both hand and power-driven, and other general purpose equipment such as conveyors, transfer equipment, and materials handling devices.	6.5	5	6.5
37.41	Manufacture of Locomotives: Includes assets used in building or rebuilding railroad locomotives (including mining and industrial locomotives). Does not include assets of railroad transportation companies or assets of companies which manufacture components of locomotives but do not manufacture finished locomotives.	11.5	7	11.5
37.42	Manufacture of Railroad Cars: Includes assets used in building or rebuilding railroad freight or passenger cars (including rail transit cars). Does not include assets of railroad transportation companies or assets of companies which manufacture components of railroad cars but do not manufacture finished railroad cars.	12	7	12
39.0	Manufacture of Athletic, Jewelry and Other Goods: Includes assets used in the production of jewelry; musical instruments; toys and sporting goods; motion picture and television films and tapes; and pens, pencils, office and art supplies, brooms, brushes, caskets, etc. Railroad Transportation: Classes with the prefix 40 include the assets identified below that are used in the commercial and contract carrying of passengers and freight by rail. Assets of electrified railroads will be classified in a manner corresponding to that set forth below for railroads not independently operated as electric lines. Excludes the assets included in classes with the prefix beginning 00.1 and 00.2 above, and also excludes any non-depreciable assets included in Interstate Commerce Commission accounts enumerated for this class.	12	7	12

Table B-2. Table of Class Lives and Recovery Periods

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
40.1	<p>Railroad Machinery and Equipment: Includes assets classified in the following Interstate Commerce Commission accounts:</p> <p>Roadway accounts: (16) Station and office buildings (freight handling machinery and equipment only) (25) TOFC/COFC terminals (freight handling machinery and equipment only) (26) Communication systems (27) Signals and interlockers (37) Roadway machines (44) Shop machinery</p> <p>Equipment Accounts: (52) Locomotives (53) Freight train cars (54) Passenger train cars (57) Work equipment</p>	14	7	14
40.2	<p>Railroad Structures and Similar Improvements: Includes assets classified in the following Interstate Commerce Commission road accounts:</p> <p>(6) Bridges, trestles, and culverts (7) Elevated structures (13) Fences, snowsheds, and signs (16) Station and office buildings (stations and other operating structures only) (17) Roadway buildings (18) Water stations (19) Fuel stations (20) Shops and enginehouses (25) TOFC/COFC terminals (operating structures only) (31) Power transmission systems (35) Miscellaneous structures (39) Public improvements construction</p>	30	20	30
40.3	<p>Railroad Wharves and Docks: Includes assets classified in the following Interstate Commerce accounts:</p> <p>(23) Wharves and docks (24) Coal and ore wharves</p>	20	15	20
40.4	Railroad Track	10	7	10
40.51	Railroad Hydraulic Electric Generating Equipment	50	20	50
40.52	Railroad Nuclear Electric Generating Equipment	20	15	20
40.53	Railroad Steam Electric Generating Equipment	28	20	28
40.54	Railroad Steam, Compressed Air, and Other Power Plant Equipment	28	20	28
41.0	<p>Motor Transport-Passengers: Includes assets used in the urban and interurban commercial and contract carrying of passengers by road, except the transportation assets included in classes with the prefix 00.2.</p>	8	5	8
42.0	<p>Motor Transport-Freight: Includes assets used in the commercial and contract carrying of freight by road, except the transportation assets included in classes with the prefix 00.2.</p>	8	5	8
44.0	<p>Water Transportation: Includes assets used in the commercial and contract carrying of freight and passengers by water except the transportation assets included in classes with the prefix 00.2. Includes all related land improvements.</p>	20	15	20
45.0	<p>Air Transport: Includes assets (except helicopters) used in commercial and contract carrying of passengers and freight by air. For purposes of section 1.167(a)-11(d)(2)(iv)(a) of the regulations, expenditures for "repair, maintenance, rehabilitation, or improvement," shall consist of direct maintenance expenses (irrespective of airworthiness provisions or charges) as defined by Civil Aeronautics Board uniform accounts 5200, maintenance burden (exclusive of expenses pertaining to maintenance buildings and improvements) as defined by Civil Aeronautics Board uniform accounts 5300, and expenditures which are not "excluded additions" as defined in section 1.167(a)-11(d)(2)(vi) of the regulations and which would be charged to property and equipment accounts in the Civil Aeronautics Board uniform system of accounts.</p>	12	7	12
45.1	<p>Air Transport (restricted): Includes each asset described in the description of class 45.0 which was held by the taxpayer on April 15, 1976, or is acquired by the taxpayer pursuant to a contract which was, on April 15, 1976, and at all times thereafter, binding on the taxpayer. This criterion of classification based on binding contract concept is to be applied in the same manner as under the general rules expressed in section 49(b)(1), (4), (5) and (8) of the Code (as in effect prior to its repeal by the Revenue Act of 1978, section 312(c)(1), (d), 1978-3 C.B. 1, 60).</p>	6	5	6
46.0	<p>Pipeline Transportation: Includes assets used in the private, commercial, and contract carrying of petroleum, gas and other products by means of pipes and conveyors. The trunk lines and related storage facilities of integrated petroleum and natural gas producers are included in this class. Excludes initial clearing and grading land improvements as specified in Rev. Rul. 72-403, 1972-2; C.B. 102, but includes all other related land improvements.</p> <p>Telephone Communications: Includes the assets identified below and that are used in the provision of commercial and contract telephonic services such as:</p>	22	15	22

Table B-2. **Table of Class Lives and Recovery Periods**

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
48.11	Telephone Central Office Buildings: Includes assets intended to house central office equipment, as defined in Federal Communications Commission Part 31 Account No. 212 whether section 1245 or section 1250 property.	45	20	45
48.12	Telephone Central Office Equipment: Includes central office switching and related equipment as defined in Federal Communications Commission Part 31 Account No. 221. Does not include computer-based telephone central office switching equipment included in class 48.121. Does not include private branch exchange (PBX) equipment.	18	10	18
48.121	Computer-based Telephone Central Office Switching Equipment: Includes equipment whose functions are those of a computer or peripheral equipment (as defined in section 168(i)(2)(B) of the Code) used in its capacity as telephone central office equipment. Does not include private exchange (PBX) equipment.	9.5	5	9.5
48.13	Telephone Station Equipment: Includes such station apparatus and connections as teletypewriters, telephones, booths, private exchanges, and comparable equipment as defined in Federal Communications Commission Part 31 Account Nos. 231, 232, and 234.	10	7*	10*
48.14	Telephone Distribution Plant: Includes such assets as pole lines, cable, aerial wire, underground conduits, and comparable equipment, and related land improvements as defined in Federal Communications Commission Part 31 Account Nos. 241, 242.1, 242.2, 242.3, 242.4, 243, and 244.	24	15	24
48.2	Radio and Television Broadcastings: Includes assets used in radio and television broadcasting, except transmitting towers. Telegraph, Ocean Cable, and Satellite Communications (TOCSC) includes communications-related assets used to provide domestic and international radio-telegraph, wire-telegraph, ocean-cable, and satellite communications services; also includes related land improvements. If property described in Classes 48.31—48.45 is comparable to telephone distribution plant described in Class 48.14 and used for 2-way exchange of voice and data communication which is the equivalent of telephone communication, such property is assigned a class life of 24 years under this revenue procedure. Comparable equipment does not include cable television equipment used primarily for 1-way communication.	6	5	6
48.31	TOCSC-Electric Power Generating and Distribution Systems: Includes assets used in the provision of electric power by generation, modulation, rectification, channelization, control, and distribution. Does not include these assets when they are installed on customers premises.	19	10	19
48.32	TOCSC-High Frequency Radio and Microwave Systems: Includes assets such as transmitters and receivers, antenna supporting structures, antennas, transmission lines from equipment to antenna, transmitter cooling systems, and control and amplification equipment. Does not include cable and long-line systems.	13	7	13
48.33	TOCSC-Cable and Long-line Systems: Includes assets such as transmission lines, pole lines, ocean cables, buried cable and conduit, repeaters, repeater stations, and other related assets. Does not include high frequency radio or microwave systems.	26.5	20	26.5
48.34	TOCSC-Central Office Control Equipment: Includes assets for general control, switching, and monitoring of communications signals including electromechanical switching and channeling apparatus, multiplexing equipment, patching and monitoring facilities, in-house cabling, teleprinter equipment, and associated site improvements.	16.5	10	16.5
48.35	TOCSC-Computerized Switching, Channeling, and Associated Control Equipment: Includes central office switching computers, interfacing computers, other associated specialized control equipment, and site improvements.	10.5	7	10.5
48.36	TOCSC-Satellite Ground Segment Property: Includes assets such as fixed earth station equipment, antennas, satellite communications equipment, and interface equipment used in satellite communications. Does not include general purpose equipment or equipment used in satellite space segment property.	10	7	10
48.37	TOCSC-Satellite Space Segment Property: Includes satellites and equipment used for telemetry, tracking, control, and monitoring when used in satellite communications.	8	5	8
48.38	TOCSC-Equipment Installed on Customer's Premises: Includes assets installed on customer's premises, such as computers, terminal equipment, power generation and distribution systems, private switching center, teleprinters, facsimile equipment, and other associated and related equipment.	10	7	10
48.39	TOCSC-Support and Service Equipment: Includes assets used to support but not engage in communications. Includes store, warehouse and shop tools, and test and laboratory assets. Cable Television (CATV): Includes communications-related assets used to provide cable television community antenna television services. Does not include assets used to provide subscribers with two-way communications services.	13.5	7	13.5

* Property described in asset guideline class 48.13 which is qualified technological equipment as defined in section 168(i)(2) is assigned a 5-year recovery period.

Table B-2. Table of Class Lives and Recovery Periods

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
48.41	CATV-Headend: Includes assets such as towers, antennas, preamplifiers, converters, modulation equipment, and program non-duplication systems. Does not include headend buildings and program origination assets.	11	7	11
48.42	CATV-Subscriber Connection and Distribution Systems: Includes assets such as trunk and feeder cable, connecting hardware, amplifiers, power equipment, passive devices, directional taps, pedestals, pressure taps, drop cables, matching transformers, multiple set connector equipment, and converters.	10	7	10
48.43	CATV-Program Origination: Includes assets such as cameras, film chains, video tape recorders, lighting, and remote location equipment excluding vehicles. Does not include buildings and their structural components.	9	5	9
48.44	CATV-Service and Test: Includes assets such as oscilloscopes, field strength meters, spectrum analyzers, and cable testing equipment, but does not include vehicles.	8.5	5	8.5
48.45	CATV-Microwave Systems: Includes assets such as towers, antennas, transmitting and receiving equipment, and broad band microwave assets if used in the provision of cable television services. Does not include assets used in the provision of common carrier services. Electric, Gas, Water and Steam, Utility Services: Includes assets used in the production, transmission and distribution of electricity, gas, steam, or water for sale including related land improvements.	9.5	5	9.5
49.11	Electric Utility Hydraulic Production Plant: Includes assets used in the hydraulic power production of electricity for sale, including related land improvements, such as dams, flumes, canals, and waterways.	50	20	50
49.12	Electric Utility Nuclear Production Plant: Includes assets used in the nuclear power production and electricity for sale and related land improvements. Does not include nuclear fuel assemblies.	20	15	20
49.121	Electric Utility Nuclear Fuel Assemblies: Includes initial core and replacement core nuclear fuel assemblies (i.e., the composite of fabricated nuclear fuel and container) when used in a boiling water, pressurized water, or high temperature gas reactor used in the production of electricity. Does not include nuclear fuel assemblies used in breeder reactors.	5	5	5
49.13	Electric Utility Steam Production Plant: Includes assets used in the steam power production of electricity for sale, combustion turbines operated in a combined cycle with a conventional steam unit and related land improvements. Also includes package boilers, electric generators and related assets such as electricity and steam distribution systems as used by a waste reduction and resource recovery plant if the steam or electricity is normally for sale to others.	28	20	28
49.14	Electric Utility Transmission and Distribution Plant: Includes assets used in the transmission and distribution of electricity for sale and related land improvements. Excludes initial clearing and grading land improvements as specified in Rev. Rul. 72-403, 1972-2 C.B. 102.	30	20	30
49.15	Electric Utility Combustion Turbine Production Plant: Includes assets used in the production of electricity for sale by the use of such prime movers as jet engines, combustion turbines, diesel engines, gasoline engines, and other internal combustion engines, their associated power turbines and/or generators, and related land improvements. Does not include combustion turbines operated in a combined cycle with a conventional steam unit.	20	15	20
49.21	Gas Utility Distribution Facilities: Includes gas water heaters and gas conversion equipment installed by utility on customers' premises on a rental basis.	35	20	35
49.221	Gas Utility Manufactured Gas Production Plants: Includes assets used in the manufacture of gas having chemical and/or physical properties which do not permit complete interchangeability with domestic natural gas. Does not include gas producing systems and related systems used in waste reduction and resource recovery plants which are elsewhere classified.	30	20	30
49.222	Gas Utility Substitute Natural Gas (SNG) Production Plant (naphtha or lighter hydrocarbon feedstocks): Includes assets used in the catalytic conversion of feedstocks or naphtha or lighter hydrocarbons to a gaseous fuel which is completely interchangeable with domestic natural gas.	14	7	14
49.223	Substitute Natural Gas-Coal Gasification: Includes assets used in the manufacture and production of pipeline quality gas from coal using the basic Lurgi process with advanced methanation. Includes all process plant equipment and structures used in this coal gasification process and all utility assets such as cooling systems, water supply and treatment facilities, and assets used in the production and distribution of electricity and steam for use by the taxpayer in a gasification plant and attendant coal mining site processes but not for assets used in the production and distribution of electricity and steam for sale to others. Also includes all other related land improvements. Does not include assets used in the direct mining and treatment of coal prior to the gasification process itself.	18	10	18
49.23	Natural Gas Production Plant	14	7	14
49.24	Gas Utility Trunk Pipelines and Related Storage Facilities: Excluding initial clearing and grading land improvements as specified in Rev. Rul. 72-40.	22	15	22
49.25	Liquefied Natural Gas Plant: Includes assets used in the liquefaction, storage, and regasification of natural gas including loading and unloading connections, instrumentation equipment and controls, pumps, vaporizers and odorizers, tanks, and related land improvements. Also includes pipeline interconnections with gas transmission lines and distribution systems and marine terminal facilities.	22	15	22

Table B-2. Table of Class Lives and Recovery Periods

Asset class	Description of assets included	Recovery Periods (in years)		
		Class Life (in years)	GDS (MACRS)	ADS
49.3	Water Utilities: Includes assets used in the gathering, treatment, and commercial distribution of water.	50	20***	50
49.4	Central Steam Utility Production and Distribution: Includes assets used in the production and distribution of steam for sale. Does not include assets used in waste reduction and resource recovery plants which are elsewhere classified.	28	20	28
49.5	Waste Reduction and Resource Recovery Plants: Includes assets used in the conversion of refuse or other solid waste or biomass to heat or to a solid, liquid, or gaseous fuel. Also includes all process plant equipment and structures at the site used to receive, handle, collect, and process refuse or other solid waste or biomass to a solid, liquid, or gaseous fuel or to handle and burn refuse or other solid waste or biomass in a waterwall combustion system, oil or gas pyrolysis system, or refuse derived fuel system to create hot water, gas, steam and electricity. Includes material recovery and support assets used in refuse or solid refuse or solid waste receiving, collecting, handling, sorting, shredding, classifying, and separation systems. Does not include any package boilers, or electric generators and related assets such as electricity, hot water, steam and manufactured gas production plants classified in classes 00.4, 49.13, 49.221, and 49.4. Does include, however, all other utilities such as water supply and treatment facilities, ash handling and other related land improvements of a waste reduction and resource recovery plant.	10	7	10
50.	Municipal Wastewater Treatment Plant	24	15	24
51.	Municipal Sewer	50	20***	50
57.0	Distributive Trades and Services: Includes assets used in wholesale and retail trade, and personal and professional services. Includes section 1245 assets used in marketing petroleum and petroleum products.	9	5	9*
57.1	Distributive Trades and Services-Billboard, Service Station Buildings and Petroleum Marketing Land Improvements: Includes section 1250 assets, including service station buildings and depreciable land improvements, whether section 1245 property or section 1250 property, used in the marketing of petroleum and petroleum products, but not including any of these facilities related to petroleum and natural gas trunk pipelines. Includes car wash buildings and related land improvements. Includes billboards, whether such assets are section 1245 property or section 1250 property. Excludes all other land improvements, buildings and structural components as defined in section 1.48-1(e) of the regulations. See <i>Gas station convenience stores</i> in chapter 3.	20	15	20
79.0	Recreation: Includes assets used in the provision of entertainment services on payment of a fee or admission charge, as in the operation of bowling alleys, billiard and pool establishments, theaters, concert halls, and miniature golf courses. Does not include amusement and theme parks and assets which consist primarily of specialized land improvements or structures, such as golf courses, sports stadia, race tracks, ski slopes, and buildings which house the assets used in entertainment services.	10	7	10
80.0	Theme and Amusement Parks: Includes assets used in the provision of rides, attractions, and amusements in activities defined as theme and amusement parks, and includes appurtenances associated with a ride, attraction, amusement or theme setting within the park such as ticket booths, facades, shop interiors, and props, special purpose structures, and buildings other than warehouses, administration buildings, hotels, and motels. Includes all land improvements for or in support of park activities, (e.g., parking lots, sidewalks, waterways, bridges, fences, landscaping, etc.) and support functions (e.g., food and beverage retailing, souvenir vending and other nonlodging accommodations) if owned by the park and provided exclusively for the benefit of park patrons. Theme and amusement parks are defined as combinations of amusements, rides, and attractions which are permanently situated on park land and open to the public for the price of admission. This guideline class is a composite of all assets used in this industry except transportation equipment (general purpose trucks, cars, airplanes, etc., which are included in asset guideline classes with the prefix 00.2), assets used in the provision of administrative services (asset classes with the prefix 00.1), and warehouses, administration buildings, hotels and motels.	12.5	7	12.5
	Certain Property for Which Recovery Periods Assigned			
	A. Personal Property With No Class Life		7	12
	Section 1245 Real Property With No Class Life		7	40
	B. Qualified Technological Equipment, as defined in section 168(i)(2).	**	5	5
	C. Property Used in Connection with Research and Experimentation referred to in section 168(e)(3)(B).	**	5	class life if no class life-12
	D. Alternative Energy Property described in sections 48(1)(3)(viii) or (iv), or section 48(1)(4) of the Code.	**	5	class life if no class life-12
	E. Biomass property described in section 48(1)(15) and is a qualifying small production facility within the meaning of section 3(17)(c) of the Federal Power Act, (16 U.S.C. 796(17)(C)), as in effect on September 1, 1986.	**	5	class life if no class life-12

* Any high technology medical equipment as defined in section 168(i)(2)(C) which is described in asset guideline class 57.0 is assigned a 5-year recovery period for the alternate MACRS method.

** The class life (if any) of property described in classes B, C, D, or E is determined by reference to the asset guideline classes. If an item of property described in paragraphs B, C, D, or E is not described in any asset guideline class, such item of property has no class life.

*** Use straight line over 25 years if placed in service after June 12, 1996, unless placed in service under a binding contract in effect before June 10, 1996, and at all times until placed in service.

Glossary

The definitions in this glossary are the meanings of the terms as used in this publication. The same term used in another publication may have a slightly different meaning.

Abstract fees: Expenses generally paid by a buyer to research the title of real property.

Active conduct of a trade/business: To determine if a trade or business is actively conducted requires an examination of all the facts and circumstances. Generally, for the section 179 deduction, a taxpayer is considered to actively conduct a trade or business if he or she meaningfully participates in the management or operations of the trade or business. A mere passive investor in a trade or business does not actively conduct the trade or business.

Adjusted basis: The original cost of property, plus certain additions and improvements, minus certain deductions such as depreciation allowed or allowable and casualty losses.

Amortization: A ratable deduction for the cost of intangible property over its useful life.

Amount realized: The total of all money received plus the fair market value of all property or services received from a sale or exchange. The amount realized also includes any liabilities assumed by the buyer and any liabilities to which the property transferred is subject, such as real estate taxes or a mortgage.

Basis: A way of measuring an individual's investment in property for tax purposes.

Business/investment use: Usually, a percentage showing how much an item of property, such as an automobile, is used for business and investment purposes.

Capitalized: Expended or treated as an item of a capital nature. A capitalized amount is not deductible as a current expense and must be included in the basis of property.

Circumstantial evidence: Details or facts which indirectly point to other facts.

Class life/lives: A number of years that establishes the property class and recovery period for most types of property under the General Depreciation System (GDS) and Alternative Depreciation System (ADS).

Commuting: Travel between a personal home and work or job site within the area of an individual's tax home.

Convention: A method established under the Modified Accelerated Cost Recovery System (MACRS) to determine the portion of the year to depreciate property both in the year the property is placed in service and in the year of disposition.

Declining balance method: An accelerated method to depreciate property. The General Depreciation System (GDS) of MACRS uses the 150% and 200% declining

balance methods for certain types of property. A depreciation rate (percentage) is determined by dividing the declining balance percentage by the recovery period for the property.

Disposed: Permanently withdrawn from use in a trade or business or from the production of income.

Documentary evidence: Written records which establish certain facts.

Exchange: To barter, swap, part with, give, or transfer property, for other property or services.

Fair market value (FMV): The price which property brings when it is offered for sale by one who is willing but not obligated to sell, and is bought by one who is willing or desires to buy but is not compelled to do so.

Fiduciary: The one who acts on behalf of another as a guardian, trustee, executor, administrator, receiver, or conservator.

Fungible commodity: A commodity of a nature that one part may be used in place of another part.

Goodwill: An intangible property such as the advantage or benefit received in property beyond its mere value. It is not confined to a name but can also be attached to a particular area where business is transacted, to a list of customers, or to other elements of value in business as a going concern.

Grantor: The one who transfers property to another.

Listed property: Passenger automobiles, any other property used for transportation, property of a type generally used for entertainment, recreation or amusement, computers and their peripheral equipment (unless used only at a regular business establishment and owned or leased by the person operating the establishment), and cellular telephones or similar telecommunications equipment.

Nonresidential real property: Most real property other than residential rental property.

Nontaxable exchange: An exchange of property in which any gain or loss realized is not recognized (included in or deducted from income) for tax purposes. This usually involves exchanges of like-kind property.

Placed in service: Ready and available for a specific use whether in a trade or business, the production of income, a tax-exempt activity, or a personal activity.

Property class: A category for property under MACRS. It generally determines the depreciation method, recovery period, and convention.

Recovery period: The number of years over which the basis (cost) of an item of property is recovered.

Remainder interest: That part of an estate which is left after all of the other provisions of a will have been satisfied.

Residential rental property: Real property, generally buildings or structures, if 80% or more of its annual gross rental income is from dwelling units.

Salvage value: An estimated value of property at the end of its useful life. Not used under MACRS.

Section 1245 property: Property that is or has been subject to an allowance for depreciation or amortization. Section 1245 property includes personal property, single purpose agricultural and horticultural structures, storage facilities used in connection with the distribution of petroleum or primary products of petroleum, and railroad grading or tunnel bores.

Section 1250 property: Real property (other than section 1245 property) which is or has been subject to an allowance for depreciation.

Standard mileage rate: The established amount for optional use in determining a tax deduction for automobiles instead of deducting depreciation and actual operating expenses.

Straight line method: A way to figure depreciation for property that ratably deducts the same amount for each year in the recovery period. The rate (in percentage terms) is determined by dividing 1 by the number of years in the recovery period.

Structural components: Parts that together form an entire structure, such as a building. The term includes those parts of a building such as walls, partitions, floors, and ceilings, as well as any permanent coverings such as paneling or tiling, windows and doors, and all components of a central air conditioning or heating system including motors, compressors, pipes and ducts. It also includes plumbing fixtures such as sinks, bathtubs, electrical wiring and lighting fixtures, and other parts that form the structure.

Taxable exchange: An exchange of property in which the gain or loss is recognized (included in or deducted from income) for tax purposes.

Tax-exempt: Not subject to tax.

Term interest: A life interest in property, an interest in property for a term of years, or an income interest in a trust. It generally refers to a present or future interest in income from property or the right to use property which terminates or fails upon the lapse of time, the occurrence of an event or the failure of an event to occur.

Unadjusted depreciable basis: The basis of an item of property for purposes of figuring gain on a sale without taking into account any depreciation taken in earlier years but with adjustments for amortization, the section 179 deduction, any deduction claimed for clean-fuel vehicles or clean-fuel vehicle refueling property, and any electric vehicle credit.

Unit-of-production method: A way to figure depreciation for certain property. It is determined by estimating the number of units that can be produced before the property is worn out. For example, if it is estimated that a machine will produce 1000 units before its useful life ends, and actually produces 100 units in a year, the percentage to figure depreciation for that year is 10% of the machine's cost less its salvage value.

Useful life: An estimate of how long an item of property can be expected to be usable in trade or business or to produce income. Under MACRS, you recover the cost of property over a set recovery period. The recovery period is based on the property class to which your property is assigned. The class your property is assigned to is generally determined by its class life. The class life for most property is established and listed in Appendix B.
