A Quarterly Statistics of Income Report

Volume 31, Number 4

The Statistics of Income (SOI) Bulletin is issued quarterly by the Statistics of Income Division of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers, and tax administrators. Selected historical and other data tables, previously published in every issue of the SOI Bulletin, now are published only in the spring issue of the Bulletin. These tables are also available on SOI's pages of the IRS Web site (www.irs.gov/taxstats).

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephoning the SOI's Statistical Information Services (202-8740410 ), or by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

The SOI Bulletin is prepared under the direction of Wayne Kei, Chief, Communications and Data Dissemination Section. Paul Bastuscheck (layout and graphics), Martha Gangi (writer/editor), Clay Moulton (layout and graphics), Lisa Smith (layout and graphics editor), and Camille Swick (layout and graphics) are the editorial staff who prepare the manuscript. Jim Hobbs, Emily Gross, and Beth Kilss also made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

## High-Income Tax Returns for 2009

By Justin Bryan
For 2009, there were 3,924,489 individual income tax returns reporting adjusted gross income (AGI) of $\$ 200,000$ or more, and $3,975,288$ with expanded income of $\$ 200,000$ or more. These returns represent, respectively, 2.793 percent and 2.830 percent of all returns for 2009. Based on AGI, the number of highincome returns for 2009, measured in current-year dollars, was 73.5 times the number for 1977. Measured in 1976 constant dollars, the number of returns for 2009 was only 8.1 times the number for 1977. For Tax Year 2009, the share of high AGI income returns in constant dollars decreased to 0.265 percent from 0.342 percent in 2008.

For 2009, of the 3,924,489 income tax returns with AGI of $\$ 200,000$ or more, 20,752 ( 0.529 percent) showed no U.S. income tax liability; and 10,080 ( 0.257 percent) showed no worldwide income tax liability. For 2008, as revised to reflect refundable credits, of the $4,375,660$ returns with AGI of $\$ 200,000$ or more, 22,257 returns ( 0.509 percent) had no U.S. income tax liability, and 12,326 returns ( 0.282 percent) had no worldwide income tax liability. For 2009, of the 3,975,288 tax returns with expanded income of $\$ 200,000$ or more, 35,061 ( 0.882 percent) had no U.S. income tax liability; and 19,551 (0.492 percent) had no worldwide income tax liability. For 2008, of the 4,416,986 returns with expanded income of $\$ 200,000$ or more, there were 31,539 ( 0.714 percent) with no U.S. income tax liability and 17,127 ( 0.388 percent) with no worldwide income tax liability.

## Individual Noncash Contributions, 2009

By Pearson Liddell and Janette Wilson
For Tax Year 2009, 21.9 million individual taxpayers who itemized deductions reported $\$ 31.8$ billion in deductions for noncash charitable contributions. Of these taxpayers, 6.7 million reported $\$ 28$ billion in deductions for charitable contributions on Form 8283, Noncash Charitable Contributions. This form is used by individual taxpayers when the amount of taxpayer deductions for all noncash donations on Schedule A, Itemized Deductions, exceeds $\$ 500$. The number of taxpayers filing Form 8283 decreased by 4.8 percent from 7 million for Tax Year 2008, and the amount claimed for donations declined by a larger percentage, 19.1 percent, from $\$ 34.6$ billion in 2008.

For both 2008 and 2009, corporate stock donations represented the largest share of total donations, in terms of amounts claimed. For 2009, corporate stock donations of $\$ 9.7$ billion, which represented 34.8 percent of all donations claimed, declined 21.2 percent from the Tax Year 2008 amount of $\$ 12.3$ billion. For Tax Year 2009, there were no notable tax law changes that affected the deductions allowed for noncash charitable contributions.

## Accumulation and Distribution of Individual Retirement Arrangements, 2008

## By Victoria L. Bryant

The year-end fair market value of all Individual Retirement Arrangements (IRAs) fell from $\$ 4.7$ trillion in 2007 to $\$ 3.7$ trillion in 2008, a 22.5-percent decrease. While the overwhelming majority of this decrease can be attributed to factors beyond the scope of this article, namely declines in the values of the financial assets held in IRA accounts, a small portion of the decline can be explained by factors apparent from the data presented in this article. First, 2008 showed an increase in withdrawals from IRA plans, from $\$ 167.1$ billion in 2007 to $\$ 227.5$ billion in 2008. The increase in withdrawals was coupled with a 28.1 -percent increase in the number of taxpayers taking withdrawals.

Second, rollovers from 401(k)-type plans to IRAs decreased, from $\$ 322.3$ billion in 2007 to $\$ 272.1$ billion in 2008. While the number of taxpayers rolling over assets actually increased by a fraction of 1 percent, the average value of the rollovers decreased by 33.5 percent.

Finally, contributions to IRAs decreased marginally from $\$ 58.8$ billion in 2007 to $\$ 55.6$ billion in 2008. Interestingly, however, the number of taxpayers making contributions decreased by 10 percent but the average value of IRA contributions actually increased by 5.1 percent. This increase in the average contribution was due largely to taxpayers taking advantage of more liberal contribution limits for traditional, Roth, and SEP IRAs. While fewer taxpayers contributed to an IRA, those who did contributed more.

The composition of IRA assets by plan type was essentially unchanged from 2007. Traditional IRA plans represented 88.5 percent, or $\$ 3.3$ trillion, of all IRA assets. The remainder was held in Simplified Employee Pension (SEP) plans (\$201.5 billion), Roth

## Inside this Issue

Statistics of Income Bulletin | Spring 2012

IRA plans ( $\$ 176.6$ billion), and Savings Incentive Match Plans for Employees (SIMPLE) plans (\$45.6 billion).

While traditional IRA plans still accounted for the vast majority of year-end fair market value in 2008, Roth IRA plans accounted for approximately 32.7 percent of total IRA contributions. SEP plans followed with just over one-fourth of the total contributions, or 26.4 percent. Traditional IRA plan contributions represented 24.1 percent of total contributions, and SIMPLE plans represented 16.7 percent.

## Foreign Recipients of U.S. Income, 2009

By Scott Luttrell
U.S.-source income payments to foreign persons and taxes withheld declined across nearly all categories of income in Calendar Year 2009, as the U.S. economy was in the midst of the Great Recession. Some $\$ 546.5$ billion in U.S.-source income payments were made to foreign recipients in 2009, a decrease of 20.7 percent from the 2008 total. Taxes withheld on U.S.source income paid to foreign persons experienced a similar decline to $\$ 7.2$ billion, down 21.4 percent from 2008. The income types that typically account for the most U.S. income paid to foreign persons decreased the most in 2009, both in terms of dollars, percentage change, and share of total income. Interest payments to foreign recipients ( $\$ 260.7$ billion) fell 26.6 percent compared to 2008 levels. The 2009 interest income amount also represents a 30.8 -percent decrease from the amount paid to foreign persons in 2007. Interest payments in 2009 were still the largest category of payment to nonresident aliens by far, accounting for 47.7 percent of all payments. However, interest payments made up larger shares of total U.S.-source income payments in 2008 (53.8 percent) and 2007 (58.3 percent).

## The Distribution of Corporate Income: <br> Tabulations from the Schedule M-3, 2004-2008

By Caitlin Bokulic, Erin Henry, and George Plesko Corporations determine the amount of income earned during a year using a variety of reporting standards. These differences in reporting standards have led to differences in the amount of book and taxable income that is reported by firms. To investigate the patterns and sources of these differences, this article examines a sample of firms that filed a Form 1120

Schedule M-3 during 2004-2008. The sample was disaggregated into statutory tax brackets to show the magnitude of aggregate measures of both financial statement worldwide and domestic income and taxable income to better understand the population of corporate tax filers.

Overall, we find aggregate book income measures increased from 2004 to 2005, but experienced a significant decline throughout the rest of the sample period. Taxable income, however, increased from 2004 to 2007 and only slightly declined from 2007 to 2008. Our analysis of income measures across statutory tax brackets indicates that the majority of corporate Schedule M-3 filers report no taxable income or taxable income between $\$ 335,000$ and $\$ 10$ million. However, a small number of corporate Schedule M-3 filers earn the largest amounts of both book and taxable incomes. In addition, an analysis of the effect of an increase in firms' tax net income on their marginal tax rate shows that firms' marginal tax rates are sensitive to increases in their tax net incomes.

## 2009 Gifts

By Melissa J. Belvedere
The Federal gift tax is one component of the Federal transfer tax system, which also includes the estate tax and the generation-skipping transfer tax. The gift tax is levied on gifts given during a donor's life, known as inter vivos gifts. Donors file Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, to report gifts made during a given calendar year. The data presented here are for gifts given in 2009 and reported on forms filed with the Internal Revenue Service during 2010. There were 223,093 returns filed during 2010, reporting a total of \$37.9 billion in assets, which were transferred to 867,507 gift recipients, mostly children and grandchildren. The majority of gifts given were in the form of cash, although real estate and stock also comprised significant percentages of total assets.

## The Income and Wealth of 2007 Estate Tax Decedents

By Barry Johnson, Brian Raub, and Joseph
Newcomb
The Statistics of Income (SOI) Division of the Internal Revenue Service has periodically combined wealth data reported on Federal estate tax returns,
filed for relatively wealthy decedents, with income tax data reported by these decedents for the last full year prior to death. Such linked datasets provide unique windows into the relationship between realized income and wealth.

In this preliminary look at a new dataset combining wealth data and 1 year of income data, we have shown that almost 21 percent of estate tax decedents who died in 2007 reported income in the top 1 percent of the adjusted gross income distribution for Tax Year 2006. In general, the portfolio held by older decedents favors low-risk, low-return assets. Likewise, income sources shift from wages and businesses for younger decedents to fixed-income, lower-risk sources for those above the usual retirement age. We have also shown surprisingly little change in realized rates of return on assets between 1976 and 2007, despite significant changes in the income tax structure during the period. This suggests that the income realization choices of the wealthy decedents in these studies were based more on attitudes toward risk and
on consumption needs than the tax regime in effect at the time.

## In the Next Issue

Articles on the following topics are tentatively planned for inclusion in the summer 2012 issue of the Statistics of Income Bulletin, scheduled to be published in August 2012:

ㅁ Sole proprietorships, Tax Year 2010;
$\square$ Foreign-controlled domestic corporations, Tax Year 2009;
$\square$ Corporate foreign tax credit data, Tax Year 2008;

- Fiduciary income tax returns, Tax Years 20022009; and
- Partnership and sole proprietorship data by State, Tax Years 2008 and 2009.

# High-Income Tax Returns for 2009 

by Justin Bryan

The Tax Reform Act of 1976 requires annual publication of data on individual income tax returns reporting income of $\$ 200,000$ or more, including the number of such returns reporting no income tax liability and the importance of various tax provisions in making these returns nontaxable. ${ }^{1}$ This article presents detailed data for the almost 4 million high-income returns for 2009, as well as summary data for the period 1977 to 2008. Detailed data for the years 1974 through 2008 have been published previously (see References section for more details).

Two income concepts are used in this article to classify tax returns as high income: the statutory concept of adjusted gross income (AGI) and the expanded income concept. ${ }^{2}$ Expanded income uses items reported on tax returns to obtain a more comprehensive measure of income than AGI. Specifically, expanded income is AGI plus tax-exempt interest, nontaxable Social Security benefits, the foreign-earned income exclusion, and items of "tax preference" for "alternative minimum tax" purposes; less unreimbursed employee business expenses, moving expenses, investment interest expense to the extent it does not exceed investment income, and miscellaneous itemized deductions not subject to the 2-percent-of-AGI floor. $3,4,5$ Note that, although expanded income is a more comprehensive measure of income than AGI, for some taxpayers, the subtractions from AGI to arrive at expanded income exceed the additions, with the result that expanded income is less than AGI.

## Number of High-Income Returns

Figure A and Table 1 show that, for 2009, there were 3,924,489 individual income tax returns reporting AGI of $\$ 200,000$ or more, and $3,975,288$ returns with expanded income of $\$ 200,000$ or more. These

Justin Bryan is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Jeff Hartzok, Chief.
returns represented 2.793 percent and 2.830 percent, respectively, of all returns for 2009.

This 2009 report is the first in this annual series of reports to include the effect of newly created refundable credits. Previously, the income tax liability of taxpayers was based on the last line of the "Taxes and Credits" section of Form 1040 (Line 55 of the 2009 Form 1040). For years prior to 2007, this worked fine. Two refundable credits, the earned income tax (EIC) and the additional child tax credit, were reported in the "Payments" section of Form 1040 (Lines 64 and 65 of the 2009 Form 1040), but the EIC did not affect high-income taxpayers, and the additional child tax credit was only available to taxpayers who had zero income tax liability. In 2007, however, a new refundable AMT credit was added. This credit was also reported in the "Payments" section of Form 1040 (Line 70c of the 2009 Form 1040). But, unlike the other two refundable credits, the refundable AMT credit can reduce a high-income taxpayer's tax liability to zero. Since 2007, some other refundable credits have been added. For 2009, they consist of the first-time homebuyer credit, making work pay credit, and the American opportunity credit. Like the refundable AMT credit, these new credits are reported in the "Payments" section of Form 1040 and can reduce a high-income taxpayer's tax liability to zero. The tabulations previously published for 2007 and 2008 do not include the effect of these new refundable credits on a taxpayer's income tax liability.

For 2009, this new concept resulted in an additional 4,314 returns with AGI of \$200,000 or more and no U.S. income tax liability (see Figure C for more details) and 1,288 additional returns with no worldwide income tax. An additional 4,708 tax returns with an expanded income of $\$ 200,000$ or more had no U.S. income tax liability and 1,480 more had no worldwide liability. Of the additional 4,708 returns with no U.S tax liability, 4,677 claimed the refundable prior-year minimum tax credit, while 62 returns claimed other refundable credits. Of the 1,480

Footnotes at end of figure.
additional returns with no worldwide liability, 1,445 returns claimed the refundable prior-year minimum tax credit; 59 returns claimed other refundable credits (see Tables 5 and 6 for more details). Figure C includes data for 2007, 2008, and 2009 under both the old and the updated concepts, and Figure D reflects the updated summary data for 2007, 2008, and 2009.

From 1977 to 2000, the numbers of returns reporting incomes of $\$ 200,000$ or more increased each year, and each year those high-income returns were
a larger share of all tax returns. However, for 2001 and 2002, both the number of high-income returns and their percentage of all returns decreased. For 2003, both the number of high-income returns and their share of all returns increased, but, by all measures, were still lower than in 2001. With a slightly larger increase than 2003, the number of returns and their percentage of all returns for 2004 rose above the previous high set in 2000. This trend continued through 2007, with large increases in both number

[1] 1976 constant dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers. See footnote 6 of this article for further details.
of returns and percentage of all returns. Starting in 2008 and continuing in 2009, both the number of returns and the percentage of all returns decreased, although both were still higher than in any year except 2006 and 2007.

The difference in the number of high-income returns between the two income concepts significantly decreased beginning with 1987, when AGI began to include 100 percent of long-term capital gains. That change in the definition of AGI made AGI and ex-
panded income concepts more comparable. In addition, as a result of the inclusion of tax-exempt interest in expanded income starting with 1987, expanded income for years after 1986 is not strictly comparable to expanded income for years before 1987.

In the top panel of Figure A, the $\$ 200,000$ threshold for high-income returns is measured in current-year (nominal) dollars. As a result of inflation, the real (constant) dollar level of the threshold has fallen over time, and many returns are classified

# High-Income Tax Returns for 2009 

Statistics of Income Bulletin | Spring 2012
as high income that would not have been classified as high income for earlier years. To maintain the comparability of the real threshold over time, the nominal \$200,000 should be adjusted for inflation since 1976. The bottom panel of Figure A shows the results of using a threshold of $\$ 200,000$ in constant 1976 dollars for all years. ${ }^{6}$

When measured in 1976 constant dollars, under the expanded income concept, the total number of high-income returns for 2009 was only 6.5 times the number for 1977, whereas the number of high-income returns for 2009 measured in current-year dollars was 58.8 times as large as for 1977. For 2009, the share of high-expanded income returns in constant dollars decreased to 0.273 percent from 0.350 percent the previous year. Thus, when the threshold for considering a tax return to be high income is adjusted for inflation, the percentage of high-income returns in the population of all returns is about 90 percent lower than when the nominal threshold is used. Figure B shows the difference between the constant and current dollar shares of high-expanded income returns.

Based on AGI, the number of high-income returns for 2009 measured in current-year dollars was 73.5 times as large as for 1977, whereas, measured in 1976 constant dollars, the number of returns for 2009 was only 8.1 times the number for 1977. For Tax Year 2009, the share of high AGI income returns in constant dollars decreased to 0.265 percent from 0.342 percent in 2008.

## Nontaxable High-Income Returns

Two tax concepts are used in this article to classify tax returns as taxable or nontaxable. The first concept, "U.S. income tax," is total Federal income tax liability (including the "alternative minimum tax" (AMT)), less all credits against income tax. Since the U.S. income tax applies to worldwide income, and since a credit (subject to certain limits) is allowed against U.S. income tax for income taxes paid to foreign governments, a return could be classified
as nontaxable under this first concept even though income taxes had been paid to a foreign government. The second tax concept, "worldwide income tax," addresses this circumstance by adding to U.S. income tax the allowed foreign tax credit and foreign taxes paid on excluded foreign-earned income. 7,8 The sum of these two items is believed to be a reasonable proxy for foreign taxes actually paid.

For 2009, of the 3,924,489 income tax returns with AGI of \$200,000 or more, 20,752 (0.529 percent) showed no U.S. income tax liability; and 10,080 ( 0.257 percent) showed no worldwide income tax liability (the top panel of Figure C). For 2008, as revised to reflect refundable credits, of the 4,375,660 returns with AGI of \$200,000 and over, 22,257 returns ( 0.509 percent) had no U.S. income tax liability, and 12,326 returns ( 0.282 percent) had no worldwide income tax liability.

For 2009, of the 3,975,288 tax returns with expanded income of \$200,000 or more, 35,061 (0.882 percent) had no U.S. income tax liability; and 19,551 ( 0.492 percent) had no worldwide income tax liability. For 2008, of the 4,416,986 returns with expanded income of \$200,000 or more, there were 31,539 ( 0.714 percent) with no U.S. income tax liability and 17,127 (0.388 percent) with no worldwide income tax liability.

The proportion of nontaxable, high-income returns increased by three of the four measures cited above between 2008 and 2009. Both measures of expanded income increased appreciably, while the one AGI measure that increased was comparably much smaller. The expanded-income increases were possibly due to the increase in returns with tax-exempt interest. Between 2008 and 2009, the number of expanded returns with no U.S. income tax liability claiming tax-exempt interest as their primary reason for nontaxability increased from 8,348 to 13,011. For expanded-income returns with no worldwide tax, tax-exempt interest increased from 7,933 returns in 2008 to 11,941 in 2009 (see Tables 7 and 8 for more details).

[^1]
## Figure B

Returns with Expanded Income of $\$ 200,000$ or More: Percentage of All Returns, Measured in Current and 1976 Constant Dollars, Tax Years 1977-2009

[1] 1976 constant dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers. See footnote 6 of this article for further details.

Regardless of the income measure (AGI or expanded income) or the tax concept (U.S. income tax or worldwide income tax) used, the percentages of 2009 nontaxable, high-income returns are generally not substantially different whether measured in constant or current dollars. Of returns with AGI of $\$ 200,000$ or more in current dollars, 0.529 percent reported no U.S. income tax for 2009; and 0.257 percent had no worldwide income tax. For returns in 1976 constant dollars, the percentage without U.S. income tax liability was 0.609 ; the percentage without worldwide income tax liability was 0.235 (see the lower panel of Figure C).

Of returns with expanded income of \$200,000 or more in current dollars, 0.882 percent reported no U.S. income tax for 2009, and 0.492 percent had no worldwide income tax. When looking at these returns using 1976 constant dollars, the percentage without U.S. income tax liability was 0.741 ; the percentage without worldwide income tax liability was 0.327 .

Figure D shows the number of returns with expanded income of $\$ 200,000$ or more with no worldwide income tax and their proportion of all highexpanded income returns for 1977 through 2009. These data are shown in both current-year and 1976

[1] 1976 constant dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers. See footnote 6 of this article for further details.
[2] Calculated under the previous concept of tax liability, which did not include refundable credits.
[3] Includes the effect of refundable credits on tax liability.
NOTE: See Figure H for the derivation of U.S. income tax and worldwide income tax.
is based on samples, year-to-year differences in the numbers and percentages of nontaxable returns with expanded income of $\$ 200,000$ or more may represent sampling variability, in addition to actual changes
in the numbers of such returns. Beginning with Tax Year 1991, nontaxable returns with expanded income of $\$ 200,000$ or more were sampled at higher rates for Statistics of Income, which reduced the sampling

## Figure D

Number and Percentage of Returns with No Worldwide Income Tax and with Expanded Income of $\mathbf{\$ 2 0 0 , 0 0 0}$ or More Measured in Current Dollars and in 1976 Constant Dollars, Tax Years 1977-2009

[1] 1976 constant dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers. See footnote 6 of this article for further details.
NOTES: See Figure H for the derivation of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits were factored in to determine tax liability. In order to retain historical comparability, Tax Years 2007 and 2008 data were recalculated using the new criteria. However, 2007 and 2008 tables, published earlier, do not reflect these changes.
variability of these returns and, therefore, provided improved estimates. Thus, the data for returns prior to 1991 are not entirely comparable with data for more recent years.

## Detailed Data for 2009

Tables 1 through 12 present data based on income tax returns for 2009, mainly those with income of $\$ 200,000$ or more (measured in current-year dollars) of AGI or expanded income. Most of the data are shown for taxable and nontaxable returns, both separately and combined. In summary, the tables show:
$\square$ The numbers of returns under the two tax concepts, cross-classified by broad AGI and expanded income-size classes (Tables 1 and 2);
$\square$ The distributions of taxable income as a percentage of AGI and expanded income (Tables 3 and 4);

- The frequencies and amounts of various sources of income, exclusions, deductions, taxes, and tax credits, as well as the relationship between the two income concepts (Tables 5 and 6);
$\square$ The frequencies with which various deductions and tax credits are the most important and second most important items in reducing (or eliminating) income tax (Tables 7 and 8);
- The frequencies with which various itemized deductions, tax credits, and tax preference items occur as certain percentages of income (Tables 9 and 10); and
- The distributions of effective tax rates, i.e., income tax under each definition as a percentage of income, by broad income-size classes (Tables 11 and 12).

Tables 1,3,5,7,9, and 11 use the U.S. income tax concept to classify returns as taxable or nontaxable, whereas Tables $2,4,6,8,10$, and 12 use the worldwide income tax concept.

## Size of Income

Tables 1 and 2 show the number of all returns, taxable returns, and nontaxable returns, cross-classified by broad AGI and expanded income-size classes. The tables show that most returns fall in the same broad income-size class under both income concepts, but that the number of nontaxable returns is generally greater in each income class over $\$ 50,000$ when income is measured by economic income rather than by AGI. Table 1 shows that 20,752 returns with no U.S. income tax had an AGI of $\$ 200,000$ or more; 35,061 returns with no U.S. income tax had an expanded income of $\$ 200,000$ or more; and 16,465 returns with no U.S. income tax had both AGI and expanded income of $\$ 200,000$ or more. Table 2 shows that 10,080 returns with no worldwide income tax had an AGI of \$200,000 or more; 19,551 returns with no worldwide income tax had expanded income of $\$ 200,000$ or more; and 5,971 returns with no worldwide income tax had both AGI and expanded income of $\$ 200,000$ or more.

## Distribution of Tax Levels

Tables 3 and 4 show the distributions of high-income returns by the ratios of "adjusted" taxable income to AGI or expanded income. Taxable income has been adjusted for these tables by subtracting from taxable
income the deduction equivalents of tax credits and other items. ${ }^{9}$ Thus, the tables show the extent to which AGI or expanded income, respectively, are reduced before taxes are imposed on the remaining income. The tables also illustrate three important facts about high-income tax returns. The examples in the paragraphs below are drawn from the "expanded income" columns in Table 4 for worldwide tax.
$\square$ As already described, only a small portion of high-income taxpayers were able to escape all income taxes ( 0.5 percent).

- Another group of high-income taxpayers-small, but larger than the nontaxable group-was able to offset a very substantial fraction of its income before being subject to tax. This type of highincome taxpayer pays income tax equal to only a small share of his or her income. Such taxpayers may be called "nearly nontaxables." A little more than 1 percent of high expanded-income taxpayers who reported at least some worldwide tax liability were able to reduce their adjustable taxable income to less than 25 percent of their expanded income.
- Overall, most high-income taxpayers were subject to tax on a large share of their income and, consequently, reported very substantial amounts of tax. (Some 63.7 percent of high- expanded income taxpayers had adjusted taxable income equal to 80 percent or more of expanded income; and 95.4 percent had adjusted taxable income equal to 50 percent or more of expanded income.)

Tables 11 and 12 show the distributions of tax returns in another way: by tax burden. These two tables classify all tax returns by both size of income and effective tax rate, i.e., income tax as a percentage of either adjusted gross income or expanded income. These tables show that, on average, high-income taxpayers did have higher effective tax rates. The tables also illustrate the wide dispersion of effective tax rates for high-income returns. For example, Table 12 shows that, while 2.8 percent of returns with adjusted gross income of $\$ 200,000$ or more had either

[^2]
# High-Income Tax Returns for 2009 

Statistics of Income Bulletin | Spring 2012
no worldwide income tax or worldwide income tax of less than 10 percent of adjusted gross income, 19.9 percent had effective tax rates of 25 percent or more. In addition, 30.6 percent had effective tax rates between 20 and 25 percent. In contrast, only 2.7 percent of taxpayers with AGI between $\$ 100,000$ and $\$ 200,000$ had effective tax rates of 20 percent or more, including 0.2 percent with effective tax rates of 25 percent or more.

## Characteristics of Tax Returns

Tables 5 and 6 show, in the aggregate, the frequencies and amounts of the types of income, the items of tax preference, and the various deductions, credits, and income taxes shown on high-income returns. By comparing the columns for nontaxable returns with those for taxable returns, some of the different characteristics of nontaxable returns can be deduced. For example, nontaxable returns under the expandedincome concept, were much more likely to have tax-exempt interest than were taxable returns, and, when they did have it, the average amount was much higher. Similarly, nontaxable returns were much less likely to have any income from salaries and wages.

## Reasons for Nontaxability

It is possible for certain itemized deductions and certain exclusions from income to cause nontaxability by themselves, but high-income returns are more often nontaxable as a result of a combination of reasons, none of which, by itself, would result in nontaxability. Moreover, some items, which singly or in combination may eliminate "regular tax" liability, i.e., income tax excluding the alternative minimum tax (AMT), cannot eliminate an AMT liability, since these items give rise to adjustments or preferences for AMT purposes.

Because they do not generate AMT adjustments or preferences, tax-exempt bond interest, itemized deductions for interest expense, miscellaneous itemized deductions not subject to the 2-percent-of-AGI floor, casualty or theft losses, and medical expenses (exceeding 10 percent of AGI) could, by themselves, produce nontaxability.

Due to the AMT exemption of $\$ 70,950$ on joint returns (\$46,700 on single and head-of-household
returns and $\$ 35,475$ on returns of married taxpayers filing separately), a return could have been nontaxable, even though it included some items that produced AMT adjustments or preferences. ${ }^{10}$ Further, since the starting point for "alternative minimum taxable income" was taxable income for regular tax purposes, a taxpayer could have adjustments and preferences exceeding the AMT exclusion without incurring AMT liability. This situation could occur if taxable income for regular tax purposes was sufficiently negative, due to itemized deductions and personal exemptions exceeding AGI, such that the taxpayer's AMT adjustments and preferences are less than the sum of the AMT exclusion and the amount by which regular taxable income is below zero. Note that, because of the AMT, taxpayers may have found it beneficial to report additional deduction items on their tax returns, even if the items did not produce a benefit for regular tax purposes.

Tables 7 and 8 classify tax returns by the items that had the largest and second largest effects in reducing or eliminating income tax. For returns on which each of the largest effects was identified, the tables show each of the second largest effects. ${ }^{11}$ For example, Table 7 shows that, on taxable returns with some U.S. income tax and expanded income of $\$ 200,000$ or more, the taxes paid deduction was the most important item 51.8 percent of the time. Where this was the primary item, the interest paid deduction was the second most important item 59.6 percent of the time, and the charitable contributions deduction was the second most important item 24.5 percent of the time.

Table 8 shows that, on returns without any worldwide tax and expanded income of $\$ 200,000$ or more, the most important item in eliminating tax, on 61.1 percent of returns, was the exclusion for state and local government interest ("tax-exempt interest"). For these returns, the itemized deduction for taxes paid was the second most important item 28.2 percent of the time, and the deduction for medical and dental expenses was the second most important reason 14.8 percent of the time.

Table 8 also shows that the four categories with the largest effect in reducing taxes on high adjusted-

[^3]gross-income returns with no worldwide income tax were the total miscellaneous deductions (3,279 returns, or 32.6 percent of the 10,072 tabulated returns with AGI of $\$ 200,000$ or more and with no worldwide tax liability); charitable contributions deduction (1,163 returns, or 11.5 percent); medical and dental expense deduction ( 1,082 returns, or 10.7 percent); and partnership and S corporation net losses ( 1,036 returns, or 10.3 percent). These effects are also shown graphically in Figure E.

For high expanded-income returns with no worldwide income tax, the four categories that most frequently had the largest effect in reducing taxes were tax-exempt interest ( 11,943 returns, or 61.1 percent of the 19,551 tabulated returns with expanded
income of $\$ 200,000$ or more and with no worldwide tax liability); medical and dental expense deductions (1,776 returns, or 9.1 percent); charitable contributions deduction ( 1,173 returns, or 6 percent); and partnership and S corporation net losses (1,118 returns, or 5.7 percent). These effects are also shown graphically in Figure F.

Table 8 also shows that the items that most frequently had the second largest effect in reducing regular tax liability for high expanded-income returns with no worldwide tax were the deduction for taxes paid ( 4,968 returns, or 25.4 percent) and charitable contributions ( 2,527 returns, or 12.9 percent).

Tables 9 and 10 present another way of illustrating the importance of various tax provisions in

## Figure $F$

## Returns with No Worldwide Income Tax and with Expanded Income of \$200,000 or More: Primary Reasons for No Income Tax Liabilities, Tax Year 2009

[1] Includes two returns from which a primary reason for nontaxability was not identified by the data items selected for this article. NOTE: Detail may not add to 100 percent because of rounding.
reducing or eliminating income tax. Unlike Tables 7 and 8, these tables cover only nontaxable returns, i.e., returns showing no income tax liability. Tables 9 and 10 show the number of times that various items reduced income by different percentages of income. The items shown include the various categories of itemized deductions, the deduction equivalents of two different types of tax credits, and total tax preferences excluded from income. For example, for high expanded-income returns with no worldwide income tax (Table 10), the itemized deduction for casualty or theft losses exceeded 100 percent of expanded income on 232 of the 19,551 returns, but there was no casualty or theft loss deduction on 18,995 returns.

## Appendix A: Income Concepts

Congress wanted data on high-income taxpayers classified by an income concept that was more comprehensive than adjusted gross income (AGI), but that was based entirely on items already reported on income tax returns. In order to derive such an income concept, it was necessary to begin with a broad, inclusive concept of income. AGI must then be compared to this broad income concept, and the differences (both additions and subtractions) that can be determined from items reported on tax returns identified.

This appendix begins by defining "Haig-Simons income," a very broad concept of income used by economists and others as a standard. AGI is then compared to Haig-Simons income, and the major differences between the two income concepts are listed. The final section defines "expanded income," a more comprehensive income measure than AGI, based entirely on tax return data.

## Haig-Simons Income

The broadest measure of annual income generally used by economists and others is defined as the value of a household's consumption plus the change, if any, in its net worth. This income concept is referred to as Haig-Simons income, or H-S income, after the two economists who wrote extensively about it [A1]. The H-S income of a household that consumed $\$ 25,000$ and saved $\$ 2,000$ in a year would be $\$ 27,000$. Alternatively, the H-S income of a household that consumed \$25,000 and had no additions to savings, but had assets that declined in value by $\$ 1,000$ in a year, would be $\$ 24,000$.

H -S income consists of three broad components: labor income, capital income (income from assets), and income from transfer payments. The major elements of each of these three components are as follows:

Labor income-This includes all forms of employee compensation (including wages and salaries), employee fringe benefits (such as employer-provided
health insurance and accrued pension benefits or contributions), and the employer share of payroll taxes (such as Social Security taxes). Labor income also includes the labor share of self-employment income. Expenses of earning labor income would be deducted in arriving at $\mathrm{H}-\mathrm{S}$ income. Deferred labor income (such as pension benefits) would be counted in the year it was earned, rather than in the year it was received.

Capital income-This includes all income from assets, including interest, dividends, rents, royalties, accrued capital gains (whether or not realized), the capital income share of self-employment income, and the rental value of consumer durables (most importantly, the rental value of owner-occupied housing). Capital income is measured in real (inflation-adjusted) terms and is net of real, economic depreciation and all other expenses (which could exceed capital income).

Transfer payments-These include payments in cash (such as Social Security benefits, workers' compensation, unemployment benefits, Aid to Families with Dependent Children (AFDC), and noncash benefits (such as Medicare, Medicaid, and food stamps).

For purposes of tax analysis, H-S income should be measured on a pre-tax basis, the amount that would be earned if there were no Federal income tax in place. Most items of income are unaffected, or little affected, by the income tax and so are reported on a pre-tax basis. However, certain income items from tax-preferred sources may be reduced because of their preferential treatment. An example is interest from tax-exempt State and local Government bonds. The interest rate on tax-exempt bonds is generally lower than the interest rate on taxable bonds of the same maturity and risk, with the difference approximately equal to the tax rate of the typical investor in tax-exempt bonds. Thus, investors in tax-exempt bonds are effectively paying a tax, referred to as an "implicit tax," and tax-exempt interest as reported is measured on an after-tax, rather than a pre-tax, basis. Income from all tax-preferred sources should be "grossed up" by implicit taxes to properly measure H-S income.

## Adjusted Gross Income

AGI is the statutory definition of income for Federal income tax purposes. AGI differs from H-S income by excluding some components of $\mathrm{H}-\mathrm{S}$ income and
by allowing accelerated business deductions and deductions unrelated to income, but also by disallowing or limiting certain expenses of earning income and certain losses. In addition, AGI is not "grossed up" for implicit taxes.

The components of H-S income excluded from AGI include most employee fringe benefits, the employer share of payroll taxes, accrued but deferred employee compensation, accrued but unrealized real capital gains, the rental value of consumer durables, most Social Security benefits, most other cash transfers, all noncash transfers, and the real income of borrowers due to inflation [A2].

Depreciation and certain other expenses allowed in determining AGI may be accelerated (relative to economic depreciation and other costs) in the early years of an investment, thus understating investment income. In later years, however, investment income in AGI will be overstated because depreciation and other accelerated expenses will then be understated. AGI also excludes some expenses not related to earning income, such as contributions to self employed retirement (Keogh) plans, deductible contributions to Individual Retirement Arrangements (IRAs), the portion of Social Security contributions for selfemployed workers that is analogous to the employer share of such contributions for employees, and contributions to medical savings accounts.

AGI generally exceeds H -S income to the extent that expenses of earning income and losses are limited or disallowed. Most of the expenses of earning income are deductible from AGI in calculating taxable income, but only if the taxpayer "itemizes" deductions and then, in some cases, only to the extent that the sum of all such items exceeds 2 percent of AGI. Expenses incurred in the production of income that are itemized deductions include certain expenses of employees (such as union dues; expenditures for items used on the job but not reimbursed by the employer; and the employees' travel, meal, and entertainment expenses); and expenses attributable to a taxpayer's (passive) investments (as opposed to active participation in a trade or business, for example), including, but not limited to, interest expense incurred in connection with investments in securities [A3]. Note that there are limits on certain types of deductible expenses. In particular, deductible meal and entertainment expenses are limited to 50 percent of total meal and entertainment expenses.

Although net capital losses reduce economic income, only the first $\$ 3,000$ of net realized capital losses may be deducted in computing AGI. Any additional realized losses must be carried forward to future years. In a somewhat similar manner, passive losses (from investments in a trade or business in which the taxpayer does not materially participate) can also reduce economic income, but, in computing AGI, they can only be deducted from passive income from other, similar investments (although a larger amount may be deducted when the losses are from rental real estate activities).

AGI can also exceed H-S income because of differences in the timing of income between the two concepts. For example, a taxpayer may realize more capital gains in a year than he or she accrues in capital gains. Since AGI includes only realizations of capital gains, whereas H - S income includes only accruals, AGI in this circumstance would exceed H-S income.

Finally, just as AGI understates the income of borrowers due to inflation, it overstates the income of lenders, who include bond owners and owners of bank deposits.

## Expanded Income

Expanded income is meant to be a measure of income that is conceptually closer to H -S income than AGI, but which is derived entirely from items already reported on income tax returns. Figure G shows the adjustments made to AGI to arrive at expanded income. Since the definition of AGI was changed by legislation several times since 1977, and certain reporting requirements also changed, the adjustments differ over the years, as indicated for each item [A4]. Most of these adjustments are relatively straightforward, but the adjustment for investment requires some explanation.

## Investment Interest

In measuring $\mathrm{H}-\mathrm{S}$ income, it generally would be appropriate to deduct all expenses incurred in the production of income, including those related to any income-producing investments, without limit. Investment expenses in excess of investment income would then represent net economic losses. However, such a liberal deduction for investment-related expenses is not necessarily correct when not all income
items have been included currently. (Investment income includes interest, dividends, and capital gains.)

If all income has not been included currently, full deduction of investment expenses might represent a mismatching of receipts and expenses and might result in understating income. For example, if a taxpayer borrowed funds to purchase securities, net income would be understated if the taxpayer deducted all interest payments on the loan, but did not include as income any accrued gains on the securities. A similar mismatching of income and expenses would occur if investment expenses that should properly be capitalized were deducted when paid. In these instances, a more accurate measure of income might be obtained by postponing the deduction of the expense until such time as the income were recognized for tax purposes.

Additional problems are created when a person with a loan has both income-producing assets, such as securities, and non-income-producing assets, such as a vacation home or yacht. It is not possible to determine what portion of the interest expense should be attributed to taxable income-producing assets and, therefore, ought to be deductible against the gross receipts from such taxable assets. As a result of these

# High-Income Tax Returns for 2009 

Statistics of Income Bulletin | Spring 2012
problems, it has been necessary to set arbitrary limits on the amount of investment expenses that are deductible in calculating expanded income.

Investment expenses that have not been deducted in determining AGI generally can appear on a Federal individual income tax return in two places. Investment interest expense is taken into account in the calculation of the itemized deduction for interest paid. Deductible investment interest expense is a separate part of the total interest deduction. Other investment expenses, such as management fees, are included in the miscellaneous category of itemized deductions [A5]. Beginning with 1987, most types of incomeproducing expenses included as miscellaneous itemized deductions are only deductible to the extent that their total exceeds 2 percent of AGI. To determine expenses that should be deductible in calculating an approximation of H-S income, investment expenses have been defined as deductible investment interest expense. Other investment expenses could not be separated from the remainder of miscellaneous deductions. Hence, they have not been used in the adjustment for investment expenses.

To the extent that interest expenses do not exceed investment income, they are generally allowed as a deduction in the computation of deductible investment interest expense and thus expanded income. Investment interest expenses that do exceed investment income are not deductible in calculating expanded income. One consequence of this definition is that investment expenses can never turn positive investment income into investment losses. Generally, allowing investment expenses to offset all investment income is generous and tends to understate broadly measured income. However, in some instances, limiting investment expenses to investment income may overstate income by disallowing genuine investment losses.

## Notes to Appendix A

[A1] Haig, Robert M. (ed.), The Federal Income Tax, Columbia University Press, 1921, and Simons, Henry C., Personal Income Taxation, University of Chicago Press, 1938.
[A2] Borrowers receive income due to inflation because the real value of debt is reduced by inflation. Even though inflation may be anticipated and reflected in interest rates, tax deductions for nominal interest payments overstate interest costs because part of these payments
represent a return of principal to the lender, rather than interest.
[A3] See references and footnote A4.
[A4] For 1977, 50 percent of net long-term capital gains were included in AGI. During 1978, the inclusion ratio was changed to 40 percent. This inclusion ratio remained unchanged through 1986. Beginning with 1987, there was no exclusion allowed for capital gains in computing AGI, and, thus, this adjustment was not made in computing expanded income for returns for years after 1986.

Beginning in 1987, taxpayers were required to report on their Federal income tax returns the amount of their tax-exempt interest income from State and local government bonds. Since 1987, tax-exempt interest has been included in expanded income.
Taxpayers are also required to report Social Security benefits. Since 1988, nontaxable Social Security benefits have been included in expanded income. However, if none of a particular taxpayer's Social Security benefits are taxable, then gross Social Security benefits are not required to be shown on the income tax return. In such instances, which generally only affect lower- and middle-income taxpayers, Social Security benefits are not included in expanded income.
The subtraction of unreimbursed employee business expense and the moving expense deduction is to make the concept of expanded income comparable to years prior to 1987. All current-year moving expenses beginning with Tax Year 1994 were deducted in the calculation of AGI as a statutory adjustment.
Due to subtracting non-limited miscellaneous deductions and not subtracting the nondeductible rental loss for 1989, the expanded income concept for 1989 is not strictly comparable to expanded income for 1988. Nor is the expanded income concept for 1990 strictly comparable to expanded income for 1989 because of the addition of the foreign-earned income exclusion. Specific details on the definition of expanded income for any given year are available in the reports and publications found under the References section.

## High-Income Tax Returns for 2009

Statistics of Income Bulletin | Spring 2012
[A5] Some income deferrals and accelerated expense deductions may also be involved in income or losses from rental property, from royalties, from partnerships, and from S Corporations, only the net amounts of which are included in adjusted gross income.

## Appendix B: Tax Concepts

This appendix provides a brief summary of the U.S. taxation of worldwide income and the foreign tax credit. The two tax concepts used in this article are then defined. The following section explains the computation of the deduction equivalent of credits and other items. A final section discusses the possible implications of the use of unaudited tax return data for this article.

## U.S. Taxation of Worldwide Income and the Foreign Tax Credit

Citizens and residents of the United States, regardless of where they physically reside, must generally include in income for Federal income tax purposes income from all geographic sources. Thus, for example, dividends and interest received from a foreign corporation or income earned working abroad is subject to Federal income tax in the same manner as income received from sources inside the United States [B1]. Income from sources outside the United States may also be subject to tax by foreign governments.

To reduce, if not eliminate, the possibility of double taxation of the foreign-source income of U.S. citizens and residents, the Federal income tax allows a credit for income taxes paid to foreign governments. This foreign tax credit is generally limited to the amount of (pre-credit) U.S. tax liability attributable to foreign-source income. This limit prevents the foreign tax credit from offsetting the U.S. tax on U.S.-source income.

As a result of taxing citizens and residents on a worldwide basis but allowing a foreign tax credit, some Federal income tax returns may report substantial income but little or no U.S. tax liability after credits. This may occur, for example, if a taxpayer has income only from foreign sources (the taxpayer may live abroad the entire year and have no incomeproducing assets in the United States), or if a taxpayer has foreign-source income that exceeds a net loss from U.S. sources and pays income taxes to a foreign government that are comparable to the U.S. tax [B2].

For taxpayers with income from foreign sources, these procedures understate the taxpayers' true worldwide income tax liabilities and effective income tax rates. For such taxpayers, it does not seem appropriate to classify U.S. income tax credits for foreign tax payments as reducing tax liabilities. This is particularly true for tax filers who appear to be nontaxable because they do not have any U.S. tax liability, but who have paid foreign income taxes. A more accurate measure of overall income tax burden, as well as the numbers of nontaxable returns, can be obtained by considering all income taxes--U.S. as well as foreign. Thus, a second tax concept, worldwide income tax, has been used in addition to the traditional U.S. income tax.

## Two Tax Concepts

Two tax concepts are used in this article to classify tax returns as taxable (i.e., returns showing an income tax liability) or nontaxable (i.e., returns showing no income tax liability) and to measure the tax burdens on taxable returns: U.S. income tax and worldwide income tax. Worldwide income tax is defined for purposes of this article as U.S. income tax plus the foreign tax credits reported on the U.S. income tax return and foreign taxes paid on excluded foreign-earned income (obtained from Form 1116, Foreign Tax Credit). The amount of the foreign tax credits and foreign taxes paid on excluded foreignearned income is used as a proxy for foreign tax liabilities [B3]. The relationship of U.S. income tax to tax items reported on individual income tax returns, and to worldwide income tax, is shown in Figure H.

## Comparing Exclusions, Deductions, Tax Credits, and Special Tax Computations

In order to compare the importance of various exclusions, deductions, tax credits, and special tax computations (such as the alternative minimum tax on tax preferences), the different types of items must be placed on the same basis. One way of doing so is to calculate the size of the deduction that would reduce (or increase) income tax by the same amount as a tax credit or special computation. This amount is called the "deduction equivalent" of the tax credit or special computation.

The deduction equivalent of a tax credit or a special tax computation is the difference between the taxable income that, using the ordinary tax rate

## Figure H

## Derivation of "U.S. Income Tax" and "Worldwide Income Tax," Tax Year 2009

Tax at regular rates (tax generated)
PLUS: Additional taxes (such as tax on accumulation distributions from qualified retirement plans, Form 4972)

PLUS: $\quad$ Alternative minimum tax (Form 6251)
EQUALS: Income tax before credits
MINUS: Tax credits
EQUALS: U.S. income tax

PLUS: Foreign tax credit

PLUS: Foreign taxes paid on excluded foreign-earned income (Form 1116)

EQUALS: Worldwide income tax
schedules, would yield the actual tax before the provision in question is considered and the actual tax after the provision. For example, the "deduction equivalent of all tax credits" is equal to the difference between "taxable income that would yield income tax before credits" and "taxable income that would yield income tax after credits."

Using this method of equating the value of deductions, exclusions, credits, and special tax computations, the order in which the various credits and special tax computations are calculated may affect the value of their deduction equivalents. Because the tax rate schedules are progressive, with successive increments to income taxed at successively higher tax rates, the deduction equivalent of the credit converted last to a deduction equivalent will be larger (for the same amount of a credit) than the item converted first, unless all relevant taxable income amounts are within a single tax-rate bracket.

The deduction equivalents of tax credits shown in Tables 9 and 10 were computed by assuming that deductions and exclusions reduce taxes before credits. As a result, the deduction equivalent of tax credits may be overstated.

## Unaudited Data

Tax return data used for Statistics of Income have been tabulated as they were reported on tax returns filed with the Internal Revenue Service (IRS). Certain obvious arithmetic errors have been corrected and certain adjustments have been made to achieve consistent statistical definitions. Otherwise, the data have not been altered. In particular, the data do not reflect any changes that may have been or could be made as a result of IRS audits. While this is true of data throughout the entire Statistics of Income program, it is particularly relevant for high-income tax returns. Because of the greater complexity of these returns, there is a higher probability of error and more scope for disagreement about the proper interpretation of tax laws.

The fact that the data have been drawn from unaudited returns is of even greater importance for those high-income returns that are nontaxable. Almost any audit changes would make such returns taxable. Even where the tax consequences are minor, such returns could be reclassified from nontaxable to taxable, thereby changing the counts of nontaxable returns.

## Notes to Appendix B

[B1] An exception is that certain income earned abroad may be excluded from AGI. Any foreign taxes paid on such income are not creditable against U.S. income tax. The tables in this article include such excluded income in expanded income. Foreign taxes paid on such income are reflected in worldwide income tax, as discussed later.
[B2] Although the foreign tax credit is an item of tax preference for AMT purposes, taxpayers below the AMT exclusion thresholds, or with preferences or deductions not subject to AMT, could completely offset pre-credit U.S. income tax liability with foreign tax credits.
[B3] Where foreign tax rates exceed U.S. rates, foreign tax credits will be less than foreign tax liabilities. In such cases, using foreign tax credits as a proxy for foreign tax liabilities understates worldwide income tax liability. In other cases, when foreign tax credits are for taxes paid on income from previous years, use of foreign tax credits as a proxy may overstate or understate worldwide taxes on current-year income.

## High-Income Tax Returns for 2009

Statistics of Income Bulletin | Spring 2012

Table 1. Returns With and Without U.S. Income Tax: Number of Returns, by Size of Income Under Alternative Concepts, Tax Year 2009
[All figures are estimates based on samples]

| Returns by tax status, size of expanded income | All returns | Returns by size of adjusted gross income |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{aligned} & \text { Under } \\ & \$ 50,000[1] \end{aligned}$ | $\begin{aligned} & \$ 50,000 \\ & \text { under } \\ & \$ 100,000 \end{aligned}$ | $\begin{aligned} & \$ 100,000 \\ & \text { under } \\ & \$ 200,000 \end{aligned}$ | $\begin{gathered} \$ 200,000 \\ \text { or more } \end{gathered}$ |
| Total All returns | (1) | (2) | (3) | (4) | (5) |

| Equals: Expanded income | 3,975,288 | 1,999,125,680 | 3,940,227 | 1,983,153,207 | 35,061 | 15,972,473 |

*Estimate should be used with caution because of the small number of sample returns on which it is based.
[1] Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.
[2] Includes tax-exempt interest and tax preference items subject to alternative minimum tax.
NOTES: Detail may not add to totals because of rounding. Starting in 2009, the portion of refundable credits that offset income taxes before credits were factored in to determine tax liability. As a result, data may not be comparable to Tax Years 2007 and 2008 published tables.

## High-Income Tax Returns for 2009

Statistics of Income Bulletin | Spring 2012

Table 6. Returns With and Without Worldwide Income Tax and With Income of \$200,000 or More Under Alternative Concepts: Income, Deductions, Credits, and Tax, by Tax Status, Tax Year 2009
[All figures are estimates based on samples-money amounts are in thousands of dollars]

| Equals: Expanded income | 3,975,288 | 1,999,125,680 | 3,955,737 | 1,991,551,767 | 19,551 | 7,573,913 |

* Estimate should be used with caution because of the small number of sample returns on which it is based.
[1] Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.
[2] Includes tax-exempt interest and tax preference items subject to alternative minimum tax.
NOTES: Detail may not add to totals because of rounding. Starting in 2009, the portion of refundable credits that offset income taxes before credits were factored in to determine tax
liability. As a result, data may not be comparable to Tax Years 2007 and 2008 published tables.

## High-Income Tax Returns for 2009

Statistics of Income Bulletin | Spring 2012

Table 7. Returns With and Without U.S. Income Tax and With Income of $\mathbf{\$ 2 0 0 , 0 0 0}$ or More Under Alternative Concepts: Number of Returns and Percentages Classified by Item With the Largest Tax Effect and by Item With the Second Largest Tax Effect, Tax Year 2009

** Data combined to avoid disclosure of information for specific taxpayers.
[1] Investment interest expense deduction only has an effect when using the adjusted gross income concept.
[2] Less than 0.05 percent.
[3] Tax-exempt interest, foreign-earned income exclusion, AMT tax preference, and nontaxable Social Security benefits only have an effect when using the expanded income concept. NOTES: Detail may not add to totals because of rounding. Total columns do not include returns with no tax effect. Starting in 2009, the portion of refundable credits that offset income taxes before credits were factored in to determine tax liability. As a result, data may not be comparable to Tax Years 2007 and 2008 published tables.

| ** Data combined to avoid disclosure of information for specific taxpayers. <br> [1] Investment interest expense deduction only has an effect when using the adjusted gross income concept. <br> [2] Less than 0.05 percent. <br> [3] Tax-exempt interest, foreign-earned income exclusion, AMT tax preference, and nontaxable Social Security benefits only have an effect when using the expanded income concep NOTES: Detail may not add to totals because of rounding. Total columns do not include returns with no tax effect. Starting in 2009, the portion of refundable credits that offset income taxes before credits were factored in to determine tax liability. As a result, data may not be comparable to Tax Years 2007 and 2008 published tables. |  |  |  |  |  |  |

## High-Income Tax Returns for 2009

Statistics of Income Bulletin | Spring 2012

# Individual Noncash Contributions, 2009 

by Pearson Liddell and Janette Wilson

For Tax Year 2009, 21.9 million individual taxpayers who itemized deductions reported $\$ 31.8$ billion in deductions for noncash charitable contributions. ${ }^{1}$ Of these taxpayers, 6.7 million reported $\$ 28$ billion in deductions for charitable contributions on Form 8283, Noncash Charitable Contributions. This form is used by individual taxpayers when the amount of taxpayer deductions for all noncash donations on Schedule A, Itemized Deductions, exceeds \$500. The number of taxpayers filing Form 8283 decreased by 4.8 percent from 7 million for Tax Year 2008, and the amount claimed for donations declined by a larger percentage, 19.1 percent, from $\$ 34.6$ billion in 2008. For both 2008 and 2009, corporate stock donations represented the largest share of total donations, in terms of amounts claimed. For 2009, corporate stock donations of $\$ 9.7$ billion, which represented 34.8 percent of all donations claimed, declined 21.2 percent from the Tax Year 2008 amount of $\$ 12.3$ billion. For Tax Year 2009, there were no notable tax law changes that affected the deductions allowed for noncash charitable contributions but donations were likely affected by the recession. For example, the 21 percent decline in stock donations was similar to the 22 percent decline in stock prices. The monthly average Standard and Poor 500 Stock Price Index decreased by 22.5 percent from 1,221 in 2008 to 947 in 2009. ${ }^{2}$

## Types of Donation Contributions

For Tax Year 2009, corporate stock donations accounted for the largest percentage of total noncash donations, followed by clothing donations of $\$ 7.6$ billion and household item donations of $\$ 3.2$ billion, representing 27.1 percent and 11.5 percent, respectively (Figure A). The average corporate stock donation was $\$ 86,186$ per return, and, while clothing and household items together represented 38.6 percent of all donations claimed, the average donation per return for clothing and household items was much smaller, at $\$ 1,452$ and $\$ 1,368$, respectively.

Pearson Liddell and Janette Wilson are economists with the Individual Research Section. This article was prepared under the direction of Michael Strudler, Chief.

The highest average deduction per return was for easements, \$483,522 for conservation easements and $\$ 477,225$ for façade easements. Other investments (excluding stock and mutual funds), which had the highest average donation amount of $\$ 531,842$ in 2008, dropped to third highest, at $\$ 282,765$ (Figure B). ${ }^{3}$

Again, the number of taxpayers claiming donations decreased 4.8 percent from 7 million in Tax Year 2008 to 6.7 million in 2009, and the amount of donations claimed by taxpayers decreased 19.1 percent from $\$ 34.6$ billion to $\$ 28$ billion. Corporate stock and clothing donations represented the highest amounts claimed for both Tax Years 2008 and 2009. Donations of corporate stock declined 21.2 percent from $\$ 12.3$ billion in Tax Year 2008 to $\$ 9.7$ billion in 2009. As a proportion of the amount donated, these donations decreased slightly, from 35.7 percent of all donations in 2008 to 34.8 percent in Tax Year 2009. Clothing donations declined 4.2 percent, from $\$ 7.9$ billion to $\$ 7.6$ billion, between Tax Years 2008 and 2009. As a proportion of all donations, clothing donations increased from 22.9 percent of donations in 2008 to 27.1 percent in 2009. Donations of household items, the third highest donation type for both tax years, increased 3 percent from $\$ 3.1$ billion in 2008 to $\$ 3.2$ billion in 2009. Façade easement donations were the only other donation type that increased. Although the number of taxpayers reporting this type of donation decreased, the amount claimed increased 17.4 percent from $\$ 0.38$ billion in Tax Year 2008 to $\$ 0.45$ billion in 2009.

Taxpayer donations of corporate stock and clothing have consistently represented the highest amounts of all donations claimed. However, while the amount of clothing donations has remained fairly consistent since Tax Year 2007, the amounts deducted for corporate stock have declined significantly. ${ }^{4}$ In Tax Year 2007, taxpayers reported $\$ 23.7$ billion in corporate stock donations, and, together, the declines in 2008 and 2009 represent a decrease of 59.1 percent since 2007.

As shown in Figure B, there were some other significant decreases between Tax Years 2008 and 2009. Taxpayer donations of other investments

[^8]

[2] Other donations include donations of intellectual property.
declined 55.1 percent from $\$ 1.9$ billion in 2008 to $\$ 0.9$ billion for Tax Year 2009. These donations represented 5.6 percent of all donations claimed in Tax Year 2008 and 3.1 percent in 2009. In addition, car and land donations declined 40.2 percent and 37 percent, respectively, from $\$ 0.4$ billion and $\$ 1.5$ billion, respectively, in Tax Year 2008 to $\$ 0.3$ billion, respectively, and $\$ 0.9$ billion in 2009.

## Average Donations

In terms of average donations per return, the overall average amount claimed decreased between Tax Years 2008 and 2009, from \$4,930 to \$4,189 (Figure A). Average corporate stock donations decreased between the two tax years from $\$ 99,912$ to $\$ 86,186$. Average donations of clothing, the next largest group in terms of amount claimed, decreased slightly from \$1,457 in Tax Year 2008 to \$1,452 in Tax Year 2009. Although the amount taxpayers claimed for real estate, land, and conservation easements declined
between Tax Years 2008 and 2009, average donations per return increased for these categories. The average real estate donation increased from \$90,966 per return to $\$ 214,451$ per return, average land donations increased from $\$ 164,944$ per return to $\$ 185,017$ per return, and average conservation easement donations went from $\$ 380,541$ per return to $\$ 483,522$ per return. Average donations of other investments declined significantly, from \$531,842 per return in 2008 to $\$ 282,765$ per return in Tax Year 2009.

## Donations by Size of Income

Taxpayers with adjusted gross income (AGI) of \$10 million or more who claimed noncash contributions collectively deducted 6.8 percent of their AGI in these contributions, claiming $\$ 5.8$ billion on 2,576 Forms 8283 (Figure C). Donations from this group of taxpayers represented 20.6 percent of all individual taxpayer noncash donations reported on Forms 8283 in Tax Year 2009. Taxpayers in the $\$ 100,000$

[2] Other donations include donations of intellectual property.
to $\$ 200,000$ AGI group gave $\$ 5.1$ billion in contributions on 2.3 million tax returns; these contributions represented 1.6 percent of their AGI and 18.3 percent of all donations claimed. Those taxpayers in the $\$ 200,000$ to $\$ 500,000$ AGI category gave $\$ 3$ billion, or 10.6 percent of donations claimed. As state above, the average donation amount for all taxpayers who claimed noncash donation deductions on Forms 8283 was $\$ 4,189$ per return. The highest average amount claimed per return was $\$ 2.2$ million by taxpayers with AGI of $\$ 10$ million or more, followed by an average donation of just less than $\$ 375,000$ by those in the $\$ 5$ million to $\$ 10$ million AGI group.

A comparison of donation amounts by AGI group across Tax Years 2008 and 2009 is shown in Figure D. Again, overall donations decreased 19.1 percent between Tax Years 2008 and 2009, and most AGI groups showed a decrease in the amount of do-
nations reported. There were some exceptions, the most notable being donations claimed by taxpayers in the under $\$ 25,000$ AGI groups, whose donation amounts increased 32.9 percent between Tax Years 2008 and 2009, from $\$ 1.4$ billion to $\$ 1.8$ billion. Almost all of this increase was for taxpayers with negative AGI. Donations claimed by those taxpayers with AGI greater than $\$ 10$ million declined 37.5 percent from $\$ 9.2$ billion in Tax Year 2008 to $\$ 5.8$ billion in 2009; the number of returns with noncash donations in this income decreased by 39.4 percent. Despite these decreases, donations made by this group still represented more than one-fifth (20.6 percent) of all donations claimed in 2009. Donations made by this group were about one-fourth of all donations in 2008 and one-third of all donations in 2007.5 Taxpayers with $\$ 10$ million or more in AGI who reported noncash contributions on Forms 8283 donated 6.8

| \$10,000,000 or more | 2,576 | 0.0 | 84,634,744 | 5,769,676 | 20.6 | 6.8 | 2,239,781 |

percent of their AGI in Tax Year 2009 compared with 6.1 percent of their AGI in $2008 .{ }^{6}$

For several income groups, the amount of donations declined by at least 20 percent from 2008 levels. The groups included the $\$ 200,000$ to $\$ 500,000$ and $\$ 500,000$ to $\$ 1$ million AGI groups, which declined by 21.7 percent and 25.6 percent, respectively, between Tax Years 2008 and 2009, from $\$ 3.8$ billion to $\$ 3$ billion for the former group and from $\$ 2.1$ billion to $\$ 1.6$ billion for the latter group. Donations claimed by taxpayers in the $\$ 5$ million to $\$ 10$ million AGI group decreased 20.1 percent from $\$ 1.8$ billion in Tax Year 2008 to $\$ 1.4$ billion in Tax Year 2009, and donations in the $\$ 1$ million under $\$ 1.5$ million class declined by 21.2 percent. ${ }^{7}$

## Types of Charitable Organizations

Information on donee organizations is presented in Figures E, F, and G. Figure E shows that, for Tax Year 2009, most donations, in terms of amount claimed, were given to large organizations and foun-
dations ( $\$ 8$ billion and $\$ 5.8$ billion, respectively). Donations to large organizations represented 28.7 percent of the total donation amount, and donations to foundations represented 20.8 percent. The largest average donation, $\$ 111,127$ per return, was made to donor-advised funds, and the second largest, \$78,447 per return was made to foundations. In contrast, the average donation to large organizations was \$1,567 per return, second lowest only to the average donation per return, $\$ 1,512$, to health and medical research organizations. Despite having the largest average donation, donor-advised funds received only 6.5 percent of the total amount deducted by taxpayers on the Schedule A.

Donations to almost all donee types declined between Tax Years 2008 and 2009 (Figures F and $\mathrm{G})$. Donations to other donees declined by the largest percentage (48.5 percent) from $\$ 2.6$ billion in Tax Year 2008 to $\$ 1.4$ billion in 2009. Donations made to arts, cultures, and humanities declined 45.3 percent from $\$ 1.6$ billion in Tax Year 2008 to $\$ 0.9$

| Donor-advised funds | 22,656 | 1,593,053 | 16,404 | 1,822,922 | -27.6 | 14.4 |
| Foundations | 105,867 | 8,063,904 | 74,282 | 5,827,187 | -29.8 | -27.7 |
| Other donees | 431,706 | 2,649,732 | 316,275 | 1,364,182 | -26.7 | -48.5 |

[1] Total number of returns does not equal the sum of returns by donee type because a return could have donations to more than one type of donee.
billion in 2009; these donations represented 4.6 percent of all donations claimed in 2008 and 3.1 percent of all donations, in 2009. In addition, the average donation per return for this donee type declined from more than $\$ 6,137$ in Tax Year 2008 to $\$ 3,545$ in 2009. Donations to foundations also declined significantly by 27.7 percent from $\$ 8.1$ billion in Tax Year 2008 to $\$ 5.8$ billion in 2009.

There were two exceptions to these declines. First, contributions to donor-advised funds increased by 14.4 percent between Tax Years 2008 and 2009. These donations, valued at $\$ 1.8$ billion, represented 6.5 percent of all donations reported in 2009 and 4.6 percent of all donations in Tax Year 2008. Contributions to health and medical research organizations increased by 6.1 percent between Tax Years 2008 and 2009. These donations, valued at $\$ 1.3$ billion, represented 4.7 percent of all donations reported in Tax Year 2009 and 3.6 percent in Tax Year 2008.

## Donations by Age

In comparing donations by different age groups, taxpayers age 65 and older who filed Form 8283 to report their noncash contributions gave the most in terms of the amount reported on Schedule A. This group gave $\$ 7.4$ billion in cash contributions (28.2 percent of total cash contributions of $\$ 26.4$ billion)
and $\$ 10.3$ billion in noncash contributions on Forms 8283 ( 36.7 percent of total noncash contributions of $\$ 28$ billion) in Tax Year 2009. Figure H shows that the average noncash donation amount per return for these taxpayers was $\$ 10,880$, which was more than 2.5 times the average of the next largest group (taxpayers age 55 under 65). In addition, taxpayers in this age group who reported their noncash contributions on Forms 8283 donated 7.1 percent of their AGI of $\$ 145.5$ billion in noncash contributions, also more than 2.5 times the percentage of any other group.

Details from Table 4 show that, of the $\$ 10.3$ billion in donations made by taxpayers 65 or older, $\$ 6.2$ billion ( 60.5 percent) were donations of corporate stock, mutual funds, and other investments. This represented 55.9 percent of all donations of this type (stock, etc.). For these taxpayers, real estate and easement donations were the next largest category, at $\$ 1.3$ billion. In addition, taxpayers in this age group donated $\$ 0.6$ billion or 71.4 percent of all donations of art and collectibles.

Those taxpayers 55 under 65 made noncash donations of $\$ 6.4$ billion ( 2.6 percent of their AGI), with an average per return donation of about \$4,172. Those taxpayers 45 under 55 donated slightly less ( $\$ 6$ billion, which was 1.9 percent of their AGI), and

## Individual Noncash Contributions, 2009

Statistics of Income Bulletin | Spring 2012

## Figure $G$

Amount of Individual Noncash Charitable Contributions Reported on Form 8283, by Donee Type, Tax Years 2006-2009

their average donation per return was somewhat lower at approximately $\$ 3,108$. Taxpayers 45 under 55 who filed Forms 8283 gave $\$ 7.2$ billion in cash donations, and those 55 to 65 gave $\$ 6.5$ billion. All age groups donated less in Tax Year 2009 than in 2008, as shown in Figure I. Donations made by taxpayers 65 and older declined by the largest percentage (26.6 percent), from \$14 billion claimed in Tax Year 2008 to $\$ 10.3$ billion in 2009. Taxpayers in this age group deducted the most in Tax Year 2008, as well as 2009. Although their donations declined, these taxpay-
ers still deducted a large percentage of all noncash donations (around 40.4 and 36.7 percent of the total amount claimed in Tax Years 2008 and 2009, respectively). Of the 6.7 million returns filed with noncash donation deductions reported on Forms 8283 for Tax Year 2009, 14.1 percent (nearly 944,000 ) were filed by those taxpayers 65 and older. This is a decrease of 1.3 percent from 2008, when, of the 7 million returns filed, approximately 956,000 (13.6 percent of all returns) were filed by this age group. For Tax Year 2009, taxpayers aged 45 through 55 years old

|  | (1) | (2) | (3) | (4) | (5) | (6) |
| All ages | 7,017,933 | 34,597,290 | 6,681,041 | 27,986,691 | -4.8 | -19.1 |
| Under 35 | 755,997 | 2,146,802 | 707,863 | 1,759,291 | -6.4 | -18.1 |
| 35 under 45 | 1,744,011 | 4,138,123 | 1,582,383 | 3,625,161 | -9.3 | -12.4 |
| 45 under 55 | 2,026,075 | 7,519,928 | 1,922,606 | 5,976,298 | -5.1 | -20.5 |
| 55 under 65 | 1,536,299 | 6,800,937 | 1,524,675 | 6,360,333 | -0.8 | -6.5 |
| 65 and older | 955,551 | 13,991,499 | 943,514 | 10,265,609 | -1.3 | -26.6 |

reported donations of $\$ 6$ billion (21.4 percent of total donations) third highest among the age groups. These taxpayers had an average of donation per return of approximately $\$ 3,108$. For Tax Year 2008, this group reported $\$ 7.5$ billion in donations ( 21.7 percent of total donations), second highest among the age groups behind taxpayers 65 years of age and older. Taxpayers aged 55 through 65, the second largest group for 2009, claimed $\$ 6.4$ million in donations for Tax Year 2009, a decline of 6.5 percent from $\$ 6.8$ billion claimed in 2008.

## Explanation of Selected Terms:

Amount carried to Schedule A-This is the fair market value from Section A (items with a deduction of $\$ 5,000$ or less or publicly-traded securities) plus the lesser of the fair market value or amount claimed
on Section B (items with a deduction of more than $\$ 5,000$ ). The dollar amounts of donations reported in this article reflect the amounts reported on Form 8283 that are carried to Schedule A for reporting itemized deductions.

Donor's cost-Also known as the adjusted basis or tax basis, this is generally the amount the owner paid for the property. If the property were received as a gift, the original cost carries over to the recipient of the gift, increased by any gift tax paid on the appreciated portion of the property. If acquired from a decedent, the basis is the fair market value of the property used for estate tax purposes.

Fair market value-The fair market value is the value a willing and knowledgeable buyer would pay a seller in a voluntary situation.

## Individual Noncash Contributions, 2009

Statistics of Income Bulletin | Spring 2012

Number of donations-For this study, data were collected in the manner they were reported by taxpayers. For example, if clothing were listed twice, even though it was given to the same donee organization, it was counted as two separate donations.

Number of returns-This is the number of returns to which a Form 8283 was attached in the Individual SOI sample. For this study, all returns with Form 8283 were counted, whether or not the taxpayer carried the Form 8283 amounts to the Schedule A.

Please note that the allowable amount of a noncash deduction depends on whether the property is ordinary income or capital gain property. Ordinary income property is property that, if sold, would generate ordinary income or short-term capital gain. Examples are clothing, household items, inventory, and capital assets held less than a year. Capital gain property results in a long-term gain, if sold. Examples of this are real property used for a taxpayer's business and corporate stock held more than 1 year. The total charitable deduction is generally limited to no more than 50 percent of AGI. This amount can be reduced to 30 percent or 20 percent, depending on the type of property donated and the type of charitable organization. The statistics in this article include the entire deduction amount reported by taxpayers and transcribed from Form 8283 to line 17 of Schedule A. The limitations are then applied to the amount reported on line 19 of that schedule.

## Donated Property Types:

Accessories-Includes belts, furs, jewelry, purses, scarves, and watches.

Art and collectibles-Includes art works, such as ceramics, drawings, paintings, photographs, and sculptures; and collectibles, including coins, books, historical documents, memorabilia, rare or valuable clothing, jewelry, and stamps.

Cars-Includes vehicles designed for road transportation, such as cars, buses, motorcycles, motor homes, SUVs, and trucks.

Clothing-Includes apparel for children, men, and women, such as coats, dresses, hats, shoes, and suits. Also includes sports and school uniforms.

Conservation easements-Includes land and right of way easements. Donations of this type must be a
qualified real property interest contributed to a qualified organization for conservation purposes. ${ }^{8}$

Corporate stock-Includes shares of publicly traded and closely held common and preferred stock, as well as stock rights.

Electronics-Includes cameras, computer systems, copiers, DVD players, fax machines, stereo systems, televisions, telephones, and video games.

Façade easements-Includes real estate easements and historical preservation or architectural easements.

Food-Includes beverages, individual food items or meals, snacks, restaurant coupons, vitamins, and wine.

Household items-Includes appliances, books, exercise equipment, furniture, luggage, tools, and toys.

Intellectual property-Includes copyrights, patents, trademarks, trade names, trade secrets, and certain types of software.

Land-Includes farms, orchards, and open lots.
Mutual funds-Includes shares of taxable and nontaxable mutual funds, exchange traded funds, and unit investment trusts.

Other investments-Includes annuities, bonds, CDs, life insurance policies, notes, options, partnership interests, and real estate investment trusts.

Other vehicles-Includes all-terrain vehicles, airplanes, and watercraft vehicles, such as boats, canoes, ships, and water-skis.

Real estate-Includes apartments, cabins, houses, and other residential, and commercial property.

Services-Includes audio presentations, catering, healthcare services, transport and travel expenses, tutoring, and other professional services.

Other-Includes animals, building materials, cemetery plots, medical equipment, tickets to events, and donated vacations or use of vacation property.

## Donee Organizations:

Arts, culture, and humanities-Includes organizations involved with the arts, music, history, and cultural activities, such as museums, libraries, science centers, and theaters.

Donor-advised funds-A segregated fund within a public charity that permits the donor to have advisory privileges on distributions or investments.

[^11]
# Individual Noncash Contributions, 2009 

Statistics of Income Bulletin | Spring 2012

Donations to donor-advised funds may be understated because of the difficulty of identifying all such donations.

Educational institutions-Includes organizations whose primary function is educational, such as fraternities, schools (including those with religious affiliation), scholarship funds, and universities.

Environmental and animal organizations-Includes organizations that protect, promote, or seek to improve the environment or welfare of animals, such as local animal shelters, botanical gardens, and garden clubs.

Foundations-A foundation is a type of philanthropic organization set up by individuals or institutions as a legal entity (usually either a corporation or trust) with the purpose of distributing grants to support causes in line with the goals of the foundation. For the purpose of this study, this includes private foundations, which are often specific to a person or family, and community foundations.

Health and medical research-Includes hospitals, medical associations, nursing homes, and hospices.

Large organizations-Includes large national and international organizations that have local chapters, such as Goodwill Industries International, The Salvation Army, United Way International, Habitat for Humanity International, and Boy Scouts of America.

Other-Includes all other organizations that are not included in any other category.

Public or societal benefit-These are organizations that benefit individuals or communities, and do not meet the conditions of other categories such as education, health, and religion. These include homeless shelters, food banks, and political think tanks.

Religious organizations-Includes churches, synagogues, and book stores and thrift stores run by religious organizations.

## Data Source and Limitations

These statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ, including electronically filed returns) filed during Calendar Year 2010. Returns in the sample were stratified based on: (1) the larger of positive income or negative income (absolute value); (2) the size of business and farm receipts; (3) the presence or absence of specific forms or schedules; and (4) the usefulness of returns for tax policy modeling purposes. Returns were then selected at rates ranging from 0.10 percent to 100 percent.

The Tax Year 2009 data are based on a sample of 295,133 returns and an estimated final population of 140,599,266 returns. ${ }^{9}$ The number of returns in the sample with attached Form 8283 was 35,858 .

Since the data presented here are estimates based on a sample of returns filed, they are subject to sampling error. To use the statistical data provided properly, the magnitude of the potential sampling error must be known; coefficients of variation (CVs) are used to measure that magnitude. Figure J shows estimated CVs for the numbers of returns and money amounts for selected income items. The reliability of estimates based on samples and the use of CVs for evaluating the precision of estimates based on samples are discussed in SOI Sampling Methodology and Data Limitations later in this issue of the Bulletin.

| \$100,000 under \$200,000 | 96,553 | 135,995 | 262,826 | 231,408 | 230,699 |
| \$200,000 under \$500,000 | 47,737 | 58,761 | 2,931,493 | 264,513 | 258,855 |
| \$500,000 under \$1,000,000 | 8,166 | 10,588 | 34,066 | 133,678 | 94,615 |
| \$1,000,000 under \$1,500,000 | 2,821 | 3,785 | 28,449 | 85,957 | 84,941 |
| \$1,500,000 under \$2,000,000 | 1,312 | 1,764 | 19,859 | 54,400 | 45,287 |
| \$2,000,000 under \$5,000,000 | 2,567 | 3,644 | 27,965 | 153,555 | 152,036 |
| \$5,000,000 under \$10,000,000 | 830 | 1,259 | 31,208 | 87,635 | 64,473 |
| \$10,000,000 or more | 738 | 1,364 | 73,652 | 185,138 | 181,911 |

* Estimates should be used with caution because of the small number of sample returns on which they are based.
[1] Not every donation has a donor cost reported.
[2] Amount carried to Schedule A is the fair market value from Section A (items with a deduction of $\$ 5,000$ or less or publicly traded securities) plus the lesser of the fair market value or amount claimed on Section B (items with a deduction of more than $\$ 5,000$ ).

*Estimate should be used with caution because of the small number of sample returns on which it is based.
[1] Amount carried to Schedule A is the fair market value from Section A (items with a deduction of $\$ 5,000$ or less or publicly-traded securities) plus the lesser of the fair market value or amount claimed on Section B (items with a deduction of more than $\$ 5,000$ ).

# Accumulation and Distribution of Individual Retirement Arrangements, 2008 

by Victoria L. Bryant

The year-end fair market value of all Individual Retirement Arrangements (IRAs) fell from \$4.7 trillion in 2007 to $\$ 3.7$ trillion in 2008, a 22.5 percent decrease. While the overwhelming majority of this decrease can be attributed to factors beyond the scope of this article, namely declines in the values of the financial assets held in IRA accounts, a small portion of the decline can be explained by factors apparent from the data presented in this article. First, 2008 showed an increase in withdrawals from IRA plans, from $\$ 167.1$ billion in 2007 to $\$ 227.5$ billion in 2008. The increase in withdrawals was coupled with a 28.1 percent increase in the number of taxpayers taking withdrawals (Figure A).

Second, rollovers from 401(k)-type plans to IRAs decreased, from $\$ 322.3$ billion in 2007 to $\$ 272.1$ billion in 2008. While the number of taxpayers rolling over assets actually increased by a fraction of 1 percent, the average value of the rollovers decreased by 33.5 percent.

Finally, contributions to IRAs decreased marginally from $\$ 58.8$ billion in 2007 to $\$ 55.6$ billion in 2008. Interestingly, however, the number of taxpayers making contributions decreased by 10 percent but the average value of IRA contributions actually increased by 5.1 percent. This increase in the average contribution was due largely to taxpayers taking advantage of more liberal contribution limits for traditional, Roth, and SEP-IRAs (detailed below). While fewer taxpayers contributed to an IRA, those who did contributed more.

The composition of IRA assets by plan type was essentially unchanged from 2007. Traditional IRA plans represented 88.5 percent, or $\$ 3.3$ trillion, of all IRA assets. The remainder was held in Simplified Employee Pension (SEP) plans ( $\$ 201.5$ billion), Roth IRA plans ( $\$ 176.6$ billion), and Savings Incentive Match Plans for Employees (SIMPLE) plans (\$45.6 billion).

While traditional IRA plans still accounted for the vast majority of year-end fair market value in 2008, Roth IRA plans accounted for approximately

Victoria L. Bryant is an economist with the Individual Special Projects Section. This article was prepared under the direction of Michael Weber, Chief,
32.7 percent of total IRA contributions. SEP plans followed with just over one-fourth of the total contributions, or 26.4 percent. Traditional IRA plan contributions represented 24.1 percent of total contributions, and SIMPLE plans 16.7 percent (Figure B).

## Types of Plans

## Traditional IRAs

IRAs were created by the Employee Retirement Income Security Act (ERISA) of 1974. These first retirement accounts, termed traditional IRAs, have remained the principle type of individual retirement account held by taxpayers in 2008. In general, contributions to traditional IRAs could be made by individuals who received taxable compensation (e.g., wages, salaries, commissions, and self-employment income). For 2008, the maximum contribution amount to a traditional IRA was the smaller of the individual's taxable compensation or $\$ 5,000$, up from the 2007 limit of $\$ 4,000$. For taxpayers age 50 and older, an additional \$1,000 "catch-up" contribution was allowed. Additional restrictions based on coverage by a retirement plan at work, age, income, and filing status limited the amount that could be contributed in any particular tax year. In general, taxpayers less than $70 \frac{1}{2}$ years of age who were not covered by a retirement plan at work could make a traditional IRA contribution that was deductible from his or her income otherwise subject to income tax. However, this deduction would be limited based on income level, filing status, and whether the taxpayer's spouse was covered by an employer-sponsored retirement plan. For 2008, a single taxpayer, having employer coverage, had his or her deduction limited when modified adjusted gross income levels were $\$ 53,000$ or more and eliminated when modified adjusted gross income levels were $\$ 63,000$ or more. ${ }^{1}$ Married taxpayers filing jointly with each spouse having employer coverage, had their deduction limited when modified adjusted gross income levels exceeded $\$ 85,000$ and those with $\$ 105,000$ or more had their deduction eliminated. Married taxpayers filing jointly with coverage only through their spouse had their deduction limited when modified adjusted gross income levels exceeded $\$ 159,000$ and those with $\$ 169,000$ or more had their deduction elimi-

| Roth IRA plans | 6,135,599 | 18,199,820 | 32.7 | 15,951,065 | 176,638,800 | 4.8 |

[1] The total represents the number of taxpayers who have at least one IRA account Taxpayers may have multiple types of IRA plans. Consequently, the sum of the number of taxpayers with the various types of IRA plans will exceed the total shown in the figure.
nated. Married taxpayers filing separately did not get a deduction if their modified adjusted gross income exceeded $\$ 10,000$. Before $591 / 2$ years of age, most withdrawals from traditional IRAs are subject to a 10 percent additional tax. In general, distributions from
the plan are required to begin by April 1 of the year following the year in which the taxpayer reaches age $701 / 2$, and are taxed as ordinary income.

Of the 3.9 million taxpayers in 2008 who contributed to a traditional IRA, 2.3 million, or 59

## Accumulation and Distribution of Individual Retirement Arrangements, 2008

percent, were age 50 or older. Nearly 39 percent of these taxpayers took advantage of the entire catch-up contribution allowance of \$6,000 (Table 5). An additional 2.1 percent took advantage of a portion of the total catch-up allowance.

## Simplified Employee Pension IRAs

Employer-sponsored Simplified Employee Pension IRAs (SEP-IRAs), introduced in the Revenue Act of 1978, allowed employers to make contributions for their employees' retirements. Self-employed individuals could also use a SEP-IRA to contribute to their own retirement. For 2008, an employer could contribute up to 20 percent of the first $\$ 230,000$ of an employee's compensation resulting in a maximum contribution of $\$ 46,000$. The corresponding amounts for 2007 were $\$ 225,000$, and $\$ 45,000$. The statistics in this article include the contributions made by employers on behalf of the employees and contributions made by self-employed individuals. In 2008, 1.4 million taxpayers contributed $\$ 14.7$ billion to SEP-IRAs. At year-end, 3.7 million taxpayers held $\$ 201.5$ billion in SEP-IRA accounts.

## Savings Incentive Match Plans for Employees IRAs

Savings Incentive Match Plans for Employees (SIMPLE) IRAs were introduced in the Small Business Job Protection Act of 1996. This Act provided a mechanism for employers (including self-employed individuals) to offer a tax-favored retirement plan for their employees. In addition to employee-determined "salary reduction contributions," employers must make either matching contributions or nonelective contributions. For 2008, employee "salary reduction contributions" to a SIMPLE plan were limited to $\$ 10,500$, with up to $\$ 2,500$ more available to employees age 50 and over as a "catch-up contribution." Employer-matching contributions could not be more than 3 percent of an employee's compensation for the year, while nonelective contributions were fixed at 2 percent of an employee's compensation for the year. ${ }^{2}$ Only $\$ 230,000$ of an employee's compensation could be used to determine the nonelective contribution limit. The statistics reported in this article include both the amounts contributed as employee-determined "salary reduction contributions," as well as the employer's matching or nonelective contributions.

For 2008, 2.1 million taxpayers made contributions to a SIMPLE IRA. The amount contributed, by both the taxpayer and employer, totaled $\$ 9.3$ billion. SIMPLE IRA contributions represented the lowest share of all Individual Retirement Account contributions, accounting for 16.7 percent of all contributions.

## Roth IRAs

Roth IRAs, introduced in the Taxpayer Relief Act of 1997, differ from traditional IRAs in several substantive ways. Contributions to Roth IRAs are never tax-deductible. Conversely, qualified distributions from these plans are tax-free and taxpayers are not required to take qualified distributions from these plans, regardless of age. Similar to other IRAs, investment returns in the plan are not taxed each year and contributions can be made regardless of age. The contribution limits for Roth IRAs are the same as those for traditional IRAs. However, the income limitations are different. For 2008, no Roth IRA contributions were allowed for married taxpayers filing jointly having modified adjusted gross incomes over $\$ 169,000$, or $\$ 10,000$ for those filing separately. For unmarried taxpayers, the corresponding limit was \$116,000.

Of the 6.1 million taxpayers in 2008 who contributed to a Roth IRA, 2.2 million or 35.1 percent were age 50 or older. Over 37 percent of these taxpayers took advantage of the entire catch-up contribution allowance of $\$ 6,000$ (Table 6). An additional 3 percent took advantage of a portion of the catch-up contribution allowance.

## Trends and Highlights

For 2008, 152.4 million taxpayers or 77.7 percent of taxpayers were eligible to contribute to an IRA (Table 4). Since 2004, this percentage has fluctuated between 78.7 percent and 77.7 percent while the percentage of eligible taxpayers making contributions has declined every year since 2005, falling from 10.1 percent to 8.4 in 2008.

As shown in Figure C, and consistent with earlier years, for 2008, the percent of taxpayers making contributions rose with higher levels of income, with the exception of the "No adjusted gross income" category. For example, those making between $\$ 100,000$

[1] For joint returns, both taxpayers are placed into the same adjusted gross income class, as determined by the adjusted gross income
and \$200,000 were more than twice as likely to contribute to an IRA as those making \$30,000 to $\$ 40,000$. For taxpayers in the "No adjusted gross income" class, participation rates and average contributions were high given the inclusion of many well-todo individuals who experienced temporary losses in 2008. As shown in Figure D, for 2008, the average IRA contribution also increased with the age of the taxpayer, which is consistent with previous years.

As noted earlier, the number of eligible taxpayers who made a contribution decreased by 10.0 percent from 2007 to 2008, but the average contribution increased by 45.1 percent from 2007 to 2008. In other words, fewer eligible taxpayers contributed to an IRA, but those that did, contributed more to their accounts. This result held for all age groups and all AGI classes with the exception of the "No adjusted gross income" class. It should be noted that contribution limits increased for the traditional and Roth IRAs from 2007 to 2008 and the income limits increased for traditional and Roth IRAs as well for SEP and SIMPLE IRAs.

For 2008, the number of taxpayers who withdrew funds from their IRAs increased by 28.1 percent from 2007 to 15.2 million. The amount of those withdrawals increased from the 2007 level by 36.1 percent to $\$ 227.5$ billion.

## Explanation of Selected Terms

Modified adjusted gross income-Adjusted Gross Income figured without taking into account any IRA deduction or foreign-earned income exclusion or foreign housing exclusion (deduction), any deduction for student loan interest, any qualified bond interest exclusion, and exclusions for certain tax-exempt interest amounts.

Eligible taxpayer-Those who qualified under Federal income tax law to make deductible or nondeductible contributions to a traditional and/or Roth IRA plan. In other words, they include all taxpayers under age $701 / 2$ with earned income for traditional IRAs, as well as older taxpayers with earned income and modified adjusted gross income under the legally specified limits for Roth IRAs.

Fair market value (FMV)—On Form 5498, the trustee holding an IRA account reports to the owner and to the IRS the value of that account as of year's end (i.e. December 31).

Nonelective contribution-A mandatory contribution made by an employer toward his or her eligible employees' SIMPLE IRAs without regard to salary reduction contributions made by the employee.

Rollovers-Rollovers are amounts transferred from one account to another. In most cases, the amounts identified as "rollovers" on Form 5498 represent with-

| 60 under 70 | 1,848,670 | 13.5 | 10,438,715 | 5,647 | 11,027,836 | 1,301,295,062 | 118,001 |
| 70 and over | 156,391 | 4.3 | 999,116 | 6,389 | 8,351,956 | 965,060,371 | 115,549 |

drawals from employer-sponsored plans that are then invested from one traditional IRA plan to another but only if the taxpayer makes the withdrawal on his or her own and deposits the amount into another IRA account within 60 days. Trustee-to-trustee transfers are not generally considered rollover; however, if a taxpayer made a contribution to one IRA during the current year, and later in the year decided to "recharacterize" it as a contribution to another IRA, the amount recharacterized is also shown as a rollover.

Roth conversions-Owners of traditional IRAs were able to convert them to Roth IRAs as long as they met the income limitations for making Roth IRA contributions. Under certain circumstances, SEP or SIMPLE IRAs could also be converted to Roth IRAs; however, these amounts could not be identified separately for the purpose of these statistics.

## Data Sources and Limitations

The data presented in this article are based on information collected from matched samples of Forms 1040, U.S. Individual Income Tax Returns; Forms 5498, IRA Contribution Information; and Forms 1099-R, Distributions from Pensions, Annuities, Retirement or Profit-Sharing Plans, IRAs, Insurance Contracts, etc., for Tax Year 2008. Data from individual income tax returns (Form 1040) are based on a stratified weighted sample. ${ }^{3}$

In addition to the limitations of the Form 1040 sample described in the above-referenced report, special limitations apply to the Form 5498 data. As is true of the Form 1040, these data are before audit. In the case of contributions to IRA plans, this means that some Forms 5498 show amounts in excess of the maximum allowable contribution. If these excess amounts are identified by the taxpayer or trustee during the tax year, the excess amounts would be refunded and the amount of the refund documented on Form 1099-R. In these cases, the refund would be included in the "withdrawals" columns of these tables. On the other hand, the excess amounts may also include cases where rollovers or conversions were improperly reported as contributions, and the subsequent corrected Form 5498 was not available at the time the sample used in these statistics was created.

N/A—Not applicable.
n.a.-Not available.
[1] For Simplified Employee Pension (SEP) and Savings Incentive Match Plans for Employees (SIMPLE) plans, total contributions include contributions made by the taxpayer directly, as well as those made by an employer.
[2] The total represents the number of taxpayers who have at least one IRA account. Taxpayers may have multiple types of IRA plans. Consequently, the sum of the number of taxpayers with the various types of IRA plans will exceed the total shown in the table.
[3] For Tax Year 2008, owners of traditional IRAs were able to convert traditional IRAs to Roth IRAs as long as they met the income limitations for making Roth IRA contributions.
Under certain circumstances, SEP or SIMPLE IRAs could also be converted to Roth IRAs; however, these amounts could not be identified separately for the purpose of these statistics.
[4] Withdrawals are reported on Form 1099-R, Distributions from Pensions, Annuities, Retirement or Profit-Sharing Plans, IRAs, Insurance Contracts, etc.; does not include withdrawals made for the purpose of rollovers to other IRA accounts if the transfer was made by the trustee; Roth IRA conversions are shown separately.
NOTE: All data are from matched Forms 1040, U.S. Individual Income Tax Returns, and 5498, IRA Contribution Information; details may not add to total due to rounding.

* Estimate should be used with caution due to the small number of sample returns on which it is based.
[1] For joint returns, both taxpayers are placed into the same adjusted gross income class, as determined by adjusted gross income.
[2] Number of taxpayers with pension coverage is determined from Form W-2, box 13, which indicates participation in a retirement plan.
[3] Those individuals qualifying under Federal income tax law to make deductible or non-deductible contributions to a traditional IRA and/or ROTH IRA plan
[4] Owners of traditional IRAs were able to convert them to Roth IRAs as long as they met the income limitations for making Roth IRA contributions. Under certain circumstances, Simplified Employee Pension (SEP) or Savings Incentive Match Plans for Employees (SIMPLE) plans IRAs could also be converted to Roth IRAs; however, these amounts could not be identified separately for the purpose of these statistics.
[5] Withdrawals are reported on Form 1099-R, Distributions from Pensions, Annuities, Retirement on Profit-Sharing Plans, IRAs, Insurance Contracts, etc.; does not include withdrawals for the purpose of rollovers to other IRA accounts if the transfer was made by the trustee; Roth IRA conversions are shown separately
NOTES: All data are from matched Forms 1040, U.S. Individual Income Tax Return, and 5498, IRA Contribution Information. Details may not add to total due to rounding.

## Accumulation and Distribution of Individual Retirement Arrangements, 2008

Statistics of Income Bulletin | Spring 2012

Table 3. Taxpayers with Individual Retirement Arrangement (IRA) Plans, by Type of Plan and by Size of Adjusted Gross Income, Tax Year 2008
[All figures are estimates based on samples-money amounts are in thousands of dollars and average amounts are in whole dollars]

| Size of adjusted gross income [1] | Traditional IRA plans |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total contributions |  |  | End-of-year fair market value |  |  |
|  | Number of taxpayers | Amount $(\$ 1,000)$ | Average (\$) [2] | Number of taxpayers | Amount $(\$ 1,000)$ | Average (\$) [2] |
|  | (1) | (2) | (3) | (4) | (5) | (6) |
| All taxpayers, total | 3,863,370 | 13,382,543 | 3,464 | 43,054,097 | 3,257,294,692 | 75,656 |
| Taxpayers on returns reporting: |  |  |  |  |  |  |
| \$1 under \$5,000 | 27,724 | 78,792 | 2,842 | 687,989 | 26,837,813 | 39,009 |

[^22][2] The statistics are based on unaudited data and contain some contribution amounts in excess of the legal maximum. For additional explanation, see Data Sources and Limitations section of the article.
[3] For Simplified Employee Pension (SEP) plans, total contributions include contributions made by the taxpayer directly as well as those made by an employer.
[4] For Savings Incentive Match Plans for Employees (SIMPLE) plans, total contributions include contributions made by the taxpayer directly, as well as those made by an employer.
NOTE: Details may not add to total due to rounding.

* Estimate should be used with cuation due to the small number of sample returns on which it is based.
[1] Number of taxpayers with pension coverage is determined from Form $\mathrm{W}-2$, box 13 , which indicates participation in a retirement plan.
[2] Those individuals qualifing under Federal Income Tax law to make deductible or non-deductible contributions to a traditional IRA and/or Roth IRA plan.
[3] Owners of traditional IRAs were able to convert them to Roth IRAs as long as they met the income limitations for making Roth IRA contributions. Under certain circumstances, Simplified Employee Pensions (SEP) or Savings Incentive Match Plan for Employees (SIMPLE) plans IRAs could also be converted to Roth IRAs; however, these amounts could not be identified separately for the purpose of these statistics.
[4] Withdrawals are reported on Form 1099-R, Distributions from Pensions, Annuities, Retirement or Profit-Sharing Plans, IRAs, Insurance Contracts, etc.; does not include withdrawals for the purpose of rollovers to other IRA accounts if the transfer was made by the trustee; Roth IRA conversions are shown separately.
NOTE: Details may not add to total due to rounding.

NOTE: Roth IRA refers to an individual retirement plan that is subject to the rules that apply to a traditional IRA with exceptions, as defined by IRS Publication 590 , p. 36 .

# Foreign Recipients of U.S. Income, 2009 

by Scott Luttrell

U.S. income payments to foreign persons are reported on Form 1042-S, Foreign Persons' U.S.-Source Income Subject to Withholding. Unlike U.S. citizens and entities, foreign persons (i.e., nonresident aliens) generally pay U.S. income tax only on income earned from U.S. sources. Additionally, foreign persons are generally not required to file U.S. tax returns, making it impossible to tax them at ordinary graduated rates on their consolidated U.S. income. ${ }^{1}$ Therefore, U.S. income paid to foreign persons is subject to a flat, statutory tax rate of 30 percent. However, this rate is frequently reduced or eliminated by an income tax treaty or statutory exemption. Income that is exempt from taxation because of a tax treaty or certain other exemptions must generally still be reported (see Table1 for the amount of income exempt from taxation).
U.S. individuals, corporations, or other entities paying U.S.-source income to foreign persons are required to withhold taxes on this income (except where statutory or treaty exemptions apply) or to appoint a withholding agent (normally a U.S. financial institution) to do so. Foreign financial institutions that enter into an agreement with the Internal Revenue Service, known as qualified intermediaries (QIs), may also serve as withholding agents. A withholding agent or qualified intermediary is fully liable for all taxes owed by a foreign beneficial owner and also reports the income paid to each recipient on a Form 1042-S. Without this withholding requirement, there would be no effective way to enforce taxpayer compliance because foreign recipients are generally not required to file U.S. tax returns to report this income.

As shown in Table 2, the most commonly reported types of income reported on Form1042-S are interest, dividends, notional principal contract income, rents, royalties, Social Security and railroad retire-

Scott Luttrell is an economist with the Special Studies Returns Analysis Section. This data release was prepared under the direction of Chris Carson, Chief.
ment payments, as well as personal services income. Other types of income include capital gains, scholarships, pension and annuities, gambling winnings, and certain real estate distributions. Bank deposit and certain other interest payments on specific types of financial obligations are generally not reported on Form 1042-S. ${ }^{2}$

## Data Highlights

U.S.-source income payments to foreign persons and taxes withheld declined across nearly all categories of income in Calendar Year 2009, as the U.S. economy was in the midst of the Great Recession. ${ }^{3}$ Some $\$ 546.5$ billion in U.S. source income payments were made to foreign recipients in 2009, a decrease of 20.7 percent from the 2008 total. Taxes withheld on U.S.-source income paid to foreign persons experienced a similar decline to $\$ 7.2$ billion, down 21.4 percent from 2008. The income types which typically account for the most U.S. income paid to foreign persons decreased the most in 2009, both in terms of dollars, percentage change, and share of total income. Interest payments to foreign recipients ( $\$ 260.7$ billion) fell 26.6 percent compared to 2008 levels. The 2009 interest income amount also represents a 30.8 percent decrease from the amount paid to foreign persons in 2007. Interest payments in 2009 were still the largest category of payment to nonresident aliens by far, accounting for 47.7 percent of all payments. However, interest payments made up larger shares of total U.S.-source income payments in 2008 (53.8 percent) and 2007 ( 58.3 percent).

Notional principal contract income continued its ascendancy in terms of share of total U.S.-source income paid to foreign persons in 2009. After accounting for 10.7 percent and 16.7 percent of total income in 2007 and 2008, respectively, notional principal contract income payments rose to 19.9 percent of total U.S. payments to foreigners for 2009. This occurred despite a 1.3 -percent decrease in notional principal contract income in 2009 compared with 2008. A notional principal contract is a contract in-

[^24]
## Foreign Recipients of U.S. Income, 2009

Statistics of Income Bulletin | Spring 2012
volving two parties who agree contractually to pay each other amounts at specified times, based on the underlying notional amount. The underlying amount is notional because neither party to the notional principal contract is required to actually hold the property comprising the underlying amount. Notional principal contracts are used by financial institutions to reduce the risk of changes in interest rates, commodity prices, and currency exchange rates. Interest rate swaps, currency swaps, and equity swaps are examples of notional principal contracts. ${ }^{4}$

Dividends and rents and royalties, the third and fourth largest categories of payment made to foreign persons, respectively, also decreased in 2009. U.S.source dividend payments to foreign persons fell from $\$ 122.9$ billion to $\$ 101.5$ billion, or 21.1 percent, from 2008. Dividends accounted for 18.6 percent of payments to foreigners in 2009, unchanged from 2008. Payments of rents and royalties to foreign persons fell from $\$ 30.6$ billion in 2008 to $\$ 28.6$ billion in 2009, or 7.1 percent. Rents and royalties accounted for 5.2 percent of total U.S.-source income payments in 2009, up from 4.6 percent of the total in 2008.

The personal services income and social security and railroad retirement income categories actually saw growth in U.S.-source income payments to foreign persons during 2009. Personal services income rose by 32.9 percent in 2009 and the share of total income accounted for by this category increased to nearly 1.0 percent compared with 0.5 percent in 2008. Social security and railroad retirement payments rose by 8.2 percent in 2009.
U.S.-source payments to foreign persons are frequently exempt from withholding tax. The primary reasons for withholding exemptions are that the income is exempt from withholding due to a tax treaty between the U.S. and the recipient's country of residence, or the specific type of income (commonly portfolio or bank deposit interest) is exempt under an Internal Revenue Code section. Other reasons why income paid to foreign persons and reported on Form 1042-S may be exempt from withholding include: it is effectively connected with a U.S. trade or business or it is being paid to a withholding foreign partnership or withholding foreign trust.

For 2009, $\$ 53.2$ billion ( 9.7 percent) of total U.S. source income payments to foreign persons was
subject to tax. Figure A presents the percentages of U.S.-source income paid to foreign persons and income subject to withholding by category of the income in 2009. This figure illustrates the differences which exist with respect to the taxation of certain types of income reported on Form 1042-S. For example dividends comprised a majority ( 63.0 percent) of income subject to tax, despite accounting for only 18.6 percent of total income. Dividend income subject to withholding was taxed at an effective rate of 14.9 percent. While dividends are taxed at comparatively high rates, interest is much more likely to be exempt from withholding. For 2009, interest payments constituted the largest share of total income ( 47.7 percent) but only 15.6 percent of interest income was subject to withholding. Interest income subject to withholding was taxed at an average rate of 8.1 percent. As mentioned previously, notional principal contract income accounts for almost 20 percent of U.S.-source income paid to foreign persons; however, it is not generally subject to withholding tax. Rents and royalty payments are more likely to be taxed as evidenced by the fact they account for just 5.2 percent of all income yet make up 12.7 percent of income subject to withholding.

One of the primary contributors to reduced withholding taxes on U.S.-source income paid to foreign persons is tax treaties. Table 1 presents data on 64 countries with treaties in force with the United States during 2009. Nearly 75.7 percent ( 2.4 million) of all payments go to recipients in treaty countries. Foreign recipients from tax treaty countries received 79.7 percent of total U.S. income paid to foreign persons and paid 64.7 percent of all withholding taxes. The average withholding tax rate on income subject to tax made to persons in treaty countries is 11.0 percent, compared with 23.9 percent on payments made to residents of nontreaty countries.

Figure B, Part 1, shows nine countries whose residents received the largest amounts of U.S.-source gross income in 2009, as well as the 2008 income. These nine countries combined to account for 65.5 percent of total U.S.-source gross income paid to foreign persons in 2009. Recipients in the United Kingdom collected the largest shares of gross income in 2008 and 2009 and their share of the total grew from 14.6 percent to 17.6 percent during that time. Payments to Japanese recipients rose from 8.6 percent in

[^25]
## Figure A

Percentage of U.S.-Source Income Paid to Foreign Persons and Income Subject to Withholding, by Income Category, 2009

2008 to 11.0 percent in 2009. U.S.-source payments to both Germany and the Cayman Islands declined from 2008 levels and accounted for 8.8 percent and 7.9 percent of all payments, respectively, in 2009.

Part 2 of Figure B shows nine countries whose residents paid the largest amounts of tax withheld on U.S.-source gross income paid to foreign persons in 2009. Together these countries paid 57.6 percent of taxes withheld in 2009. Some $\$ 959.1$ million in taxes (13.3 percent of the total) were withheld on payments to the Cayman Islands, the most of any country for 2009. Canadian recipients paid 8.9 percent of all withholding taxes in 2009, despite receiving just 4.6 percent of total gross income. Over half of all income paid to recipients in Canada were dividends, from which taxes were withheld at an average rate of 13.1 percent. Luxembourg was one of very few
countries whose residents paid more taxes in 2009 ( $\$ 591.8$ million) than in 2008 ( $\$ 532.1$ million).

## Additional Foreign Income and Withholding Data

While income reported on Form 1042-S represents the majority of U.S.-source income payments to foreign persons, data reported on two other tax forms help provide a more complete picture of withholding on foreign persons' U.S. income. U.S. partnership income that is allocable to foreign partners is reported on Form 8805, Foreign Partner's Information Statement of Section 1446 Withholding Tax. Domestic partnerships are required to withhold income tax on effectively connected taxable income deemed allocable to foreign partners. A U.S. partnership files

## Figure B

Percentage of Total Income Paid, by Country of Foreign Recipient, 2008 and 2009

Percentage of Total Taxes Withheld, by Country of Foreign Recipient, 2008 and 2009
Country

# Foreign Recipients of U.S. Income, 2009 

Statistics of Income Bulletin | Spring 2012
a Form 8805 to show the amount of taxable income and total tax allocable to the foreign partner for the partnership's tax year. ${ }^{5}$ The statutory withholding rate for partnership income allocable to foreign partners is 35 percent. Reduced withholding rates may apply if the foreign partner is an individual and the specific type of income is among those subject to preferential rates. These types of income include capital gains, depreciation recapture, and collectibles gains.

The other tax form that provides information about withholding on foreign persons' U.S. income is the Form 8288-A. The Foreign Investment in Real Property Tax Act of 1980 (FIRPTA) was introduced to ensure that the U.S. collected a portion of the capital gains realized by foreigners from the sales of U.S. real property interests. The sales price of U.S. real property sold by the foreign person and the tax withheld on that sales price is reported on Form 8288-A, Statement of Withholding on Dispositions by Foreign Persons of U.S. Real Property Interests. ${ }^{6}$ Typically, the sales price is subject to 10 -percent withholding, although corporations may be taxed up to 35 percent in certain circumstances. When a foreign person sells real property interests in the United States, the buyer of the property is responsible for collecting and remitting to the IRS the appropriate amount of withholding and filing the necessary tax forms.

As one might expect, the sales of U.S. real property interests account for a relatively small amount of U.S.-source income paid to foreign persons. Income from the sale of U.S. real property interests, as reported on Form 8288-A, accounted for 0.4 percent of U.S.-source income paid to foreign persons in 2009. Income reported on Form 8288-A is not eligible for reduced withholding rates under tax treaties and is typically subject to 10 -percent withholding. Therefore, the effective withholding rate of 9.9 percent, shown in Figure C, is well within expectations. Taxes on income from the sales of U.S. real property made up 1.8 percent of withholding taxes on U.S.source income paid to foreign persons, while the total number of reportable transactions of U.S. real property sales made up less than 1.0 percent of all U.S. payments to foreign persons for 2009.

Figure D shows the number of U.S. real property interest sales, total sales revenue, and tax withheld, by the U.S. State where the real property interest is located. The largest volume of sales occurred in Florida, which accounted for 36.5 percent of all sales of U.S. real property interest by foreign persons in 2009. The four States shown in Figure D with the most U.S. real property interest sales in 2009 made up 56.7 percent of all transactions, 67.6 percent of the total sales revenue, and 67.6 percent of taxes withheld. While Florida had by far the most sales in 2009, the average sales revenue per transaction was less than $\$ 216,000$. By comparison, the highest average sales revenue was found in New York, with an average of $\$ 1.37$ million per U.S. real property interest transaction.

The effective withholding rates vary widely among the types of income reported on tax Forms 1042-S, 8805, and 8288A. As shown in Figure C, U.S. partnership income allocable to foreign partners was subject to significantly higher rates of withholding than other types of U.S. income payments to foreign persons during Tax Year 2009. In fact, the effective withholding rate on income reported on Form 8805 was 31.1 percent, compared with 9.9 percent for income reported on Form 8288-A and 13.6 percent for income reported on Form 1042-S. Nearly 30.0 percent of all withholding taxes on U.S. income paid to foreign persons were reported on Form 8805, while only 15.6 percent of the income subject to tax was reported on this form. Higher effective tax rates exist for Form 8805 income, because income paid to foreign partnerships is not typically reduced by tax treaties and is far more likely to be taxed near the statutory 35 -percent tax rate.

## Data Sources and Limitations

Payers (or their authorized withholding agents) of most U.S.-source income to foreign persons must withhold tax in accordance with Internal Revenue Code section 1441. Form 1042-S, Foreign Persons' U.S.-Source Income Subject to Withholding, is filed by the payer to report this income and the U.S. tax withheld. Often a financial institution acts as the payer's withholding agent. The statistics in this data

[1] Number of forms in this column include returns with income subject to taxation for Form 1042-S; positive income (excluding losses) for Form 8805; sales revenue for
Form 8288-A.
[2] Amounts in this column represent income subject to taxation for Form 1042-S; positive income (excluding losses) for Form 8805; sales price for Form 8288-A.
[3] U.S. tax withheld (column 5) divided by income (column 4)
[4] Income for all payments (column 2) is less than income on payments subject to tax (column 4) because column 2 includes forms with negative income.
release were tabulated by calendar year, using all Forms 1042-S filed with the Internal Revenue Service for 2009. The data reflect the income that was paid and U.S. tax that was withheld for 2009.

Domestic partnerships (or their authorized withholding agents) must withhold tax in accordance with Internal Revenue Code section 1446 on distributions
made to foreign partners. Form 8805, Foreign Partner's Information Statement of Section 1446 Withholding Tax, is filed by the payer to report income paid by U.S. partnerships to their foreign partners and the U.S. tax withheld. The statistics in this data release were tabulated by calendar year, using all Forms 8805 filed with the Internal Revenue Service

## Figure D

Withholding on Dispositions by Foreign Persons of U.S. Real Property Interests, 2009: Sales Price and Tax Withheld as Reported on Form 8288-A, by Selected U.S. State
[Money amounts are in thousands of dollars]

| U.S. State location <br> of real property | Total <br> number <br> of forms | Total sales <br> revenue | U.S. tax <br> withheld |
| :--- | ---: | ---: | ---: |
|  | $(1)$ | $(2)$ | $(3)$ |
| Total | $\mathbf{6 , 4 3 4}$ | $\mathbf{1 , 9 7 0 , 9 2 7}$ | $\mathbf{1 9 6 , 0 7 6}$ |
| Florida | 2,349 | 506,708 | 50,211 |

| California | 394 | 261,365 | 26,035 |
| Hawaii | 584 | 122,598 | 12,280 |
| All others | 2,785 | 637,962 | 63,572 |

for 2009. The data reflect the income that was paid and U.S. tax that was withheld for 2009.

Purchasers of U.S. real property held by foreign persons must withhold tax in accordance with Internal Revenue Code section 1445. Form 8288-A, Statement of Withholding on Dispositions by Foreign Persons of U.S. Real Property Interests, is filed by the buyer of U.S. real property sold by foreign persons. The statistics in this data release were tabulated by calendar year using all Forms 8288-A filed with the Internal Revenue Service with a date of transfer occurring during 2009.

Because the population of Forms 1042-S, 8805, and 8288 -A were used for the statistics, the data are not subject to sampling error. However, the data are subject to nonsampling error, including data entry and taxpayer reporting errors. Although the data were subjected to tests for certain basic mathematical relationships, including the calculation of the correct tax withheld, the possibility of error cannot be completely eliminated.

## Explanation of Selected Terms

Foreign persons-For purposes of this data release, foreign persons include: (a) individuals whose residence is not within the United States and who are not U.S. citizens (i.e., nonresident aliens); and (b) corporations and other organizations (including partnerships, private foundations, estates, and trusts) created or organized outside the United States. Individuals residing, and organizations created or organized, in Puerto Rico and U.S. possessions are also considered foreign persons.

Notional principal contract income-Notional principal contracts involve two parties who agree contractually to pay each other amounts at specified times, based on the underlying contract. The notional amount is an amount specified in the contract and, based on that amount, certain calculations are made. Generally, when amounts under the contract are due at the same time, they are netted, and only one payment is made. Notional principal contract income is not subject to withholding but must be reported on Form 1042-S, if the income is effectively connected with the conduct of a trade or business in the United States.

Qualified intermediary pool-Payments made by a qualified intermediary directly to beneficial owners may generally be reported on the basis of reporting pools. A reporting pool consists of income that falls within a particular withholding rate and within a particular income type, exemption type, or recipient type.
U.S. branch treated as U.S. person-The following types of U.S. branches (of foreign entities) may reach an agreement with a withholding agent to treat a branch as a U.S. person: (a) a U.S. branch of a foreign bank subject to regulatory supervision by the Federal Reserve Board or (b) a U.S. branch of a foreign insurance company required to file an annual statement on a form approved by the National Association of Insurance Commissioners with the Insurance Department of a State, Territory, or the District of Columbia.

# The Distribution of Corporate Income: Tabulations from the Schedule M-3, 2004-2008 

by Caitlin Bokulic, Erin Henry, and George Plesko

Corporations determine the amount of income earned during a year using a variety of reporting standards. For publicly traded companies, annual financial statements must be filed in accordance with Generally Accepted Accounting Principles (GAAP), as issued by the Financial Accounting Standards Board (FASB). Through the Internal Revenue Code (IRC), Congress has provided a separate set of rules that govern the definition of income for tax purposes. During the late 1990s and early 2000s, divergence in the amounts of income reported under each system led to increased interest in learning about the patterns and sources of those differences.

Prior to 2004, Schedule M-1 of the Form 1120 series of corporate income tax returns required a reconciliation of financial reporting ("book") net income with tax net income. ${ }^{1,2}$ ² Acknowledged shortcomings in the Schedule M-1, including a lack of detail in reconciling both the entities and income included in each of the separate book and tax reports, led to the development of the Schedule M-3. The requirement to include Schedule M-3 with the corporate income tax filing became effective December 2004; Schedule $\mathrm{M}-3$ is required of returns with assets that equal or exceed $\$ 10$ million. ${ }^{3}$ Since Tax Year 2004, a number of papers have provided tabulations of the annual corporate income tax and Schedule M-3 data and have served to create a better understanding of the magnitude of the differences in book and tax measures of income. ${ }^{4}$

Utilizing data from the Schedule M-3, this article makes three contributions. First, it provides an additional set of IRS corporate return data tabulations

> Caitlin Bokulic is an economist with the Corporation Returns Analysis Section. Erin Henry is a doctoral student in accounting, and George Plesko is an Associate Professor both at the University of Connecticut. This article was prepared under the direction of Marty Harris, Chief, Corporations Returns Analysis Section.
to better understand the characteristics of the corporations in the SOI sample, as well as in the population of corporate tax filers. Second, it extends prior IRS research on the magnitudes of various income measures that each firm reports to gain a better understanding of how the different income reporting systems (tax and financial) relate to each other. In particular, the next section, Defining Corporate Income, reviews the various definitions of income used to report firms' performance and the role that the Schedule M-3 serves in providing a reconciliation of book and taxable income through the information firms report to the IRS. The section also provides an overview of the amount of income firms that file returns in the U.S. report on both a global and domestic level and the amount of taxable income attributed to them. The following section, Distribution of Returns and Income Across Taxable Income Brackets, provides tabulations and a description of the distribution of corporate income, as variously defined. The third section of this article, Income Changes and the Marginal Tax Rate, presents our third contribution and provides estimates of the change in the marginal tax rate a firm might face in response to changes in firms' income tax positions, either through a change in their underlying economic condition (such as an increase in income caused by increased sales) or owing to changes in the income tax laws that would cause firms to report greater amounts of income.

## Defining Corporate Income

The existence of differences in the way income might be calculated for tax purposes, as opposed to other business purposes, has been recognized for nearly a century. The basis for a separate concept of income tax accounting, as opposed to firms' normal bookkeeping, traces back to the Revenue Act of 1918 and subsequent regulations. Section 212 (b) of the Act of 1918 says in part:

[^39]
# The Distribution of Corporate Income: Tabulations from the Schedule M-3, 2004-2008 

Statistics of Income Bulletin | Spring 2012

"The net income shall be computed upon the basis of the taxpayer's annual accounting period (fiscal year or calendar year as the case may be) in accordance with the method of accounting regularly employed in keeping the books of such taxpayer; but if no such method of accounting has been so employed, or if the method employed does not clearly reflect the income, the computation shall be made upon such basis and in such a manner as in the opinion of the Commissioner does clearly reflect the income." ${ }^{5}$
Over the past century, as both financial statement and income tax accounting have grown more complicated, numerous differences have arisen between the two measures. Previous Treasury reports, as well as IRS research and tabulations, ${ }^{6}$ have documented the extent that book and taxable income have differed across time. But, until the Schedule M-3 was included in corporate income tax filings, it was difficult to precisely identify or measure the causes of many of these differences.

One major difference between financial accounting income prepared under GAAP and taxable income as calculated under the Internal Revenue Code is caused by differences in the rules outlining which entities in consolidated groups are to be included in financial versus tax reports. In calculating a company group's book income, parent companies are required to consolidate and include the income of all entities (both domestic worldwide) in which they have at least a 50 -percent ownership. For consolidated tax-reporting purposes, however, parent companies may elect to consolidate and include only the domestic income of all entities in which they have at least an 80 -percent ownership. Thus, the consolidated taxable income of a corporate group excludes financial statement income from foreign sources ${ }^{7}$ and the domestic income of both domestic and foreign entities in which a parent company owns between 50 - and 80 -percent interest. Despite explicit consolidation rules for presenting book income on financial reports, prior to the Schedule M-3, there
was no uniform definition outlining which entities would be included in the financial statement income number reported on the income tax return. Thus, before the explicit requirements regarding the book income number reported on the Schedule M-3, there was no uniformity in the tax reporting of worldwide financial statement income across corporate tax return filers. As shown and annotated in Figure A, the Schedule M-3 provides a detailed reconciliation and clear definitions of the types of adjustments to be made when reconciling a firm's reported worldwide financial statement income with its reported U.S. taxable income. For example, Page 1 of the Schedule M-3 requires a firm to present not only the worldwide consolidated net income from its financial reports, but also to report the consolidated worldwide net income (or loss) of only those entities included in calculating a firm's taxable income. As a result, consolidation differences, a common driver of book and tax-reporting differences, are able to be identified and quantified.

The second set of differences between financial statement and taxable income relates to the specific differences in the rules governing the calculation of income under each system. Prior to the Schedule $\mathrm{M}-3$, one could not fully separate book-tax differences that were due to differences in the reporting entities from those that were simply due to differences in the book versus tax-accounting rules for recognizing income and deductions. Though these differences do exist and are identifiable via the Schedule M-3, they are not addressed in this article.

Because the Schedule M-3 provides a clearer identification and reconciliation of the financialreporting includible entities versus tax-reporting includible entities than the previous Schedule M-1, the tabulations presented should not be viewed as a continuation of past trends. The data on the Schedule M-3 allow for the examination of four distinct measures of income, which include two measures of financial reporting income and two of tax-reporting income: 1) pre-tax worldwide book income of those

[^40]
# The Distribution of Corporate Income: Tabulations from the Schedule M-3, 2004-2008 

Statistics of Income Bulletin | Spring 2012

## Figure A

## Reconciliation of Net Income (Loss) per Income Statement: Consolidated Worldwide to Includible Corporations

| Schedule M-3, Part I: Line Number and Item | Explanation |  |
| :---: | :--- | :--- |
| 4a | Worldwide consolidated net income (loss) from income statement <br> source | This is the consolidated parent company's worldwide financial reporting income; a <br> common concept for all corporate filers. |
| 5a | Net income from nonincludible foreign entities | These two items eliminate foreign income (loss) from entities that are not <br> consolidated for tax-reporting purposes. |
| b | Net loss from nonincludible foreign entities | These two items eliminate domestic income (loss) from entities that are not <br> consolidated for tax-reporting purposes. |
| 6a | Net income from nonincludible U.S. entities | These items add the income or loss from entities that are not part of the <br> consolidated financial reporting entity but which are included for tax-reporting <br> purposes. |
| b | Net loss from nonincludible U.S. entities | This entry eliminates inter-corporate transactions related to the income (loss) of <br> entities that are reported in lines 5, 6, or 7. Examples are dividends received by <br> the tax entity and adjustments for minority interest. |
| 7a | Net income (loss) of other includible foreign disregarded entities | This adjustment relates to reporting differences in the fiscal years from the tax <br> return to the financial statement entity. |
| b | Net income (loss) of other includible U.S. disregarded entities | Net income (loss) of other includible entities |
| 8 | Adjustment to eliminations of transactions between includible <br> entities and nonincludible entities | These items are any other adjustments necessary to reconcile worldwide <br> consolidated net income (loss) from financial statements to the net income (loss) <br> per income statement of includible corporations. |
| 9 | Adjustment to reconcile income statement period to tax year |  |
| 10a | Intercompany dividend adjustments to reconcile to line 11 | Combines lines 4-10 to report the financial reporting income (loss) of the tax entity. |
| b | Other statutory accounting adjustments to reconcile to line 11 |  |

entities included in calculating taxable income; ${ }^{8}$ 2) pre-tax domestic book income of those entities included in calculating taxable income; ${ }^{9}$ 3) tax net income; ${ }^{10}$ and 4) taxable income. ${ }^{11}$ Our measure of pre-tax worldwide book income represents both the foreign and domestic income before tax expense of any entity that files a return in the United States, while our measure of pre-tax domestic book income represents only the domestic income of the entities includible in the consolidated tax return. Tax net income represents a firm's taxable income before sub-
tracting any net operating loss carryforward (NOL) or special deductions and is most closely comparable to domestic pre-tax book income. ${ }^{12}$ Finally, taxable income includes the effect of net operating loss carryforwards and special deductions and is the basis for calculating the U.S. income tax.

Figure B provides a plot of the four measures of income over the 2004-2008 period for returns other than Forms 1120S, 1120-REIT, and 1120-RIC that included a Schedule M-3. This figure shows the advantages of the Schedule M-3 in its first required

[^41]

## Figure B

Aggregate Book and Tax Income Measures, Tax Years 2004-2008

year, as it yields new information to understand the book and tax-reporting relations that were previously unavailable. It is worth noting that prior to our sample period (beginning in the early 1990s), book income grew at a faster rate than taxable income, creating large book-tax differences. This trend ended in 2001, a year when aggregate taxable income exceeded aggregate book income. ${ }^{13}$ However, Figure $B$ suggests this trend seemed to continue again in the early to mid-2000s with aggregate pre-tax worldwide book income exceeding all other income figures from 2004 through 2006. Taxable income exceeded tax net income and both financial statement income measures in 2007 and 2008. Over the sample period, taxable income increases through 2007, followed by a modest drop in 2008. By contrast, book income, regardless of the measure, and tax net income begin to decline after 2005 and show a sharp decline in

2008, with aggregate pre-tax domestic book income becoming negative.

## Distribution of Returns and Income Across Taxable Income Brackets

In this section, the total amount of each type of income is disaggregated into cells defined by the statutory tax rate brackets (corporate statutory income tax brackets are provided for reference in Figure C). In the same way that Figure B provided information on the magnitude of the reporting differences, our analysis here allows for a better understanding of where, as defined by income, the differences arise. In order to better understand those differences, this study examines four separate measures of corporate income by statutory tax rate bracket as previously defined: aggregate pre-tax worldwide book income

| $18,333,333$ |  |  | $35 \%$ |

of corporations includible in the filed Form 1120; the aggregate pre-tax domestic book income of corporations includible in the filed Form 1120; aggregate tax net income; and aggregate taxable income.

Table 1 provides the annual number of returns and aggregate book and taxable income measures across statutory tax brackets for all active corporate returns (other than Forms 1120S, 1120-REIT, and 1120-RIC) required to file Schedule M-3 and with information sufficient to calculate our income figures. Figures D through H present the figures included in Table 1. The total number of corporate Schedule M-3 filers increases in the 3 -year period, from 35,120 returns filed in 2004 to 55,759 returns filed in 2007 and then decreases to 49,013 returns filed in 2008. For each year, the vast majority of corporate Schedule M-3 filers have taxable income falling within either the zero-percent tax bracket (i.e., taxable income equal to zero) or the 34-percent statutory tax bracket with taxable income over $\$ 335,000$ but not over $\$ 10$ million. Consistent with the decline in income shown in Figure B, the percentage of firms whose taxable income falls within the zero-percent tax bracket increases over the period 2004-2008 and represents the largest single group of M-3 returns in each tax year under analysis, ranging from approximately 48.1 percent of Schedule M-3 filers in 2004 to 55.6 percent of firms in 2008. The percentage of firms falling in the 34-percent statutory tax bracket with taxable income over $\$ 335,000$ but not over $\$ 10$ million decreases over time from 32.6 percent in 2004 to 28.3 percent in 2008. The percentage of corporate filers in any of the other seven tax brackets ranges from 19.3 percent

As shown in Figure B, aggregate worldwide pre-tax book income increased from 2004 to 2005 and then decreased from 2005 through 2008, and domestic pre-tax book income increased from 2004 to 2006, then decreased from 2006 to 2008. Tax net income exhibits a pattern similar to worldwide pretax book income, increasing from 2004 to 2005, and decreasing from 2005 to 2008, though the decline in tax net income is not as severe in those years as the decline in worldwide book income. However, taxable income continues to increase from 2004 to 2007 and only begins to decrease from 2007 to 2008. The modest increase in taxable income through 2007 is at first glance at odds with Figure D, which shows an increase in the number of zero-bracket returns, but there is also an increase in the total number of returns from 2004 to 2006. As shown in Table 1, the total number of returns increased from 35,120 in 2004 to 55,759 in 2006, then fell in each of the next 2 years. While previous studies document significant differences in financial statement and taxable incomes across time, this study documents similar patterns in both book income measures and tax net income. Taxable income, however, exhibits different behavior across time from the financial statement measures and even tax net income.

Examining Figures E and F for Tax Years 20042007 shows aggregate worldwide and domestic book income to be far greater than aggregate book losses. However, aggregate domestic book losses of \$431.1 billion experienced by filers whose taxable income fell in the zero-percent statutory tax rate bracket in 2008 are larger than the $\$ 323.9$ billion in aggregate domestic book income experienced by filers whose

# The Distribution of Corporate Income: Tabulations from the 

 Schedule M-3, 2004-2008

Statutory tax bracket

| $■ 2004$ | $\boxed{2005}$ | $\boxed{2006}$ | $\boxed{2007}$ | $\square 2008$ |
| :--- | :--- | :--- | :--- | :--- |

taxable income fell in the 35-percent statutory tax rate bracket, possibly indicative of the U.S. economic downturn during Tax Year 2008.

While the taxable income of the majority of corporate Schedule M-3 filers falls within the zeropercent or 34-percent (with taxable income over \$335,000 but not over $\$ 10$ million) statutory tax bracket (see Figure D), the few firms whose taxable income falls within the highest statutory tax bracket threshold of over $\$ 18.3$ million (i.e., facing a statutory tax rate of 35 percent) possess the largest aggregate levels of worldwide and domestic book income and both taxable income measures. Thus, although they comprise only a very small percentage of corporate Schedule M-3 filers (ranging from a high of 5.4 percent in 2005 to a low of 4.7 percent in 2008), these businesses earn the largest amounts of both
book and taxable incomes. This is consistent with the concentration of income shown in tabulations of corporate income by assets. Based on the 2008 Statistics of Income Complete Report, for example, the largest asset group for all active corporate income tax filers (with assets over $\$ 2.5$ billion) possess approximately 81 percent of all assets, 68 percent of net income, and pay 76 (68) percent of total income tax before (after) credits. ${ }^{14}$

The information reported on Schedule M-3 allows for the observation of differences in book and taxable incomes not driven by differences in the number of entities included in each report. In sum, our tabulations reveal that the majority of corporate Schedule M-3 filers (i.e., those firms with assets greater than $\$ 10$ million), report no taxable income or taxable income between $\$ 335,000$ and $\$ 10$ mil-

| $\square 2004$ | $\boxed{2005}$ | $\boxed{2006}$ | ם2008 |
| :--- | :--- | :--- | :--- |

lion, with aggregate corporate taxable income increasing from Tax Years 2004 through 2007 and decreasing from 2007 to 2008. In contrast to the pattern of reported taxable income from 2004 through 2008, reported worldwide pre-tax book income and tax net income only increase from 2004 to 2005 and begins to decrease for the remainder of our sample period (2005-2008), while reported domestic pre-tax book income increases from 2004 to 2006 and decreases from 2006 to 2008. The measures of financial statement income greatly exceed financial statement losses during the first 4 years of our sample period, while aggregate domestic financial statement losses exceed reported aggregate book income during 2008.

Despite differences in the levels and amounts of reported book and taxable income across time, the
figures reporting aggregate financial statement and taxable incomes across statutory tax rate brackets appear quite similar, regardless of the income measure under examination; the highest amount of aggregate income (financial statement or taxable income) is concentrated in the 35-percent statutory tax bracket (taxable income over $\$ 18.3$ million). Combining this result with Figure D, "Number of Returns Across Statutory Tax Brackets," it is clear that a small number of corporate Schedule M-3 filers earn the largest amounts of both book and taxable incomes.

## Income Changes and the Marginal Tax Rate

The information on the distribution of taxable income is useful to better understand the composition of the corporate tax base (by one measure of size)

# The Distribution of Corporate Income: Tabulations from the

| :---: | :---: | :---: | :---: | :---: |

and the relation between alternative measures of income. This section addresses a complementary issue regarding whether the distribution of income measures across statutory tax brackets would change if there are changes in the amount of income reported by businesses. This question is important for two reasons. First, as the economy grows, it is expected that each business will have, on average, higher income as well. The tabulations in this section provide insight on the rates at which any growth in taxable income will be taxed. Second, recent tax policy discussions have suggested the need to broaden the
corporate tax base. An increase in the base, similar to the effects of economic growth, could cause the amount of taxable income in each bracket to rise and potentially move firms into higher rate brackets unless there are concurrent changes in the rate structure.

Table 2 shows the effects of changes in underlying tax net income (i.e., taxable income before NOL and special deductions) on our sample of firms’ statutory tax rates from 2004 to 2008. To determine whether a firm's marginal tax rate would change, tax net income (Form 1120, Page 1, Line 28) is increased by 5 percent, and the firm's statutory tax rate is de-

# The Distribution of Corporate Income: Tabulations from the Schedule M-3, 2004-2008

| :---: | :---: | :---: | :---: | :---: |

termined using the adjusted taxable income figure. ${ }^{15}$ There is a substantial amount of upward movement across statutory tax brackets and across years in response to a 5 -percent increase in a firm's tax net income. In particular, mobility is most pronounced for those firms originally falling in the zero tax bracket, the 25 -percent bracket with income over \$50,000 but not over $\$ 75,000$, the 34 -percent bracket with income over \$75,000 but not over \$100,000, and the

38-percent bracket with income over $\$ 15$ million but not over $\$ 18.3$ million. The percentage of firms that move from the zero statutory tax rate bracket to a higher tax bracket ranges from a low of 17.9 percent (4,863 of the original 27,230 firms in the zero-percent bracket) in 2008 to a high of 25.1 percent ( 4,236 of the original 16,896 firms in the zero-percent bracket) in 2004. ${ }^{16}$ The relatively large percentage of firms originally in the 25-percent bracket with

[^44]
# The Distribution of Corporate Income: Tabulations from the Schedule M-3, 2004-2008 

## Figure H

Aggregate Taxable Income Across Statutory Tax Brackets, Tax Years 2004-2008

income over $\$ 50,000$ but not over $\$ 75,000$, ranging from 13.7 percent ( 68 of the original 497 firms in 2004 were outgoing in this tax bracket) to 39.8 percent in 2007 ( 314 of the original 789 firms), and the 34-percent bracket with income over \$75,000 but not over $\$ 100,000$, ranging from 21.0 percent ( 72 of the original 344 firms in this statutory tax bracket) in 2008 to 36.9 percent ( 210 of the original 569 firms) in 2007 that move to a higher tax bracket is likely due to the narrow definition of these tax brackets. Finally, there is substantial movement in the 38-percent, over $\$ 15$ million but not over $\$ 18.3$ million, tax bracket, ranging from 21.3 percent ( 87 of the original 409 firms falling in this statutory tax bracket in 2007) of firms that move to the highest income threshold tax rate bracket to 27.5 percent of the original 258 firms in 2004. Thus, firms' marginal tax rates appear quite sensitive to even a 5 percent
increase in their tax net incomes across statutory tax rates and tax years.

## Data Sources and Limitations, Form 1120, Tax Years 2004-2008

Estimates of Tax Years 2004-2008 are based on samples of corporate income tax returns with accounting period ending July of one year through June of the following year. These returns represent domestic corporations filing Form 1120 or 1120-A; foreign corporations with income "effectively connected" with a U.S. business filing Form 1120-F; life insurance companies filing Form 1120-L; and property and casualty insurance companies filing Form 1120-PC. Form 1120S (S corporation returns), regulated investment companies filing Form 1120RIC, and real estate investment trusts filing Form 1120-REIT were excluded from tabulations. Firms

# The Distribution of Corporate Income: Tabulations from the Schedule M-3, 2004-2008 

Statistics of Income Bulletin | Spring 2012
included in the sample are only those required to file Schedule M-3 (total assets of $\$ 10$ million or more) and whose Schedule M-3 provides information sufficient to distinguish between domestic and foreign components of worldwide book income. ${ }^{17}$ As a result, the number of firms in each year's sample will differ, and firms are not required to be present in all sample years. ${ }^{18}$

A stratified probability sample was used to produce the statistics. Sample sizes vary by year with stratifications based on combinations of total assets and a measure of income at rates ranging from 0.25 percent to 100 percent. More detail for individual years is available in Statistics of Income-Corporation Income Tax Returns, Publication 16.

## 2009 Gifts

by Melissa J. Belvedere

The Federal gift tax is one component of the Federal transfer tax system, which also includes the estate tax and the generation-skipping transfer tax. The gift tax is levied on gifts given during a donor's life, known as inter vivos gifts, while the estate tax is imposed on the right to transfer property at death. The generation-skipping transfer tax ensures that wealth is taxed at each successive generation.

Donors file Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, to report gifts made during a given calendar year. The data presented here are for gifts given in 2009 and reported on forms filed with the Internal Revenue Service (IRS) during 2010; the Statistics of Income Division (SOI) of IRS collects data from samples of gift tax returns. There were 223,093 returns filed during 2010, approximately 89 percent of which reported gifts given during 2009. The remaining 11 percent of returns were filed to report gifts given prior to 2009; these returns are considered an appropriate proxy for gifts made in 2009 that will be reported in subsequent years.

## Background Information

Congress added the gift tax to the United States transfer tax system in 1924. ${ }^{1}$ Gift tax rates were set equal to estate tax rates, and there were provisions for both an annual exclusion and a lifetime exemption. The annual exclusion is the amount that a donor can give to any single recipient during a given year without incurring tax (the number of donees is unlimited); the lifetime exemption is the total amount the donor can transfer tax-free over the course of his or her lifetime.

Congress made various changes to gift tax law in subsequent years. All gifts to charitable organizations, regardless of amount, were made tax exempt in 1932. The estate tax marital deduction, which allowed one spouse to give an amount of up to half of his or her adjusted gross estate (excluding community property) to the other spouse without incurring estate tax, was introduced in 1948. The Act also in-

Melissa J. Belvedere is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Melissa Ludlum, Chief.
troduced the split-gift rule, which allowed the donor spouse to treat one-half of a gift as having been made by the non-donor spouse for tax purposes. The splitgift rule effectively doubled the amount that a donor could give to any single recipient without incurring tax liability.

Congress significantly restructured gift tax law with the Tax Reform Act of 1976. The Act unified the system of estate and gift taxation, imposing a single, graduated tax rate schedule on all gifts, and created the unified credit, which replaced both the estate tax exclusion and the lifetime gift exemption. The Act also introduced the generation-skipping tax. Only relatively minor changes to gift tax law have been made since 1976.

## 2009 Gifts—Overview

Of the 223,093 Forms 709 filed for Gift Year 2009 (Figure A), 213,448 were nontaxable (95.7 percent), and 9,645 were taxable ( 4.3 percent). Tax liability is calculated after making adjustments for annual exclusions, marital deductions, and charitable deductions. Female donors accounted for 54.9 percent of all returns filed and 63.3 percent of all taxable returns.

## Figure A

Number of Gift Tax Returns Filed, by Tax Status and Sex of Donor, Gift Year 2009
[All figures are estimates based on a sample]

| Tax status | All donors | Female | Male |
| :--- | ---: | :---: | :---: |
| Total | $(1)$ | $(2)$ | $(3)$ |
|  | 223,093 | $\mathbf{1 2 2 , 4 2 0}$ | $\mathbf{1 0 0 , 6 7 3}$ |
|  | 213,448 | 116,317 | 97,131 |
| Taxable | 9,645 | 6,102 | 3,543 |

There were 867,507 donees, or gift recipients, for gifts given in 2009 (Figure B). The majority of gift recipients, 84.3 percent, were relatives of the donor. As in prior years, children and grandchildren received the highest percentages of gifts reported for 2009, some 50.3 percent and 24.2 percent, respectively. Gifts to all other relatives accounted for an additional 9.8 percent of the total. Charitable organizations received only 1.4 percent of all gifts reported on Form 709.

## Figure B

## Relationship of Donees to Donors, Gift Year 2009

[All figures are estimates based on a sample]

| Relationship | Number <br> of donees | Percent <br> of total |
| :--- | ---: | ---: |
| Total | $\mathbf{8 6 7 , 5 0 7}$ | $\mathbf{1 0 0 . 0}$ |
| Children [1] | 436,363 | 50.3 |
| Grandchildren [2] | 209,958 | 24.2 |
| Other donees [3] | 124,295 | 14.3 |
| Other relatives [4] | 40,135 | 4.6 |
| Siblings [5] | 25,026 | 2.9 |
| Charitable organizations | 12,156 | 1.4 |
| Parents [6] | 11,154 | 1.3 |
| Spouses [7] | 8,418 | 1.0 |

[1] "Children" includes children by blood, adopted children, foster children, stepchildren, and sons- and daughters-in-law.
[2] "Grandchildren" includes grandchildren by blood, adopted grandchildren, foster grandchildren, step-grandchildren, grandchildren-in-law, and great-grandchildren.
[3] "Other donees" includes other individuals whose relationship was not specified and unidentified organizations.
[4] "Other relatives" includes nieces and nephews, grand-nieces or grand-nephews, cousins (including second cousins, etc.), and aunts and uncles.
[5] "Siblings" includes siblings by blood, adopted siblings, foster siblings, stepsiblings, half-siblings, and siblings-in-law.
[6] "Parents" includes parents by blood, adopted parents, foster parents, stepparents, parents-in-law, and grandparents.
[7] "Spouses" includes current and divorced spouses and life partners.
NOTE: Percentages may not add to 100 percent due to rounding.
Most gifts (67.3 percent, or $\$ 25.5$ billion) were given directly, meaning that recipients immediately had full use and enjoyment of the gifts (Figure C). Gifts through trust, where the donee's use of the gift is controlled by a trustee, accounted for the remaining 32.7 percent ( $\$ 12.4$ billion) of the gifts. A trust is a legal entity that holds property and assets transferred to it by one person, known as the settler or
grantor, for the benefit of one or more beneficiaries. Family trusts, which are designed to allow assets to be passed from one generation to the next, were the most common trust type used, comprising $\$ 2.8$ billion, or 7.3 percent, of all gifts given. Compared to women, men gave more through split-interest trusts, which are trusts that have both charitable and noncharitable beneficiaries. Male donors gave $\$ 604.1$ million through split-interest trusts, or 67 percent of all gifts through this trust type. Overall, male and female donors gave nearly the same amounts in 2009, with female donors accounting for 52.8 percent of the total amount of gifts given.

Most gifts were in the form of cash which represented 47.5 percent ( $\$ 18$ billion) of total gifts
(Figure D). Cash represented the largest share of gift amounts reported on both taxable and nontaxable returns. Gifts of real estate and stock made up the second and third largest shares of total gifts, 18.4 percent and 16.2 percent of the total, respectively. The asset composition of gifts reported on taxable returns differed somewhat from the composition reported of nontaxable returns. The most significant difference was in the share of gifts in the form of real estate, which made up 21.1 percent of taxable gifts, but only 8 percent on returns with no tax liability. The shares of cash and stock gifts were lower on taxable returns than on returns with no tax liability.

## Data Sources and Limitations

Statistics presented in this article were derived from a sample of 7,883 Forms 709 filed in Calendar Year 2010. Approximately 89 percent of returns filed dur-

[5] "Other assets" includes annuities, retirement assets, futures, face value of insurance policies, art, depletable/intangible property, and other assets.
[6] "Bonds" includes State and local bonds, Federal savings bonds, other Federal bonds, corporate and foreign bonds, and bond funds.
ing 2010 were to report gifts made during 2009. The remaining approximately 11 percent of returns filed during 2010 reported gifts made prior to Calendar Year 2009. These included fiscal year filers, taxpayers who were granted extensions to file their gift returns, and late-filed returns. They are considered an appropriate proxy for gifts made in 2009 that will be reported in subsequent filing periods.

The Form 709, United States Gift (and Gen-eration-Skipping Transfer) Tax Return, study is an annual study based on a stratified random sample. Returns are stratified based on tax status (taxable or nontaxable) and size of total gifts. Tax status is determined based on the amount of tax liability reported on the return in Part 2, Line 15. The amount of total taxable gifts is the sum of gifts given during a specific calendar year, prior to reductions for the annual exclusion amounts and the marital and charitable deductions.

There are four strata of nontaxable returns and five strata of taxable returns, based on the amount of total deductions. Nontaxable returns with total gifts of less than $\$ 100,000$ were sampled at a rate of 1.01 percent; rates increased as the amount of
total taxable gifts increased, up to a rate of 100 percent for returns with total gifts of $\$ 1.05$ million or more. Taxable returns with total gifts of less than $\$ 100,000$ were sampled at a rate of 4.47 percent; rates increased to 100 percent for taxable returns reporting gifts of $\$ 1$ million or more. The final sample included 5,001 nontaxable returns and 2,882 taxable returns.

Weights were applied, by strata, to each return in the sample to create population estimates. All weights were calculated by dividing the final population count by the final sample count for each stratum. Weights were adjusted to account for missing returns and returns rejected from the final sample. Selected coefficients of variation, which measure sampling error, are shown in Figure E.

## Selected Terms and Concepts

Annual exclusion-The amount that a donor can give to any single beneficiary, within a given tax year, without incurring Federal gift tax. For gifts given in 2009, the annual exclusion amount was $\$ 13,000$.

Charitable deduction-Completed, outright transfers to a qualifying charitable organization

## Figure E

Coefficients of Variation for Selected Data Items, by Tax Status, Gift Year 2009

| Item | All <br> returns | Nontaxable <br> returns |  |
| :---: | ---: | ---: | ---: |
|  | Coefficients of variation (percentages) <br> returns |  |  |
| Total returns filed | $(1)$ | (2) | $(3)$ |
|  | $\mathbf{0 . 2 4}$ | $\mathbf{0 . 0 6}$ | $\mathbf{1 . 2 9}$ |
|  | 2.18 | 2.25 | 3.93 |
| Female donors | 1.79 | 1.88 | 2.91 |
| Total gift amount | 0.76 | 0.96 | 0.42 |

entitle the donor to take a deduction for the full amount of the transfer. Gifts given through trust must meet various legal requirements in order for the donation to qualify for a charitable deduction.

Marital deduction-Gifts between spouses, either during life or at death, qualify the donor for an unlimited marital deduction for the full amount of the transfer.

Maximum unified credit-A credit applied as a dollar-for-dollar reduction in both gift and estate taxes. The unified credit represents the amount of tax on that part of gross estate that is below the filing requirement. The credit may be used to offset gift taxes on lifetime transfers made after 1976.

However, to the extent it is so used, the amount of credit available at death is reduced.

Net tax on current period gifts-Net tax is calculated as the tentative tax on current period gifts, less the applied unified credit and applied foreign gift tax credits, which are credits allowed for gift taxes paid to other countries with which the U.S. has gift tax treaty provisions.

Tax status-Returns can be considered taxable or nontaxable, based on the amount of tax liability reported on Part 2, line 15 of the return. Gift tax returns with a positive amount of reported liability are taxable returns; those with no reported liability are nontaxable.

Trust-An independent legal entity governed by a trust agreement, created when one party (known as the grantor or settler) transfers ownership of assets to the trust under the control of a trustee, for the benefit of a third-party beneficiary. Trusts can be either simple or complex. Simple trusts are those that are required to distribute all income in the tax year in which it is earned, that neither distribute nor reserve any money for charitable purposes, and that do not distribute amounts from the corpus of the trust. Complex trusts are those that are not, by definition, simple trusts.

## 2009 Gifts

Table 1. 2009 Gifts Reported on Returns Filed in 2010: Total Gifts of Donor, Deductions, Credits, and Net Tax on Current Period Gifts, by Tax Status and Size of Taxable Gifts
[All figures are estimates based on a sample-money amounts are in whole dollars]

[1] This is the value of total gifts reported by the donor after gifts have been split between the donor and the consenting spouse.
[2] An unlimited marital deduction is available for all outright transfers to a donor's spouse. The deduction is available for gifts to trusts only under limited circumstances,
[3] An unlimited charitable deduction is available for all outright transfers to qualified charities. The deduction is available for gifts to trusts only if the trust meets certain requirements.
[4] This is the amount of taxable gifts (total gifts less exclusions and deductions) for the current year.
[5] This is the amount of taxable gifts (total gifts less exclusions and deductions) for all prior tax years in which the donor transferred property.
[6] This is the value of available unified credit that is applied to the gift tax liability in the current period, as reported on Part 2, Line 12 of Form 709. It is the lesser of available unified credit less the specific exemption amount (reported on Part 2, Line 10 of Form 709) or tax on current period gifts.
[7] This is the sum of reported value of gift tax on current period gifts and generation-skipping transfer taxes.
NOTES: Detail may not add to totals due to taxpayer reporting discrepancies and processing tolerances. "Number" shown in Columns 1, 3,5, etc. refers to the number of returns.

# The Income and Wealth of 2007 Estate Tax Decedents 

by Barry Johnson, Brian Raub, and Joseph Newcomb

The Statistics of Income (SOI) Division of the Internal Revenue Service (IRS) has periodically combined wealth data reported on Federal estate tax returns, filed for relatively wealthy decedents, with income tax data reported by these decedents for the last full year prior to death. Such linked datasets provide unique windows into the relationship between realized income and wealth. Of particular interest is how the composition of income varies among decedents in different phases of the life cycle. Past research has shown that older top wealth holders report less income than similar, younger decedents (see, for example, Steuerle 1983, Steuerle 1985, and Johnson \& Wahl 2004). This paper updates previous research using a new dataset focused on decedents who died in 2007, a group with sufficient wealth to place them in the top 1 percent of the wealth distribution. Unlike some earlier datasets, the relatively large sample size of the dataset used in this research allows us to examine differences among demographic groups in detail, and its focus on a single year of death reduces inter-temporal effects on results. In this article, we compare our findings with those from earlier studies and find surprising similarity in the estimated aggregate rates of return on assets over the more than 3 decades represented in these studies.

## The Data

The estate tax return, IRS Form 706, provides a rich source of information about an individual at the time of death, including demographic characteristics, asset portfolio composition, and charitable bequests. This article focuses on data reported on estate tax returns filed for Year-of-Death 2007 decedents that have been linked to income, deduction, and tax liability information reported on the Form 1040 filed by the decedent for the year prior to death, Tax Year 2006. ${ }^{1}$ Form 1040 is used to report income earned by single

> Barry Johnson is Chief of the Special Studies Branch. Brian Raub and Joseph Newcomb are economists with the Special Studies Special Projects Section. This article was prepared under the direction of Melissa R. Ludlum, Chief.
filers or the joint income of married couples. ${ }^{2}$ The misalignment of the unit of observation between the estate and income data for joint income tax filers is an important limitation of these data.

## Demographics

A total of 36,352 Forms 706 were filed between 2007 and 2009 for decedents who died in 2007 with estates at or above the $\$ 2$ million filing threshold in effect for that year of death. ${ }^{3,4}$ Figure A shows the mean and median age of decedents, by gender and filing status. Estate tax returns filed for male decedents made up almost 57 percent of 2007 decedents. The overall average age for male decedents was 78 and the median age was 80 . The majority of male decedents, 65.2 percent, were married at death. Married males were, on average, younger at death than those who were single. Female decedents were, on average, older than their male counterparts. With an average age at death of almost 85 , single female decedents were the longest lived, surviving, on average, 9 years longer than married female decedents. ${ }^{5}$

Age at death is an important factor in examining the income reported by these decedents, especially when considering income from sources such as salaries and wages, pensions, and Social Security. Age often plays an important role in portfolio allocation decisions, as well, with older investors eschewing risk in favor of tax-preferred, income-generating assets. The data show a significant drop-off in the number of decedents receiving income from wages and salaries for those 70 and older, so age also serves as an indicator of retirement status. Hereafter, we focus on two broad age groups, those under age 70 and those 70 or older, who were more likely retired. Figures $B$ and $C$ show the relatively small percentage of this population who were of working age at time of death. Only 23.1 percent of males and 14.1 percent of females were under age 70 when they died.

## Wealth

The 36,352 estate tax decedents owned more than $\$ 225.5$ billion in total gross estate at the time of

## Figure B

## 2007 Estate Tax Decedents, by Gender and Age

## Number

death in 2007. Male decedents had an average estate of $\$ 6.3$ million and a median estate size of $\$ 3.2$ million. The mean for female decedents was $\$ 6.1$ million and the median was $\$ 3.1$ million. Figure D shows that the distribution of gross estate was remarkably similar for the gender-age groups shown.

Figure E shows portfolio allocation, as a percentage of total estate, for single decedents by gender and age. Overall, compared to other gender-age groups, both male and female decedents over age 70
devoted larger shares of their estates to tax-exempt bonds, consistent with models of life-cycle risk management. Similarly, dividend-producing assets, including publicly traded stocks and certain mutual funds, featured more prominently in the portfolios of older decedents than for the under age 70 group. Conversely, retirement assets (annuities, IRAs, 401K plans) made up a smaller share of the total for these older decedents. For some older decedents, these assets may have been consumed. ${ }^{6}$ For younger

## Figure E

Single 2007 Estate Tax Decedents: Estate Portfolio Allocation, by Gender and Age

decedents, the personal residence made up a somewhat larger share of the estate. Significantly, business assets (including limited partnerships, farms, non-corporate businesses, and closely held corporations) made up the largest share of the portfolio of younger males.

Figure F shows similar portfolio information for married decedents. For these decedents, the portfolio allocation patterns among the categories presented were more similar for men and women in the same age groups than was the case for single decedents. Estates of married decedents under age 70 contained higher percentages of business assets and retirement assets, while those of older decedents were composed of higher shares of financial assets. These patterns again suggest both simplification of the portfolio and reduction of risk for older decedents. Figure G summarizes the data shown in Figures E and F by marital status and age for all decedents.

## Income

In this section, we look at the income of 2007 estate tax decedents during the last year of life, using data reported by decedents on Tax Year 2006 Forms 1040. Given the similarities between gender groups high-
lighted in the previous section, and to mitigate the unit-of-observation challenges inherent in the data, we focus on age and marital/filing status rather than gender for the remainder of the paper.

## Adjusted Gross Income

We begin by examining how income earned by 2007 decedents in Tax Year 2006 compares with income reported by all taxpayers that year, focusing here on Adjusted Gross Income (AGI). Figure H shows that almost 70 percent of all decedents reported income in the top decile of the AGI distribution for Tax Year 2006, with 21 percent of all decedents in the top 1 percent. Conversely, almost 2 percent reported zero or negative AGI, and 3.8 percent had AGI in the lowest 50th percentile. A higher percentage of single filers had AGI that fell below the 75th percentile, while almost 69 percent of older joint filers reported income above the $95^{\text {th }}$ percentile cutoff.

Figure I shows median effective income tax rates paid in Tax Year 2006 by 2007 estate tax decedents. To maintain comparability with other SOI publications (see Mudry and Bryan 2009), we calculate the effective tax rate as total tax divided by AGI and limit the analysis to those who reported positive AGI.

|  |  | Under 70 | 70 and older | Under 70 | 70 and older |
|  | (1) | (2) | (3) | (4) | (5) |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| No tax paid | 8.0 | 10.3 | 11.8 | 4.2 | 4.5 |
| Under 5 percent | 8.1 | 7.2 | 9.8 | 5.4 | 7.1 |
| 5 under 10 percent | 13.8 | 12.8 | 14.3 | 10.4 | 14.7 |
| 10 under 15 percent | 22.3 | 18.5 | 24.2 | 16.5 | 22.7 |
| 15 under 25 percent | 38.1 | 34.1 | 34.3 | 40.7 | 42.2 |
| 25 under 28 percent | 5.0 | 6.6 | 2.9 | 11.1 | 5.0 |
| 28 under 33 percent | 3.7 | 8.4 | 1.8 | 10.0 | 3.1 |
| 33 under 35 percent | 0.5 | 1.5 | 0.3 | 1.4 | 0.3 |
| 35 percent | 0.5 | 0.6 | 0.6 | 0.5 | 0.3 |
| Median effective tax rate | 13.9 | 14.5 | 12.5 | 17.4 | 14.6 |

NOTE: Excludes an estimated 695 decedents who reported negative AGI, 10.4 percent of whom had a tax liability in Tax Year 2006.

Overall, 8 percent of decedents had no tax liability in 2006. Higher percentages of single decedents in both age groups paid no tax, when compared with those who were married. More than half, 52.2 percent, of all decedents paid taxes at effective rates of less than 15 percent in 2006. Larger percentages of both single and married younger decedents, 51.2 percent and 62.6 percent, respectively, paid taxes at effective tax rates of 15 percent or higher. The overall median effective tax rate for 2007 decedents was 13.9 percent, and the highest median effective tax rate, 17.4 percent, was that of married decedents under $70 .{ }^{7}$

Figure J shows median effective income tax rates by gross estate size for the filing status-age groups used in the previous tables. For all groups, the median effective tax rate generally increased with estate size. Younger married decedents in all wealth categories paid tax at the highest median effective tax rates, which rose from 15.3 percent for those with gross estates of less than $\$ 3.5$ million to about 21 percent for those with gross estates of $\$ 5$ million or more. Single decedents who were 70 and older at death had the lowest median effective tax rates in all gross estate categories, ranging from 11.3 percent for those

with less than $\$ 3.5$ million to 16.1 percent for those with estates of $\$ 10$ million but less than $\$ 20$ million.

## Income Components

In order to present a more complete accounting of income earned by 2007 decedents, we create a new measure, gross income, by adding to total income reported on Form 1040 the value of tax-exempt interest income; non-taxable portions of individual retirement arrangement (IRA) distributions, pensions, and annuities; and Social Security benefits. To calculate gross income, we then subtract the value of IRA rollovers, IRA recharacterizations, and Roth IRA conversions. Gross income, therefore, includes forms of realized income that are not used in calculating income tax and excludes transactions that reflect the shifting of retirement assets from one form to another, rather than true economic income. Figure K shows that 2007 estate tax decedents reported a mean gross income of nearly $\$ 500,000$ for Tax Year 2006, with a median value of a little more than $\$ 200,000$. Both mean and median gross incomes of married decedents were roughly twice those of
single decedents. The mean gross income of single decedents age 70 and older was lower than that of their younger counterparts, although the median was slightly higher. Older married decedents reported lower mean and median gross income than younger married decedents.

Figure K also shows that mean and median gross incomes were higher for decedents who had larger estates at the time of death. For example, mean and median gross incomes for decedents with between $\$ 10$ million and $\$ 20$ million were roughly 5 times higher than the comparable values for decedents in the lowest wealth class. The distribution of incomes was most skewed in the unbounded wealth class, as evidenced by the large difference between the median and mean for both married and single decedents; the mean and median gross incomes reported for these decedents were much higher than for the other decedent groups examined.

Figure L shows selected types of income as a percentage of gross income for single decedents, by age. Capital gains income was the largest income category for single decedents, accounting for

## Figure L

Single 2007 Estate Tax Decedents: Income Types as a Percentage of Gross Income, by Age

# The Income and Wealth of 2007 Estate Tax Decedents 

Statistics of Income Bulletin | Spring 2012
more than 30 percent of the total for each age group shown. As expected, salaries and wages and business income accounted for markedly higher shares of gross income for decedents under age 70 than for decedents age 70 and older. As a consequence, dividends, taxable interest, and tax-exempt interest each made up smaller shares of gross income for younger decedents, as did retirement income, defined as IRA distributions plus gross pension and annuity income, less IRA rollovers, IRA recharacterizations, and Roth IRA conversions. Other income, primarily composed of Social Security income, made up a similarly small share for single decedents in both age categories.

As shown in Figure M, the income composition reported by married decedents differed from that of single decedents. Salaries and wages and business income made up larger shares of gross income, while dividends, taxable interest, and tax-exempt interest made up smaller shares, regardless of age. Together, Figures L and M suggest that wealthy individuals transition from a reliance on wage and business income to realizing greater shares of income from dividend- and interest-bearing investments after retirement.

Figure N shows that the gross income composition reported by single decedents varied significantly by size of estate. Dividends, capital gains, and taxexempt interest generally accounted for larger shares of gross income for single decedents with larger estates than for those in the smaller estate categories, while the share made up of retirement and other income declined markedly for estates in larger size classes. Somewhat surprisingly, salaries and wages made up relatively similar percentages of gross income, between 3.7 percent and 4.9 percent, for single decedents across the size-of-estate spectrum.

Figure O shows that, in general, the composition of gross income, by size of estate, for married decedents is similar to that of single decedents. As seen earlier, however, salaries and wages and business income made up overall larger shares of gross income, while dividends, taxable interest, and taxexempt interest made up smaller shares for all estate size classes. One notable difference, however, is that salaries and wages declined markedly as a share of gross income for estate size classes of 3.5 million or more, falling from 14.4 percent to 6.1 percent across the categories presented. Together, Figures N and O
show that the wealthiest decedents realized a majority of their income in capital gains and dividends and were much less reliant on wages, retirement income, and other income (primarily Social Security) than their less-wealthy counterparts.

## Return on Assets

Steuerle (1983) discusses in detail the limitations of using realized income as a measure of well-being, especially for the wealthy, in part because realization of income on capital is, to a great degree, discretionary. To examine the relationship between realized income in the year prior to death and wealth at death, he calculated rates of return, both on overall wealth, for various asset classes. In this section, we do the same and begin by examining the overall return on wealth using three related measures of return:

Measure 1: Gross income / Total gross estate
Measure 2: [Gross income-(Wages + Social Security Income)] / Total gross estate
Measure 3: [Gross income-(Wages + Social Security Income)-Capital gains] / Total gross estate
Measure 1 captures all of the decedent's realized income and, therefore, includes income from sources such as wages and Social Security that may not be directly related to the decedent's asset holdings. Measure 2 more closely aligns income and wealth by excluding these items, but may underestimate the realized return on capital for decedents whose businesses paid them a salary. Measure 3 attempts to recognize that at least some income from capital gains recognized in 2006 will have been used for consumption (for example, to pay medical expenses) and will have disappeared from the decedent's balance sheet at death. A drawback to using this measure is that the rate of return will be understated to the extent that realized 2006 capital gains were reinvested rather than consumed. Therefore, this measure forms, at best, a lower bound estimate of the realized rate of return.

## Overall Return

Overall, 2007 estate tax decedents reported a median rate of return on assets of 5.56 percent, calculated using gross income, for Tax Year 2006. Excluding wage and Social Security income, the median rate of return was 4.49 percent. Removing capital gains

## Figure M

Married 2007 Estate Tax Decedents: Income Types as a Percentage of Gross Income, by Age

from this measure yielded a rate of 3.61 percent. Figure P shows the median return on assets separately for single decedents and married decedents, by age of decedent and size of gross estate.

Using all three measures of income, the median return on assets was higher for older single decedents than for those under age 70. The disparity was greatest when wages, Social Security, and capital gains were excluded from the income measure. Married decedents had a higher median return on assets than single decedents in each age and size of estate class, which is expected, because our income measures include the income of both the decedent and a spouse, while wealth is observed for the decedent only. Unlike singles in the same age group, the return on gross income for younger married decedents was higher than that for older married decedents. However, for income measures that exclude wages and Social Security, the relationship reversed-older decedents had higher median rates of return than their
younger counterparts. This suggests that, for the younger married decedents, wages earned by the surviving spouse contributed significantly to our gross income measure.

Another broad pattern shown in Figure P is a decline in median return on assets across wealth categories, regardless of the measure of income used. This pattern was the least pronounced when return on assets was calculated using gross income less wages and Social Security and were likely influenced by the declining share that wages and Social Security income contribute to adjusted gross income/gross income for decedents in higher wealth categories. Excluding capital gains, which make up larger shares of income reported by decedents in higher wealth categories, exaggerated the trends seen using the less restrictive income measures. The robustness of this decline in rates of return across increasing wealth size classes seems to affirm the voluntary nature of income realization for the very wealthy.

| \$20 million or more | 3.55 | 3.46 | 2.64 | 6.37 | 5.87 | 3.54 |

## Return by Asset Class

We next decompose overall rates of return by calculating rates of return on specific asset types. We construct broad asset and income categories to minimize misclassification of either assets or income, recognizing that even these broad categories are subject to some classification error. For example, we include all common stock and most mutual funds in the "dividend-bearing assets" category because we are unable to separately identify common stock and growth-oriented mutual funds from preferred stock and income funds. The results are shown in Figures Q and R. Figure $S$ shows the distribution of rates of return on overall assets and specific asset classes in box plot form. The box displays the $25^{\text {th }}$, $50^{\text {th }}$ (median), and $75^{\text {th }}$ percentiles, while top of the upper "whisker" shows the value at the $95^{\text {th }}$ percentile. The bottom of the lower "whisker" shows the value at the $5^{\text {th }}$ percentile.

Notably, rates of return varied significantly by asset class. ${ }^{8}$ Looking first at single decedents, the median rate of return ranged from a scant 0.09 percent for business assets to 5.78 percent for retirement assets (Figure Q). The low median value for businesses was because the rate of return was zero or negative for more than 50 percent of decedents (Figure S). The high median rate of return on retire-
ment assets and, more generally, the large dispersion of rates reflected the eclectic nature of this category, which included both investments-generated income from 401 K plans, as well as income from traditional pension plans for which there was no associated asset in the estate.

In asset classes for which there was variation across wealth groups, rates of return were often lower for those in the higher wealth categories. For single decedents, the return on interest-bearing assets and tax-exempt bonds did not vary significantly by level of wealth for single decedents. This was expected, because these types of assets likely provide the taxpayer little control over the timing and amount of realized income. In contrast, the return on retirement assets declined markedly for decedents in higher wealth categories.

As expected, overall rates of return in each asset class were greater for married decedents, ranging from 1.1 percent on business assets to 8.33 percent on tax-exempt bonds. The patterns by wealth class generally mirrored those for single decedents, with the exception of the returns on tax-exempt bonds and dividend-bearing assets, which, although relatively constant for single decedents, declined notably for the married decedents.

|  | (1) | (2) | (3) | (4) | (5) |
| All | 0.09 | 5.78 | 2.55 | 2.72 | 4.85 |
| Age of decedent Under 70 | 0.02 | 0.00 | 2.09 | 2.16 | 4.39 |
| 70 and older | 0.09 | 6.95 | 2.65 | 2.77 | 4.87 |
| Size of estate \$2 < \$3.5 million | 0.01 | 6.26 | 2.51 | 2.74 | 4.83 |
| \$3.5 < \$5 million | 0.19 | 5.50 | 2.72 | 2.78 | 4.88 |
| \$5 < \$10 million | 0.17 | 5.13 | 2.64 | 2.71 | 4.89 |
| \$10 < \$20 million | 0.38 | 5.72 | 2.37 | 2.51 | 4.80 |
| \$20 million or more | 0.17 | 4.50 | 2.35 | 2.41 | 4.84 |

## Figure R

Rate of Return by Asset Class, Married 2007 Estate Tax Decedents
[Rates of return are percentages]

| Age of decedent, size of estate | Business assets | Retirement assets | Interest-bearing assets | Dividend-bearing assets | Tax-exempt bonds |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | (1) | (2) | (3) | (4) | (5) |
| All | 1.14 | 7.20 | 5.10 | 4.18 | 8.33 |
| Age of decedent Under 70 | 1.56 | 0.00 | 4.48 | 3.60 | 7.07 |
| 70 and older | 1.04 | 10.23 | 5.29 | 4.39 | 8.48 |
| Size of estate $\$ 2<\$ 3.5$ million | 1.06 | 8.26 | 5.24 | 4.40 | 8.55 |
| \$3.5 < \$5 million | 1.36 | 7.53 | 5.03 | 4.09 | 8.08 |
| \$5 < \$10 million | 1.06 | 5.29 | 4.75 | 4.03 | 8.17 |
| \$10 < \$20 million | 1.32 | 5.50 | 4.88 | 3.59 | 7.42 |
| \$20 million or more | 1.41 | 4.59 | 5.39 | 3.38 | 7.33 |

Figures Q and R also show that single and married decedents age 70 and older realized higher median rates of return on assets for most asset classes than their younger counterparts. For retirement assets and dividend-bearing assets, this result is expected, because many decedents in the under 70 category would have been too young in 2006 to realize income from their pensions, annuities, and retirement plans. The higher returns on dividend and interest-bearing assets for older decedents is consistent with life-cycle investment models that predict that older individuals are more likely to prefer less risky, income-generating assets than younger individuals.

## Comparison with Prior Studies

As discussed, this work replicates that of three prior studies that have used linked data from estate tax returns and individual income tax returns to estimate rates of return on assets in the year prior to a decedent's death. Combined with ours, these studies span 25 years that encompass significant changes in tax policy and the economy, some of which are summarized in Figure T. The selected economic data associated with each study year were chosen to provide some context to the rates of return presented for each period. In addition, we present data on contemporary tax law provisions, because a substantial body of

[1] Return on assets calculated using gross income less wages and Social Security income.
[2] The $95^{\text {th }}$ percentile value for return on retirement assets was trimmed to 40 percent to fit the graph
research suggests that the amount of income reported on tax returns is affected by the level and structure of tax rates. ${ }^{9,10}$ Of particular note are changes to both overall income tax rate schedule, as well as the tax rates that applied to capital gains and dividends. ${ }^{11}$

The overall return on assets, here calculated using AGI less wages in the numerator for consistency across the four studies, was significantly lower in the 1972 decedent study than in the other three studies, an expected result because the 1972 study was based on a very small sample of observations chosen for the condition that the decedent's estate was composed primarily of small business assets. As we have
shown, the realized return on business assets tends to be much lower than the return on other asset types.

A surprising result is the relative similarity of overall rates of return on assets among the 1976, 1992, and 2007 decedent studies. Overall return on assets calculated using AGI less wages stayed within a relatively narrow band of 4.21 to 5.90 percent. Broadly speaking, rates of return on individual asset categories, by wealth class, are also very similar. Of particular note is the similarity of overall rate of return found by Steuerle (1985) in his study of 1976 decedents to that calculated for our 2007 decedents, despite overall top marginal income tax rates that

| Return on assets, all decedents |  |  |  |  |
| AGI less wages | 1.88 | 4.5 | 5.9 | 4.21 |

were 50 percent lower, and rates on capital gains and dividends that were 66 percent lower in the latter period. This suggests that the income realization choices of the wealthy decedents in these studies were based more on attitudes toward risk and consumption needs than the tax regime in effect at the time.

One key source of difference in the data across the four studies is the estate tax filing threshold in effect for the year of death. For 1972 and 1976, the filing threshold was nominally $\$ 60,000$, or $\$ 238,200$ and $\$ 178,800$, respectively, in constant 2007 dollars. The inflation-adjusted filing threshold for 1992 was significantly higher at $\$ 834,000$ and higher still for 2007, at $\$ 2$ million. These filing threshold increases may affect comparisons of aggregate rates of return on assets, because all four studies show that wealthier individuals tended to report lower overall return on assets than less-wealthy individuals. Thus, all other things being equal, one would expect that the inclusion of more low-wealth decedents in the earlier estimates would inflate the rates of return relative to those calculated for the higher wealth decedents observed in 2007. In an attempt to present more comparable information, Figure U shows estimated trend lines for all three studies, generated using constant 2007 dollar gross estate categories. ${ }^{12}$ Although based on a limited number of data points in each year, the
figure shows a steady decline in the rate of return on assets for increasing wealth within a relatively narrow band of returns. Rates of return for decedents with more than $\$ 5$ million in gross estate were lowest in 2007, the year with the lowest interest rates and dividend yield, and highest in 1992.

## Conclusion

In this preliminary look at a new dataset combining wealth and 1 year of income data, we have shown that the portfolios owned by the nation's wealthiest individuals, at death, and the income earned by these individuals in the year just prior to death vary by both marital status and age, defined in broad categories. In general, the portfolio held by older decedents favors low-risk, low-return assets. Likewise, income sources shift from wages and businesses for younger decedents to fixed-income, lower-risk sources for those above the usual retirement age. We have also shown surprisingly little change in realized rates of return on assets between 1976 and 2007, despite significant changes in the income tax structure between the study periods. This suggests that the income realization choices of the wealthy decedents in these studies were based more on attitudes toward risk and on consumption needs than the tax regime in effect at the time.

## The Income and Wealth of 2007 Estate Tax Decedents

Statistics of Income Bulletin | Spring 2012

## Figure U

Return on Assets, by Size of Gross Estate and Study Year

Size of gross estate in constant 2007 dollars

An important consideration in computing rates of return on assets using these data is the effect of estate planning on asset values. Mechanisms for smoothing the transition of family wealth between generations, such as family limited partnerships, can result in significantly discounted asset values for estate taxation purposes (see Raub et. al 2010). These types of techniques have become more pervasive in recent years and could significantly affect the trends shown in Figure B. Therefore, the rates of return calculated for 2007 may actually be somewhat understated relative to the prior studies. It must also be emphasized that the results we show apply to individuals at the end of their lives, many of whom may have made extensive changes to their finances in anticipation of death, and thus may not be generalizable to healthy individuals in similar age and wealth cohorts. For example, we may observe higher pension income realization for younger single decedents or lower business income, in general, among those suffering a chronic illness. In the future, we would like to examine the influences of aging and anticipation of death due to illness on these results. To this end, we would like to construct a longitudinal panel of income data
for our decedents and compare their income realization patterns over time with similar data for survivors.

## Data Sources and Limitations

Analysts in the Special Projects Section of SOI's Special Studies Branch, with SOI staff in the Cincinnati Submission Processing Center, conduct the Estate Tax Study, which extracts demographic, financial, and bequest data from Form 706, the Federal estate tax return. SOI conducts the Estate Tax Study on an annual basis, which allows annual production of filing year data on estate taxation. By focusing on a single year of death for a period of 3 years, SOI is also able to produce periodic year-of-death estimates. Year-of-death estimates are advantageous in that the included estates have been subject to the same tax law and similar economic conditions. A single year of death is sampled for 3 calendar years, and 99 percent of all returns for decedents who die in a given year are filed by the end of the second calendar year following the year of death. The Estate Tax Study for the period 2007-2009 concentrates on Year-ofDeath 2007, the most recent year-of-death estimates available.

# The Income and Wealth of 2007 Estate Tax Decedents 

Statistics of Income Bulletin | Spring 2012

For each study year, 2007-2009, a sample was selected from returns filed. The sample for Filing Year 2007 included 9,674 returns out of a total population of 38,000 . In 2008, the year in which most returns for 2007 decedents were filed, 11,710 returns were sampled out of a total of 38,354 . There were 9,105 returns from a total population of 33,515 sampled during Filing Year 2009. Of the 30,489 returns sampled during 2007-2009, there were 12,426 returns filed for 2007 decedents.

Estate tax returns were sampled while the returns were being processed for administrative purposes, but before any audit examination. Returns were selected on a flow basis, using a stratified random probability sampling method, whereby the sample rates were preset based on the desired sample size and an estimate of the population. The design had three stratification variables: year of death, age at death, and size of total gross estate plus adjusted taxable gifts. For the 2007-2009 filing years, the year-of-death variable was separated into two categories: 2007 year of death and non-2007 year of death. Age was disaggregated into four categories: under 40, 40 under 50, 50 under 65, and 65 and older (including age unknown). Total gross estate plus adjusted taxable gifts was limited to six categories: under $\$ 1.5$ million, $\$ 1.5$ million under $\$ 2$ million, $\$ 2$ million under $\$ 3$ million, $\$ 3$ million under $\$ 5$ million, $\$ 5$ million under $\$ 10$ million, and $\$ 10$ million or more. Sampling rates ranged from 1 percent to 100 percent. Returns for more than half of the strata were selected at the 100-percent rate.

Because almost 99 percent of all returns for decedents who die in a given year are filed by the end of the second calendar year following the year of death, and because the decedent's age at death and the length of time between the decedent's date of death and the filing of an estate tax return are related, it was possible to predict the percentage of unfiled returns within age strata. The sample weights were adjusted accordingly, in order to account for returns for 2007 decedents not filed by the end of Filing Year 2009.

[p] Preliminary.
[1] Year-to-year comparability of the "all returns" total is affected by changes in dollar income filing thresholds, while year-to-year comparability of the number of returns by type of tax form used is affected by changes in the specific filing requirements, including adjustments for inflation, for each form. In general, the filing of "short forms" (mostly Forms 1040A and 1040EZ) has been encouraged by IRS to simplify both taxpayer filing requirements and IRS processing. Filing requirements for each of the short forms have, therefore, been gradually liberalized to facilitate their use. Increases in the number of short forms have mostly been at the expense of "long form" 1040 usage (although increases in the number of each of the short forms have often been at the expense of one short form over another). While the number of 1040 (paper) returns has, therefore, increased over the time period shown, the rate of increase has been reduced by the use of the short forms, and, later, by electronic filing options (see below), including, for 1999, use of Form 1040PC. For additional information about the return filing requirements, see the annual reports, Statistics of Income-Individual Income Tax Returns. Forms 1040, 1040A, and 1040EZ include "standard" electronicallyfiled ("ELF" or "e-file") returns, and Form 1040EZ returns filed electronically by telephone ("TeleFile" for 1999-2004 only). Form 1040PC (computer-generated "paper") returns were not reclassified for Statistics of Income for 1999; data for Forms 1040, 1040A, and 1040EZ for this year are not comparable with preceding years (Form 1040PC did not apply after 1999). For 2006, the total number of Form 1040EZ returns includes 742,859 Form 1040EZ-T returns.
[2] Taxpayers could elect to assign $\$ 3$ of the income tax reported on their returns ( $\$ 6$ on a joint return, if both spouses contributed) to help pay for the cost of Presidential election campaigns. To do so, a taxpayer had to check a box on the tax return. The relationship between (a) the number of returns and boxes checked and (b) the dollar amounts shown is only approximate because the frequencies and the amounts were obtained from different sources, the frequencies from Statistics of Income tax return data and the dollar amounts from IRS monthly tax collections, aggregated by calendar year. It should be noted that the frequencies and amounts are related to the tax year for which statistics are shown, even though the designation by the taxpayer occurred in the following year, when the income tax return was filed and processed.
[3] Less deficit.
[4] Taxable interest includes "dividends" on deposits and withdrawable shares in mutual savings banks, savings and loan associations, and credit unions, but excludes interest from Regulated Investment Companies on money market mutual funds, which is included in "dividends" in "adjusted gross income" (AGI).
[5] Not included in AGI. Represents interest on State and local government obligations, including tax-exempt interest dividends from Regulated Investment Companies.
[6] Dividends in AGI exclude capital gains and liquidating dividends, reflected in the statistics for net capital gain or loss in AGI, but include interest from Regulated Investment Companies on money market mutual funds. Qualified dividends are the ordinary dividends received after May 5,2003 , that met certain conditions. These included: the dividend must have been paid by a U.S. corporation or a "qualified" foreign corporation; the stock ownership must have met certain holding period requirements; the dividends were not from certain institutions, such as mutual savings banks, cooperative banks, credit unions, tax-exempt organizations, or farmer cooperatives; and the dividends were not for any share of stock which was a part of an employee stock ownership plan (ESOP).
[7] Rent net income (or loss) excludes sole proprietorship (including farm) rental income or loss; these are included in business or profession net income or loss. Rental losses are before "passive loss" limitation and, therefore, exceed the amount included in AGI.
[8] Losses are after "passive loss" limitation.
[9] Includes capital gains from the sale of assets held for personal use or investment, and also net gains from the sale of certain business property treated as net capital gains and from "involuntary conversions" of property, such as by casualty or theft. Also includes capital gains received from partnerships and S corporations. See also footnote 15 . Data represent total capital gains. Total includes capital gain distributions from Regulated Investment Companies. For other changes affecting capital gains, see Statistics of Income-Individual Income Tax Returns, various years. See also footnote 6.
[10] Includes capital losses (after limitation) from the sale of assets held for personal use or investment, including losses in excess of net gains from the sale of certain business property treated as net capital losses and "involuntary conversions" of property, such as by casualty or theft. Also includes capital losses received from partnerships and $\mathrm{Scorporations}$. also footnotes 6,15 , and 16 .
[11] Net gain or loss, not includable in capital gain or loss, from the sale of business property (excluding inventories and certain other assets) and "involuntary conversions" of property, such as by casualty or theft. See also footnote 15 .
[12] Excludes Individual Retirement Arrangement (IRA) distributions.
[13] Represents total unemployment compensation.
[14] Up to 85 percent of Social Security benefits were taxable.
[15] Excludes certain royalties included in the computations of capital gain or loss and of ordinary gain or loss in sales of noncapital assets. .
[16] Excludes capital gains and losses.
[17] Includes adjustments not shown separately in this table. Total excludes certain business-related expenses, deduction for two-earner married couples, and certain alimony payments.
[18] Contributions to education and Roth IRAs were nondeductible and are, therefore, not included in the statistics.
[19] Beginning in Tax Year 2004, a taxpayer could have taken a deduction for contributions to a Health Savings Account. The deduction was limited to the annual deductible on the qualifying high deductible health plan and other criteria.
[20] Exemption amounts were indexed for inflation. Amounts were also limited for taxpayers with high incomes. A check box on the return was used for taxpayer's age 65 or over, in general, for use in establishing claims for the additional standard deductions, but many taxpayers not claiming the additional deductions also used the check box. The amount shown for exemptions excludes amounts in excess of AGI, which were reported but could not be used by the taxpayer. The number of exemptions and amounts also excludes the number and amounts reported on returns with no AGI, which did not figure into the computation of tax as a result.

# Selected Historical and Other Data 

## Table 1. Individual Income Tax Returns: Selected Income and Tax Items for Tax Years 2004-2010— Continued

Footnotes-Continued
[21] In general, represents the sum of standard and itemized deductions from AGI to compute "taxable income" (the tax base for the regular income tax), but also includes deductions in excess of AGI that could not be used in the computation. Deductions erroneously reported on returns with no AGI were excluded from the deduction statistics. Includes revised itemized deductions (see also footnotes 25-26), "basic" standard deduction, and "additional" standard deductions for age 65 or over or for blindness (for changes in the standard deduction and its relation to the zero bracket amount, see Statistics of Income-Individual Income Tax Returns, for appropriate years). Total itemized deductions are after statutory limitation (see footnote 23).
22] Standard deductions were indexed for inflation. Statistics for taxpayers with the additional standard deduction for age 65 or over exclude those who checked the box on tax returns indicating age 65 or over, but then itemized their deductions instead of claiming standard deductions (see footnote 20). For the percentages of AGI used for the standard deduction and the limitation on the deduction, see Statistics of Income-Individual Income Tax Returns.

23] Includes itemized deductions not shown separately in this table, including revised deductions, for "miscellaneous expenses" after limitation and for employee moving expenses. In general, total itemized deductions were limited for certain high-income taxpayers. This limitation was indexed for inflation.
[24] Deductible medical and dental expenses were limited, based on a percentage of AGI. The definition of expenses includes payments for certain long-term care insurance premiums and for the unreimbursed cost of certain long-term care of a chronically ill individual.
[25] Starting with 2004, a taxpayer could have elected to deduct State and local general sales taxes instead of State and local income taxes as itemized deductions on Schedule A.
[26] Deductions for mortgage real estate loan interest were limited. Personal interest was not deductible.
[27] Includes "alternative minimum tax" (AMT), starting with 2000. For previous years, AMT was excluded and was reflected only in "total income tax" (see footnote 31)
28] Different tax rate structures for the regular income tax applied to Tax Years 1999-2010. Indexing of tax rate boundaries for inflation existed. The preferential maximum tax rate on net long-term capital gains under "alternative tax" was revised over the years. Alternative tax was abolished, but a maximum capital gain tax rate less than the maximum regular tax rate continued to apply under certain conditions. For additional information on changes affecting tax computations, see Table 23 of the appendix to the historical section of this report and Statistics of Income-Individual Income Tax Returns.
[29] Includes the portion of refundable credits used to offset income tax before credits. Earned income credit and refundable American opportunity credit are shown below in Table 1. See also footnote 33.
[30] Includes credits such as the low-income housing credit, child adoption credit, and "empowerment zone employment" (EZE) credit not shown separately.
31] The statistics for all years shown are comparable. However, prior to Tax Year 2000, total income tax is the sum of two components, income tax after credits and "minimum tax" or "alternative minimum tax (AMT)"; see footnotes 27 and 32. Starting with Tax Year 2000, total income tax is, in general, the same as income tax after credits, which was redefined to include AMT. (The small difference between the two amounts for 2000 is due mainly to the inclusion in the statistics for Tax Year 2000 of prior-year returns filed in Calendar Year 2001 that were used as proxies for Tax Year 2000 returns filed after 2001; the AMT on these returns was included in total income tax, but not in income tax before or after credits, consistent with the reporting sequence on the tax return forms for these years. The same is true for Tax Year 2002 for prior returns filed in Calendar Year 2003 for Tax Year 2000 and earlier. To a far lesser extent, the difference between total income tax and income tax after credits represents the tax on accumulation distributions of trusts, which was included in total income tax only.) Total income tax reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the income tax liability that was payable to the U.S. Department of the Treasury.
[32] Under "alternative minimum tax" (AMT), generally high-income taxpayers to whom the tax applied were required to pay the larger of the regular income tax or the AMT. As of 2010, examples of preferences or adjustments subject to recapture through the AMT were accelerated depreciation, incentive stock options, certain itemized deductions, personal exemptions, certain tax-exempt interest, and income loss from tax-shelter farm or "passive" investment activities. AMT is shown separately in the statistics for all years. However, starting with 2000, AMT is also included in "income tax before credits," as well as in "income tax after credits" and "total income tax." Previously, AMT was only included in "total income tax."
[33] In Table 1, the amounts "used to offset income tax before credits" and "used to offset other taxes" (that are income-related) are reflected in the statistics for "total tax credits"; however, the "excess" or refundable portion of the credits are reflected in the statistics for tax "overpayments." The refundable portion of the credit is the amount (in excess of the taxes) that could not be credited, including any "advance earned income credit payments" on those returns that had such an excess. ("Advance earned income credit payments" were made to employees electing to receive such payments currently through their paychecks. Such "payments" are included in the statistics only if the employees also met the tax return filing requirements; advance payments received by those not required to file are, therefore, excluded.)
[34] Represents payments reflecting the sum of "total income tax" (see footnote 31), tax recapture of certain prior-year tax credits, tax applicable to Individual Retirement Arrangements (IRAs), and Social Security taxes on "self-employment income" and on certain employee tip income, as well as on other income-related taxes applicable to the years shown (see Statistics of Income-Individual Income Tax Returns). The total also includes the following not shown separately below in Table 1: "advance earned income credit payments" and credits for (a) capital gain tax paid by a Regulated Investment Company, but considered paid by shareholders, and (b) part of the purchase price of a diesel-powered highway vehicle. .
[35] Represents tax withheld on (a) salaries and wages; (b) certain tip income; (c) pensions and annuities; (d) certain gambling winnings; and (e) distributions from profit-sharing plans, retirement plans, and Individual Retirement Arrangements (IRAs). Also included are taxes withheld as a result of "backup withholding" on certain interest, dividends, and royalty payments, which otherwise were not subject to withholding.
[36] Represents the sum of (a) "estimated tax," generally paid quarterly throughout the tax year by self-employed and certain other taxpayers with insufficient or no tax withheld, and (b) prior-year tax overpayments taxpayers elected to credit to their current-year's "estimated tax" in lieu of requesting a refund.
[37] Represents the sum of payments made with a request for an "automatic" 4-month extension of time in which to file an income tax return, and payments with a request for an additional 2-month extension. Notwithstanding the timing of these requests, full payment of a tax estimate for the year had to be made with the original application; if adjustments to the amount thus paid were later necessitated, the difference was either refundable or payable subject to an interest charge (which is not reflected in the tax statistics).
[38] Includes refunds (shown separately), plus credits to the following year's "estimated tax" and the refundable portion of any refundable credits (see footnote 33). The taxes reflected in tax overpayments are the same as those listed in footnote 35 .
[39] Not applicable.
[40] Not available.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

## Selected Historical and Other Data

Table 2. Individual Income and Tax Data, by State and Size of Adjusted Gross Income, Tax Year 2010
[Money amounts are in thousands of dollars]

Footnotes at end of table.

## Table 2. Individual Income and Tax Data, by State and Size of Adjusted Gross Income, Tax Year 2010-

 Continued
## Footnotes

An expanded version of this table showing additional tax items and AGI classes is available at the following link on the IRS website: http://www.irs.gov/taxstats/article/0,,id=171535,00.html. *Less than \$500.
${ }^{* *}$ Not shown to avoid disclosure of information about specific taxpayers. However, the data are combined with data in an adjacent size class, as appropriate, and included in the appropriate totals.
[1] Includes returns with adjusted gross deficit.
[2] Less deficit.
[3] "Number," here, and elsewhere in Table 2, represents number of returns, unless otherwise specified.
[4] Includes the Alaskan permanent fund, reported by residents of Alaska on Forms 1040A and 1040EZ's. This fund only applies to statistics in the U.S. totals, and the State of Alaska.
[5] "Itemized deductions" include any amounts reported by the taxpayer, even if they could not be used in computing "taxable income," the base on which the regular income tax was computed. Thus, total itemized deductions include amounts that did not have to be reported by taxpayers with no "adjusted gross income." (Adjusted gross income is the total from which these deductions would normally be subtracted.) In addition, if standard and itemized deductions were both reported on a tax return, the form of deduction actually used in computing income tax was the one used for the statistics. Therefore, if the standard deduction was the form of deduction used, the total reported for itemized deductions was excluded from the statistics. However, the component deductions were not similarly excluded. As a result, the number of returns and related amounts for the component deductions are slightly overstated in relation to the grand total shown for itemized deductions. These components are also overstated in relation to the total because there was a statutory limitation on the total of itemized deductions that could be claimed by certain high-income taxpayers. This limitation did not affect the component deductions, the sum of which therefore exceeded the total used in computing income tax.
[6] Unlike Table 1, Table 2's "Total tax credits" excludes the "earned income credit" which is shown separately below in the table.
[7] "Earned income credit" includes both the refundable and non-refundable portions. The non-refundable portion could reduce income tax and certain related taxes to zero. The earned income credit amounts in excess of total tax liability, or amounts when there was no tax liability at all, were refundable. See footnote 8 below for explanation of the refundable portion of the earned income credit.
[8] The refundable portion of the "earned income credit" equals "total income tax" minus the "earned income credit." If the result is negative, this amount is considered the refundable portion. No other refundable credits were taken into account for this calculation.
[9] The "refundable education credit" can partially or totally offset tax liability as well as be totally refundable.
[10] Taxpayers were only allowed to claim the "first-time homebuyer credit" in Tax Year 2010 if their modified AGI was below $\$ 145,000$ ( $\$ 245,000$ if married filing jointly), and they entered into a binding contract before May 1, 2010. Table 2 data does not include any amendments made to returns claiming the credit.
[11] "Income tax" reflects the amount reported on Form 1040 line 55. It also includes data from Form 1040A and 1040EZ filers. This amount differs from "income tax after credits" used in statisitical tables dervived from the Individual Statistics of Income (SOI) sample. The SOI figure for "income tax after credits" takes in to account the effect of refundable credits.
[12] For Table 2, "Total tax liability" differs from "Income tax," in that "Total tax liability" includes the taxes from recapture of certain prior-year credits, tax applicable to individual retirement arrangements (IRA's), social security taxes on self-employment income and on certain tip income, advanced earned income payments, household employment taxes, and certain "other taxes" listed in the Form 1040 instructions.
[13] Reflects payments to or withholdings made to "Total tax liability." This is the amount the tax filer owes when the income tax return is filed.
[14] The amount of overpayments the tax filer requested to have refunded.
[15] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.
NOTES: This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2011, including any returns filed for tax years preceding 2010.
In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the total tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in Table 2 should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes and that U.S. totals in this table may not be altogether comparable to U.S. totals in Tables 1 and 3 , as a result. Also, see footnote 15 , above for differences in tax return coverage, which affects U.S. totals in this table.
Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer, or accountant, or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.
For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the Spring SOI Bulletin. For further explanation of the tax terms, refer to the respective years' "Statistics of Income—Individual Income Tax Returns," Publication 1304.

## Detail may not add to totals because of rounding.

## Selected Historical and Other Data

Table 3. Number of Individual Income Tax Returns, Income, Exemptions and Deductions, Tax, and Average Tax, by Size of Adjusted Gross Income, Tax Years 2008-2010—Continued

## Footnotes

[p] Preliminary.
[1] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in "adjusted gross income" or "taxable income," which are subject to the "alternative minimum tax" (included in "total income tax"), defined in Table 1, footnote 32.
[2] "Adjusted gross income" (AGI) minus "personal exemptions and total deductions" will not equal "taxable income" because the total of deductions and exemptions could exceed AGI and, therefore, includes amounts that could not be used in computing "taxable income."
[3] Not computed.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. Percentages shown in this table are based on dollar amounts rounded to the units indicated in the specific table heading. Therefore, they may not be as precise as percentages based on the fuller dollar amounts found in tables contained in the source publications or articles which underlie the historical tables presented in this section of the SOI Bulletin.

Table 7. Standard, Itemized, and Total Deductions Reported on Individual Income Tax Returns, Tax Years 1950-2010
[All figures are estimates based on samples-number of returns is in millions; money amounts are in billions of dollars]

| Tax year | Total number of returns | Total deductions |  | Standard deduction |  | Itemized deductions |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Amount [1] | As a percentage of adjusted gross income (AGI) [2] | Number of returns [3] | Amount [4] | Number of returns [3] | Amount [5] |

## Selected Historical and Other Data

Table 7. Standard, Itemized, and Total Deductions Reported on Individual Income Tax Returns, Tax Years 1950-2010-Continued
[All figures are estimates based on samples-number of returns is in millions; money amounts are in billions of dollars]

| Tax year | Total number of returns | Total deductions |  | Standard deduction |  | Itemized deductions |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Amount [1] | As a percentage of adjusted gross income (AGI) [2] | Number of returns [3] | Amount [4] | Number of returns [3] | Amount [5] |
|  | (1) | (2) | (3) | (4) | (5) | (6) | (7) |
| 1998 | 124.8 | 1,135.9 | 21.0 | 85.6 | 459.5 | 38.2 | 676.5 |
| 1999 | 127.1 | 1,205.3 | 20.6 | 85.8 | 464.0 | 40.2 | 741.4 |
| 2000 | 129.4 | 1,293.2 | 20.3 | 85.7 | 470.8 | 42.5 | 822.4 |
| 2001 | 130.3 | 1,366.4 | 22.1 | 84.2 | 481.9 | 44.6 | 884.5 |
| 2002 | 130.1 | 1,390.1 | 23.0 | 82.7 | 492.1 | 45.6 | 898.0 |
| 2003 | 130.4 | 1,457.6 | 23.5 | 84.6 | 555.8 | 43.9 | 901.9 |
| 2004 | 132.2 | 1,559.2 | 23.0 | 84.0 | 560.9 | 46.3 | 998.2 |
| 2005 | 134.4 | 1,702.6 | 22.9 | 84.8 | 580.7 | 47.8 | 1,121.8 |
| 2006 | 138.4 | 1,836.7 | 22.9 | 86.6 | 607.5 | 49.1 | 1,229.2 |
| 2007 | 143.0 | 1,987.2 | 22.9 | 90.5 | 654.2 | 50.5 | 1,333.0 |
| 2008 | 142.5 | 2,017.8 | 24.4 | 91.8 | 695.5 | 48.2 | 1,322.3 |
| 2009 | 140.5 | 1,951.6 | 25.6 | 92.3 | 747.8 | 45.7 | 1,203.8 |
| 2010 [p] | 142.9 | 1,911.5 | 23.8 | 94.0 | 743.3 | 46.5 | 1,168.2 |

[p] Preliminary.
[1] Sum of standard and itemized deductions, plus charitable contributions deduction reported on standard deduction returns for Tax Years 1982-1986. Amount of total deductions for 1950-1957 was estimated by Joseph A. Pechman, The Brookings Institution, using his estimate of the standard deduction for these years (see footnote 4) plus the total for itemized deductions published in Statistics of Income—Individual Income Tax Returns Part 1 for 1950-1953 and Statistics of Income-Individual Income Tax Returns for 1954-1957. Starting with 1958, total deductions were obtained directly from Statistics of Income-Individual Income Tax Returns. Deductions exclude amounts shown as "statutory adjustments" in Table 1. For Tax Years 1987-1988, total deductions also include the "zero bracket amount" reported on a small number of returns (see footnote 4). It includes total deductions as reported by taxpayers, even if the total exceeded "adjusted gross income" (AGI) and, therefore, could not be used.
[2] Data for years 1987 and after are not comparable to pre-1987 data because of major changes in the definition of "adjusted gross income" (AGI).
[3] Series revised, starting with the Spring 1997 SOI Bulletin, to exclude from the standard deduction statistics, the relatively small number of returns with no adjusted gross income and no deductions. Previously, these returns were classified as if they showed a standard deduction. For the 1977-1986 statistics, the standard deduction is the "zero bracket amount" (reported on returns with only a "zero bracket amount"). Such an amount was also included for a small number of returns for 1987-1988 (see footnote 4). For years in which the "zero bracket amount" was in effect, frequencies shown for standard deduction returns were derived by subtracting the number reporting an income tax liability, but no itemized deductions, from the total of all returns. For 1950-1952, returns with itemized deductions include the small number of returns with no deductions and, for 1950-1954, the small number with no income, regardless of whether or not deductions were itemized. For later years, returns in these two categories were excluded from all the deduction statistics in this table.
[4] Amount of standard deduction for 1950-1957 was estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of returns by income class and marital status in Statistics of Income— Individual Income Tax Returns Part 1 for 1950-1953 and Statistics of Income—Individual Income Tax Returns for 1954-1957, and, starting with 1958, was obtained directly from Statistics of Income-Individual Income Tax Returns. It represents the "zero bracket amount" for 1977-1986. Starting with 1987, it represents the sum of "basic" and "additional" standard deductions (for age 65 or over and for blindness); also includes the "zero bracket amount" reported on the small number of prior-year returns filed in 1988-1989 that were included in the 1987-1988 statistics as proxies for returns due but not received.
[5] For 1977-1986, total itemized deductions are before subtraction of the "zero bracket amount." Starting with 1991, total itemized deductions are after statutory limitation (see Table 1 , footnote 23).
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. Percentages shown in this table are based on dollar amounts rounded to the units indicated in the specific table heading. Therefore, they may not be as precise as percentages based on the fuller dollar amounts found in tables contained in the source publications or articles which underlie the historical tables presented in this section of the SOI Bulletin.

Table 9. Number of Individual Income Tax Returns, by Type of Tax Settlement, Tax Years 1950-2010 [All figures are estimates based on samples-number of returns in millions]

| Tax year | Total number of returns | Number of returns with- |  |  |
| :---: | :---: | :---: | :---: | :---: |

[1] Represents the number of returns, even if there was more than one business per return.
[2] "Total deductions" include amounts not shown separately in this table, as well as amounts not itemized separately on Schedule C-EZ (short form) used by certain of the smaller businesses. Most deductions for which statistics are shown are slightly understated to the extent that only total deductions had to be reported on Schedule C-EZ. Total deductions exclude disallowed "passive losses"; but net income (less deficit), net income, and deficit reflect these losses. In addition, net income (less deficit), net income, and deficit are after adjustment for the passive loss carryover from prior years. Therefore, "business receipts" minus "total deductions" do not equal "net income (less deficit)."

## [3] Not available.

NOTES: There are slight differences between: (a) the number of individual income tax returns "with business or profession net income or loss" and the associated amounts, based on the summarized totals on the face of the tax return (Table 1), and (b) the related number of individual income tax returns "with nonfarm business net income or deficit" and the associated amounts, based on data from Schedules C filed in support of the total on the face of the return (Table 10). These differences result from the somewhat larger tax return samples underlying the sole proprietorship statistics for more recent years, and also from the taxpayer reporting variations and inconsistencies, e.g., in the occasional misreporting of farm versus nonfarm business activity on the face of the return compared to what was indicated in supporting schedules, and in the equating of certain partnership income or employee business expenses with the presence of sole proprietorship activity. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

## Selected Historical and Other Data

Table 11. Partnership Returns: Selected Balance Sheet and Income Statement Items for Income Years, 2003-2009

[r] Revised.
[1] Certain small partnerships were not required to file balance sheets.
[2] Number of limited partnerships, limited liability companies, and the associated number of partners are understated because some businesses failed to answer the question about type of partnership on their tax returns as originally filed.
[3] Total assets, total liabilities, and partners' capital account represent end-of-year amounts. Moreover, they are understated somewhat because not all partnerships included a complete balance sheet and because of the reporting requirement mentioned in footnote 1, above. However, certain partnerships with negative total assets, total liabilities, and/or total partners' capital are included in the statistics.
[4] Short-term debt is the abbreviated title for mortgages, notes, and bonds payable in less than 1 year
[5] Long-term debt is the abbreviated title for mortgages, notes, and bonds payable in 1 year or more.
[6] "Total receipts" and "total deductions" include amounts not shown separately. Total receipts were computed for the statistics as the sum of trade or business income (gross receipts or sales less returns and allowances (business receipts); ordinary income from other partnerships, estates, and trusts; farm net profit; net gain, noncapital assets; and other income from trade or business), as well as income distributed directly to partners (net rental real estate income; other net rental income; interest income; dividend income; and royalties). Total deductions were computed as the sum of trade or business expenses (cost of goods sold; ordinary loss from other partnerships; net farm loss; net loss, noncapital assets; other loss from trade or business; and total deductions from trade or business), as well as losses distributed directly to partners (net rental real estate loss; and other net rental loss). Starting in 2004, othe portfolio income (loss) was not included in total receipts and deductions because it was no longer reported separately on the tax return. Portfolio net short-term capital gain (loss) and net long-term capital gain (loss) continue to be intentionally omitted from total receipts and total deductions in order to improve comparability with 1986 and prior data.
[7] Represents the more complete amounts reported in depreciation computation schedules, rather than the amounts reported as the depreciation deduction.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data.

Table 12. Number of Business Income Tax Returns, by Size of Business for Income Years, 2003-2009 [1]
[All figures are estimates based on samples—number of businesses is in thousands]

| Type and size of business | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

n.a.-Not available.
[r] Revised.
[1] Excludes business income tax returns filed by tax-exempt organizations. See Table 16.
[2] Size classes for corporations are based on "business receipts," i.e., gross amounts from sales and operations, for industries (a) except those in the "finance, insurance, and real estate" industrial division, using the former Standard Industrial Classification or SIC system for years preceding 1998, (b) then, starting with 1998, except those in the "finance and insurance" industrial sector and those in the "management of companies (holding companies)" sector (which includes bank holding companies, as well as other holding companies), using the North American Industrial Classification System or NAICS. For the groupings comprising these two exceptions, "total receipts," which are the sum of business receipts and investment income, were used instead of "business receipts" as the basis for the size classification. Because of the differing treatment of holding companies (other than bank holding companies) and of real estate and rental and leasing, the statistics, starting with 1998, are not completely comparable with those for earlier years
[3] Includes returns with no "business receipts" (or no "total receipts" in the case of certain corporations as described in footnote 2).
[4] Includes corporations and partnerships with "zero assets and liabilities." For corporations, returns with zero assets represent final returns of liquidating or dissolving corporations which had disposed of all assets; final returns of merging corporations whose assets were included in the returns of the acquiring corporations; part-year returns of corporations changing accounting periods (except for certain newly-incorporated businesses); and returns of foreign corporations with income "effectively connected" with a U.S. business (except foreign insurance companies providing separate balance sheets for U.S. branches). For partnerships, returns with zero assets include businesses not required to file balance sheets, as well as businesses that failed to provide balance sheets on their returns as originally filed. See also Table 11, footnote 1.
[5] Size classes for partnerships are affected by changes in the definition of receipts. (See Table 11, footnote 6.)
[6] Sole proprietors are not required to provide balance sheet information.
NOTES: Statistics for corporations are for accounting periods ended July of one year through June of the next. Thus, for example, corporation data for 2009 are for accounting periods ended July 2009 through June 2010. Statistics for nonfarm sole proprietorships and partnerships are, in general, for the calendar year. Data may not add to totals because of rounding Most of the data are subject to sampling errors. Tax law and tax form changes affect the year-to-year comparability of the data.

Table 13. Corporation Income Tax Returns: Balance Sheet, Income Statement, and Tax Items for Income Years, 2003-2009
[All figures are estimates based on samples-money amounts are in thousands of dollars]

N/A-Not applicable.

## [r] Revised or corrected.

[1] Excludes inactive corporation returns. Excludes taxable farmers' cooperatives; Real Estate Mortgage Investment Conduits (REMIC's); Foreign Sales Corporations (FSC's) and Interest-Charge Domestic International Sales Corporations (IC-DISC's). Because of the omission of these categories of returns, annual totals for the income, financial, and tax items shown in the statistics (except those not applicable to IC-DISC's and FSC's, such as "income subject to tax," "income tax," and tax credits) are not altogether comparable. Corporations that otherwise qualified as S corporations, but that had subsidiaries, could qualify, provided the subsidiaries also qualified as S corporations. These subsidiaries are included in the income tax returns of the parent $S$ corporations. S corporation net income totals for receipts and deductions are slightly understated to the extent that they were not directly related to the "income from a trade or business" reported by these companies. Comparability of data for "returns with net income" is also affected by the exclusion of certain amounts for Regulated Investment Companies. For additional information about these changes, see footnote 16 below.
[2] Consolidated returns were filed on an elective basis for groups of affiliated corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group, and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates. Consolidated returns exclude $S$ corporations (defined in footnote 4), although, S corporation returns could include subsidiaries that were also S corporations. Returns filed by parent S corporations which include qualifying subsidiaries are included in the Scorporation frequencies shown in Table 13. Consolidated returns also exclude all real estate investment trusts (REIT's).
[3] Included in "number of returns, total" and "number with net income."
[4] In general, certain small qualifying corporations that elected to be taxed at the shareholder level. These corporations could have no more than 75 shareholders (mostly individuals). $S$ corporation returns could include subsidiaries if the subsidiaries also qualified as $S$ corporations, with income and financial data for both parent and subsidiaries combined on the return of the parent corporation.
[5] Balance sheet data are end-of-year amounts.
[6] Inventories include amounts reported by real estate subdividers and developers.
[7] Tax-exempt securities include not only investments in State and local government obligations, but also stock in investment companies that distributed dividends during the current year representing tax-exempt interest on such obligations.
[8] Accounts payable of banking and savings and loan institutions could include deposits and withdrawable shares.
[9] Amounts for "adjustments to shareholders' equity" are reported separately on the tax return.
[10] In general, Statistics of Income data for receipts, deductions, and net income (or deficit) of S corporations are limited to those attributable to a trade or business. Therefore, most investment income or loss, such as from taxable interest, dividends, rents, royalties, and gain (loss) from sales of investment property; the deductions related to this income; and deductions for charitable contributions, intangible drilling and development costs, oil and gas depletion, foreign taxes paid, and the limited expensing of the cost of depreciable assets (Code section 179) are not reflected in net income (because they were allocated directly to shareholders instead). See also footnote 4. Cost of goods sold applies when inventories are an income-determining factor, i.e., when the corporation was engaged in the production, manufacture, purchase, or sale of merchandise in the course of its trade or business. For all years, identifiable amounts of depreciation, depletion, amortization, taxes paid, advertising, bad debts, compensation of officers, employee plan contributions, interest paid, and rent found in taxpayer schedules in support of the total cost of goods sold/cost of operations were transferred to their respective deduction headings for the statistics. This enabled more complete statistics for these expenditures to be produced.
[11] "Business receipts" include the gross proceeds (netting during statistical processing against the cost of these sales) reported by stock and commodity brokers and exchanges, and by real estate subdividers, developers, and operative builders, even when they bought and sold securities, commodities, and real estate on their own account.
[12] "Other interest" includes any dividends reported in combination with interest on the Form 1120 S tax return by S corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 4).
[13] Identifiable amounts reported on Form 1120-A are included in the statistics for the appropriate deduction. Form 1120-A became obsolete in 2007. "Other deductions" include certain amounts previously treated as part of the combined "cost of goods sold/cost of operations" for Statistics of Income. See also footnote 10.
[14] In general, "total receipts less total deductions" include tax-exempt interest on State and local government obligations, but exclude income from related foreign corporations only "constructively" received. As such, "total receipts less total deductions" represent all income, taxable and nontaxable, "actually" received by the corporation, as reported on the corporation income tax return, and exclude all income only "constructively" or "deemed" received. In contrast, "net income (less deficit)" represents all taxable income, actually or constructively received. Therefore, in the statistics, "total receipts less total deductions" minus "nontaxable interest on State and local government obligations" plus "constructive taxable income from related foreign corporations" equal "net income (less deficit)." For the exception, due to Regulated Investment Companies, see footnote 16.
[15] Represents "income" that was only "constructively" or "deemed" received from foreign corporations and that was taxed to the U. S. corporation. (In general, such income was otherwise subject to U. S. income tax only when actually repatriated as dividends.) For the statistics, it is the sum of "includable income of Controlled Foreign Corporations" and the "foreign dividend gross-up," reported separately on the tax return. The "includable income" was comprised of specific types of undistributed income earned by a Controlled Foreign Corporation that were taxed under certain conditions to the U. S. shareholder corporations unless an actual "minimum distribution" was made. The foreign dividend gross-up represents a share of the foreign taxes paid on the profits of certain foreign subsidiaries out of which they paid dividends to their U.S. parent corporations and for which the parent corporation then claimed a foreign tax credit.
[16] "Net income (less deficit)," "net income," and "deficit" exclude: (a) net long-term capital gain reduced by net short-term capital loss reported by Regulated Investment Companies (see footnote 14), and (b) amounts other than from a trade or business, i.e., portfolio and rental income, reported by S corporations (see footnote 4). For additional information about Scorporation net income, see the various articles on Scorporations in the Bulletin.

## Selected Historical and Other Data

Table 13. Corporation Income Tax Returns: Balance Sheet, Income Statement, and Tax Items for Income Years, 2003-2009-Continued

## Footnotes-Continued

[17] For some years, "income subject to tax" (the corporate tax base) exceeds "net income (less deficit)" in the statistics, chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined for the statistics as net income minus certain statutory special non-business deductions, such as for intercorporate dividends received and "net operating losses" carried forward from prior years). Profits of S corporations were mostly taxed through shareholders (who had to be individuals, estates, or trusts).
[18] Includes Personal Holding Company tax; tax on "branch profits" of foreign corporations with U.S. operations; and certain lesser taxes, including special taxes applicable to Real Estate Investment Trusts (REIT's) and foreign corporations with U.S.-source income. "Total income tax" more closely represents worldwide income tax liability because it is before subtraction of the foreign tax credit, the largest of the tax credits. To the extent that foreign tax credits adequately reflect the total foreign income tax burden, total income tax includes these taxes.
[19] Under AMT, corporations are required to compute their regular tax liability and their "tentative minimum tax" liability. The difference between the "tentative minimum tax" and the regular tax is the legally defined alternative minimum tax. The AMT was designed to ensure that, at least, a minimum amount of income tax was paid in spite of the legitimate use of exclusions, deductions, and credits. New corporations and certain small corporations were not subject to the AMT.
[20] Tax credits are applied against "regular tax" only. See also footnote 22.
[21] Not all components of the general business credit are shown separately. Most components are subject to a combined overall limitation, therefore the amounts shown in the table are tentative. Certain credits are subject to a separate limitation. For other changes in the definition of components of the general business credit, see Statistics of Income-Corporation Income Tax Returns, for the years concerned.
[22] "Total income tax after credits" is before any examination or enforcement activities by the Internal Revenue Service. May include credits not reported separately above. It is the amount payable to the U.S. Government as reported on the income tax return. Because it is after subtraction of foreign tax credit, this total does not include income taxes paid to foreign governments.
NOTES: Statistics are for corporate accounting periods ended July of one year through June of the next. Thus, for example, data for 2009 are for accounting periods ended July 2009 through June 2010. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

## Selected Historical and Other Data

Table 14a. Corporation Income Tax Returns: Selected Balance Sheet, Income Statement, and Tax Items, by Standard Industrial Classification (SIC) Industrial Division, Specified Income Years, 1985-1997Continued

## Footnotes

[1] Industrial classification is based on the product or service accounting for the largest percentage of "total receipts." (Total receipts are the sum of business or gross receipts, plus capital gains and income from investments, including rentals.) Starting with 1998, this classification is based on the North American Industry Classification System (NAICS), which replaced the Standard Industrial Classification (SIC) system. The SIC, in its various versions, was used to classify statistics for the years before 1998. Both systems were intended for Governmentwide use in classifying business statistics. (For information about NAICS and its usage in Canadian, Mexican, and U.S. Government statistics, see the Statistics of Income Bulletin, Summer 1997, Volume 17, Number 1, pp. 3-5.) Because there are substantial differences between NAICS and its predecessor SIC system, data by "industrial sector" for years beginning with 1998 (Table 14b) are shown apart from data for earlier years by "industrial division" (Table 14a). As an example of differences between the two systems, using NAICS, Statistics of Income classifies banks that were bank holding companies in the new "management of companies (holding companies)" sector, instead of in the "finance and insurance" sector. Using the SIC, bank holding companies had previously been classified in the "finance, insurance, and real estate" industrial division. For additional information about breaks in comparability caused by the changeover to NAICS, see Statistics of Income-1998, Corporation Income Tax Returns. If information for the business activity and product was not discernible from the corporation income tax return, the return was classified as with nature of business "not allocable." Data for nature of business "not allocable" are included in the totals for "all industrial divisions" (Table 14a) and "all industrial sectors" (Table 14b), but are not shown separately. Therefore, in addition to rounding differences, the statistics by industrial division or sector will not add to their respective grand totals.
[2] See Table 13, footnote 1.
[3] Balance sheet data are end-of-year amounts. Net worth is the sum of "capital stock," "additional paid-in capital," "retained earnings, appropriated," "retained earnings, unappropriated," and "adjustments to shareholders' equity" minus "cost of treasury stock." (Prior to 1997, data for "retained earnings, unappropriated" included "adjustments to shareholders' equity," not reported separately on the tax return.) Each of these amounts is presented separately in Table 13.
[4] See Table 13, footnotes 10 and 14.
[5] See Table 13, footnote 11.
[6] Interest received is the sum of "interest on State and local government obligations" (i.e., tax-exempt interest) and "other interest" (which includes interest paid by banking and savings institutions). Data for both of these amounts are presented separately in Table 13. See also Table 13, footnote 12.
[7] In addition to regular tax (and alternative tax) for years prior to 1988, includes certain other taxes either shown separately in Table 13 or mentioned in Table 13 , footnote 18 .
[8] Beginning with Tax Year 1987, "Alternative tax" was repealed. See also Table 13, footnote 19.
NOTES: Statistics are for corporate accounting periods ended July of one year through June of the next. Thus, for example, data for 1997 are for accounting periods ended July 1997 through June 1998. Data may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling errors. Tax law and tax form changes affect the year-to-year comparability of the data.

[1] Industrial classification is based on the product or service accounting for the largest percentage of "total receipts." (Total receipts are the sum of business or gross receipts, plus capital gains and income from investments, including rentals.) This classification is based on the North American Industry Classification System (NAICS). The system was intended for Governmentwide use in classifying business statistics. (For information about NAICS and its usage in Canadian, Mexican, and U.S. Government statistics, see the Statistics of Income Bulletin, Summer 1997, Volume 17, Number 1, pp. 3-5.). If information for the business activity and product was not discernible from the corporation income tax return, the return was classified as with nature of business "not allocable." Data for nature of business "not allocable" are included in the totals for "all industrial sectors," but are not shown separately. Therefore, in addition to rounding differences, the statistics by industrial division or sector will not add to their respective grand totals.
[2] See Table 13, footnote 1.
[3] Balance sheet data are end-of-year amounts. Net worth is the sum of "capital stock," "additional paid-in capital," "retained earnings, appropriated," "retained earnings, unappropriated," and "adjustments to shareholders' equity" minus "cost of treasury stock." Each of these amounts is presented separately in Table 13
[4] See Table 13, footnotes 10 and 14.
[5] See Table 13, footnote 11.
[6] Separate breakouts of "interest on State and local government obligations" (i.e., tax-exempt interest) and "other interest" (which includes interest paid by banking and savings institutions) are presented separately in Table 13. See also Table 13, footnote 12.
[7] In addition to regular tax, includes certain other taxes either shown separately in Table 13 or mentioned in Table 13, footnote 18. Includes adjustments to total tax which may be negative.
NOTES: Statistics are for corporate accounting periods ended July of one year through June of the next. Thus, for example, data for 2008 are for accounting periods ended July 2008 through June 2009. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

## Selected Historical and Other Data

| Unrelated business taxable income | 792 | 647 | 780 | 1,288 | 2,044 | 2,176 | 2,316 | 1,209 |
| Deficit [9] | 774 | 793 | 757 | 776 | 831 | 893 | 889 | 1,126 |
| Unrelated business income tax | 226 | 194 | 220 | 365 | 543 | 555 | 598 | 340 |
| Total tax [11] | 222 | 193 | 221 | 368 | 541 | 556 | 594 | 336 |

[1] Includes data reported by organizations described in Internal Revenue Code section 501(c)(3), excluding private foundations and most religious organizations. Organizations with receipts under $\$ 25,000$ were not required to file,
[2] Balance sheet data are end-of-year amounts.
[3] Represents fees collected by organizations in support of their tax-exempt purposes, and income such as tuition and fees at educational institutions, hospital patient charges, and admis sion and activity fees collected by museums and other nonprofit organizations or institutions
[4] For Tax Year 2007, The Bill and Melinda Gates Foundation reported "other investments," valued at $\$ 38.7$ billion for both book and fair market value. This amount represented the foundation's interest in the Bill and Melinda Gates Foundation Trust. These assets were also reported by the Bill and Melinda Gates Foundation Trust on its Form 990-PF. For statistical purposes, for Tax Year 2007, the reported amount of total assets (both book and fair market value) was reduced by $\$ 38.7$ billion to avoid overstating these joint assets. Similarly, for Tax Year 2008, the reported amount of total assets (both book and fair market value) was reduced by $\$ 29.6$ billion to avoid overstating these joint assets. For additional information, see http://www.gatesfoundation.org/annualreport/Pages/annual-reports.aspx.
[5] The amount of contributions, gifts, and grants shown reflects the amount actually disbursed, on a cash basis, for charitable purposes.
[6] Represents income that may be subject to the excise tax on net investment income under Internal Revenue Code section 4940, including interest, dividends, rents, royalties, net income from realized capital gains, and, beginning in 2006, certain other similar income from investments.

Table 16. Nonprofit Charitable Organization and Domestic Private Foundation Information Returns, and Exempt Organization Business Income Tax Returns: Selected Financial Data, 2001-2008—Continued

## Footnotes-Continued

[7] Includes returns filed by or for entities described in Internal Revenue Code sections 401(a) (qualified pension, profit-sharing, or stock bonus plans), 408(e) (Individual Retirement Arrangements, or IRA's), 408A (Roth IRA's), and 501(c)(2) through 501(c)(27) (charitable and most other types of tax-exempt organizations).
[8] The primary reason for the drop in gross unrelated business income (UBI) and total deductions between Tax Years 1997 and 1998 is the exclusion from the 1998 statistics of one association, which reported relatively large amounts of gross UBI and deductions for 1997 and prior years. The tax-exempt status of this association was terminated effective 1998. For additional information see Riley Margaret, "Unrelated Business Income Tax Returns, 1998," Statistics of Income Bulletin, Spring 2002, Volume 21, Number 4.
[9] Aggregate amounts of total deductions, unrelated business taxable income (less deficit), and deficit previously published in various issues of the Statistics of Income Bulletin have been adjusted in Table 16 for years prior to 1999. The revisions were required to take into account certain adjustments made to reported amounts of the "net operating loss deduction." During processing of the SOI sample of Tax Year 1999 returns, it was discovered that many Form 990-T filers were deducting the entire amount of any previous years' net operating loss carryover from net income (even when net income was zero or negative), rather than deducting only the part of the carryover amount needed to offset any positive net income amount. Entering the entire amount of the net operating loss carryover, as opposed to entering only the appropriate deduction amount, did not affect a filer's unrelated business income tax liability, but it did inflate the amount of deficit reported. Prior to 1992 , organizations with gross unrelated business income of $\$ 10,000$ or less were not required to report NOLD separately; therefore the adjusted amounts for 1990 and 1991 take into account only the larger organizations. If it had been possible to make adjustments for the smaller organizations, the amounts of total deductions and deficit would be somewhat smaller, and the amount of unrelated business taxable income (less deficit) would be somewhat larger.
[10] Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services is component of "gross unrelated business income" (upon which the filing requirement is based).
[11] Total tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the "proxy tax" on certain lobbying expenditures (applicable only to tax years after 1993), the "alternative minimum tax," and the environmental tax (applicable only to tax years prior to 1996). Beginning with Tax Year 2001, total tax also can include interest due, computed under the look-back method for certain depreciated property and completed long-term contracts, and "other" taxes, as described by the return filer.

Table 17. Taxable Estate Tax Returns as a Percentage of Adult Deaths, Selected Years of Death, 1934-2008-Continued

## Footnotes

[r] Revised.
[1] Starting with 1965, number of returns, total gross estate at date of death, and estate tax after credits are estimates based on samples. Beginning with 1982 , numbers in columns $2-5$ have been revised to reflect returns filed more than 3 calendar years after a decedent's death.
[2] Prior to 1982, year of death figures were approximated, using data from returns filed in a single calendar year. While many of the returns filed in a given calendar year represent returns of decedents who died in the immediately preceding year, others represent returns of decedents who died in earlier years. Starting with 1982, the statistics are by year of death, using the year of death reported on the estate tax returns filed during periods of at least 3 successive years.
[3] Total adult deaths represent those of individuals age 20 and over, plus deaths for which age was unavailable.
[4] Prior to 1964, a return was taxable if it showed an estate tax before credits. Starting with 1964, the classification was based on estate tax after credits.
[5] Year-to-year comparability of the data is affected by changes in the gross estate filing threshold which is based on year of death: 1934 (\$50,000); 1935 ( $\$ 50,000$ changing to $\$ 40,000$ ); 1936-1941 (\$40,000); 1942 (\$40,000 changing to \$60,000); 1943-1976 (\$60,000); 1977 (\$120,000); 1978 (\$134,000); 1979 (\$147,000); 1980 (\$161,000); 1981 (\$175,000); 1982 (\$225,000); $1983(\$ 275,000) ; 1984(\$ 325,000) ; 1985(\$ 400,000) ; 1986(\$ 500,000) ; 1987-1997(\$ 600,000) ; 1998(\$ 625,000) ; 1999(\$ 650,000) ; 2000-2001(\$ 675,000) ; 2002-2003$ (\$1,000,000); 2004-2005 (\$1,500,000); 2006-2008 (\$2,000,000).

NOTE: The title of this table has been changed from "Estate Tax Returns as a Percentage of Adult Deaths," in some previously published versions, to "Taxable Estate Tax Returns as a Percentage of Adult Deaths." However, the data contained in the table have not changed. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

# Table 20. Federal Excise Taxes Reported to or Collected by the Internal Revenue Service, Alcohol and Tobacco Tax and Trade Bureau, and Customs Service, by Type of Excise Tax, Fiscal Years 2005-2011Continued 

## Footnotes

## N/A—Not applicable.

[1] Tax "liability" statistics also include "collections" of the use tax on heavy highway vehicles and of the "crude oil windfall profit tax." See also the "Notes" below.
[2] Represents aggregates for two or more specific taxes for which amounts have either been combined or are not available separately.
[3] As of June 2006, taxable tires have been divided into three taxable types: taxable tires other than Biasply or Super Single tires; taxable tires, Biasply, or Super Single tires (other than Super Single tires designed for steering); and taxable tires, Super Single tires designed for steering.
[4] This tax is in addition to the regular tax on gasoline.
[5] Data for this and certain other taxes are combined and included in the totals for excise taxes "unclassified," shown below in Table 20. Data for the specific taxes were not separately tabulated.
[6] Based on information obtained from Forms 990-PF as recorded by the Tax Exempt/Government Entities Returns Inventory and Control System (RICS). Excludes data from nonexempt charitable trusts and foreign private foundations that file Form 990-PF.
[7] Based on information obtained from Forms 4720 as recorded by the Tax Exempt/Government Entities Returns Inventory and Control System (RICS). Includes data for initial taxes on self-dealing, required distributions, excess business holdings, jeopardizing investments, and taxable expenditures as reported on Forms 4720 filed by organizations, other than nonexempt charitable trusts, that were also required to file Form 990-PF.
[8] Includes excise taxes collected through the Federal Tax Deposit (FTD) system, which the Internal Revenue Service had not yet classified by type of excise tax. Classification is based on returns filed in the quarter following tax payment. Negative amounts for "unclassified" taxes result from subsequent classification of the previously unclassified taxes. See also the "Notes," below.
[9] Tax "liability" statistics shown for the Customs Service/Alcohol and Tobacco Tax and Trade Bureau (TTB) include tax "collections" on imported items for which the Customs Service is responsible. See also the "Notes," below.
[10] Taxes shown for the different types of domestic tobacco products are before postfiling tax adjustments. Therefore, the statistics by type of tax for domestic tobacco products will not add to the total tax on domestic tobacco products, which is after these adjustments. For additional information, see the "Notes," below, under "Statistics on Excise Taxes Administered by the Alcohol and Tobacco Tax and Trade Bureau (TTB) and the Customs Service."
[11] Before September 30, 2011 Liquid Petroleum Gas was included in Special Motor Fuels. Liquid Petroleum was renewed while Special Motor Fuels sunset.
NOTES: Grand totals for taxes shown for the Internal Revenue Service (IRS), the Alcohol and Tobacco Tax and Trade Bureau (TTB) (formerly the Bureau of Alcohol, Tobacco, and Firearms [ATF]), and the Customs Service represent tax "collections." (Fees for the Harbor Maintenance tax treated as excise taxes under the Internal Revenue Code are also collected by the Customs Service, but are excluded from Table 20 for consistency with the excise tax definitions and totals published in the Federal Budget.) For the grand totals, collections rounded to millions of dollars are all that are available. In general, amounts shown are the gross amounts, i.e., before refunds. However, as explained below, refunds are sometimes claimed as a credit against the tax reported on the excise tax return of a subsequent quarter so that, to this extent, the data are after refunds. "Floor stocks taxes" are shown separately in Table 20 because they are nonrecurring. They are generally imposed on holders of inventories on the date a new excise tax is imposed or a tax rate increased. Total collections represent tax payments made during the indicated fiscal year (or quarter), either through: (a) the semimonthly tax deposits required of most taxpayers with significant excise tax liabilities using Federal Tax Deposit (FTD) coupons, in the case of taxes collected by IRS, or Electronic Funds Transfers (EFTs), in the case of taxes collected by TTB/Customs, or (b) payments attached to quarterly excise tax returns. Statistics for both the total for taxes administered by the IRS and the taxes by type of tax represent tax "collections" (see below). Also, statistics on the types of tax take into account the normal lag that exists between the time most taxes are collected (through FTDs, the means by which most excise taxes are collected) and the recording of tax liabilities by type of tax as reported on excise tax returns and "certified" by IRS, as described below. For additional information, see the notes to Table 21 , Statistics of Income Bulletin, Fall 1998, Volume 18, Number 2, and also, "Federal Excise Taxes, Fiscal Years 1994 and 1995," Fall 1996, Volume 16, Number 2.
a. Statistics on excise taxes administered by the Internal Revenue Service: Corrections to the IRS data are reflected in the quarter(s) and year(s) in which the corrections were made, rather than in the data for the quarter(s) and year(s) in which the original tax liability arose (unlike the TTB /Customs data). The certified tax is net of refund credits reported on excise tax returns, not only for this reason, but for conformity with the Internal Revenue Code. As examples, tax can be offset for commodities exported that were previously taxed (exports are usually nontaxable), or for the sale of previously-taxed gasoline to a State or local government (or, in the case of TTB taxes, for alcohol used for a nonbeverage purpose). Other taxpayers apply directly for refunds and, for some of the taxes, are allowed to claim refunds by means of a credit against income tax. Because such refundable amounts were not reported on the excise tax return, they are not reflected in the Table 20 totals. (Other corrections to the IRS data for certain specific taxes are assumed to be due to misclassification and have been adjusted for as additions (or subtractions) to "Unclassified IRS taxes.")
b. Statistics on excise taxes administered by the Alcohol and Tobacco Tax and Trade Bureau (TTB) and the Customs Service: Excise taxes on alcoholic beverages and tobacco products are collected by both Customs Service (on imports) and TTB (on domestic production). Taxes on firearms and certain occupational taxes are also collected by TTB. So, TTB statistics represent tax "collections" on domestic alcohol and tobacco productions, as well as tax "collections" on firearms and certain occupations. By contrast, the tax statistics for the detailed types of taxes on domestic tobacco products are tax "liabilities." The grand totals for TTB and Customs Service tax "collections," as presented in Table 20, are residual amounts. They were derived by subtracting total IRS tax collections, which are available before most refunds, from the grand total of all excise tax gross collections reported in the Monthly Treasury Statement, rounded to millions of dollars, as shown at the beginning of Table 21. This subtraction is not precise because of definitional differences between IRS and TTB or Customs Service. In Table 20, TTB data have been rearranged so that tax liabilities are matched with tax collections in that same quarter. Previously, tax liabilities arising in a given quarter were not directly related to reported tax collections during that same quarter. Also, as previously noted, TTB amounts are often revised slightly as late returns are processed or postfiling adjustments are made to the tax. As a result, tax reported for prior periods is updated on a continuing basis, although the updated prior-year collections data are actually retabulated only for the one, most recent, prior year. Retabulated postfiling tax revisions for these earlier years are included for the first time in Table 21 of the spring 2002 issue of the Bulletin and affect previously published data for fiscal years, beginning with 1996.
However, as stated in footnote 10, above, postfiling revisions to the data for the immediately preceding fiscal year are not available for the detailed types of taxes on domestic tobacco products. Therefore, because revisions are available and are reflected in the total presented as the sum of these taxes, adding up the (unrevised) detail by type of tax will not yield the (revised) total. Detail may not add to totals because of rounding. All amounts are in current dollars. Tax law and tax form changes affect the year-to-year comparability of the data.

| Other | 54,300 | 49,800 | 49,000 | 45,600 | 41,900 | 36,100 |

[1] Form 1040 is the "long form," and Form 1040A is one of the two "short forms." The types of income that could be reported on Form 1040EZ were expanded, starting in 1996, to include unemployment compensation. Form 1040PC, discontinued after 2000, was the equivalent of a "paper" Form 1040, 1040A, or 1040 EZ return for which an IRS-approved computer software-generated compressed format was used. Schedule C is for reporting nonfarm sole proprietorship business profits, and Schedule F is for reporting farm sole proprietorship business profits. The reported data for total Forms 1040, 1040A, 1040EZ, and 1040PC returns, as well as the totals for nonbusiness and business Form 1040 returns with Schedules C or $F$ attached, are comprised of "paper" returns, plus "standard" electronically filed ("e-file") returns. Standard e-file returns are filed by authorized third parties, such as paid preparers and, approved "online" tax filing companies. For 2000 through 2005, the electronically filed totals also include returns filed by touch-tone telephone ("TeleFile"). IRS discontinued Telefile after 2005. The last category under individual income tax returns is comprised of 1040NR (nonresident alien); 1040PR (self-employment tax, Puerto Rico); and 1040SS (self-employment tax, U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands). Amended returns filed on Form 1040X are excluded.
[2] Form 1120 is the basic corporation income tax return. The short Form 1120A was discontinued in 2008, but returns were received through 2010. Form 1120S is for S corporations (certain qualifying corporations electing to be taxed through shareholders). "Other" includes Forms $1120-\mathrm{F}$ (most foreign companies with U.S. income); Forms 1120-L (domestic and foreign life insurance companies); Forms 1120POL (certain political associations); Forms 1120-H (homeowners' associations); Forms1120-C (Cooperative Associations); Forms 1120-FSC (Foreign Sales Corporations, or FSCs); Forms 1120-REIT (Real Estate Investment Trusts); Forms 1120-RIC (Regulated Investment Companies); and Forms 1120-PC (Property and Casualty Insurance Companies). "Other" also includes Form 1120ND (for nuclear decommissioning trust funds and related persons). "Other" excludes Form 1120-DISC for Domestic International Sales Corporations, which were discontinued and mostly replaced by FSCs (see above); and Form 1120 IC-DISC for Interest-Charge Domestic International Sales Corporations (which was used by certain other DISCs after 1985). Amended returns filed on Form 1120X are excluded.
[3] Form 1041 is the regular income tax return filed for estates and trusts.
[4] Form 706 is the regular estate tax return; Form 706NA is for U.S. estates of nonresident aliens; Forms $706 \mathrm{GS}(\mathrm{D})$ and $706 \mathrm{GS}(\mathrm{T})$ are for estate tax returns for which the generationskipping transfer tax applies to distributions and to trust terminations, respectively.

## Selected Historical and Other Data

Table 21. Selected Returns and Forms Filed or To Be Filed by Type During Calendar Years, 2000-2011— Continued

## Footnotes-Continued

[5] Form 990 is for tax-exempt organizations, except private foundations (Form 990-PF). Form 990EZ is the short form. Form 990-T is the income tax return filed for businesses conducted by tax-exempt organizations. Form 990 C is for farmers' co-operatives. Form 4720 is for computing the special excise taxes applicable to certain private foundations, and Form 5227 is for split-interest trusts treated as private foundations.
[6] Form 940 is the annual unemployment (FUTA) tax return filed by employers; Form 940PR is used by employers in Puerto Rico; and Form 940EZ is a shorter version of Form 940. Form 941 is the employer's quarterly return for income tax withheld; Form 941PR is used by employers in Puerto Rico; and Form 941SS by employers in the U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands; Form 944 is the employer's annual return for income tax withheld (starting in Calendar Year 2007). Form 943 is filed to report income tax withheld by employers for agricultural employees. Form 943PR is used by employers in Puerto Rico. Form 943SS, for employers in the U.S. Virgin Islands, Guam, or American Samoa, was discontinued in 2002, but returns have still been received through 2010. "Other" includes Form 945 (annual tax withholding from nonpayroll distributions) and Form CT-1 (Employer's Annual Railroad Retirement Tax Return).
[7] Form 720 is the IRS quarterly excise tax return. Form 2290 is the IRS return used to report heavy highway vehicle use tax. "Other" includes Form 730 (tax on wagering) and Form $11 C$ (occupational tax and registration return for wagering). (Excise tax returns exclude those now filed with the Alcohol and Tobacco Tax and Trade Bureau (TTB) and the Customs Service).
NOTES: Detail may not add to totals because of rounding. Tax law and tax form changes affect the year-to-year comparability of the data.

[p] Preliminary.
[1] Number of returns with a paid preparer signature is based on the sample used for Statistics of Income-Individual Income Tax Returns.
[2] Data on electronically-filed returns are included in the counts of Form 1040 returns, shown above in Table 22, for all years. Data are based on the full SOI samples of returns filed throughout the entire year. For 2006, Form 1040EZ includes 1040EZ-T returns.
NOTE: Detail may not add to totals because of rounding

## Table 23. U.S. Individual Income Tax: Personal Exemptions and Lowest and Highest Bracket Tax Rates, and Tax Base for Regular Tax, Tax Years 1913-2011-Continued

## Footnotes

## N/A-Not applicable.

[1] Personal exemption amounts were deducted at different points in the tax computation, depending on the tax year. For some of the earlier years, they were deducted only from the statutory "net income" subject to the basic "normal tax," for other years, only from the "net income" subject to the "surtax," and, for still other years, from the "net income" subject to both normal tax and surtax. (Footnote 2, below, includes a description of "normal tax" and "surtax.") For more recent years, personal exemptions have been deducted in computing "taxable income," the current tax base for "regular" tax purposes.
[2] Tax rates shown in Table 23 are for the "regular" income tax, i.e., for "normal tax" and "surtax," applicable to U.S. citizens and residents. Therefore, the rates exclude provisions unique to nonresident aliens. Tax rates exclude the effect of tax credits (which reduce the tax liability), except as noted, and several specific add-on or other taxes applicable to all or some tax years. Excluded are the "war excess profits tax" (1917), "victory tax" (1942-1943), Social Security "self-employment tax" (starting with 1951), tax under the "income averaging" provisions (1964-1986) and under the farm income averaging provisions (starting with 1998), and the "recapture taxes" resulting from having to recompute and pay back certain tax credits in later years (starting with 1963), the "maximum tax" on "earned income" or on "personal service income" (1971-1981), the "minimum tax" on "tax preferences" (1970-1983), and the "alternative minimum tax" on "tax preferences" (starting with 1979). Also excluded are such other taxes as the tax on recipients of accumulation distributions of trusts (starting with 1954) and the "special averaging tax" or "multiple recipient special averaging tax" on recipients of lump-sum distributions from qualified retirement plans (starting with 1974). In addition, Table 23 excludes taxes associated with the preferential treatment of capital gains, starting with 1922 (although certain gains received preferential treatment as early as 1918). At various times, these treatments have taken the form of special tax rates; special definitions; different asset holding periods; ceilings on taxes; and exclusions from income. Included among these special treatments were "alternative tax" (1938-1986) and its variations for the earlier years, although all of these taxes were in some way tied to the structure for regular tax. Until 1948, a single set of tax rates applied to all taxpayers, regardless of marital or filing status, and married couples filing joint returns were taxed on the combined income of each spouse. However, a second, lower set of rates was introduced, starting with 1948, for married couples filing jointly. (To simplify the Table 23 presentation for these more recent years, only the lowest and highest tax rates for married persons filing jointly are shown.) Under this change, the combined tax of husband and wife became twice the combined tax that would have applied if their combined "taxable income" ("net income" for years before 1954) were cut in half. Thus, taxpayers using the joint return filing status "split" their incomes for tax purposes, in effect doubling the width of their taxable income (or net income) size "brackets." The lowest and highest tax rate brackets shown in columns 4 and 6 in Table 23 are, therefore, the brackets for married couples filing jointly that result from taking into account this doubling of the bracket widths. Starting with 1952, a third set of rates was introduced (not shown) for "heads of household," i.e., for unmarried individuals who paid over half the cost of maintaining a home for a qualifying person (e.g., a child or parent), or for certain married individuals who had lived apart from their spouses for the last 6 months of the tax year. This filing status was liberalized, starting with 1970 , and provides approximately half the advantage of the income-splitting described above. Starting with 1954, the full benefits of income-splitting allowed married couples filing jointly (i.e., the same tax rates and taxable income brackets) were extended to a new, fourth filing status, "surviving spouse" (i.e., individuals widowed for 1 to 2 years following the death of a spouse, provided they had a dependent child and had not remarried). The remaining filing status was for "single persons," who used the rates formerly applicable to taxpayers in general. However, these latter rates were moderated, starting with 1969, by limiting the tax so that it would not exceed 20 percent more than the tax on married couples filing jointly. One result of the 1969 law change was that certain married couples filing jointly had to pay more tax than they would have paid if each spouse had filed separately. To help mitigate this effect, a special deduction in computing adjusted gross income was allowed for 1982-1986 for two-earner couples filing jointly. This deduction was initially 5 percent of the lesser of $\$ 30,000$ or the "earned income" of the spouse with the lesser earnings. The percentage was increased to 10 percent, starting with 1983. The deduction provision was repealed, starting with 1987 , when new, lower rates and a reduced number of tax brackets began. For tax years preceding 1954, the lowest tax rate, as shown in Table 23, was either the rate for the basic "normal tax" (if there was just one rate for normal tax) or the lowest of the several rates for "normal tax" (if there was more than one rate for normal tax). The highest tax rate was the sum of the uppermost of the graduated rates (if any) for normal tax, plus the uppermost of the additional, graduated "surtax" rates, provided that both rates were applied to the same income. For example, for 1932 , there were two graduated rates for normal tax, 4 percent (on the first $\$ 4,000$ of income) and 8 percent (on all income over $\$ 4,000$ ), and graduated rates for "surtax" that ranged from 1 percent to 55 percent. In Table 23, the lowest rate for 1932 is, therefore, shown as 4 percent (the lower of the two normal tax rates) and the highest rate as 63 percent (the sum of the 8 -percent higher, graduated rate for normal tax on income over $\$ 4,000$, plus 55 percent, the highest of the graduated, surtax rates, on income over $\$ 1$ million). As another example, for 1941, there was just one rate for normal tax, 4 percent, but it applied to all income. The lowest of the surtax rates, 6 percent, was applied to all income under $\$ 2,000$, so that income under $\$ 2,000$ was taxed at both the 4 -percent normal tax rate and the 6-percent surtax rate. Therefore, the lowest rate shown in Table 23 for 1941 is 10 percent, the sum of these two tax rates. The highest rate is the sum of the 4-percent normal tax on total statutory "net income," plus the highest graduated surtax rate, 77 percent on income over $\$ 5$ million, so that income over $\$ 5$ million was taxed at 81 percent, the sum of the two rates. For tax years starting with 1954, normal tax and surtax rates were, in effect, combined into a single rate structure.
[3] The definition of the income base (and, thus, the tax "bracket" boundaries) to which the tax rates were applied differs over the years, depending on how the following were determined and figured: statutory adjustments to or exclusions from income; personal exemptions; itemized deduction expenditures, which were sometimes described as income "credits"; standard deductions; the various thresholds and ceilings; and statutory "taxable income" (and its predecessor "net income"). Therefore, the lowest and highest taxable income amounts, as shown in Table 23, are not comparable for all years, and the amounts described as for statutory taxable income for tax years preceding 1954 are actually for statutory net income. (Statutory net income was income after subtracting deductions but, for most years, was before subtracting personal exemptions. Statutory taxable income was after subtracting both deductions and personal exemptions. Taxable income is the tax base for recent years. Net income required certain adjustments to arrive at the tax base, depending on whether the income was subject to normal tax, surtax, or both). See also footnote 2, above.
[4] For 1921-1923, the personal exemption amount for married couples (column 2) decreased to $\$ 2,000$ if statutory "net income" exceeded $\$ 5,000$.
[5] For 1923, the tax rates shown (columns 4 and 6) are after a 25 -percent statutory credit or refund.
[6] For 1924, the lowest tax rate (column 4) is after reduction by an "earned income credit," equal to 25 percent of the "normal tax" on the first $\$ 5,000$ of total statutory "net income" and the normal tax on the first $\$ 10,000$ of "earned net income," but limited to 25 percent of the normal tax on total net income.
[7] For 1925-1927, the lowest tax rate (column 4) is after reduction by an "earned income credit" equal to 25 percent of the total tax on the first $\$ 5,000$ of total statutory "net income" and the total tax on the first $\$ 20,000$ of "earned net income," but limited to 25 percent of the total tax on earned net income (not to exceed 25 percent of the sum of "normal tax" on total net income plus the "surtax" on earned net income.)
[8] For 1928-1931, the lowest tax rate (column 4) is after reduction by an "earned income credit" equal to 25 percent of the total tax on the first $\$ 5,000$ of total statutory "net income" and the total tax on the first $\$ 30,000$ of "earned net income," but subject to the same limitations described in footnote 7, above. For 1929 only, there was a special reduction in normal tax rates as provided for in a joint resolution of Congress.
[9] For 1934-1943, the tax rate (column 4) excludes the effect of an "earned income credit," allowed as a deduction equal to 10 percent of the first $\$ 14,000$ of "earned net income" (before credit) and the first $\$ 3,000$ of total statutory "net income" (before credit), but limited to 10 percent of earned net income (not to exceed 10 percent of total net income).
[10] For 1940, tax rates (columns 4 and 6) include "defense tax," computed as 10 percent of the total "regular" tax, but limited to 10 percent of statutory "net income" in excess of the total regular tax.
[11] For 1944-1945, the personal exemption amounts (columns 1-3) were for "surtax" purposes only. The exemption for basic "normal tax" purposes was $\$ 500$ per tax return, augmented by the "earned income" of the spouse, up to $\$ 500$, on joint returns.
[12] For 1944-1945, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 90 percent of statutory "net income."
[13] For 1946-1947, tax rates (columns 4 and 6) are the effective rates after a statutory 5 -percent reduction of combined "tentative normal tax and surtax." The highest rate (column 6) was subject to a maximum effective rate limitation equal to 85.5 percent of statutory "net income."
[14] For 1948-1986, in addition to the personal exemptions (columns 1-2), there were additional personal exemptions for blind taxpayer(s) and for taxpayers (s) age 65 or over.

# Selected Historical and Other Data 

## Table 23. U.S. Individual Income Tax: Personal Exemptions and Lowest and Highest Bracket Tax Rates, and Tax Base for Regular Tax, Tax Years 1913-2011-Continued

## Footnotes-Continued

[15] For 1948-1949, tax rates (columns 4 and 6) are the effective rates after statutory reductions ranging from 17.0 percent of the first $\$ 400$ of combined "tentative normal tax and surtax" to 9.75 percent of combined tentative normal tax and surtax over $\$ 100,000$. The highest tax rate (column 6 ) was subject to a maximum effective rate limitation equal to 77.0 percent of statutory "net income."
[16] For 1950, tax rates (columns 4 and 6 ) are the effective rates after statutory reductions ranging from 13.0 percent of the first $\$ 400$ of combined "tentative normal tax and surtax" to 7.3 percent of combined tentative normal tax and surtax over $\$ 100,000$. The highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 87.0 percent of statutory "net income."
[17] For 1951, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 87.2 percent of statutory "net income."
[18] For 1952-1953, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 88.0 percent of statutory "net income."
[19] For 1954-1963, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 87.0 percent of statutory "taxable income."
[20] For 1968, the highest tax rate (column 6) includes a Vietnam War surcharge equal to 7.5 percent of tax (as defined for this purpose). However, this surcharge did not apply to "regular" tax generated at the lowest rate.
[21] For 1969, the highest tax rate (column 6) includes a Vietnam War surcharge equal to 10 percent of tax (as defined for this purpose). However, this surcharge did not apply to "regular" tax generated at the lowest rate.
[22] For 1970, the highest tax rate (column 6) includes a Vietnam War surcharge equal to 2.5 percent of tax (as defined for this purpose). However, this surcharge did not apply to "regular" tax generated at the lowest rate.
[23] For 1971, "earned net income" was subject to a "maximum tax" of 60 percent (not shown in column 6).
[24] For 1972-1981, "earned net income" (broadened to become "personal service net income" after 1976) was subject to a "maximum tax" of 50 percent (not shown in column 6).
[25] For 1974, tax rates (columns 4 and 6) do not take into account a statutory rebate of 10 percent of total income tax after credits. In general, the minimum rebate was $\$ 100$ and the maximum, $\$ 200$, but could not exceed the tax liability.
[26] For 1975, a \$30-per-capita tax credit was allowed in addition to the personal exemptions shown in columns 1-3.
[27] For 1976-1978, a tax credit was allowed, in addition to the personal exemptions shown in columns $1-3$, that was equal to the larger of $\$ 35$ per capita or 2 percent of the first $\$ 9,000$ of statutory "taxable income."
[28] For 1977-1986, in order to help preserve the conceptual comparability of the amounts shown with those for earlier and later years, the lowest tax rates in column 4 and the lowest "taxable income" amounts in column 5 exclude the so-called "zero tax rate" and the "zero bracket amount," which were unique to the tax computation for these 10 years.
[29] For 1981, tax rates (columns 4 and 6) are after a 1.25-percent statutory tax credit.
[30] Starting with 1985, the personal exemption amounts (columns 1-3) reflect annual adjustments for inflation, using the U.S. Department of Labor Consumer Price Index for Urban Consumers ("CPI-U").
[31] Starting with 1985, tax "bracket" boundaries (columns 5 and 7) were indexed for inflation, using the U.S. Department of Labor Consumer Price Index (as described in footnote 30).
[32] Starting with 1988, the amount eligible to be deducted for personal exemptions (columns 1-3) was phased out for certain high-income taxpayers. For 1988-1990, this was accomplished as part of the tax computation (see footnote 34, below).
[33] For 1988-1990, excludes the effect on certain high-income taxpayers of the phaseout of the amount deductible for personal exemptions (columns 1-3).
[34] For 1988-1990, the tax rates (columns 4 and 6) exclude the effects on certain high-income taxpayers of the phaseout both of the benefit of the 15-percent tax rate (compared to the 28 -percent rate) and the amount deductible for personal exemptions. This phaseout was accomplished by imposing an additional, 5 -percent tax on income above certain levels, based on filing status, thus creating a "temporary" 33-percent tax rate. At the point where the taxpayer had completely phased out the two benefits by use of the 33 -percent rate, the tax rate on any remaining taxable income above the phaseout range returned to 28 percent (see also footnote 35). As Table 23 shows, beginning with 1991 , this phaseout was replaced by including an additional, 31-percent, graduated rate for taxable incomes above certain levels. Two other, higher, graduated rates were subsequently added, starting with 1993, the higher of which is shown in Table 23.
[35] For 1988-1990, the 15-percent tax rate (column 4), which applied to the first \$29,750 of statutory "taxable income" (column 5), gradually increased to the top "brackets" rate, 28 percent
 income taxpayers, all of whose incomes were then effectively taxed at the higher 28 -percent rate through use of the "temporary" 33 -percent rate (see footnote 34 , above, for additional information). The boundaries of the phaseout range were adjusted for inflation for 1989-1990, although the top tax rate on the taxable income above that covered by the phaseout range remained 28 percent. Therefore, the top taxable income and top tax bracket rate shown in Table 23 for 1988-1990 do not take into account the higher, 33-percent, "temporary" phaseout rate.
[36] For 2000, the tax rates (columns 4 and 6) do not reflect a special statutory refund, partially offset for 2001, of between $\$ 300$ and $\$ 600$, depending on the size of income tax for 2000 and filing status. See also footnote 37, below.
[37] For 2001, the tax rates (columns 4 and 6) do not reflect a 5 -percent tax credit of up to $\$ 300, \$ 500$, or $\$ 1,000$, depending on the filing status. This credit effectively reduced the lowest rate on the income shown in column 5 from 15 percent to 10 percent, in lieu of an explicit 10 -percent rate. However, the credit was reduced by the amount of the special statutory refund made in 2001 (based on tax for 2000), described in footnote 36, above. The 10-percent rate was only for dependents.
[38] For the change in the lowest tax "bracket" boundary (columns 5 and 7) for 2001, see footnotes 36 and 37, above.
[39] For 2006-2007, the phaseout of the personal exemption was reduced by one-third (to a minimum of $\$ 1,100$ per exemption for 2006, $\$ 1,133$ for 2007).
[40] Starting with 2008, the phaseout of the personal exemption was reduced by two-thirds (to a minimum of $\$ 2,333$ per exemption in 2008 and $\$ 2,433$ per exemption in 2009 ).
[41] Starting with 2010, the phaseout of the personal exemption was eliminated.

|  | \$15,000,000-\$18,333,333 | [24] 38.00 |
|  | Over \$18,333,333 | 35.00 |

[1] The rates shown are the "standard" or "ordinary" rates, applying to all taxable corporate net income unless otherwise provided. However, there have always been numerous exceptions and special rates based on the type of corporation, the type of income, and other factors. In addition, there have been, at various times, additional taxes related to income that increased the statutory rates. When possible, these are noted in other footnotes to this table for the years for which they were effective. Credits, deductions, and other alterations in the definition of taxable income also effectively alter the tax rate, but these are too numerous and too frequent to include in a table such as this. The most important types of corporations to which these rates have not always applied, or not applied as they did to other corporations, are: Section 501(c) and similar Nonprofit Corporations: Corporations not organized or operated for profit are generally exempt from the corporation income tax except, since 1950, on business income unrelated to their exempt purposes. Mutual and cooperative organizations: Most of these were treated as nonprofits in the early days of the income tax. Most have long since been made taxable as ordinary corporations, but there are still some exceptions. Credit unions and small mutual property insurance companies are exempt. Rural electrical and telephone cooperatives are exempt on income generated in transactions with their members. Farmers' cooperatives are not taxed on income distributed to their members. Insurance companies: Because of the nature of insurance, determining taxable income has often been a problem for the tax system. Insurance companies have been subjected to a number of different tax structures since 1921, including special rates and complete exemption of premium income. They are currently taxed at the same rates as other corporations on income calculated using reserve deductions (which other corporations are not allowed). Regulated Investment Companies (since 1936) and Real Estate Investment Trusts (since 1961): These investment companies are not taxed on profits distributed to shareholders if they distribute substantially all of their incomes annually. S Corporations: Since 1958, certain closely held corporations could elect to be taxed through their shareholders, as partnerships are, and not pay the corporate tax at all (except in special, unusual circumstances). Foreign corporations: Companies incorporated outside the U.S. are taxed on business income earned in the U.S. at the regular corporate rates, but may be taxed on investment income at special statutory or treaty rates. U.S. corporations with foreign-source income: The U.S. taxes the worldwide income of U.S. corporations; however, since 1918, taxes paid to foreign governments on foreign-source income can be credited against the U.S. tax otherwise due on that income. (Before 1918, the foreign taxes were allowed as a deduction against worldwide income.) U.S. Possessions Corporations: Since 1921, corporations earning most of their incomes in a U.S. possession were subject to reduced taxes. From 1921 to 1976, they were taxable only on U.S.-source income; since 1976, they have received a credit for manufacturing income earned in a possession (including Puerto Rico). The credit was repealed after 2005. Affiliated groups: Corporations that are closely affiliated through stock ownership have usually been allowed to consolidate their financial statements for tax purposes and file one return for the group, but there have always been restrictions, and, sometimes, they have been charged an additional tax for the privilege. In 1932 and 1933 , consolidated returns were subject to an additional tax of 75 percent. In 1934 and 1935 , only railroad companies were allowed to file consolidated returns, and the additional tax was 1 percent. From 1936 to 1941, there was no additional tax, but the privilege was restricted to railroads and a few other companies. From 1942 to 1964, most domestic affiliated groups that met the stock ownership and other requirements could file consolidated returns, but the surtax on such a group was increased by 2 percentage points. The additional tax on consolidated returns was repealed, effective December 31, 1963. The most important type of income to have received special rates was "long-term" capital gains. From 1942 through 1987, the tax rate was capped at a maximum rate lower than the highest corporate rate. (The rates are noted in footnotes to the table.) Although there is currently no special rate for corporations' capital gains, long-term capital gains are still treated separately from other income in the Tax Code. During World War I, the Great Depression, World War II, and the Korean War, additional taxes were imposed on what were called "war profits" or "excess profits." These are noted in the table in footnotes to the applicable years. In addition to taxes based on net income, there have been from time to time taxes based on accumulated earnings that were not distributed to shareholders, designed to limit tax avoidance at the individual stockholder level. Taxes on "undue" accumulations have been imposed (though seldom paid) since the inception of the income tax. These were supplemented, since 1934, by a "personal holding company" tax, equal to the highest individual income tax rate, on the undistributed earnings of closely held companies accumulating investment income. There was also a Depression-era tax on accumulated earnings (noted below). In recent years, there have also been "minimum taxes" designed to supplement the regular taxes. These have the effect of a separate set of tax rates. These are noted in footnotes to the table.
[2] Calendar year unless otherwise noted. Taxpayers whose fiscal years spanned years with different rates were required to prorate the year's income between the two rate structures. Before 1933, the proration was based on the number of months in each year; after 1932, it was based on the number of days in each year.
[3] "Taxable income" is used here to mean the amount of income to which the rates shown were applied. The concept has had various names and various meanings over the years covered; so, brackets for one year are not necessarily comparable with those for another.
[4] An additional tax on "excess profits" and/or "war profits" was in effect from 1917 to 1922 . It was allowed as a deduction in computing income tax.
[5] An additional "declared value" excess profits tax, based on profits in excess of a percentage of the value of corporate stock, was in effect from 1933 through 1945. It was a deduction for income tax purposes.
[6] An additional surtax ranging from 7 percent to 27 percent was imposed on undistributed profits.
[7] From June 1940 to the end of 1945, a tax on profits in excess of average prewar earnings was also imposed. It was taken into account, as either a deduction or a credit, for the income tax and the other excess profits tax.

## Table 24. U.S. Corporation Income Tax: Tax Brackets and Rates, 1909-2011 [1]—Continued

## Footnotes-Continued

[8] The rates for 1940 include extra "defense tax" rates that are integrated with the regular rates in later years.
[9] These rates are the sum of the "normal tax" rates and the "surtax" rates, which actually applied to slightly different definitions of taxable income.
[10] Beginning with Tax Year 1942, gains on the sale of assets held for more than 6 months (long-term capital gains) could be treated separately from other taxable income and taxed at a maximum rate of 25 percent.
[11] An excess profits tax was also in effect from July 1950 through Calendar Year 1953. The tax was 30 percent of an adjusted profits figure reduced by credits for the level of prewar profits. It was not offset against income tax, but the sum of income and excess profits taxes was capped at a given percentage of income (from 62 percent to 70 percent).
[12] These rates reflect a tax increase (for the Korean War), effective March 31, 1951. The maximum capital gain tax rate was also increased to 26 percent.
[13] From April 1, 1954, through Calendar Year 1969, the maximum tax rate on capital gains was 25 percent.
[14] From 1969 through 1986, corporations were also subject to an "add-on minimum tax" on certain "tax preference" items (such as percentage depletion, accelerated depreciation, etc.) above a certain amount. For Tax Years 1969 through 1976, the tax was 10 percent of tax preferences in excess of $\$ 30,000$; after 1976, the tax was 15 percent of preferences in excess of the greater of $\$ 10,000$ or regular income tax.
[15] Rates include the Vietnam War surcharge of 10 percent.
[16] Includes a 2.5 -percent Vietnam War surcharge.
[17] The maximum tax rate on long-term capital gains was increased to 28 percent.
[18] The maximum tax rate on long-term capital gains was increased to 30 percent.
[19] The holding period for long-term capital gain treatment of assets was increased from 6 months to 9 months in 1977 and 12 months in 1978. The rate remained at 30 percent.
[20] The maximum tax rate on long-term capital gains was 28 percent.
[21] Beginning in 1983, incorporated professional practices ("personal service corporations") have been taxed on all taxable income at the corporate tax rate applicable to the highest income bracket.
[22] The Tax Reform Act of 1986 (TRA86) established a new rate structure effective for Tax Year 1988 and made the rates for Transition Year 1987 an average of the pre-TRA rates for 1986 and the post-TRA rates for 1988.
[23] A new "alternative minimum tax" (AMT) replaced the add-on minimum tax, effective in 1987. It required a calculation of an alternative measure of taxable income that reduced or eliminated many tax preference items. The tax was 20 percent of the excess of this "alternative minimum taxable income" (AMTI) over $\$ 40,000$. The $\$ 40,000$ exemption was reduced by 25 percent of the excess of AMTI over $\$ 150,000$. AMT in excess of regular tax could be carried over as a credit against regular tax in future years. In 1998, "small" corporations (generally, those with average gross receipts of less than $\$ 5$ million) were exempted from the AMT.
[24] The maximum tax rate on capital gains was capped at 34 percent for 1987, which was to be the rate on the highest corporate tax bracket in 1988 and after, according to TRA86. The maximum capital gain rate was raised to 35 percent when the highest corporate rate bracket was increased in 1993.

# SOI Sampling Methodology and Data Limitations 

This article discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports. More technical information is available, on request, by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

## Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on such criteria as: industry, presence or absence of a tax form or schedule, and various income factors or other measures of economic size (such as total assets, total receipts, size of gift, and size of estate). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years-3 for corporations because of the incidence of fiscal (noncalendar) year reporting and extensions of filing time. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from those planned. However, these factors do not compromise the validity of the estimates.

The probability of a return's selection depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated pro-
cessing costs or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the Social Security number (SSN) or the Employer Identification Number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TINs designated from one year's sample are, for the most part, selected for the next year's, so that a very high proportion of the returns selected in the current year's sample are from taxpayers whose previous years’ returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

## Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. "Weights" are computed by dividing the count of returns filed for a given stratum by the number of population sample returns for that same stratum. These weights are usually adjusted for unavailable returns and outliers. Weights are used to adjust for the various sampling rates used, relative to the population-the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "poststrata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these poststrata using additional population counts. The data on each sample return in a stratum are then multiplied by that weight. To produce the tabulated estimates, the weighted

## Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

## SOI Sampling Methodology and Data Limitations

## In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.

data are summed to produce the published statistical totals.

## Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different samples usually
vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports, the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its CV to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68 -percent confidence interval estimate:

$$
\begin{aligned}
\text { 150,000 } & \text { (sample estimate) } \\
\text { x 0.02 } & \text { (coefficient of variation) } \\
=3,000 & \text { (standard error of estimate) }
\end{aligned}
$$

then:

$$
\begin{aligned}
150,000 & \text { (sample estimate) } \\
+ \text { or }-3,000 & \text { (standard error) } \\
=\{147,000,153,000\} & \text { (68-percent confidence } \\
& \text { interval). }
\end{aligned}
$$

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible samples similarly selected. To obtain this interval es-
timate with 95-percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained, on request, by writing to the Director, Statistics of Income Division, at the address given above.

## Nonsampling Error Controls and Limitations

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors and inconsistencies, processing errors, and the effects of any early cutoff of sampling. Additional information on nonsampling error as it applies to individual and corporation income tax returns is presented in the separate SOI reports on these returns.

In transcribing and tabulating the information from returns or forms selected for the sample, steps are taken to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during the statistical abstracting and "editing" process that takes place in IRS submission processing centers. This is done to improve data consistency from return to return and to achieve definitions of the data items more in keeping with the needs of major users. In some cases, not all of the data are available from the tax return as originally filed. Sometimes, the missing data can be obtained by the Statistics of Income Division in Washington, DC, through field followup. More often, though, they are obtained through manual or computerized imputation. For this purpose, other information in the return or in accompanying schedules may be sufficient to serve as the basis for making an estimate. Prior-year data for the same taxpayer can be used for this same purpose, or comparable data from business reference books may be substituted.

Data abstracted or "edited" from returns for statistical use are subjected to a number of validation checks, including systematic verifications of a sampling of the work of each tax examiner involved in the SOI process. Data reported on sampled returns

## SOI Sampling Methodology and Data Limitations

and previously transcribed as part of processing for the IRS Master Files are subject to validation as part of the administrative process before SOI processing begins. However, during the administrative process, it is only practical to transcribe corrections to errors that have a direct bearing on the tax reported or the refund claimed. Therefore, during the SOI process, checks must also be made to correct any errors or inconsistencies left in the administrative data before the data can be accepted for the statistics.

The Statistics of Income program includes many more tax return items than are transcribed and perfected for IRS tax administration needs, especially for items reported in tax return schedules in support of the various summary totals reported on the return. Therefore, checks must also be designed to validate these additional data items and to assure that they are consistent with other data entries.

Most of the data validation checks made during the SOI process take the form of computerized tests of each record. In addition to verifying that internal consistency and proper balance and relationships among the tax return items and statistical classifications are maintained, this process is intended to check on consistency with tax law provisions, acceptable reporting practices, and generally accepted accounting principles. Most testing occurs during the data abstracting and editing operation, while the tax return source document is still on hand, although some testing for certain programs occurs later on. Records failing the tests are subjected to further review and correction.

Finally, before publication, the statistics are reviewed for accuracy and reasonableness in light of the tax law provisions, taxpayer reporting variations and other limitations, tolerances and statistical techniques allowed or employed in data processing and estimating, economic conditions, and comparability with other statistical series. However, these controls do not completely eliminate the possibility of error. When discovered, errors in Bulletin tables are corrected, through a published errata.

## Table Conventions

Published estimates subject to excessive sampling variability are identified for most of the statistics by means of an asterisk $\left(^{*}\right)$ presented alongside the estimate or in place of an estimate. Presence of an asterisk means that the sampling rate was less than 100 percent of the population and that there were fewer than 10 sample observations available for estimation purposes. This method produces a rough indication of excessive sampling variability. However, the results will differ somewhat from more precise indicators of excessive sampling variability based on the standard statistical formula. For some of the statistics based on samples, asterisking was not possible because of resource and other constraints. Users should keep this limitation in mind when using these data.

A zero, in place of a frequency or an amount, in any given table cell presenting data based on an SOI sample, indicates either that (1) there were no returns in the population with the particular characteristic, or (2) because of its rarity, instances of the characteristic were not present among the sampled returns. However, for statistics based on returns selected for the sample at the 100 -percent rate, a zero indicates a presumption of no returns with the particular characteristic in the population.

In addition to sampling variability, Statistics of Income is required to prevent disclosure of information about specific taxpayers or businesses in its tables. Therefore, a weighted frequency (and the associated amount, where applicable) of less than 3 is either combined with data in an adjacent cell(s) so as to meet the criteria, or deleted altogether. Similar steps are taken to prevent indirect disclosure through subtraction. However, any combined or deleted data are included in the appropriate totals. Most data on tax-exempt, nonprofit organizations are excluded from disclosure review because the Internal Revenue Code and regulations permit public access to most of the information reported by these organizations.

[^72][2] Corporation statistics for 2009 represent accounting periods ended July 2009 through June 2010. Study Year 2010 is similarly defined.
[3] Estate and gift tax data are processed on a filing-year, rather than on a year-of-death or gift-year (tax-year) basis. At a later stage (not shown here), filing years are combined by year of death or gift year, respectively.
4] Split-interest trust and fiduciary income tax statistics are processed on a filing-year rather than a tax-year basis.
[5] Tax-exempt private activity governmental bond statistics are collected annually based on issue year. Arbitrage rebate and penalty are conducted biennially, for tax years ending in odd numbers.

## SOI Products and Services

statistics of Income (SOI) data are available in electronic formats and in print. For further information on any of the following products and services, or for answers to questions on the availability of SOI data, other statistical services, or release dates for data, contact SOI's
Statistical Information Services (SIS):

## Statistical Information Services (sis@irs.gov)

 Statistics of Income Division Internal Revenue ServiceP.O. Box 2608 • Washington, DC 20013-2608 (202) 874-0410 • Fax: (202) 874-0964

As its name implies, SIS is best able to answer questions about data. It does not supply tax forms or information about the status of an individual's tax refund or audit examination. Media requests should be directed to the IRS Media Relations Branch, Communications Division, on (202) 622-4000.

## Free Products on the Internet

SOI's Internet site offers a combination of files presenting SOI tables, articles about SOI data, and information about SOI products and services, as well as non-SOI products, including Compliance Research projections and nonprofit Master File microdata records. At present, almost 12,000 files reside there.

## Products for Sale From SOI

Many of SOI's data files are available for sale on CD-ROM or via e-mail through Statistical Information Services. Prepayment is required for orders of \$100 or more, with checks made payable to the IRS Accounting Section. Credit and debit card payments are also accepted. Contact SIS for information on specific products, prices, sources, media, and ordering instructions.

The following files are currently available on a reimbursable basis and include data from returns for corporations, individuals, exempt organizations, and private foundations

## SOI Products and Services

and charitable trusts. Most of these files are tabulations of aggregated data, but some are files of microdata records.

## Corporation Income Tax Returns

## Corporation Source Book

CD-ROMs containing data from the Corporation Source Book are available for Tax Years 1996-2003 at a cost of $\$ 250$ per year. Data from the 2004 through 2009 Corporation Source Books are available at no charge from the Tax Stats Web site. Data tables from the 2000 through 2009 Source Books are also available at no charge from the Tax Stats Web site at: www.irs.gov/taxstats/bustaxstats/ article/0,,id=149687,00.html.

## Individual Income Tax Returns

## Individual Public-Use Microdata Files

Files for 1992 through 2007 are available on CD-ROM from the SOI Division for $\$ 4,000$ per year. These microdata files have been edited to protect the confidentiality of individual taxpayers.

## County-to-County Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by county for the entire United States, including inflows and outflows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 19912010. Price is $\$ 200$ per year for the entire United States or $\$ 10$ per State per year for Filing Years 1991-2004. All years for the entire United States are also available for \$500. Filing Years 2005-2010 are available at no cost at www.irs.gov/ taxstats. Click on "U.S. Population Migration Data" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## State-to-State Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by State for the entire United States, including inflows and outflows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1989-2010. Price is $\$ 50$ per year for the entire United States or \$10 per State per year for Filing

Years 1989-2004. Filing Years 2005-2010 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## County Income Data

One table, based on the population of returns from the IRS Individual Master File system. This table presents data for adjusted gross income (total and for selected sources), number of returns (which approximates the number of households), and number of personal exemptions (which approximates the population). The data are presented by county (including State totals) and are available for Tax Years 1989-2009 for the entire United States. Price is $\$ 50$ per year for the entire United States or $\$ 10$ per State per year for Tax Years 1989-2004. Tax Years 2004-2009 are available at no cost at www.irs.gov/taxstats. Click on "County Income" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## ZIP Code Area Data

Statistics are available for Tax Years 2002 and 2004-2008 on CD-ROM showing the number of individual income tax returns; the total number of exemptions and number of dependent exemptions (which approximates population); adjusted gross income; salaries and wages; taxable interest; total tax; and contributions; by State and 5-digit ZIP Code. In addition to these items, data for Tax Year 2004-2008 also show the amount of taxable dividends; net capital gain/loss; IRA payment adjustment; self-employed pension adjustment; taxes paid deduction; alternative minimum tax; income tax before credits; earned income credit; and number of returns prepared by paid preparers. Price is $\$ 500$ for the entire United States; $\$ 25$ for a single State. Data for Tax Years 1998, 2001, and 2008 are available at no cost at www.irs.gov/taxstats. Click on "Zip Code Data (SOI)" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## Tax-Exempt Organizations

## Compendium of Studies of Tax-Exempt Organizations, 1989-1998

This is a compilation of articles on SOI studies of charitable and other nonprofit organizations described in Internal Revenue Code sections 501(c)(3)-(c)(9), private foundations, charitable remainder trusts, and nonprofit organizations' unrelated business income. All of these articles were published previously in various issues of the Statistics of Income Bulletin. In addition, the Compendium includes papers on statistical sampling of tax-exempt or-
ganization returns, and other topics relating to tax-exempt organizations and philanthropy that were authored by IRS staff and others who use SOI study data for research. Available at no charge on CD-ROM.

## Microdata Records for Tax Year 2008

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 15,708 Internal Revenue Code section 501(c)(3) organizations and 6,450 section 501(c) (4)-(9) organizations. All returns for organizations with assets of $\$ 50,000,000$ or more are included in the sample. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/0,,id=97176,00.html, or may be purchased on CD-ROM for $\$ 20$.

## Microdata Records for Tax Years 1992-2007

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI’s Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/0,,id=97176,00.html, or may be purchased on CD-ROM for $\$ 20$.

## Private Foundations (and Charitable Trusts)

## Microdata Records for Tax Year 2008

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes 15,710 returns. (All returns filed by foundations with assets of $\$ 10$ million or more, as well as the population of returns filed by nonexempt charitable trusts, are included in the sample.) Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article/0,,id=96996,00.hmtl, or may be purchased for $\$ 20$.

## Publications

## Statistics of Income-2009, Corporation Source Book <br> Publication 1053, Price: \$175, plus $\$ 10$ for shipping and handling

This document presents detailed income statement, balance sheet, tax, and selected items, by sector, major and minor industrial groups, and size of total assets for all returns and separately for returns with net income. Separate statistics on S corporations are included by sector. Industry detail is based on the North American Industry Classification System (NAICS). The report, which underlies the Statistics of Income-Corporation Income Tax Returns publication, is part of an annual series and can be purchased in its entirety or by page. The complete, printed version of the Source Book for selected prior years, 19842009, is also for sale at $\$ 175$ per year, plus $\$ 10$ for shipping and handling.

## Compendium of Federal Estate Tax and Personal Wealth Studies

Publication 1773, Price: \$26, plus $\$ 10$ for shipping and handling

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting sample data for the estate studies and presents statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estatemultiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years 1962-1989, and a discussion of the relationship among realized income, wealth, and well-being.

## Statistics of Income-2008,

## Corporation Income Tax Returns

Publication 16 Stock No. 048-004-02532-9
Price: $\$ 52.00$
This report presents comprehensive data on corporation income tax returns with accounting periods that ended July 2008 through June 2009. Data are classified by industry, size of total assets, and size of business receipts.

Statistics of Income-2009, Individual Income Tax Returns
Publication 1304, Stock No. 048-004-02530-2
Price: \$43 Foreign: \$60.20
This report presents more comprehensive and complete data on individual income tax returns for Tax Year 2008 than those published earlier in the SOI Bulletin.

Presents information on: Classifies data by:
■ sources of income

- exemptions

■ itemized deductions

- tax computations

■ size of adjusted gross income

- marital status
- type of tax computation

■ age

IRS Data Book, 2010
Annually, Publication 55B, Stock No. 048-004-02531-1 Price: \$14.00 International: \$19.60

This volume pertains to Fiscal Year (FY) 2010—October 1, 2009, through September 30, 2010. The report provides information on returns filed and taxes collected, enforcement, taxpayer assistance, the IRS budget and workforce, and other selected activities. The FY 2011 issue of the Data Book will be available in late March 2012.

## Statistics of Income Bulletin

Quarterly, Publication 1136, Stock No. 748-005-00000-5
Subscription price: \$67 International: \$93.80
Winter 2012 Single copy, Stock No. 748-005-00110-9
Single copy price: \$44 International: \$61.60
This series provides the earliest published financial statistics from individual and corporation income tax returns. The Bulletin also includes annual data on nonfarm sole proprietorships and partnerships, as well as periodic or special studies of particular interest to tax analysts, administrators, and economists. Historical tables, published in the spring issue, include data from SOI, as well as tax collections and refunds by type of tax.

[^0]:    ${ }^{1}$ The statutory requirement is contained in section 2123 of the Tax Reform Act of 1976 ( 90 Stat. at 1915).
    ${ }^{2}$ The 1976 Act specified four income concepts for classifying tax returns: adjusted gross income (AGI), expanded income, AGI plus excluded tax preference items, and AGI less investment interest expense not in excess of investment income. Section 441 of the Deficit Reduction Act of 1984 ( 98 Stat. at 815) eliminated the requirement to use the last two income concepts.
    ${ }^{3}$ The definition of adjustments to AGI to obtain the expanded income given in the text is for the current year. See Appendix A for a discussion of AGI and expanded income and a list of adjustments covering all years since 1977.
    ${ }^{4}$ See Notes to Appendix A, note A4.
    ${ }^{5}$ Tax-exempt interest had to be reported on the individual income tax return starting with Tax Year 1987 and is included in expanded income starting with that year. Beginning with Tax Year 1991, tax-exempt interest was incorporated into the criteria used for sampling returns for Statistics of income, thus increasing the reliability of the estimates of expanded income.

[^1]:    ${ }^{6}$ Inflation-adjusted constant dollars are based on the Consumer Price Index (CPI-U) as published by the U.S. Department of Labor, Bureau of Labor Statistics. The consumer price index approximates buying patterns of typical urban consumers. The annual index is the average of the monthly indices.
    7 See Appendix B for a discussion of the tax concepts. In data published for years prior to 1989, either in articles presented in the Statistics of Income Bulletin or in chapters in Statistics of Income-Individual Income Tax Returns (see Reference section), the "U.S. income tax" concept was described as "total income tax," and the "worldwide income tax" concept was described as "modified total income tax."
    8 The inclusion of foreign taxes paid on excluded foreign-earned income, beginning with Tax Year 1990, represents an improvement in the worldwide income tax concept. It does, however, represent a slight break in the year-to-year comparability of data for worldwide income tax. However, the number of returns with foreign taxes paid on excluded foreign-earned income is extremely small compared to the number of returns with the foreign tax credit.

[^2]:    9 See Appendix B for a description of how the deduction equivalent of credits was computed

[^3]:    10 The AMT exclusion phases out above certain levels of "alternative minimum taxable income," based on filing status. But, since taxpayers will have some AMT liability in the phaseout range, the phaseout income is not relevant for nontaxable, high-income returns.
    11 Tax-exempt interest and the foreign-earned income exclusion were not included in Tables 7 and 8 as possible tax effects before Tax Year 1994. Thus, caution should be exercised in making comparisons between data prior to 1994 and after 1993.

[^4]:    Footnotes at end of table.

    2 Information on current stock prices and historical data in regards to the S\&P 500 can be found and is available via the Internet at http://www.whitehouse.gov/ adminstration.
    ${ }^{3}$ The deduction amounts reported in this article include the amount carried to Schedule A for reporting itemized deductions.
    4 Liddell, Pearson, and Janette Wilson (2007), "Noncash Charitable Contributions," Statistics of Income Bulletin, Spring 2010, IRS Publication 1136, Volume 29, Number 4.

[^9]:    ${ }^{6}$ Liddell, Pearson, and Janette Wilson (2008), "Noncash Charitable Contributions," Statistics of Income Bulletin, Winter 2011, IRS Publication 1136, Volume 30, Number 3. 7 Ibid.

[^10]:    [1] Total number of returns does not equal the sum of returns by donee type because a return could have donations to more than one type of donee.

[^11]:    8 Notice 2007-50, Guidance Regarding Deductions by Individuals for Qualified Conservation Contributions, includes a tax law change for conservation contributions such that the 50 -percent-of-AGI limitation is increased to 100 -percent (the 100 percent limitation) for eligible farmers and ranchers.

[^12]:    ${ }^{9}$ For further details on sampling methodology, see Statistics of Income-2009, Individual Income Tax Returns (IRS Publication 1304).

[^13]:    Footnotes at end of table 1j

[^14]:    Footnotes at end of table 1j.

[^15]:    Footnotes at end of table 1j.

[^16]:    * Estimates should be used with caution because of the small number of sample returns on which they are based.
    [1] Not every donation has a donor cost reported.
    [2] Amount carried to Schedule A is the fair market value from Section A (items with a deduction of $\$ 5,000$ or less or publicly traded securities) plus the lesser of the fair market value or the amount claimed on Section B (items with a deduction of more than $\$ 5,000$ )
    [3] Other donations includes intellectual property, services, airline tickets and miles, and other donations.

[^21]:    Footnotes at end of table

[^22]:    [1] For joint returns, both taxpayers are placed into the same adjusted gross income class, as determined by the combined adjusted gross income.

[^23]:    Footnotes at end of table.

[^24]:    1 An exception to this general rule exists in some cases for personal services income.
    2 U.S. Department of the Treasury, Internal Revenue Service, Instructions for Form 1042-S. Bank deposit interest is generally excluded from Form 1042-S reporting, although an exception exists for Canadian residents who are not U.S. citizens. Bank deposit interest paid to Canadian residents is subject to Form 1042-S reporting but is exempt from withholding tax. In addition to bank deposit interest, other payments to foreign persons that are not subject to reporting on Form 1042-S include: interest and original issue discount (OID) from short-term obligations, registered obligations targeted to foreign markets, bearer obligations targeted to foreign markets, notional principal contract payments that are not effectively connected income, and accrued interest and OID. These types of income are not available from other sources.

[^39]:    ${ }^{1}$ The IRS has previously released data from Schedule M-1. See Plesko, G.A., and Nina Shumofsky, "Reconciling Corporation Book and Tax Net Income, Tax Years 1996-1998," SOI Bulletin, Spring 2002, pp. 1-16, and Plesko, G.A., and Nina Shumofsky, "Reconciling Corporation Book and Tax Net Income, Tax Years 1995-2001," SOI Bulletin, Winter 2004-2005, pp. 103-108.
    ${ }^{2}$ Throughout this report, we interchangeably use the terms "financial reporting income" and "book income" to describe a company's consolidated income calculated under GAAP and reported on annual financial statements.
    ${ }^{3}$ See the IRS's Frequently Asked Questions for Form 1120, Schedule M-3, as well as Form 1120, Schedule M-3, for more information on this form.
    ${ }^{4}$ Background information on the shortcomings of the Schedule M-1 and the arguments for a revised form can be found in Mills, L., and G.A. Plesko, "Bridging the Reporting Gap: A Proposal for More Informative Reconciling of Book and Tax Income," National Tax Journal 56:4 (December 2003), pp. 865-893, and C. Boynton, and W. Wilson, "A Review of Schedule M-3, the Internal Revenue Service's New Book-Tax Reconciliation Tool" Petroleum Accounting and Financial Management Journal 25, No. 1 (Spring 2006): 1-16. Since release of the Schedule M-3, the IRS has published a number of tabulations. See Boynton, C.; P. DeFilippes; and E. Legel "A First Look at 2004 Schedule M-3 Reporting by Large Corporations," Tax Notes, 112, No. 11 (September 11, 2006): 943-981; Boynton, C.; P. DeFilippes; and E.J. Legel, "A First Look at 2005 Schedule M-3 Corporate Reporting," Tax Notes, Special Report, November 3, 2008; Boynton, C.; P. DeFilippes; E. Legel; and T. Reum, "First Look at 2007 Schedule M-3 Reporting by Large Corporations," Tax Notes, August 15, 2011.

[^40]:    5 Now section 41 of the Internal Revenue Code. From Smith, D., and J. K. Butters, "Taxable and Business Income," New York: National Bureau of Economic Research, 1949.

    6 Talisman, J. "Penalty and Interest Provisions, Corporate Tax Shelters." U.S. Department of the Treasury Testimony before the U.S. Senate, Committee on Finance. Washington, D.C., March 8, 2000. See also Plesko and Shumofsky, supra note 1.
    ${ }^{7}$ Given that foreign income is not repatriated to the U.S. parent company during the taxable year.

[^41]:    ${ }^{8}$ Pre-tax worldwide book income of includible corporations is calculated as the worldwide net income of includible corporations plus the firm's total financial statement tax expense. Specifically, we measure a firm's includible worldwide pre-tax book income as its Net Income (Loss) per Income Statement of Includible Corporations (Form 1120, Schedule M-3, Part I, Line 11) plus the following seven items from Schedule M-3, Part III: 1) U.S. Current Income Tax Expense (Line 1, Column (a)); 2) U.S. Deferred Income Tax Expense (Line 2, Column (a)); 3) State and Local Current Income Tax Expense (Line 3, Column (a)); 4) State and Local Deferred Income Tax Expense (Line 4, Column (a)); 5) Foreign Current Income Tax Expense Other than Foreign Withholding Taxes (Line 5, Column (a)); 6) Foreign Deferred Income Tax Expense (Line 6, Column (a)); and 7) Foreign Withholding Taxes (Line 7, Column (a)).
    ${ }^{9}$ Pre-tax domestic book income of includible corporations is calculated as the worldwide pre-tax income plus adjustments for foreign income following the 2008 GAO Report, "U.S. Multinational Corporations-Effective Tax Rates are Correlated with Where Income is Reported." Specifically, a firm's includible pre-tax domestic book income is measured as the worldwide pre-tax book income of includible corporations as calculated in footnote 8, less the following six items from Schedule M-3, Part II: 1) Income/Loss from Equity Method Foreign Corporations (Line 1, Column (a)); 2) Gross Foreign Dividends Not Previously Taxed (Line 2, Column (a)); 3) Gross Foreign Distributions Previously Taxed (Line 5, Column (a)); 4) Income/Loss from Equity Method U.S. Corporations (Line 6, Column (a)); 5) Minority Interest for Includible Corporations (Line 8, Column (a)); and 6) Income/Loss from Foreign Partnerships (Line 10) plus the following three items from Schedule M-3, Part III: 1) Foreign current income tax expenses (other than foreign withholding taxes) (Line 5, Column (a)); 2) Foreign deferred income tax expense (Line 6, Column (a)); and 3) Foreign withholding taxes (Line 7, Column (a)).
    ${ }^{10}$ Tax Net Income is equal to Form 1120, Page 1, Line 28.
    ${ }^{11}$ Taxable Income is equal to Form 1120, Page 1, Line 30.
    ${ }^{12}$ A firm's domestic pre-tax book income does not include the effect of net operating losses carried forward, and a firm's taxable income does not include earned foreign income.

[^42]:    ${ }^{13}$ Plesko, G., and N. Shumofsky, "Reconciling Corporation Book and Tax Net Income, Tax Years 1995-2001," SOI Bulletin, Winter 2004-2005.

[^43]:    ${ }^{14}$ See Table 2, Internal Revenue Service, Statistics of Income-2008, Corporation Income Tax Returns (Publication 16), p. 40.

[^44]:    ${ }^{15}$ The adjusted taxable income figure is calculated as 1.05 percent of a firm's tax net income less the net operating loss and special deductions. For example, if a firm reported $\$ 100,000$ of tax net income (Form 1120, Line 28) and a net operating loss of $\$ 50,000$ on its originally filed return, the firm falls in the 15 -percent, over $\$ 0$ but not over $\$ 50,000$, statutory tax bracket. To determine the marginal tax rate faced by this firm in response to a 5 -percent change in its underlying tax net income, we multiply its originally filed tax net income of $\$ 100,000$ by 1.05 to arrive at a new tax net income figure of $\$ 105,000$ and subtract its net operating loss deduction of $\$ 50,000$ to arrive at a new taxable income figure of $\$ 55,000$. We then determine the statutory tax rate that corresponds to the increased taxable income figure. In this case, the firm leaves the 15 -percent, over $\$ 0$ but not over $\$ 50,000$, statutory tax bracket to face a new statutory tax rate of 25 percent (taxable income over $\$ 50,000$ but not over $\$ 75,000$ ).
    ${ }^{16}$ For presentation of Table 2, we excluded a total of 166 observations that moved from the zero-percent tax bracket to the highest income statutory 34-, 38 -, and 35-percent rate tax brackets ( 28 firms in 2004; 34 in 2005; 42 in 2006; 32 in 2007; and 30 in 2008). These outlier observations occur because these are very high tax net income firms who originally face a zero-percent statutory tax bracket due to a net operating loss equal to or greater than their tax net income. From Form 1120, Line 28, we are only able to observe the net operating loss deducted from originally reported taxable net income (i.e., only the amount of net operating loss necessary to bring taxable income to zero). As such, we cannot effectively reduce the calculated increased net income by potential or available net operating loss.

[^45]:    ${ }^{17}$ We excluded from our sample any firm with obvious data consistency issues, including those firms whose Schedule M-3, Part II, Line 30 does not equal Schedule M-3, Part I, Line 11 (two items that must be equal if following form instructions) and any firm whose gross foreign dividends (an item that should always be reported as a positive number) is less than zero. See Boynton, C, P. DeFilippes; E. Legel; and T. Reum, "First Look at 2007 Schedule M-3 Reporting by Large Corporations," Tax Notes, August 15 , 2011, for a discussion of data consistency issues.
    ${ }^{18}$ For an alternative analysis of this data see Bokulic, C.; E. Henry; and G. Plesko, "Reconciling Global Financial Reporting with Domestic Taxation," 2012 SOI and University of Connecticut Working Paper.

[^46]:    ${ }^{1}$ For more detailed information on the history of the transfer tax system in the United States, see Luckey, John R., "A History of Federal Estate, Gift, and GenerationSkipping Taxes," April 9, 2003, Congressional Research Service, Library of Congress.

[^47]:    ${ }^{1}$ For detailed information about Individual income tax returns filed for Tax Year 2006, see Statistics of Income—Individual Income Tax Returns, 2008, Publication 1304. ${ }^{2}$ For purposes of this analysis, we assign each decedent's marital status based on the filing status reported on the matched individual income tax return. Marital status is grouped into two broad categories, single (including those who filed as single, widowed, head of household, and married filing separately) and joint.
    ${ }^{3}$ The relatively long data collection period is required because an estate has up to 15 months after a decedent's death to file the Form 706 .
    ${ }^{4}$ Due to limitations in linking estate tax data to income tax data, a small number of estate tax decedents from Year-of-Death 2007 were excluded from this analysis. For more information on 2007 estate tax decedents, see http://www.irs.gov/pub/irs-soi/11essumbulestatereturns.pdf.
    ${ }^{5}$ More than 80 percent of single female decedents were widowed.

[^48]:    ${ }^{6}$ For the oldest decedents in the sample, these types of assets may not have been a practical option. The Employee Retirement Income Security Act (ERISA) of 1974 introduced individual retirement arrangements (IRAs) for employees not covered by a qualified employment-based retirement plan. These were expanded to all taxpayers under the age of $701 / 2$ by the 1981 Economic Recovery Tax Act (ERTA). The Revenue Act of 1978 led to the creation of section 401 K of the Internal Revenue Code, although deferred compensation arrangements predate the Act.

[^49]:    ${ }^{8}$ Calculations for return by asset class exclude observations for which income from a particular asset class was reported but no corresponding asset was present. These cases may result from the sale of assets between the filing of Form 1040 and the date of death.

[^50]:    ${ }^{9}$ For a review, see Saez et al. (2009).
    ${ }^{10}$ See, for example, Auerbach (1988).
    ${ }^{11}$ Corporate issuance of dividends surged following the 2003 reduction in the dividend tax rate. See Chetty et al. (2004).

[^51]:    12 We omit the rate of return for highest wealth group in 1976 in determining the trend line because of its reliance on an extremely small sample size.
