

ReadMeF 5.0.4 Improvements:

The application was migrated from the older VB6 technology to the newer C# technology. This will allow for better support in the future. As part of the migration process, the application was retested and several defects were fixed and enhancements made. Examples of issues that were fixed or enhancements made are provided below:

1. The Application was tested on Windows XP SP3 and Windows 7
2. The Installation Guide is updated.
3. Enhancements were made to provide increased support for section 508 compliance
4. File open -- Provides the option to select the directory to open when selecting a new file to open. Refined directory selection functionality.
5. Handling Bad Characters – The program now checks for a limited set of bad characters in the XML and provides an error message.
6. Viewing the tree:
 - The vertical frame border between the tree and the form can be moved by the user to allow full view of the tree.
 - Allows better initial view of the tree, opens to subsidiary
7. Busy cursor now displays when processing is taking a long time.
8. File/open -- If you inadvertently try to open an index file, the application will give you a meaningful error message.
9. Print selected -- Improved behavior for handling orientation of the document.
10. Unused User Interface menu items have been removed
