A.1 General Business Purpose

5. What is the general business purpose of this system? Provide a clear, concise description of the system, application or database, the reason for the system, and the benefits to the IRS to use the information, and how the information will be used.

The Federal Unemployment Tax Act (FUTA) provides a cooperation between state and federal governments in the establishment and administration of unemployment insurance. Under this dual system, the employer is subject to a payroll tax levied by the federal and state governments. The taxpayer is allowed a minimum credit of 5.4% against the Federal tax of 6.0%, provided that all payments were made to the state by the due date. Employers who payments are received by the state after the due date are allowed 90% of the credit that would have been allowed had the payments been made on time. The FUTA Certification program is the method IRS uses to verify with the states that the credit claimed on the Form 940 and/or Schedule H was actually paid into the state's unemployment funds. There are currently 53 states participating agencies which encompass the 50 states, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands.

B. PII DETAIL

Yes	Taxpayer Identification Number for Pending U.S. Adoptions (ATIN)
Yes	Practitioner Tax Identification Number (PTIN)

Describe the planned mitigation strategy and forecasted implementation date to mitigate or eliminate the use of SSN s (or tax identification numbers).

FUTA mainframe processes use batch applications to extract taxpayer data from the IMF and BMF master files. This data is used as input into the FUTA FCP system, so until the downstream processes are changed, no changes are expected in the data that is extracted.

The Federal Unemployment Tax Act (FUTA) provides for cooperation between state and federal governments in the establishment and administration of unemployment insurance. There are currently 53 states participating agencies which encompass the 50 states, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands.

8. How is the SBU/PII verified for accuracy, timeliness, and completeness? Explain how steps are taken to ensure that all information maintained by the system that is used by IRS to make any adverse determination about an individual's rights, benefits, and/or privileges is maintained with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination

The information comes from various the IRS systems listed below. BMF is used to obtain employer information, such as EIN, Name, Address, Wage, Tax Amounts, and SSN on certain Schedule H. This information is obtained via batch processes from the IBM mainframe to the FUTA UNIX back-end database. AUR is used to obtain the PAL that provides a listing of duplicate W-2's, or information that is reported multiple times. This information is obtained via batch processes from AUR to the FUTA Unix back-end database. CADE is used to obtain Schedule H information that is not included within BMF. This information is obtained via batch processes from CADE to the FUTA UNIX back-end database. IRP is used to obtain W-2G, and 1099R information. This information is obtained via batch processes from PMF to the FUTA UNIX back-end database.
