

Protect personal and financial information online

The IRS and Security Summit partners remind people to take these basic steps:

- Use security software for computers and mobile phones – and keep it updated.
- Avoid phishing scams, especially those related to COVID-19 or Economic Impact Payments.
- Use strong and unique passwords for all accounts.
- Use multi-factor authentication whenever possible.
- Shop only secure websites by looking for the “https” in web addresses.
- Don’t shop on unsecured public Wi-Fi in places such as a mall.
