CORPORATON SOURCE BOOK OF STATISTICS OF INCOME

INDUSTRY STATISTICS AND THEIR LIMITATIONS

The data in the Corporation Source Book of Statistics of Income are based on a carefully selected sample of corporation income tax returns for each year. Except for the largest corporations (generally those with assets of $10 million or more), it is not likely that tax returns of the same company are included in the sample from year to year. Even for large corporations, significant changes in the money amounts occur from year to year if one of the largest companies shifts from one industry to another owing to a merger, acquisition, or even filing of a consolidated return.

The industry groupings used for Statistics of Income, Corporation Income Tax Returns, conform with the 1974 Standard Enterprise Classification issued by the Office of Management and Budget. The structure of the classification follows closely along the lines of the Standard Industrial Classification, which is designed as a means of classifying separate establishments rather than the companies of which establishments are part. Some departures from the enterprise classification system are made for Statistics of Income for the finance industries in order to reflect particular provisions of the Internal Revenue Code.

Even though the classificaton system is designed to apply to the company rather than the establishment, its application to corporation income tax return statistics has limitations. For corporations, industry statistics are generally governed by the returns of the larger companies. Since a return is classified by industry based on the activity accounting for the largest percentage of total receipts, this means that large corporations with diversified activities are included in only one industry even though many of their business operations are unrelated to the industry in which they are classified. It should, therefore, be noted in using the Source Book, especially for recent years, that statistics for an industry may be either understated by amounts reported by corporations whose principal activity lies elsewhere, or overstated by amounts reported by corporations classified in the industry but having substantial operations in other industries.

To an extent the effect of diversification on the statistics is mitigated by the reporting unit used by most corporations. Separate returns are generally filed for each member of a group of related companies even though for general financial purposes reports are filed for each group as a whole. When separate returns are filed, it becomes possible to classify each company within a group by industry. Also, when a company's operations are diversified among related minor industries, the effects of diversification may be mitigated somewhat when data for the related minor industries are accumulated into the major industries featured in the published Statistics of Income reports.

NOTES

* Estimate should be used with caution because of the small number of sample returns on which it is based.

** In order to avoid disclosure of information for specific corporations, these data have been combined with data in a lower asset size class.

*** In order to avoid disclosure of information for specific corporations, these data have been deleted. Data are included in appropriate totals.

✓ This asset size class includes data from one or more higher size classes.

✓✓ This asset size class had data, but the data was combined with a lower asset size or deleted at the minor industry level.

(-0) Less than $500 per return.

NOTE: Detail may not add to totals due to rounding and deletion of data. The statistics at the major group level were derived by adding the appropriate minor industries after combinations or deletions of asset size classes had been made. The statistics of industrial divisions were similarly derived by adding the appropriate major groups.

1. Income year 1980 covers corporation accounting periods ended July 1980 through June 1981.

2. Constructive taxable income from related foreign corporations includes "Includable income of Controlled Foreign Corporations" and "Foreign dividend income resulting from foreign taxes deemed paid" (i.e., foreign taxes deemed paid by related foreign corporations in developed countries on the profits from which dividends were distributed).

3. Net income (less deficit) equals "Total receipts less total deductions" less "Interest on State and local Government obligations" plus "Constructive taxable income from related foreign corporations."

4. Income subject to tax

   For most corporations, income subject to tax consisted of "Net income" less "Statutory special deductions." However, certain of these deductions (a) could exceed net income resulting in no income subject to tax and (b) could occur on returns without net income and, therefore, without income subject to tax. Other exceptions applied to life insurance companies, regulated investment companies, real estate investment trusts, and to Small Business Corporations electing to be taxed through stockholders. See "Income Subject to Tax" in Explanation of Terms, in the most recent edition of STATISTICS OF INCOME, CORPORATION INCOME TAX RETURNS.

5. See the report STATISTICS OF INCOME--1980, CORPORATION INCOME TAX RETURNS, for a discussion of these statistics including:

   Changes in law
   Description of the sample and limitations of the data
   Explanation of terms
   Facsimilies of corporation income tax return forms, 1980

   This report may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

6. When data is the same for minor and major industries, only the major industry is shown. When data is the same for minor, major and industrial division industries, only the industrial division is shown.
