	Glossary of Terms and Acroynms	70

1 Purpose of this Document

This document includes detailed explanations the potential notifications filers will receive in response to the files they submit via the International Data Exchange System (IDES). It focuses on the meaning of each possible notification and the steps that should be taken to address the issue(s) identified by the notification. This document includes key Frequently Asked Questions (FAQs) relevant to each notification. The FAQs contained in this document are current as of the date of publication, those these FAQs are regularly updated by the IRS in response to feedback from filers throughout the year. For the latest information and up-to-date FAQs, please see the IRS [FATCA ICMM Report Notifications webpage](#).

2 Receiving a FATCA Notification

A Notification is file within a transmission sent through IDES from the United States Internal Revenue Service (IRS) to a Foreign Financial Institution (FFI), direct reporting non-financial foreign entity (direct reporting NFFE), sponsoring entity, trustee of a trustee-documented trust, [non-GIIN filer](#), or Host Country Tax Authority (HCTA) in response to the transmission of a FATCA Report submitted on the Intergovernmental FATCA XML Schema or the paper Form 8966. Notifications originate from the IRS International Compliance Management Model (ICMM) system, which processes FATCA XML files sent to the IRS through IDES. Instructions on how to download a transmission IRS from IDES and how to process the elements contained in it are available in the *IDES User Guide*, available on the [IRS IDES Homepage](#).

3 IRS FATCA Report Processing

Once an Intergovernmental FATCA XML transmission is received by IDES, the IRS ICMM system will receive an alert from IDES notifying it that the transmission is available and will then attempt to download and process the file in two stages:

1. **File-level Processing**, in which the system will download and perform various actions on received files to assess the overall integrity of the file and to check for file level errors. File processing is typically completed immediately after download for IDES. Files processing failures at this stage will generate error notifications transmitted to the sender of the file (through IDES).
2. **Record-level Processing** will decompose and evaluate individual FATCA account, pooled or nil report records within files passing the file-level processing stage. This level of processing will occur at some point after the file has been successfully processed, depending on file size and system load.

3.1 File-level Processing Activities – Detailed Description

There are a number of processing activities that occur in IRS's file-level processing of the Intergovernmental FATCA XML files. It is important to note that these activities are **not** entirely linear, sequential steps - for example, threat and virus detection all occur at multiple levels as the file is processed. Each activity will result in an error notification to the sender of the file if the processing activity is not completed or is unsuccessful. **The specific notification code, content and resolution instructions for each of the error notifications generated are included in Sections 4 and 5 of this document.**

1. **Transmission Download:** When the IRS receives an alert from IDES that a transmission has been received and is awaiting download, ICMM will attempt to download the transmission from IDES. The alert provides the sender, received timestamp, and other transmission information to ICMM. ICMM will use the sender, received timestamp, and other transmission information in this alert information to request download of the transmission from IDES. However, there may be circumstances that prevent this download from occurring when ICMM initially receives the alert. For example, either system (IDES or ICMM) may be down for scheduled maintenance or due to an unscheduled outage. ICMM will regularly attempt to download a transmission after receiving the initial alert from IDES. If ICMM is not able to download the transmission within seven days after initial receipt by IDES, IDES will delete it. ICMM will continue to attempt to download the transmission until IDES provides a response saying it has been deleted. At this point, ICMM will consider the download step to have failed, and will issue an error notification to the sender (Notification code NDW) with transmission identification information provided in the original IDES alert, which will allow the sender to identify specifically which transmission has been lost. The remedy for the sender will be to upload the transmission to IDES again.
2. **File Decryption:** ICMM will attempt to decrypt the AES key used to encrypt the payload using the private key corresponding to the valid IRS public key available on IDES. It will then attempt to use the AES key to decrypt the payload file. If either the AES key file or the payload cannot be decrypted in this manner, ICMM will generate an error notification (Notification codes NDC or NKS) to the sender using file identification information received from IDES stating that the file could not be decrypted (NDC) or that the encryption key size is incorrect, most likely due to incorrect cyphering technique (NKS). The remedy for the user will be to first ensure that they are using the correct encryption method (AES-256-CBC for files submitted on or after July 11, 2016) and that the IRS public key in use on their encryption system is the valid key that is available on IDES. The sender must then re-encrypt the digitally-signed and compressed plain text version of the referenced file with a new AES key, encrypt the new AES key with the valid IRS public key and upload a new transmission containing the file to IDES. The NKS notification indicating incorrect an AES key size may indicate cases in which the filer is using AES-256 encryption with ECB versus CBC ciphering. The NDC notification will indicate any other decryption issues.
3. **File Decompression:** Since the payload is compressed prior to encryption, ICMM will decompress the file after decryption. The IDES User Guide provides the allowed compression method and a list of recommended compression tools. While other tools may be used, the compression method must be recognized by one of the recommended tools for the file to be successfully decompressed by ICMM. If the decompression fails, ICMM will issue an error notification (Notification code NDP below) to the sender using file identification information received from IDES stating that file could not be decompressed. The sender will need to re-compress using a recognized compression method and upload a new transmission containing the file to IDES.
4. **Digital Signature Check:** After decompressing the payload, ICMM will attempt to verify the filer's digital signature. The digital signature is generated by the sender of the file using the private key corresponding to the filer's private key posted on IDES, and proves that a) a FATCA file was sent by a FATCA partner and b) the FATCA file was not altered or corrupted during compression, encryption, decryption or decompression processes and not altered or corrupted during transmission to or from IDES. If the digital signature cannot be verified as belonging to the sender, ICMM will issue an error notification (Notification code NSC below) to the sender using file identification information received from IDES stating that

the digital signature on the file could not be verified. The remedy for the sender will be to ensure their private key matches the public key on IDES, re-sign the file using the procedures provided in the IDES User Guide, re-compress, and upload a new transmission containing the file to IDES.

5. **Threat Scanning:** Files will be scanned for non-virus threats that could pose security threats to the IRS IT environment after each processing stage involving the archive and the enclosed files. These processing stages include “unzipping” the transmission archive, decryption of the AES key file, and decryption and decompression of the signed XML payload file. Potential threats include, but are not limited to the following:

- prohibited characters ((Apostrophe (‘), Double Dash (--), and Hash (#))
- hyperlinks
- executable files
- JavaScript components
- compressed archive files.

If any such items are detected ICMM will reject the file, stop further processing of the file and send an error notification (Notification code NTD below) to the sender of the file.. The error notification will inform the sender that a non-virus threat was found, but will not identify the specific type of threat. The sender will need to ensure any prohibited characters or other artifacts are removed from both the payload and sender metadata files; re-create the transmission, using up-to-date antivirus software to scan for and remove any viruses and/or threats at each of the processing steps; then upload the clean transmission to IDES.

6. **Virus Scanning:** Files will be checked by ICMM for known viruses after each processing stage. If a virus is found, ICMM will reject the file, stop further processing of the file, and send an error notification (Notification code NVS below) to the sender. The error notification will inform the sender that a virus was found on the file, but will not identify the specific virus. The sender will need to re-create the transmission, using up-to-date antivirus software to scan for and remove any viruses and/or threats at each of the processing steps, then upload the clean transmission to IDES.
7. **Schema Validation:** Once a file has been decrypted, decompressed, validated and found to contain no viruses or other cyber security threats, ICMM will determine whether it is a) a properly formed XML file (vs. another file type) and b) that it is valid against the FATCA XML schema. This validation step ensures that the file structure conforms to the structure of the schema (e.g., data elements and sub-elements possess the proper relationships, data field contents conform to the schema specification). Both of these checks have a pass/fail outcome. If a file fails either of these checks, ICMM will reject the file; stop further processing of the file, and send an error notification (Notification code NSV below) to the sender of the file. The error notification will inform the sender that the file is not a valid FATCA XML file, but will not identify the specific problem or error within the validation process that was encountered. Since file validation against a known XML schema is a fairly routine process, local validation by the sender should be sufficient to identify the issue causing schema validation failure. Filers should ensure they are using the correct version of the FATCA XML Schema (V2.0 after January 2017).
8. **Specific Schema Field Value Validations:** After the file passes schema validation, IRS will then run specific checks on the following sub-elements in the MessageSpec and all DocSpec elements in the file:

- the MessageRefId field, to ensure it contains at least one non-blank, alphanumerical character and is within the 200 character limit established for the field (NMR - File Contains Invalid MessageRefId)
- the MessageRefId field, to ensure it is not duplicative with any other file the sender has submitted (NDM - File Contains Duplicate MessageRefId)
- the DocRefId fields (note: a file may include multiple DocRefId fields), to ensure they follow the required format and are within the 200 character limit established for the field. (NDR - File Contains Invalid DocRefId)
- DocTypeIndic values for submitted records will be checked to ensure no test data, as indicated by DocTypeIndic values form FATCA11-14, is processed in the production environment (NTP - File Contains Test Data for Production Environment)
- During testing periods, DocTypeIndic values for submitted records will be checked to ensure no production data, as indicated by DocTypeIndic values form FATCA1-4, is processed in test environments (NPT - File Contains Production Data for Test Environment)

While a file containing a duplicative value or blank spaces for MessageRefId or an invalid format for DocRefId would pass schema validation, it would cause significant issues with business rules for unique file/record identification and file/record processing and therefore cannot be accepted by IRS. If these validation checks fail, ICMM will generate the an appropriate error notification for the detected file-error condition (codes NMR, NDM, or NDR discussed in later sections) informing the sender of the invalid data. The sender will need to correct the invalid values and upload a new transmission containing the file to IDES.

3.2 Detailed Record Processing

Once all file-level processing steps on a received file are successfully completed, ICMM will then begin to identify and process individual records within these files. Prior to record processing, all data in the received file will have been found to be valid according to the FATCA XML schema. However, there are record-level errors possible in records which conform to the FATCA schema. ICMM record-level processing will identify if there are any record-level errors, including errors caused by contents of ReportingFI and/or ReportingGroup sub-elements, and will generate additional notifications (either that the records were processed successfully or of the specific error(s) identified) to filers at that time.

3.3 Sample File-Level Error Notification

The following Figure 3-1 is an example of a File-Level Error Notification in XML; this specific example is for the incorrect AES key size (NKS) case:

```

<?xml version="1.0" encoding="UTF-8"?>
<n1:FATCAFileErrorNotification xmlns="urn:fatca:fatcanotificationbase"
xmlns:n1="urn:fatca:fatcafileerrornotification"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" version="2.3">

  </OriginalFileMetadataGrp>
  <NotificationContentTxt>The IRS could not decrypt the referenced file following
download from IDES because the AES-256 key file was either blank, missing or could not be
decrypted, or because the decryption process failed to complete. Please do not submit a request
to correct, amend or void any of the records in this file until you receive a notification that this
file has been received as valid. For more information on this notification, including the
classification of a failed file decryption under an intergovernmental agreement (IGA), please see:
http://www.irs.gov/Businesses/Corporations/FATCA-Error-
Notifications</NotificationContentTxt>
  <ActionRequestedGrp>
    <ActionRequestedTxt>Please ensure the key/initialization vector file is encrypted
using the valid IRS certificate on IDES, and the encrypted file is included in the IDES
transmission packet. Please repost the file to IDES.</ActionRequestedTxt>
    <ActionRequestedDueDateTxt>Your FATCA reporting due date for the prior tax
year.</ActionRequestedDueDateTxt>
  </ActionRequestedGrp>
  <HCTATreatyStampTxt>This information is furnished under the provisions of an income
tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of
information with a foreign government, and its use and disclosure must be governed by the
provisions of that treaty, TIEA, or other agreement.</HCTATreatyStampTxt>
</n1:FATCAFileErrorNotification>

```

The notification informs the sender of which file had the processing error, the type of error encountered, and what to do about the error, as well as provide a link to additional resources on irs.gov where you can find more information on the type of error encountered and the steps required for resolution.

3.4 Notification Content

The ICMM Notification Schema User Guide (IRS Publication 5216) provides detailed discussion of the XML structure and data elements used for FATCA notifications. A summary of the key data elements in a FATCA Notification is provided below:

- Notification Timestamp: the time and date that the notification was generated
- Notification Reference ID: unique identifier for the notification created by ICMM
- Notification Code: 3-letter mnemonic indicating the type of trigger for the notification
- Sender ID: IRS's GIIN identifier (000000.00000.TA.840)
- Receiver ID: GIIN or FIN of receiving entity
- "Copy to" FATCA entity ID: GIIN of HCTA receiving a notification copy (for select Model 2 cases only)
- Contact Information Text: (included on error notifications only) provides a URL to a "hidden" web page with error notification FAQs, links to supporting information, and contact email addresses and phone numbers for EPSS
- Notification Content Text: brief description of reason for the notification
- Action requested: brief description of what recipient must do next
- Action requested by date: due date for action (typically will be filing date for Form 8966)
- HCTA treaty stamp: brief statement that exchanged data referenced in notification is covered by terms of a tax treaty (specific language will depend on jurisdiction of FFI).

4 Notification Descriptions and Resolution Instructions

The specific contents, meaning, and recommended resolution steps for each of the file-level processing notifications are provided in this section. The notification type can be identified from the 3-letter code in the “FATCANotificationCd” element in the notification. Each of the following subsections corresponds to a file-level error notification type.

4.1 FATCA Notification Code NDW: Failed Download

Notification Contents	<p>Notification Code: NDW</p> <p>Notification Content: The IRS could not download the referenced file that had been posted to IDES. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
-----------------------	---

Cause of Problem	<ul style="list-style-type: none"> You successfully uploaded the transmission with the IDES Sender File ID and IDES Transmission ID to IDES. The IRS could not download the transmission before expiration of the 7 day IDES retention period. This may have been the result of an outage between IDES and the IRS, but did not involve any system or transmission components on your end. However, as a result the transmission is no longer available in IDES for download.
Potential Resolution	<ul style="list-style-type: none"> Because the transmission is no longer present on IDES, you will need to upload the transmission referenced by the listed IDES Sender's File ID and IDES Transmission ID in the error notification again. Please ensure that the IRS encryption key you used for the initial transmission has not changed. If it has, please re-encrypt the plain text version of the file you are sending with the new IRS key, and upload this new encrypted transmission to IDES. The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> IRS IDES Homepage IDES Service Home Page
FAQs	<ol style="list-style-type: none"> What could have prevented the IRS from downloading this transmission? The IRS automatically downloads transmissions from IDES after receiving an alert from IDES that a transmission is available for download. We do not divulge the exact cause or reason for the failure of the automated process, but a system failure or outage on either side of the IRS-IDES connection led to the failure to download. What do I need to do as a result of this notification? Please upload the referenced transmission to IDES again by the due date that pertains to your organization, which is included in the notification body. The IRS will be notified when the transmission is available, and will download it at that time. Why can't the IRS download the transmission now? Because IDES automatically deletes transmissions that are not downloaded within seven days of upload, your transmission is no longer available on IDES. You must upload the transmission to IDES again to satisfy FATCA requirements. Please refer to the IDES User Guide, available on the IRS IDES Homepage, if you have any questions on how to prepare and upload transmissions to IDES. The IRS will be notified by IDES when your transmission is available, and will download it at that time. Was there a problem with the contents of my file? The IRS has not been able to process your file, so we cannot provide any feedback at this time on whether it is valid or not. After we have downloaded your transmission from IDES, we will process it and notify you of the results, including whether the file was successfully processed or if any additional errors were identified.

4.2 FATCA Notification Code NDC: Failed Decryption

<p>Notification Contents</p>	<p>Notification Code: NDC</p> <p>Notification Content:</p> <p>The IRS could not decrypt the referenced file following download from IDES because the AES-256 key file was either blank, missing or could not be decrypted, or because the decryption process failed to complete. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification (NVF) that this file has been received as valid. For more information on this notification, including the classification of a failed file decryption under an intergovernmental agreement (IGA), please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested:</p> <p>Please ensure the key/initialization vector file is encrypted using the AES-256-CBC encryption mode and valid IRS certificate on IDES, and the encrypted file is included in the IDES transmission packet. Please repost the file to IDES.</p> <p>Action Requested By Date:</p> <p>Your organization's due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable):</p> <p>"This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement."</p>
------------------------------	---

Cause of Problem	<ul style="list-style-type: none"> • You are receiving this notice because the IRS was unable to decrypt your file after download from IDES. • There are several situations that may have occurred: <ul style="list-style-type: none"> • the AES key provided with the file was not the same as the AES key used to encrypt the payload • the AES key used to encrypt is of the wrong type • the AES key used to encrypt is missing completely • the public IRS key used to encrypt the AES key was not valid • the encryption settings were incompatible with the IRS decryption algorithm • the payload and/or encrypted AES key file was changed or modified after encryption.
Potential Resolution	<ul style="list-style-type: none"> • Ensure you have the valid IRS public encryption key on your system, downloaded from IDES. • Please encrypt the digitally-signed and compressed payload of the referenced file with a new AES key and then encrypt the new AES key with the valid IRS public key. Ensure you are using the IRS recommended encryption settings and following all of the procedures and file naming conventions in the “Data Preparation for FATCA XML Report” section of the <i>IDES User Guide</i>, available on the IRS IDES Homepage. • Insert the re-encrypted payload and AES key files and a new XML header in an archive to create the IDES transmission. • Finally, upload the transmission to IDES following all additional procedures (see <i>IDES User Guide</i>, available on the IRS IDES Homepage) for transmission preparation and upload. • The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> • IRS IDES Homepage • IDES Service Home Page
FAQs	<ol style="list-style-type: none"> 5. Which specific decryption step failed? For security reasons the IRS does not disclose which situation caused the decryption failure. However, if your file was submitted after the July 11, 2016 conversion to CBC encryption, this notification is used to indicate any decryption issue other than an AES key size issue. After the July 11, 2016 conversion, AES key size issues (which indicate potential use of the legacy ECB encryption) are identified specifically by the NKS notification. 6. What key should I use to encrypt my files? Please follow the procedures in the <i>IDES User Guide</i>, available on the IRS IDES Homepage, and your local encryption software to generate a unique, one-time use AES-256 key. You should be using this unique, one-time use AES-256 key to encrypt your payload and the valid IRS public key available on IDES to encrypt the AES key. 7. How can I determine if the IRS public key I am using is the correct version? The valid IRS key is available on IDES. Please see the <i>IDES User Guide</i>, available on the IRS IDES Homepage, for additional information and instructions on how to find and download the IRS public key for encrypting the AES key for transmission. 8. How do I download the valid public key for the IRS? Please see the <i>IDES User Guide</i>, available on the IRS IDES Homepage, and the main IDES Service page, for additional information and instructions on how to find and download the IRS public key for encrypting the AES key for transmission to the IRS. Also, please consult the documentation for your encryption software application for assistance in importing the IRS public key into your system after downloading.

4.3 FATCA Notification Code NKS: Incorrect AES Key Size

<p>Notification Contents</p>	<p>Notification Code: NKS</p> <p>Notification Content: The IRS could not decrypt the referenced file because the size of AES key file was incorrect. The IRS expects a 48 byte AES key file, consisting of a 32 byte (256 bit) key and 16 byte (128 bit) initialization vector combined in a 48 byte encrypted file. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, including the classification of a failed file decryption under an intergovernmental agreement (IGA), please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications. For more information on formatting the AES key file, please consult the IDES User Guide at https://www.irs.gov/pub/fatca/p5190idesuserguide.pdf.</p> <p>Action Requested: Please ensure that you are using AES-256-CBC encryption (with CBC ciphering) to encrypt your payload file, and that your 16-byte initialization vector is included with your AES key is in the encrypted key file. Please repost your corrected package to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>

<p>Cause of Problem</p>	<ul style="list-style-type: none"> • The IRS expects a 48 byte AES key file, consisting of a 32 byte (256 bit) key and 16 byte (128 bit) initialization vector combined in a 48 byte encrypted file. You are receiving this notice because your AES key file size was not consistent with these expectations. • The most probable cause of this notification is that you are using the incorrect cyphering technique. This notification indicates that a file may have been encrypted using AES-256-ECB, which the IRS stopped supporting on July11, 2016, based on the size of the AES key file. However, it will also be generated in response to other circumstances in which result in an incorrect AES key size.
<p>Potential Resolution</p>	<ul style="list-style-type: none"> • Ensure you are using AES-256-CBC encryption cyphering to encrypt your payload file, and that your 16-byte initialization vector is included with your AES key in the encrypted key file • Please encrypt the digitally-signed and compressed payload of the referenced file with the new AES key and then encrypt the new AES key with the valid IRS public key. Ensure you are using the IRS recommended encryption settings and following all of the procedures and file naming conventions in the “Data Preparation for FATCA XML Report” section of the <i>IDES User Guide</i>, available on the IRS IDES Homepage. • Insert the re-encrypted payload and AES key files and a new XML header in an archive to create the IDES transmission. • Finally, upload the transmission to IDES following all additional procedures (see <i>IDES User Guide</i>, available on the IRS IDES Homepage) for transmission preparation and upload. • The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
<p>Other Links/ Resources</p>	<ul style="list-style-type: none"> • IRS IDES Homepage • IDES Service Home Page
<p>FAQs</p>	<ol style="list-style-type: none"> 9. Which specific decryption step failed? This notification indicates an issue specifically with the AES key file size. You may not be using the CBC cipher, required as of July 11, 2016 or the AES key file size may be incorrect for another reason. 10. What key should I use to encrypt my files? Please follow the procedures in the <i>IDES User Guide</i>, available on the IRS IDES Homepage, and your local encryption software to generate a unique, one-time use AES-256 key with CBC cyphering. You should be using this unique, one-time use AES-256 key to encrypt your payload and the valid IRS public key available on IDES to encrypt the AES key. Ensure that your 16-byte initialization vector is included with your AES key in the encrypted key file. 11. How do I ensure I am using the right encryption method? Please refer to the <i>IDES User Guide</i>, available on the IRS IDES Homepage, and your local encryption software for specific instructions on using the AES-256-CBC encryption process.

4.4 FATCA Notification Code NDP: Failed Decompression

Notification Contents	<p>Notification Code: NDP</p> <p>Notification Content: The IRS could not decompress the referenced file following download from IDES. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please compress the file (before encrypting) and repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
	DRAFT

Cause of Problem	<ul style="list-style-type: none"> You are receiving this notice because the IRS was unable to decompress your file after download from IDES. The decompression failure occurred either because the file was compressed using an unsupported compression tool or method, or because the file became corrupted after compression but before the AES encryption step.
Potential Resolution	<ul style="list-style-type: none"> Please recompress the digitally signed XML file using a ZIP compression tool and the standard Deflate compression method. Then create a new IDES transmission with this file, following all procedures (see the <i>IDES User Guide</i>, available on the IRS IDES Homepage) for IDES transmission preparation and upload. For a list of recommended tools and additional instructions for compression and file naming requirements, please refer to the <i>IDES User Guide</i>, available on the IRS IDES Homepage. The IRS will send another notification to you through IDES after we have downloaded and processed your file further.

FAQs	<p>12. <i>What tool should I be using to compress the file?</i> For a list of recommended tools and additional instructions for compression, please refer to the <i>IDES User Guide</i>, available on the IRS IDES Homepage.</p>

4.5 FATCA Notification Code NSC: Failed Signature Check

Notification Contents	<p>Notification Code: NSC</p> <p>Notification Content: The IRS could not validate the digital signature on the referenced file following download from IDES. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please re-sign the file with the owner’s private key using procedures provided on the IDES website and repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
	DRAFT

Cause of Problem	<ul style="list-style-type: none"> You are receiving this notice because the IRS could not validate the digital signature on the payload file with your organization's valid public key on IDES.
Potential Resolution	<ul style="list-style-type: none"> Please re-sign the file using the specific instructions for signing the XML file in the "Data Preparation for FATCA XML Report" section of the <i>IDES User Guide</i>, available on the IRS IDES Homepage as well as the procedures for your local encryption software package. Ensure that you use the digital signature "enveloping" type as the enveloped and detached types will cause the transmission to fail. Then recreate and upload the transmission to IDES following all additional procedures (see the <i>IDES User Guide</i>, available on the IRS IDES Homepage) for transmission preparation and upload The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> IRS IDES Homepage IDES Service Home Page
FAQs	<p>13. How do I digitally sign the file? Please follow the procedures for your local encryption software and for IDES. The <i>IDES User Guide</i> contains the signature methods acceptable for use in FATCA filing. See the <i>IDES User Guide</i>, available on the IRS IDES Homepage, and your local encryption software for instructions on how to apply the digital signature.</p>

4.6 FATCA Notification Code NTD: Failed Threat Detection

Notification Contents	<p>Notification Code: NTD</p> <p>Notification Content: The IRS detected one or more potential security threats within the decrypted version of the referenced file following download from IDES. Such threats include but are not limited to hyperlinks, Java script, and executable files. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please scan the file for known threats and viruses, remove all detected threats and viruses prior to encryption and re-encrypt and repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
-----------------------	---

<p>Cause of Problem</p>	<ul style="list-style-type: none"> • The IRS detected one or more security threats or prohibited character strings embedded in the decrypted version of the payload and/or Sender Metadata files. We cannot accept files with these embedded security threats or strings. • The list of restricted character strings is provided in FATCA XML Schema Best Practices for Form 8966). As these character strings would not be detected by an antivirus product, you will need to take other measures to ensure these characters are not present in any of your files. • The IRS scans each transmission archive file and all files contained in the archive for viruses and other threats after each processing stage involving the archive and the enclosed files. These processing stages include “unzipping” the transmission archive, decryption of the AES-key file, and decryption and decompression of the signed XML payload file. • One of these scans detected a non-virus security threat, which triggered this notification.
<p>Potential Resolution</p>	<ul style="list-style-type: none"> • Please remove all prohibited character strings from the payload and Sender Metadata files, then rebuild the full transmission by following all additional procedures (see the IDES User Guide, available on the IRS IDES Homepage) and scanning for viruses and other security threats with up-to-date antivirus software at each step in the process (digital signature, compression, encryption of the payload and AES key files, creation of the IDES metadata file, creation of the full transmission files). • Upload the full transmission to IDES. • The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
<p>Other Links/ Resources</p>	<ul style="list-style-type: none"> • IRS IDES Homepage • IDES Service Home Page • FATCA XML Schema Best Practices

FAQs	<p>14. What threat did the IRS detect? For security reasons the IRS does not disclose specific threats identified on electronic communications received from third parties, or what we use to identify these threat. However, these threats can include items such as:</p> <ul style="list-style-type: none">• hyperlinks embedded within received files• JavaScript components• executable files (e.g., .exe files)• compressed archive files• character strings specifically prohibited by the IRS <p>These items should not be part of any submitted file. Note the full list of restricted character strings and optional and non-optional entity reference substitutions is provided in FATCA XML Schema Best Practices for Form 8966). As these characters would not be detected by an antivirus product, you will need to take other measure to ensure these characters are not present in any of your files.</p> <p>15. What antivirus product should I use to clean my file? As prohibited characters would not be detected by an antivirus product, you will need to take other measures to ensure these characters are not present in any of your files. Generally, any up-to-date and widely accepted antivirus software product should be capable of finding any other threat the IRS detected. The IRS uses such products for virus and threat detection and removal. However, the IRS does not recommend the use of a particular product for this purpose.</p> <p>16. What should I do if I need help with scanning my file for threats? It is the sender's responsibility to ensure all files are virus and threat free and comply with all IRS requirements and restrictions. Please contact your local IT support staff for assistance with this step, or consult the IDES User Guide and documentation provided by your antivirus software provider. The IRS cannot provide technical assistance with this process.</p>

FAQs	<p>17. <i>What virus did the IRS detect?</i> For security reasons the IRS does not disclose specific viruses identified on electronic communications received from third parties, or what we use to identify viruses. However, the viruses we detect are typically found using up-to-date commercial anti-virus products.</p> <p>18. <i>What antivirus product should I use to clean my file?</i> Generally, any up-to-date and widely accepted antivirus software product should be capable of finding the virus the IRS detected. The IRS uses such products for virus and threat detection and removal. However, the IRS does not recommend the use of a particular product for this purpose.</p> <p>19. <i>What should I do if I need help with scanning my file for viruses?</i> It is the sender’s responsibility to provide clean files, and to ensure all files are virus free. Please contact your local IT support staff for assistance with this step, or consult the documentation provided by your antivirus software provider. The IRS cannot provide technical assistance with this process.</p>

4.8 FATCA Notification Code NSV: Failed Schema Validation

<p>Notification Contents</p>	<p>Notification Code: NSV</p> <p>Notification Content: The referenced file failed validation against the Intergovernmental FATCA XML Schema. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please re-validate the file against the Intergovernmental FATCA XML Schema, resolve any validation errors, and re-encrypt and repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
------------------------------	---

Cause of Problem	<ul style="list-style-type: none"> The referenced file has one or more XML schema validation errors.
Potential Resolution	<ul style="list-style-type: none"> Please revalidate the referenced file against the FATCA XML Schema (IRS Publication 5124 available at FATCA XML Schema) to identify and resolve the specific validation issue. Also, please be aware that use of the ampersand (&) and less than (<) symbols are prohibited as they are not allowed by XML syntax rules and will cause the transmission to be rejected with a failed schema error notification. These symbols must be replaced with entity references. Use this inspected file to recreate an IDES transmission and upload to IDES following all procedures (see the IDES User Guide, available on the IRS IDES Homepage. for transmission preparation and upload The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> IRS Publication 5124 (FATCA XML Schema) IRS IDES Homepage
FAQs	<p>20. What was the specific validation error that the IRS detected on my file? There were one or more validation errors identified on your file. The IRS does not provide specific error information for this type of file error, but these errors can be identified by using any widely accepted XML validation tool.</p> <p>21. Are there any characters that are not allowed due to XML syntax rules and should be avoided in submitted XML documents? Use of the ampersand (&) and less than (<) symbols are prohibited as they are not allowed by XML syntax rules and will cause the transmission to be rejected with a failed schema error notification. These symbols must be replaced with entity references. Substituting any ampersand symbols with "&" and less than symbols with "<" in XML files will prevent the generation of the error notification.</p>

4.9 FATCA Notification Code NMR: File Contains Invalid MessageRefId

Notification Contents	<p>Notification Code: NMR</p> <p>Notification Content: The referenced file has an invalid MessageRefId field which is either null, consisting of all blank characters or exceeding 200 characters. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please replace any all-blank character MessageRefId field values with non-blank entries, and repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
-----------------------	--

Cause of Problem	<ul style="list-style-type: none"> • The MessageRefId schema field in the referenced file is either null, consists of all blank characters, or exceeds 200 characters in length. • This field should be a unique identifier for a report file and is required to be at least one, but no more than 200, alphanumeric characters, and cannot be all blank characters.
Potential Resolution	<ul style="list-style-type: none"> • Please correct the file by including a unique, valid alphanumeric character string in the MessageRefId field per the FATCA XML Schema User Guide (IRS Publication 5124 available at FATCA XML Schema) that does not consist of all blanks and that is no more than 200 characters in length. Use this file to recreate an IDES transmission and upload to IDES following all procedures (see <i>IDES User Guide</i>, available on the IRS IDES Homepage) for transmission preparation and upload. • The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> • IRS Publication 5124 (FATCA XML Schema) • IRS IDES Homepage
FAQs	<p>22. Why was this issue not identified by my XML validation tool? The FATCA XML Schema User Guide (IRS Publication 5124 available at FATCA XML Schema) states that the MessageRefId should be a unique identifying number (created by the sender) that identifies the particular message being sent. Although a MessageRefId consisting of all blanks is valid against the schema, the IRS does not consider a blank MessageRefId to be unique. Furthermore, we have limited the MessageRefId and DocRefId fields to 200 characters. We require non-blank MessageRefIds and DocRefIds that are no more than 200 characters in length in order to be able to accept your file.</p>

4.10 FATCA Notification Code NDM: File Contains Duplicate MessageRefId

Notification Contents	<p>Notification Code: NDM</p> <p>Notification Content: The referenced file has a duplicate MessageRefId value that was received on a previous file. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please replace the MessageRefId field value with a unique value (not containing all blanks), and repost the file to IDES.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
-----------------------	---

DRAFT

Cause of Problem	<ul style="list-style-type: none"> The MessageRefId schema field in the referenced file is duplicative of another file you have submitted. This field should be a unique identifying number for a report file and is required to be a string of at least one alphanumeric character.
Potential Resolution	<ul style="list-style-type: none"> Please correct the file by including a unique, valid alphanumeric character string in the MessageRefId field per the FATCA XML Schema User Guide (IRS Publication 5124 available at FATCA XML Schema) that does not consist of all blanks. Use this file to recreate an IDES transmission and upload to IDES following all procedures (see <i>IDES User Guide</i>, available on the IRS IDES Homepage) for transmission preparation and upload. The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> IRS Publication 5124 (FATCA XML Schema) IRS IDES Homepage
FAQs	<p>23. Why was this issue not identified by my XML validation tool? While your file is in the valid XML format, comparison of MessageRefIds takes place outside of XML validation. The FATCA XML Schema User Guide (IRS Publication 5124 available at FATCA XML Schema) states that the MessageRefId should be a unique identifying number (created by the sender) that identifies the particular message being sent. The IRS cannot accept more than one file from the same sender with the same MessageRefId.</p>

4.11 FATCA Notification Code NDR: File Contains Invalid DocRefId

<p>Notification Contents</p>	<p>Notification Code: NDR</p> <p>Notification Content: The referenced file has one or more invalid DocRefId field values. Please do not submit a request to correct, amend or void any of the records in this file until you receive a notification that this file has been received as valid. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: Please replace any blank DocRefId field values with alpha numeric names and repost the file to IDES. Also, please consider using the recommended FATCA DocRefId naming conventions when assigning DocRefId values for this file and future files.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp (where applicable): “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
------------------------------	---

DRAFT

Cause of Problem	<ul style="list-style-type: none"> • One or more records with DocRefId schema fields in the submitted file consist of one or more blank characters or exceed 200 characters in length or otherwise do not follow the required format of <ReportingGIIN>.<UniqueValue>. • These fields should contain the unique identifier of the specific account or pooled report record they reference and are required to follow the specified format of <ReportingGIIN>.<UniqueValue>. They must contain no more than 200, alphanumeric characters, and cannot be all blank characters.
Potential Resolution	<ul style="list-style-type: none"> • Please correct the file by ensuring DocRefIds for all records follow the required DocRefId format (<ReportingGIIN>.<UniqueValue>) per the guidance at FATCA XML Schemas Best Practices for Form 8966 DocRefId. Ensure that they contain no blank spaces and are no more than 200 characters in length. Use this file to recreate an IDES transmission and upload to IDES following all procedures (see IDES User Guide, available on the IRS IDES Homepage) for transmission preparation and upload. • The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
Other Links/ Resources	<ul style="list-style-type: none"> • IRS Publication 5124 (FATCA XML Schema) • FATCA XML Schemas Best Practices for Form 8966 DocRefId • IRS IDES Homepage
FAQs	<p>24. Why was this issue not identified by my XML validation tool? The FATCA XML Schema User Guide (IRS Publication 5124 available at FATCA XML Schema) states that the DocRefId data element should contain the unique identifier of the specific account or pooled report it references. Currently the IRS's more specific requirements for DocRefIds are not reflected in the XML schema so DocRefId validation errors will not be detected by a schema validation tool. The IRS requires non-blank DocRefIds that follow the format of <ReportingGIIN>.<UniqueValue> and are no more than 200 characters in length in order to be able to accept your file.</p>

4.12 FATCA Notification Code NTP: File Contains Test Data for Production Environment

Notification Contents	<p>Notification Code: NTP</p> <p>Notification Content: The referenced file contains one or more records with a DocTypeIndic value in the range FATCA11-FATCA14, indicating test data. As a result, the IRS cannot accept this file as a valid FATCA Report submission. Valid FATCA Reports must have DocTypeIndic values in the range FATCA1-FATCA4 for all account and/or pooled report records. For more information on the DocTypeIndic data element, please consult IRS Publication 5124 or For more information on this notifications see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: If this file was intended to be submitted to the IRS as a valid FATCA Report, please resubmit with DocTypeIndic values in the range FATCA1-FATCA4 for all account and/or pooled report records in the file. If this file was intended as a test file, please submit to the IDES test environment during an IRS-provided test window.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp*: “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
-----------------------	--

Cause of Problem	<ul style="list-style-type: none"> • One or more records in the indicated file has a DocTypeIndic value for test data (FATCA11-FATCA14), and the IRS cannot accept any of the records in this file as valid FATCA submissions • The IRS has mandated that test and production data cannot be mixed in the same file.
Potential Resolution	<ul style="list-style-type: none"> • Please review the data in the indicated transmission to determine if the data is meant to be submitted as an actual FATCA submission or is simply test data. If the data must be resubmitted, the DocTypeIndic value must be set (to FATCA1-FATCA4) for each record in the file. • Please review the IDES and ICMM testing schedules on IRS IDES Homepage to determine IDES and ICMM testing schedules and availability
Other Links/ Resources	<ul style="list-style-type: none"> • IRS Publication 5124 (FATCA XML Schema) • IRS IDES Homepage
FAQs	<p>25. <i>Do I need to void or correct this record?</i> Since this data is considered to be test data, and the IRS discourages submission of test data in its production environments, no further action should be taken with respect to this record.. Please do not attempt to void, correct, or amend this record with additional test data. However, if you determine that the record is a valid record please resubmit with the proper DocTypeIndic value through IDES to the ICMM production environment.</p>

4.13 FATCA Notification Code NPT: File Contains Production Data for Test Environment

Notification Contents	<p>Notification Code: NPT</p> <p>Notification Content: The referenced file was received by the IRS in a test environment with one or more records having a DocTypeIndic value in the range FATCA1-FATCA4. These DocTypeIndic values indicate data in this file may have been intended as a valid FATCA Report submission. FATCA Reports received in test environments are not accepted by the IRS as a valid FATCA Report submissions. Submissions to the test environment should only include records with DocTypeIndic in the range FATCA11-FATCA14, indicating test files. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>Action Requested: If this file was intended to be submitted to the IRS as a valid FATCA Report, please resubmit this data with DocTypeIndic values in the range FATCA1-FATCA4 for all account and/or pooled report records in the file to the correct link in IDES. If this file was intended as a test file, please correct the DocTypeIndic for all records and resubmit to the IDES test link.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp*: “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
-----------------------	--

Cause of Problem	<ul style="list-style-type: none"> • One or more records submitted to the ICMM test environment in the indicated file has a DocTypeIndic value for production data (FATCA1-FATCA14), and the IRS cannot accept any of the records in this file as valid FATCA submissions • The IRS has mandated that test and production data cannot be mixed in the same file.
Potential Resolution	<ul style="list-style-type: none"> • Please review the data in the indicated transmission to determine if the data is meant to be submitted as an actual FATCA submission or is simply test data. If the data must be resubmitted, the DocTypeIndic value must be set (to FATCA1-FATCA04) for each record in the file. • Please ensure that all future test data has DocTypeIndic values for test data (FATCA11-FATCA14). • Please review the IDES and ICMM testing schedules on the IRS IDES Homepage to determine IDES and ICMM testing schedules and availability
Other Links/ Resources	<ul style="list-style-type: none"> • IRS Publication 5124 (FATCA XML Schema) • IRS IDES Homepage
FAQs	<p>26. <i>Do I need to void or correct this record?</i> This record does not need to be voided or otherwise modified in the test environment. If the records are valid production submissions, please submit through IDES to the ICMM production environment.</p>

5 ICMM Record-Level Processing and Notifications

When file-level processing is complete, all data in a received file will have been found to be valid according to the FATCA XML schema. ICMM will then process individual records within these files. There are errors possible at both the record level and individual field level in files which conform to the FATCA schema. ICMM record-level processing generates a valid file notification, notification code “NVF”, indicating that file-level processing completed successfully, and providing counts of records processed and detail for each record-level error identified.

5.1 Valid File Notification with Record-level Errors

When a file passes all file processing and validation checks, it is considered a “valid”, or readable, file. However, though valid/readable, one or more individual records contained in the file may contain errors which prevent such records from being considered usable. ICMM record-level processing detects these errors, and includes record-level error information for each detected error with valid file notification for the file containing the record error. All valid file notifications will provide the following:

- The Name and TIN/GIIN of the reporting FI
- The Name and GIIN of the sponsoring entity or trustee of a trustee-documented trust submitting the file, if there is one
- A count of records processed (total account, pooled, nil report records)

A valid file notification for a file with record-level errors will provide additional information:

- The identifying information for each record in which errors were detected (including MessageRefId for the file and the DocRefId field from the “DocSpec” element for the record)
- Type of record (account or pooled)
- The “Document Type Indicator Code” for the record, indicating whether the submitted record is original, corrected, or amended, or a “void” record nullifying a previously submitted record
- A record-level error code indicating the type of error identified for the record
- Data element paths and descriptions of field-level errors for “8001 – Account Report Error”, “8007 – Pooled Report Error” and “8013 – Nil Report Error” record-level errors only.

5.2 Record-Level Processing Errors

If the record-level error is due to field-level errors resulting from problems with data element values, each field level error is listed with the following information:

- Field Name: path for XML data elements ending in the sub-element causing the error
- Error Description: short text description of the error or omission found in the field.

This pattern will be repeated for all field level errors identified in each record, for all records in a file. The following table shows the data for record level errors that will be provided in the “valid file with errors” notification, and supporting elements for addressing these notifications. Section 5.3 provides an illustrative rendering of an ICMM Valid File Notification for a file with a single account report which documents the presence and location of 2 record level errors within the account record. The actual XML version for this Valid File Notification, which is what the recipient will actually receive, is provided in Appendix A.

5.3 FATCA Notification Code NVF: Valid File Notification (With Record-Level Errors)

Notification Contents	<p>Notification Code: NVF</p> <p>Notification Content: The IRS has determined that the referenced file is in a valid format. Individual records submitted within the file have been processed and any errors detected during processing are provided in the Error Details included. For more information about record level errors, including their classification under an intergovernmental agreement (IGA), see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>IRS Processing Data for Received File: File Type: <new, revised, duplicate> # of Records in File: <number> # of Account Reports in File: <number> # of Pooled Reports in File: <number> # of Nil Reports in File: <number></p> <p>Record Level Errors for Received File: Sponsor FI Name: Sponsor_name_(if any) Sponsor FI GIIN: XXXXXX.XXXXX.XX.XXX Reporting FI Name: Reporting_FI_name Reporting FI GIIN: XXXXXX.XXXXX.XX.XXX</p> <p>(The following is for an account report record with two field-level errors)</p> <p>FATCA Report Code; ACCOUNT_REPORT Document Type Indicator Code: FATCA1 <denotes "Original FATCA Report"> DocRefId: ARDOCRefId2 Record Level Error Code: 8007 <denotes account report with field level errors></p> <p>Field Name: ReportingGroup/AccountReport/AccountHolder/Individual/Name Error Description: Name of Account Holder or Recipient Not Provided</p> <p>Field Name: ReportingFI/Address/AddressFix/City; ReportingFI/Address/AddressFree Error Description: City or Town Not Provided for Filer</p>
-----------------------	--

<p>Notification Contents (Continued)</p>	<p>Action Requested: Please correct all records with errors. Ensure the corrected record has a CorrDocRefId that matches the DocRefId and a CorrMessageRefId that matches the MessageRefId for the original(s) record submitted for which the IRS is requesting a correction and post the file with corrected records to IDES. If the record has an error in the Reporting FI GIIN, the original record must be voided and a new record submitted to correct the GIIN.</p> <p>Action Requested By Date: Your organization’s due date for filing Form 8966.</p> <p>HCTA Model 1/Model 2 Treaty Stamp*: “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
<p>Cause of Problem</p>	<ul style="list-style-type: none"> • One or more fields within the record level details failed validation text. These record level errors are identified in the error details section of the notification with the field name and field error text for each error. Refer to the table below for specific error types and resolutions.
<p>Potential Resolution</p>	<ul style="list-style-type: none"> • Please correct all individual record errors within the file. • Ensure the corrected record has a CorrDocRefId that matches the DocRefId and a CorrMessageRefId that matches the MessageRefId for the original record(s) submitted for which the IRS is requesting a correction. • If the record has an error in the Reporting FI GIIN, the original record must be voided and a new record submitted to correct the GIIN. • Set the DocTypeIndic value for the DocSpec element for the corrected record to “FATCA2” to denote corrected data submission • Use this file to recreate an IDES transmission and upload to IDES following all procedures <i>IDES User Guide</i>, available on the IRS IDES Homepage for transmission preparation and upload • The IRS will send another notification to you through IDES after we have downloaded and processed your file further.
<p>Other Links/ Resources</p>	<ul style="list-style-type: none"> • IRS Publication 5124 (FATCA XML Schema) • Form 8966 instructions • IRS IDES Homepage

FAQs	<p>27. What does this notification mean? The IRS has received and successfully completed processing of your file. At this time, one or more record level errors have been identified in your file and require correction. You will need to correct all identified record level errors and resubmit the file.</p> <p>28. Why weren't these errors identified by my XML validation tool? It is possible for a FATCA XML file to validate against the FATCA Intergovernmental Schema while not complying with FATCA reporting requirements. The FATCA XML V2.0 User Guide (IRS Publication 5124) details rules for FATCA data elements needed to validate against the FATCA schema, as well as mandatory data elements and values which extend beyond validation but are needed to satisfy reporting requirements.</p> <p>29. Which record contained the detected errors? The record indicated by the DocRefId value included with the error descriptions in the notifications is the record that must be corrected and resubmitted</p> <p>30. Do I need to resubmit the entire file or just the corrected record? Only the record with the corrected data needs to be resubmitted. However, since the record must be transmitted in a valid FATCA Report file, the full file must have sufficient data from the original file to pass XML validation and other checks, as defined in IRS Publication 5124, including MessageSpec and ReportingFI data elements. In addition, the following changes from the original file are necessary:</p> <ul style="list-style-type: none"> • The DocTypeIndic value should be "FATCA2" for corrected data • The MessageRefId and DocRefId values for the file being corrected must be provided in the CorrMessageRefId and CorrDocRefId fields for the submitted file. <p>31. What triggers a "TIN not valid" error message? The "TIN not valid" error is generated when a non-GIIN value for a TIN data element is not in a valid format for a U.S. TIN. A value for a TIN data element must be either in a GIIN format or in one of the following formats for a U.S. TIN to be considered valid when filed:</p> <ul style="list-style-type: none"> • Nine consecutive numerical digits without hyphens or other separators (e.g., "123456789") • Nine numerical digits with two hyphens, one hyphen entered after the third numeric digit and a second hyphen entered after the fifth numeric digit (e.g., "123-45-6789") • Nine numerical digits with a hyphen entered after the second digit (e.g., "12-3456789") <p>If a filer has confirmed that the US TIN is correct and receives a Valid File Notification (NVF) with a "TIN not valid" error because the original TIN was not in one of the above formats, then the filer does not need to re-file to correct the "TIN not valid" error. Any other errors included in the notification must be corrected and the filer should re-submit a corrected file for those errors only.</p> <p>The Account Holder TIN must be provided and cannot be blank characters in the TIN data sub-element. If an entity Account Holder does not have a TIN, enter all zeros in the TIN data sub-element, otherwise you will receive a "TIN not populated" error.</p> <p>32. I have verified that the US TIN (in SSN or EIN form) for my reporting FI, intermediary, account holder, or substantial owner is correct; why am I getting the "TIN not valid" error? Though the nine digits in the US TIN you have provided are the correct TIN for the person or entity being documented, you may have used an incorrect format for the TIN. Please see Question 27 above for the correct formats to be used for US TINs in FATCA reporting.</p>
------	---

	<p>33. How do I submit a Date of Birth in place of a TIN for a U.S. account holder if I am reporting from a Model 1 or Model 2 jurisdiction and do not have a TIN? Per provisions of Model 1 and Model 2 IGA's, for 2014 accounts reported in 2015, Model 1 HCTAs and Reporting FIs in Model 2 jurisdictions should include a date of birth if a U.S. TIN is not available for a U.S. account holder or substantial owner. The date of birth must be properly formatted per Publication 5124 and placed in the BirthInfo/Birthdate sub-element of the Accountholder or Substantial Owner element, as appropriate. If a date of birth is provided in lieu of a TIN, filers should include a string of nine consecutive zeros ("000000000") in the TIN sub-element for the Accountholder or Substantial Owner element. The Account Holder TIN fields must have numeric digits in them and cannot be all blank characters in the TIN data sub-element, otherwise you will receive a "TIN not populated" error.</p> <p>34. What do the record-level error codes in the notification mean? The 12 record-level error codes, descriptions, and remedial actions are provided in Figure 5-1 below.</p> <p>35. Do I need to correct data submitted in my FATCA Record file? The record-level error codes 8001 (Pooled Report Error) and 8007 (Account Report Error) indicate errors found with specific data elements in the record that must be corrected through a resubmission. In these cases the notifications will contain a "FieldErrorGrp" for each field-level error, with a description of the error ("FieldErrorTxt") and the XML path for the data element ("FieldNm") in error. Field-level errors are provided alphabetically by description Figure 5-2 below. Each field-level error must be corrected to resolve the record-level error.</p> <p>36. How do I submit my corrected, amended, or void data? For the procedures to correct, amend, or void specific records, please see Section 5.4 of this guide.</p>

DRAFT

5.4 Record and Field-Level Error Messages

The following Table 5-1 provides the codes, descriptions, and remedial actions needed for record level errors ICMM will detect for records in electronically submitted files. Four digit record level errors codes are always provided when record level errors are present, and are found in the “/FATCARRecordErrorDetailGrp/RecordLevelErrorCd” data element within the XML version of a Valid File Notification. The notification illustration above shows this code as “Record Level Error Code: 8007.”

Table 5-1 ICMM Record-level Processing Error Codes (electronic filing)

Error Code	Description	Record Error Detail	Remedial Actions
8001	Pooled Reporting Error	One or more field-level errors were found on the indicated pooled reporting record.	Correct field level errors and resubmit
8002	Duplicate Pooled Report Record	A duplicate pooled report was received, based on the MessageRefId and DocRefId values in the record.	The filer should research the duplicate record to determine if it should be resubmitted with unique identifiers
8003	Pooled Report Correction with Error	One or more field-level errors were found on the indicated pooled report record which was submitted as a correction to a prior account report record.	To correct a corrected pooled report record with an error, the filer should consult the field-level error messages on the original record error report for the pooled report record the filer is attempting to correct (record error code 8001), and resubmit a corrected record for the original record which addresses the specific field -level errors in the original record.
8004	Pooled Report Correction without Matching Original	The filer submitted a corrected pooled report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a pooled report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a record with errors
8005	Void Pooled Report without Matching Original	The filer submitted a void pooled report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a pooled report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a previously submitted file
8006	Amended Pooled Report without Matching Original	The filer submitted an amended pooled report, but the values in the CorrMessageRefId and CorrDocRefId	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and

Error Code	Description	Record Error Detail	Remedial Actions
		fields did not tie to a pooled report received	CorrDocRefId values corresponding to a previously submitted file
8007	Account Reporting Error	One or more field-level errors were found on the indicated account reporting record.	Correct field level errors and resubmit
8008	Duplicate Account Report Record	A duplicate account report was received, based on the MessageRefId and DocRefId values in the record.	The filer should research the duplicate record to determine if it should be resubmitted with unique identifiers
8009	Account Report Correction with Error	One or more field-level errors were found on the indicated account report record which was submitted as a correction to a prior account report record.	To correct a corrected account report record with an error, the filer should consult the field-level error messages on the original record error report for the account report record the filer is attempting to correct (record error code 8007), and resubmit a corrected record for the original record which addresses the specific field -level errors in the original record.
8010	Account Report Correction without Matching Original	The filer submitted a corrected account report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a account report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a record with errors
8011	Void Account Report without Matching Original	The filer submitted a void account report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a account report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a previously submitted file
8012	Amended Account Report without Matching Original	The filer submitted an amended account report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a account report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a previously submitted file
8013	Nil Reporting Error	One or more field-level errors were found on the indicated nil report.	Correct field level errors and resubmit indicated for this record and resubmit as a corrected nil report
8014	Duplicate Nil Report Record	A duplicate nil report was received, based on the MessageRefId and DocRefId	The filer should research the duplicate nil record to determine if a nil report was previously sent; no follow-up

Error Code	Description	Record Error Detail	Remedial Actions
		values in the record.	action is needed if an earlier nil report was received without errors
8015	Nil Report Correction with Error	One or more field-level errors were found on the indicated nil report record which was submitted as a correction to a prior nil report record.	To correct a nil report record with an error, the filer should consult the field-level error messages on the original record error report for the nil report record the filer is attempting to correct (record error code 8013), and resubmit a corrected record which addresses the specific field-level errors in the original record.
8016	Nil Report Correction without Matching Original	The filer submitted a corrected nil report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a nil report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a nil report record with errors
8017	Void Nil Report without Matching Original	The filer submitted a void nil report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a nil report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a previously submitted file
8018	Amended Nil Report without Matching Original	The filer submitted an amended nil report, but the values in the CorrMessageRefId and CorrDocRefId fields did not tie to a nil report received	The filer should research the CorrMessageRefId and CorrDocRefId fields of the submitted file to determine if it should be resubmitted with CorrMessageRefId and CorrDocRefId values corresponding to a previously submitted file

The following Table 5-2 provides the field level errors ICMM will detect in pooled and account report records in electronically submitted files. The entries in this table are sorted first by “Field Level Error.”.

Table 5-2 ICM Field-level Errors for Electronic FATCA XML Reports

Field Level Error	Field Level Error Description	Record Type	Form Part/Line Reference	Field Level Error Business Rules
AccountHolder /Individual /AddressFix/City - Not Populated	Account Holder Individual Address Fix City populated with space(s) only	Account	Part II Line 3a	The AccountHolder/Individual/AddressFix/City element must be populated with the account holder's city
AccountHolder /Individual /Name - Not Populated	Account Holder Individual Name populated with space(s) only	Account	Part II Line 1a	The AccountHolder/Individual/Name element must be populated with the account holder's name
AccountHolder /Individual /TIN - Invalid Format	Account Holder Individual TIN not in IRS specified format	Account	Part II Line 4	For at least one of the AccountHolder/Individual/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: - the value populated in the AccountHolder/Individual/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the AccountHolder/Individual/TIN element is formatted as (XXX-XX-XXXX), (XX-XXXXXXXX), or (XXXXXXXXXX)
AccountHolder /Individual /TIN - Invalid Format, Non-US	Account Holder Individual is not US issued TIN	Account	Part II Line 4	At least one of the AccountHolder/Individual/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
AccountHolder /Individual /TIN - Not Populated	Account Holder Individual TIN populated with space(s) only	Account	Part II Line 4	At least one of the AccountHolder/Individual/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
AccountHolder /Organisation /AddressFix/City - Not Populated	Account Holder Organisation AddressFix City populated with space(s) only	Account	Part II Line 3a	The AccountHolder/Organisation/AddressFix/City element must be populated with the account holder's city
AccountHolder /Organisation /Name - Not Populated	Account Holder Organisation Name populated with space(s) only	Account	Part II Line 1a	The AccountHolder/Organisation/Name element must be populated with the account holder's name

AccountHolder /Organisation /TIN - Invalid Format	Account Holder Organisation TIN not in IRS specified format	Account	Part II Line 4	For at least one of the AccountHolder/Organisation/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: - the value populated in the AccountHolder/Organisation/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the AccountHolder/Organisation/TIN element is formatted as (XX-XX-XXXX), (XX-XXXXXX), or (XXXXXXXXXX)
AccountHolder /Organisation /TIN - Invalid Format, Non-US	Account Holder Organisation no US issued TIN	Account	Part II Line 4	At least one of the AccountHolder/Organisation/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
AccountHolder /Organisation /TIN - Not Populated	Account Holder Organisation TIN populated with space(s) only	Account	Part II Line 4	At least one of the AccountHolder/Organisation/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
AccountHolderType - Invalid Code for Tax Year	Account Holder Type invalid code populated for Tax Year reported	Account	Part II Line 5	The AcctHolderType element cannot be (FATCA105) for account reports submitted reporting periods prior to 2016
AccountHolderType - Invalid Code, Direct Reporting NFFE	Account Holder Type non-Direct Reporting NFFE code populated	Account	Part II Line 5	The ReportingFI/FilerCategory element cannot be populated with (FATCA606) if the AccountHolderType element related to the ReportingFI is not populated with (FATCA105)
AccountHolderType - Invalid Code, Reciprocal Reporting	Account Holder Type invalid code populated	Account	Part II Line 5	The AccountHolderType element value of (FATCA106) is reserved and is not to be used in FATCA reporting to the IRS
AccountHolderType - Invalid Code, Reporting FI/Sponsor	Account Holder Type Direct Reporting NFFE code populated for non-Direct Reporting NFFE Filer	Account	Part II Line 5	The AccountHolderType element is populated with (FATCA105), but the Sponsor/FilerCategory element or the ReportingFI/FilerCategory element is not populated with (FATCA606); either the AccountHolderType value must be changed from (FATCA105), or the FilerCategory value must be changed to (FATCA606)
AccountReport/ AccountBalance - Invalid Amount	Account Balance negative amount populated	Account	Part IV Line 3a	The AccountReport/AccountBalance amount must be a numerical value that is a negative number or or greater

Intermediary /AddressFix/City - Not Populated	Intermediary AddressFix City populated with space(s) only	ALL	Part I Line 8a	The Intermediary/AddressFix/City element must be populated with the Intermediary's city
Intermediary /FilerCategory - Multiple Codes	Intermediary Category and Sponsor Category or Reporting FI Filer Category populated	ALL	Part I Line 1b	The Intermediary/FilerCategory element cannot be populated if either the Sponsor/FilerCategory or ReportingFI/FilerCategory elements are populated
Intermediary /Name - Not Populated	Intermediary Name populated with space(s) only	ALL	Part I Line 6	The Intermediary/Name element must be populated with the name of the Intermediary
Intermediary /TIN - Invalid Format	Intermediary TIN not in IRS specified format	ALL	Part I Line 9, 10	For at least one of the Intermediary/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: <ul style="list-style-type: none"> - the value populated in the Intermediary/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the Intermediary/TIN element is formatted as (XXX-XX-XXXX), (XX-XXXXXXX), or (XXXXXXXXXX)
Intermediary /TIN - Mismatch	Intermediary TIN not registered	ALL	Part I Line 9, 10	At least one of the Intermediary/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
Intermediary /TIN - Not Populated	Intermediary TIN populated with space(s) only	ALL	Part I Line 9, 10	At least one of the Intermediary/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
PoolReport/PoolBalance - Invalid Amount	Pool Balance negative amount populated	Pool	Part V Line 3a	The PoolReport/PoolBalance element must be a negative number or greater
ReportingFI /AddressFix/City - Not Populated	Reporting FI AddressFix City populated with space(s) only	ALL	Part I Line 3a	The ReportingFI/AddressFix/City element must be populated with the ReportingFI's city
ReportingFI /FilerCategory - Invalid Code	Reporting FI Category populated with non-Reporting FI code	ALL	Part I Line 1b	The ReportingFI/FilerCategory element can only be populated with one of the following values: (FATCA601), (FATCA602), (FATCA603), (FATCA604), (FATCA605), (FATCA606), (FATCA610), or (FATCA611)

ReportingFI /FilerCategory - Multiple Codes	Reporting FI Category and Sponsor Category or Intermediary Category populated	ALL	Part I Line 1b	The ReportingFI/FilerCategory element cannot be populated if either the Sponsor/FilerCategory or Intermediary/FilerCategory elements are populated
ReportingFI /FilerCategory - Not Populated	Reporting FI Category not populated	ALL	Part I Line 1b	The ReportingFI/FilerCategory must be populated if neither a Sponsor nor Intermediary is provided
ReportingFI /Name - Not Populated	Reporting FI Name populated with space(s) only	ALL	Part I Line 1a	The ReportingFI/Name element must be populated with the name of the Reporting FI
ReportingFI /TIN - Invalid Format	Reporting FI TIN not in IRS specified format	ALL	Part I Line 4, 5	For at least one of the ReportingFI/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: <ul style="list-style-type: none"> - the value populated in the ReportingFI/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the ReportingFI/TIN element is formatted as (XXX-XX-XXXX), (XX-XXXXXXX), or (XXXXXXXXXX)
ReportingFI /TIN - Mismatch	Reporting FI TIN not registered	ALL	Part I Line 4, 5	At least one of the ReportingFI/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
ReportingFI /TIN - Not Populated	Reporting FI TIN populated with space(s) only	ALL	Part I Line 4, 5	At least one of the ReportingFI/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
Sponsor /AddressFix/City - Not Populated	Sponsor City populated with space(s) only	ALL	Part I Line 3a	The Sponsor/AddressFix/City element must be populated with the Sponsor's city
Sponsor /FilerCategory - Invalid Code	Sponsor Category populated with non-Sponsor code	ALL	Part I Line 1b	The Sponsor/FilerCategory element must only be populated with a value of (FATCA607), (FATCA608), or (FATCA609)
Sponsor /FilerCategory - Multiple Codes	Sponsor Category and Intermediary Category or Reporting FI Category populated	ALL	Part I Line 1b	The Sponsor/FilerCategory element cannot be populated if either the Intermediary/FilerCategory or ReportingFI/FilerCategory elements are populated

Sponsor /FilerCategory - Not Populated	Sponsor Category not populated	ALL	Part I Line 1b	If the ReportingGroup/Sponsor section is populated the Sponsor/FilerCategory element must be populated with a valid value
Sponsor /Name - Not Populated	Sponsor Name populated with space(s) only	ALL	Part I Line 1a	The Sponsor/Name element must be populated with the name of the Sponsor
Sponsor /TIN - Invalid Format	Sponsor TIN not in IRS specified format	ALL	Part I Line 4, 5	For at least one of the Sponsor/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: <ul style="list-style-type: none"> - the value populated in the Sponsor/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the Sponsor/TIN element is formatted as (XXX-XX-XXXX), (XX-XXXXXXXX), or (XXXXXXXXXX)
Sponsor /TIN - Mismatch	Sponsor TIN not registered	ALL	Part I Line 4, 5	At least one of the Sponsor/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
Sponsor /TIN - Not Populated	Sponsor TIN populated with space(s) only	ALL	Part I Line 4, 5	At least one of the Sponsor/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
SubstantialOwner /Individual /AddressFix/City - Not Populated	Substantial Owner Individual AddressFix City populated with space(s) only	Account	Part III Line 3a	The SubstantialOwner/Individual/AddressFix/City element must be populated with the city of the account owner
SubstantialOwner /Individual /Name - Not Populated	Substantial Owner Individual Name populated with space(s) only	Account	Part III Line 1	The SubstantialOwner/Individual/Name element must be populated with the name of the account owner

SubstantialOwner /Individual /TIN - Invalid Format	Substantial Owner Individual TIN not in IRS specified format	Account	Part III Line 4	For at least one of the SubstantialOwner/Individual/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: <ul style="list-style-type: none"> - the value populated in the SubstantialOwner/Individual/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the SubstantialOwner/Individual/TIN element is formatted as (XXX-XX-XXXX), (XX-XXXXXXX), or (XXXXXXXXXX)
SubstantialOwner /Individual /TIN - Invalid Format, Non-US	Substantial Owner Individual no US issued TIN	Account	Part III Line 4	At least one of the SubstantialOwner/Individual/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
SubstantialOwner /Individual /TIN - Not Populated	Substantial Owner Individual TIN populated with space(s) only	Account	Part III Line 4	At least one of the SubstantialOwner/Individual/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
SubstantialOwner /Organisation /AddressFix/City - Not Populated	Substantial Owner Organisation AddressFix City populated with space(s) only	Account	Part III Line 3a	The SubstantialOwner/Organisation/AddressFix/City element must be populated with the city of the account owner
SubstantialOwner /Organisation /Name - Not Populated	Substantial Owner Organisation Name populated with space(s) only	Account	Part III Line 1	The SubstantialOwner/Organisation/Name must be populated with the name of the account owner
SubstantialOwner /Organisation /TIN - Invalid Format	Substantial Owner Organisation TIN not in IRS specified format	Account	Part III Line 4	For at least one of the SubstantialOwner/Organisation/TIN elements populated, the TIN/IssuedBy attribute must be null or the value populated = US and at least one of the following must be true: <ul style="list-style-type: none"> - the value populated in the SubstantialOwner/Organisation/TIN element is formatted as (XXXXXX.XXXXX.XX.XXX); - the value populated in the SubstantialOwner/Organisation/TIN element is formatted as (XXX-XX-XXXX), (XX-XXXXXXX), or (XXXXXXXXXX)

SubstantialOwner /Organisation /TIN - Invalid Format, Non-US	Substantial Owner Organisation no US issued TIN	Account	Part III Line 4	At least one of the SubstantialOwner/Organisation/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format
SubstantialOwner /Organisation /TIN - Not Populated	Substantial Owner Organisation TIN populated with space(s) only	Account	Part III Line 4	At least one of the SubstantialOwner/Organisation/TIN elements populated must have a TIN/IssuedBy attribute value that is either null or = US, with the TIN element value that is either a valid GIIN or US TIN format

DRAFT

5.5 Electronic Resubmission Process

The procedures to correct, amend, or void specific records below may be applied to those cases in which 1) the ReportingFI/TIN element does not contain a field error, and 2) the filer has not used the DocRefId value of the record being corrected more than once.

When a filer resubmits corrected record data in response to a valid file notification (NVF) with record errors from the IRS for an electronically submitted file, the following changes must be made within the “DocSpec” element for the corrected record:

- The “DocTypeIndic” element must be “FATCA2” to denote a corrected record
- The “CorrMessageRefId” element must be set equal to the “MessageRefId” for the original file in which the record being corrected was contained
- The “CorrDocRefId” element must be set equal to the “DocRefId” for the original record being corrected
- All fields identified in the error listing for the record in the notification must be corrected.

In addition, all other record elements from the original record submission must be included, and the resubmitted file with the corrected record data must represent a valid FATCA XML file.

Amended records, in which a filer chooses to amend (change or edit) a previously submitted record, are prepared similarly to corrected records. To submit an amended record the filer must make the following changes with the resubmitted record:

- The “DocTypeIndic” element must be “FATCA4” to denote an amended record
- The “CorrMessageRefId” element must be set equal to the “MessageRefId” for the original file in which the record being amended was contained
- The “CorrDocRefId” element must be set equal to the “DocRefId” for the original record being amended
- All fields in the amended record must have values that the filer wishes to report to the IRS for the relevant account or pooled report.

Voided records, in which a filer wishes to delete a previously submitted record, are submitted in the following manner:

- The “DocTypeIndic” element must be “FATCA3” to denote a voided record
- The “CorrMessageRefId” element must be set equal to the “MessageRefId” for the original file in which the record being voided was contained
- The “CorrDocRefId” element must be set equal to the “DocRefId” for the original record being voided

All fields in the voided record must have the same values as the original record being voided (deleted).

5.6 Paper Record-Level Processing Errors

When a data record from a paper Form 8966 is processed, ICMM will apply business rules to evaluate the captured data and identify errors requiring resolution. ICMM will generate a notification only if errors are detected in the record associated with a paper Form 8966; unlike the electronic filing case the filer of a paper form with no errors receives no acknowledgement from the IRS. Also, unlike the XML notifications sent to electronic filers, this notification will be printed and mailed to paper filers. These paper notifications will provide the following:

- Notification identification information
- The Name and TIN/GIIN of the reporting FI

- The Name and GIIN of the sponsoring entity or trustee of a trustee-documented trust submitting the file, if there is one
- Type of record (account or pooled)
- The “Document Type Indicator Code” for the record, indicating whether the submitted record is original, corrected, or amended, or a “void” record nullifying a previously submitted record.
- The 4-digit record level error code for the error found in the record; “8001” denotes a “Pooled Report Error” and one or more field-level errors in a pooled report record, “8007” denotes a “Account Report Error” and one or more field-level errors in an account report record, etc. (see Table 5-4 below for the complete list of codes and meanings).
- Details on specific field-level errors identified within the paper record, including the part and line number on the form where the error occurs and a description of the error itself.

A sample paper error notification is shown below for a record error on an account record with field level errors.

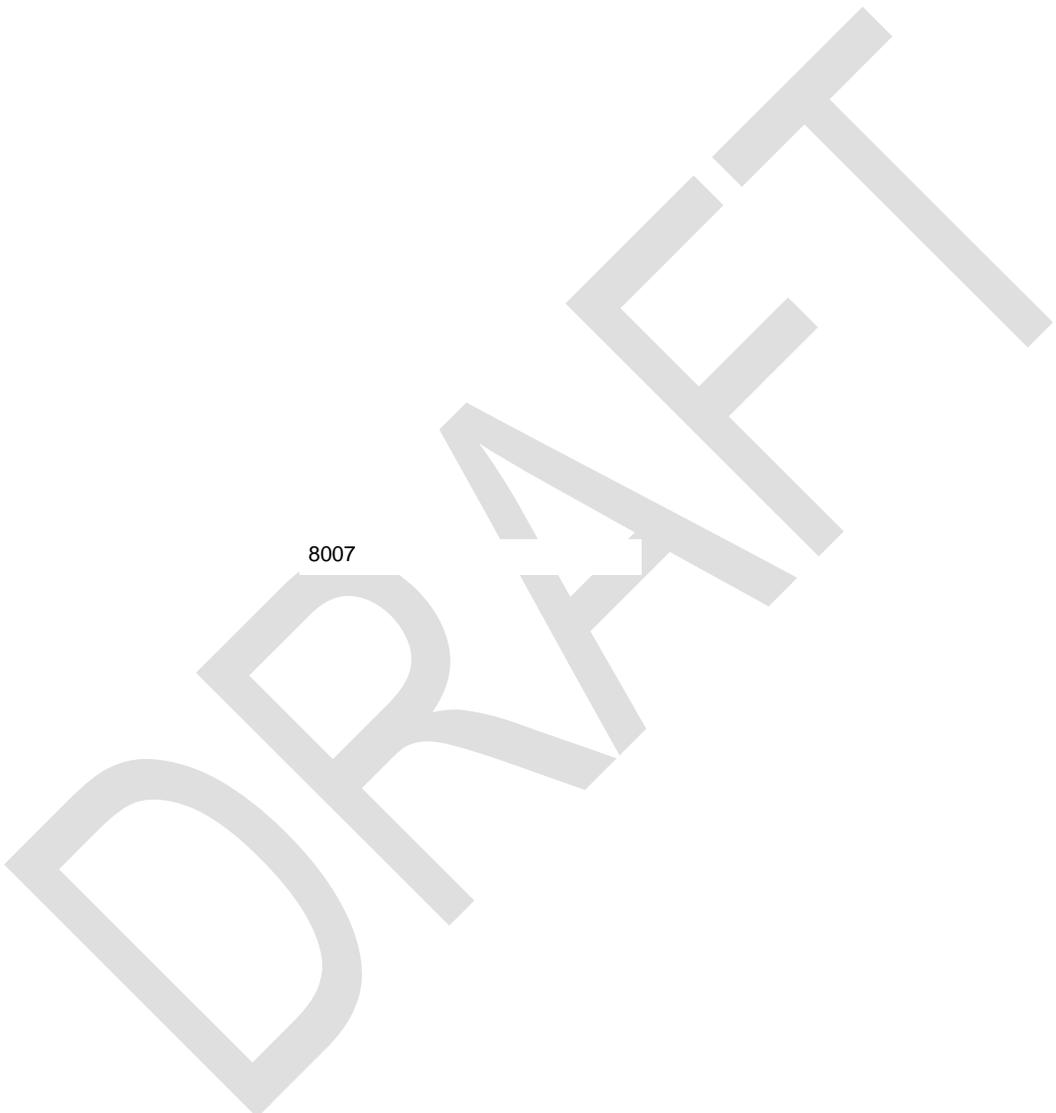

5.7 ICMM Record-level Error Notifications for Paper Forms 8966

ICMM will treat each paper Form 8966 as a single record. Since paper forms undergo no processing equivalent to file-level processing for FATCA Reports in XML format, all errors on paper forms are considered record-level errors. There is no valid file notification generated on receipt of a paper Form 8966; only a record-error notification is generated if one or more errors are selected on the Form 8966. All error notifications for paper Forms 8966 will be sent by mail to the filer of the form, as identified in Part I. A sample notification for a paper Form 8966 with field-level errors is shown in Figure 5-3 below. These notifications will utilize essentially the same layout for account or pooled reports.

Figure 5-3 Example ICMM Paper Record-level Error Notification (Account Report)

HCTA Model 1/Model 2 Treaty Stamp:

This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.

5.8 ICMM Record-level Error Notifications for Paper Forms 8966

	<p>Notification Code: Paper Account Report Error Notification</p> <p>Notification Content: An account report submitted on Form 8966 by the organization indicated on the Form has one or more errors. These errors are described below. For more information on this notification, please see: http://www.irs.gov/Businesses/Corporations/FATCA-Error-Notifications</p> <p>IRS Processing Data for Received File: Record Level Error Code: <Record Level Error Code> Field ID: <Part X, Line X, Line Item Name> Field Error Description: <Field Level Error Description></p> <p>Action Requested: Please send the complete account report on a paper Form 8966 with corrections to the errors indicated above and the “Corrected report” boxed checked to the IRS, as indicated by instructions for Form 8966. If the record has an error in the Reporting FI GIIN, the original record must be voided and a new record submitted to correct the GIIN.</p> <p>Action Requested By Date: Correct the errors within 120 days of the date of this notice.</p> <p>HCTA Model 1/Model 2 Treaty Stamp*: “This information is furnished under the provisions of an income tax treaty, tax information exchange agreement (TIEA), or other agreement for the exchange of information with a foreign government, and its use and disclosure must be governed by the provisions of that treaty, TIEA, or other agreement.”</p>
Cause of Problem	<ul style="list-style-type: none"> • One or more fields within the paper Form 8966 you submitted as an account report failed our validation tests. These errors are identified in the “IRS Processing Data for Received Record” section of the notification with the part and line number and a description for each error. [Refer to the tables in Figures 5-3 and 5-4 below for specific error types and resolutions.]
Potential Resolution	<ul style="list-style-type: none"> • Please correct all errors identified in the file, including field level errors • Send the correction on a separate Form 8966 marked as “Corrected” on the top of the form • If the record has an error in the Filer FI GIIN in Part I line 4, the original record must be voided and a new Form 8966 submitted to correct the GIIN. In this case you will need to send 2 Forms 8966: <ul style="list-style-type: none"> – Form 8966 marked as “Void” with the original Filer GIIN in Part I line 4 – Form 8966 marked as “New” with the actual Filer GIIN in Part I line 4 • Please note that all communications with the IRS regarding this paper Form 8966 must be via paper for the remainder of the tax year.

------	---

DRAFT

The following Table 5-4 provides the codes, descriptions, and remedial actions needed for record level errors that ICMM will detect for records on paper Forms 8966. Four digit record level errors codes are always provided when record level errors are present. The notification illustration above shows this code as “**Record Level Error Code: 8007.**”

Unlike the electronic case, in which a single file can contain multiple account reports and pooled reports as records, a single Form 8966 is considered to be a single, standalone record. A filer can only document a single account or pooled report on each paper Form 8966, and cannot file both types of reports on a single form. Also, unlike the electronic case, there is no way to identify a specific Form 8966 submitted by a filer; that is, there is no analog on the paper filing side to the MessageRefId and DocRefId data elements in the FATCA XML schema which can be used to exactly identify prior paper records. The IRS will need to analyze filing history from a given filer to determine if corrections to errors on specific paper account and pooled reports have been provided. Because there is no way to directly correlate corrections to original submissions with errors, the record level errors in electronic filing centered on corrected or amended reports with no matching originals have no paper counterparts, so the range of paper record-level errors is smaller.

Table 5-4 ICMM Record-level Processing Error Codes (paper filing)

Error Code	Description	Record Error Description	Remedial Actions
8001	Pooled Reporting Error	One or more field-level errors were found on the indicated pooled reporting record.	Correct field level errors and resubmit.
8003	Pooled Report Correction with Error	One or more field-level errors were found on the indicated pooled report record which was submitted as a correction to a prior account report record.	To correct a corrected paper Form 8966 pooled report with an error, the filer should consult the field-level error messages on the initial error notification for the Form 8966 pooled report the filer is attempting to correct (record error code 8001), and resubmit a corrected Form 8966 for the original pooled report which addresses the specific field-level errors in the original pooled report.
8007	Account Reporting Error	One or more field-level errors were found on the indicated account reporting record.	Correct field level errors and resubmit
8009	Account Report Correction with Error	One or more field-level errors were found on the indicated account report record which was submitted as a correction to a prior account report record.	To correct a corrected paper Form 8966 account report with an error, the filer should consult the field-level error messages on the initial error notification for the Form 8966 account report the filer is attempting to correct (record error code 8007), and resubmit a corrected Form 8966 for the original account report which addresses the specific field-level errors in the original account report.

8013	Nil Reporting Error	One or more field-level errors were found on the indicated nil reporting record.	Correct field level errors and resubmit
8015	Nil Report Correction with Error	One or more field-level errors were found on the indicated nil report record which was submitted as a correction to a prior nil report record.	To correct a corrected paper Form 8966 nil report with an error, the filer should consult the field-level error messages on the initial error notification for the Form 8966 nil report the filer is attempting to correct (record error code 8015), and resubmit a corrected Form 8966 for the original nil report which addresses the specific field-level errors in the original nil report.

DRAFT

The following table in Figure 5-5 provides the field level errors ICMM will detect in pooled and account report records on Forms 8966 filed on paper. The entries in this table are sorted first by “Error Description” and, second by the “Field Name (Form part and line number)” for the part and line in which the error is detected; both of these are provided in the notification for each field level error.

Figure 5-5 ICMM Field-level Errors for Paper Reports

Field Level Error	Record Type	Form Reference	Field Level Error Description	Resolution Notes
Account Balance - Invalid Format	Account	Part IV Line 3a	Account Balance is in Invalid Format (not numeric)	The value populated must be numeric
Account Balance - Not Populated	Account	Part IV Line 3a	Account Balance is not populated	If one or more fields in Part IV are populated, Account Balance must be populated with a numerical value
Account Holder City - Not Populated	Account	Part II Line 3a	Account Holder City is not populated	Account Holder city must be populated with 1 or more non-blank characters
Account Holder Country - Not Populated	Account	Part II Line 3c	Account Holder Country is not populated	Account Holder country must be populated with 1 or more non-blank characters
Account Holder Name - Not Populated	Account	Part II Line 1	Account Holder Name is not populated	Account Holder name must be populated with 1 or more non-blank characters
Account Holder TIN - Invalid Format	Account	Part II Line 4	Account Holder TIN not in IRS specified format	The Account Holder TIN must be populated in a format XXXXXXXXX, where X is a numeral
Account Holder TIN - Not Populated	Account	Part II Line 4	Account Holder TIN is not populated	The Account Holder TIN must be populated in a format XXXXXXXXX, where X is a numeral
Account Holder Type - Multiple Selection	Account	Part II Line 1b	Multiple checkboxes selected for Account Holder Type	An Account Holder type (individual or entity) must be selected, but only one box can be checked

Account Holder Type - Not Populated	Account	Part II Line 1b	Account Holder Type is not populated	An Account Holder type (individual or entity) must be selected, but only one box can be checked
Account Number - Not Populated	Account	Part IV Line1	Account Number is not populated	If one or more fields in Part IV are populated Account Number must be populated with 1 or more non-blank characters
Account Owner City - Not Populated	Account	Part III Line 3a	Account Owner City is not populated	Account Owner city must be populated with 1 or more non-blank characters
Account Owner Country - Not Populated	Account	Part III Line 3c	Account Owner Country is not populated	Account Owner country must be populated with 1 or more non-blank characters
Account Owner Name - Not Populated	Account	Part III Line 1	Account Owner Name is not populated	Account Owner name must be populated with 1 or more non-blank characters
Account Owner TIN - Invalid Format	Account	Part III Line 4	Account Owner TIN not in IRS specified format	The Account Owner TIN must be populated in a format XXXXXXXXXX, where X is a numeral
Account Owner TIN - Not Populated	Account	Part III Line 4	Account Owner TIN is not populated	The Account Owner TIN must be populated in a format XXXXXXXXXX, where X is a numeral
Aggregate Account Balance - Invalid Format	Pool	Part V Line 4	Aggregate Account Balance is in Invalid Format (not numeric)	The value must be populated and be numeric for an account report
Aggregate Account Balance - Not Populated	Pool	Part V Line 4	Aggregate Account Balance is not Populated	The value must be populated and be numeric for an account report
Aggregate Payment Amount - Not Populated	Pool	Part V Line 3	Aggregate Payment Amount is not Populated	The value must be populated and be numeric for a pool report
Aggregate Payment Amount - Invalid Format	Pool	Part V Line 3	Aggregate Payment Amount is in Invalid Format (not numeric)	The value must be populated and be numeric for a pool report
Currency Code - Invalid Code	Account	Part IV Line 2	Currency Code not in the ISO Currency Code list	The currency code provided must match the ISO currency code list
Currency Code - Invalid Code	Pool	Part V Line 5	Currency Code not in the ISO Currency Code list	The currency code provided must match the ISO currency code list

Dividends - Invalid Format	Account	Part IV Line 4b	Dividends is in Invalid Format (not numeric)	If populated the value must be numeric
Entity Type - Multiple Selection	Account	Part II Line 5	Multiple checkboxes selected for Entity Type	If the Account Holder Type selection type is Entity only one account holder entity type can be selected
Entity Type - Not Populated	Account	Part II Line 5	Entity Type is not populated	If the Account Holder Type selection type is Entity only one account holder entity type can be selected
Filer City - Not Populated	ALL	Part I Line 3a	Filer City is not populated	Filer city must be populated with 1 or more non-blank characters
Filer Country - Not Populated	ALL	Part I Line 3c	Filer Country is not populated	Filer country must be populated with 1 or more non-blank characters
Filer GIIN - Invalid Format	ALL	Part I Line 4	Filer GIIN not in IRS specified format	When provided the filer GIIN must be populated in a valid format and match a registered entity
Filer GIIN - Mismatch	ALL	Part I Line 4	Filer GIIN not registered	When provided the filer GIIN must be populated in a valid format and match a registered entity
Filer GIIN - Not Populated	ALL	Part I Line 4	Filer GIIN is not populated	Either the filer GIIN or filer TIN must be populated with 1 or more non-blank characters in a valid GIIN or TIN format
Filer Name - Not Populated	ALL	Part I Line 1a	Filer Name is not populated	Filer name must be populated with 1 or more non-blank characters
Filer TIN - Invalid Format	ALL	Part I Line 5	Filer TIN not in IRS specified format	If provided the filer TIN must be populated in a format XXXXXXXXX, where X is a numeral
Filer TIN - Not Populated	ALL	Part I Line 5	Filer TIN is not populated	Either the filer GIIN or filer TIN must be populated with 1 or more non-blank characters in a valid GIIN or TIN format
Gross Proceeds/Redemptions - Invalid Format	Account	Part IV Line 4c	Gross Proceeds/Redemptions is in Invalid Format (not numeric)	If populated the value must be numeric

Interest - Invalid Format	Account	Part IV Line 4a	Interest is in Invalid Format (not numeric)	If populated the value must be numeric
Number of Accounts - Invalid Format	Pool	Part V Line 2	Number of Accounts is in Invalid Format (not numeric)	The number of accounts for a pool must be numeric and greater than zero
Number of Accounts - Not Populated	Pool	Part V Line 2	Number of Accounts is not Populated	The number of accounts for a pool must be numeric and greater than zero
Number of Accounts - Not Valid	Pool	Part V Line 2	Number of Accounts is Not Valid	The number of accounts for a pool must be numeric and greater than zero
Other - Invalid Format	Account	Part IV Line 4d	Other is in Invalid Format (not numeric)	If populated the value must be numeric
Pooled Reporting Type - Multiple Selection	Pool	Part V Line 1	Multiple checkboxes selected for Pooled Reporting Type	A pool type must be specified by selecting only one checkbox for a pool type
Pooled Reporting Type - Not Populated	Pool	Part V Line 1	Pooled Reporting Type is not Populated	A pool type must be specified by selecting only one checkbox for a pool type
Report Type - Multiple Selections	ALL	Report Type Box	Corrected, Amended or Voided Report Type - Multiple checkboxes selected	If this submission is for a Corrected, Amended, Voided or Nil Report only one box may be selected
Sponsored Entity City - Not Populated	ALL	Part I Line 8a	Sponsor City is not populated	Sponsored Entity city must be populated with 1 or more non-blank characters
Sponsored Entity Country - Not Populated	ALL	Part I Line 8c	Sponsor Country is not populated	Sponsored Entity country must be populated with 1 or more non-blank characters
Sponsored Entity GIIN - Invalid Format	ALL	Part I Line 9	Sponsor GIIN not in IRS specified format	When provided the Sponsored Entity GIIN must be populated in a valid format and match a registered entity

Sponsored Entity GIIN - Mismatch	ALL	Part I Line 9	Sponsor GIIN not registered	When provided the Sponsored Entity GIIN must be populated in a valid format and match a registered entity
Sponsored Entity GIIN - Not Populated	ALL	Part I Line 9	Sponsor GIIN is not populated	Either the Sponsored Entity GIIN or Sponsored Entity TIN must be populated with 1 or more non-blank characters in a valid GIIN or TIN format
Sponsored Entity Name - Not Populated	ALL	Part I Line 1a	Sponsor Name is not populated	The Sponsored Entity name must be populated with 1 or more non-blank characters
Sponsored Entity TIN - Invalid Format	ALL	Part I Line 10	Sponsor TIN not in IRS specified format	If provided the Sponsored Entity TIN must be populated in a format XXXXXXXXX, where X is a numeral
Sponsored Entity TIN - Not Populated	ALL	Part I Line 10	Sponsor TIN is not populated	Either the Sponsored Entity GIIN or Sponsored Entity TIN must be populated with 1 or more non-blank characters in a valid GIIN or TIN format

5.11 Paper Resubmission Process

To resubmit a Form 8966, paper filers should submit a new Form 8966 with all appropriate fields populated with either data from the originally filed form or changes to reflect corrections or amendments:

- To correct an account or pooled report in response to error notifications received from the IRS, make corrections to the fields in the part and line numbers specified in the error notification and check the “Corrected form” box
- To amend or change an account or pooled report submitted on a previously filed Form 8966, change the fields needing edits and check the “Amended form” box
- To void or delete a previously filed Form 8966, check the “Voided form” box.

In all cases, fields from the original submission that are not being corrected or edited must be populated with the same data as from the original filing (note: voided forms must include the same data as the original form being voided).

DRAFT

Appendix A: Valid File Notification Examples

The following are "Valid File Notification" (NVF) generated for files which pass file-level processing. The example below is an NVF notification for a file with no records errors.
