## **Overview**

The 2025 edition of IRS Publication 6186, Calendar Year Return Projections for the United States and IRS Campuses, presents projected tax return volumes for the nation and seven IRS Submission Processing campuses from Calendar Years (CY) 2025 through 2032. It also includes projected volumes for selected IRS examination classes.

Publication 6186's projections serve as a foundation for estimating IRS workload and resource requirements, which are reflected in the IRS budget and other key planning documents. The Statistics of Income (SOI) staff update the projections annually to account for changes in filing patterns, economic trends, demographic shifts, legislative requirements, and IRS administrative processes. This year's projections are based on data available as of August 2025 and do not reflect pending legislation or administrative initiatives that may be under consideration.

## **Data Sources and Projections Methodology**

### ***IRS Data Sources***

The actual return volumes for CY 2024 are based on data from the IRS Master File, which reports the historical number of returns processed and recorded each year. In cases where Master File data were not available, program staff from the IRS operating divisions provided alternative data sources, typically from data capture systems at IRS processing campuses.

### ***U.S.-Level Projection Methodology***

Publication 6186 provides U.S.-level projections for approximately 80 IRS tax forms. To develop these projections, SOI staff employed statistical models that analyzed historical trends by form type and filing method. The models primarily utilized time-series extrapolation techniques, such as trended exponential smoothing, to forecast future tax return volumes. Additionally, some projections incorporated regression models that leveraged economic and demographic data from IHS Global, allowing for more nuanced projections. For newly introduced or emerging return types with limited historical data, SOI staff drew upon filing patterns from comparable return types to inform their projections.

### ***Campus-Level Projection Methodology***

This publication also includes projections for the number of returns expected to be processed at seven Submission Processing campuses: Andover, Austin, Cincinnati, Fresno, Kansas City, Ogden, and Philadelphia. To create these campus-level projections, SOI staff first developed state-level forecasts for each return category. SOI staff then adjusted the state-level forecasts to ensure consistency with the corresponding U.S.-level projections. Finally, SOI staff applied the latest state-to-campus processing maps, which were developed by IRS Taxpayer Services, to allocate the state-level forecasts to the relevant campus. This allowed SOI to generate localized projections for each Submission Processing campus.

### ***Exam Class Projection Methodology***

Publication 6186 also provides exam class projections for six tax return categories: individual, fiduciary, partnership, corporate, estate, and gift returns. To ensure the accuracy of these projections, SOI staff relied on the most recent exam class data from the IRS Master File. As necessary, SOI staff adjusted the exam class data to align with the reported U.S.-level totals for each form, thereby maintaining consistency and reliability. Additionally, this year's update of Publication 6186 includes new exam class groupings for high-earning estates (Form 706).

## **Recent Administrative and Legislative Changes Impacting the Projections**

### ***Transforming Paper Return Processing***

Following the passage of the Inflation Reduction Act (IRA) in August 2022, the IRS began implementing new digitalization technologies to streamline the processing of paper returns. On March 8, 2023, the IRS announced a new Digital Intake Initiative to scan paper returns of selected form types, including Forms 940, 941, and 1040. As of August 2025, the percentage of processed paper returns that were scanned was approximately 7.6% for Form 940, 15.7% for Form 941, and 2.1% for Form 1040s.

In addition to the Digital Intake Initiative, the IRS also announced a Paperless Processing Initiative in August 2023, with a goal of digitally processing all paper-filed tax returns. This year's update of Publication 6186 does not separately report scanned paper returns. Future updates of Publication 6186 will explore how to represent scanned paper returns as more data and program information become available.

### ***Modernizing Payments To and From the Federal Government***

In March 2025, an Executive Order was signed titled "Modernizing Payments To and From America's Bank Account." This order requires that payments to and from the federal government be made electronically as soon as practicable, with limited exceptions. This year's update of Publication 6186 does not account for the impacts of the new executive order since the implementation requirements have not been finalized. However, future updates will assess the impacts of this policy change on the forms included in this publication as more information becomes available.

### ***Anticipating the Effects from the One, Big, Beautiful Bill***

The One, Big, Beautiful Bill (OB BB) was signed into law in July 2025, with implications for both individual and business taxpayers. Due to the timing of its passage and the ongoing development of implementation guidance by the IRS, the provisions of this new law have not been incorporated into the projections presented in this update of Publication 6186. However, future updates will account for any potential effects of OB BB on the tax forms included in this publication.

## Summary of Key Publication 6186 Highlights

### *Historical Tax Return Volumes for the United States*

Table 1 of Publication 6186 presents historical data on the number of tax returns filed in the U.S. from CY 1989 through CY 2024, along with projected tax return volumes for CY 2025 through CY 2032. The data in Table 1 are rounded to the nearest thousand, offering a high-level summary of tax return trends. This historical context serves as a foundation for understanding long-term changes in taxpayer behavior and supports the development of future projections.

### *U.S.-Level Projections*

Table 2 presents projected tax return volumes for the U.S. from CY 2025 through CY 2032. While the total projections align with those in Table 1, this table provides a more detailed breakdown across specific return types and subcategories. This additional granularity provides greater visibility into the composition of return volumes and their influence on broader trends.

Three key trends from this year's projections include:

- In CY 2024, approximately 82.6% of all tax returns were filed electronically. This share is expected to rise to 83.7% in CY 2025, reaching 90.7% by CY 2032.
- Individual income tax returns made up about 60.3% of all returns filed in CY 2024. This percentage is expected to remain consistent in future CYs.
- Approximately 93.3% of individual returns were filed electronically in CY 2024. This percentage is projected to increase to 93.9% in CY 2025, reaching 97.0% by CY 2032.

### *Campus-Level Projections*

Tables 3 through 9 present projections of the volume of tax returns expected to be processed at seven IRS campuses. In CY 2024, the Kansas City campus processed the largest share of tax returns included in this publication, accounting for 25.9% of all returns. By contrast, the Cincinnati campus processed the smallest share, at 0.1%. The distribution of tax return volumes across the seven IRS campuses is expected to remain relatively stable in the coming calendar years.

### *Exam Class Projections*

Table 10 provides exam class projections for six major tax return categories: individual, fiduciary, partnership, corporate, estate, and gift returns. Within each category, projections are broken out by exam class, which SOI selected based on stakeholder needs and data availability. The exam classes are defined based on characteristics such as income level for individual returns (Form 1040) or asset size for corporate returns (Form 1120). This structure offers additional insight into how tax return volumes may vary across different taxpayer segments.

## Accuracy of Prior Projections

This section presents an assessment of the historical accuracy of Publication 6186's U.S.-level projections. Table 11 summarizes the performance of the U.S.-level projections across major return categories using actual data from CY 2021 through CY 2024.

Two key accuracy measures are presented in the table:

1. Mean Absolute Percent Error (MAPE): This measure represents the average absolute deviation between projected and actual return counts over the four-year period, regardless of whether the projection was an overestimate or underestimate.
2. Number of Overprojections: This measure indicates how many times the projection exceeded the actual return count. For example, a value of "2," reflects a balanced forecast (i.e., two overprojections and two underprojections) over the four-year span.

These two measures are grouped by forecast time horizon, which is defined as the number of years between the projection year and the target calendar year. For instance, a CY 2024 forecast made in CY 2021 falls under the "3-years-ahead" category.

Assessing the performance of prior projections allows SOI to enhance its forecasting methodology and improve the accuracy of future projections.

\* These forms are all paper. Some will have an electronic filing option in the future. See "Electronic-Filing Requirements for Specified Returns and Other Documents." 88 Fed. Reg. 11754 (February 23, 2023).

\*\* Forms 990-N and 8871 are all electronic.

\*\*\* Form 8038-CP returns are included in the Paper Grand Total.

\*\*\*\* Forms 5330, 1120-X, 5558, 941-X, 943-X, and 945-X are available to file electronically; however, this year's update does not include the electronic volumes due to limited data.

\*\*\*\*\* The sum of the 2024 actual campus volumes may not add up to the U. S. total for some supplemental forms because a small number of the returns were processed at other IRS campuses that are not covered in this publication.

\*\*\*\*\* Form 1040-X's paper volumes include receipts for IRS Submission Processing and IRS Accounts Management.

**NOTES:**

- For additional information on the forms listed under "Type of Return," please refer to the Table Notes section of Publication 6186. Some data breakouts in this table may not add up to the subtotals or totals due to rounding.
- Projected volumes have been rounded to the nearest 100, with values of 49 or fewer rounded to 0. Actual volumes less than 10 have been rounded to the nearest 10.
- The IRS introduced a Digital Intake Initiative in March 2023 and a Paperless Processing Initiative in August 2023. However, this publication does not distinguish between scanned paper returns and traditional paper returns. Future updates will explore a methodology to estimate the volume of scanned paper returns once sufficient data are available.
- An Executive Order titled "Modernizing Payments To and From America's Bank Account" was signed in March 2025, requiring electronic payments to and from the federal government whenever possible. The potential impact of this order on tax return volumes will be evaluated once implementation plans are finalized.
- The One, Big, Beautiful Bill was signed into law in July 2025, with implications for both individual and business taxpayers. The effects of this new law have not been incorporated into the projections for this update of Publication 6186. Future updates will take into account the impact of the new law on the forms included in this publication.

## Appendix A. Table Notes

- The details in the tables may not add up to the totals due to rounding.
- Projected return volumes are rounded to the nearest hundred, with values of 49 or fewer rounded to 0. However, some forms may report zero volumes because they are associated with only selected areas, or their filing options were recently established or eliminated.
- Actual and projected return volumes for the major categories are based on IRS Master File processing, as recorded in the electronic versions of the Report of Returns Posted to the IRS Master Files.
- Complete IRS Master File volumes for CY 2024 were not available for Forms 5558 and 8849. IRS operating division staff members supplied these volumes at the national level, while some data were derived from secondary sources.
