

FAQs

Question	Answer
How do I apply for a TCC?	Publication 5903 covers the application process for obtaining a TCC. IRIS application for TCC Internal Revenue Service
How will I correct forms submitted in FIRE once FIRE goes away?	When submitting a correction for an original return filed through FIRE, transmitters must identify FIRE as the original intake system using the applicable XML data element for A2A files. The Taxpayer Portal will also allow for prior FIRE original corrections.
Do I need to develop my own software?	You can purchase software or develop on your own.
How long does the application process for a TCC take?	The application process can take up to 45 days.
How do I get schemas for the forms that I am submitting?	Schema packages are not generated or delivered on an individual, real-time basis upon completion of an IRIS TCC application. Once an application is successfully completed, the package will be distributed as part of the scheduled bulk delivery. IRIS schemas and business rules Internal Revenue Service
Will this PowerPoint be shared?	Presentations are uploaded to IRS.gov/IRIS. IRIS working group meetings and notes Internal Revenue Service
How do I get a Software Developers Kit (SDK)?	The SDK is part of the Schema Package that is made available in SOR
Will there be a grace period for FIRE submissions?	There will not be a grace period for FIRE. Once FIRE is retired you will have to use IRIS for all submissions.
What is the difference between A2A and UI?	The Application to Application (A2A) intake method uses Extensible Markup Language (XML) format to bulk file large volumes of information returns. The Taxpayer Portal allows filers to submit information returns by keying in the information or by uploading a CSV file.
What is TIN Matching?	TIN matching is the process where the IRS verifies the Name/TIN combination for a recipient/payee. Taxpayer Identification Number (TIN) Matching Internal Revenue Service
Is there a process for non-Domestic Filers?	Foreign filers who are unable to obtain an IRIS Transmitter Control Code (TCC) because their authorized users do not have a Social Security number (SSN) or Individual Taxpayer Identification Number (ITIN) must submit their information returns through the International Data Exchange Service (IDES). Foreign Filer Transmitter Control Code (TCC) Registration Internal Revenue Service
When will prior year schemas be available?	Prior year schemas and business rules were delivered to SOR on 9/24/2026 for TY2022-TY2025.

Information Returns Intake System (IRIS)

Working Group Meeting

Date: October 14, 2026

TY2026/PY2027

Decorative wavy lines in shades of blue, dark blue, and red at the bottom of the page.

FIRE System Retirement

- IRIS will be the only information returns electronic filing system, including current year, prior year, or corrections, after January 1, 2027.
- Key dates to remember
 - Nov. 1, 2026: Last day to file test information returns through the FIRE Trading Partner Test System.
 - Nov. 9, 2026: Last day to make changes to the IR Applications for TCCs.
 - Nov. 19, 2026, at 3 p.m. ET: Last day to file information returns through the FIRE system.
- Publication 1220, Specifications for Electronic Filing of Forms 1097, 1098, 1099, 3921, 3922, 5498, and W-2G, will be made obsolete when the FIRE system retires.
 - This information will be contained in the Schema Package and Publications 5717, 5718 and 5719.
- For additional information, visit [IRS.gov/iris](https://www.irs.gov/iris).

IRIS Checklist

- Users are strongly encouraged to obtain their IRIS TCC, complete required testing, and establish their filing processes before the January 2027 production filing season begins.

User	Readiness Steps
Software Developers	Obtain IRIS TCC Obtain Software ID Establish API Client ID Complete ATS testing using applicable schemas and business rules
A2A Transmitters	Obtain IRIS TCC Establish API Client ID Complete required communication testing
Taxpayer Portal Users	Obtain IRIS TCC Collect and organize information needed to support FS27 reporting

Schema Versions

- ATS (Test) Environment
 - Effective October 7, 2026, all IRIS ATS transmission requires the following SchemaVersionNum values when testing:
 - TY2026: Use SchemaVersionNum 5.0.7
 - TY2025: Use SchemaVersionNum 5.0.7
 - TY2022–TY2024: Include the required SchemaVersionNum element and use 5.0.7
- These requirements support testing using the schema packages released through the Secure Object Repository (SOR) on 9/24/2026.
- Production Environment
 - No changes are being made to the IRIS Production environment at this time.
 - The Production environment will continue to use the currently supported SchemaVersionNum values until TY26/PY27 becomes available when the filing season opens in January 2027.

IRIS ATS Reminders

- IRIS Assurance Testing System (ATS) is available for A2A testing year-round.
- Tax Year 2026 is current year in IRIS ATS.
 - TY26/PY27 IRIS ATS opened on October 5, 2026.
 - Tax Year(s) 2025, 2024, 2023 and 2022 are available for prior year returns.
- If you wish to have your Software tested and reviewed for a prior year, you must use the schema for that year.
- There is not a test environment for the Taxpayer Portal.
 - The portal only accepts live production data.
 - There is no test software or testing capabilities for transmitters.

ATS Overview

- General information for completing IRIS ATS:
 - IRIS ATS performs schema and business rules validation.
 - IRIS ATS does not support stress or load testing.
 - Each submission within a transmission can contain up to 500 information returns.
- Response times in IRIS ATS do not mirror expected response times in Production.
- The Transmitter Control Code (TCC) must match the TCC for the transmitter in the IRS database.
- ATS will not accept live taxpayer data for the Issuer and Recipient.
 - The first three digits of TIN in Recipient Detail must be equal to "000".
 - The first three digits of TIN in Issuer Detail must be equal to "000".

Production File Limits

- An IRIS transmission can contain one or more submissions. The total size of a transmission cannot exceed 100 MB.
- Each submission within a transmission can contain up to 30,000 information returns.
 - There can be multiple submissions within a transmission
- IRIS validates each submission independently during processing.
 - Submissions with a high volume of errors will be rejected and not processed.
 - 16mb error threshold
- The 30,000-return submission limit establishes a standardized submission size that promotes
 - Efficient processing
 - Timely validation
 - Consistent status reporting across all IRIS submissions

Access Tokens

- The IRIS A2A channel uses the OAuth 2.0 authorization framework to securely authenticate software applications before they can communicate with IRS systems.
 - OAuth uses JSON Web Tokens (JWTs) to verify both the software application and the authorized user requesting access.
- Before requesting an access token, the following requirements must be completed:
 - An approved IRIS Transmitter Control Code (TCC).
 - An approved API Client ID.
 - A valid JSON Web Key Set (JWKS) associated with the API Client ID.
 - Completed A2A Consent for the API Client ID.
 - A valid IRIS User ID obtained during the Consent process.
- When requesting an access token, two JWTs must be provided:
 - Client JWT – Represents the software application (client) and is used to authenticate the application.
 - User JWT – Represents the authorized IRIS user (resource owner) on whose behalf the software is requesting access.

Access Token Generation

➤ The access token generation process consists of the following steps:

1. Your software application creates and signs both the Client JWT and the User JWT using the private key associated with your registered JWKS.
2. Your software submits both JWTs to the IRS OAuth authorization server when requesting an access token.
3. The IRS authorization server validates the JWTs using the public key contained in the JWKS that was submitted with your API Client ID Application.
4. If the JWTs are successfully validated, the IRS verifies that the IRIS user identified in the User JWT has granted consent to the software application identified in the Client JWT.
5. If authentication and authorization are successful, the IRS authorization server issues an Access Token and Refresh Token, which are used by your software to securely access IRIS A2A services.

ESRV306 Errors

- The most common reasons for ESRV306 are:
 - Expired JWT (exp claim has passed)
 - Incorrect system time causing the iat or exp claims to be invalid
 - Invalid JWT signature (signed with the wrong private key)
 - Incorrect kid (Key ID) in the JWT header
 - API Client ID does not match the registered application
 - Incorrect aud (Audience) value
 - Using the wrong environment (e.g., Production credentials against ATS, or vice versa)
 - Incorrect signing algorithm (IRIS requires RS256)
 - Malformed or improperly encoded JWT

- Verify the following:
 - JWT is signed using RS256
 - kid matches the registered JSON Web Key (JWK)
 - API Client ID is correct
 - iss and sub claims are correct
 - aud matches the IRS OAuth token endpoint
 - iat and exp are valid and based on UTC
 - JWT has not expired
 - The private key matches the public key registered with the IRS
 - Test or Production credentials are being used with the correct environment

IRIS Taxpayer Portal helpful hints

Where can I find the required fields for the CSV templates?

The CSV file formatting guidelines are provided on the Taxpayer Portal. On the dashboard click the Upload CSV with Form Data tile, then on the right side of the next page under FAQ, #8 has the template formatting guidelines. You may download the formatting guidelines for each form you need to file.

Tips for troubleshooting CSV errors are provided in Publication 5717 (Rev. 9-2024).

I uploaded a CSV file and nothing happens when I select "Start".

Confirm the file is saved as a CSV file. After uploading the file, a blue box should appear with the title "Current Uploaded File". The blue box will include the name of your file. If your file is not listed, please refresh your page and try uploading again. If your file name is in the blue box and there are no issues, the "Start" button will turn blue to indicate it is active.

The Taxpayer Portal just spins after I select "Add All" for CSV uploads.

The Taxpayer Portal notifications are not showing my download.

PDF downloads are showing in the notifications section on the Taxpayer Portal but unable to download the form.

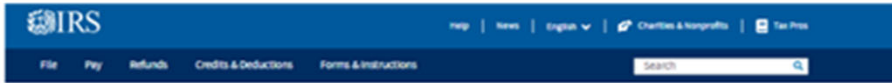

PDF downloads do not include a payer/issuer copy.

Portal hints are located at the top of the IRIS landing page

- Governmental Liaisons
- Federal State Local Governments
- Indian Tribal Governments
- Tax Exempt Bonds

10 or more returns: E-filing now required
Starting tax year 2023, if you have 10 or more information returns, you must file them electronically. Find details on the [final e-file regulations](#).

You can e-file any Form 1099 for tax year 2022 and later with the Information Returns Intake System (IRIS). The system also lets you file corrections and request automatic extensions for Forms 1099.

For system availability, [check IRIS status](#).

There are 2 ways to e-file with IRIS:

E-file through the IRIS Taxpayer Portal

This free, web-based filing system lets you:

- E-file up to 100 returns at a time
- Enter manually or by .csv upload
- Download payee copies to distribute
- Keep a record of completed, filed and distributed forms
- Save and manage issuer information

Get started

To use the IRIS Taxpayer Portal, you need an IRIS Transmitter Control Code (TCC). This 5-digit code identifies your business when you e-file forms. It can only be used for IRIS.
