## Individual Income Tax Returns, by State, 2007

Statistics of Income Bulletin

Table 1. Individual Income and Tax Data, by State and Size of Adjusted Gross Income, Tax Year 2007-Continued
[Money amounts are in thousands of dollars]
FOOTNOTES

* Estimate should be used with caution because of the small number of sample returns on which it is based.
** Not shown to avoid disclosure of information about specific taxpayers. However, the data are combined with data in an adjacent size class, as appropriate, and included in the appropriate totals.
[1] Data for Tax Year 2007 do not include returns that were filed by individuals who had no other reason to file except to receive the eonomic stimulus payment. This may affect the data for various items shown in the table, such as the total number of returns filed (including joint and paid preparer returns), number of exemptions, salaries and wages, and adjusted gross income.
[2] Includes returns with adjusted gross deficit.
[3] Less deficit.
[4] "Number" here and elsewhere in Table 1 represents number of returns, unless otherwise specified.
[5] Net capital gain (less loss) includes the total gains or losses (limited) reported on the Schedule D and brought to the Form 1040, as well as capital gain distributions not reported on Schedule D, but reported on the Forms 1040/1040A.
[6] "Earned income credit" includes both the refundable and nonrefundable portions. The nonrefundable portion could reduce income tax and certain related taxes to zero. The earned income credit amounts in excess of total tax liability, or amounts when there was no tax liability at all, were refundable.
[7] "Total tax liability" differs from "total Income tax" in that "Total tax liability" includes the taxes from recapture of certain prior-year credits, tax applicable to individual retirement arrangements (IRAs), Social Security taxes on self-employment income and on certain tip income, advanced earned income payments, household employment taxes, and certain "other taxes" listed in the Form 1040 instructions.
[8] Reflects payments to, or withholdings made to, "Total tax liability"(footnote 7). The amount the tax filer owes when the income tax return is filed.
[9] The amount of overpayments the tax filer requested to have refunded.
[10] Less than $\$ 500$.
[11] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.
Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.
For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring 2009 Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns 2007," Publication 1304.
NOTE: Detail may not add to totals because of rounding.

# Foreign Recipients of U.S. Income, 2008 

by Scott Luttrell

Whenever a U.S. entity (the payer) distributes U.S.-source income to foreign persons, it is required to withhold taxes on the income or to appoint a third-party withholding agent to do so. Foreign financial institutions that enter into an agreement with the Internal Revenue Service (IRS), known as qualified intermediaries (QIs), may also serve as withholding agents. The payer or withholding agent is fully liable for all taxes owed and is required to report the income paid to each foreign recipient on a Form 1042-S, Foreign Persons’ U.S.Source Income Subject to Withholding. Absent this withholding requirement, there would be no effective way to enforce taxpayer compliance because foreign recipients are generally not required to file U.S. tax returns to report this income.

The principal types of income reported on Form 1042-S include interest, dividends, notional principal contract income, rents, royalties, Social Security and railroad retirement payments, and personal services income, shown separately in Table 2. Other types of income include capital gains, scholarships, pensions and annuities, gambling winnings, and certain real estate distributions. Bank deposit interest and certain other interest payments on specific types of financial obligations are generally not reported on Form 1042-S. ${ }^{1}$

As most foreign recipients are not required to file U.S. tax returns, it is generally not possible to tax them at ordinary graduated rates on their consolidated U.S.-source income. ${ }^{2}$ Therefore, the statutory withholding rate for income paid to foreign persons is 30 percent. The flat, statutory rate is frequently reduced or eliminated by an income tax treaty or statutory exemption (see Table 1 for the amount of income exempt from taxation). Income that is exempt from taxation because of a tax treaty or certain other exemptions must still be reported.

## Data Highlights

During Calendar Year 2008, more than $\$ 659.7$ billion in U.S.-source income payments were made to for-

[^223]eign recipients. This amount represents an increase of 2.0 percent over the $\$ 646.5$ billion that was paid in 2007. The increase was fueled primarily by growth in notional principal contract income, which rose by 59.7 percent in 2008. A notional principal contract is a contract involving two parties who agree contractually to pay each other amounts at specified times, based on the underlying notional amount. The underlying amount is notional because neither party to the notional principal contract is required to actually hold the property comprising the underlying amount. Notional principal contracts are used by financial institutions to reduce the risk of changes in interest rates, commodity prices, and currency exchange rates. Interest rate swaps, currency swaps, and equity swaps are examples of notional principal contracts. ${ }^{3}$ As shown in Figure A, notional principal contract income accounted for 16.7 percent of total income, up from 10.7 percent in 2007.

The increase in notional principal contract income between 2007 and 2008 is in contrast to the declines observed in other major types of income paid to foreign persons. The two categories that account for the largest amounts of income paid to foreign persons, dividend and interest payments, declined in 2008, due to the affects of the recession. ${ }^{4}$ Interest payments ( $\$ 355.1$ billion) decreased by 5.7 percent in 2008, while dividends ( $\$ 122.9$ billion) fell by 8.3 percent. Although interest payments continued to account for the majority of all U.S.-source income payments to foreigners in 2008, their share of the total fell to 53.8 percent from 58.3 percent in 2007. Dividend payments to foreign persons also accounted for a smaller share of the total in 2008, dropping from 20.7 percent to 18.6 percent. Personal services income and Social Security and railroad retirement benefits combined to account for less than 1 percent of total income, remaining constant from 2007.

Residents of certain foreign countries may be entitled to reduced rates of withholding, or exemption from taxation, under a reciprocal tax treaty between the United States and the recipient's country of residence. During Tax Year 2008, the U.S. had treaties in force with the 64 foreign jurisdictions listed in Table 1. Payments to residents of treaty partner

[^224]
## Figure A

Percentage of Total Income Paid, by Income Type, 2007 and 2008

Percentage of Total Taxes Withheld, by Income Type, 2007 and 2008

countries made up 76.8 percent of income paid and 61.9 percent of total tax withheld. U.S.-source income earned by residents of treaty partner countries was subject to substantially lower tax rates than those from other countries in 2008. While the effective withholding rate on U.S.-source income payments to all countries was 10.5 percent during 2008, the effective rate for treaty country residents was 7.8 percent.
faced an effective U.S. tax rate of 23.9 percent on their income subject to withholding. While their effective withholding rate was higher, recipients from non-treaty countries actually received a larger proportion of income that was exempt from withholding (90.4 percent) compared to those from treaty countries ( 85.6 percent). Income paid to foreign persons and reported on Form 1042-S may be exempt from withholding tax for a variety of reasons, including:

## Figure B

Form 1042-S
Percentage of Total Income Paid, by Country of Foreign Recipient, 2007 and 2008

Percentage of Total Taxes Withheld, by Country of Foreign Recipient, 2007 and 2008

## Foreign Recipients of U.S. Income, 2008

Statistics of Income Bulletin | Spring 2011
it is effectively connected with a U.S. trade or business; it is bank deposit interest; it is exempt under tax treaty; it is portfolio interest exempt under an Internal Revenue Code; or it is being paid to a withholding foreign partnership or withholding foreign trust, among other reasons.

Historically, the majority of U.S.-source income payments to foreign persons have been concentrated among residents of a relatively small number of countries, and Tax Year 2008 was no exception. The eight countries listed in Part I of Figure B combined to account for 66.6 percent of all income paid to foreign recipients. U.S. income payments to U.K. residents rose from $\$ 77.1$ billion to $\$ 96.3$ billion in 2008, increasing their share of the total U.S. income received to 14.6 percent, most among all countries in 2008. Residents of the Cayman Islands received $\$ 73.9$ billion in 2008, down from $\$ 84.7$ million in 2007. This decline caused the share of U.S. income received by Cayman Island recipients to fall from 13.1 percent to 11.2 percent in 2008. Among other countries shown in Figure B, Part I, residents of Germany, Japan, Canada, and France all increased in their share of U.S.-source income by at least 1.0 percent. Residents of the Netherlands experienced the largest decline of any country, as their share of U.S. income fell by half, from 9.6 percent to 4.8 percent in 2008.

With six countries accounting for 50.3 percent of the total, tax withheld on U.S.-source income payments to foreign persons is heavily concentrated among a small number of countries, as illustrated in Figure B. Interestingly, however, the correlation between income received and taxes paid varies among countries. For example, Canadian recipients accounted for 9.8 percent of all tax withheld in 2008 but received only 5.3 percent of U.S.-source income. Taxes were high for Canadian recipients in relation to their income received, principally because they received large amounts of Social Security and railroad retirement payments and personal services income, which tend to have higher effective withholding rates. In fact, 24.5 percent of all Social Security and railroad retirement payments and 17.6 percent of all personal services income payments to non-U.S. residents were made to Canadians in 2008.

There are vast differences in the taxation of certain types of income reported on Form 1042-S. While tax treaties reduce withholding on dividend payments to residents of certain countries, dividends are taxed at rates closer to the statutory rate more fre-
quently than the other most commonly reported types of income. Figure A shows that dividend payments accounted for 18.6 percent of all U.S. income paid to foreign persons but made up 72.0 percent of all withholding taxes. Interest income paid to foreign persons is commonly exempt from withholding, and, when it is subject to taxation, it is frequently taxed at a rate of less than 10 percent. Therefore, it is not surprising to see that tax withheld on interest made up only 10.4 percent of the total, while interest income accounted for 53.8 percent of all income paid to foreign persons. Notional principal contract income is not subject to taxation, although it must be reported on Form 1042-S if it is effectively connected with the conduct of a trade of business in the United States. This explains why there is no tax for notional principal income in Figure A, despite accounting for 16.7 percent of income.

## Additional Foreign Income and Withholding Data

While income reported on Form 1042-S represents the majority of U.S.-source income payments to foreign persons, data reported on two other tax forms help provide a more complete picture of withholding on foreign persons' U.S. income. U.S. partnership income that is allocable to foreign partners is reported on Form 8805, Foreign Partner's Information Statement of Section 1446 Withholding Tax. Domestic partnerships are required to withhold income tax on effectively connected taxable income deemed allocable to foreign partners. A U.S. partnership files a Form 8805 to show the amount of taxable income and the total tax allocable to the foreign partner for the partnership's tax year. ${ }^{5}$ The statutory withholding rate for partnership income allocable to foreign partners is 35 percent. Reduced withholding rates may apply if the foreign partner is an individual and the specific type of income is among those subject to preferential rates. These types of income include capital gains, depreciation recapture, and collectibles gains.

The other tax form that provides information about withholding on foreign persons' U.S. income is the Form 8288-A. The Foreign Investment in Real Property Tax Act of 1980 (FIRPTA) was introduced to ensure that the U.S. collected a portion of the capital gains realized by foreigners from the sales of U.S. real property interests. The sales price of the U.S. real property sold by the foreign person and the

| France | 1,135 | 515,247 | 866 | 527,338 | 183,457 | 34.8 |
| Canada | 8,054 | 195,962 | 4,694 | 378,372 | 114,953 | 30.4 |
| Netherlands | 2,028 | 156,563 | 1,610 | 201,225 | 40,195 | 20.0 |
| Form 8288-A: All countries [5] | 8,929 | 3,246,850 | 8,929 | 3,246,850 | 334,055 | 10.3 |

[1] Number of forms in this column include returns with income subject to taxation for Form 1042-S; positive income (excluding losses) for Form 8805; sales price for Form 8288-A.
[2] Amounts in this column represent income subject to taxation for Form 1042-S; positive income (excluding losses) for Form 8805; sales price for Form 8288-A.
[3] U.S. tax withheld divided by income (column 4).
[4] Income for all payments (column 2) is less than income on payments subject to tax (column 4) because column 2 includes forms with negative income. Also, the sum of the components in column 2 for Form 8805 is greater than the total because certain countries not shown in this figure had negative income in 2008.
[5] The country of residence of the foreign seller is not always readily available. Therefore, amounts by country are not displayed for this form type.
tax withheld on that sales price is reported on Form 8288-A, Statement of Withholding on Dispositions by Foreign Persons of U.S. Real Property Interests. ${ }^{6}$ Typically, the sales price is subject to 10 percent withholding, although corporations may be taxed up to 35 percent in certain circumstances. When a foreign person sells real property interests in the United States, the buyer of the property is responsible for collecting and remitting to the IRS the appropriate amount of withholding and filing the necessary tax forms.

As one might expect, the sales of U.S. real property interests account for a relatively small amount of U.S.-source income paid to foreign persons. Income from the sale of U.S. real property interests, as reported on Form 8288-A, accounted for 3 percent of
U.S.-source income paid to foreign persons in 2008. Income reported on Form 8288-A is not eligible for reduced withholding rates under tax treaties and is typically subject to 10 -percent withholding. Therefore, the effective withholding rate of 10.3 percent, shown in Figure C, is well within expectations. Taxes on income from the sales of U.S. real property made up 2.2 percent of withholding taxes on U.S.source income paid to foreign persons, while the total number of reportable transactions of U.S. real property sales made up less than 1.0 percent of all U.S. payments to foreign persons for 2008.

The effective withholding rates vary widely among the types of income reported on tax forms 1042-S, 8805, and 8288A. As shown in Figure C,

[^225]
## Foreign Recipients of U.S. Income, 2008

Statistics of Income Bulletin | Spring 2011
U.S. partnership income allocable to foreign partners was subject to significantly higher rates of withholding than other types of U.S. income payments to foreign persons during Tax Year 2008. In fact, the effective withholding rate on income reported on Form 8805 was 33.8 percent, compared with 10.3 percent for income reported on Form 8288-A and 10.5 percent for income reported on Form 1042-S. Nearly 35.9 percent of all withholding taxes on U.S. income paid to foreign persons were reported on Form 8805 , while only 14.8 percent of the income paid was reported on this form. Higher effective tax rates exist for Form 8805 income because income paid to foreign partnerships is not typically reduced by tax treaties and is far more likely to be taxed near the statutory 35 percent tax rate.

## Data Sources and Limitations

Payers (or their authorized withholding agents) of most U.S.-source income to foreign persons must withhold tax in accordance with Internal Revenue Code Section 1441. Form 1042-S, Foreign Persons' U.S.-Source Income Subject to Withholding, is filed by the payer to report this income and the U.S. tax withheld. Often a financial institution acts as the payer's withholding agent. The statistics in this data release were tabulated by calendar year, using all Forms 1042-S filed with the Internal Revenue Service for 2008. The data reflect the income that was paid and U.S. tax that was withheld for 2008.

Domestic partnerships (or their authorized withholding agents) must withhold tax in accordance with Internal Revenue Code Section 1446 on distributions made to foreign partners. Form 8805, Foreign Partner's Information Statement of Section 1446 Withholding Tax, is filed by the payer to report income paid by U.S. partnerships to their foreign partners and the U.S. tax withheld. The statistics in this data release were tabulated by calendar year, using all Forms 8805 filed with the Internal Revenue Service for 2008. The data reflect the income that was paid and U.S. tax that was withheld for 2008.

Purchasers of U.S. real property held by foreign persons must withhold tax in accordance with Internal Revenue Code Section 1445. Form 8288-A, Statement of Withholding on Dispositions by Foreign Persons of U.S. Real Property Interests, is filed by the buyer of U.S. real property sold by foreign persons. The statistics in this date release were tabulated by calendar year suing all Forms 8288-A filed
with the Internal Revenue Service with a data of transfer occurring during 2008.

Because the population of Forms 1042S, Forms 8805, and Form 8288-A were used for the statistics, the data are not subject to sampling error. However, the data are subject to nonsampling error, including data entry and taxpayer reporting errors. Although the data were subjected to tests for certain basic mathematical relationships, including the calculation of the correct tax withheld, the possibility of error can not be completely eliminated.

## Explanation of Selected Terms

Foreign persons-For purposes of this data release, foreign persons include: (a) individuals whose residence is not within the United States and who are not U.S. citizens (i.e., nonresident aliens); and (b) corporations and other organizations (including partnerships, private foundations, estates, and trusts) created or organized outside the United States. Individuals residing, and organizations created or organized, in Puerto Rico and U.S. possessions are also considered foreign persons.

Notional principal contract income-Notional principal contracts involve two parties who agree contractually to pay each other amounts at specified times, based on the underlying contract. The notional amount is an amount specified in the contract and, based on that amount, certain calculations are made. Generally, when amounts under the contract are due at the same time, they are netted, and only one payment is made. Notional principal contract income is not subject to withholding but must be reported on Form 1042-S, if it the income effectively connected with the conduct of a trade or business in the United States.

Qualified intermediary pool-Payments made by a qualified intermediary directly to beneficial owners may generally be reported on the basis of reporting pools. A reporting pool consists of income that falls within a particular withholding rate and within a particular income type, exemption type, or recipient type.
U.S. branch treated as U.S. person-The following types of U.S. branches (of foreign entities) may reach an agreement with a withholding agent to treat a branch as a U.S. person: (a) a U.S. branch of a foreign bank subject to regulatory supervision by the Federal Reserve Board or (b) a U.S. branch of a foreign insurance company required to file an annual statement on a form approved by the National Association of Insurance Commissioners with the Insurance Department of a State, Territory, or the District of Columbia.

| Venezuela | 48,802 | 2,456,320 | 381,983 | 2,074,337 | 115,451 |
| Nontreaty countries, total [3] | 830,417 | 152,933,139 | 138,262,502 | 14,670,637 | 3,499,710 |

[1] Includes Ashmore and Cartier Islands, Christmas Island, Cocos (Keeling) Islands, Coral Sea Islands Territory, and Norfolk Island.
[2] Includes Guadeloupe, French Guiana, Martinique, and Reunion.
[3] Includes Puerto Rico and U.S. possessions. The U.S. and Bermuda have had a tax treaty in effect since 1986, however, this treaty provides no reduction of withholding rates.
NOTES: Detail may not add to totals because of rounding. Form 1042S is entitled "Foreign Person's U.S. Source Income Subject to Withholding."

Table 2. Foreign Recipients of U.S. Income Forms 1042S: Number, U.S. Tax Withheld, and U.S.-Source Income, by Principal Type of Income, Selected Recipient Type, and Selected Country of Recipient, 2008 [Money amounts are in thousands of dollars]

d-Not shown to avoid disclosure of information about specific taxpayers. However, the data are included in the appropriate totals.
NOTES: Detail may not add to totals because of rounding. Form 1042S is entitled "Foreign Person's U.S. Source Income Subject to Withholding." All countries with total U.S.-source income over $\$ 100$ million for tax year 2008 were selected for this table.

# International Boycott Reports, 2007 and 2008 

by Melissa Costa

For Tax Year 2007, 120 "U.S. persons" ${ }^{1}$ received about 4,800 requests to participate in boycotts unsanctioned by the United States, while, for Tax Year 2008, 138 U.S. persons received about 3,700 requests. Those receiving requests composed about 7.9 percent of the 1,509 U.S. persons who reported operations in, with, or related to countries known to participate in unsanctioned boycotts for Tax Year 2007 and about 8.6 percent of the 1,596 reporting such operations for Tax Year 2008. Of those receiving requests, 26 agreed to participate for Tax Year 2007 and 33 for Tax Year 2008. Roughly 1 percent of those with operations in countries known to participate in unsanctioned boycotts reported tax consequences for both years.

## Operations

Most taxpayers file Form 5713, International Boycott Report, with their Federal income tax return to report operations in countries known to participate in boycotts not condoned by the United States. For both Tax Years 2007 and 2008, approximately 90 percent of filers were corporations, while partnerships accounted for another 8 percent. Trusts, estates, and individuals filed most of the remainder.

About 98 percent of Form 5713 filers for both Tax Years 2007 and 2008 reported operations in countries on the list of known boycotting countries maintained by the U.S. Department of Treasury. For 2007 and 2008, that list included Kuwait, Lebanon, Libya, Qatar, Saudi Arabia, Syria, the United Arab Emirates, and Yemen. These countries are known to participate in boycotts of Israel. While the antiboycott laws target any boycotts not sanctioned by the United States, less than 1 percent of filers reported operations in countries known to participate in boycotts of a country other than Israel for Tax Year 2007, and just 3.8 percent did so for Tax Year 2008.

## Types of Boycotts

Because the United States does not wish to infringe upon the right of any country to choose its own trading partners, the antiboycott laws do not target pri-

Melissa Costa is an economist with the Special Studies Returns Analysis Section. This data release was prepared under the direction of Chris Carson, Chief.
mary boycotts, i.e., restrictions on the importation of goods and services originating in the boycotted country into the boycotting countries. Instead, laws are directed against secondary and tertiary boycotts.

Specifically, Internal Revenue Code section 999(b)(3) classifies the disallowed boycotts into the five types below:

1) A person agrees, as a condition of doing business directly or indirectly within a country or with the government, a company, or a national of the country:
a) to refrain from doing business with or in a country that is the object of the boycott or with the government, companies, or nationals of that country [Type 1 request, as shown in Figure A]; or
b) to refrain from doing business with any U.S. person engaged in trade in a country that is the object of the boycott or with the government, companies, or nationals of that country [Type 2]; or
c) to refrain from doing business with any company whose ownership or management is made up, all or in part, of individuals of a particular nationality, race, or religion [Type 3]; or
d) to refrain from employing individuals of a particular nationality, race, or religion [Type 4]; or
2) A person agrees, as a condition of the sale of a product to the government, a company, or a national of a country, to refrain from shipping or insuring the product(s) on a carrier owned, leased, or operated by a person who does not participate in, or cooperate with, a boycott [Type 5].

Figure A includes the number of persons receiving requests and the number of requests received, by type of boycott. Most of the boycott requests for both Tax Years 2007 and 2008 were either Type 1 or Type 5 requests.

## Country of Requests

Table 1 displays the number of persons receiving requests, number of requests received, and number

[^230]
# International Boycott Reports, 2007 and 2008 

Statistics of Income Bulletin | Spring 2011

## Figure A

## International Boycott Reports: Number of Persons Receiving Requests and Number of Requests Received, by Type of Request, Tax Years 2007-2008

| Type <br> of boycott <br> request | Number of U.S. persons <br> receiving requests [1] |  | Number of boycott <br> requests received [2] |  |
| :---: | ---: | :---: | ---: | ---: |
|  | 2007 | 2008 | 2007 | 2008 |
| Total | $(1)$ | $(2)$ | $(3)$ | $(4)$ |
|  | 120 | 138 | 4,823 | 3,716 |
| Type 1 | 76 | 88 | 2,061 | 1,824 |
| Type 2 | 8 | 8 | 65 | 51 |
| Type 3 | 10 | 10 | 75 | 77 |
| Type 4 | 9 | 7 | 50 | 34 |
| Type 5 | 66 | 69 | 2,572 | 1,730 |

[1] Data in these columns may not add to totals because a person could have received requests of more than one type.
[2] The number of requests are undercounted to the extent that many taxpayers do not specify the number of requests they received. This figure counts an unknown number of requests as one request.
NOTE: For an explanation of each of the five types of international boycott requests, see article text.
of agreements, by boycotting country, for Tax Years 2007 and 2008.

About 90 percent of the requests received for Tax Year 2007, and almost 82 percent of those received in Tax Year 2008, were from persons in Treasury list nations. Entities from the United Arab Emirates accounted for the largest percentage of requests for both years, with 35.7 percent for Tax Year 2008 and 37.8 percent for Tax Year 2007.

Overall, the number of persons receiving requests rose about 15 percent from Tax Year 2007, while the number of requests dropped 23.0 percent, from 4,823 to 3,716 . Requests from persons in Saudi Arabia had the largest change, with a drop of nearly 62 percent, from 522 to 199 requests. Requests from Kuwaiti persons fell from 471 to 221, or 53.1 percent. However, requests from Libyans rose 42.9 percent, from 231 to 330. See Figure B.

## Tax Penalties

U.S. taxpayers who participated in the boycotts listed may lose their right to claim the foreign tax credit, as well as the tax deferral available to U.S. shareholders of controlled foreign corporations (CFCs) and to shareholders of Interest Charge Domestic International Sales Corporations (IC-DISCs). ${ }^{2,3}$ Taxpayers who had operations in a boycotting country were required to reduce foreign trade income qualifying for the extraterritorial income exclusion, even if they did not participate in a boycott. ${ }^{4}$ For both Tax Years 2007 and 2008, just 15 taxpayers reported a loss of this tax benefit.

Taxpayers compute the loss of their extraterritorial income exclusion using the international boycott factor method. Under this method, the loss of tax benefit is determined by the taxpayer's ratio of purchases, sales, and payroll in boycotting countries to the taxpayer's total foreign purchases, sales, and payroll. The amount of foreign trade income qualifying for the exclusion is reduced by the same proportion as the international boycott factor. The boycott reduction in the extraterritorial income exclusion has dropped from the peak of $\$ 1,656,910$ (in constant 2008 dollars) for Tax Year 2005 due to the gradual repeal of this provision included in the American Jobs Act of 2004. The total reduction fell to $\$ 190,786$ for Tax Year in 2007 and $\$ 6,871$ for Tax Year 2008. (Table 2 shows the tax consequences reported for the past 11 years, in constant 2008 dollars, by method of computation.)

For the denial of other tax benefits, taxpayers may use either the international boycott factor method or the specifically attributable method. Under the specifically attributable method, taxpayers reduce each benefit by the foreign taxes paid or foreign income earned that is associated with the operation in the boycotting countries with whom the agreement was made and that would otherwise be eligible for the tax benefits.

[^231]
## Figure B

Changes in Boycott Requests and Agreements, by Boycotting Country, Tax Years 2007-2008

| Country | Number of boycott requests received [1] |  | Percentage change in number of requests from 2007 to 2008 | Number of boycott agreements received |  | Percentage change in number of agreements from 2007 to 2008 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2007 | 2008 |  | 2007 | 2008 |  |
|  | (1) | (2) | (3) | (4) | (5) | (6) |
| All countries | 4,823 | 3,716 | -23.0 | 1,980 | 889 | -55.1 |
| Treasury-listed countries | 4,356 | 3,045 | -30.1 | 1,962 | 852 | -56.6 |
| Kuwait | 471 | 221 | -53.1 | 315 | 67 | -78.7 |
| Lebanon | 408 | 400 | -2.0 | 81 | 94 | 16.0 |
| Libya | 231 | 330 | 42.9 | 39 | 36 | -7.7 |
| Qatar | 377 | 223 | -40.8 | 211 | 13 | -93.8 |
| Saudi Arabia | 522 | 199 | -61.9 | 367 | 80 | -78.2 |
| Syria | 282 | 210 | -25.5 | 158 | 95 | -39.9 |
| United Arab Emirates | 1,823 | 1,326 | -27.3 | 652 | 442 | -32.2 |
| Yemen, Republic of | 242 | 136 | -43.8 | 139 | 25 | -82.0 |
| Non-listed countries | 467 | 671 | 43.7 | 18 | 37 | 105.6 | request.

Taxpayers who use the international boycott factor reduce their foreign tax credit by the same proportion as the boycott factor. Those who use the specifically attributable method subtract the foreign taxes paid to the boycotting countries with whom they established agreements from the total amount of taxes eligible for credit. Regardless of the method selected, taxpayers may elect to treat the amount of taxes ineligible for the credit under the boycott provisions as a deduction from their U.S. gross incomes for the purpose of calculating their U.S. tax liabilities.

For Tax Year 2007, taxpayers reduced their U.S. foreign tax credit by a total of \$70,994 (in constant 2008 dollars) using the international boycott factor and reduced their foreign taxes eligible for the foreign tax credit by $\$ 1,468,340$ using the specifically attributable method. For 2008, taxpayers lowered their total foreign tax credit by $\$ 16,794$ and decreased their eligible taxes by $\$ 2,010,545$. For comparison, the total foreign tax credit for corporations filing for 2008 was more than $\$ 100$ billion.

Under both the international boycott factor and specifically attributable methods, shareholders of CFCs or IC-DISCs must convert some of the earnings of the CFC or IC-DISC into a "deemed distribution," thereby subjecting the earnings to U.S. tax. Taxpayers who participated in a boycott reported a
total increase of \$3,750,233 (in constant 2008 dollars) to their taxable incomes from CFCs for Tax Year 2007. By comparison, includable income for all CFCs on corporate returns for Tax Year 2007 (in constant 2008 dollars) was more than $\$ 68$ billion. Income from CFCs deemed taxable due to boycott participation rose to $\$ 7,973,026$ for Tax Year 2008.

## Summary

For both Tax Years 2007 and 2008, approximately 8 percent of taxpayers reporting operations in countries known to participate in an international boycott received boycott requests. More than a third of the requests received originated from persons in the United Arab Emirates. Less than 3 percent of taxpayers who had operations in countries known to participate in a boycott not sanctioned by the U.S. agreed to participate in such a boycott for both tax years, and only 15 persons lost tax benefits for both years. The total loss of tax benefits remains a very small percentage of the total tax benefits claimed by all filers.

## Data Sources and Limitations

Data for the 2007 and 2008 studies were based on the population of Forms 5713, International Boycott Report, attached to U.S income tax returns with accounting periods ending between June 30 of the study year and June 30 of the subsequent year.

[^232]
## 2008 Gifts

by Melissa J. Belvedere

The system of Federal transfer taxes comprises three interrelated parts: the estate tax, the gift tax, and the generation-skipping transfer tax. The estate tax is a type of indirect tax imposed on the right to transfer gifts at death; the gift tax is levied on gifts transferred during a donor’s life, also known as inter vivos gifts. The generation-skipping transfer tax ensures that wealth transfers, either during a donor's life or at death, are taxed at each successive generation.

A donor reports gift transfers on Form 709, United States Gift (and Generation-Skipping Transfer) Tax Return, which is filed annually, as appropriate. This article presents data from returns filed during Calendar Year 2009, collected by the Internal Revenue Service's Statistics of Income Division. Approximately 90 percent of returns filed during Calendar Year 2009 were for gifts made in 2008. ${ }^{1}$ This "Gift Year 2008" study file is the most recent of SOI's annual Form 709 studies.

Donors filed 234,714 returns for Gift Year 2008. Most donors were female, and the majority of returns filed were nontaxable. Donors transferred a total of $\$ 40.2$ billion to 927,554 donees, or gift recipients, primarily children and grandchildren. Most gifts were given directly to recipients. Of the trust vehicles used to make indirect gifts, family trusts were used more commonly than other vehicles. The majority of gifts given were in the form of cash, while the next most commonly used form of gift was corporate stock.

## Background

Congress added the gift tax to the United States transfer tax system in 1924. ${ }^{2}$ The gift tax rates were equal to estate tax rates, and there were provisions for both an annual exclusion and a lifetime exemption. The annual exclusion is the amount that a donor can give to any single recipient during a given year without incurring tax (the number of donees is

Melissa J. Belvedere is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Melissa Ludlum, Chief.
unlimited); the lifetime exemption is the total amount the donor can transfer tax free over the course of his or her lifetime. At its inception, the annual exclusion was $\$ 500$ per donee, and the lifetime exemption was set at $\$ 50,000$. Two years later, the Revenue Act of 1926 repealed the gift tax.

The government's need for revenue to address the changing economic circumstances of the Great Depression led to the reinstatement of the gift tax in 1932. The Revenue Act of 1932 established gift tax rates at 75 percent of estate tax rates and made gifts to charitable organizations entirely tax-exempt, regardless of the amount. Congress continued to make minor changes to gift tax law in subsequent years. In 1948, the marital deduction was introduced to equalize treatment of couples in community property states with those in non-community property states. The marital deduction allowed one spouse to gift an amount of up to half of their adjusted gross estate, excluding community property, to the other spouse without incurring tax. The split-gift rule, which allowed one spouse to elect to consider half of a gift as having been made by the non-donor spouse, was also introduced at that time. The split-gift rule effectively doubled the amount that a donor could give to any single recipient without incurring tax liability.

The transfer tax system underwent significant restructuring with the Tax Reform Act of 1976. The Act unified the system of estate and gift taxation, imposing a single, graduated rate schedule on all gifts, with the disposition of the decedent's estate considered to be the decedent's ultimate gift. The applied rate of tax, therefore, increased as the cumulative total of lifetime gifts exceeded threshold steps established in the rate schedule, with the highest rate applied to transfers at death. The 1976 Act also created the unified credit, which replaced both the estate tax exclusion and the lifetime gift exemption. Under the new system, the unified credit could be used to offset gift tax liability during the donor's life, and then any remaining credit could be used to offset estate tax liability. The gift tax annual exclusion was retained. The Act also introduced the generation-skipping tax, ensuring that wealth was taxed at each successive generation.

[^233]
## 2008 Gifts

Between 1976 and 2001, there were only minor changes to gift tax law, although the annual exclusion amount was indexed as a result of the Taxpayer Protection Act of 1997. The Economic Growth and Tax Relief Reconciliation Act of 2001 gradually increased the lifetime exemption from estate and generation skipping taxes to $\$ 3.5$ million in 2009, of which $\$ 1$ million could be applied to gifts made during the donor's life. It also lowered the maximum gift tax rate to 35 percent. For gifts made in 2008, the annual exclusion amount was $\$ 12,000$, meaning that donors could give up to $\$ 12,000$ to any single recipient, tax-free.

## 2008 Gifts

Donors filed a total of 234,714 Forms 709 for Gift Year 2008 (Figure A). Of the total returns filed, 223,996 were nontaxable ( 95.4 percent), while 10,718 were taxable ( 4.6 percent). This represents a decline of 8.8 percent from the total number of returns filed for Gift Year 2007, and a 3.7-percent decline from the total number of returns filed for Gift Year 2006. The entirety of this decline came from nontaxable returns; the number of taxable returns ac-
tually increased from 2007. Tax liability was calculated after making adjustments for annual exclusions, the marital deduction, and charitable deductions. Taxable gifts, which are calculated by subtracting the annual exclusion amount, charitable deduction, and marital deduction from total gifts, were $\$ 24.9$ billion (Figure B).

Female donors accounted for 55.3 percent of all returns filed; male donors accounted for 44.7 percent (Figure C). Nontaxable returns were composed of approximately equal percentages of male and female donors. However, the percentage of taxable returns filed by female donors was 62.7, while the percentage of taxable returns filed by male donors was only 37.3.

There were 927,554 donees, or gift recipients, in 2008 (Figure D). Approximately 44.9 percent of all donees were male, while approximately 46 percent of donees were female. The remaining 9.1 percent of recipients were trusts, organizations, or cases in which the donee's gender could not be determined.

Together, children and grandchildren received the vast majority of all gifts given, 48.9 percent and 24.7 percent, respectively (Figure E). Gifts to all other rela-

| Charitable organizations | 8,610 | 0.9 |

[1] "Children" includes children by blood, adopted children, foster children, stepchildren, and sons- and daughters-in-law.
[2] "Grandchildren" includes grandchildren by blood, adopted grandchildren, foster grandchildren, step-grandchildren, grandchildren-in-law, and great-grandchildren. [3] "Other donees" includes other individuals whose relationship was not specified and unidentified organizations.
[4] "Siblings" includes siblings by blood, adopted siblings, foster siblings, stepsiblings, half-siblings, and siblings-in-law.
[5] "Other relatives" includes nieces and nephews, grand-nieces or grand-nephews, cousins (including second cousins, etc.), and aunts and uncles.
[6] "Parents" includes parents by blood, adopted parents, foster parents, stepparents, parents-in-law, and grandparents.
[7] "Spouses" includes current and divorced spouses and life partners.
NOTE: Percentages may not add to 100 percent due to rounding.
donee's use of the gift is dependent on a future event, made up the remaining 30.9 percent ( $\$ 12.4$ billion) of the gifts. Family trusts were the most common trust type used, totaling $\$ 2.4$ billion, or 5.9 percent, of all gifts given. Family trusts, sometimes called dynasty trusts or credit shelter trusts, allow donors to take full advantage of the unified credit by removing assets from their estates with the intention of passing them on to other heirs, while still allowing surviving spouses access to the trust principal under limited circumstances.

Gifts in the form of cash made up the largest share of total gifts (Figure G). Cash made up 46.3 percent ( $\$ 14.2$ billion) of the total gifts reported on nontaxable returns, and 53.3 percent ( $\$ 5.1$ billion)

## 2008 Gifts

## Figure F

## Transfer Method Used by All Donors, Taxable and Nontaxable, Gift Year 2008

[1] "Family trusts" includes children's trusts and bypass trusts. [2] "Split-interest trusts" includes charitable remainder unitrusts, charitable remainder annuity trusts, charitable lead trusts, pooled income funds, unknown charitable remainder trusts, and unknown split-interest trusts.
[3] "Other trust types" includes insurance trusts, marital trusts, 529 trusts, grantor retained annuity trusts, generation skipping trusts, and unknown trusts. NOTE: Detail may not add to totals due to taxpayer reporting discrepancies and processing tolerances.
of the total gift amount reported on taxable returns. Stock was the second most commonly gifted asset, for both taxable and nontaxable returns, followed by real estate. However, while real estate made up 19 percent ( $\$ 5.8$ billion) of gifts reported on nontaxable returns, it made up only 8.2 percent ( $\$ 0.8$ billion) of the gifts reported on taxable returns. The type of property given differed by gender of the donor: men gave less cash as gifts compared to women; 44.5 percent of total gifts given by men were cash versus 51.0 percent for women. Conversely, men gave more stock as gifts; 22.4 percent of the total value of gifts given by male donors was composed of stock, compared to 15.1 percent of the value of gifts given by women.

Gift taxes are calculated based on the fair market value of assets at the time of the transfer. However, for tax purposes, the fair market value can be reduced through the use of discounts. Discounts generally reflect the limited marketability of assets, often because the gifted asset represents a minority ownership interest in real or business assets. There were 102,608 gifts given in 2008 against which valuation discounts were taken, and the dollar value of these

## 2008 Gifts

Statistics of Income Bulletin | Spring 2011

## Focus on Gifts Given Through Family Limited Partnerships

As part of its annual gift tax study, the Statistics of Income Division collects data on transfers of-i.e., gifts of-interests in family limited partnerships (FLPs), as well as the composition of those FLPs at the time of the transfer. FLPs are limited partnerships, organized with both a general partner (or partners) and limited partners who are related to one another, and they are often used to manage family wealth. For this reason, FLPs are an important tool in estate planning for many wealthy individuals.

Generally, parents create and fund an FLP, naming themselves as general partners who maintain full control and decision-making authority over the partnership and its assets, regardless of how few general partnership shares they own. Over time, the general partners transfer the limited partnership shares in the FLP to children, grandchildren, or other family members. These limited partnership shares convey no control over the FLP or its assets. This arrangement allows parents to retain full control over the FLP assets, while taking full advantage of the annual gift tax exclusion by slowly transferring shares in the partnership and ultimately reducing the wealth that is eventually included in the parents' estates at death.

For 2008, donors gifted FLP shares worth approximately $\$ 1.7$ billion, which represents about 4.2
percent of all gifts given in 2008. Figure J presents the overall composition of those FLPs, as reported by donors. Stock was the most prevalent asset in the donors' FLPs; it represented about 48.7 percent of FLP assets reported on nontaxable returns and about 53.4 percent of the FLP assets reported on taxable returns. Real estate was the next most common type of FLP asset, regardless of tax status. However, while bonds made up only 1.7 percent of FLP assets reported on nontaxable returns, they accounted for 11.7 percent of FLP assets reported on taxable returns.

The asset composition of FLPs varies significantly by the gender of the donor (Figure K). The FLPs reported by male donors were overwhelmingly composed of stock ( 57.7 percent), while all other asset categories contributed less than 10 percent of the total value of FLPs. Farm assets were the second most common type of asset within the FLPs of male donors. However, farm assets still contributed only 8.9 percent of the value of FLP assets. By comparison, real estate assets (which accounted for only 6 percent of the FLP assets of male donors) made up 35.5 percent of the FLPs of female donors, making it the most popular type of asset in the FLPs of female donors. Stock, meanwhile, accounted for only 27.4 percent of FLP assets of female donors.

## Data Sources and Limitations

Statistics presented in this article were derived from a sample of 7,399 Federal gift taxreturns filed in Calendar Year 2009. Approximately 90 percent of gifts reported on returns filed in 2009 were given during Calendar Year 2008. The remaining approximately 10 percent of returns filed during 2009 reported gifts made prior to Calendar Year 2008. These include fiscal-year filers, taxpayers who were granted extensions to file their gift tax returns, and late-filed returns. They are considered an appropriate proxy for gifts made in 2008 that will be reported in subsequent filing periods.

The Form 709, United States Gift (and Genera-tion-Skipping Transfer) Tax, study is an annual study based on a stratified random sample. Returns are stratified based on tax status (taxable or nontaxable) and size of total gifts. Tax status is determined based on the amount of tax liability reported on the return in Part 2, Line 15. The amount of total taxable gifts is the sum of gifts given during a given calendar year, prior to reductions for the annual exclusion amounts, and the marital and charitable deductions.

There are four strata of nontaxable returns and five strata of taxable returns, based on the amount of
total deductions. Nontaxable returns with total gifts of less than $\$ 100,000$ were sampled at a rate of 0.30 percent; rates increased as the amount of total taxable gifts increased, up to a rate of 100 percent for returns with total gifts of $\$ 1.0$ million or more. Taxable returns with total gifts of less than $\$ 100,000$ were sampled at a rate of 6.53 ; rates increased to 100 percent for taxable returns of $\$ 1$ million or more. The final sample included 3,971 nontaxable returns and 3,428 taxable returns.

Weights were applied, by strata, to each return in the sample to create population estimates. All weights were calculated by dividing the final population count by the final sample count for each stratum. All weights were adjusted to account for missing returns and returns rejected from the sample. Selected coefficients of variation, which measure sampling error, are shown in Figure L.

## Selected Terms and Concepts

Annual exclusion-The amount that a donor can give to any single beneficiary, within a given tax year, without incurring Federal gift taxes. For gifts given in 2008, the annual exclusion amount was \$12,000.

## 2008 Gifts

## Figure

## Coefficients of Variation for Selected Data Items, by Tax Status, Gift Year 2008

| Item | All returns | Nontaxable <br> returns | Taxable <br> returns |
| :--- | ---: | ---: | :---: |
| Total returns filed | $(1)$ | $(2)$ | $(3)$ |
|  | 0.00 | 0.16 | 3.27 |
|  | 2.98 | 3.72 | 2.99 |
| Total gift amount | 0.74 | 3.06 | 5.46 |
| Total gift tax | 0.51 | 0.96 | 0.36 |

Charitable deduction-Completed, outright transfers to a qualifying charitable organization entitle the donor to take a deduction for the full amount of the transfer. Gifts given through trust must meet various legal requirements in order for the donation to qualify for a charitable deduction.

Crummey trust-A trust arrangement that allows trust beneficiaries, or contingent beneficiaries, the right to withdraw their gifts from the trust. The trust structure enables the donor to take advantage of the annual gift exclusion, while still exerting a measure of control over the gift in the trust. Crummey trusts were first legitimized in 1968, by Crummey v. Commissioner; the principle was extended further in 1991 in Cristofani's Estate v. Commissioner.

Family limited partnership (FLP)-FLPs are limited partnerships in which the majority of partners are related. They are most commonly used to manage family business or financial assets. Generally, the creators are general partners with control over the FLP management, while limited partnership shares are gifted and distributed to other family members over time.

Marital deduction-Gifts between spouses, either during life are at death, qualify the donor for an unlimited marital deduction for the full amount of the transfer.

Tax status-Returns can be considered taxable or nontaxable, based on the amount of tax liability reported on Part 2, line 15 of the return. Gift tax returns with a positive amount of liability reported are taxable returns; those with no liability reported are nontaxable.

Trust-An independent legal entity governed by a trust agreement, created when one party (known as the grantor or settler) transfers ownership of assets to the trust under the control of a trustee, for the benefit of a third-party beneficiary. Trusts can be either simple or complex. Simple trusts are those that are required to distribute all income in the tax year in which it is earned; that neither distribute nor reserve any money for charitable purposes; and that do not distribute amounts from the corpus of the trust. Complex trusts are those that are not, by definition, simple trusts.

| Amount | 73,741,408 | 99,683,799 | 118,232,296 | 126,289,889 | 130,607,837 | 110,828,337 | 94,332,976 |
| Tax overpayments, total [38]: <br> Number of returns | 105,361,848 | 103,706,648 | 104,778,359 | 109,915,823 | 110,611,578 | 115,206,683 | 113,142,955 |
| Amount | 254,553,541 | 255,064,839 | 272,110,056 | 295,796,995 | 316,924,652 | 357,932,449 | 365,937,162 |
| Overpayment refunds: <br> Number of returns | 102,004,984 | 100,674,244 | 101,870,385 | 107,001,071 | 107,687,030 | 112,480,892 | 110,439,391 |
| Amount | 219,751,889 | 221,371,474 | 232,975,616 | 250,941,390 | 267,872,391 | 321,441,289 | 334,990,311 |

[p] Preliminary.
[1] Year-to-year comparability of the "all returns" total is affected by changes in dollar income filing thresholds, while year-to-year comparability of the number of returns by type of tax form used is affected by changes in the specific filing requirements, including adjustments for inflation, for each form. In general, the filing of "short forms" (mostly Forms 1040A and 1040EZ) has been encouraged by IRS to simplify both taxpayer filing requirements and IRS processing. Filing requirements for each of the short forms have, therefore, been gradually liberalized to facilitate their use. Increases in the number of short forms have mostly been at the expense of "long form" 1040 usage (although increases in the number of each of the short forms have often been at the expense of one short form over another). While the number of 1040 (paper) returns has, therefore, increased over the time period shown, the rate of increase has been reduced by the use of the short forms, and, later, by electronic filing options (see below), including, for 1999, use of Form 1040PC. For additional information about the return filing requirements, see the annual reports, Statistics of Income-Individual Income Tax Returns. Forms 1040, 1040A, and 1040EZ include "standard" electronicallyfiled ("ELF" or "e-file") returns, and Form 1040EZ returns filed electronically by telephone ("TeleFile" for 1999-2004 only). Form 1040PC (computer-generated "paper") returns were not reclassified for Statistics of Income for 1999; data for Forms 1040, 1040A, and 1040EZ for this year are not comparable with preceding years (Form 1040PC did not apply after 1999). For 2006, the total number of Form 1040EZ returns includes 742,859 Form 1040EZ-T returns.

## Selected Historical and Other Data

## Table 1. Individual Income Tax Returns: Selected Income and Tax Items for Tax Years 2003-2009— Continued

## Footnotes-Continued

[2] Taxpayers could elect to assign $\$ 3$ of the income tax reported on their returns ( $\$ 6$ on a joint return, if both spouses contributed) to help pay for the cost of Presidential election campaigns. To do so, a taxpayer had to check a box on the tax return. The relationship between (a) the number of returns and boxes checked and (b) the dollar amounts shown is only approximate because the frequencies and the amounts were obtained from different sources, the frequencies from Statistics of Income tax return data and the dollar amounts from IRS monthly tax collections, aggregated by calendar year. It should be noted that the frequencies and amounts are related to the tax year for which statistics are shown, even though the designation by the taxpayer occurred in the following year, when the income tax return was filed and processed.
[3] Less deficit.
[4] Taxable interest includes "dividends" on deposits and withdrawable shares in mutual savings banks, savings and loan associations, and credit unions, but excludes interest from Regulated Investment Companies on money market mutual funds, which is included in "dividends" in "adjusted gross income" (AGI).
[5] Not included in AGI. Represents interest on State and local government obligations, including tax-exempt interest dividends from Regulated Investment Companies.
[6] Dividends in AGI exclude capital gains and liquidating dividends, reflected in the statistics for net capital gain or loss in AGI, but include interest from Regulated Investment Companies on money market mutual funds. Qualified dividends are the ordinary dividends received after May 5,2003 , that met certain conditions. These included: the dividend must have been paid by a U.S. corporation or a "qualified" foreign corporation; the stock ownership must have met certain holding period requirements; the dividends were not from certain institutions, such as mutual savings banks, cooperative banks, credit unions, tax-exempt organizations, or farmer cooperatives; and the dividends were not for any share of stock which was a part of an employee stock ownership plan (ESOP).
[7] Rent net income (or loss) excludes sole proprietorship (including farm) rental income or loss; these are included in business or profession net income or loss. Rental losses are before "passive loss" limitation and, therefore, exceed the amount included in AGI.
[8] Losses are after "passive loss" limitation.
[9] Includes capital gains from the sale of assets held for personal use or investment, and also net gains from the sale of certain business property treated as net capital gains and from "involuntary conversions" of property, such as by casualty or theft. Also includes capital gains received from partnerships and S corporations. See also footnote 15. Data represent total capital gains. Total includes capital gain distributions from Regulated Investment Companies. For other changes affecting capital gains, see Statistics of Income-Individual Income Tax Returns, various years. See also footnote 6.
[10] Includes capital losses (after limitation) from the sale of assets held for personal use or investment, including losses in excess of net gains from the sale of certain business property treated as net capital losses and "involuntary conversions" of property, such as by casualty or theft. Also includes capital losses received from partnerships and S corporations. See also footnotes 6,15 , and 16 .
[11] Net gain or loss, not includable in capital gain or loss, from the sale of business property (excluding inventories and certain other assets) and "involuntary conversions" of property, such as by casualty or theft. See also footnote 15.
[12] Excludes Individual Retirement Arrangement (IRA) distributions.
[13] Represents total unemployment compensation.
[14] Up to 85 percent of Social Security benefits were taxable.
[15] Excludes certain royalties included in the computations of capital gain or loss and of ordinary gain or loss in sales of noncapital assets.
[16] Excludes capital gains and losses.
[17] Includes adjustments not shown separately in this table. Total excludes certain business-related expenses, deduction for two-earner married couples, and certain alimony payments.
[18] Deductible Individual Retirement Arrangement (IRA) contributions were limited, then liberalized somewhat. Contributions to education and Roth IRAs were nondeductible and are, therefore, not included in the statistics.
[19] Beginning in Tax Year 2004, a taxpayer could have taken a deduction for contributions to a Health Savings Account. The deduction was limited to the annual deductible on the qualifying high deductible health plan and other criteria.
[20] Exemption amounts were indexed for inflation. Amounts were also limited for taxpayers with high incomes. A check box on the return was used for taxpayer's age 65 or over, in general, for use in establishing claims for the additional standard deductions, but many taxpayers not claiming the additional deductions also used the check box. The amount shown for exemptions excludes amounts in excess of AGI, which were reported but could not be used by the taxpayer. The number of exemptions and amounts also excludes the number and amounts reported on returns with no AGI, which did not figure into the computation of tax as a result.
[21] In general, represents the sum of standard and itemized deductions from AGI to compute "taxable income" (the tax base for the regular income tax), but also includes deductions in excess of AGI that could not be used in the computation. Deductions erroneously reported on returns with no AGI were excluded from the deduction statistics. Includes revised itemized deductions (see also footnotes 25-26), "basic" standard deduction, and "additional" standard deductions for age 65 or over or for blindness (for changes in the standard deduction and its relation to the zero bracket amount, see Statistics of Income-Individual Income Tax Returns, for appropriate years). Total itemized deductions are after statutory limitation (see footnote 23).
[22] Standard deductions were indexed for inflation. Statistics for taxpayers with the additional standard deduction for age 65 or over exclude those who checked the box on tax returns indicating age 65 or over, but then itemized their deductions instead of claiming standard deductions (see footnote 20). For the percentages of AGI used for the standard deduction and the limitation on the deduction, see Statistics of Income-Individual Income Tax Returns.
[23] Includes itemized deductions not shown separately in this table, including revised deductions, for "miscellaneous expenses" after limitation and for employee moving expenses. In general, total itemized deductions were limited for certain high-income taxpayers. This limitation was indexed for inflation.
[24] Deductible medical and dental expenses were limited, based on a revised percentage of AGI. The definition of expenses includes payments for certain long-term care insurance premiums and for the unreimbursed cost of certain long-term care of a chronically ill individual.
[25] Starting with 2004, a taxpayer could have elected to deduct State and local general sales taxes instead of State and local income taxes as itemized deductions on Schedule A.
[26] Deductions for mortgage real estate loan interest were limited. Personal interest was not deductible.
[27] Includes "alternative minimum tax" (AMT), starting with 2000. For previous years, AMT was excluded and was reflected only in "total income tax" (see footnote 31).
[28] Different tax rate structures for the regular income tax applied to Tax Years 1999-2009. Indexing of tax rate boundaries for inflation existed. The preferential maximum tax rate on net long-term capital gains under "alternative tax" was revised over the years. Alternative tax was abolished, but a maximum capital gain tax rate less than the maximum regular tax rate continued to apply under certain conditions. For additional informationon changes affecting tax computations, see Table 23 of the appendix to the historical section of this report and Statistics of Income-Individual Income Tax Returns.
[29] Includes that portion of the "earned income credit" used to offset income tax before credits. Earned income credit is shown below in Table 1. See also footnote 33.

Table 1. Individual Income Tax Returns: Selected Income and Tax Items for Tax Years 2003-2009— Continued

## Footnotes-Continued

[30] Includes credits such as the low-income housing credit, child adoption credit, and "empowerment zone employment" (EZE) credit not shown separately.
[31] The statistics for all years shown are comparable. However, prior to Tax Year 2000, total income tax is the sum of two components, income tax after credits and "minimum tax" or "alternative minimum tax (AMT)"; see footnotes 27 and 32. Starting with Tax Year 2000, total income tax is, in general, the same as income tax after credits, which was redefined to include AMT. (The small difference between the two amounts for 2000 is due mainly to the inclusion in the statistics for Tax Year 2000 of prior-year returns filed in Calendar Year 2001 that were used as proxies for Tax Year 2000 returns filed after 2001; the AMT on these returns was included in total income tax, but not in income tax before or after credits, consistent with the reporting sequence on the tax return forms for these years. The same is true for Tax Year 2002 for prior returns filed in Calendar Year 2003 for Tax Year 2000 and earlier. To a far lesser extent, the difference between total income tax and income tax after credits represents the tax on accumulation distributions of trusts, which was included in total income tax only.) Total income tax reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the income tax liability that was payable to the U.S. Department of the Treasury.
[32] Under "alternative minimum tax" (AMT), generally high-income taxpayers to whom the tax applied were required to pay the larger of the regular income tax or the AMT. As of 2009, examples of preferences or adjustments subject to recapture through the AMT were accelerated depreciation, incentive stock options, certain itemized deductions, personal exemptions, certain tax-exempt interest, and income loss from tax-shelter farm or "passive" investment activities. AMT is shown separately in the statistics for all years. However, starting with 2000, AMT is also included in "income tax before credits," as well as in "income tax after credits" and "total income tax." Previously, AMT was only included in "total income tax."
[33] In Table 1, the amounts "used to offset income tax before credits" and "used to offset other taxes" (that are income-related) are reflected in the statistics for "total tax credits"; however, "excess earned income credit (refundable)" is reflected in the statistics for tax "overpayments." The refundable portion of the credit is the amount (in excess of the taxes) that could not be credited, including any "advance earned income credit payments" on those returns that had such an excess. ("Advance earned income credit payments" were made to employees electing to receive such payments currently through their paychecks. Such "payments" are included in the statistics only if the employees also met the tax return filing requirements; advance payments received by those not required to file are, therefore, excluded.)
[34] Represents payments reflecting the sum of "total income tax" (see footnote 31), tax recapture of certain prior-year tax credits, tax applicable to Individual Retirement Arrangements (IRAs), and Social Security taxes on "self-employment income" and on certain employee tip income, as well as on other income-related taxes applicable to the years shown (see Statistics of Income-Individual Income Tax Returns). The total also includes the following not shown separately below in Table 1: "advance earned income credit payments" and credits for (a) capital gain tax paid by a Regulated Investment Company, but considered paid by shareholders, and (b) part of the purchase price of a diesel-powered highway vehicle.
[35] Represents tax withheld on (a) salaries and wages; (b) certain tip income; (c) pensions and annuities; (d) certain gambling winnings; and (e) distributions from profit-sharing plans, retirement plans, and Individual Retirement Arrangements (IRAs). Also included are taxes withheld as a result of "backup withholding" on certain interest, dividends, and royalty payments, which otherwise were not subject to withholding.
[36] Represents the sum of (a) "estimated tax," generally paid quarterly throughout the tax year by self-employed and certain other taxpayers with insufficient or no tax withheld, and (b) prior-year tax overpayments taxpayers elected to credit to their current-year's "estimated tax" in lieu of requesting a refund.
[37] Represents the sum of payments made with a request for an "automatic" 4-month extension of time in which to file an income tax return, and payments with a request for an additional 2-month extension. Notwithstanding the timing of these requests, full payment of a tax estimate for the year had to be made with the original application; if adjustments to the amount thus paid were later necessitated, the difference was either refundable or payable subject to an interest charge (which is not reflected in the tax statistics).
[38] Includes refunds (shown separately), plus credits to the following year's "estimated tax" and the refundable portion of the "earned income credit" (see footnote 33). The taxes reflected in tax overpayments are the same as those listed in footnote 35.
[39] Not applicable.
[40] Not available.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

## Selected Historical and Other Data

Table 2. Individual Income and Tax Data, by State and Size of Adjusted Gross Income, Tax Year 2009

Table 2. Individual Income and Tax Data, by State and Size of Adjusted Gross Income, Tax Year 2009— Continued

## Footnotes

**Not shown to avoid disclosure of information about specific taxpayers. However, the data are combined with data in an adjacent size class, as appropriate, and included in the appropriate totals.
[1] Includes returns with adjusted gross deficit.
[2] Less deficit.
[3] "Number," here, and elsewhere in Table 2, represents number of returns, unless otherwise specified.
[4] Includes the Alaskan permanent fund, reported by residents of Alaska on Forms 1040A and 1040EZ's. This fund only applies to statistics in the U.S. totals, and the state of Alaska.
[5] "Itemized deductions" include any amounts reported by the taxpayer, even if they could not be used in computing "taxable income," the base on which the regular income tax was computed. Thus, total itemized deductions include amounts that did not have to be reported by taxpayers with no "adjusted gross income." (Adjusted gross income is the total from which these deductions would normally be subtracted.) In addition, if standard and itemized deductions were both reported on a tax return, the form of deduction actually used in computing income tax was the one used for the statistics. Therefore, if the standard deduction was the form of deduction used, the total reported for itemized deductions was excluded from the statistics. However, the component deductions were not similarly excluded. As a result, the number of returns and related amounts for the component deductions are slightly overstated in relation to the grand total shown for itemized deductions. These components are also overstated in relation to the total because there was a statutory limitation on the total of itemized deductions that could be claimed by certain high-incometaxpayers. This limitation did not affect the component deductions, the sum of which therefore exceeded the total used in computing income tax.
[6] Unlike Table 1, Table 2's "Total tax credits" excludes the "earned income credit" which is shown separately below in the table.
[7] "Earned income credit" includes both the refundable and non-refundable portions. The non-refundable portion could reduce income tax and certain related taxes to zero. The earned income credit amounts in excess of total tax liability, or amounts when there was no tax liability at all, were refundable. See footnote 8 below for explanation of the refundable portion of the earned income credit.
[8] The refundable portion of the "earned income credit" equals "total income tax" minus the "earned income credit". If the result is negative, this amount is considered the refundable portion.
[9] Taxpayers were only allowed to claim the "first-time homebuyer credit" in Tax Year 2009 if their modified AGI was below $\$ 95,000$ ( $\$ 170,000$ if married filing jointly), and they purchased the home before November 7, 2009. If the home was purchased after November 6, 2009, this income limit was increased to $\$ 145,000$ ( $\$ 245,000$ if married filing jointly). Table-2 data does not include any amendments made to returns claiming the credit.
[10] "Income tax" is in general, the same as "income tax after credits" which was redefined in Tax Year 2000 to include the "alternative minimum tax (AMT)". Table 2 "Income tax" differs from "total income tax" (in Tables 1 and 3 ) in that Table 2 "Income tax" is after the subtraction of all tax credits except the earned income credit. See footnotes 7 and 8 above, for an explanation of the treatment of the earned income credit. "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. Income tax represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury and excludes the effects of the earned income credit and any items in the payments section of form 1040 on final taxes owed.
[11] For Table 2, "Total tax liability" differs from "Income tax," in that "Total tax liability" includes the taxes from recapture of certain prior-year credits, tax applicable to individual retirement arrangements (IRA's), Social Security taxes on self-employment income and on certain tip income, advanced earned income payments, household employment taxes, and certain "other taxes" listed in the Form 1040 instructions.
[12] Reflects payments to or withholdings made to "Total tax liability" (footnote 11). The amount the tax filer owes when the income tax return is filed.
[13] The amount of overpayments the tax filer requested to have refunded.
[14] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.
NOTES: This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2010, including any returns filed for tax years preceding 2009.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the total tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in Table 2 should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes and that U.S. totals in this table may not be altogether comparable to U.S. totals in Tables 1 and 3 , as a result. Also, see footnote 14, above for differences in tax return coverage, which affects U.S. totals in this table.
Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer, or accountant, or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the respective years' "Individual Income Tax Returns," Publication 1304.

Detail may not add to totals because of rounding.

## Selected Historical and Other Data

Table 3. Number of Individual Income Tax Returns, Income, Exemptions and Deductions, Tax, and Average Tax, by Size of Adjusted Gross Income, Tax Years 2007-2009
[All figures are estimates based on samples-money amounts are in thousands of dollars except as indicated]

## Selected Historical and Other Data

Table 3. Number of Individual Income Tax Returns, Income, Exemptions and Deductions, Tax, and Average Tax, by Size of Adjusted Gross Income, Tax Years 2007-2009_Continued

## Footnotes

[p] Preliminary.
[1] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in "adjusted gross income" or "taxable income," which are subject to the "alternative minimum tax" (included in "total income tax"), defined in Table 1, footnote 32
[2] "Adjusted gross income" (AGI) minus "personal exemptions and total deductions" will not equal "taxable income" because the total of deductions and exemptions could exceed AGI and, therefore, includes amounts that could not be used in computing "taxable income."
[3] Not computed.
[4] Removed due to excessive sampling variability.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. Percentages shown in this table are based on dollar amounts rounded to the units indicated in the specific table heading. Therefore, they may not be as precise as percentages based on the fuller dollar amounts found in tables contained in the source publications or articles which underlie the historical tables presented in this section of the SOI Bulletin.

Table 7. Standard, Itemized, and Total Deductions Reported on Individual Income Tax Returns, Tax Years 1950-2009
[All figures are estimates based on samples-number of returns is in millions; money amounts are in billions of dollars]

| Tax year | Total number of returns | Total deductions |  | Standard deduction |  | Itemized deductions |  |

## [p] Preliminary.

[1] Sum of standard and itemized deductions, plus charitable contributions deduction reported on standard deduction returns for Tax Years 1982-1986. Amount of total deductions for 1950-1957 was estimated by Joseph A. Pechman, The Brookings Institution, using his estimate of the standard deduction for these years (see footnote 4) plus the total for itemized deductions published in Statistics of Income-Part 1 for 1950-1953 and Statistics of Income-Individual Income Tax Returns for 1954-1957. Starting with 1958, total deductions were obtained directly from Statistics of Income-Individual Income Tax Returns. Deductions exclude amounts shown as "statutory adjustments" in Table 1. For Tax Years 1987-1988, total deductions also include the "zero bracket amount" reported on a small number of returns (see footnote 4). It includes total deductions as reported by taxpayers, even if the total exceeded "adjusted gross income" (AGI) and, therefore, could not be used.
[2] See Table 5, footnote 3.
[3] Series revised, starting with the Spring 1997 SOI Bulletin, to exclude from the standard deduction statistics, the relatively small number of returns with no adjusted gross income and no deductions. Previously, these returns were classified as if they showed a standard deduction. For the 1977-1986 statistics, the standard deduction is the "zero bracket amount" (reported on returns with only a "zero bracket amount"). Such an amount was also included for a small number of returns for 1987-1988 (see footnote 4). For years in which the "zero bracket amount" was in effect, frequencies shown for standard deduction returns were derived by subtracting the number reporting an income tax liability, but no itemized deductions, from the total of all returns. For 1950-1952, returns with itemized deductions include the small number of returns with no deductions and, for 1950-1954, the small number with no income, regardless of whether or not deductions were itemized. For later years, returns in these two categories were excluded from all the deduction statistics in this table.
[4] Amount of standard deduction for 1950-1957 was estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of returns by income class and marital status in Statistics of Income-Part 1 for 1950-1953 and Statistics of Income-Individual Income Tax Returns for 1954-1957, and, starting with 1958, was obtained directly from Statistics of Income-Individual Income Tax Returns. It represents the "zero bracket amount" for 1977-1986. Starting with 1987, it represents the sum of "basic" and "additional" standard deductions (for age 65 or over and for blindness); also includes the "zero bracket amount" reported on the small number of prior-year returns filed in 1988-1989 that were included in the 1987-1988 statistics as proxies for returns due but not received.
[5] For 1977-1986, total itemized deductions are before subtraction of the "zero bracket amount." Starting with 1991, total itemized deductions are after statutory limitation (see Table 1, footnote 23).
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. Percentages shown in this table are based on dollar amounts rounded to the units indicated in the specific table heading. Therefore, they may not be as precise as percentages based on the fuller dollar amounts found in tables contained in the source publications or articles which underlie the historical tables presented in this section of the SOI Bulletin.

Table 9. Number of Individual Income Tax Returns, by Type of Tax Settlement, Tax Years 1950-2009 [All figures are estimates based on samples-number of returns in millions]

| Tax year | Total number of returns | Number of returns with- |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Tax due at time of filing | Overpayments [1] | No overpayments or tax due at time of filing |
|  | (1) | (2) | (3) | (4) |
| 1950 | 53.1 | 14.3 | 32.0 | 6.8 |
| 1951 | 55.4 | 18.6 | 31.0 | 5.8 |

| Deficit [2] | 36,179,568 | 38,781,068 | 42,918,970 | 44,836,514 | 48,736,596 | 54,541,958 | 60,757,103 |

[1] Represents the number of returns, even if there was more than one business per return.
[2] "Total deductions" include amounts not shown separately in this table, as well as amounts not itemized separately on Schedule C-EZ (short form) used by certain of the smaller businesses. Most deductions for which statistics are shown are slightly understated to the extent that only total deductions had to be reported on Schedule C-EZ. Total deductions exclude disallowed "passive losses"; but net income (less deficit), net income, and deficit reflect these losses. In addition, net income (less deficit), net income, and deficit are after adjustment for the passive loss carryover from prior years. Therefore, "business receipts" minus "total deductions" do not equal "net income (less deficit)."
[3] Not available.
NOTES: There are slight differences between: (a) the number of individual income tax returns "with business or profession net income or loss" and the associated amounts, based on the summarized totals on the face of the tax return (Table 1), and (b) the related number of individual income tax returns "with nonfarm business net income or deficit" and the associated amounts, based on data from Schedules C filed in support of the total on the face of the return (Table 10). These differences result from the somewhat larger tax return samples underlying the sole proprietorship statistics for more recent years, and also from the taxpayer reporting variations and inconsistencies, e.g., in the occasional misreporting of farm versus nonfarm business activity on the face of the return compared to what was indicated in supporting schedules, and in the equating of certain partnership income or employee business expenses with the presence of sole proprietorship activity. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data.

[r] Revised.
[1] Certain small partnerships were not required to file balance sheets.
[2] Number of limited partnerships, limited liability companies, and the associated number of partners are understated because some businesses failed to answer the question about type of partnership on their tax returns as originally filed.
[3] Total assets, total liabilities, and partners' capital account represent end-of-year amounts. Moreover, they are understated somewhat because not all partnerships included a complete balance sheet and because of the reporting requirement mentioned in footnote 1, above. However, certain partnerships with negative total assets, total liabilities, and/or total partners' capital are included in the statistics.
[4] Short-term debt is the abbreviated title for mortgages, notes, and bonds payable in less than 1 year.
[5] Long-term debt is the abbreviated title for mortgages, notes, and bonds payable in 1 year or more.
[6] "Total receipts" and "total deductions" include amounts not shown separately. Total receipts were computed for the statistics as the sum of trade or business income (gross receipts or sales less returns and allowances (business receipts); ordinary income from other partnerships, estates, and trusts; farm net profit; net gain, noncapital assets; and other income from trade or business), as well as income distributed directly to partners (net rental real estate income; other net rental income; interest income; dividend income; and royalties). Total deductions were computed as the sum of trade or business expenses (cost of goods sold; ordinary loss from other partnerships; net farm loss; net loss, noncapital assets; other loss from trade or business; and total deductions from trade or business), as well as losses distributed directly to partners (net rental real estate loss; and other net rental loss). Starting in 2004, othe portfolio income (loss) was not included in total receipts and deductions because it was no longer reported separately on the tax return. Portfolio net short-term capital gain (loss) and net long-term capital gain (loss) continue to be intentionally omitted from total receipts and total deductions in order to improve comparability with 1986 and prior data.
[7] Represents the more complete amounts reported in depreciation computation schedules, rather than the amounts reported as the depreciation deduction.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data.

n.a.-Not available.
[r] Revised.
[1] Excludes business income tax returns filed by tax-exempt organizations. See Table 16.
[2] Size classes for corporations are based on "business receipts," i.e., gross amounts from sales and operations, for industries (a) except those in the "finance, insurance, and real estate" industrial division, using the former Standard Industrial Classification or SIC system for years preceding 1998, (b) then, starting with 1998, except those in the "finance and insurance" industrial sector and those in the "management of companies (holding companies)" sector (which includes bank holding companies, as well as other holding companies), using the North American Industrial Classification System or NAICS. For the groupings comprising these two exceptions, "total receipts," which are the sum of business receipts and investment income, were used instead of "business receipts" as the basis for the size classification. Because of the differing treatment of holding companies (other than bank holding companies) and of real estate and rental and leasing, the statistics, starting with 1998, are not completely comparable with those for earlier years
[3] Includes returns with no "business receipts" (or no "total receipts" in the case of certain corporations as described in footnote 2).
[4] Includes corporations and partnerships with "zero assets and liabilities." For corporations, returns with zero assets represent final returns of liquidating or dissolving corporations which had disposed of all assets; final returns of merging corporations whose assets were included in the returns of the acquiring corporations; part-year returns of corporations changing accounting periods (except for certain newly-incorporated businesses); and returns of foreign corporations with income "effectively connected" with a U.S. business (except foreign insurance companies providing separate balance sheets for U.S. branches). For partnerships, returns with zero assets include businesses not required to file balance sheets, as well as businesses that failed to provide balance sheets on their returns as originally filed. See also Table 11, footnote 1.
[5] Size classes for partnerships are affected by changes in the definition of receipts. (See Table 11, footnote 6.) Only partnership net rental income is reflected in the size distribution.
[6] Sole proprietors are not required to provide balance sheet information.
NOTES: Statistics for corporations are for accounting periods ended July of one year through June of the next. Thus, for example, corporation data for 2008 are for accounting periods ended July 2008 through June 2009. Statistics for nonfarm sole proprietorships and partnerships are, in general, for the calendar year.
Data may not add to totals because of rounding. Most of the data are subject to sampling errors. Tax law and tax form changes affect the year-to-year comparability of the data.

## [r] Revised or corrected.

[1] Excludes inactive corporation returns. Excludes taxable farmers' cooperatives; Real Estate Mortgage Investment Conduits (REMIC's); Foreign Sales Corporations (FSC's) and Interest-Charge Domestic International Sales Corporations (IC-DISC's). Because of the omission of these categories of returns, annual totals for the income, financial, and tax items shown in the statistics (except those not applicable to IC-DISC's and FSC's, such as "income subject to tax," "income tax," and tax credits) are not altogether comparable. Corporations that otherwise qualified as $S$ corporations, but that had subsidiaries, could qualify, provided the subsidiaries also qualified as S corporations. These subsidiaries are included in the income tax returns of the parent $S$ corporations. Scorporation net income totals for receipts and deductions are slightly understated to the extent that they were not directly related to the "income from a trade or business" reported by these companies. Comparability of data for "returns with net income" is also affected by the exclusion of certain amounts for Regulated Investment Companies. For additional information about these changes, see footnote 16 below.
[2] Consolidated returns were filed on an elective basis for groups of affiliated corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group, and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates. Consolidated returns exclude S corporations (defined in footnote 4), although, S corporation returns could include subsidiaries that were also S corporations. Returns filed by parent S corporations which include qualifying subsidiaries are included in the Scorporation frequencies shown in Table 13. Consolidated returns also exclude all real estate investment trusts (REIT's).
[3] Included in "number of returns, total" and "number with net income."
[4] In general, certain small qualifying corporations that elected to be taxed at the shareholder level. These corporations could have no more than 75 shareholders (mostly individuals). S corporation returns could include subsidiaries if the subsidiaries also qualified as $S$ corporations, with income and financial data for both parent and subsidiaries combined on the return of the parent corporation.
[5] Balance sheet data are end-of-year amounts.
[6] Inventories include amounts reported by real estate subdividers and developers.
[7] Tax-exempt securities include not only investments in State and local government obligations, but also stock in investment companies that distributed dividends during the current year representing tax-exempt interest on such obligations.
[8] Accounts payable of banking and savings and loan institutions could include deposits and withdrawable shares.
[9] Amounts for "adjustments to shareholders' equity" are reported separately on the tax return.
[10] In general, Statistics of Income data for receipts, deductions, and net income (or deficit) of S corporations are limited to those attributable to a trade or business. Therefore, most investment income or loss, such as from taxable interest, dividends, rents, royalties, and gain (loss) from sales of investment property; the deductions related to this income; and deductions for charitable contributions, intangible drilling and development costs, oil and gas depletion, foreign taxes paid, and the limited expensing of the cost of depreciable assets (Code section 179) are not reflected in net income (because they were allocated directly to shareholders instead). See also footnote 4. Cost of goods sold applies when inventories are an income-determining factor, i.e., when the corporation was engaged in the production, manufacture, purchase, or sale of merchandise in the course of its trade or business. For all years, identifiable amounts of depreciation, depletion, amortization, taxes paid, advertising, bad debts, compensation of officers, employee plan contributions, interest paid, and rent found in taxpayer schedules in support of the total cost of goods sold/cost of operations were transferred to their respective deduction headings for the statistics. This enabled more complete statistics for these expenditures to be produced.
[11] "Business receipts" include the gross proceeds (netting during statistical processing against the cost of these sales) reported by stock and commodity brokers and exchanges, and by real estate subdividers, developers, and operative builders, even when they bought and sold securities, commodities, and real estate on their own account.
[12] "Other interest" includes any dividends reported in combination with interest on the Form 1120 S tax return by S corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 4).
[13] Identifiable amounts reported on Form 1120-A are included in the statistics for the appropriate deduction. Form 1120-A became obsolete in 2007. "Other deductions" include certain amounts previously treated as part of the combined "cost of goods sold/cost of operations" for Statistics of Income. See also footnote 10.
[14] In general, "total receipts less total deductions" include tax-exempt interest on State and local government obligations, but exclude income from related foreign corporations only "constructively" received. As such, "total receipts less total deductions" represent all income, taxable and nontaxable, "actually" received by the corporation, as reported on the corporation income tax return, and exclude all income only "constructively" or "deemed" received. In contrast, "net income (less deficit)" represents all taxable income, actually or constructively received. Therefore, in the statistics, "total receipts less total deductions" minus "nontaxable interest on State and local government obligations" plus "constructive taxable income from related foreign corporations" equal "net income (less deficit)." For the exception, due to Regulated Investment Companies, see footnote 16.
[15] Represents "income" that was only "constructively" or "deemed" received from foreign corporations and that was taxed to the U. S. corporation. (In general, such income was otherwise subject to U. S. income tax only when actually repatriated as dividends.) For the statistics, it is the sum of "includable income of Controlled Foreign Corporations" and the "foreign dividend gross-up," reported separately on the tax return. The "includable income" was comprised of specific types of undistributed income earned by a Controlled Foreign Corporation that were taxed under certain conditions to the U. S. shareholder corporations unless an actual "minimum distribution" was made. The foreign dividend gross-up represents a share of the foreign taxes paid on the profits of certain foreign subsidiaries out of which they paid dividends to their U.S. parent corporations and for which the parent corporation then claimed a foreign tax credit.
[16] "Net income (less deficit)," "net income," and "deficit" exclude: (a) net long-term capital gain reduced by net short-term capital loss reported by Regulated Investment Companies (see footnote 14), and (b) amounts other than from a trade or business, i.e., portfolio and rental income, reported by S corporations (see footnote 4). For additional information about S corporation net income, see the various articles on S corporations in the Bulletin.

## Selected Historical and Other Data

Table 13. Corporation Income Tax Returns: Balance Sheet, Income Statement, and Tax Items for Income Years, 2002-2008-Continued

## Footnotes-Continued

[17] For some years, "income subject to tax" (the corporate tax base) exceeds "net income (less deficit)" in the statistics, chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined for the statistics as net income minus certain statutory special non-business deductions, such as for intercorporate dividends received and "net operating losses" carried forward from prior years). Profits of S corporations were mostly taxed through shareholders (who had to be individuals, estates, or trusts).
[18] Includes Personal Holding Company tax; tax on "branch profits" of foreign corporations with U.S. operations; and certain lesser taxes, including special taxes applicable to Real Estate Investment Trusts (REIT's) and foreign corporations with U.S.-source income. "Total income tax" more closely represents worldwide income tax liability because it is before subtraction of the foreign tax credit, the largest of the tax credits. To the extent that foreign tax credits adequately reflect the total foreign income tax burden, total income tax includes these taxes.
[19] Under AMT, corporations are required to compute their regular tax liability and their "tentative minimum tax" liability. The difference between the "tentative minimum tax" and the regular tax is the legally defined alternative minimum tax. The AMT was designed to ensure that, at least, a minimum amount of income tax was paid in spite of the legitimate use of exclusions, deductions, and credits. New corporations and certain small corporations were not subject to the AMT.
[20] Tax credits are applied against "regular tax" only. See also footnote 22
[21] Not all components of the general business credit are shown separately. Most components are subject to a combined overall limitation, therefore the amounts shown in the table are tentative. Certain credits are subject to a separate limitation. For other changes in the definition of components of the general business credit, see Statistics of Income-Corporation Income Tax Returns, for the years concerned.
[22] "Total income tax after credits" is before any examination or enforcement activities by the Internal Revenue Service. May include credits not reported separately above. It is the amount payable to the U.S. Government as reported on the income tax return. Because it is after subtraction of foreign tax credit, this total does not include income taxes paid to foreign governments.
NOTES: Statistics are for corporate accounting periods ended July of one year through June of the next. Thus, for example, data for 2008 are for accounting periods ended July 2008 through June 2009. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data

Table 14a. Corporation Income Tax Returns: Selected Balance Sheet, Income Statement, and Tax Items, by Standard Industrial Classification (SIC) Industrial Division, Specified Income Years, 1985-1997

## Selected Historical and Other Data

Table 14a. Corporation Income Tax Returns: Selected Balance Sheet, Income Statement, and Tax Items, by Standard Industrial Classification (SIC) Industrial Division, Specified Income Years, 1985-1997Continued

## Footnotes

[1] Industrial classification is based on the product or service accounting for the largest percentage of "total receipts." (Total receipts are the sum of business or gross receipts, plus capital gains and income from investments, including rentals.) Starting with 1998, this classification is based on the North American Industry Classification System (NAICS), which replaced the Standard Industrial Classification (SIC) system. The SIC, in its various versions, was used to classify statistics for the years before 1998. Both systems were intended for Governmentwide use in classifying business statistics. (For information about NAICS and its usage in Canadian, Mexican, and U.S. Government statistics, see the Statistics of Income Bulletin, Summer 1997, Volume 17, Number 1, pp. 3-5.) Because there are substantial differences between NAICS and its predecessor SIC system, data by "industrial sector" for years beginning with 1998 (Table 14b) are shown apart from data for earlier years by "industrial division" (Table 14a). As an example of differences between the two systems, using NAICS, Statistics of Income classifies banks that were bank holding companies in the new "management of companies (holding companies)" sector, instead of in the "finance and insurance" sector. Using the SIC, bank holding companies had previously been classified in the "finance, insurance, and real estate" industrial division. For additional information about breaks in comparability caused by the changeover to NAICS, see Statistics of Income-1998, Corporation Income Tax Returns. If information for the business activity and product was not discernible from the corporation income tax return, the return was classified as with nature of business "not allocable." Data for nature of business "not allocable" are included in the totals for "all industrial divisions" (Table 14a) and "all industrial sectors" (Table 14b), but are not shown separately. Therefore, in addition to rounding differences, the statistics by industrial division or sector will not add to their respective grand totals.
[2] See Table 13, footnote 1.
[3] Balance sheet data are end-of-year amounts. Net worth is the sum of "capital stock," "additional paid-in capital," "retained earnings, appropriated," "retained earnings, unappropriated," and "adjustments to shareholders' equity" minus "cost of treasury stock." (Prior to 1997, data for "retained earnings, unappropriated" included "adjustments to shareholders' equity," not reported separately on the tax return.) Each of these amounts is presented separately in Table 13.
[4] See Table 13, footnotes 10 and 14.
[5] See Table 13, footnote 11.
[6] Interest received is the sum of "interest on State and local government obligations" (i.e., tax-exempt interest) and "other interest" (which includes interest paid by banking and savings institutions). Data for both of these amounts are presented separately in Table 13. See also Table 13, footnote 12.
[7] In addition to regular tax (and alternative tax) for years prior to 1988, includes certain other taxes either shown separately in Table 13 or mentioned in Table 13 , footnote 18 .
[8] Beginning with tax year 1987, "Alternative tax" was repealed. See also Table 13, footnote 19.
NOTES: Statistics are for corporate accounting periods ended July of one year through June of the next. Thus, for example, data for 1997 are for accounting periods ended July 1997 through June 1998. Data may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling errors. Tax law and tax form changes affect the year-to-year comparability of the data.

Table 14b. Corporation Income Tax Returns: Selected Balance Sheet, Income Statement, and Tax Items, by North American Industry Classification System (NAICS) Industrial Sector, Income Years 2003-2008 [All figures are estimates based on samples-money amounts are in thousands of dollars]

[1] Industrial classification is based on the product or service accounting for the largest percentage of "total receipts." (Total receipts are the sum of business or gross receipts, plus capital gains and income from investments, including rentals.) This classification is based on the North American Industry Classification System (NAICS). The system was intended for Governmentwide use in classifying business statistics. (For information about NAICS and its usage in Canadian, Mexican, and U.S. Government statistics, see the Statistics of Income Bulletin, Summer 1997, Volume 17, Number 1, pp. 3-5.). If information for the business activity and product was not discernible from the corporation income tax return, the return was classified as with nature of business "not allocable." Data for nature of business "not allocable" are included in the totals for "all industrial sectors," but are not shown separately. Therefore, in addition to rounding differences, the statistics by industrial division or sector will not add to their respective grand totals.
[2] See Table 13, footnote 1.
[3] Balance sheet data are end-of-year amounts. Net worth is the sum of "capital stock," "additional paid-in capital," "retained earnings, appropriated," "retained earnings, unappropriated," and "adjustments to shareholders' equity" minus "cost of treasury stock." Each of these amounts is presented separately in Table 13
[4] See Table 13, footnotes 10 and 14 .
[5] See Table 13, footnote 11.
[6] Separate breakouts of "interest on State and local government obligations" (i.e., tax-exempt interest) and "other interest" (which includes interest paid by banking and savings institutions) are presented separately in Table 13. See also Table 13, footnote 12.
[7] In addition to regular tax, includes certain other taxes either shown separately in Table 13 or mentioned in Table 13, footnote 18. Includes adjustments to total tax which may be negative.
NOTES: Statistics are for corporate accounting periods ended July of one year through June of the next. Thus, for example, data for 2008 are for accounting periods ended July 2008 through June 2009. Detail may not add to totals because of rounding. All amounts are in current dollars. Most of the data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data.

## Selected Historical and Other Data

n.a.-Not available
[1] Includes data reported by organizations described in Internal Revenue Code section 501(c)(3), excluding private foundations and most religious organizations. Organizations with receipts under $\$ 25,000$ were not required to file.
[2] Balance sheet data are end-of-year amounts.
[3] Represents fees collected by organizations in support of their tax-exempt purposes, and income such as tuition and fees at educational institutions, hospital patient charges, and admission and activity fees collected by museums and other nonprofit organizations or institutions.
[4] For Tax Year 2007, The Bill and Melinda Gates Foundation reported "other investments," valued at $\$ 38.7$ billion for both book and fair market. This amount represented the foundation's interest in the Bill and Melinda Gates Foundation Trust. These assets were also reported by the Bill and Melinda Gates Foundation Trust on its Form 990-PF. For statistical purposes, for Tax Year 2007, the data shown in rows 22 and 23 were reduced by $\$ 38.7$ billion to avoid overstating these joint assets. For additional information, see http://www.gatesfoundation. org/nr/public/media/annualreports/annualreport07/AR2007Statements.html.
[5] The amount of contributions, gifts, and grants shown reflects the amount actually disbursed, on a cash basis, for charitable purposes.
[6] Represents income that may be subject to the excise tax on net investment income under Internal Revenue Code section 4940, including interest, dividends, rents, royalties, net income from realized capital gains, and, beginning in 2006, certain other similar income from investments.

Table 16. Nonprofit Charitable Organization and Domestic Private Foundation Information Returns, and Exempt Organization Business Income Tax Returns: Selected Financial Data, 2000-2007—Continued

## Footnotes-Continued

[7] Includes returns filed by or for entities described in Internal Revenue Code sections 401(a) (qualified pension, profit-sharing, or stock bonus plans), 408(e) (Individual Retirement Arrangements, or IRA's), 408A (Roth IRA's), and 501(c)(2) through 501(c)(27) (charitable and most other types of tax-exempt organizations).
[8] The primary reason for the drop in gross unrelated business income (UBI) and total deductions between Tax Years 1997 and 1998 is the exclusion from the 1998 statistics of one association, which reported relatively large amounts of gross UBI and deductions for 1997 and prior years. The tax-exempt status of this association was terminated effective 1998. For additional information see Riley Margaret, "Unrelated Business Income Tax Returns, 1998," Statistics of Income Bulletin, Spring 2002, Volume 21, Number 4.
[9] Aggregate amounts of total deductions, unrelated business taxable income (less deficit), and deficit previously published in various issues of the Statistics of Income Bulletin have been adjusted in Table 16 for years prior to 1999. The revisions were required to take into account certain adjustments made to reported amounts of the "net operating loss deduction." During processing of the SOI sample of Tax Year 1999 returns, it was discovered that many Form 990-T filers were deducting the entire amount of any previous years' net operating loss carryover from net income (even when net income was zero or negative), rather than deducting only the part of the carryover amount needed to offset any positive net income amount. Entering the entire amount of the net operating loss carryover, as opposed to entering only the appropriate deduction amount, did not affect a filer's unrelated business income tax liability, but it did inflate the amount of deficit reported. Prior to 1992, organizations with gross unrelated business income of $\$ 10,000$ or less were not required to report NOLD separately; therefore the adjusted amounts for 1990 and1991 take into account only the larger organizations. If it had been possible to make adjustments for the smaller organizations, the amounts of total deductions and deficit would be somewhat smaller, and the amount of unrelated business taxable income (less deficit) would be somewhat larger.
[10] Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services is component of "gross unrelated business income" (upon which the filing requirement is based).
[11] Total tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the "proxy tax" on certain lobbying expenditures (applicable only to tax years after 1993), the "alternative minimum tax," and the environmental tax (applicable only to tax years prior to 1996). Beginning with Tax Year 2001, total tax also can include interest due, computed under the look-back method for certain depreciated property and completed long-term contracts, and "other" taxes, as described by the return filer.

## Selected Historical and Other Data

Table 17. Taxable Estate Tax Returns as a Percentage of Adult Deaths, Selected Years of Death, 1934-2007-Continued

## Footnotes

[1] Starting with 1965, number of returns, total gross estate at date of death, and estate tax after credits are estimates based on samples.
[2] Prior to 1982, year of death figures were approximated, using data from returns filed in a single calendar year. While many of the returns filed in a given calendar year represent returns of decedents who died in the immediately preceding year, others represent returns of decedents who died in earlier years. Starting with 1982, the statistics are by year of death, as reported on estate tax returns filed during the year of death and two successive years. Starting with year of death 1986, more detailed year of death estimates were calculated on a trienniel basis. These estimates included adjustment factors to account for returns filed more than two years after the year of death.
[3] Total adult deaths represent those of individuals age 20 and over, plus deaths for which age was unavailable. Data on adult deaths are taken from the National Vital Statistics Reports, National Center for Health Statistics, U.S. Department of Health and Human Services. See http://www.cdc.gov/nchs/products/nvsr.htm.
[4] Prior to 1964, a return was taxable if it showed an estate tax before credits. Starting with 1964, the classification was based on estate tax after credits.
[5] Year-to-year comparability of the data is affected by changes in the gross estate filing threshold, which is based on year of death: 1934 (\$50,000); 1935 (\$50,000 changing to $\$ 40,000$ ); 1936-1941 (\$40,000); 1942 ( $\$ 40,000$ changing to $\$ 60,000$ ); 1943-1976 (\$60,000); 1977 ( $\$ 120,000$ ); 1978 ( $\$ 134,000$ ); 1979 (\$147,000); 1980 (\$161,000); 1981 (\$175,000); 1982 (\$225,000); 1983 (\$275,000); 1984 (\$325,000); 1985 (\$400,000); 1986 (\$500,000); 1987-1997 (\$600,000); 1998 (\$625,000); 1999 (\$650,000); 2000-2001 (\$675,000); 2002-2003 (\$1,000,000); 2004-2005 (\$1,500,000); 2006-2007 (\$2,000,000).

NOTE: Data are shown only for years for which Statistics of Income data are available

## Table 20. Federal Excise Taxes Reported to or Collected by the Internal Revenue Service, Alcohol and Tobacco Tax and Trade Bureau, and Customs Service, by Type of Excise Tax, Fiscal Years 2004-2010— Continued

## Footnotes

## N/A-Not applicable.

[1] Tax "liability" statistics also include "collections" of the use tax on heavy highway vehicles and of the "crude oil windfall profit tax." See also the "Notes" below.
[2] Represents aggregates for two or more specific taxes for which amounts have either been combined or are not available separately.
[3] As of June 2006, taxable tires have been divided into three taxable types: taxable tires other than Biasply or Super Single tires; taxable tires, Biasply, or Super Single tires (other than Super Single tires designed for steering); and taxable tires, Super Single tires designed for steering.
[4] This tax is in addition to the regular tax on gasoline.
[5] Data for this and certain other taxes are combined and included in the totals for excise taxes "unclassified," shown below in Table 20. Data for the specific taxes were not separately tabulated.
[6] Based on information obtained from Forms 990-PF as recorded by the Tax Exempt/Government Entities Returns Inventory and Control System (RICS). Excludes data from nonexempt charitable trusts and foreign private foundations that file Form 990-PF.
[7] Based on information obtained from Forms 4720 as recorded by the Tax Exempt/Government Entities Returns Inventory and Control System (RICS). Includes data for initial taxes on self-dealing, required distributions, excess business holdings, jeopardizing investments, and taxable expenditures as reported on Forms 4720 filed by organizations, other than nonexempt charitable trusts, that were also required to file Form 990-PF.
[8] Includes excise taxes collected through the Federal Tax Deposit (FTD) system, which the Internal Revenue Service had not yet classified by type of excise tax. Classification is based on returns filed in the quarter following tax payment. Negative amounts for "unclassified" taxes result from subsequent classification of the previously unclassified taxes. See also the "Notes," below.
[9] Tax "liability" statistics shown for the Customs Service/Alcohol and Tobacco Tax and Trade Bureau (TTB) include tax "collections" on imported items for which the Customs Service is responsible. See also the "Notes," below.
[10] Taxes shown for the different types of domestic tobacco products are before postfiling tax adjustments. Therefore, the statistics by type of tax for domestic tobacco products will not add to the total tax on domestic tobacco products, which is after these adjustments. For additional information, see the "Notes," below, under "Statistics on Excise Taxes Administered by the Alcohol and Tobacco Tax and Trade Bureau (TTB) and the Customs Service."

NOTES: Grand totals for taxes shown for the Internal Revenue Service (IRS), the Alcohol and Tobacco Tax and Trade Bureau (TTB) (formerly the Bureau of Alcohol, Tobacco, and Firearms [ATF]), and the Customs Service represent tax "collections." (Fees for the Harbor Maintenance tax treated as excise taxes under the Internal Revenue Code are also collected by the Customs Service, but are excluded from Table 20 for consistency with the excise tax definitions and totals published in the Federal Budget.) For the grand totals, collections rounded to millions of dollars are all that are available. In general, amounts shown are the gross amounts, i.e., before refunds. However, as explained below, refunds are sometimes claimed as a credit against the tax reported on the excise tax return of a subsequent quarter so that, to this extent, the data are after refunds. "Floor stocks taxes" are shown separately in Table 20 because they are nonrecurring. They are generally imposed on holders of inventories on the date a new excise tax is imposed or a tax rate increased. Total collections represent tax payments made during the indicated fiscal year (or quarter), either through: (a) the semimonthly tax deposits required of most taxpayers with significant excise tax liabilities using Federal Tax Deposit (FTD) coupons, in the case of taxes collected by IRS, or Electronic Funds Transfers (EFTs), in the case of taxes collected by TTB/Customs, or (b) payments attached to quarterly excise tax returns. Statistics for both the total for taxes administered by the IRS and the taxes by type of tax represent tax "collections" (see below). Also, statistics on the types of tax take into account the normal lag that exists between the time most taxes are collected (through FTDs, the means by which most excise taxes are collected) and the recording of tax liabilities by type of tax as reported on excise tax returns and "certified" by IRS, as described below. For additional information, see the notes to Table 21, Statistics of Income Bulletin, Fall 1998, Volume 18, Number 2, and also, "Federal Excise Taxes, Fiscal Years 1994 and 1995," Fall 1996, Volume 16, Number 2.
a. Statistics on excise taxes administered by the Internal Revenue Service: Corrections to the IRS data are reflected in the quarter(s) and year(s) in which the corrections were made, rather than in the data for the quarter(s) and year(s) in which the original tax liability arose (unlike the TTB /Customs data). The certified tax is net of refund credits reported on excise tax returns, not only for this reason, but for conformity with the Internal Revenue Code. As examples, tax can be offset for commodities exported that were previously taxed (exports are usually nontaxable), or for the sale of previously-taxed gasoline to a State or local government (or, in the case of TTB taxes, for alcohol used for a nonbeverage purpose). Other taxpayers apply directly for refunds and, for some of the taxes, are allowed to claim refunds by means of a credit against income tax. Because such refundable amounts were not reported on the excise tax return, they are not reflected in the Table 20 totals. (Other corrections to the IRS data for certain specific taxes are assumed to be due to misclassification and have been adjusted for as additions (or subtractions) to "Unclassified IRS taxes.")
b. Statistics on excise taxes administered by the Alcohol and Tobacco Tax and Trade Bureau (TTB) and the Customs Service: Excise taxes on alcoholic beverages and tobacco products are collected by both Customs Service (on imports) and TTB (on domestic production). Taxes on firearms and certain occupational taxes are also collected by TTB. So, TTB statistics represent tax "collections" on domestic alcohol and tobacco productions, as well as tax "collections" on firearms and certain occupations. By contrast, the tax statistics for the detailed types of taxes on domestic tobacco products are tax "liabilities." The grand totals for TTB and Customs Service tax "collections," as presented in Table 20, are residual amounts. They were derived by subtracting total IRS tax collections, which are available before most refunds, from the grand total of all excise tax gross collections reported in the Monthly Treasury Statement, rounded to millions of dollars, as shown at the beginning of Table 21. This subtraction is not precise because of definitional differences between IRS and TTB or Customs Service. In Table 20, TTB data have been rearranged so that tax liabilities are matched with tax collections in that same quarter. Previously, tax liabilities arising in a given quarter were not directly related to reported tax collections during that same quarter. Also, as previously noted, TTB amounts are often revised slightly as late returns are processed or postfiling adjustments are made to the tax. As a result, tax reported for prior periods is updated on a continuing basis, although the updated prior-year collections data are actually retabulated only for the one, most recent, prior year. Retabulated postfiling tax revisions for these earlier years are included for the first time in Table 21 of the spring 2002 issue of the Bulletin and affect previously published data for fiscal years, beginning with 1996.
However, as stated in footnote 11, above, postfiling revisions to the data for the immediately preceding fiscal year are not available for the detailed types of taxes on domestic tobacco products. Therefore, because revisions are available and are reflected in the total presented as the sum of these taxes, adding up the (unrevised) detail by type of tax will not yield the (revised) total. Detail may not add to totals because of rounding. All amounts are in current dollars. Tax law and tax form changes affect the year-to-year comparability of the data. SOURCE: U.S. Department of the Treasury, Financial Management Service, Monthly Treasury Statement of Receipts and Outlays of the United States Government; Alcohol and Tobacco Tax and Trade Bureau, Statistical Release: Alcohol, Tobacco and Firearms Tax Collections, quarterly (this release also includes data for the Customs Service), and previously unpublished special tabulations; Internal Revenue Service, Internal Revenue Service Data Book, and its predecessor, Annual Report, Commissioner and Chief Counsel, Internal Revenue Service; also Chief Financial Officer, Office of Finance, Revenue Accounting Division, Office of Revenue Systems, Internal Revenue Report of Excise Taxes. Also see Francis, Brian D., "Federal Excise Taxes, Including the Slow Death of Expired Taxes, Statistics of Income Bulletin, Summer 1999, Volume 19, Number 1. Also see Henry, Eric, "Excise Taxes and the Airport and Airway Trust Fund, 1970-2002," Statistics of Income Bulletin, Winter 2003-2004, Volume 23, Number 3. For additional information about the process used to match quarterly excise tax "collections" with excise tax "liabilities" as reported on quarterly excise tax returns, see the "Notes" to Table 20 in the Fall 1998 (Volume 18, Number 2) issue of the Statistics of Income Bulletin.

| Other | 53,100 | 54,300 | 49,800 | 49,000 | 45,600 | 41,900 |

[1] Form 1040 is the "long form," and Forms 1040A and 1040EZ are two "short forms." Form 1040PC, discontinued after 2000, was the equivalent of a "paper" Form 1040, 1040A, or 1040EZ return for which an IRS-approved computer software-generated compressed format was used. Schedule C is for reporting nonfarm sole proprietorship business profits, and Schedule $F$ is for reporting farm sole proprietorship business profits. The reported data for total Forms 1040, 1040A, 1040EZ, and 1040PC returns, as well as the totals for nonbusiness and business Form 1040 returns with Schedules C or F attached, are comprised of "paper" returns, plus "standard" electronically filed ("e-file") returns. Standard e-file returns are filed by authorized third parties, such as paid preparers and, approved "online" tax filing companies. For 1999 through 2005, the electronically filed totals also include returns filed by touch-tone telephone ("TeleFile"). IRS discontinued Telefile after 2005. The last category under individual income tax returns is comprised of 1040NR (nonresident alien); 1040PR (self-employment tax, Puerto Rico); and 1040SS (self-employment tax, U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands). Amended returns filed on Form 1040X are excluded.
[2] Form 1120 is the basic corporation income tax return. The short Form 1120A was discontinued in 2008, but returns have still been received through 2010. Form 1120 is for S corporations (certain qualifying corporations electing to be taxed through shareholders). "Other" includes Forms 1120-F (most foreign companies with U.S. income); Forms 1120-L (domestic and foreign life insurance companies). Forms 1120POL (certain political associations); Forms 1120-H (homeowners' associations); Forms1120-C (Cooperative Associations); Forms 1120-FSC (Foreign Sales Corporations, or FSCs); Forms 1120-REIT (Real Estate Investment Trusts); Forms 1120-RIC (Regulated Investment Companies); and Forms 1120-PC (Property and Casualty Insurance Companies). "Other" also includes Form 1120ND (for nuclear decommissioning trust funds and related persons). "Other" excludes Form 1120-DISC for Domestic International Sales Corporations, which were discontinued and mostly replaced by FSCs (see above); and Form 1120 IC-DISC for Interest-Charge Domestic International Sales Corporations (which was used by certain other DISCs after 1985). Amended returns filed on Form 1120X are excluded.
[3] Form 1041 is the regular income tax return filed for estates and trusts.
[4] Form 706 is the regular estate tax return; Form 706NA is for U.S. estates of nonresident aliens; Forms 706 GS(D) and 706 GS(T) are for estate tax returns for which the generationskipping transfer tax applies to distributions and to trust terminations, respectively

## Selected Historical and Other Data

Table 21. Selected Returns and Forms Filed or To Be Filed by Type During Specified Calendar Years, 1999-2010—Continued

## Footnotes-Continued

[5] Form 990 is for tax-exempt organizations, except private foundations (Form 990-PF). Form 990EZ is the short form. Form 990-T is the income tax return filed for businesses conducted by tax-exempt organizations. Form 990 C is for farmers' co-operatives. Form 4720 is for computing the special excise taxes applicable to certain private foundations, and Form 5227 is for split-interest trusts treated as private foundations.
[6] Form 940 is the annual unemployment (FUTA) tax return filed by employers; Form 940PR is used by employers in Puerto Rico; and Form 940EZ is a shorter version of Form 940. Form 941 is the employer's quarterly return for income tax withheld; Form 941PR is used by employers in Puerto Rico; and Form 941SS by employers in the U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands; Form 944 is the employer's annual return for income tax withheld (starting in Calendar Year 2007). Form 943 is filed to report income tax withheld by employers for agricultural employees. Form 943PR is used by employers in Puerto Rico. Form 943SS, for employers in the U.S. Virgin Islands, Guam, or American Samoa, was discontinued in 2002, but returns have still been received through 2009. "Other" includes Form 945 (annual tax withholding from nonpayroll distributions), and Form CT-1 (annual Railroad Retirement and Unemployment Tax Return).
[7] Form 720 is the IRS quarterly excise tax return. Form 2290 is the IRS return used to report heavy highway vehicle use tax. "Other" includes Form 730 (tax on wagering) and Form 11 C (occupational tax and registration return for wagering). (Excise tax returns exclude those now filed with the Alcohol and Tobacco Tax and Trade Bureau (TTB) and the Customs Service).
NOTES: Detail may not add to totals because of rounding. Tax law and tax form changes affect the year-to-year comparability of the data.

Table 22. Taxpayers Using Paid Preparers, Tax Years 2003-2008
[Figures are estimates based on samples-Number of returns are in thousands]

| Type of return | Tax year |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 |
|  | (1) | (2) | (3) | (4) | (5) | (6) |
| Returns with paid preparer signature: [1] All returns | 76,818 | 78,418 | 80,033 | 81,875 | 83,827 | 82,216 |
| Form 1040EZ [2] | 1,690 | 1,719 | 1,580 | 1,473 | 1,321 | 1,087 |
| Form 1040A [2] | 3,328 | 3,023 | 2,817 | 2,655 | 2,504 | 2,352 |
| Form 1040, total [2] | 71,800 | 73,675 | 75,636 | 77,747 | 80,002 | 78,777 |
| Form 1040 Business, total | 15,897 | 16,456 | 16,886 | 17,149 | 17,684 | 17,252 |
| Nonfarm | 14,169 | 14,701 | 15,138 | 15,438 | 15,958 | 15,566 |
| Farm | 1,728 | 1,754 | 1,748 | 1,711 | 1,726 | 1,686 |
| Form 1040 Nonbusiness, total | 55,903 | 57,219 | 58,750 | 60,598 | 62,318 | 61,525 |
| With itemized deductions | 21,425 | 22,539 | 23,259 | 23,768 | 24,293 | 22,981 |
| Without itemized deductions | 34,479 | 34,680 | 35,490 | 36,830 | 38,025 | 38,544 |
| Electronically-filed [2] | 40,910 | 45,865 | 50,345 | 54,272 | 58,184 | 59,707 |

[1] Number of returns with a paid preparer signature is based on the sample used for Statistics of Income-Individual Income Tax Returns.
[2] Data on electronically-filed returns are included in the counts of Form 1040 returns, shown above in Table 22a, for all years. Data are based on the full SOI samples of returns filed throughout the entire year. For 2006, Form 1040EZ includes 1040EZ-T returns.

## Table 23. U.S. Individual Income Tax: Personal Exemptions and Lowest and Highest Bracket Tax Rates, and Tax Base for Regular Tax, Tax Years 1913-2010-Continued

## Footnotes

N/A-Not applicable.
[1] Personal exemption amounts were deducted at different points in the tax computation, depending on the tax year. For some of the earlier years, they were deducted only from the statutory "net income" subject to the basic "normal tax," for other years, only from the "net income" subject to the "surtax," and, for still other years, from the "net income" subject to both normal tax and surtax. (Footnote 2, below, includes a description of "normal tax" and "surtax.") For more recent years, personal exemptions have been deducted in computing "taxable income," the current tax base for "regular" tax purposes.
[2] Tax rates shown in Table 23 are for the "regular" income tax, i.e., for "normal tax" and "surtax," applicable to U.S. citizens and residents. Therefore, the rates exclude provisions unique to nonresident aliens. Tax rates exclude the effect of tax credits (which reduce the tax liability), except as noted, and several specific add-on or other taxes applicable to all or some tax years. Excluded are the "war excess profits tax" (1917), "victory tax" (1942-1943), Social Security "self-employment tax" (starting with 1951), tax under the "income averaging" provisions (1964-1986) and under the farm income averaging provisions (starting with 1998), and the "recapture taxes" resulting from having to recompute and pay back certain tax credits in later years (starting with 1963), the "maximum tax" on "earned income" or on "personal service income" (1971-1981), the "minimum tax" on "tax preferences" (1970-1983), and the "alternative minimum tax" on "tax preferences" (starting with 1979). Also excluded are such other taxes as the tax on recipients of accumulation distributions of trusts (starting with 1954) and the "special averaging tax" or "multiple recipient special averaging tax" on recipients of lump-sum distributions from qualified retirement plans (starting with 1974). In addition, Table 23 excludes taxes associated with the preferential treatment of capital gains, starting with 1922 (although certain gains received preferential treatment as early as 1918). At various times, these treatments have taken the form of special tax rates; special definitions; different asset holding periods; ceilings on taxes; and exclusions from income. Included among these special treatments were "alternative tax" (1938-1986) and its variations for the earlier years, although all of these taxes were in some way tied to the structure for regular tax. Until 1948, a single set of tax rates applied to all taxpayers, regardless of marital or filing status, and married couples filing joint returns were taxed on the combined income of each spouse. However, a second, lower set of rates was introduced, starting with 1948, for married couples filing jointly. (To simplify the Table 23 presentation for these more recent years, only the lowest and highest tax rates for married persons filing jointly are shown.) Under this change, the combined tax of husband and wife became twice the combined tax that would have applied if their combined "taxable income" ("net income" for years before 1954) were cut in half. Thus, taxpayers using the joint return filing status "split" their incomes for tax purposes, in effect doubling the width of their taxable income (or net income) size "brackets." The lowest and highest tax rate brackets shown in columns 4 and 6 in Table 23 are, therefore, the brackets for married couples filing jointly that result from taking into account this doubling of the bracket widths. Starting with 1952, a third set of rates was introduced (not shown) for "heads of household," i.e., for unmarried individuals who paid over half the cost of maintaining a home for a qualifying person (e.g., a child or parent), or for certain married individuals who had lived apart from their spouses for the last 6 months of the tax year. This filing status was liberalized, starting with 1970, and provides approximately half the advantage of the income-splitting described above. Starting with 1954, the full benefits of income-splitting allowed married couples filing jointly (i.e., the same tax rates and taxable income brackets) were extended to a new, fourth filing status, "surviving spouse" (i.e., individuals widowed for 1 to 2 years following the death of a spouse, provided they had a dependent child and had not remarried). The remaining filing status was for "single persons," who used the rates formerly applicable to taxpayers in general. However, these latter rates were moderated, starting with 1969 , by limiting the tax so that it would not exceed 20 percent more than the tax on married couples filing jointly. One result of the 1969 law change was that certain married couples filing jointly had to pay more tax than they would have paid if each spouse had filed separately. To help mitigate this effect, a special deduction in computing adjusted gross income was allowed for 1982-1986 for two-earner couples filing jointly. This deduction was initially 5 percent of the lesser of $\$ 30,000$ or the "earned income" of the spouse with the lesser earnings. The percentage was increased to 10 percent, starting with 1983. The deduction provision was repealed, starting with 1987, when new, lower rates and a reduced number of tax brackets began. For tax years preceding 1954, the lowest tax rate, as shown in Table 23, was either the rate for the basic "normal tax" (if there was just one rate for normal tax) or the lowest of the several rates for "normal tax" (if there was more than one rate for normal tax). The highest tax rate was the sum of the uppermost of the graduated rates (if any) for normal tax, plus the uppermost of the additional, graduated "surtax" rates, provided that both rates were applied to the same income. For example, for 1932, there were two graduated rates for normal tax, 4 percent (on the first $\$ 4,000$ of income) and 8 percent (on all income over $\$ 4,000$ ), and graduated rates for "surtax" that ranged from 1 percent to 55 percent. In Table 23, the lowest rate for 1932 is, therefore, shown as 4 percent (the lower of the two normal tax rates) and the highest rate as 63 percent (the sum of the 8 -percent higher, graduated rate for normal tax on income over $\$ 4,000$, plus 55 percent, the highest of the graduated, surtax rates, on income over $\$ 1$ million.). As another example, for 1941, there was just one rate for normal tax, 4 percent, but it applied to all income. The lowest of the surtax rates, 6 percent, was applied to all income under $\$ 2,000$, so that income under $\$ 2,000$ was taxed at both the 4 -percent normal tax rate and the 6 -percent surtax rate. Therefore, the lowest rate shown in Table 23 for 1941 is 10 percent, the sum of these two tax rates. The highest rate is the sum of the 4 -percent normal tax on total statutory "net income," plus the highest graduated surtax rate, 77 percent on income over $\$ 5$ million, so that income over $\$ 5$ million was taxed at 81 percent, the sum of the two rates. For tax years starting with 1954 , normal tax and surtax rates were, in effect, combined into a single rate structure.
[3] The definition of the income base (and, thus, the tax "bracket" boundaries) to which the tax rates were applied differs over the years, depending on how the following were determined and figured: statutory adjustments to or exclusions from income; personal exemptions; itemized deduction expenditures, which were sometimes described as income "credits"; standard deductions; the various thresholds and ceilings; and statutory "taxable income" (and its predecessor "net income"). Therefore, the lowest and highest taxable income amounts, as shown in Table 23, are not comparable for all years, and the amounts described as for statutory taxable income for tax years preceding 1954 are actually for statutory net income. (Statutory net income was income after subtracting deductions but, for most years, was before subtracting personal exemptions. Statutory taxable income was after subtracting both deductions and personal exemptions. Taxable income is the tax base for recent years. Net income required certain adjustments to arrive at the tax base, depending on whether the income was subject to normal tax, surtax, or both). See also footnote 2, above.
[4] For 1921-1923, the personal exemption amount for married couples (column 2) decreased to $\$ 2,000$ if statutory "net income" exceeded $\$ 5,000$.
[5] For 1923, the tax rates shown (columns 4 and 6 ) are after a 25 -percent statutory credit or refund.
[6] For 1924, the lowest tax rate (column 4) is after reduction by an "earned income credit," equal to 25 percent of the "normal tax" on the first $\$ 5,000$ of total statutory "net income" and the normal tax on the first $\$ 10,000$ of "earned net income," but limited to 25 percent of the normal tax on total net income.
[7] For 1925-1927, the lowest tax rate (column 4) is after reduction by an "earned income credit" equal to 25 percent of the total tax on the first $\$ 5,000$ of total statutory "net income" and the total tax on the first $\$ 20,000$ of "earned net income," but limited to 25 percent of the total tax on earned net income (not to exceed 25 percent of the sum of "norma tax" on total net income plus the "surtax" on earned net income.)
[8] For 1928-1931, the lowest tax rate (column 4) is after reduction by an "earned income credit" equal to 25 percent of the total tax on the first $\$ 5,000$ of total statutory "net income" and the total tax on the first $\$ 30,000$ of "earned net income," but subject to the same limitations described in footnote 7 , above. For 1929 only, there was a special reduction in normal tax rates as provided for in a joint resolution of Congress.
[9] For 1934-1943, the tax rate (column 4) excludes the effect of an "earned income credit," allowed as a deduction equal to 10 percent of the first $\$ 14,000$ of "earned net income" (before credit) and the first $\$ 3,000$ of total statutory "net income" (before credit), but limited to 10 percent of earned net income (not to exceed 10 percent of total net income).
[10] For 1940, tax rates (columns 4 and 6) include "defense tax," computed as 10 percent of the total "regular" tax, but limited to 10 percent of statutory "net income" in excess of the total regular tax.
[11] For 1944-1945, the personal exemption amounts (columns 1-3) were for "surtax" purposes only. The exemption for basic "normal tax" purposes was $\$ 500$ per tax return, augmented by the "earned income" of the spouse, up to $\$ 500$, on joint returns.
[12] For 1944-1945, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 90 percent of statutory "net income."
[13] For 1946-1947, tax rates (columns 4 and 6 ) are the effective rates after a statutory 5 -percent reduction of combined "tentative normal tax and surtax." The highest rate (column 6) was subject to a maximum effective rate limitation equal to 85.5 percent of statutory "net income."
[14] For 1948-1986, in addition to the personal exemptions (columns 1-2), there were additional personal exemptions for blind taxpayer(s) and for taxpayers (s) age 65 or over.

## Table 23. U.S. Individual Income Tax: Personal Exemptions and Lowest and Highest Bracket Tax Rates, and Tax Base for Regular Tax, Tax Years 1913-2010—Continued

## Footnotes-Continued

[15] For 1948-1949, tax rates (columns 4 and 6) are the effective rates after statutory reductions ranging from 17.0 percent of the first $\$ 400$ of combined "tentative normal tax and surtax" to 9.75 percent of combined tentative normal tax and surtax over $\$ 100,000$. The highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 77.0 percent of statutory "net income."
[16] For 1950, tax rates (columns 4 and 6) are the effective rates after statutory reductions ranging from 13.0 percent of the first $\$ 400$ of combined "tentative normal tax and surtax" to 7.3 percent of combined tentative normal tax and surtax over $\$ 100,000$. The highest tax rate (column 6 ) was subject to a maximum effective rate limitation equal to 87.0 percent of statutory "net income."
[17] For 1951, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 87.2 percent of statutory "net income."
[18] For 1952-1953, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 88.0 percent of statutory "net income."
[19] For 1954-1963, the highest tax rate (column 6) was subject to a maximum effective rate limitation equal to 87.0 percent of statutory "taxable income."
[20] For 1968, the highest tax rate (column 6) includes a Vietnam War surcharge equal to 7.5 percent of tax (as defined for this purpose). However, this surcharge did not apply to "regular" tax generated at the lowest rate.
[21] For 1969, the highest tax rate (column 6) includes a Vietnam War surcharge equal to 10 percent of tax (as defined for this purpose). However, this surcharge did not apply to "regular" tax generated at the lowest rate.
[22] For 1970, the highest tax rate (column 6) includes a Vietnam War surcharge equal to 2.5 percent of tax (as defined for this purpose). However, this surcharge did not apply to "regular" tax generated at the lowest rate.
[23] For 1971, "earned net income" was subject to a "maximum tax" of 60 percent (not shown in column 6).
[24] For 1972-1981, "earned net income" (broadened to become "personal service net income" after 1976) was subject to a "maximum tax" of 50 percent (not shown in column 6).
[25] For 1974, tax rates (columns 4 and 6) do not take into account a statutory rebate of 10 percent of total income tax after credits. In general, the minimum rebate was $\$ 100$ and the maximum, $\$ 200$, but could not exceed the tax liability.
[26] For 1975, a \$30-per-capita tax credit was allowed in addition to the personal exemptions shown in columns 1-3.
[27] For 1976-1978, a tax credit was allowed, in addition to the personal exemptions shown in columns 1-3, that was equal to the larger of $\$ 35$ per capita or 2 percent of the first $\$ 9,000$ of statutory "taxable income."
[28] For 1977-1986, in order to help preserve the conceptual comparability of the amounts shown with those for earlier and later years, the lowest tax rates in column 4 and the lowest "taxable income" amounts in column 5 exclude the so-called "zero tax rate" and the "zero bracket amount," which were unique to the tax computation for these 10 years.
[29] For 1981, tax rates (columns 4 and 6) are after a 1.25-percent statutory tax credit.
[30] Starting with 1985, the personal exemption amounts (columns 1-3) reflect annual adjustments for inflation, using the U.S. Department of Labor Consumer Price Index for Urban Consumers ("CPS-U").
[31] Starting with 1985, tax "bracket" boundaries (columns 5 and 7) were indexed for inflation, using the U.S. Department of Labor Consumer Price Index (as described in footnote 30).
[32] Starting with 1988, the amount eligible to be deducted for personal exemptions (columns 1-3) was phased out for certain high-income taxpayers. For 1988-1990, this was accomplished as part of the tax computation (see footnote 34, below).
[33] For 1988-1990, excludes the effect on certain high-income taxpayers of the phaseout of the amount deductible for personal exemptions (columns 1-3).
[34] For 1988-1990, the tax rates (columns 4 and 6) exclude the effects on certain high-income taxpayers of the phaseout both of the benefit of the 15-percent tax rate (compared to the 28 -percent rate) and the amount deductible for personal exemptions. This phaseout was accomplished by imposing an additional, 5-percent tax on income above certain levels, based on filing status, thus creating a "temporary" 33-percent tax rate. At the point where the taxpayer had completely phased out the two benefits by use of the 33-percent rate, the tax rate on any remaining taxable income above the phaseout range returned to 28 percent (see also footnote 35). As Table 23 shows, beginning with 1991 , this phaseout was replaced by including an additional, 31-percent, graduated rate for taxable incomes above certain levels. Two other, higher, graduated rates were subsequently added, starting with 1993 , the higher of which is shown in Table 23.
[35] For 1988-1990, the 15-percent tax rate (column 4), which applied to the first \$29,750 of statutory "taxable income" (column 5 ), gradually increased to the top "brackets" rate, 28 percent (column 6), when taxable income (included in column 7) reached between $\$ 71,900$ and $\$ 149,250$. This was the range at which the 15 -percent rate was phased out for certain highincome taxpayers, all of whose incomes were then effectively taxed at the higher 28-percent rate through use of the "temporary" 33-percent rate (see footnote 34 , above, for additional information). The boundaries of the phaseout range were adjusted for inflation for 1989-1990, although the top tax rate on the taxable income above that covered by the phaseout range remained 28 percent. Therefore, the top taxable income and top tax bracket rate shown in Table 23 for 1988-1990 do not take into account the higher, 33-percent, "temporary" phaseout rate.
[36] For 2000, the tax rates (columns 4 and 6 ) do not reflect a special statutory refund, partially offset for 2001, of between $\$ 300$ and $\$ 600$, depending on the size of income tax for 2000 and filing status. See also footnote 37, below.
[37] For 2001, the tax rates (columns 4 and 6) do not reflect a 5 -percent tax credit of up to $\$ 300, \$ 500$, or $\$ 1,000$, depending on the filing status. This credit effectively reduced the lowest rate on the income shown in column 5 from 15 percent to 10 percent, in lieu of an explicit 10 -percent rate. However, the credit was reduced by the amount of the special statutory refund made in 2001 (based on tax for 2000), described in footnote 36, above. The 10-percent rate was only for dependents.
[38] For the change in the lowest tax "bracket" boundary (columns 5 and 7) for 2001, see footnotes 36 and 37, above.
[39] For 2006-2007, the phaseout of the personal exemption was reduced by one-third (to a minimum of $\$ 1,100$ per exemption for $2006, \$ 1,133$ for 2007).
[40] Starting with 2008, the phaseout of the personal exemption was reduced by two-thirds (to a minimum of $\$ 2,333$ per exemption in 2008 and $\$ 2,433$ per exemption in 2009).
[41] Starting with 2010, the phaseout of the personal exemption was eliminated.

|  | Over \$1,405,000 | [24] 40.00 |
| 1988-1992 [22, 23] | First \$50,000 | 15.00 |
|  | \$50,000-\$75,000 | 25.00 |
|  | \$75,000-\$100,000 | 34.00 |
|  | \$100,000-\$335,000 | [24] 39.00 |
|  | Over \$335,000 | 34.00 |
| 1993-2010 | First \$50,000 | 15.00 |
|  | \$50,000-\$75,000 | 25.00 |
|  | \$75,000-\$100,000 | 34.00 |
|  | \$100,000-\$335,000 | [24] 39.00 |
|  | \$335,000-\$10,000,000 | 34.00 |
|  | \$10,000,000-\$15,000,000 | 35.00 |
|  | \$15,000,000-\$18,333,333 | [24] 38.00 |
|  | Over \$18,333,333 | 35.00 |

[1] The rates shown are the "standard" or "ordinary" rates, applying to all taxable corporate net income unless otherwise provided. However, there have always been numerous exceptions and special rates based on the type of corporation, the type of income, and other factors. In addition, there have been, at various times, additional taxes related to income that increased the statutory rates. When possible, these are noted in other footnotes to this table for the years for which they were effective. Credits, deductions, and other alterations in the definition of taxable income also effectively alter the tax rate, but these are too numerous and too frequent to include in a table such as this. The most important types of corporations to which these rates have not always applied, or not applied as they did to other corporations, are: Section 501(c) and similar Nonprofit Corporations: Corporations not organized or operated for profit are generally exempt from the corporation income tax except, since 1950, on business income unrelated to their exempt purposes. Mutual and cooperative organizations: Most of these were treated as nonprofits in the early days of the income tax. Most have long since been made taxable as ordinary corporations, but there are still some exceptions. Credit unions and small mutual property insurance companies are exempt. Rural electrical and telephone cooperatives are exempt on income generated in transactions with their members. Farmers' cooperatives are not taxed on income distributed to their members. Insurance companies: Because of the nature of insurance, determining taxable income has often been a problem for the tax system. Insurance companies have been subjected to a number of different tax structures since 1921, including special rates and complete exemption of premium income. They are currently taxed at the same rates as other corporations on income calculated using reserve deductions (which other corporations are not allowed). Regulated Investment Companies (since 1936) and Real Estate Investment Trusts (since 1961): These investment companies are not taxed on profits distributed to shareholders if they distribute substantially all of their incomes annually. S Corporations: Since 1958, certain closely held corporations could elect to be taxed through their shareholders, as partnerships are, and not pay the corporate tax at all (except in special, unusual circumstances). Foreign corporations: Companies incorporated outside the U.S. are taxed on business income earned in the U.S. at the regular corporate rates, but may be taxed on investment income at special statutory or treaty rates. U.S. corporations with foreign-source income: The U.S. taxes the worldwide income of U.S. corporations; however, since 1918, taxes paid to foreign governments on foreign-source income can be credited against the U.S. tax otherwise due on that income. (Before 1918, the foreign taxes were allowed as a deduction against worldwide income.) U.S. Possessions Corporations: Since 1921, corporations earning most of their incomes in a U.S. possession were subject to reduced taxes. From 1921 to 1976 , they were taxable only on U.S.-source income; since 1976, they have received a credit for manufacturing income earned in a possession (including Puerto Rico). The credit was repealed after 2005. Affiliated groups: Corporations that are closely affiliated through stock ownership have usually been allowed to consolidate their financial statements for tax purposes and file one return for the group, but there have always been restrictions, and, sometimes, they have been charged an additional tax for the privilege. In 1932 and 1933 , consolidated returns were subject to an additional tax of 75 percent. In 1934 and 1935 , only railroad companies were allowed to file consolidated returns, and the additional tax was 1 percent. From 1936 to 1941, there was no additional tax, but the privilege was restricted to railroads and a few other companies. From 1942 to 1964, most domestic affiliated groups that met the stock ownership and other requirements could file consolidated returns, but the surtax on such a group was increased by 2 percentage points. The additional tax on consolidated returns was repealed, effective December 31, 1963. The most important type of income to have received special rates was "long-term" capital gains. From 1942 through 1987, the tax rate was capped at a maximum rate lower than the highest corporate rate. (The rates are noted in footnotes to the table.) Although there is currently no special rate for corporations' capital gains, long-term capital gains are still treated separately from other income in the Tax Code. During World War I, the Great Depression, World War II, and the Korean War, additional taxes were imposed on what were called "war profits" or "excess profits." These are noted in the table in footnotes to the applicable years. In addition to taxes based on net income, there have been from time to time taxes based on accumulated earnings that were not distributed to shareholders, designed to limit tax avoidance at the individual stockholder level. Taxes on "undue" accumulations have been imposed (though seldom paid) since the inception of the income tax. These were supplemented, since 1934, by a "personal holding company" tax, equal to the highest individual income tax rate, on the undistributed earnings of closely held companies accumulating investment income. There was also a Depression-era tax on accumulated earnings (noted below). In recent years, there have also been "minimum taxes" designed to supplement the regular taxes. These have the effect of a separate set of tax rates. These are noted in footnotes to the table.
[2] Calendar year unless otherwise noted. Taxpayers whose fiscal years spanned years with different rates were required to prorate the year's income between the two rate structures. Before 1933, the proration was based on the number of months in each year; after 1932, it was based on the number of days in each year.
[3] "Taxable income" is used here to mean the amount of income to which the rates shown were applied. The concept has had various names and various meanings over the years covered; so, brackets for one year are not necessarily comparable with those for another.
[4] An additional tax on "excess profits" and/or "war profits" was in effect from 1917 to 1922. It was allowed as a deduction in computing income tax.
[5] An additional "declared value" excess profits tax, based on profits in excess of a percentage of the value of corporate stock, was in effect from 1933 through 1945. It was a deduction for income tax purposes.
[6] An additional surtax ranging from 7 percent to 27 percent was imposed on undistributed profits.
[7] From June 1940 to the end of 1945, a tax on profits in excess of average prewar earnings was also imposed. It was taken into account, as either a deduction or a credit, for the income tax and the other excess profits tax.

## Table 24. U.S. Corporation Income Tax: Tax Brackets and Rates, 1909-2010 [1]—Continued

## Footnotes-Continued

[8] The rates for 1940 include extra "defense tax" rates that are integrated with the regular rates in later years.
[9] These rates are the sum of the "normal tax" rates and the "surtax" rates, which actually applied to slightly different definitions of taxable income.
[10] Beginning with Tax Year 1942, gains on the sale of assets held for more than 6 months (long-term capital gains) could be treated separately from other taxable income and taxed at a maximum rate of 25 percent.
[11] An excess profits tax was also in effect from July 1950 through Calendar Year 1953. The tax was 30 percent of an adjusted profits figure reduced by credits for the level of prewar profits. It was not offset against income tax, but the sum of income and excess profits taxes was capped at a given percentage of income (from 62 percent to 70 percent).
[12] These rates reflect a tax increase (for the Korean War), effective March 31, 1951. The maximum capital gain tax rate was also increased to 26 percent.
[13] From April 1, 1954, through Calendar Year 1969, the maximum tax rate on capital gains was 25 percent.
[14] From 1969 through 1986, corporations were also subject to an "add-on minimum tax" on certain "tax preference" items (such as percentage depletion, accelerated depreciation, etc.) above a certain amount. For Tax Years 1969 through 1976, the tax was 10 percent of tax preferences in excess of $\$ 30,000$; after 1976 , the tax was 15 percent of preferences in excess of the greater of $\$ 10,000$ or regular income tax.
[15] Rates include the Vietnam War surcharge of 10 percent.
[16] Includes a 2.5 -percent Vietnam War surcharge.
[17] The maximum tax rate on long-term capital gains was increased to 28 percent.
[18] The maximum tax rate on long-term capital gains was increased to 30 percent.
[19] The holding period for long-term capital gain treatment of assets was increased from 6 months to 9 months in 1977 and 12 months in 1978 . The rate remained at 30 percent.
[20] The maximum tax rate on long-term capital gains was 28 percent.
[21] Beginning in 1983, incorporated professional practices ("personal service corporations") have been taxed on all taxable income at the corporate tax rate applicable to the highest income bracket.
[22] The Tax Reform Act of 1986 (TRA86) established a new rate structure effective for Tax Year 1988 and made the rates for Transition Year 1987 an average of the pre-TRA rates for 1986 and the post-TRA rates for 1988.
[23] A new "alternative minimum tax" (AMT) replaced the add-on minimum tax, effective in 1987. It required a calculation of an alternative measure of taxable income that reduced or eliminated many tax preference items. The tax was 20 percent of the excess of this "alternative minimum taxable income" (AMTI) over $\$ 40,000$. The $\$ 40,000$ exemption was reduced by 25 percent of the excess of AMTI over $\$ 150,000$. AMT in excess of regular tax could be carried over as a credit against regular tax in future years. In 1998, "small" corporations (generally, those with average gross receipts of less than $\$ 5$ million) were exempted from the AMT.
[24] The maximum tax rate on capital gains was capped at 34 percent for 1987, which was to be the rate on the highest corporate tax bracket in 1988 and after, according to TRA86. The maximum capital gain rate was raised to 35 percent when the highest corporate rate bracket was increased in 1993.

# SOI Sampling Methodology and Data Limitations 

This article discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports. More technical information is available, on request, by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

## Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on such criteria as: industry, presence or absence of a tax form or schedule, and various income factors or other measures of economic size (such as total assets, total receipts, size of gift, and size of estate). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years- 3 for corporations because of the incidence of fiscal (noncalendar) year reporting and extensions of filing time. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from those planned. However, these factors do not compromise the validity of the estimates.

The probability of a return's selection depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated pro-
cessing costs or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the Social Security number (SSN) or the Employer Identification Number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TINs designated from one year's sample are, for the most part, selected for the next year's, so that a very high proportion of the returns selected in the current year's sample are from taxpayers whose previous years’ returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

## Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. "Weights" are computed by dividing the count of returns filed for a given stratum by the number of population sample returns for that same stratum. These weights are usually adjusted for unavailable returns, outliers, or trimming weights. Weights are used to adjust for the various sampling rates used, relative to the population - the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "poststrata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these poststrata using additional population counts. The data on each sample return in a stratum are then multiplied by that weight. To produce the tabulated estimates, the
Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

## SOI Sampling Methodology and Data Limitations

## In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.

weighted data are summed to produce the published statistical totals.

## Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different samples usually vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports, the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its CV to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68 -percent confidence interval estimate:

$$
\begin{aligned}
\text { 150,000 } & \text { (sample estimate) } \\
\times 0.02 & \text { (coefficient of variation) } \\
=3,000 & \text { (standard error of estimate) }
\end{aligned}
$$

then:

$$
\begin{aligned}
150,000 & \text { (sample estimate) } \\
+ \text { or }-3,000 & \text { (standard error) } \\
=\{147,000,153,000\} & \text { (68-percent confidence } \\
& \text { interval). }
\end{aligned}
$$

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible
samples similarly selected. To obtain this interval estimate with 95 -percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained, on request, by writing to the Director, Statistics of Income Division, at the address given above.

## Nonsampling Error Controls and Limitations

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors and inconsistencies, processing errors, and the effects of any early cutoff of sampling. Additional information on nonsampling error as it applies to individual and corporation income tax returns is presented in the separate SOI reports on these returns.

In transcribing and tabulating the information from returns or forms selected for the sample, steps are taken to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during the statistical abstracting and "editing" process that takes place in IRS submission processing centers. This is done to improve data consistency from return to return and to achieve definitions of the data items more in keeping with the needs of major users. In some cases, not all of the data are available from the tax return as originally filed. Sometimes, the missing data can be obtained by the Statistics of Income Division in Washington, DC, through field followup. More often, though, they are obtained through manual or computerized imputation. For this purpose, other information in the return or in accompanying schedules may be sufficient to serve as the basis for making an estimate. Prior-year data for the same taxpayer can be used for this same purpose, or comparable data from business reference books may be substituted.

Data abstracted or "edited" from returns for statistical use are subjected to a number of validation checks, including systematic verifications of a sampling of the work of each tax examiner involved in the SOI process. Data reported on sampled returns

## SOI Sampling Methodology and Data Limitations

and previously transcribed as part of processing for the IRS Master Files are subject to validation as part of the administrative process before SOI processing begins. However, during the administrative process, it is only practical to transcribe corrections to errors that have a direct bearing on the tax reported or the refund claimed. Therefore, during the SOI process, checks must also be made to correct any errors or inconsistencies left in the administrative data before the data can be accepted for the statistics.

The Statistics of Income program includes many more tax return items than are transcribed and perfected for IRS tax administration needs, especially for items reported in tax return schedules in support of the various summary totals reported on the return. Therefore, checks must also be designed to validate these additional data items and to assure that they are consistent with other data entries.

Most of the data validation checks made during the SOI process take the form of computerized tests of each record. In addition to verifying that internal consistency and proper balance and relationships among the tax return items and statistical classifications are maintained, this process is intended to check on consistency with tax law provisions, acceptable reporting practices, and generally accepted accounting principles. Most testing occurs during the data abstracting and editing operation, while the tax return source document is still on hand, although some testing for certain programs occurs later on. Records failing the tests are subjected to further review and correction.

Finally, before publication, the statistics are reviewed for accuracy and reasonableness in light of the tax law provisions, taxpayer reporting variations and other limitations, tolerances and statistical techniques allowed or employed in data processing and estimating, economic conditions, and comparability with other statistical series. However, these controls do not completely eliminate the possibility of error. When discovered, errors in Bulletin tables are corrected, through a published errata.

## Table Conventions

Published estimates subject to excessive sampling variability are identified for most of the statistics by means of an asterisk $\left(^{*}\right)$ presented alongside the estimate or in place of an estimate. Presence of an asterisk means that the sampling rate was less than 100 percent of the population and that there were fewer than 10 sample observations available for estimation purposes. This method produces a rough indication of excessive sampling variability. However, the results will differ somewhat from more precise indicators of excessive sampling variability based on the standard statistical formula. For some of the statistics based on samples, asterisking was not possible because of resource and other constraints. Users should keep this limitation in mind when using these data.

A zero, in place of a frequency or an amount, in any given table cell presenting data based on an SOI sample, indicates either that (1) there were no returns in the population with the particular characteristic, or (2) because of its rarity, instances of the characteristic were not present among the sampled returns. However, for statistics based on returns selected for the sample at the 100 -percent rate, a zero indicates a presumption of no returns with the particular characteristic in the population.

In addition to sampling variability, Statistics of Income is required to prevent disclosure of information about specific taxpayers or businesses in its tables. Therefore, a weighted frequency (and the associated amount, where applicable) of less than 3 is either combined with data in an adjacent cell(s) so as to meet the criteria, or deleted altogether. Similar steps are taken to prevent indirect disclosure through subtraction. However, any combined or deleted data are included in the appropriate totals. Most data on tax-exempt, nonprofit organizations are excluded from disclosure review because the Internal Revenue Code and regulations permit public access to most of the information reported by these organizations.

## SOI Projects, Contacts, and Public Release Information

## General Statistical Information: (202) 874-0410 Fax: (202)874-0964 e-mail: sis@irs.gov

|  |  |  | End of tax year | Close of filing period- |  | Close of sampling period | Planned release date for the final draft |
|  |  |  |  | Regular | With extensions of time |  |  |
| Foreign-Controlled Domestic Corporations: James Hobbs | This annual study covers domestic corporations with 50-percent-or-more stock ownership by a single foreign "person." It covers balance sheet, income statement, and tax-related data, which are classified by industry group, country, and size and age of the corporations. Data are compared to those for other domestic corporations. | 2009 | June 2010 | September 2010 | March 2011 | June 2011 | December 30, 2011 |
| Foreign Recipients of U.S. Income: <br> Scott Luttrell | This annual study provides data by country on income paid to nonresident aliens and the amount of tax withheld for the U.S. Government. | $\begin{aligned} & 2009 \\ & 2010 \end{aligned}$ | December 2009 <br> December 2010 | March 2010 <br> March 2011 | April 2010 <br> April 2011 | March 2011 <br> March 2012 | September 30, 2011 <br> September 30, 2012 |
| Foreign Trusts: Dan Holik | This periodic study, conducted every 4 years, provides data on foreign trusts that have U.S. "persons" as grantors, transferors, or beneficiaries. Data include country where the trust was created, value of transfer to the trust, and year the trust was created. The most recent study is for Tax Year 2006. | 2010 | December 2010 | April 2011 | October 2011 | March 2012 | December 2012 |
| Gift Tax: <br> Melissa Belvedere | This annual study provides data for type and amount of gift, information on donee, and tax computation items. Information about the donor and gift splitting is also available. The most recent available data are for Filing Year 2009. | 2010 | [3] | [3] | [3] | December 2010 | October 31, 2011 |
| Individual Foreign Tax <br> Study: <br> Scott Hollenbeck <br> Maureen Keenan Kahr | This periodic study is conducted every 5 years. It covers foreign income, foreign taxes paid, and foreign tax credit shown on individual income tax returns. Data are classified by size of adjusted gross income and country. | 2011 | December 2012 | April 2012 | October 2012 | December 2012 | March 31, 2014 |
| Individual Income Tax <br> Returns: <br> Maureen Keenan Kahr <br> Scott Hollenbeck <br> Mike Parisi | Basic data are produced annually and cover income, deductions, tax, and credits reported on individual income tax returns and associated schedules. Data are classified by size of adjusted gross income, marital status, or type of tax computation. | $\begin{aligned} & 2009 \\ & 2010 \end{aligned}$ | December 2009 <br> December 2010 | April 2010 <br> April 2011 | October 2010 <br> October 2011 | December 2010 <br> December 2011 | August 31, 2011 <br> August 31, 2012 |
| Interest-Charge Domestic International Sales Corporations: Dan Holik | These corporations replaced the Domestic International Sales Corporations, or DISCs, as of 1985. Balance sheet, income statement, and exportrelated data are tabulated every 2 years. The most recent study is for Tax Year 2006. | 2010 | June 2011 | September 2011 | March 2012 | June 2012 | February 28, 2013 |

## SOI Products and Services

statistics of Income (SOI) data are available in electronic formats and in print. For further information on any of the following products and services, or for answers to questions on the availability of SOI data, other statistical services, or release dates for data, contact SOI's
Statistical Information Services (SIS):

Statistical Information Services (sis@irs.gov) Statistics of Income Division Internal Revenue Service<br>P.O. Box 2608 • Washington, DC 20013-2608 (202) 874-0410 • Fax: (202) 874-0964

As its name implies, SIS is best able to answer questions about data. It does not supply tax forms or information about the status of an individual's tax refund or audit examination. Media requests should be directed to the IRS Media Relations Branch, Communications Division, on (202) 622-4000.

## Free Products on the Internet

SOI's Internet site offers a combination of files presenting SOI tables, articles about SOI data, and information about SOI products and services, as well as non-SOI products, including Compliance Research projections and nonprofit Master File microdata records. At present, almost 12,000 files reside there.

Web site: www.irs.gov/taxstats

There is also a direct link to our Web site from FedStats, the gateway to official statistics from the Federal Government: www.fedstats.gov.

## Tax Stats

On the Tax Stats Home Page, you will find the following list of topics that will lead to a wide range of tables, articles, and data that describe and measure elements of the U.S. tax system. There is also a link to check out What's New.

Questions On Tax Statistics?

## Products for Sale From SOI

Many of SOI's data files are available for sale on CD-ROM or via e-mail through Statistical Information Services. Prepayment is required for orders of $\mathbf{\$ 1 0 0}$ or more, with checks made payable to the IRS Accounting Section. Credit and debit card payments are also accepted. Contact SIS for information on specific products, prices, sources, media, and ordering instructions.

The following files are currently available on a reimbursable basis and include data from returns for corporations, individuals, exempt organizations, and private foundations and charitable trusts. Most of these files are tabulations of aggregated data, but some are files of microdata records.

## Corporation Income Tax Returns

## Corporation Source Book

CD-ROMs containing data from the Corporation Source Book are available for Tax Years 1996-2003 at a cost of $\$ 250$ per year. Data from the 2004 through 2008 Corporation Source Books are available at no charge from the Tax Stats Web site. Data tables from the 2000 through 2008 Source Books are also available at no charge from the Tax Stats Web site at: www.irs.gov/taxstats/bustaxstats/article/0,,id=149687,00.html.

## Individual Income Tax Returns

## Individual Public-Use Microdata Files

These files include individual income tax returns for Tax Years 1960, 1962, 1964, and 1966-2006. All of the files have been edited to protect the confidentiality of individual taxpayers. Public-use files of individual income tax returns for 1960, 1962, 1964, and 1966-1991 are available for sale by writing to the Center for Electronic Records at the National Archives and Records Administration, 8601 Adelphi Road, College Park, MD 20740-6001, or by calling toll-free (866) 272-6272. Files for 1992 through 2006 are available on CD-ROM from the SOI Division. Price for the SOI microdata files is $\$ 4,000$ per year.

## County-to-County Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by county for the entire United States, including inflows and outflows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1991-2008. Price is \$200 per year for the entire United States or $\$ 10$ per State per year for Filing Years 1991-2004. All years for the entire United States are also available for $\$ 500$. Filing Years 2005-2008 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data."

## State-to-State Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by State for the entire United States, including inflows and outflows, and include the number of returns (which approximates the number of households); the
number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1989-2008. Price is $\$ 50$ per year for the entire United States or $\$ 10$ per State per year for Filing Years 1989-2004. Filing Years 2005-2008 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data."

## County Income Data

One table, based on the population of returns from the IRS Individual Master File system. This table presents data for adjusted gross income (total and for selected sources), number of returns (which approximates the number of households), and number of personal exemptions (which approximates the population). The data are presented by county (including State totals) and are available for Tax Years 1989-2007 for the entire United States. Price is $\$ 50$ per year for the entire United States or $\$ 10$ per State per year for Filing Years 1989-2003. Filing Years 2005-2008 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data."

## ZIP Code Area Data

Statistics are available for Tax Years 2002 and 2004-2007 on CD-ROM showing the number of individual income tax returns; the total number of exemptions and number of dependent exemptions (which approximates population); adjusted gross income; salaries and wages; taxable interest; total tax; contributions; number of returns with Schedules C and F; and number of returns with Schedule A, by State and 5-digit ZIP Code. In addition to these items, data for Tax Year 2004-2007 also show the amount of taxable dividends; net capital gain/loss; IRA payment adjustment; self-employed pension adjustment; taxes paid deduction; alternative minimum tax; income tax before credits; earned income credit; and number of returns prepared by paid preparers. Price is $\$ 500$ for the entire United States; \$25 for a single State. Data for Tax Years 1998 and 2001 are available free on SOI's Internet site. Go to www.irs.gov, select the Tax Stats option; Individual Tax Statistics; Individual Income Tax; Zip Code Data (SOI) under Data by Geographic Areas.

## Tax-Exempt Organizations

## Compendium of Studies of Tax-Exempt Organizations, 1989-1998

This is a compilation of articles on SOI studies of charitable and other nonprofit organizations described in Internal

## SOI Products and Services

Revenue Code sections 501(c)(3)-(c)(9), private foundations, charitable remainder trusts, and nonprofit organizations' unrelated business income. All of these articles were published previously in various issues of the Statistics of Income Bulletin. In addition, the Compendium includes papers on statistical sampling of tax-exempt organization returns, and other topics relating to tax-exempt organizations and philanthropy that were authored by IRS staff and others who use SOI study data for research. Available at no charge on CD-ROM.

## Microdata Records for Tax Year 2007

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 16,042 Internal Revenue Code section 501(c)(3) organizations and 6,555 section 501(c) (4)-(9) organizations. All returns for organizations with assets of $\$ 50,000,000$ or more are included in the sample. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI’s Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/0,,id=97176,00.html, or may be purchased on CD-ROM for $\$ 20$.

## Microdata Records for Tax Years 1992-2006

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/0,,id=97176,00.html, or may be purchased on CD-ROM for $\$ 20$.

## Private Foundations (and Charitable Trusts)

## Microdata Records for Tax Year 2007

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes 12,776 returns. (All returns filed by foundations with assets of $\$ 10$ million or more, as well as the population of returns filed by nonexempt charitable trusts, are included in the sample.) Microdata records contain information on revenue, expenses,
assets, and distributions, as well as weights, for each foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article/0,id=96996,00.hmtl, or may be purchased for $\$ 20$.

## Microdata Records for Tax Years 1992-2006

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article/0,,id=96996,00.html, or may be purchased for $\$ 20$.

## Publications

Statistics of Income-2008, Corporation Source Book
Publication 1053, Price: \$175, plus $\$ 10$ for shipping and handling

This document presents detailed income statement, balance sheet, tax, and selected items, by sector, major and minor industrial groups, and size of total assets for all returns and separately for returns with net income. Separate statistics on S corporations are included by sector. Industry detail is based on the North American Industry Classification System (NAICS). The report, which underlies the Statistics of Income-Corporation Income Tax Returns publication, is part of an annual series and can be purchased in its entirety or by page. Corporation Source Book industry pages and notes for 1963 through the present are available at a cost of $\$ 30$, plus $\$ 1$ per page copying charge (free for orders under 5 pages). The complete, printed version of the Source Book for selected prior years, 1984-2008, is also for sale at $\$ 175$ per year, plus $\$ 10$ for shipping and handling.

## Compendium of Federal Estate Tax and Personal Wealth Studies <br> Publication 1773, Price: \$26, <br> plus $\$ 10$ for shipping and handling

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composi-
tion of their estates. It contains a methodological discussion of the strategy used in weighting sample data for the estate studies and presents statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estatemultiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years 1962-1989, and a discussion of the relationship among realized income, wealth, and well-being.

A Quarterly Statistics of Income Report

Volume 31, Number 1

The Statistics of Income (SOI) Bulletin is issued quarterly by the Statistics of Income Division of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers, and tax administrators. Selected historical and other data tables, previously published in every issue of the SOI Bulletin, now are published only in the spring issue of the Bulletin. These tables are also available on SOI's pages of the IRS Web site (www.irs.gov/taxstats).

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephoning the SOI's Statistical Information Services (202-8740410), or by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

The SOI Bulletin is prepared under the direction of Paul Arnsberger, Acting Chief, Communications and Data Dissemination Section. Paul Bastuscheck (layout and graphics), Martha Gangi (writer/editor), Clay Moulton (layout and graphics), Lisa Smith (layout and graphics editor), and Camille Swick (layout and graphics) are the editorial staff who prepare the manuscript. Jim Hobbs, Emily Gross, and Beth Kilss also made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

## Inside this Issue

## Sole Proprietorship Returns, 2009

by Jason Paninos and Scott Hollenbeck For Tax Year 2009, nearly 22.7 million individual income tax returns reported nonfarm sole proprietorship activity, a 0.2 -percent increase from 2008. Between Tax Years 2008 and 2009, reported profits for those sole proprietorships declined by 7.4 percent to $\$ 244.8$ billion. In constant dollars, reported profits decreased for the fourth consecutive year, by 8.3 percent, after decreasing 7.7 percent between 2007 and 2008, 2.0 percent between 2006 and 2007, and 0.2 percent between 2005 and 2006. This was the first time that profits (in constant dollars) have decreased for 4 consecutive years since before 1988 .

The professional, scientific, and technical services sector, reporting $\$ 67.2$ billion in profits, accounted for 27.5 percent of total profits for all nonfarm sole proprietorship industries. This was the largest percentage of total profits of any sector despite its 9.5 -percent decrease in profits between 2008 and 2009. The largest sole proprietorship industrial sector, based on business receipts, was retail trade, which accounted for 15.2 percent of total business receipts despite reporting a 9 -percent decrease between Tax Years 2008 and 2009. The other services sector showed the largest percentage increase in receipts, at 1 percent, while also experiencing the smallest percentage decrease in deductions after reporting a 0.2 -percent decline between 2008 and 2009. The largest dollar decrease, as well as the largest percent decrease in total profits, from 2008 to 2009 was reported by the finance and insurance sector after dropping by almost 60 percent from $\$ 18$ billion to $\$ 10.3$ billion.

## Foreign-Controlled Domestic Corporations, 2008

by James R. Hobbs
Foreign-controlled domestic corporations (FCDCs) accounted for only 1.1 percent of all U.S. corporation income tax returns filed for Tax Year 2008. However, they accounted for 15.3 percent of receipts and 14.2 percent of assets reported on all corporate returns filed for that tax year. FCDCs reported $\$ 4.4$ trillion of total receipts for 2008. Manufacturers produced $\$ 2$ trillion of receipts, wholesalers accounted for $\$ 1$ trillion, and finance and insurance companies tallied $\$ 0.5$ trillion.

Domestic corporations controlled by "persons" (including individuals, corporations, partnerships, estates, and trusts) in the United Kingdom reported total receipts of $\$ 1.1$ trillion, 24.1 percent of the FCDC total. Domestic corporations with owners resident in Japan (13.4 percent of the total), Germany ( 9.9 percent), Canada ( 9.1 percent), France ( 6.8 percent), the Netherlands ( 6.7 percent), and Switzerland (6.2 percent) also accounted for significant amounts of receipts.

Of the 66,797 foreign-controlled domestic corporations, the 4,400 largest companies accounted for most of the total amounts of key financial items (e.g., 95.2 percent of total receipts and 94.6 percent of total assets). Each of these large companies had at least $\$ 250$ million of assets or at least $\$ 50$ million of receipts.

All FCDCs reported combined profits (i.e., net income less deficit) of $\$ 21.8$ billion for 2008, an 85.7-percent decrease from the amount for the prior year. Less than one out of every two ( 42.5 percent) FCDCs reported positive profits (i.e., net income), totaling $\$ 172.9$ billion. The profitable companies also reported $\$ 140.2$ billion of taxable income. The originally reported U.S. tax liability of FCDCs was $\$ 38.2$ billion for 2008.

## Interest-Charge Domestic International Sales Corporations, Tax Year 2008

by Daniel S. Holik

There were 1,917 active Interest-Charge International Sales Corporation (IC-DISC) returns filed for Tax Year 2008. IC-DISC export gross receipts, one measure of overall IC-DISC export activity, increased by 89 percent from $\$ 19,286$ million for Tax Year 2006 to $\$ 36,528$ million for Tax Year 2008. Net income (less deficit) rose from $\$ 1,731$ million for Tax Year 2006 to $\$ 3,168$ for Tax Year 2008. Actual distributions to IC-DISC shareholders increased 67 percent, from \$1,805 million for Tax Year 2006 to $\$ 3,013$ million for Tax Year 2008.

## Corporate Foreign Tax Credit, 2007

by Scott Luttrell
For 2007, 6,675 corporations claimed a total foreign tax credit of $\$ 86.5$ billion against their U.S. income tax liability. These corporations reported income subject to U.S. tax of $\$ 833.9$ billion, including

## Inside this Issue

Statistics of Income Bulletin | Summer 2011
$\$ 392.5$ billion in foreign-source income on which they paid current-year foreign taxes of $\$ 99.1$ billion. Foreign tax credits plus other credits enabled these corporations to reduce their U.S. income tax from $\$ 292.3$ billion to $\$ 192.8$ billion.

As in past years, corporations classified as manufacturers earned the most foreign-source taxable income, paid the most current-year foreign taxes, and claimed the largest amount of foreign tax credit in 2007. Within the manufacturing category, corporations classified as petroleum and coal products manufacturers accounted for nearly one-third of the total foreign tax credit. Services corporations had the second largest percentage of the total foreign tax credit during 2007, followed by the finance, insurance, real estate, and rental and leasing sector.

Among geographic regions, countries located in Europe tallied the largest shares of foreign-source taxable income, current-year foreign taxes paid or accrued, and current-year tax deemed paid. For corporations claiming foreign tax credits in 2007, those in the United Kingdom (U.K.) had the largest amounts of income and taxes among specific countries. Corporations in the U.K., along with Japan, Canada, the Netherlands, and Ireland, combined to account for more than 35 percent of foreign-source taxable income.

## Federal Estate Tax Returns Filed For 2007 Decedents

## by Brian Raub and Joseph Newcomb

An estimated 36,706 individuals died in 2007 with total gross estates of $\$ 2$ million or more, the threshold for filing the estate tax return, Form 706. These decedents reported a combined $\$ 224.8$ billion in total gross estate, with publicly traded stock, investment real estate, and tax-exempt bonds accounting for the largest shares of their combined portfolio.

Bequests to a surviving spouse and bequests to charity made up most of the deductions claimed against total gross estate. The returns of nearly all
married decedents included a spousal bequest deduction. About 1 in 5 of all returns included a deduction for charitable bequests. Compared to other decedents, a higher percentage of decedents with the largest estates made charitable bequests, and these decedents left, on average, a larger share of total gross estate to charity.

Just less than half of all estate tax returns filed for 2007 decedents included a net estate tax liability, but the taxability of returns varied significantly by marital status and size of gross estate. Most estate tax returns filed for unmarried (mostly widowed) decedents had a net estate tax liability, including 93.5 percent of returns filed for unmarried decedents with $\$ 20$ million or more in gross estate.

## In the Next Issue

Articles on the following topics are tentatively planned for inclusion in the fall 2011 issue of the Statistics of Income Bulletin, scheduled to be published in November 2011:
$\square$ Individual income tax returns, Tax Year 2009;

- Partnership returns, Tax Year 2009;
- Fiduciary income tax returns, Tax Years 2002-2006;
- Charities and other tax-exempt organizations, Tax Year 2008;
- Tax-exempt government and private activity bonds, Tax Year 2009;
- Historical perspective on electronically filed returns;
- Income and taxes reported on information returns; and
- Personal wealth, 2007.

# Sole Proprietorship Returns, 2009 

by Jason Paninos and Scott Hollenbeck

For Tax Year 2009, there were approximately 22.7 million individual income tax returns that reported nonfarm sole proprietorship activity, a 0.2 -percent increase from 2008. Profits reported on these returns fell to $\$ 244.8$ billion in 2009, a $7.4-$ percent decline from 2008. In constant dollars, total nonfarm sole proprietorship profits decreased by 8.3 percent in 2009, continuing a 4 -year trend that started with a 0.2 -percent decrease in inflation-adjusted profits in 2006, followed by a 2.0 -percent decline in 2007, and 7.7-percent fall in 2008. The steepest decline in profits was experienced by the finance and insurance sector, falling 42.5 percent and losing $\$ 7.7$ billion in 2009. This was the second year in a row that this sector experienced a double-digit decrease, as its reported profits fell 10.8 percent in 2008, as well. ${ }^{1}$ There were three nonfarm sole proprietorship industries that experienced modest increases in profits for 2009. The greatest rise in profits was reported by the other services sector. This sector, which is principally composed of auto repair, laundry services, and other miscellaneous services, saw increases of approximately $\$ 2.6$ billion. This sector also reported the greatest percentage increase in profits, 14.1 percent, going from $\$ 18.1$ billion for 2008 to $\$ 20.7$ billion for 2009. The professional, scientific, and technical services sector accounted for 27.5 percent of total profits for all nonfarm sole proprietorship industries, the largest by any sector, despite experiencing a 9.5 -percent decline in profits in 2009. Reporting the second largest profits of any sector was the health care and social assistance sector, with 19.8 percent of total profits, at $\$ 48.4$ billion.

> Jason Paninos and Scott Hollenbeck are economists with the Individual Research Section. This article was prepared under the direction of Mike Strudler, Chief.

In addition to reporting the largest percentage decrease in profits, the finance and insurance sector also reported the largest percentage decrease in receipts, dropping from $\$ 112.3$ billion in 2008 to $\$ 90.9$ billion in 2009, a 19.1 -percent decrease. For sole proprietorships as a whole, receipts decreased 10.6 percent, while deductions decreased 11.3 percent. Among all industrial sectors, the construction sector experienced the greatest downturn in receipts, losing $\$ 34$ billion, or 16.4 percent. The retail trade sector reported the largest percentage of total business receipts, with 15.2 percent, while also having the largest percentage of total business deductions, with 18.3 percent. The retail trade sector was the largest in these two categories despite reporting a 9 -percent decrease in receipts and a 9.5 -percent decrease in deductions. The other services sector reported the largest increase in receipts, with a 1-percent increase in business receipts. The only other sector to report an increase in receipts was the health care and social assistance sector, with a 0.6 -percent increase. This sector also reported the smallest decrease in deductions, with a 0.2 -percent decline.

## Returns and Receipts

The number of individual income tax returns reporting nonfarm sole proprietorship activity for 2009 increased 0.2 percent to just under 22.7 million (Figure A). ${ }^{2}$ The largest sector in terms of number of returns was the professional, scientific, and technical services sector. The number of returns in this sector decreased for the second straight year to just under 3.2 million returns, a reduction of 0.8 percent. The second largest sector, the construction sector, had a 4.5 -percent decrease in number of returns from slightly more than 2.8 million to just under 2.7 million. The overall increase in number of returns was

| All other sectors | 2,944.3 | 2,670.5 | -9.3 | 141.9 | 121.3 | -14.5 | 125.6 | 109.3 | -13.0 |

[1] Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from prior years.
NOTES: Detail may not add to totals because of rounding. Percentage increases were calculated before rounding
primarily due to the increase in the other services sector, which, as stated above, includes personal and laundry services, as well as automotive and other repair services. This sector increased by 13.1 percent to roughly 2.7 million returns.

Total business receipts (the sum of "income from sales and operations" and "other business income") for all nonfarm sole proprietorship industries showed the biggest decrease reported, since at least 1980, dropping 10.6 percent, from $\$ 1,317.4$ billion to $\$ 1,178.4$ billion. ${ }^{3}$ The retail sector was the largest sector in terms of business receipts and accounted for 15.2 percent of total business receipts in 2009. Its receipts decreased by 9 percent, following a 1 -percent decrease in 2008. For the first time since 2003, the construction sector was not the largest sector in terms of total business receipts. In 2009, the construction sector saw its third consecutive year of decline,
dropping 16.4 percent from $\$ 206.7$ billion to $\$ 172.7$ billion. This 16.4 -percent decrease in total business receipts was the steepest drop in 3 years of decreases; total business receipts decreased by 10.5 percent in 2008 and 2.4 percent in 2007. The only two industries that showed increases in business receipts were the health care and social assistance sector and the other services sector. They grew by 0.6 percent and 1 percent, respectively, resulting in a total increase of $\$ 1.5$ billion in business receipts. For all sectors, total business receipts for nonfarm sole proprietorships decreased by $\$ 139$ billion. The construction sector accounted for $\$ 34$ billion of the decrease in business receipts, or nearly one quarter of the aggregate decline. The finance and insurance sector experienced the second largest overall decrease in total business receipts, a $\$ 21.4$-billion decline from 2008. This sector had the largest percentage drop in total business

[^283]receipts in 2009, 19.1 percent, following the largest percentage increase in 2008, 19.5 percent. In constant dollar terms, total business receipts for 2009 decreased 11.4 percent (Figure B). ${ }^{4}$ This is the largest percentage decrease since at least 1989, and it is almost twice as large as the 5.8 -percent decrease experienced in 1991; the second largest percentage decrease reported.

## Deductions

Total business deductions ("cost of sales and operations" plus business expenses, including expenses for home office) in current dollars decreased 11.3 percent from $\$ 1,053.7$ billion in 2008 to $\$ 934.5$ billion in 2009 (Figure A). ${ }^{5,6}$ In 2009, there were no industries that reported a percentage increase in total business deductions. The largest sector in terms

[1] Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from prior years. However, these losses (after subtraction) and any carryover are reflected in net income less deficit. Therefore, total business receipts minus total business deductions may not always equal net income less deficit. [2] Constant dollars are based on the overall implicit price deflator for gross domestic product computed and reported by the U.S. Department of Commerce, Bureau of Economic
Analysis, in the Survey of Current Business. The deflator represents the annual average of current-weighted prices, based on $2005=100$.
[3] Not calculated.
[4] Less than 0.05 percent.
NOTE: Percentage increases were calculated before rounding.
${ }^{4}$ Based on the overall implicit price deflator for Gross Domestic Product (GDP). See U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business. Indices used for this article were:

[^284]Sole Proprietorship Returns, 2009

Statistics of Income Bulletin | Summer 2011

of total business deductions, the retail trade sector, reported a 9.5 -percent decrease in deductions, dropping to $\$ 170.9$ billion. The second largest sector, the construction sector, reported a decrease in deductions of 17.9 percent, down to $\$ 145.8$ billion. This represented the largest percentage decrease by any sector in 2009. When accounting for inflation, total business deductions decreased 12.1 percent in 2009, by far the biggest decrease since at least 1980 .

The cost of sales and operations, which represented 39.2 percent of total 2009 business deductions,
decreased 15.7 percent from the 2008 level to approximately $\$ 366.4$ billion (Figure C). Total business "expenses" (total business deductions minus the cost of sales and operations) were $\$ 568.1$ billion for 2009, an 8.2 -percent decrease from the 2008 amount. The main components of total business expenses are highlighted in Figure D. The two largest components were car and truck expenses and salaries and wages, both reported a little more than $\$ 75$ billion; each accounting for 13.2 percent of the total. The car and truck expenses decreased by 11.8 per-

[1] Total business deductions are before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years.
[2] Depreciation claimed on Form 8829, Expenses for Business Use of Your Home, is included in "home office business deductions" and excluded from "depreciation" shown above NOTES: Detail may not add to totals because of rounding. Percentage increases were calculated before rounding.

## Figure D

Nonfarm Sole Proprietorship Business Expenses, Tax Year 2009 [1]

1] Total business expenses equal all business deductions minus cost of sales and operations.
[2] Depreciation claimed on Form 8829, Expenses for Business Use of Your Home, is included in "home office business deductions" and excluded from "depreciation" shown above. See footnote 3 below
[3] Includes depletion; employee benefit programs; legal and professional services; pension and profit-sharing plans; meals and entertainment; home office; and other business deductions. Other business deductions also includes all Schedule C-EZ, Net Profit from Business, deductions (\$3.7 billion). NOTES: Percentages are based on an estimated total business expense of $\$ 568.1$ billion. Detail may not add to 100 percent because of rounding.
cent from roughly $\$ 85.1$ billion, while salaries and wages decreased 5.2 percent from the 2008 amount of $\$ 79.1$ billion. The next largest components of business expenses in regard to deductions were rent paid on business property, machinery, and equipment ( 7.2 percent of total business expenses), and depreciation ( 6.1 percent). For 2009, rent of business property, machinery, and equipment expenses decreased 5.6 percent from $\$ 43.5$ billion down to $\$ 41.1$ billion, while depreciation expenses fell 16.6 percent to $\$ 34.5$ billion. The only business expense that increased for 2009 was the meals and entertainment deduction, which rose 2.2 percent. Salaries and wages showed the largest net increase in share of
business expenses, at 0.4 percentage points, up from 12.8 percent in 2008. Depreciation showed the largest net decrease in share of business expenses, at 6.1 percent, 0.6 percentage points down from 6.7 percent in 2008. Car and truck expenses showed the second largest net decrease in share, seeing the share drop from 13.7 percent in 2008 to 13.2 percent in 2009.

Historically, constant dollar depreciation increased almost every year from 1993 through 2003 and then declined every year from 2003 until 2009, except for 2008 (Figure E). ${ }^{7}$ The increases in 2003 and 2008 coincided with legislative changes to section 179 of the Internal Revenue Code that substantially increased the amount of certain investment

[1] Constant dollars are based on the overall implicit price deflator for gross domestic product computed and reported by the U.S. Department of Commerce, Bureau of Economic
Analysis, in the Survey of Current Business. The deflator represents the annual average of current-weighted prices, based on $2005=100$.
[2] Excludes depreciation claimed on Form 8829, Expenses for Business Use of Your Home.
[3] Not calculated.
[4] Less than 0.05 percent.
NOTE: Percentage increases were calculated before rounding
property that could be expensed in a given year (rather than depreciated over time). In 2003, under the Jobs and Growth Tax Relief Reconciliation Act of 2003, the maximum allowable section 179 deduction vaulted from $\$ 24,000$ in 2002 to $\$ 100,000$ in 2003. The change led to constant dollar depreciation increasing by 11.6 percent for 2003, which was the highest growth in depreciation of any year between 1988 and 2009. But the initial jump in depreciation was followed in subsequent years by trends of decreased depreciation. From 2004 through 2007, constant dollar declines of depreciation were witnessed for all 4 years. In 2004, constant dollar depreciation
deductions decreased by 0.1 percent, marking the first drop in 9 years. This downward trend was even more evident in 2005, as constant dollar depreciation fell by 11.8 percent, followed by decreases of 3.3 percent and 1.3 percent in 2006 and 2007, respectively. During this same 4 -year period, section 179 limits gradually increased for inflation, finally rising to $\$ 125,000$ in $2007 .{ }^{8}$ In 2008, the section 179 limit was doubled to $\$ 250,000$, which contributed to a reversal in the previous downward trend in depreciation and helped to account for a 2.3-percent increase in constant dollar depreciation. The $\$ 250,000$ limit remained constant for 2009, and depreciation

[^286]dropped by 17.4 percent, the largest decrease since at least 1988. ${ }^{9}$

Beginning with Tax Year 1992, certain smaller businesses could elect not to itemize depreciation and other business deductions by filing the Schedule C-EZ, Net Profit from Business, a simplified version of Schedule C, Profit or Loss from Business. (Schedule C and Schedule C-EZ are the source of sole proprietorship statistics.) For Tax Year 2009, taxpayers could use Schedule C-EZ if they: had business expenses of $\$ 5,000$ or less; used the cash accounting method; had no inventories; did not report a loss from the business; had only one business as a sole proprietor; had no employees; were not required to file form 4562, Depreciation and Amortization, for the business; claimed no deduction for home business expenses; and had no prior-year disallowed passive activity losses from the business. Since tax-
payers using Schedule C-EZ did not itemize business deductions, the detailed deductions in Table 2 are slightly understated and do not add to the totals.

Figure F presents the numbers and percentages of nonfarm sole proprietorship returns filed on Schedule C-EZ, by the industrial sector. For Tax Year 2009, approximately 4.5 million taxpayers filed the Schedule C-EZ, marking a 3-percent increase from the number filed for 2008. Of returns filed for 2009 in the administrative and support sector (the largest filers of this schedule), taxpayers filed 0.72 million Schedule C-EZ returns, or 29.7 percent of the total sole proprietorship returns for that sector. ${ }^{10}$ For 2009, business receipts from Schedule C-EZ filers totaled $\$ 33.4$ billion, or 2.8 percent of total business receipts reported. Business deductions reported on Schedule C-EZ returns accounted for only 0.4 percent of total business deductions for all industries, or

| Professional, scientific, and technical services | 3,191.8 | 509.1 | 15.9 | 157,357.6 | 5,099.2 | 3.2 | 90,234.5 | 519.4 | 0.6 |
| Administrative and support and waste management and remediation services | 2,415.0 | 718.0 | 29.7 | 60,273.8 | 5,138.7 | 8.5 | 42,437.0 | 540.3 | 1.3 |
| Health care and social assistance | 2,080.8 | 554.4 | 26.6 | 119,332.7 | 4,943.8 | 4.1 | 70,992.5 | 418.9 | 0.6 |
| Arts, entertainment, and recreation | 1,345.3 | 295.1 | 21.9 | 29,237.6 | 1,156.6 | 4.0 | 22,454.0 | 227.0 | 1.0 |
| Other services | 2,669.5 | 632.4 | 23.7 | 83,822.0 | 4,881.4 | 5.8 | 63,148.0 | 590.4 | 0.9 |
| All other sectors | 2,670.5 | 703.7 | 26.4 | 121,321.2 | 3,738.3 | 3.1 | 109,273.1 | 430.7 | 0.4 |

[^287][^288]$\$ 3.7$ billion of the total $\$ 934.5$ billion. Despite having the largest concentration of Schedule C-EZ filers, deductions reported on the Schedule C-EZ by the administrative and support services sector accounted for only 1.3 percent of that sector's total business deductions.

## Profits and Losses

In 2009, many of the largest principal industrial sectors reported significantly decreased sole proprietorship profits (net income less deficit), driving the overall reported profits down. Figure B presents total profits for all industries (in both current and constant dollars) since 1988, while Figure G presents profits by industrial sector for 2008 and 2009. ${ }^{11}$ Total profits decreased 7.4 percent from $\$ 264.5$ billion in 2008 to $\$ 244.8$ billion in 2009. The professional, scientific, and technical services sector reported the largest percentage of total profits of all nonfarm sole proprietorships, with 27.5 percent, despite a 9.5 -percent drop in profits since 2008. Of all the principal industrial sectors, only four reported dollar increases in profits. The largest dollar and percentage increase
in profits were realized in the other services sector, rising $\$ 2.6$ billion and 14.1 percent, respectively. The administrative and support services, as well as the health care and social assistance sectors, both reported increases in profits of approximately $\$ 0.9$ billion. The only other industry that reported an increase in profit between 2008 and 2009 was the retail trade sector, which reported a 3.6-percent increase from $\$ 8$ billion in 2008 to $\$ 8.3$ billion in 2009. In 2009, the finance and insurance sector reported less than 60 percent of the total profits that were reported for that sector in 2008, dropping from $\$ 18$ billion to $\$ 10.3$ billion. This was the largest dollar decrease in total profits, as well as the largest percent decrease from 2008 to 2009 for any sector. The wholesale trade and the arts, entertainment, and recreation industries also experienced double-digit percentage decreases in profits, dropping 15.6 percent and 15 percent, respectively.

In constant dollars, total profits decreased 8.3 percent for 2009 , surpassing the previous largest single-year decline (which had occurred in 2008) during the 20 -year period covered by this article

## Figure $G$

Nonfarm Sole Proprietorship Profits, by Selected Industrial Sectors, Tax Years 2008 and 2009
[Money amounts are in billions of dollars]

| Industrial sector | Net income less deficit (profits) |  |  |
| :---: | :---: | :---: | :---: |
|  | 2008 | 2009 | Percentage increase |
|  | (1) | (2) | (3) |
| All nonfarm industries | 264.5 | 244.8 | -7.4 |
| Construction | 29.2 | 27.0 | -7.4 |
| Specialty trade contractors | 23.7 | 22.5 | -5.3 |

[^289]
## Figure H

Nonfarm Sole Proprietorship Net Income Less Deficit (Profits) as a Percentage of Business Receipts,Tax Years 1988-2009

(Figure B). Despite this drop, after 3 consecutive years of decline, profits as a percent of business receipts increased in 2009. Figure $H$ shows net income less deficits as a percentage of business receipts for 1988 through 2009. In general, this percentage has increased slightly over time from a low of 18.8 percent for 1988. Profits as a percentage of business receipts had remained between 20.7 percent and 22.1 percent since 1992, peaking at 22.1 percent in 2005. However, this trend was broken in 2008, when the percentage dropped out of this range down to 20.1 percent, only to come back into the range in 2009, when it increased to 20.8 percent. Figure E presents net income and deficit separately for 1988 through 2009, in current and constant dollars. For 2009, net income (in constant dollars) decreased by 5.9 percent, and net deficit (in constant dollars) increased by 4.5 percent.

## Industries

Using receipts as a measure of business size, Figure A and Figure I show that retail trade was the largest
sole proprietorship industrial sector for 2009, with 15.2 percent of all business receipts. Total receipts for the retail trade sector, at $\$ 179.1$ billion, were 9 percent lower than the $\$ 196.8$ billion reported for 2008, while deductions decreased by an even larger percentage ( 9.5 percent), which resulted in retail trade reporting a 3.6 -percent increase in profits, going from $\$ 8$ billion to $\$ 8.3$ billion (See Figure G). In terms of receipts, construction was the second largest sole proprietorship industrial sector for 2009, with 14.7 percent of all business receipts. Tax Year 2009 was the first time in 5 years that construction was not the largest sole proprietorship industrial sector, due to a 16.4 -percent decrease in total business receipts, from $\$ 206.7$ billion for 2008 to $\$ 172.7$ billion in 2009. In 2009, nearly all industries reported a decrease in total business receipts. In fact, six major industries, including, finance and insurance ( -19.1 percent), construction ( -16.4 percent), wholesale trade ( -16 percent), real estate (and rental and leasing) ( -14.4 percent), transportation and warehousing ( -12.7 percent), and arts, entertainment, and

## Figure 1

## Nonfarm Sole Proprietorship Total Business Receipts, by Selected Industrial Sectors, Tax Year 2009

NOTES: Percentages are based on estimated total business receipts of $\$ 1.2$ trillion. Detail may not add to 100 percent because of rounding.
recreation ( -11.6 percent), each reported doubledigit losses in percentage of business receipts when compared to 2008. Those six industries, combined with retail trade, made up 54 percent of all nonfarm industry business receipts and reported a combined 14.1-percent decline, going from $\$ 740.4$ billion for 2008 to $\$ 636.3$ billion for 2009.

Other services and health care and social assistance were the only sectors that reported increases in business receipts, increasing 1 percent and 0.6 percent, respectively. In 2009, the construction sector saw the largest decline in total business receipts, losing $\$ 34$ billion, whereas the finance and insurance sector reported the greatest percentage decline in business receipts, going from $\$ 112.3$ billion to $\$ 90.9$ billion, a 19.1-percent decrease. The third largest sector in terms of receipts was professional, scientific, and technical services, which accounted for 13.4 percent
of sole proprietorship receipts for 2009. Receipts in this sector decreased 8.5 percent to $\$ 157.4$ billion, and deductions also fell 7.8 percent to $\$ 90.2$ billion. While the professional, scientific, and technical services sector was the third largest sector in terms of business receipts, the sector had the largest percentage of sole proprietorship profits ( 27.5 percent), despite the fact that its profits went from $\$ 74.3$ billion in 2008 to $\$ 67.2$ billion in 2009, a 9.5 -percent decrease (Figure J). The sector with the second largest profits was health care and social assistance, for which profits rose to $\$ 48.4$ billion for 2009. This marked a 1.7-percent increase from 2008 levels and represented 19.8 percent of all sole proprietorship profits. These sectors were followed by construction ( 11.0 percent), other services ( 8.5 percent), and administrative and support services ( 7.3 percent) in terms of overall sole proprietor profits.

## Figure J

Nonfarm Sole Proprietorship Total Profits, by Selected Industrial Sectors, Tax Year 2009

NOTES: Percentages are based on estimated total profits of $\$ 244.8$ billion. Detail may not add to 100 percent because of rounding. Profits is a designation for "net income less deficit," shown elsewhere in this article.

Tax Year 2001 is the first year in which data became available on the number of limited liability companies (LLCs) among sole proprietorship returns. LLC entities have limited liability (like corporations), but they may be taxed as sole proprietorships (for which income and expenses flow through to the owner to be taxed), if they are owned by a single, individual member. In 2001, there were approximately 126,000 sole proprietorship returns that indicated status as an LLC (Figure K). This increased by 15.3 percent for 2002, 51.3 percent for 2003, 40.4 percent for 2004, 47.2 percent for 2005, 33.2 percent for 2006, 23.1 percent for 2007, 12.8 percent for 2008, and 17.7 percent for 2009. For Tax Year 2009, the number of these sole proprietorships rose to approximately 992,000 . The 2009 level of LLCs among sole proprietorship returns accounted for 4.4 percent of the total nonfarm sole proprietorships, with the total number of returns with LLCs having increased nearly eight-fold since 2001, when LLCs accounted for 0.7 percent of the total non-
farm sole proprietorships. The increase in number of LLC returns has resulted in the LLC business receipts share of the total nonfarm sole proprietorship business receipts rising, from approximately 2.3 percent in 2001, to a little more than 17.4 percent in 2009. Similarly, the portion of total net income (less deficit) of all nonfarm sole proprietorships that is attributable to LLCs has increased from 1 percent in 2001, to 7.6 percent in 2009.

## Summary

Profits for the 22.7 million returns with sole proprietorship activity for Tax Year 2009 declined by 7.4 percent to a level of $\$ 244.8$ billion. In constant dollars, total nonfarm sole proprietorship profits decreased 8.3 percent, after decreasing 7.7 percent in 2008, 2 percent in 2007, and 0.2 percent in 2006. This is the first time since before 1988 that sole proprietorship profits (in constant dollars) had decreased for 4 consecutive years. The professional, scientific,

## Figure K

Number of Nonfarm Sole Proprietorships Registered as Limited Liabilitiy Companies (LLCs), Tax Years 2001-2009

and technical services sector had the largest profits of any sector, at $\$ 67.2$ billion, representing 27.5 percent of total sole proprietorship profits, followed by the health care and social assistance sector, at $\$ 48.4$ billion or 19.8 percent of total profits. For all sole proprietorships, receipts decreased 10.6 percent, while deductions also decreased 11.3 percent. The largest sole proprietorship industrial sector, based on business receipts, was the retail trade sector, accounting for 15.2 percent of receipts even though this sector reported a 9-percent decrease from 2008 levels. Other services had the largest increase in receipts at 1 percent, while the health care and social assistance sector showed the smallest decrease in deductions at 0.2 percent. The construction sector is the industrial sector that experienced the most significant downturn in receipts from 2008 to 2009, losing $\$ 34$ billion, whereas the finance and insurance sector experienced the largest drop in profits, losing
$\$ 7.7$ billion. The finance and insurance sector also experienced the greatest percentage decline in both receipts ( 19.1 percent) and profits ( 42.5 percent) for 2009 , snapping a 3 -year trend in which the real estate and rental leasing sector had the largest percentage declines for each of these indicators.

## Data Sources and Limitations

The 2009 sole proprietorship estimates are based on a stratified probability sample of unaudited individual income tax returns, Form 1040 (including electronically filed returns), processed by the Internal Revenue Service during Calendar Year 2010. Returns in the sample were stratified based on: (1) the presence or absence of Schedule C, Profit or Loss From Business (Sole Proprietorship), or Schedule C-EZ, Net Profit From Business, and Schedule F, Farm Income and Expenses; (2) the larger of positive income or negative income (i.e., "adjusted gross income" before statutory
adjustments); and (3) tax year. The returns were selected at rates that ranged from 0.1 percent to 100 percent. The 2009 nonfarm sole proprietorship data are based on a sample of 77,772 returns and a population of $23,014,214$ returns. ${ }^{12}$ The corresponding sample and population for the 2008 data were 91,679 and $22,990,883$, respectively.

Since the data presented in this article are estimates based on a sample of returns filed, they are subject to sampling error. To properly use the statistical data estimates provided, the magnitude of the potential
sampling error must be known; coefficients of variation (CVs) are used to measure that magnitude. Figure L presents estimated coefficients of variation for the number of returns and money amounts for selected items and industrial sectors. Generally, the smaller the coefficient of variation, the more reliable the estimate is judged to be. The SOI Sampling Methodology and Data Limitations section in this issue of the Bulletin discusses the reliability of estimates based on samples and the use of coefficients of variation for evaluating the precision of estimates based on samples.

## Figure $\mathbf{L}$

Nonfarm Sole Proprietorships: Coefficients of Variation for Selected Items, by Selected Industrial Sectors, Tax Year 2009
[Coefficients of variation are in percentages]

| Industrial sector | Coefficients of variation |  |  |  |  |

## Sole Proprietorship Returns, 2009

Statistics of Income Bulletin | Summer 2011

## Table 2. Nonfarm Sole Proprietorships: Income Statements, by Industrial Sectors, Tax Year 2009-Continued

## Footnotes

* Estimate should be used with caution because of the small number of sample returns on which it is based
** Data combined to prevent disclosure of taxpayer information.
[1] Includes returns with Schedule C-EZ attached. Schedule C-EZ was filed for certain small businesses, i.e., those with net incomes, business expenses of $\$ 5,000$ or less, used the cash accounting method, with no inventories or employees, and with no deduction for a home office business and no allowable "passive" activity losses. Because only a total is reported for business deductions on Schedule C-EZ, the totals shown in the statistics exceed the sum of the detailed deductions; the detailed deductions are, therefore, slightly understated
[2] Total business deductions are before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years. However, these losses (after subtraction) and any carrryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit. [3] These are selected line items from Form 8829, Expenses for Business Use of Your Home, and do not represent the total of the home office business deduction found on the Schedule C.
[4] Less than \$500.
NOTE: Detail may not add to totals because of rounding.

# Foreign-Controlled Domestic Corporations, 2008 

by James R. Hobbs

For Tax Year 2008, the 66,797 U.S. domestic corporations, each controlled by a foreign "person," generated $\$ 4.4$ trillion of total receipts with $\$ 10.9$ trillion of total assets, based on information reported on corporation income tax returns filed with the Internal Revenue Service (IRS). A "person" is an entity, including an individual, corporation, partnership, estate, or trust. "Foreign-controlled domestic corporation" returns were relatively few in number, just 1.1 percent of the total U.S. corporation income tax returns filed. However, they accounted for 15.3 percent of the receipts and 14.2 percent of the assets reported on all U.S. corporation income tax returns. ${ }^{1}$

The total profits (i.e., "net income (less deficit)") reported by all foreign-controlled domestic corporations (FCDCs) for tax purposes under the Internal Revenue Code were $\$ 21.8$ billion for 2008 . This was an 85.7-percent decrease from the amount reported for the prior year. Placed in context, the profits reported on all corporation income tax returns decreased by 46.4 percent from the prior year, to $\$ 1.0$ trillion for 2008. ${ }^{2}$ FCDCs accounted for 2.2 percent of the profits reported by all corporations for 2008, down from 8.3 percent for 2007.

Of the 66,797 FCDCs, 28,399 reported positive profits for 2008, totaling $\$ 172.9$ billion. This was a 23.7-percent decrease from the prior-year amount. These profitable companies for 2008 also reported $\$ 140.2$ billion of taxable income (i.e., "income subject to tax"), once again a decrease of 23.7 percent from the prior year. The U.S. tax liability (i.e., "total income tax after credits") of FCDCs was $\$ 38.2$ billion for 2008, 27.6 percent less than that of the prior year.

For 2008, there were 4,400 "large" foreigncontrolled domestic corporations, each with at least

[^302]$\$ 250$ million of assets or at least $\$ 50$ million of receipts. These large FCDCs accounted for most of the key financial items of all FCDCs: 94.6 percent of total assets, 95.2 percent of total receipts, 96.4 percent of profits, 94.3 percent of taxable income, and 93.2 percent of total income tax after credits. After an overview of all FCDCs, this article focuses on these large foreign-controlled domestic corporations, and it includes a comparison of the "oldest and largest" FCDCs to other old and large domestic corporations (i.e., those not controlled by foreign persons). "Old" corporations are those with dates of incorporation prior to 2006 or with unknown dates of incorporation.

Tables showing selected balance sheet, income statement, and tax items for FCDCs are included at the end of this article. Table 1 shows historical FCDC data for selected tax years between 1971 and 2008. Tables 2, 3, and 4 concentrate on Tax Year 2008 data. Table 2 includes information for all FCDCs, classified by major industry under the North American Industry Classification System (NAICS). Table 3 also presents data for all FCDCs, classified by country of the foreign owner, as well as age of the corporation. Table 4 presents information on "old and large" FCDCs for selected industries. For comparison purposes, this table also contains data for old and large domestic corporations not controlled by foreign persons.

## Foreign Business Activity in the United States

Foreign business activity in the United States can take several forms, including corporations. With regard to corporations, a foreign investor may own stock in a domestic (i.e., United States) company or in a company that operates in the United States as a branch of a foreign corporation. ${ }^{3,4}$ This article focuses on domestic corporations that are "controlled" by foreign persons. For the foreign-controlled domestic

[^303]
## Foreign-Controlled Domestic Corporations, 2008

Statistics of Income Bulletin | Summer 2011
corporations covered in this article, control is defined as ownership by one foreign person, directly or indirectly, of 50 percent or more of the U.S. corporation's voting stock, or of 50 percent or more of the value of all of the corporation's stock, at any time during the accounting period. ${ }^{5,6}$ (This is discussed in greater depth in the Explanation of Selected Terms section of this article, under "Constructive ownership rules" and "Foreign person.")

The foreign-controlled domestic corporation statistics shown in this article exclude domestic corporations with only foreign "portfolio" investors. A foreign portfolio investor, having only a minimal interest in a domestic company, exerts no control over the management of the domestic corporation, except to the extent, for example, of rights to vote periodically in stockholder meetings of the corporation. A foreign portfolio investor is primarily seeking dividend payments, an increase in the value of the shares of stock, or both. The Statistics of Income program does not conduct studies covering foreign portfolio investors of domestic corporations.

Foreign-controlled domestic corporations report tax information on: (1) Form 1120, U.S. Corporation Income Tax Return; (2) Form 1120-L, U.S. Life Insurance Company Income Tax Return; (3) Form 1120-PC, U.S. Property and Casualty Insurance Company Income Tax Return; (4) Form 1120-REIT, U.S. Income Tax Return for Real Estate Investment Trusts; and (5) Form 1120-RIC, U.S. Income Tax Return for Regulated Investment Companies. The FCDC statistics shown in this article include all of these return types (unless otherwise stated). Data for all corporation income tax returns discussed in this article include (unless otherwise stated) the five form types listed above, plus two types filed by domestic corporations: Form 1120-A, U.S. Corporation ShortForm Income Tax Return, and Form 1120S, U.S. In-
come Tax Return for an S Corporation. Also included in the corporate total is Form 1120-F, U.S. Income Tax Return of a Foreign Corporation, for foreign corporations with income effectively connected with a U.S. trade or business. All of these form types are included in the Statistics of Income Corporate Study, from which FCDC statistics are derived. ${ }^{7}$ However, FCDCs cannot file Forms 1120-A, 1120-F, or 1120S.

## Foreign-Controlled Domestic Corporations

## Growth of Corporations

The estimated numbers of returns filed by FCDCs have remained rather constant during the 10 -year period of Tax Years 1999-2008. There were 59,514 returns of foreign-controlled domestic corporations for 1999 and 66,797 for 2008, a 12.2-percent increase. During this same time period, the total number of U.S. corporation income tax returns grew by 18.5 percent, from 4.9 million to 5.8 million. FCDCs generally comprised a slowly decreasing percentage of those returns, from 1.2 percent for 1999 down to 1.1 percent for 2008. The increase in total filings of U.S. corporation income tax returns has largely been due to the growth in the number of Forms 1120S filed by S corporations. For 1999, 1120S returns comprised 55.2 percent of all corporation returns ( 2.7 million of the total 4.9 million returns); for 2008, 69.3 percent of all returns ( 4.0 million of the total 5.8 million returns). FCDCs are not eligible to elect to be treated as $S$ corporations for Federal income tax purposes. (See "S corporations" in the Explanation of Selected Terms section of this article.)

The counts of corporation income tax returns include consolidated returns. These returns contain the combined financial data of two or more corporations in which a common parent corporation owns at least 80 percent of the stock of at least one member

[^304]
# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011

## Figure A

Foreign-Controlled Domestic Corporations as a Percentage of All Corporations, Tax Years 1999-2008

of the group, and at least 80 percent of the stock of each other member of the group is owned within the group. A consolidated return filed by a common parent is treated as a single unit, with each statistical item being determined on the basis of the combined data of the affiliated group.

FCDCs, like most other corporations, could elect to file consolidated returns for affiliated groups of domestic corporations. For 2008, there were 6,197 consolidated returns filed by FCDCs, 9.3 percent of all FCDC returns. These returns accounted for the majority of economic activity reported by all FCDCs. Specifically, they accounted for $\$ 9.6$ trillion of assets ( 88.3 percent of the total for all FCDCs), $\$ 3.8$ trillion of receipts ( 86.6 percent of the total), $\$ 14.2$ billion of profits ( 65.2 percent of the total), $\$ 120.9$ billion of taxable income ( 86.2 percent of the total), and $\$ 32.4$ billion of total income tax after credits ( 84.8 percent of the total).

To the extent that FCDCs filed consolidated income tax returns, the data included in this article
actually represent more corporations than the stated number of returns. The study, however, did not tabulate the number of subsidiary corporations included in the consolidated returns.

In contrast to the numbers of returns, the growth of foreign investment in the United States through foreign-controlled domestic corporations during the last 10 years was evident in most of the financial items. ${ }^{8}$ In particular, the share of both total U.S. corporate assets and receipts accounted for by FCDCs increased between 1999 and 2008.

The assets of domestic corporations controlled by foreign persons increased by 128.7 percent between 1999 and 2008, as compared to the 85.2-percent increase for the assets reported on all U.S. corporation income tax returns. ${ }^{9}$ As a result of these changes, the percentage of total corporate assets accounted for by FCDCs increased from 11.5 percent for 1999 to 14.2 percent for 2008 (Figure A).

Total receipts of FCDCs increased by 101.5 percent between 1999 and 2008, as compared to the

[^305]
# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
increase of 51.3 percent for all corporations. As a result, the share of the receipts reported on all corporate returns attributed to FCDCs increased from 11.5 percent for 1999 to 15.3 percent for 2008.

The growth of FCDCs can also be measured from the early 1970s, when a question concerning foreign ownership of corporations was first placed on the income tax return. For 1971, the 5,154 FCDCs reported $\$ 36.7$ billion of total assets and $\$ 39.2$ billion of total receipts. They accounted for just 0.3 percent of the returns, 1.3 percent of the assets, and 2.1 percent of the receipts reported by all corporations for that year (see Table 1).

## Industry Characteristics

For 2008, foreign-controlled domestic corporations were involved in each of the 19 industrial sectors
(treating wholesale trade and retail trade as separate sectors) listed in Figure B. However, 45,860 of the 66,797 (more than two-thirds of the total) had primary business activities in one of the following four industrial sectors: (1) wholesale trade $(16,211) ;(2)$ real estate and rental and leasing (12,881); (3) professional, scientific, and technical services $(8,918)$; and (4) manufacturing $(7,850)$. By comparison, relatively few FCDCs were primarily involved in utilities (250), health care and social assistance (89), and educational services (13). The Data Sources and Limitations section discusses how returns were classified by industry. ${ }^{10}$

Companies in different industries often have different financial characteristics. For instance, the relative levels of assets and receipts of companies primarily engaged in wholesale trade differ

## Figure B

[^306]NOTES: Detail may not add to totals because of rounding. Percentages are computed using rounded data.

[^307]
# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
significantly from those primarily engaged in credit intermediation (e.g., commercial banks, credit card issuers, credit unions, mortgage banks, and savings institutions). FCDC wholesalers produced large amounts of receipts with relatively small amounts of assets (valued as of the end of their accounting periods), resulting in $\$ 1.61$ of receipts for each dollar of end-of-year assets for 2008. By comparison, credit intermediation companies reported large amounts of assets, but relatively small amounts of receipts. These FCDCs produced only $\$ .07$ of receipts for each dollar of end-of-year assets. See Table 2.

Corporations classified as wholesalers accounted for 22.5 percent of the receipts for all FCDCs, a significant percentage, as is the 24.3 percent of the total FCDC returns they comprised. However, these companies reported only 5.6 percent of the total FCDC assets.

Corporations classified in the real estate and rental and leasing industrial sector reported only 1.6 percent of the assets and 0.6 percent of the receipts of all FCDCs. These percentages were both substantially less than the 19.3 percent of the FCDC returns that they filed.

Corporations classified in the professional, scientific, and technical services industrial sector reported only 1.8 percent of the assets and 2.4 percent of the receipts of all FCDCs. Both of these percentages are significantly lower than the portion (13.4 percent) of total FCDC returns this service sector represented. These service corporations were often small, with reported average amounts of assets and receipts of $\$ 21.9$ million and $\$ 11.7$ million, respectively.

Manufacturing corporations filed 11.8 percent of the FCDC returns for 2008. These capital-intensive, goods-producing companies accounted for far greater percentages of the total FCDC assets ( 23.7 percent) and receipts ( 46.2 percent). These corporations were often large, with reported average amounts of assets and receipts of $\$ 328.4$ million and $\$ 257.2$ million, respectively.

Two additional sectors warrant discussion. While corporations classified in the finance and insurance industrial sector composed only 5.0 percent of the total returns filed by FCDCs for 2008, they accounted for the largest share ( 46.5 percent) of the total assets reported for any of the industrial sectors. Additionally, finance and insurance companies accounted for 11.7 percent of the total FCDC receipts.

Management (or holding) companies contributed a significant portion (11.4 percent) of the FCDC total
assets. However, this sector accounted for smaller portions of both the number of returns ( 3.7 percent) filed by FCDCs and the receipts ( 2.1 percent) reported by them.

While foreign-controlled domestic corporations accounted for 15.3 percent of the $\$ 28.6$ trillion of total receipts reported by all corporations filing U.S. income tax returns for 2008, these companies played disproportionately larger roles in certain industrial sectors. For instance, FCDCs produced substantial portions of the total receipts reported for wholesale trade ( 24.9 percent), manufacturing ( 24.7 percent), and mining ( 18.4 percent). Conversely, FCDC involvement in a number of other business activities was relatively low and accounted for a small percentage of the receipts for all companies classified in agriculture, forestry, fishing, and hunting ( 2.1 percent), and health care and social assistance ( 2.0 percent). See Figure C.

FCDC industrial data at the sector level can be decomposed into more specific industrial classifications for analysis purposes. In general, sectors are composed of major groups, which in turn are composed of minor industries. For 2008, FCDCs in 17 minor industries each reported more than $\$ 50$ billion of total receipts. See Figure D. The largest minor industry was petroleum manufacturing refineries with $\$ 749$ billion of receipts. FCDCs in this minor industry accounted for 17.1 percent of the receipts of FCDCs in all industries, and for 32.3 percent of the receipts of all corporations classified in the petroleum manufacturing refineries industry.

## Country Characteristics

Persons (including individuals, corporations, and other entities) resident in any country throughout the world can control U.S. corporations. As reported on the U.S. income tax returns of the foreign-controlled domestic corporations, a country represents the geographic location of the foreign owner's place of residence in the case of individuals, and place of incorporation, organization, creation, or administration in the case of corporations or other entities. A foreign corporation, or a chain of related foreign corporations, is frequently the owner of a U.S. subsidiary corporation. Because a foreign corporation in the chain of related companies, which directly owns the stock of a U.S. subsidiary, may be located in a country different from that of the ultimate owner, the country reported on the tax return may not

NOTES: Detail may not add to totals because of rounding. Percentages are computed using rounded data.
necessarily reflect the country of the ultimate owner. (See the Data Sources and Limitations section of this article for a brief discussion of the possible limitations of the data classified on a country basis.)

For 2008, residents of 43 countries accounted for nearly 9 of every 10 domestic corporations classified as 50 -percent-or-more controlled by a foreign person. The 58,810 corporations controlled by persons resident in the 43 countries shown in Table 3 accounted for nearly all of the total FCDC financial items, including 99.5 percent of total assets, 99.2 percent of total receipts, 98.6 percent of taxable income, and 98.4 percent of total income tax after credits.

From among these 43 countries, domestic corporations controlled by persons from just 7 countries produced 76.1 percent of the total receipts of all FCDCs. These top seven countries, in decreasing size of receipts, are the United Kingdom, Japan, Germany, Canada, France, the Netherlands, and Switzerland.

Domestic corporations controlled by persons resident in the United Kingdom reported total receipts of $\$ 1.1$ trillion for 2008, an amount larger than that for any other country. These receipts represented 24.1 percent of the total for all FCDCs. As shown in Figure E, the United Kingdom's share of 2008 FCDC receipts is substantially larger than its share of 1999 FCDC receipts (i.e., 14.3 percent).

For 2008, domestic corporations with owners resident in Japan ( $\$ 585$ billion), Germany ( $\$ 432$ billion), Canada ( $\$ 397$ billion), France ( $\$ 295$ billion), the Netherlands (\$293 billion), and Switzerland (\$271 billion) also accounted for significant amounts of receipts. Of these six countries, Japan's portion of total receipts decreased significantly between 1999 and 2008 (from 21.0 percent to 13.4 percent), as did the portions for Germany ( 14.4 percent down to 9.9 percent) and the Netherlands ( 12.4 percent down to 6.7 percent). Figure E shows that the portion of

NOTES: This figure includes minor industries with at least $\$ 50$ billion of total receipts. These industries are listed by decreasing size of total receipts (column 3 ). Percentages are computed using rounded data.

FCDC total receipts accounted for by countries other than the largest seven increased in size over the 10year period, from 16.9 percent to 23.8 percent. For 2008, the countries with the largest receipts included in this "other" grouping were: Sweden (\$94 billion), Bermuda ( $\$ 86$ billion), South Korea ( $\$ 78$ billion), Belgium ( $\$ 68$ billion), Luxembourg ( $\$ 64$ billion), and Australia ( $\$ 52$ billion).

Domestic corporations controlled by persons resident in the United Kingdom accounted for $\$ 2.5$ trillion of assets, the largest portion held by any country. Corporations controlled by persons resident in Switzerland ( $\$ 1.3$ trillion), Germany ( $\$ 1.2$ trillion), Canada ( $\$ 1.2$ trillion), France ( $\$ 1.1$ trillion), the Netherlands ( $\$ 1.1$ trillion), and Japan ( $\$ 0.8$ trillion) also accounted for significant amounts of assets.

Although U.K.-controlled domestic corporations accounted for the largest part of the total FCDC receipts and assets for 2008, the United Kingdom was not responsible for the largest number of returns filed
for FCDCs. Canadian-controlled domestic corporations filed the most returns, 10,132. Japanese-controlled domestic corporations were second with 6,108 returns, followed by U.K.-controlled domestic corporations with 5,524 returns and German-controlled domestic corporations with 4,346 returns.

For 2008, the U.S. tax liability of all FCDCs was $\$ 38.2$ billion, or 0.9 percent of the $\$ 4.4$ trillion of receipts reported by all FCDCs. U.K.-controlled domestic corporations reported the largest amount of U.S. tax liability ( $\$ 9.0$ billion). Canadian-controlled corporations, with $\$ 4.5$ billion of tax liability, and Swiss-controlled corporations, with $\$ 4.2$ billion of tax liability, followed. For the U.K.-controlled corporations, tax liabilities were 0.9 percent of their $\$ 1.1$ trillion of receipts. Tax liabilities as a percent of receipts were somewhat higher at 1.1 percent for Canadian-controlled corporations, and even higher for Swiss-controlled corporations at 1.6 percent of their receipts. Many factors, including differences

in industrial apportionments and age apportionments (discussed later in this article), may have caused the resulting differences between countries in calculating tax as a percentage of receipts.

## Combined Country and Industry Characteristics

There were some similarities, but also important differences among the primary industrial activities of the corporations with owners from the top seven countries. Figure F shows the industries that accounted for at least 10 percent of the total receipts of each of these countries.

For the United Kingdom, manufacturing was the predominant industrial sector, accounting for 70.5 percent of its total $\$ 1.1$ trillion of receipts. More specifically, petroleum and coal products manufacturers produced the most receipts of any major industrial group, accounting for $\$ 616$ billion, or 58.6 percent of the country total.

Japanese-controlled corporations were concentrated in two industrial sectors, which produced most of the $\$ 585$ billion of receipts: wholesale trade (54.3 percent of the total) and manufacturing ( 33.2 percent). Japan was the only country of the top seven in which wholesale trade was the leading industrial sector in producing receipts. More specifically, wholesale trade of durable goods was the leading major industrial group, producing 43.8 percent of the total receipts for this country. The second largest major industrial group was transportation equipment manufacturing with 18.6 percent of the receipts.

Like those in the United Kingdom, German-controlled corporations were primarily concentrated in manufacturing, with 49.2 percent of the $\$ 432$ billion of receipts for that country coming from corporations in this industrial sector. Within this sector, chemical manufacturers ( 14.6 percent of the country total) and transportation equipment manufacturers (13.8 percent) produced the most receipts. Wholesale trade (17.1 percent of the country total) and finance and insurance ( 12.0 percent) were the other predominant industrial sectors.

Canadian-controlled corporations were primarily concentrated in manufacturing, which accounted for 30.5 percent of the $\$ 397$ billion of receipts for that country. This sector was followed by finance and insurance ( 22.0 percent) and wholesale trade (19.3 per-
cent). More specifically, insurance carriers reported 17.8 percent of the total receipts and wholesalers of nondurable goods accounted for 12.7 percent of the receipts.

For France, manufacturers produced 45.5 percent of the $\$ 295$ billion of receipts for this country. This was followed by finance and insurance ( 19.0 percent) and wholesale trade ( 16.2 percent). More specifically, petroleum and coal products manufacturers and insurance carriers produced 14.5 percent and 10.5 percent, respectively, of the receipts for the country.

For the Netherlands, finance and insurance was the largest industrial sector with 37.5 percent of the total receipts ( $\$ 293$ billion). This sector was followed by manufacturing ( 24.1 percent), wholesale trade (11.5 percent), and retail trade (11.2 percent). Insurance carriers reported 31.9 percent of the total receipts for this country, the largest portion for any major industrial group.

For Switzerland, 35.3 percent of the $\$ 271$ billion of receipts came from the manufacturing sector, followed by wholesale trade with 31.9 percent and finance and insurance with 27.3 percent. More specifically, wholesalers of nondurable goods (27.8 percent of the country total) were the leading major industry. Other important major industries were chemical manufacturers ( 16.8 percent), businesses that handled securities and commodity contracts and other financial investments (14.9 percent), and insurance carriers (12.1 percent).

## Age Characteristics

Table 3 presents data for two groups of FCDCs based on the age of each corporation. A "new" corporation is one defined here as having been incorporated in 2006 or after, as reported on its income tax return. An "old" corporation is one incorporated in or prior to 2005 , or with an unknown (i.e., unreported) date of incorporation. ${ }^{11}$

The year of incorporation may be somewhat unreliable as an indicator of the true age of corporations. For example, a consolidated return may include companies that fall into both the new and old categories. However, the return (including all of the financial information contained in it) was classified into just one of the categories based on the year of incorporation of the parent company. Another example

[1] Less than 0.05 percent.
NOTES: This figure includes the seven countries with the largest amounts of total receipts. For each of these countries, this table also includes industries that accounted for at least 10 percent of the total receipts of the country. Percentages are computed using rounded data.

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
is the reorganization of an existing corporation into a new corporation, which results in a recent year of incorporation, even though it is an "old" business. An additional limitation is that the year of incorporation is difficult to verify during statistical processing because there are no other items to which it can be compared on a tax return, and recourse to other sources is not always practical. Thus, it is subject to higher levels of taxpayer reporting and data entry errors, as compared to statistical items that can be evaluated against other reported items.

For 2008, there were 16,224 FCDCs incorporated in 2006 or later. Professional, scientific, and technical services accounted for the largest portion of these "new" corporations with 4,144 companies, followed by real estate with 2,351 companies and wholesalers of nondurable goods with 2,310 companies.

More than three out of every four foreigncontrolled domestic corporations were incorporated prior to 2006, i.e., considered to be "old" corporations. These corporations tended to be larger than the new corporations, accounting for 92.7 percent of the FCDC assets and 91.5 percent of the receipts.

Old corporations were generally more profitable than the newer corporations. Among other factors, newer companies may have had more expenses (including startup costs) relative to receipts than the older companies. For 2008, old corporations reported $\$ 28.8$ billion of net profits on $\$ 4.0$ trillion of receipts, while new corporations reported $\$ 7.0$ billion of net losses on $\$ 0.4$ trillion of receipts. Thus, net profits (i.e., net income less deficit) as a percentage of total receipts were 0.7 percent for old corporations, versus -1.9 percent for new corporations.

As a result of reporting most of the profits, old corporations also accounted for most of U.S. taxable income ( 94.2 percent) and U.S. tax liabilities (93.4 percent) of all FCDCs. The old corporations had $\$ 35.7$ billion of tax liabilities after credits, equaling 0.9 percent of their total receipts. The new corporations had $\$ 2.5$ billion of tax liabilities after credits, equaling 0.7 percent of their total receipts.

## Receipts, Deductions, and Profits

Total receipts comprise all of the income "actually" received by corporations. These receipts include business receipts, as well as investment and incidental income. Business receipts are gross receipts from sales and operations and frequently make up most of a corporation's total receipts. Investment income includes interest, dividends, and gains on the sale or exchange of both capital and noncapital assets. Interest, in turn, includes both taxable interest from all sources and nontaxable interest on State and local government obligations.

A domestic corporation, whether controlled by a foreign person or not, could have business activities in foreign countries, as well as in the United States. The estimates for total receipts shown in this article include business activities in the United States, as well as certain foreign activities as reported on tax returns of domestic corporations. Total receipts include the receipts of foreign branch operations of U.S. companies. Also included in these receipts are dividends remitted to U.S. corporations by their foreign subsidiaries.

The receipts and deductions of foreign-controlled domestic corporations that are shown in this article do not include amounts generated by their foreign parent or other related foreign companies. However, FCDCs could have had business transactions with their related foreign companies, and FCDC receipts and deductions stemming from these transactions are included in the statistics. ${ }^{12}$

An FCDC that transacts business with a related foreign company must determine "transfer prices" for those transactions. These transactions include the sale and purchase of tangible goods, fees for services, interest payments on debts, leasing expenses, and royalties. How transfer prices are determined for these transactions may affect the amount of receipts and deductions, as well as profits (i.e., net income or deficit), taxable income, and taxes reported on the U.S. income tax return of an FCDC. Section 482 of the Internal Revenue Code, and the related

[^309]
## Foreign-Controlled Domestic Corporations, 2008

Statistics of Income Bulletin | Summer 2011
regulations, provide guidance in determining transfer prices. In general, the objective is to use "arm's length prices," which means prices that would be used for transactions between unrelated enterprises and determined by market forces.

More than 88 percent of the $\$ 4.4$ trillion of total receipts reported by domestic corporations controlled by a foreign person consisted of "business receipts" (i.e., receipts from sales and operations). These same companies reported $\$ 4.4$ trillion of total deductions. Cost of goods sold was more than 65 percent of that total. (See "Business receipts" and "Cost of goods sold" in the Explanation of Selected Terms section.)

It is noteworthy to look at the "gross profit" of FCDCs. Gross profit is the difference between business receipts and cost of goods sold. Two important industrial sectors for FCDCs, manufacturing and wholesale trade, accounted for most of the reported amounts of business receipts and cost of goods sold. In manufacturing, FCDCs reported $\$ .79$ of cost of goods sold for every dollar of business receipts, while the amount was $\$ .75$ for all other corporations classified in this sector. Thus, FCDCs had smaller gross profits than other corporations, $\$ .21$ compared to $\$ .25$ for every dollar of business receipts. In wholesale trade, all FCDCs reported $\$ .84$ of cost of goods sold for every dollar of business receipts. The amount was slightly less ( $\$ .82$ ) for all other corporations classified in this sector. As a result, FCDCs had smaller gross profits than other corporations, $\$ .16$ and $\$ .18$, respectively, for every dollar of business receipts.

Taxable interest received by FCDCs for Tax Year 2008 amounted to $\$ 288$ billion, 6.6 percent of their total receipts. Interest paid by FCDCs for that year amounted to $\$ 252$ billion, 5.8 percent of their total deductions. Complete income statement statistics of FCDCs are shown in Tables 24 and 25 of Statistics of Income-2008, Corporation Income Tax Returns.

Total receipts less total deductions for FCDCs equaled $\$ 15.5$ billion for 2008 . By comparison, net
income (less deficit) amounted to $\$ 21.8$ billion. The statistics for total receipts less total deductions include all income actually received by corporations, while the statistics for net income (less deficit) focus on taxable sources of corporate income, including "constructive" taxable income. Thus, unlike total receipts less total deductions, net income (less deficit) includes two items of constructive taxable income from related foreign corporations, and excludes nontaxable interest on State and local government obligations. ${ }^{13}$ The two items of constructive taxable income from related foreign corporations are includable income from foreign corporations owned by U.S. shareholders and foreign dividend grossup. (See "Constructive taxable income from related foreign corporations" in the Explanation of Selected Terms section.) For 2008, FCDCs reported $\$ 8.0$ billion of constructive taxable income, and received $\$ 1.7$ billion of nontaxable interest on State and local government obligations.

Net income (less deficit) for foreign-controlled domestic corporations decreased from $\$ 152.3$ billion for 2007 to $\$ 21.8$ billion for 2008. This was a decrease of $\$ 130.5$ billion, or 85.7 percent. In comparison, net income (less deficit) reported on all corporation income tax returns decreased by 46.4 percent between 2007 and 2008, to $\$ 984.3$ billion.

Most industrial sectors contributed to the $\$ 130.5$ billion decrease in total FCDC net income (less deficit) between 2007 and 2008. Five sectors accounted for most of the decrease: finance and insurance ( $\$ 42.0$ billion), manufacturing ( $\$ 33.1$ billion), wholesale trade ( $\$ 16.5$ billion), holding companies ( $\$ 13.5$ billion), and information ( $\$ 6.2$ billion). Within the finance and insurance sector, the net income (less deficit) of securities and commodity contracts dealers and insurance carriers declined the most, by $\$ 22.0$ billion and $\$ 17.3$ billion, respectively. There were four sectors that reported higher profits for 2008. However, the amounts of the increases were small for three of those sectors. The professional, scientific,

[^310]
# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
and technical services sector reported $\$ 1.3$ billion of increased profits for 2008.

The $\$ 21.8$ billion of total FCDC net income (less deficit) for 2008 were the result of 28,399 corporations collectively reporting $\$ 172.9$ billion of positive net income and 38,398 companies reporting $\$ 151.1$ billion of deficits. ${ }^{14}$ Thus, less than one out of every two ( 42.5 percent) domestic corporations with foreign owners reported a positive net income. In comparison, 54.5 percent of all corporations filing U.S. income tax returns for the same year reported a positive net income.

The percentage of FCDCs reporting positive net income varied greatly among the different industrial groups. At the industrial sector level, the portion reporting positive net income ranged from a low of 20.2 percent for health care and social assistance to a high of 69.2 percent for educational services. For the more predominant sectors of FCDCs, the percentages of profitable companies were 43.1 percent for manufacturing and 49.4 percent for wholesale trade.

The $\$ 151.1$ billion of deficits for 2008 could be carried back or forward to other tax years, under prescribed rules, to reduce the taxable income of those years (see "Net operating loss deduction" (NOL) in the Explanation of Selected Terms section). Net operating losses carried back to Tax Year 2008 from 2009 and beyond, reported on Forms 1120X and 1139, are not included in the statistics shown in this article. ${ }^{15}$ However, NOLs carried forward to Tax Year 2008 from prior years are included in the statistics and discussed in the next section.

## Taxable Income and Taxes

For most corporations, taxable income (i.e., "income subject to tax") is generally equal to positive net income less statutory special deductions. ${ }^{16}$ Statutory special deductions include deductions for net operating loss (NOL) carryovers from prior years and the special deductions for dividends and other corporate attributes allowed by the Internal Revenue Code. For 2008, the difference between the $\$ 172.9$ billion
of positive net income and $\$ 140.2$ billion of taxable income was, for the most part, the result of statutory special deductions. The net operating loss deduction was $\$ 24.6$ billion and accounted for 64.9 percent of the $\$ 37.9$ billion of total statutory special deductions. In calculating taxable income for 2008 , FCDCs reduced their positive net incomes by 14.2 percent using NOLs carried over from prior years.

For 2008, foreign-controlled domestic corporations reported $\$ 140.2$ billion of taxable income. This was the base on which $\$ 48.8$ billion of income tax were computed. The $\$ 49.4$ billion of total income tax before credits reported by FCDCs consisted primarily of the income tax, plus the alternative minimum tax and certain other taxes. The alternative minimum tax was $\$ 0.5$ billion, and the remaining taxes comprised a very small part of the total.

Tax credits totaling $\$ 11.2$ billion reduced the U.S. income tax liability of foreign-controlled domestic corporations from $\$ 49.4$ billion to $\$ 38.2$ billion for 2008. The largest credits claimed were $\$ 9.4$ billion of foreign tax credits, $\$ 1.3$ billion of general business credits, and $\$ 0.5$ billion of prior-year minimum tax credits. The $\$ 38.2$ billion of total U.S. income tax after credits represent the tax liability as originally reported by taxpayers. However, this amount may differ from the actual income tax collected and the final income tax liability of corporations for Tax Year 2008. The originally reported tax liability does not take into account either: (1) amended or superseded returns filed by the corporations, or (2) adjustments made by IRS as a result of tax examination or enforcement activities. Among other reasons, corporations could file amended returns to use carryback provisions for net operating losses and unused foreign tax and general business credits.

The percentage of FCDCs reporting U.S. tax liabilities (i.e., total income tax after credits) for 2008 was 31.3 percent, significantly less than the 34.7 percent for 2007. The amount of tax liability reported by FCDCs also decreased to $\$ 38.2$ billion for 2008 from $\$ 52.8$ billion for 2007, a 27.6-percent decrease.

[^311]
## Foreign-Controlled Domestic Corporations, 2008

Statistics of Income Bulletin | Summer 2011

## The "Largest" Foreign-Controlled Domestic Corporations

This article defines the largest companies as those with at least $\$ 250$ million of total assets, or those that produced at least $\$ 50$ million of business receipts. Within the finance and insurance, and management of companies (holding companies) industrial sectors, total receipts were used in place of business receipts for selecting the largest companies.

Both size of assets and size of receipts were used to select the largest companies in order to ensure adequate coverage of all industries. As discussed, financial structure varies across industries. For instance, companies classified in wholesale trade generally report large amounts of receipts compared to their end-of-year assets. By comparison, credit intermediation corporations generally report large amounts of assets compared to their receipts. If either assets or receipts were used exclusively to select the largest companies, then the largest companies in one of these industrial groups would have been underrepresented in comparison to the other group.

There were a total of 19,406 large domestic corporations for 2008. Of this total, foreign persons controlled 4,400 corporations, or 22.7 percent. This percentage is remarkably larger than the 1.1 percent that FCDCs accounted for of all corporations, regardless of size.

The 4,400 large foreign-controlled domestic corporations comprised just 6.6 percent of the number of income tax returns filed by FCDCs. However, these large companies accounted for the majority of the key FCDC financial items, reporting 94.6 percent of the total assets, 95.2 percent of the total receipts, 94.3 percent of the taxable income, and 93.2 percent of the total income tax after credits, of all FCDCs.

There were 15,006 large domestic corporations that did not have controlling foreign owners for 2008. Similar to FCDCs, these large companies also accounted for a small portion of the total number of income tax returns filed by domestic corporations without foreign owners, but comprised a significant portion of the key financial items reported for these filers.

Collectively, the largest FCDCs reported slightly higher profits as a percentage of receipts than their smaller counterparts. For 2008, the largest FCDCs reported net profits of $\$ 21.0$ billion, 0.5 percent of the companies' receipts. The smaller FCDCs reported net profits of $\$ 0.8$ billion, 0.4 percent of the companies' receipts.

Figures G1 and G2 present 12 categories of tax liabilities as percentages of total receipts, shown separately for large FCDCs and for other large domestic corporations. "Other domestic corporations" (ODCs) were not foreign-controlled or owned (i.e., they were either owned by domestic persons, or no separate foreign person owned 25 percent or more of the corporation's stock). This definition of other large domestic corporations is used throughout this article, including the data shown in Figures G through I, and Table 4. Thus, domestic corporations with a foreign person who owned between 25 percent and 49 percent of the corporation's stock are not included in either of the two groups shown in Figures G through I, and Table 4. ${ }^{17}$ These corporations are identified from Schedule K of Form 1120 during Statistics of Income processing. However, they are neither FCDCs nor ODCs, as defined.

For 2008, the largest FCDCs reported $\$ 35.6$ billion of U.S. tax liabilities, which was 0.9 percent of their total receipts. Column 3 of Figure G1 shows that 40.2 percent of largest FCDCs had no U.S. tax liabilities, 72.5 percent of these companies had tax liabilities of less than 1.0 percent of their receipts, and 91.8 percent of these companies had tax liabilities of less than 4.0 percent of their receipts. By comparison, Figure G2 shows that large domestic corporations not foreign-controlled reported $\$ 172.9$ billion of U.S. tax liabilities, 1.1 percent of their total receipts. For these companies, 35.1 percent had no tax liabilities, 69.4 percent had tax liabilities of less than 1.0 percent of their receipts, and 89.3 percent had tax liabilities of less than 4.0 percent of their receipts.

FCDCs claimed smaller amounts of tax credits than ODCs in relative terms. For 2008, large FCDCs claimed $\$ 11.1$ billion of credits, equaling 23.7

d-Not shown to avoid disclosure of information about specific corporations. However, data are included in the appropriate totals.
N/A-Not applicable.
NOTES: "Large" corporations are those with total assets of $\$ 250,000,000$ or more, and/or with business receipts of $\$ 50,000,000$ or more (total receipts are used in lieu of business receipts for the finance and insurance, and management of companies sectors). "Old" corporations are those with dates of incorporation prior to 2006, or with unknown dates of incorporation. Data exclude Forms 1120-REIT (real estate investment trusts), 1120-RIC (regulated investment companies), and 1120 (S corporations). Data also exclude returns in which the foreign ownership level is between 25 percent and 49 percent. Detail may not add to totals because of rounding.
percent of their income tax liabilities before credits. Other large domestic corporations claimed \$101.6 billion of credits for the same tax year, equaling 37.0 percent of their income tax liabilities before credits. The largest credit claimed by each group of corporations was the foreign tax credit, $\$ 9.3$ billion by large FCDCs (20.0 percent of their tax liabilities) and
$\$ 90.3$ billion by other large domestic corporations (32.9 percent of their tax liabilities).

## Industry Characteristics

The industrial makeup of the largest foreign-controlled domestic companies is somewhat different from that of other large domestic corporations. For

N/A-Not applicable.
[1] Less than $\$ 500,000$.
NOTES: "Large" corporations are those with total assets of $\$ 250,000,000$ or more, and/or with business receipts of $\$ 50,000,000$ or more (total receipts are used in lieu of business receipts for the finance and insurance, and management of companies sectors). "Old" corporations are those with dates of incorporation prior to 2006, or with unknown dates of incorporation. Data exclude Forms 1120-REIT (real estate investment trusts), 1120-RIC (regulated investment companies), and 1120 S (S corporations). Data also exclude returns in which the foreign ownership level is between 25 percent and 49 percent. Detail may not add to totals because of rounding.

2008, 36.0 percent of the largest FCDCs were classified as manufacturers, while manufacturers made up just 21.2 percent of the largest domestic companies that were not foreign-controlled. Similarly,
wholesalers were a larger share of the FCDCs (27.5 percent) than of the other large domestic corporations ( 15.6 percent). Conversely, 12.7 percent of the largest ODCs were classified in finance and insurance,

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
while this sector made up just 8.2 percent of the largest FCDCs. Retailers accounted for 9.3 percent of the largest domestic companies that were not for-eign-controlled, while only 2.4 percent of the largest FCDCs were similarly classified. See Figure H for other differences in the industrial makeup of these two groups of corporations.

The largest domestic corporations are primarily "old" corporations, with incorporation dates prior to 2006. Of the 4,400 large FCDCs contained in the Tax Year 2008 study, 87.6 percent were old corporations. Other large domestic corporations were similar to the FCDCs in this respect, with old corporations accounting for 91.2 percent of this group of 15,006 corporations.

Table 4 presents industry data for "old and large" domestic corporations, both foreign- and nonforeigncontrolled. This comparison used 3,854 FCDCs and 13,679 ODCs that were incorporated prior to 2006 and that had assets of $\$ 250$ million or more and/or receipts of $\$ 50$ million or more. Each of the industrial sectors and major groups shown in this table had at least $\$ 50$ billion of receipts by FCDCs.

Column 43 of Table 4 shows the percentage of returns that reported profits (i.e., positive net income). While 63.1 percent of FCDCs reported profits, 68.7 percent of other domestic corporations (ODCs) were profitable. Within each group of corporations, the percentage of corporations that reported a profit varied substantially across the industrial sectors. For this reason, it is important to compare the two types of corporations for a specific industry, rather than for all industries. Of the industries shown in Table 4, the percentage of profitable returns was highest in the petroleum and coal products manufacturing industry for both FCDCs (79.0 percent) and ODCs (82.1 percent). Additionally, the percentage of profitable returns was lowest in the transportation equipment manufacturing industry for both FCDCs (40.4 percent) and ODCs (53.1 percent).

Column 57 of Table 4 shows the ratio of net income (less deficit) to total receipts. ${ }^{18}$ Overall, net income (less deficit) as a percentage of receipts for FCDCs ( 0.6 percent) was considerably smaller than for ODCs ( 3.2 percent). Within each group of corporations, the ratio of profits to receipts varied across the industries. Certain industries, such as mining ( 12.6 percent for FCDCs and 10.1 percent for ODCs), reported high percentages. Other industries, such as securities, commodity contracts, and other financial investments and related activities (-26.6 percent for FCDCs and - 25.0 percent for ODCs), reported much lower percentages.

The ratio of taxable income (i.e., "income subject to tax") to total receipts is shown in column 61 of Table 4. This ratio, unlike the ratio of net income (less deficit) to total receipts discussed earlier, excludes deficits, and includes the amount of statutory special deductions reported on tax returns. FCDCs generally had lower ratios of taxable income to receipts than those of other domestic corporations, 3.3 percent for FCDCs versus 5.2 percent for ODCs for all industries. For each group of corporations, the ratio of taxable income to receipts varied among the different industries. For FCDCs, the ratio ranged from a low of 0.3 percent for utilities to a high of 13.5 percent for mining companies. For ODCs, the lowest ratio was 1.6 percent for retail food, beverage, and liquor stores, and the highest ratio was 11.3 percent for mining companies.

Table 4 also includes the ratio of total U.S. income tax after credits to total receipts (column 64). ${ }^{19}$ The total income tax after credits reported by both FCDCs ( $\$ 33.4$ billion) and ODCs ( $\$ 167.6$ billion) represents the tax liability of these companies as reported on their originally filed U.S. income tax returns (see column 42). The ratio of tax to receipts shown in column 64 of this table takes into account only the U.S. tax liabilities of the corporations. Additional data, which are beyond the scope of this

[^313]
## Figure H

Distribution of Returns by Industry for "Large" Foreign-Controlled and Other Domestic Corporations, Tax Year 2008

DOMESTIC CORPORATIONS NOT FOREIGN-CONTROLLED

NOTES: "Large" corporations are those with total assets of $\$ 250,000,000$ or more, and/or with business receipts of $\$ 50,000,000$ or more. (Total receipts are used in lieu of business receipts for the finance and insurance, and management of companies sectors.) Data exclude Forms 1120-REIT (real estate investment trusts), 1120-RIC (regulated investment companies), and 1120S (S corporations). Data also exclude returns in which the foreign ownership level is between 25 percent and 49 percent.

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
article, would be required to examine the worldwide tax liabilities of the corporations. ${ }^{20}$

Overall, while FCDCs reported average tax liabilities after credits of $\$ 0.87$ per $\$ 100$ of receipts (or 0.87 percent), other domestic corporations reported tax liabilities after credits of $\$ 1.15$ per $\$ 100$ of receipts (or 1.15 percent). FCDCs had a wide range, from a low of 0.10 percent for utilities to a high of 3.04 percent for mining companies. The range for ODCs was narrower, between a low of 0.53 percent for retail food, beverage, and liquor stores to a high of 2.17 percent for mining companies.

Table 4 highlights, once again, the differences in financial characteristics of corporations in different industries. For instance, looking at FCDCs, column 49 shows that retail food, beverage, and liquor stores had receipts equal to 212.5 percent of their assets, while companies handling securities, commodity contracts, and other financial investments had receipts of only 5.9 percent of their assets. Because the percentages of companies allocated by principal industrial activities are not the same for the FCDCs as they are for ODCs, this, again, illustrates the importance of comparing the two groups of corporations on an industry basis. This article will now look at two specific industrial sectors that are important to FCDCs, manufacturing and wholesale trade.

Manufacturing was a significant industrial sector for the oldest and largest FCDCs, accounting for 48.2 percent of the total receipts of the group of corporations. The percentage of manufacturing FCDCs that reported positive profits was lower than that for the ODCs, 59.3 percent and 66.5 percent, respectively (see column 43 of Table 4). Looking at the actual amounts of those positive profits and also accounting for losses reported by the remaining companies, the percentage of net income (less deficit) to total receipts was significantly higher for ODCs, 6.7 percent, than it was for FCDCs, 2.5 percent (see column 57 of Table 4). Net income (less deficit) as a percentage of total receipts for Tax Years 1999-2008 is shown in Figure I. The difference in the percentages for FCDCs and ODCs for Tax Year 2008 is similar to the differences for most of the 9 previous tax years.

Manufacturing ODCs reported taxable incomes of 7.1 percent of their receipts, while the percentage for FCDCs was considerably smaller at 3.6 percent (see column 61 of Table 4). The ratios of total income tax after credits to total receipts for ODCs and FCDCs were 1.1 percent and 0.9 percent, respectively (see column 64 of Table 4). The relative similarity of these tax to receipts ratios is partially explained by the difference in the amounts of credits that the two groups of corporations reported. ODCs reported larger credits than did the FCDCs, thereby reducing their postcredit tax liabilities by a larger portion. ODCs reported credits equaling 57.7 percent of their precredit income tax liabilities. For FCDCs, the percentage was substantially less, at 30.8 percent. For both groups of corporations, foreign tax credits accounted for most of the total credits.

Wholesale trade was also a significant industrial sector for the oldest and largest FCDCs, accounting for 20.3 percent of the total receipts of the group of corporations. The percentage of ODCs in this industrial sector that reported positive profits was higher than that for the FCDCs, 77.7 percent and 71.5 percent, respectively. Looking at the amounts of both profits and losses across the entire sector, the percentage of net income (less deficit) to total receipts was higher for ODCs ( 3.0 percent) than it was for FCDCs ( 0.9 percent). Figure I shows that the difference in percentages (of net income (less deficit) as a percentage of total receipts) between ODCs and FCDCs was mixed during the 1999-2003 period, but ODCs produced higher percentages over the 20042008 period.

Wholesale ODCs reported taxable incomes of 3.2 percent of their receipts, while the percentage was 1.7 for FCDCs. The ratio of total income tax after credits to total receipts was also higher for ODCs ( 1.0 percent) than that of FCDCs ( 0.6 percent). These latter percentages are once again impacted by the amount of credits claimed by both groups of corporations. ODCs and FCDCs claimed credits that equaled 11.5 percent and 7.1 percent, respectively, of their precredit income tax liabilities. For both groups of corporations, the foreign tax credit was the largest credit.

## Figure I

"Old, Large" Domestic Corporations: Net Income (Less Deficit) as a Percentage of Total Receipts for Selected Industries, by Control Status, Tax Years 1999-2008

| - | Domestic corporations not foreign-controlled |
| :--- | :--- |
| - Foreign-controlled domestic corporations |  |

NOTES: "Old" corporations are those with dates of incorporation prior to 2006, or with unknown dates of incorporation, "Large" corporations are those with total assets of $\$ 250,000,000$ or more, and/or with business receipts of $\$ 50,000,000$ or more. Data exclude Forms 1120 S (S corporations). Data also exclude returns in which the foreign ownership level is between 25 percent and 49 percent.

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011

## Summary

FCDCs accounted for only 1.1 percent of all corporation income tax returns filed for Tax Year 2008. This percentage is much smaller than the percentages of receipts ( 15.3 percent) and assets ( 14.2 percent) that those FCDCs produced.

The value of FCDC assets declined for 2008, as did the value of assets for all corporations. FCDC assets totaled $\$ 10.9$ trillion for 2008, a 2.5 -percent decrease from the previous year. By comparison, all corporations reported a total of $\$ 76.8$ trillion of assets for 2008, a 5.8 -percent decrease over the previous year. FCDCs accounted for 14.2 percent of total corporate assets for 2008, up from 13.7 percent for the previous year.

Foreign business activity in the United States through FCDCs grew for Tax Year 2008. FCDCs reported $\$ 4.4$ trillion of total receipts for the year, a 3.6-percent increase over the 2007 level. Total receipts reported on all U.S. corporation income tax returns actually decreased by a small percentage ( 0.6 percent) from the previous year. As a result, the share of total corporate receipts accounted for by FCDCs increased from 14.7 percent to 15.3 percent.

Two industrial sectors, manufacturing and wholesale trade, generated more than two-thirds of the $\$ 4.4$ trillion of total FCDC receipts. Manufacturers produced $\$ 2.0$ trillion of receipts, while wholesalers accounted for an additional $\$ 1.0$ trillion.

Domestic corporations controlled by persons in the United Kingdom reported total receipts of $\$ 1.1$ trillion, 24.1 percent of the FCDC total. In addition, FCDCs owned by persons in Japan ( 13.4 percent), Germany ( 9.9 percent), Canada ( 9.1 percent), France ( 6.8 percent), the Netherlands ( 6.7 percent), and Switzerland ( 6.2 percent) accounted for significant portions of receipts.

FCDC "net" profits dropped by 85.7 percent from those of the previous year. The collective net income (less deficit) reported by foreign-controlled domestic corporations decreased from $\$ 152.3$ billion for 2007 to $\$ 21.8$ billion for 2008 . To place the performance of FCDCs in context, total corporate profits also decreased, by 46.4 percent, totaling $\$ 1.0$ trillion for 2008.

FCDC "positive" profits (i.e., net income) decreased by 23.7 percent for 2008. The U.S. tax liability of FCDCs (i.e., total income tax after credits) moved in the same direction as did positive profits, decreasing from $\$ 52.8$ billion for 2007 to $\$ 38.2$ billion for 2008, or by 27.6 percent. To place this in perspective, the 2008 U.S. tax liabilities of all corporations were 31.0 percent lower than the previous year. Thus, FCDCs share of total corporate postcredit U.S. tax liabilities increased from 16.0 percent for 2007 to 16.7 percent for 2008.

Of the 66,797 foreign-controlled domestic corporations, the 4,400 "largest" companies accounted for most of the total amounts of key financial items (e.g., 94.6 percent of the total assets, 95.2 percent of the total receipts, 94.3 percent of the taxable income, and 93.2 percent of the total income tax after credits).

This article compared the 3,854 oldest and largest foreign-controlled domestic corporations to the 13,679 other old and large domestic companies for selected industries, focusing on the following four criteria: (1) percentage of corporations that reported profits, (2) percentage of net income (less deficit) to total receipts, (3) percentage of taxable income to total receipts, and (4) percentage of total income tax after credits to total receipts. While the results varied by industry and criteria, percentages reflecting ODC performance were more frequently higher than those reflecting FCDC performance. ${ }^{21}$

## Explanation of Selected Terms

The following are brief explanations of some of the terms used in this article. For more extensive definitions, see Statistics of Income-2008, Corporation Income Tax Returns, IRS Publication 16.

Alternative minimum tax-This tax was designed to ensure that a taxpayer with substantial economic income would have at least a minimum amount of income tax liability in spite of the legitimate use of exclusions, deductions, and credits. In effect, it provided a second tax system that curtailed or eliminated many of the means of reducing taxes allowed in the regular tax system and taxed the resulting alternative taxable income at a reduced rate. The AMT

[^315]
## Foreign-Controlled Domestic Corporations, 2008

Statistics of Income Bulletin | Summer 2011
is included in the amounts reported for both total income tax before (and after) credits.

Balance sheets-The balance sheet data presented in this article were the amounts reported by the taxpayer as of the end of the taxpayer's accounting year. Taxpayers were instructed to provide data that agreed with their books of account but were given very few other guidelines. Thus, the statistics for balance sheets contained more reporting variability than those for income statement and tax computation items. Since balance sheet data were from the taxpayer's books, they were normally governed by generally accepted accounting principles rather than the special rules of tax accounting. A number of steps were taken during statistical processing to reduce the variability due to taxpayer reporting practices. Misreported amounts were transferred to their proper accounts. Missing balance sheets were either supplied from reference books or statistically imputed based on other data and the company's characteristics. Some balance sheets were suppressed during statistical processing, including those for final returns of corporations going out of existence because they should have had either zero assets (if liquidating) or assets included in another corporation's return (if merging). Additionally, balance sheets of part-year returns (for the most part, by continuing corporations changing their accounting periods) were not included in the statistics because the same corporations' data could have been subject to inclusion from their fullyear returns.

Business receipts-These receipts were, in general, the gross operating receipts of the corporation reduced by the cost of returned goods and allowances. They represented all of a corporation's receipts except investment and incidental income. Business receipts also exclude gains from the sale of assets. Some corporations reported sales and excise taxes as part of their gross receipts from sales (and deducted these taxes as part of "cost of goods sold" or as "taxes paid"); others reported their receipts after adjustment for these taxes. Business receipts include rents reported by real estate operators and other corporations for which rent made up a significant portion of income. The latter corporations included manufacturers that rented their products, lessors of public
utility facilities, and companies engaged in rental services, such as lodging places and the rental of automobiles. Business receipts include such banking items as fees, commissions, and credit card income. Interest, the principal operating income of banking and other financial institutions, was excluded from business receipts; rather, it was included in the separate statistics for interest received. Also, premium income of most insurance companies was included in business receipts. Security dealers included profits from security trades in business receipts.

Constructive ownership rules-The constructive ownership rules of Internal Revenue Code (IRC) section 318 apply in determining if a U.S. corporation is foreign-owned. However, if a corporation is owned by two or more "unrelated" foreign persons, neither of which owned 50 percent or more of the corporation, then that corporation was excluded from the FCDC statistics even though, together, these persons may have met the 50 -percent-or-more ownership criterion. See also, "Foreign person," defined below.

Constructive taxable income from related foreign corporations-This item is the sum of includable income from Controlled Foreign Corporations (CFCs) and foreign dividend gross-up. IRC sections 951-964 ("Subpart F") created an exception to the general rule that the earnings and profits of CFCs were subject to U.S. taxation only when the income was actually distributed to U.S. shareholders. ${ }^{22}$ Under Subpart F, some types of foreign income are required to be included in the income of the U.S. shareholders, even if not actually distributed. This includable income comprises passive investment income, income from sources thought especially easy to shift between tax jurisdictions, and income from sources contrary to public policy. Foreign dividend gross-up is constructive taxable income to corporations that claim a foreign tax credit. A U.S. corporation could claim a foreign tax credit for a share of the foreign taxes actually paid by its related foreign corporations. The share of foreign taxes was treated as deemed paid by the U.S. corporation. In order to receive credit against U.S. tax, the foreign taxes deemed paid need to be included in the corporation's worldwide income. The dividend gross-up, which is the equivalent amount of the foreign taxes deemed

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
paid by the U.S. corporation, is included as income of the U.S. corporation. Constructive taxable income from related foreign corporations is not included in the statistics for total receipts.

Cost of goods sold-This item generally consisted of the costs incurred by corporations in producing the goods or providing the services that generated the business receipts. Included were costs of materials used in manufacturing; costs of goods purchased for resale; direct labor; and a share of overhead expenses, such as rent, utilities, supplies, maintenance, and repairs. For statistical processing purposes, however, certain items (such as advertising, amortization, bad debts, compensation of officers, depletion, depreciation, interest paid, taxes, and contributions to charitable organizations, employee benefit programs, and pension plans) reported by taxpayers in cost of goods sold schedules were transferred to their respective and separate deduction categories. For insurance companies, benefits paid (e.g., the death benefits paid by life insurance companies) were included in the cost of goods sold. In general, finance corporations did not have any cost of goods sold.

Current and noncurrent assets-In this article, current assets plus noncurrent assets equal total assets. Table 4 of this article includes separate data for current assets and noncurrent assets. Current assets include cash, notes and accounts receivable (less the allowance for bad debts), inventories, investments in government obligations, tax-exempt securities, and other current assets, such as short-term prepaid expenses and nontrade receivables. Noncurrent assets include loans to shareholders, mortgage and real estate loans, other investments, depreciable assets (less accumulated depreciation), depletable assets (less accumulated depletion), land, intangible assets (less accumulated amortization), and other assets, including those not identified on the tax return as either current or long-term.

Current and noncurrent liabilities-In this article, current liabilities include accounts payable; mortgages, notes, and bonds payable in less than 1 year; and other current liabilities, such as accrued taxes, payrolls, and other expenses. Noncurrent liabilities include loans from shareholders; mortgages, notes, and bonds payable in 1 year or more; and other liabilities, including those not identified on the tax return as either current or long-term.

Dividends received from domestic corpora-tions-These dividends represented most distribu-
tions from the earnings and profits of companies incorporated in the United States. They were generally used in computing the special deduction from net income for dividends received. Dividend distributions among member corporations electing to file a consolidated return were eliminated from the statistics as part of the consolidated reporting of tax accounts.

Dividends received from foreign corporationsThese were dividends paid from the earnings and profits of companies incorporated in foreign countries. This item does not include constructive taxable income from related foreign corporations (discussed above) because it was not an actual receipt. Dividends received from foreign corporations out of U.S. source earnings and profits or from Foreign Sales Corporations were usually eligible for the dividends received deduction. Not eligible were dividends out of foreign-source earnings and profits.

Foreign person-A foreign person (or entity) includes: (1) a foreign citizen or nonresident alien, (2) an individual who is a citizen of a U.S. possession (but who is not a U.S. citizen or resident), (3) a foreign corporation, (4) a foreign partnership, (5) a foreign estate or trust within the meaning of IRC section 7701(a)(31), and (6) a foreign government (or one of its agencies or instrumentalities) to the extent that it is engaged in the conduct of a commercial activity as described in IRC section 892.

Foreign tax credit-Although the United States taxes the worldwide income of U.S. persons (including corporations), foreign source income is often taxed as well by the country where the income is earned. The foreign tax credit provisions were enacted to mitigate the potential impact of the double taxation of foreign-source income. U.S. persons are allowed a credit against U.S. income tax for income taxes paid (or accrued) to foreign countries or U.S. possessions, subject to a limitation that prevented corporations from using foreign tax credits to reduce U.S. tax liability on U.S.-sourced income. A corporation that claimed the foreign tax credit could not also claim a business deduction for the same foreign taxes paid. The foreign tax credit was not allowed for taxes paid to certain foreign countries whose governments were not recognized by the United States, with which the United States severed or did not conduct diplomatic relations, or which provided support for international terrorism.

Income subject to tax-For most corporations, income subject to tax, i.e., taxable income, consisted

## Foreign-Controlled Domestic Corporations, 2008

Statistics of Income Bulletin | Summer 2011
of (positive) net income minus certain statutory special deductions. However, there were special provisions in the Internal Revenue Code for determining the taxable income of insurance companies, based on changes in their reserve accounts. Also, S corporations, regulated investment companies, and real estate investment trusts generally passed their net income on to be taxed at the shareholder level. They had limited tax liabilities (based on capital gains for S corporations and undistributed income for RICs and REITs) and, thus, small amounts of taxable income.

Income tax-This item was the amount of a corporation's tax liability calculated at the regular corporate tax rates. (However, there were certain exceptions for members of controlled groups and personal service corporations.) It is included in the amounts reported for both total income tax before (and after) credits. A small number of corporations without net income had an income tax liability under special life insurance rules.

Interest-This item is taxable interest, a component of total receipts. It includes interest on U.S. Government obligations, loans, notes, mortgages, corporate bonds, bank deposits, and dividends from savings and loans and mutual savings banks. This item does not include interest received from certain government obligations not subject to U.S. income tax, including those issued by States, local governments, the District of Columbia, and U.S. possessions.

Net income (or deficit)—This is a company's net profit or loss from taxable sources of income reduced by deductions allowed by the Internal Revenue Code. It reflects not only actual receipts, but "constructive" receipts as well (i.e., includable income from Controlled Foreign Corporations and the foreign dividend "gross-up"). Tax-exempt interest on State and local government obligations is excluded from this item, but is included in "total receipts." The deductions include ordinary and necessary business deductions, but do not include statutory special deductions. The statistics for (positive) net income are generally larger than those for "income subject to tax" because the latter is reduced by the amount of statutory special deductions, including the net operating loss deduction. In this article, for a group of returns, this item may be referred to as either "profits" (i.e., net income exceeds deficits) or "losses" (deficits exceed net income). On Form 1120, net income (or deficit) was reported on page 1, line 28, entitled "Taxable in-
come before net operating loss deduction and special deductions."

Net operating loss deduction (NOLD)—A statutory "net operating loss" (NOL) for a given tax year could be carried back, in general, 2 years to reduce the taxable income of those years. Similarly, any amount of the NOL not offset against income during that time could be carried forward to offset income for a period not exceeding 20 years. A "net operating loss" is calculated using the laws and IRS regulations in effect for a given tax year, and is the excess of allowable deductions over taxable income, with certain adjustments. The amount of the deduction included in the statistics of this article, however, consists only of losses from prior years carried forward and actually used to reduce taxable income for the current (2008) tax year. Losses incurred after Tax Year 2008 and carried back to that year at a later date were not reported on the tax returns used for this article. Net operating losses on which the 2008 deduction was based include: (1) the excess of ordinary and necessary business expenses over income for previous loss years, and (2) statutory special deductions claimed in a loss year for dividends received and for dividends paid on certain preferred stock of public utilities (or any excess of such deductions over net income).

Net worth-This item represents the shareholders' equity in the corporation, i.e., total assets less the claims of creditors. It is the net sum of capital stock, additional paid-in capital, appropriated retained earnings, and unappropriated retained earnings (including adjustments to shareholders' equity), minus the cost of treasury stock. Capital stock includes amounts of outstanding shares of both common and preferred stock. Additional paid-in capital comprises additions to the corporation's capital from sources other than earnings, including receipts from the sale of capital stock in excess of the stated value and stock redemptions or conversions. Retained earnings and profits of corporations can be appropriated (i.e., set aside for specific purposes such as for plant expansions or bond retirements) or unappropriated (dividends and distributions to shareholders are paid from these funds). Adjustments to shareholders' equity can be either positive or negative, and includes unrealized gains and losses on securities held "available for sale." Treasury stock is common or preferred stock originally issued by the corporation that has been reacquired and held at the end of the accounting period by the issuing corporation.

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011

Number of returns-The data contained in this article include the number of returns filed by "active" corporations (i.e., those reporting at least one item of income or deductions) for Tax Year 2008. For simplicity, the number of returns is sometimes referred to in this article as the number of corporations. However, the actual number of corporations may be larger than the number of returns because most domestic corporations could elect to file consolidated income tax returns. These returns were filed by common parent corporations and contained combined financial data of two or more affiliated domestic corporations meeting certain stock ownership requirements. Each consolidated return was treated for statistical purposes as a single unit.

Real estate investment trusts-Domestic corporations, trusts, and associations that meet certain ownership, purpose, income, and diversification requirements may elect to be taxed as real estate investment trusts (REITs). Foreign-controlled domestic corporations can be REITs. However, REITs played a much larger role for ODCs than for FCDCs. ${ }^{23}$ REITs generally invest in real estate and mortgages. A beneficial ownership of the trust is established through transferable shares or transferable certificates of beneficial interest. Among the income requirements, at least 95 percent of the total gross income of a REIT must come from dividends; interest; rents from real property; and gains from the sale of stock, securities, and real property; etc. Additionally, at least 75 percent of total gross income must be derived from rents from real property; interest on mortgages on real property; gains from sales of real property and mortgages; and dividends and gains from the sale of transferable shares in other REITs; etc. The tax liability of REITs is generally very low. This is because, through a statutory special deduction for dividends paid, REITs are not taxed on amounts distributed to shareholders. In general, REITs must distribute to their shareholders at least 90 percent of their taxable incomes. Such distributions are taxed to the shareholders (i.e., beneficiaries).

Regulated investment companies-A regulated investment company (RIC) is a domestic corporation registered with the Securities and Exchange Commission as a management company, business development company, unit investment trust, com-
mon trust fund, or a similar fund. Typically, it is a mutual fund. Foreign-controlled domestic corporations can be RICs. However, RICs played a much larger role for ODCs than for FCDCs. ${ }^{23}$ A RIC must meet certain Internal Revenue Code requirements, including deriving at least 90 percent of its gross income from dividends, interest, payments related to securities loans, and gains from the sale of stock or securities, foreign currencies, or other income related to its business of investing in such stock, securities, or currencies. The tax liability of RICs is generally very low. This is because, through a statutory special deduction for dividends paid, RICs are not taxed on amounts distributed to shareholders. In general, RICs must distribute to their shareholders at least 90 percent of their taxable incomes. Such distributions are taxed at the shareholder level.
$S$ corporations-An S corporation has elected to be taxed through its shareholders under Internal Revenue Code section 1362. The IRC contains restrictive criteria that a company must meet in order to qualify as an S corporation, which include the number and types of shareholders. These companies are involved in numerous industrial activities. They report corporate income and deductions from their conduct of trades and businesses, but generally allocate any income or loss to their shareholders to be taxed only at the individual level. S corporations comprise a very large part of the corporate population. However, foreign-controlled domestic corporations cannot elect to be treated as $S$ corporations. ${ }^{23}$

Statutory special deductions-This item is the sum of: (1) deductions for net operating loss carryovers from prior years, and (2) special deductions for dividends and other corporate attributes allowed by the Internal Revenue Code, which includes: (a) dividends received deductions, (b) deductions for dividends paid on certain stock of public utilities, (c) deductions for dividends paid by regulated investment companies and real estate investment trusts, (d) Internal Revenue Code section 857(b)(2)(E) deductions reported by real estate investment trusts, and (e) Code section 806(a) small life insurance company deductions. These deductions were in addition to ordinary and necessary business deductions. In general, net income less statutory special deductions equals income subject to tax.

[^316]
## Foreign-Controlled Domestic Corporations, 2008

Statistics of Income Bulletin | Summer 2011

Total assets-This item represented those assets reported in the end-of-year balance sheets of the corporations' books of account. Total assets were net amounts after reduction by accumulated depreciation, accumulated amortization, accumulated depletion, and the reserve for bad debts.

Total income tax before and after credits-For 2008, total income tax of FCDCs was primarily comprised of the income tax imposed on corporate income subject to tax ( 98.9 percent of the total tax). The alternative minimum tax accounted for 1.1 percent of the total. A small number of corporation income tax returns without net income reported amounts of income tax. The income tax, in these cases, resulted from special provisions of the Internal Revenue Code applicable to life insurance operations. Additionally, some taxes included in total income tax were not imposed directly on a corporation's income subject to tax, such as the recapture taxes. Thus, a small number of corporations without net income and income tax may have reported such taxes on their income tax returns. These taxes were included in the statistics for total income tax. Also included in total income tax were personal holding company taxes and the taxes on undistributed net capital gains of regulated investment companies. Total income tax included an adjustment that could be either positive or negative. This adjustment was used for write-in amounts on the tax computation schedule (e.g., Schedule J of Form 1120), as well as for differences in total tax reported on the tax computation schedule and reported on the tax and payments section of the tax return (e.g., Page 1 of Form 1120). For 2008, the credits used to reduce the total income tax of FCDCs primarily included the foreign tax credit ( 84.2 percent of the $\$ 11.2$ billion of total credits), the general business credit (11.7 percent), and the prior-year minimum tax credit ( 4.2 percent), as well as a small amount for the qualified zone academy bond credit.

Total receipts-This item includes all of the income actually (as opposed to constructively) received by a corporation and reported on its income tax return. It includes gross taxable receipts (i.e, business receipts, taxable interest, rents, royalties, most net capital gains, net noncapital gains, dividends received, and other receipts), before the deduction of cost of goods sold and ordinary and necessary business expenses. It also includes tax-exempt interest received on State and local government obliga-
tions. A domestic corporation (i.e., one incorporated in the United States), whether controlled by a foreign person or not, could have business activities in a foreign country, as well as in the United States. Thus, total receipts may include those from foreign branch operations of the U.S. company. Also, the total receipts of a domestic corporation conducting business abroad through foreign subsidiaries may include dividends remitted from those subsidiaries. However, total receipts exclude certain taxable income from related foreign corporations that is only constructively received by the domestic corporation. Long-term capital gains of regulated investment companies, as well as both short-term and long-term capital gains of S corporations, are also excluded.

Total receipts less total deductions-This item differs from the "net income (less deficit)" shown in the statistics in that it includes nontaxable interest received on State and local government obligations, and excludes constructive taxable income from related foreign corporations.

## Data Sources and Limitations

## Time Period Covered

Data for Tax Year 2008 are based on returns with accounting periods that ended between July 2008 and June 2009. These accounting periods were 12 months in length, or less for part-year accounting periods. As a result of the 12 -month span for ending accounting periods, the statistics shown in this article include accounting periods that began and ended within a 23 -month span. For Tax Year 2008, that span was from August 2007 through June 2009. Nevertheless, most of the income and expense data are, in fact, associated with Calendar Year 2008. Of the 66,797 FCDC returns filed for Tax Year 2008, 46,815 had accounting periods that ended in December 2008, 70 percent of the total. These returns accounted for 79 percent of both the receipts and deductions reported by all FCDCs, as well as 85 percent of the FCDC assets.

The sampling frame for the 2008 statistics consisted, in general, of tax returns with accounting periods that ended between July 2008 and June 2009, and that posted to the IRS Business Master File between July 2008 and June 2010. A 24-month sampling period was needed for several reasons. First, some corporations had noncalendar year accounting periods ending as late as June 2009. Second, while

# Foreign-Controlled Domestic Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
corporation returns must be filed within $21 / 2$ months after the close of the accounting period, many corporations requested and received filing extensions of 6 months. Third, normal administrative processing time lags required that the sampling process remained open until June 2010.

## Returns Covered

The number of returns shown in this article represents returns of "active" corporations, i.e., those that reported any income or deduction items. While any corporation in existence during any portion of the taxable year was required to file an income tax return (even though it may have been inactive, not having any income or deductions), the great majority of returns filed with the Internal Revenue Service were for active corporations. Part-year returns, those filed for accounting periods of less than 12 months, were included in the number of returns and other data shown in this article. Continuing corporations changing their accounting periods, new corporations in existence less than 12 months, merging corporations, and liquidating corporations filed such returns. To avoid double counting, data from the balance sheets of part-year returns were not included in the statistics, except for those from initial returns of newly incorporated businesses.

## Sample

This article presents statistical estimates based on a stratified sample of nearly 9,200 unaudited tax returns selected from nearly 66,800 returns of active domestic corporations controlled by a foreign person filed for Tax Year 2008. The statistics for FCDCs are based on samples of corporation income tax returns filed primarily on Form 1120 (U.S. Corporation Income Tax Return). In addition, the statistics for all FCDCs include data from the small numbers of other domestic corporation income tax returns filed on Forms 1120L (U.S. Life Insurance Company Income Tax Return), 1120-RIC (U.S. Income Tax Return for Regulated Investment Companies), 1120-REIT (U.S. Income Tax Return for Real Estate Investment Trusts), and 1120-PC (U.S. Property and Casualty Insurance Company Income Tax Return). For Tax Year 2008, FCDCs filed only 47 Forms 1120L, 369

Forms 1120-RIC, 114 Forms 1120-REIT, and 51 Forms 1120-PC. ${ }^{24}$ FCDCs could not file Forms $1120-\mathrm{A}, 1120-\mathrm{F}$, and 1120S. The statistics for the largest FCDCs shown in Figures G through I, and in Table 4, exclude Forms 1120-RIC and 1120-REIT.

Form 1120 sampled returns were stratified based on the size of total assets and the size of "proceeds" (which was used as a measure of income and was the larger of the absolute value of net income or deficit or the absolute value of "cash flow," i.e., net income plus depreciation plus depletion). Forms 1120L, 1120-RIC, 1120-REIT, and 1120-PC were sampled based solely on the size of total assets.

For 2008, the sampling rates for Forms 1120 alone (the majority of returns included in the sample) ranged from less than 1 percent to 100 percent. In general, Form 1120 returns with assets of $\$ 50$ million or more, or with "proceeds" of $\$ 10$ million or more, were selected for the Statistics of Income study at the 100 -percent sampling rate. Thus, most if not all of the "largest" FCDCs (and other domestic corporations as well) were selected at the 100 -percent rate. Therefore, sampling error is not considered to be a major concern for the large-corporation data shown in this article. For additional information on the sampling rates, see Statistics of Income-2008, Corporation Income Tax Returns.

Because the data presented are estimates based on samples, they are subject to sampling error. To properly use these data, the magnitude of the sampling error should be known. Coefficients of variation (CVs) are used to measure that magnitude. Figure J shows CVs for selected financial data of selected industrial sectors and selected countries of the foreign owners. For a general discussion of sampling procedures and CVs, see "SOI Sampling Methodology and Data Limitations" located near the back of this issue of the Statistics of Income Bulletin.

## Nonsampling Limitations

Nonsampling errors can be categorized as coverage errors, nonresponse errors, processing errors, or response errors. These errors can be the result of the inability to obtain information about all returns in the sample, differing interpretations of tax concepts or instructions by the taxpayer, inability of a corpora-

tion to provide accurate information at the time of filing (data are collected before auditing), inability to obtain all tax schedules and attachments, errors in recording or coding the data, errors in collecting or cleaning the data, errors made in estimating for missing data, and failure to represent all population units.

Returns were selected for this study based on taxpayers' responses to two questions that appeared on the various types of Form 1120. The first question asked whether one "foreign person" owned, directly or indirectly, 25 percent or more of the filing corporation's voting stock or of the total value of all the corporation's stock, at any time during the tax year. If this question was answered "Yes," then a second question asked for the percentage owned. ${ }^{25}$

If the first question was answered "Yes," and the second question was answered with a percentage between 50 and 100, then the return was included in the FCDC statistics. Taxpayers sometimes incorrectly answered these questions or did not answer them at all. ${ }^{26}$ However, prior to tabulation, corporations with large amounts of assets or receipts, and with changes in foreign ownership status between 2007 and 2008, were researched, and the answers to the questions were verified. These large corporations had a dominating effect on the estimates for balance sheet, income statement, and tax items.

Each return used for the statistics had an industry code reported, or was assigned one during administrative or statistical processing. The North American

[^318]
# Foreign-Controlled Domestic Corporations, 2008 

Industry Classification System (NAICS) was used as a classifier of the returns. The industry code represented the principal business activity (i.e., the activity which accounted for the largest portion of the total receipts) of the corporation filing the return. However, a given return may summarize the activity of a company engaged in several businesses or may have been a consolidated return filed for an affiliated group of corporations that conducted different business activities. To the extent that some consolidated (and nonconsolidated) returns covered corporations that were engaged in many types of business activities, the data in this article are not entirely related to the industrial activity under which they are shown.

There is an additional limitation related to data presented by industrial classification. Companies that sell similar products may not be classified in the same industry. For instance, those FCDCs that were primarily U.S. distributors of products made in foreign countries by their parent or other related companies were classified as wholesalers. However, other domestic corporations that were also distributors may have been included in consolidated returns covering both the manufacture and distribution of similar products and classified as manufacturers.

Each return was assigned a foreign country code during statistical processing that identified the owner's country. For individuals, it was the owner's country of residence. For all others, it was the country in which the foreign entity was incorporated, organized, created, or administered. To the extent that
a holding company or other affiliated entity was part of a chain between a U.S. subsidiary company and the ultimate foreign parent, the country data may be related to the holding company and, thus, not be related to the foreign country of the ultimate parent.

## Appendix A

REITs, RICs, and S Corporations Filed by Foreign-Controlled Domestic Corporations (FCDCs) and Other Domestic Corporations (ODCs), Tax Year 2008
[Money amounts are in millions of dollars]

| Type of corporation and item | FCDCs | ODCs |

[1] Includes domestic corporations with owners from Saint Christopher, Nevis, and Anguilla.
[2] Includes domestic corporations with owners from Russia, Armenia, Uzbekistan, Ukraine, Turkmenistan, Tajikistan, Sakhalin Island, Moldova, Kyrgyzstan, Azerbaijan,
Kazakhstan, Kurile Islands, Georgia, Belarus, and Estonia.
[3] Less than $\$ 500,000$.
NOTES: "New" corporations were those with dates of incorporation between 2006 and 2009; "old" corporations were those with dates of incorporation prior to 2006, or with unknown dates of incorporation. Countries shown in this table are those in which one or more of the following were present: (a) at least 750 returns, (b) at least $\$ 10$ billion of total assets, or (c) at least $\$ 5$ billion of total receipts. Detail may not add to totals because of rounding

[1] Excludes nontaxable interest received on State and local government obligations, which totaled $\$ 30.1$ billion for "old, large" domestic corporations not foreign-controlled, and $\$ 1.6$ billion for "old, large" foreign-controlled domestic corporations.
NOTES: "Old" corporations are those with dates of incorporation prior to 2006, or with unknown dates of incorporation. "Large" corporations are those with total assets of $\$ 250$ Data exclude Forms 1120-REIT (real estate investment trusts), 1120-RIC (regulated investment companies), and 1120S (S corporations). Data also exclude returns in which the foreign ownership level is between 25 percent and 49 percent. Percentages shown in table were calculated using rounded data. Detail may not add to totals because of rounding.

# Interest-Charge Domestic International Sales Corporations, Tax Year 2008 

by Daniel Holik

Interest-Charge Domestic International Sales Corporations (IC-DISCs) are domestic corporations formed for the purpose of providing limited incentives to small exporters of U.S. products and certain services. There were 1,917 active IC-DISC returns filed for Tax Year 2008, an increase from the 1,209 filed for 2006, the most recent year for which data are available. ${ }^{1}$ The increase in the number of IC-DISC returns filed reflected an expansion of IC-DISC economic activity. IC-DISC export gross receipts, one measure of overall IC-DISC export activity, increased by 89 percent from $\$ 19,286$ million for Tax Year 2006 to $\$ 36,528$ million for Tax Year 2008 (Figure A). ${ }^{2}$ Net income (less deficit) rose from \$1,731 million for Tax Year 2006 to $\$ 3,168$ million for Tax Year 2008. Finally, actual distributions to IC-DISC shareholders increased 67 percent, from $\$ 1,805$ million for Tax Year 2006 to $\$ 3,013$ million for Tax Year 2008.

## Background and Current Law

The IC-DISC entity was created by the Deficit Reduction Act of 1984 as a replacement for the Domestic International Sales Corporation (DISC). ${ }^{3}$ To become an IC-DISC, a corporation must be organized under the laws of a State or the District of Columbia. Parent shareholders-generally, other corporations, individuals, partnerships, trusts, or estates-form the IC-DISC entity by filing Form 4876-A, Election To Be Treated as an Interest-Charge DISC. This election is considered to be in effect as long as the IC-DISC meets the following requirements: (1) at least 95 percent of the IC-DISC's total receipts are "qualified export receipts" and (2) at least 95 percent of the adjusted basis of the IC-DISC's

Daniel S. Holik is an economist with the Special Studies Returns Analysis Section. This article was written under the direction of Chris Carson, Chief.
total assets are "qualified assets." ${ }^{4}$ Qualified export receipts arise from the sale or exchange of qualified export property by an IC-DISC. In general, export property is property made, grown, or extracted in the United States, by an entity other than an IC-DISC, for direct use or disposition outside the United States. In addition, qualified export receipts can be divided into two categories: receipts from the sale of export property and other qualified export receipts, which include payment for certain services provided by the IC-DISC, as well as certain types of passive income (e.g., qualified dividends, interest, and capital gains).

An IC-DISC is required to have only one class of stock, conform its tax year to that of the principal shareholder, and maintain separate books and records. For Tax Year 2008, 86.1 percent of IC-DISCs were majority-owned by individuals, partnerships, trusts, estates, or $S$ corporations; 11.7 percent were majorityowned by other corporations; and the remaining 2.2 percent reported no majority owner (Figure B).

By design, an IC-DISC provides a "tax-deferral" benefit to shareholders. No U.S. tax is imposed on certain types of IC-DISC income, i.e., payment of income tax is "deferred," until the income is either actually distributed or "deemed" distributed to shareholders. The IC-DISC entity is not taxed. IC-DISC taxable income that does not qualify for tax-deferral is deemed distributed to shareholders as a taxable dividend in the tax year in which it is earned, regardless of whether the income is actually distributed to shareholders or retained by the IC-DISC. In addition, a producer's loan may be made from the IC-DISC's accumulated tax-deferred income to its parent shareholders, in order to provide additional capital to the shareholders. ${ }^{5}$

An IC-DISC is required to: (1) calculate the tax-deferred portion of its "taxable income" each year; (2) accumulate tax-deferred income for the current tax year and prior tax years in a separate account; and (3)

## [1] Includes items not shown separately.

[2] Excludes shareholder's equity accounts.
NOTES: Detail may not add to totals because of rounding.
Tax Year 1996 IC-DISC statistics are presented in the Statistics of Income Bulletin, Fall 2000, Volume 20, Number 2.
Tax Year 2000 IC-DISC statistics are presented in the Statistics of Income Bulletin, Spring 2004, Volume 23, Number 4
Tax Year 2004, 2005, and 2006 IC-DISC statistics are presented in the Statistics of Income Bulletin, Winter 2010, Volume 29, Number 3.
report the total accumulated amount of tax-deferred income to its shareholders each year. (In Figure A, the sum of these accounts is the difference between Total assets and Total liabilities; they comprise the total shareholder's equity of IC-DISCs). IC-DISC shareholders must pay an interest charge on their share of IC-DISC-related deferred tax liability. This interest charge is determined using a compounded annual rate of interest equivalent to the average investment yield of U.S. Treasury bills with 52 -week maturities. ${ }^{6}$

Types of income not eligible for tax deferral include: taxable income derived from "excess qualified export receipts"; certain gains from the sale or
exchange of assets; one-half of IC-DISC taxable income attributable to the sale or exchange of military property; "international boycott income"; illegal bribes and kickbacks; and foreign investment attributable to "producer's loans." "Excess" qualified export receipts are certain "export gross receipts" in excess of \$10 million, a limitation intended to restrict IC-DISC activity to smaller businesses. For example, if the total of certain export gross receipts is greater than $\$ 10$ million for the tax year, taxable income derived from export gross receipts above this amount (e.g., "excess" qualified export receipts) is not eligible for deferral and is deemed distributed to shareholders.

Statistics of Income Bulletin | Summer 2011

## Figure B

Active Interest-Charge Domestic International Sales Corporations, by Type of Majority Shareholder, Tax Year 2008

## IC-DISC Receipts, Taxable Income, Excess Qualified Export Receipts, Deemed Distributions, and Actual Distributions to

 Shareholders for Tax Year 2008IC-DISCs reported $\$ 4,780$ million of gross income for Tax Year 2008. Of this amount, $\$ 4,552$ million ( 95 percent) was attributable to qualified export receipts. Most transactions generating qualified export receipts for Tax Year 2008 involved direct foreign sales to unrelated purchasers. The balance ( $\$ 182$ million) of qualified export receipts was from other qualified export receipts. Interest on "producer's loans" accounted for $\$ 11$ million of this amount.

After subtracting the cost of sales and operations ( $\$ 1,320$ million), total export promotion and other expenses ( $\$ 293$ million), the net operating loss deduction ( $\$ 2$ million), and the dividends received deduction ( $\$ 0.1$ million), IC-DISCs reported $\$ 3,165$ million of taxable income. For Tax Year 2008, $\$ 1,932$ million of taxable income was attributable to excess qualified export receipts and $\$ 1,811$ million
was deemed distributed. (Deemed distributions were also subject to certain limitations that are beyond the scope of this article.) ${ }^{7}$

After the subtraction of "deemed" and actual distributions (if any) to IC-DISC shareholders, the income remaining is considered to be tax deferred and is reported to shareholders on Schedule K, Shareholder's Statement of IC-DISC Distributions. Actual distributions to shareholders were $\$ 3,031$ million for Tax Year 2008, while tax-deferred IC-DISC income reported to shareholders was $\$ 537$ million (Figure A).

## Data by Size of IC-DISC Export Gross Receipts for Tax Year 2008

Table 1 presents selected Tax Year 2008 IC-DISC statistics, classified by size of IC-DISC export gross receipts. ${ }^{8}$ IC-DISC export gross receipts are a useful classifier for these statistics, because such receipts are the most complete measure of the total value of goods and services exported through use of the IC-DISC mechanism. Total assets, which traditionally are used as one classifier for corporation

[^333]
# Interest-Charge Domestic International Sales Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
returns by the Statistics of Income (SOI) Division of IRS, are not as good a measure of economic activity by IC-DISC returns, because the IC-DISC entity does not produce goods or services; the IC-DISC is solely an export mechanism for its shareholders. Hence, most IC-DISCs do not carry substantial inventories as assets on their balance sheets or report substantial assets associated with production of goods and services.

Table 1 shows that Tax Year 2008 IC-DISCs reported a wide range of export gross receipts. Certain returns showed zero export gross receipts-these returns were considered "active" returns because these IC-DISCs reported at least one item of deduction(s) or distribution(s). Other returns reported export gross receipts of more than $\$ 100$ million, even though the IC-DISC tax deferral mechanism is limited by law to the first $\$ 10$ million of export gross receipts. For Tax Year 2008, the largest number of IC-DISC returns reporting export gross receipts fell into the $\$ 0$ through \$1 million export gross receipts classification, while for Tax Year 2006, the largest number of IC-DISC returns was grouped into the $\$ 1$ million through $\$ 3$ million export gross receipts classification.

As expected, returns reporting export gross receipts more than $\$ 100$ million dominated the statistics shown in Table 1 for Tax Year 2008. Currentyear tax-deferred income reported to shareholders is the only consistent item where IC-DISC returns not classified in this grouping did not dominate the Tax Year 2008 statistics. Current-year tax-deferred IC-DISC income reported to shareholders does capture previous tax year income(s) for a given IC-DISC, hence it is not necessarily dependent on current-year export gross receipts. ${ }^{9}$

## Distribution of IC-DISCs by Selected Major Product or Service Group for Tax Year 2008

Table 3 presents detailed Tax Year 2008 statistics, such as IC-DISC assets, receipts (including total export gross receipts of IC-DISCs and related U.S. persons), deductions, income, distributions, and total qualified export receipts, and nonqualified receipts, classified by selected major and minor product or service group. The selected minor product or service groupings in Table 3 show which specific minor
products and services groupings comprise each major product or service group. For Tax Year 2008, almost 88 percent of all active IC-DISC returns reported the export of manufactured products as their major product or service, a proportion which was comparable to the figures for Tax Years 2005 and 2006. The two most frequently reported major product groups were machinery (other than electrical and electronics) and electrical and electronic machinery, equipment, and supplies, which together comprised slightly more than 27 percent of all active IC-DISC returns for Tax Year 2008. Combined, these two major product groups were responsible for 20 percent of total qualified export receipts and nonqualified receipts, 20 percent of taxable income, and 14 percent of taxable income attributable to excess qualified export receipts.

Other predominant major product groups included fabricated metal products, except ordnance, machinery, and transportation equipment; chemicals and allied products; primary and secondary nonfabricated metal products; and transportation equipment. Although only 8 percent of all active IC-DISCs for Tax Year 2008 reported chemicals and allied products as their major export, these IC-DISCs were responsible for 15 percent of current-year total export gross receipts of IC-DISCs, 19 percent of taxable income, and 26 percent of taxable income attributable to excess qualified export receipts. Further, more than 26 percent of total "deemed" distributions and 19 percent of actual distributions were accounted for by IC-DISCs in the chemicals and allied products industry.

For Tax Year 2008, 12 percent of active IC-DISCs (231 returns) reported the export of nonmanufactured products and services. Returns with computer software as their major export reported 5 percent of total qualified and nonqualified export receipts ( $\$ 255$ million); 8 percent of taxable income ( $\$ 250$ million); 12 percent of taxable income attributable to excess qualified export receipts (\$227 million); 13 percent of total amounts deemed distributed ( $\$ 226$ million); and 8 percent of actual distributions to shareholders ( $\$ 242$ million).

Figure C presents distributions of active IC-DISCs by selected major product or service group for the past 6 IC-DISC studies, spanning 12 tax years

| Professional, scientific, and controlling instruments | 44 | 43 | 43 | 57 | 94 | 122 |
| Miscellaneous and other manufactured products | 64 | 64 | 25 | 56 | 75 | 94 |
| Nonmanufactured products and services | 71 | 52 | 31 | 89 | 129 | 231 |

NOTE: Detail does not add to totals because selected major product or service groups are shown.
[1] Includes 7 returns for 1996 and 11 returns for 2000 in which the major product or service was not allocable.
between 1996 and 2008. Approximately 90 percent of IC-DISC returns reported the export of manufactured products as their major product or service for tax years prior to 2008, a proportion similar to that in Tax Year 2008. In addition, the two most frequently reported major product groups over the period were machinery (other than electrical and electronics) and electrical and electronic machinery, equipment, and supplies; these are the same two most frequently reported major product groups for 2008.

## Summary

There were 1,917 active IC-DISC returns filed for Tax Year 2008. IC-DISC export gross receipts, one measure of overall IC-DISC export activity, increased by 89 percent from \$19,286 million for Tax Year 2006 to $\$ 36,528$ million for Tax Year 2008. Net income (less deficit) rose from $\$ 1,731$ million for Tax Year 2006 to $\$ 3,168$ million for Tax Year 2008. Finally, actual distributions to IC-DISC shareholders increased 67 percent, from $\$ 1,805$ million for Tax Year 2006 to \$3,013 million for Tax Year 2008.

## Explanation of Selected Terms

Actual distributions to shareholders-Distributions from IC-DISC "earnings and profits" actually paid to shareholders of the IC-DISC.

Adjusted IC-DISC income subject to deferral computation -IC-DISC taxable income after subtracting certain amounts not eligible for tax deferral (e.g., amounts deemed distributed). For Tax Year 2008, adjusted IC-DISC income subject to the tax-deferral computation equaled IC-DISC taxable income minus the sum of: (1) gross interest from "producer's loans;"(2) certain gains from the sale or exchange of assets; (3) one-half of IC-DISC taxable income attributable to military property; and (4) IC-DISC taxable income attributable to "export gross receipts" in excess of $\$ 10$ million.

Amounts deemed distributed - The portion of the IC-DISC"s "earnings and profits" that was not eligible for tax-deferral and, hence, was characterized as a fully taxable dividend to IC-DISC shareholder(s). For Tax Year 2008, amounts deemed distributed equaled the sum of: (1) gross interest from "producer's loans";

# Interest-Charge Domestic International Sales Corporations, 2008 

Statistics of Income Bulletin | Summer 2011
(2) certain gains from the sale or exchange of assets; (3) one-half of IC-DISC taxable income attributable to military property; (4) IC-DISC taxable income attributable to "export gross receipts" in excess of $\$ 10$ million; (5) international boycott income; (6) illegal bribes and kickbacks; and (7) the amount of foreign investment attributable to producer's loans. In addition, for all shareholders that were C corporations, one-seventeenth of adjusted IC-DISC income subject to deferral was to be reported as a deemed distribution. ${ }^{10}$

Current-year tax-deferred income-IC-DISC taxable income after all current year taxable income amounts deemed distributed under Internal Revenue Code section 995(b)(1) were subtracted.

Export gross receipts-Export gross receipts of the IC-DISC represented "qualified export receipts" from: (1) the sale, lease, or rental of export property; (2) services related and subsidiary to any qualified sale, lease, or rental of export property; (3) engineering or architectural services for construction projects located outside of the United States; and (4) export management services provided to other unrelated IC-DISCs to aid in promoting qualified export receipts. For IC-DISCs that acted as commission agents, export gross receipts included total receipts on which the commission was earned, as well as the commission. Export gross receipts did not include passive income (dividends, interest, or capital or ordinary gains on sale of business property) received by IC-DISCs.

Export promotion expenses-Expenses (excluding income taxes) incurred by an IC-DISC to advance the sale, lease, or other distribution of export property for use, consumption, or distribution outside the United States.

Export property-Export property was inventory and property held for sale or lease which: (1) had been made, manufactured, produced, grown, or extracted in the United States by a "person" other than an IC-DISC; (2) was held primarily for sale or lease in the ordinary course of business for direct use, consumption, or disposition outside the United States; and (3) had, at the time of sale or lease by the IC-DISC, not more than 50 percent of its fair market value attributable to imported articles.

IC-DISC gross income-The sum of qualified and nonqualified receipts.

IC-DISC taxable income-IC-DISC net income minus statutory special deductions (i.e., the "net
operating loss deduction" and the dividends-received deduction). IC-DISC taxable income was computed to determine: (1) the IC-DISC's "earnings and profits" considered "deemed distributed" to IC-DISC shareholders for the current tax year; and (2) the interest charge on tax that would have been imposed on IC-DISC income had it not been subject to deferral.

Producer's loans-This qualified asset generally consisted of loans made from the IC-DISC's accumulated tax-deferred income to its parent company or any other U.S. person engaged in manufacturing, producing, growing, or extracting export property. A producer's loan must have been designated as such, have been evidenced by a note, have had a stated maturity not to exceed 5 years, and have been attributed to assets used in export production. If a producer's loan was renewed, it had to be requalified at the time of renewal. A producer's loan did not have to be traced to a specific investment by the domestic borrower, but was subject to certain limitations to assure it did not exceed the investment in assets that could have been attributable to production for export.

Qualified assets-Qualified export assets included: (1) export property; (2) assets used in performing engineering or architectural services; (3) accounts receivable attributable to export transactions; (4) working capital; (5) producer's loan obligations; (6) certain stocks or securities held by the IC-DISC; (7) certain obligations issued or insured by the U.S. Export-Import Bank or the Foreign Credit Insurance Association; and (8) certain other deposits.

Qualified export receipts-See export gross receipts.

Related U.S. persons-IC-DISC related U.S. persons were: (1) individuals who were citizens or residents of the United States and controlled the IC-DISC; (2) domestic partnerships, estates, or trusts that controlled the IC-DISC; (3) domestic corporations that controlled the IC-DISC; and (4) domestic corporations that were controlled by the same person(s) that controlled the IC-DISC. Control meant direct or indirect ownership of more than 50 percent of the voting power of the stock entitled to vote in an IC-DISC or other domestic corporation. Under the stock attribution rules of the Internal Revenue Code section 267(c), stock held by related family members is considered to be held as if the family is one shareholder.

# Interest-Charge Domestic International Sales Corporations, 2008 

Statistics of Income Bulletin | Summer 2011

Tax-deferred IC-DISC income reported to share-holders-This amount was reported on Form 1120-ICDISC, Schedule K, Shareholders Statement of IC-DISC Distributions. An interest charge on the tax that would otherwise have been paid currently on this income amount was computed by IC-DISC shareholders on Form 8404, Computation of Interest Charge on DISC-Related Deferred Tax Liability.

Total qualified export receipts and nonqualified receipts-This sum was used as the starting point for the computation of the IC-DISCs net and taxable incomes. For IC-DISCs that acted as commission agents, total qualified export receipts and nonqualified receipts excluded the total receipts upon which the commission was earned and therefore represent only the commission amounts. Total qualified export receipts and nonqualified receipts included passive income (dividends, interest, capital or ordinary gains) amounts received by IC-DISCs. IC-DISC passive income amounts may be characterized as either qualified export receipts or nonqualified gross receipts.

## Data Sources and Limitations

The Tax Year 2008 statistics in this article were compiled from Form 1120 IC-DISC returns with accounting periods ending between July 2007 and June 2008. Tax Year 2008 returns would have been filed during Calendar Years 2007, 2008, and 2009. The data presented excluded "inactive" IC-DISC returns. An IC-DISC was considered to be inactive if no receipts, deductions, income, or distributions were reported on the return. In addition, returns for corporations designated as "former DISCs" or "former ICDISCs" were excluded. Such corporations were those that had been disqualified as a DISC or an IC-DISC for a tax year prior to the Tax Year 2008 study. These disqualified DISC or IC-DISC entities were generally required to distribute any undistributed income that was previously taxed or accumulated DISC or IC-DISC income as a section 995(b)(2) distribution during a 10 -year period.

The Tax Year 2008 IC-DISC study was designed to include the entire population of IC-DISC returns;
however, certain returns (for example, late filed returns with extensions) were unavailable for the statistics. The complete 2008 study file included 2,100 returns: 1,917 returns were included in the statistics, while 183 returns were inactive. With regard to nonsampling error, some data were inconsistently reported by taxpayers. Where possible, such inconsistencies were resolved to reflect provisions of the Internal Revenue Code and taxpayer intentions.

The products and services classification system used in the 2008 IC-DISC study was generally based on Internal Revenue Service instructions provided to the taxpayer for completion of Schedule N, Export Gross Receipts of the IC-DISC and Related U.S. Persons. Products and services reported by a taxpayer on each specific return were reviewed for consistency with product information provided in supporting schedules and other taxpayer attachments and with the principal business activity described on the return. For example, a return was reviewed if the taxpayer indicated engineering services on Schedule N, despite the absence of any "engineering and architectural services income" on Schedule B, Gross Income. In addition, products and services reported by taxpayers on specific returns were reviewed for consistency with the major products and services group classification. Certain business activities, such as manufacturing, were not applicable to an IC-DISC. Therefore, an IC-DISC return reporting the manufacture of farm machinery equipment as the principal business activity would have been reviewed to ascertain if a more appropriate principal business activity was the wholesaling of farm machinery and equipment.

For purposes of this article, data classified by product or service were compiled using the IC-DISC's largest grossing export product (in terms of gross receipts), without regard to any entry for the IC-DISC's second largest product or service reported on the Schedule N. To this extent, the industry statistics contained in this data release may be slightly overstated for certain industries and slightly understated for others.

# Corporate Foreign Tax Credit, 2007 

by Scott Luttrell

5ince the introduction of the modern income tax in 1913, U.S. taxpayers have been taxed on their worldwide incomes, regardless of the source. U.S. corporations may be taxed on their foreignsource incomes by both the foreign jurisdiction in which the income was earned and the United States, resulting in the double taxation of foreign-source income. The foreign tax credit was adopted by the United States to alleviate this problem.

Under foreign tax credit provisions, the United States taxes worldwide income but allows a credit against the U.S. tax liability on foreign-source income for the income taxes paid to foreign countries. Taxpayers also have the option of deducting foreign taxes from their foreign-source taxable incomes; however, most corporations will elect to take the foreign tax credit because it offsets U.S. taxes dollar-for-dollar.

The foreign tax credit, introduced in the Revenue Act of 1918, has been modified numerous times. Initially, the foreign tax credit provisions allowed taxpayers an unlimited credit against U.S. income taxes for any taxes paid to or accrued in a foreign country. Therefore, for cases in which foreign tax rates exceeded U.S. tax rates, corporations were able to credit foreign taxes against their total U.S. income tax liabilities. The loss of revenues that resulted from this practice led Congress to amend the foreign tax credit provisions in 1921. This legislation introduced the "overall limitation," which restricted the foreign tax credit to an amount equivalent to the U.S. tax on all foreign-source taxable income. This was accomplished by limiting the foreign tax credit to the lesser of all creditable foreign taxes paid or an amount equal to the U.S. income tax multiplied by the ratio of foreign-source taxable income to worldwide taxable income. Though it has been fine-tuned over the years, the principle of "overall limitation" remains a vital part of the foreign tax credit to this day.

A "per-country" limitation, which required taxpayers to compute a foreign tax credit limitation on a country-by-country basis, was the next significant modification to foreign tax credit provisions. The intent was to constrain taxpayers from using taxes

[^338]derived from higher-tax foreign jurisdictions to offset U.S. taxes on incomes earned in lower-tax foreign countries. In various forms, the "per-country" limitation was a part of the foreign tax credit provisions from 1932 until 1976.

With the Revenue Act of 1962, taxpayers were required, for the first time, to calculate a separate limitation for a particular type of income. This legislation was designed to discourage corporations from shifting nonbusiness, lower-taxed income overseas. Typically, these investments generated additional foreign income with minimal tax, effectively increasing the limitation on the foreign tax credit. Segregation of this low-taxed nonbusiness income from other foreign income limited U.S. corporations from arranging foreign investments at the expense of U.S. tax revenue.

In the following years, Congress passed legislation requiring additional separate foreign tax credit limitation categories for various types of foreign income and for income from different industrial sectors. As recently as 2006, there were nine separate limitation categories. Each of the separate categories was intended to further discourage U.S. taxpayers from arranging their operations to maximize the foreign tax credit at the expense of paying taxes due on U.S.-source income.

Provisions of the American Jobs Creation Act of 2004, which took effect in 2007, reduced the number of categories. For 2007, taxpayers were required to compute a separate foreign tax credit limitation for each of the following statutory categories of foreign-source income or "baskets" (each of these is described separately in the Explanation of Selected Terms section of this article):

## - Passive income

- Income from U.S.-sanctioned countries per Internal Revenue Code section 901(j) ${ }^{1}$
- Income resourced by a bilateral income tax treaty
- All other income from outside the United States (commonly referred to as general limitation income).

The total foreign tax credit claimed is the sum of credits allowed in each separate limitation

[^339]

[1] Before adjustments.
[2] Current-year foreign taxes (column 2) divided by foreign-source taxable income (column 1).
[3] Current-year foreign taxes (column 6) divided by foreign-source taxable income (column 5).
[4] Sum of detail does not equal total because only selected categories are shown.
[5] Percentage not calculated because these separate limitation categories were phased out for 2007.
category. In certain instances, the total foreign tax credit claimed was reduced for participation in, or for cooperation with, international boycotts unsanctioned by the U.S. Government. ${ }^{2}$ Beginning with the Technical Amendments Act of 1958, Congress allowed for a carryover of "unused" foreign tax credits. In 2007, these provisions instructed that excess foreign taxes that could not be credited because of the current-year limitation could be carried back to the immediately preceding tax year (necessitating an amended return) or carried forward 10 years, subject to the current-year foreign tax credit limitation. As a result, the total foreign taxes for each separate limitation category for any given year include current-year foreign taxes plus taxes carried forward from previous years. ${ }^{3}$

## Impacts of Changes to Separate Limitation Categories

Section 404 of the American Jobs Creation Act of 2004 eliminated several separate limitation catego-
ries for foreign tax credit reporting purposes including: high withholding tax interest, financial services income, shipping income, dividends from a domestic international sales corporation (DISC) or former DISC, taxable income attributable to foreign trade income, and certain distributions from a foreign sales corporation (FSC) or former FSC. Income that was previously reported in any of those categories was considered for either the passive category income or general category income in 2007. The most significant change affected income formerly reported as financial services income. Most of the income reported as financial services income prior to 2007 was considered general category income for 2007.

Figure A shows foreign-source taxable income, current-year foreign taxes, current-year foreign taxes as a percentage of foreign-source taxable income, and carryover tax amounts for Tax Years 2006 and 2007, by separate limitation category. For 2006, the majority of foreign-source taxable income was reported in the general limitation income category

[^340]

| 2003 | 5,409 | 424,500,012 | 149,244,042 | 205,129,663 | 48.3 | 51,637,430 | 25.2 | 49,963,270 | 33.5 |
| 2004 | 5,502 | 533,194,188 | 187,480,142 | 241,493,136 | 45.3 | 61,156,800 | 25.3 | 56,593,276 | 30.2 |
| 2005 | 5,837 | 792,789,034 | 278,171,235 | 401,907,604 | 50.7 | 111,609,398 | 27.8 | 84,210,634 | 30.3 |
| 2006 | 6,947 | 847,400,555 | 296,836,560 | 335,545,482 | 39.6 | 85,971,728 | 25.6 | 78,225,098 | 26.4 |
| 2007 | 6,675 | 833,922,862 | 292,285,845 | 392,530,203 | 47.1 | 99,103,064 | 25.2 | 86,524,475 | 29.6 |

[1] "Worldwide taxable income" is also used to describe "income subject to U.S. tax."
[2] Foreign-source taxable income shown is before adjustments, such as for allocations of current-year U.S.-source losses and recapture of foreign losses
[3] The percentages shown in this column are not effective tax rates. An effective tax rate would contain a measure of economic income in the denominator and taxes on that income in the numerator. The percentages shown here are simply a tool used to determine what factors contributed to the relatively constant proportion of foreign tax credits to U.S. tax liability between 2003 and 2007.
NOTES: Detail may not add to totals because of rounding. All amounts are in current dollars
(74.9 percent), followed by financial services income (19.7 percent), and passive income (4.7 percent). Figure A shows that most of the foreign source taxable income from baskets that were eliminated in 2007 flowed into the general limitation category, which increased in its share of the total, to 94.8 percent. The share of taxable income reported in the passive basket remained relatively stable, rising 0.3 percent to account for 5.0 percent of the total. Not surprisingly, current-year foreign taxes followed the same pattern, with most taxes formerly reported in the financial services category moving to the general limitation category. The share of the total foreign taxes categorized as general limitation rose from 81.6 percent in 2006 to 96.8 percent in 2007, while passive income accounted for 3.0 percent in 2007, up slightly from 2.1 percent in 2006.

Income formerly reported in the financial services income category tends to be taxed at levels in between the relatively low rates associated with passive income and the relatively high rates associated with general limitation income. This point is illustrated in Figure A which presents current-year foreign taxes as a percentage of foreign-source taxable income between 2006 and 2007. With the inclusion
of income formerly categorized as financial services income, general limitation current-year foreign taxes, as a percentage of its foreign-source taxable income, dropped from 27.9 percent in 2006 to 25.8 percent in 2007. Meanwhile, passive income's share of this measure rose to 15.3 percent, up from 11.5 percent in 2006.

## Foreign Tax Credit and Related Components, 2003-2007

The 5 years from 2003 through 2007 were a period of solid economic growth for U.S. multinational firms, as reflected in several components of the foreign tax credit, shown in Figure B. Income subject to U.S. tax and U.S. income tax before credits increased by 96.4 percent and 95.8 percent, respectively, during this period. Foreign-source taxable income (less loss) rose by 91.4 percent from 2003 to 2007. Current-year foreign taxes increased by 91.9 percent and foreign tax credits claimed rose by 73.2 percent during this period. In order to understand why growth in foreign tax credits was lower than that of other measures, it is useful to consider the other factors included in the computation of foreign tax credits.

## Corporate Foreign Tax Credit, 2007

Statistics of Income Bulletin | Summer 2011

Current-year foreign taxes are the largest determinant of corporations' allowable foreign tax credit. The larger the amount of foreign taxes paid, the greater the foreign tax credit that can be claimed, subject to the effects of the limitation provisions. In addition to current-year foreign taxes, however, several additional factors affect the eventual foreign tax credit. In general, the total pool of foreign taxes available for credit is comprised of current-year foreign taxes, minus certain non-creditable currentyear foreign taxes, plus carryover of creditable taxes from prior years.

Different categories of reductions in current-year foreign taxes are detailed separately on Form 1118, Schedule G, Reduction of Taxes, Paid, Accrued, or Deemed Paid. The most common reduction is re-
lated to taxes paid on oil and gas extraction under Internal Revenue Code section 907. Other categories of reductions of foreign taxes are reported far less frequently but include those associated with certain types of foreign mineral income, taxes specifically attributable to participation in or cooperation with an international boycott, as well as a "failure to file" penalty for certain information associated with controlled foreign corporations or controlled foreign partnerships.

Figure C provides an illustration of the past 5 years of current-year taxes, with the reduction amount shaded at the top of each bar. Taxpayers were required to reduce their pool of current-year foreign taxes available for credit by $\$ 10.3$ billion for Tax Year 2007. The reduction represents 10.4

## Figure $C$

Reductions in Creditable Current-Year Foreign Taxes, Tax Years 2003-2007

NOTE: All amounts are in current dollars.

## Figure D

Carryover as a Percentage of Foreign Taxes Available for Credit, Selected Tax Years 1997-2007

percent of the current-year foreign tax amount and is consistent with the 10.5 -percent reduction in 2006. The reduction amount for 2005 was higher than normal due to reductions related to the section 965 one-time dividend repatriation. ${ }^{4}$ Excluding 2005, the average reduction amount for the other 4 years presented in Figure B is 8.9 percent.

The final component of the foreign tax credit equation involves carryover of foreign tax credits from prior years. The foreign tax credit provisions allow corporations to carry forward unused foreign tax credits for a period of up to 10 years and carry back to the previous year. ${ }^{5}$ All statistics included in
the article and associated data tables show only taxes that have been carried over from prior years; carryback taxes from future years are excluded. Corporations carried over $\$ 29.2$ billion of prior-year taxes for 2007, which was combined with the $\$ 88.8$ billion of creditable current-year foreign taxes.

Figure D shows carried-over taxes as a percentage of the total pool of taxes available for credit. The significance of carryover varied during the period from 2003 through 2007, although the general trend points toward the increasing importance of carryover in the most recent years compared with a decade ago. While the share of creditable foreign taxes ac-

[^341]
# Corporate Foreign Tax Credit, 2007 

counted for by carryover peaked in 2006 (40.4 percent), the 32.9-percentage share reported in 2007 still represents a significant increase from 17.4 percent for 1997.

The petroleum and coal products manufacturing industry has typically accounted for the largest amounts of carryover taxes. This is because the types of income earned by corporations in this sector tend to be taxed at higher rates and, therefore, are more likely to be subject to the foreign tax credit limitation provisions. For 2007, petroleum and coal products had 45.1 percent of all carryover taxes, more than three and a half times that of the second leading industry in terms of carryover taxes.

A summary of the factors affecting the foreign tax credit calculation for Tax Years 1997 and 2003 through 2007 can be found in Figure E. Column 5 shows the total amount of creditable taxes, after reductions and including taxes carried over from previous years. The limitation provisions of the foreign tax credit are reflected in the difference between the creditable taxes in column 5 and the foreign tax credits actually claimed in column 6. For 2007, foreign tax credits claimed totaled 73.4 percent of total taxes available for credit.

## Industry Composition

Figure F provides a summary of foreign income and taxes by U.S. corporations' industrial category, in-
cluding the number of returns, foreign-source taxable income, current-year foreign taxes, and foreign tax credit claimed. For 2007, as for past years, manufacturing corporations earned the most foreign-source taxable income, paid out the most current-year foreign taxes, and claimed the largest amount of foreign tax credit. Corporations classified as manufacturers received $\$ 233.5$ billion in foreign-source taxable income, 59.5 percent of the total. The $\$ 61.0$ billion paid in current-year foreign taxes by U.S. manufacturers accounted for 61.6 percent of the total. This allowed manufacturing corporations to account for 66.1 percent of the total foreign tax credit claimed for 2007.

The leading industrial sectors and groups in terms of percentage share of the total foreign tax credit were remarkably consistent during the 5 years between 2003 and 2007. The 26 corporations classified as petroleum and coal products manufacturers accounted for 32.7 percent of all foreign tax credits in 2007 (an average of $\$ 1.1$ billion per corporation). Petroleum and coal products manufacturers were consistently the leading group within the manufacturing industry, with a share of the foreign tax credit ranging from a low of 26.9 percent in 2003 to a high of 34.0 in 2006. Services corporations comprised the second largest percentage of the total foreign tax credit during 4 of the 5 years detailed in Figure F, although their share declined from a high of 11.2 per-

[1] Before adjustments.
NOTE: Detail may not add to the total for "All industries" because of rounding.
cent in 2003 to a low of 9.4 percent in 2007. Corporations classified in the finance, insurance, real estate, and rental and leasing section had the third largest share of the total foreign tax credit in 2003 through 2005, and again in 2007. The fourth largest share of the foreign tax credit in 2007 belonged to the mining sector. Mining corporations were noteworthy for a consistently rising share of the foreign tax credit, increasing from 2.5 percent in 2003 to 7.9 percent in 2007.

## Geographic Focus

Tax Year 2007 continued the longstanding trend of European nations accounting for large shares of key economic measures reported by corporations claiming a foreign tax credit. Figure G shows foreign-
source taxable income, current-year foreign taxes paid or accrued, and current-year tax deemed paid, by geographic region and select countries. Of the $\$ 392.5$ billion in foreign-source taxable income, 51.5 percent was from Europe, and, of the $\$ 99.1$ billion in current-year foreign taxes, 41.2 percent was paid to European countries. The 27 nations that comprise the European Union accounted for 32.6 percent of foreign-source taxable income and 27.3 percent of current-year foreign taxes.

Among geographic regions shown in Figure G, Asia and Latin America were second and third, respectively, with regards to economic measures related to the foreign tax credit in 2007. Foreignsource taxable income of $\$ 75.2$ billion was earned in Asia, which was 19.2 percent of the total; $\$ 22.2$ bil-

## Figure $G$

U.S. Corporation Returns With Foreign Tax Credit: Foreign-Source Taxable Income, Taxes Paid, and Taxes Deemed Paid by Geographic Region, Tax Year 2007

$\square$ Foreign-source taxable income $\square$ Current-year foreign taxes paid or accrued $\square$ Current-year tax deemed paid
lion or 22.4 percent of current-year foreign taxes paid or accrued were paid to Asian nations. Latin American countries accounted for $\$ 45.9$ billion or 11.7 percent of foreign-source taxable income and $\$ 12.4$ billion or 12.5 percent of current-year foreign taxes.

Figure H shows the percentage of foreign-source taxable income for the five countries with the largest shares of income. Corporations in the United Kingdom, Canada, Japan, the Netherlands, and Ireland
combined to account for 35.2 percent of foreign-source taxable income in 2007. Although much of the foreign income earned by corporations claiming a foreign tax credit is attributed to these five countries, the degree to which income is concentrated among leading countries is not as pronounced as it has been in past years. For example, as recently as 1997, the top five countries with respect to foreign-source taxable income combined to make up 44.4 percent of the total.

## Figure H

## U.S. Corporation Returns with a Foreign Tax Credit: Percentage of Foreign-Source Taxable Income, by Selected Country, Tax Year 2007

## Oil and Gas Extraction Income

U.S. taxpayers claiming a foreign tax credit related to foreign oil and gas extraction income (FOGEI) are required to identify and report foreign-source oil and gas extraction income, deductions, and taxes separately from all other foreign-source income on Form 1118, Schedule I, Reduction of Foreign Oil and Gas Taxes. Separate rules related to oil and gas extraction income, under section 907 of the Internal Revenue Code, affect the amount of foreign taxes available for corporations to credit. These provisions ban certain foreign levies from being credited and require another limitation calculation specific to foreign oil and gas extraction income. Foreign taxes paid, accrued, or deemed paid at a rate in excess of the statutory U.S. tax rate must be excluded from the foreign tax credit calculation. Foreign levies can also be excluded if they were not, in effect, income taxes, but rather royalty payments. Only income taxes, as defined by U.S. tax principles, are creditable under the foreign tax credit provisions. Voluntary payments in lieu of taxes and payments for a specific right (such as the right to extract a natural resource) or services are examples of payments that are not eligible for a foreign tax credit.

Figure I shows gross income from foreign oil and gas extraction by both selected industrial sectors and selected countries for 2007. As in past years, manufacturers of petroleum and coal products continued to account for the majority of FOGEI, with 86.9 percent. Mining corporations were second, with 12.2 percent, while all other industries combined for less than 1 percent.

Figure I also lists the countries in which corporations generated the largest amounts of gross income associated with foreign oil and gas extraction for 2007. As demonstrated in Figure I, foreign oil and gas extraction income earned in 2007 was dispersed among several countries with Norway (15.5 percent) as the only country accounting for more than 10 percent of the total. Corporations in Nigeria (10.0), the United Kingdom (9.1), Canada (7.3), Kazakhstan (6.6), and Bermuda (6.6) were the only

NOTE: Detail may not add to totals because of rounding.
other countries that accounted for at least 5 percent of total foreign oil and gas extraction income. In many instances, FOGEI is earned by foreign corporations controlled by the U.S. corporation claiming the foreign tax credit. Therefore, the source country reported for FOGEI may be the country of incorporation of the foreign company, not necessarily the same country where the income was generated.

## Summary

For 2007, 6,675 corporations claimed a total foreign tax credit of $\$ 86.5$ billion against their U.S. income tax liability. These corporations reported income subject to U.S. tax of $\$ 833.9$ billion, including $\$ 392.5$ billion in foreign-source income on which they paid current-year foreign taxes of $\$ 99.1$ billion. Foreign tax credits plus other credits enabled these corporations to reduce their U.S. income tax from $\$ 292.3$ billion to $\$ 192.8$ billion.

As in past years, corporations classified as manufacturers earned the most foreign-source taxable income, paid the most current-year foreign taxes, and claimed the largest amount of foreign tax credit in 2007. Within the manufacturing category, corporations classified as petroleum and coal products manufacturers accounted for nearly one-third of the total foreign tax credit. Services corporations had the second largest percentage of the total foreign tax credit during 2007, followed by the finance, insurance, real estate, and rental and leasing sector.

Among geographic regions, countries located in Europe tallied the largest shares of foreign-source taxable income, current-year foreign taxes paid or accrued, and current-year tax deemed paid. For corporations claiming foreign tax credits in 2007, those in the United Kingdom had the largest amounts of income and taxes among specific countries. Corporations in the U.K., along with Japan, Canada, the Netherlands, and Ireland, combined to account for more than 35 percent of foreign-source taxable income.

## Data Sources and Limitations

Internal Revenue Code section 901 specifies the provisions for the foreign tax credit. Corporations report the foreign income and taxes related to the credit on Form 1118, Computation of Foreign Tax Credit-Corporations, and attach it to their corpo-
rate tax returns. The statistics in this data release are based on information reported on Form 1118 and related corporate tax forms for those corporation income tax returns with a foreign tax credit that were included in the 2007 Statistics of Income sample of returns filed for corporations with accounting periods ending between July 2007 and June 2008. These returns were selected after administrative processing but prior to any amendments or audit examination. The 2007 corporation income tax return sample included Forms 1120, 1120-F, 1120-L, 1120-PC, and 1120-REIT. The statistics in this data release do not include any foreign tax credit data filed specifically for the computation of the alternative minimum tax (AMT), even if the corporation reported both the regular and AMT foreign tax credits.

There are small discrepancies between the more complete foreign tax credit data presented in this data release and those published in Statistics of Income-2007, Corporation Income Tax Returns.
Some of the differences can be attributed to returns selected for the Statistics of Income sample that were received too late to be included in the corporation income tax statistics. Also, this report incorporates additional data specifically requested for the foreign tax credit statistics from some corporations that submitted preliminary data on their original returns because they lacked complete information on their foreign operations at the time of filing.

Foreign income and taxes available for credit are understated to the extent that they were not reported on the Form 1118 filed with the Form 1120. Because amended returns are not included in this report, these statistics do not contain foreign taxes carried back from subsequent tax years. Likewise, corporations that could not claim a foreign tax credit because they did not have a U.S. tax liability are not included. Finally, some corporations may have deducted their foreign taxes from gross income rather than claim a foreign tax credit.

Because these estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CVs) are used to measure the magnitude of this sampling error. The CV concept is defined in the section on sampling variability in the SOI Sampling Methodology and Data Limitations section of this publication and can be found at www.irs.gov/taxstats. Figure J presents CVs for foreign tax credits

by selected North American Industry Classification System (NAICS) divisions and industrial sectors. The smaller the CV, the more reliable the estimate is judged to be.

## Description of Tables 1-3

Table 1, columns 2 through 14, presents statistics on assets, receipts, income, and taxes reported on the basic corporation income tax returns for those corporations that claimed a foreign tax credit. Columns 15 through 53 present statistics from Form 1118, Foreign Tax Credit Corporations. Columns 15 through 34 present statistics on foreign income (i.e., income from sources outside the United States, including
U.S. possessions) and deductions, reported primarily on Form 1118, Schedule A, Income or Loss Before Adjustments.

Although the amounts of oil and gas income and deductions (columns 22 and 35 , respectively) are included in the summary columns (i.e., columns 15 through 21 and 24 through 33), these amounts are also reported separately on Form 1118 (Schedule I, Reduction of Oil and Gas Extraction Taxes), because they are subject to special rules under Internal Revenue Code section 907 , which effectively requires a separate limitation calculation for taxes related to oil and gas extraction income. Foreign branch income (column 23) is also contained in the summary columns but reported separately on Form 1118 (Schedule F, Gross Income and Definitely Allocable Deductions for Foreign Branches).

Table 2 includes foreign income, deductions, and taxes paid, accrued, or deemed paid from Form 1118, by selected geographic region and country.

## Explanation of Selected Terms

Adjustments to taxable income-Foreign-source taxable income is adjusted, when applicable, by the allocation of current-year foreign losses, recharacterization of income due to prior-year loss allocations, adjustments related to overall foreign losses, including recapture of prior overall foreign losses, and allocations of current-year U.S. losses. See Table 1, column 37.

Carryover of foreign taxes-Corporations with tax years beginning prior to October 22, 2006, were able to carry taxes paid in excess of the limitation back up to 2 years and forward up to 5 years. The American Jobs Creation Act of 2004 extended the carryover period to 10 years and reduced the carryback period to 1 year. The 2007 statistics in this article include only foreign taxes carried forward from prior years.

Controlled foreign corporations (CFCs)—As defined in the Internal Revenue Code section 957(a), any foreign corporation in which U.S. shareholders own directly, indirectly, or constructively more than 50 percent of either the total combined voting power or total value of all stock on any day of the taxable year of the corporation.

Deemed dividends-Certain types of income earned by controlled foreign corporations (CFCs) are recognized under Subpart F of the Internal Revenue

Service Code as current-year income of the U.S. corporation, even if no income is actually received from the CFC in the current tax year. In such cases, the U.S. corporation is deemed to have received a prorata share of this income and is required to report it as a "deemed dividend" on Form 1118, Schedule A. See Internal Revenue Code section 951(a) for a more detailed description of income reported as deemed dividends.

Dividend gross-up-U.S. corporations that satisfy ownership and other requirements are permitted to take an indirect foreign tax credit for taxes paid on profits from which dividends were distributed. Under Internal Revenue Code section 78, these taxes are "deemed paid" by U.S. corporations under Internal Revenue Code sections 902 and 960(a). Consequently, the dividend income is "grossed-up" by the amount of taxes deemed paid on the income from which the dividend was paid.

Financial services income-This separate limitation income applies to certain income from financial services activities. It includes all income, including "passive income" (see below), that is generated from banking, insurance, financing, or similar activities, and from certain types of insurance investments. Financial services income includes "high withholding tax interest" (see below) and certain types of export financing interest. This category was phased out beginning with Tax Year 2007.

Foreign sales corporation (FSC)—A company incorporated abroad and usually controlled by a U.S. person. A portion of the FSC's "foreign trade income" is exempt from U.S. taxation. Congress repealed FSC provisions in 1999. Transition rules exempting transactions that were part of a binding contract with a FSC before September 17, 2003, were repealed in May 2006.

Foreign-source taxable income-Foreign-source taxable income is equal to gross income (less loss) less deductions from sources outside the United States, including U.S. possessions, and is included in the taxable income of U.S. corporations.

General limitation income-This separate limitation category, or basket, comprises foreign income not included in any other separate limitation category.

High withholding tax interest-This separate limitation category includes interest income subject to withholding tax of 5 percent or more, with the
exception of interest received from the financing of certain export activities. This category was phased out beginning with Tax Year 2007.

Income resourced by bilateral tax treaty-This separate limitation category includes certain U.S.source income that has been subject to tax in another country pursuant to a bilateral income tax treaty. In order to appropriately relieve double taxation, these items of income are reclassified by a treaty provision as arising from foreign sources. A separate foreign tax credit limitation must be computed for each amount resourced by a tax treaty.

Interest charge domestic international sales corporation (IC-DISC)-A corporation whose "qualified export receipts" constitute at least 95 percent of its gross receipts and which can classify at least 95 percent of its assets as "qualified export assets" can claim IC-DISC status. A small portion of the ICDISC's income is deemed distributed to the shareholder. The rest is not subject to U.S. taxation until it is actually distributed, although interest on the tax must be paid annually. This category was phased out beginning with Tax Year 2007.

Passive income-This separate limitation category includes dividends, interest, rents, royalties, annuities, and net capital gains, as well as commodity transactions not connected with the active conduct of a trade or business. Passive income subject to a foreign tax credit rate that exceeds the highest applicable U.S. tax rate is excluded from this separate limitation category and included in the general limitation category.

Section 901(j) income-This separate limitation category includes income and taxes paid to countries sanctioned by the United States. Internal Revenue Code 901(j) denies credit for taxes paid or accrued to these countries. For 2007, countries subject to these restrictions were Cuba, Iran, North Korea, Sudan, and Syria. Income and deductions from section 901(j) countries are reported on Form 1118, even though these taxes are not creditable. A separate limitation credit is computed for informational purposes and is not included in the foreign tax credit of the corporation.

Shipping income-This separate limitation category applies to certain income from shipping related activities. It includes the following: (1) all income from the use (or leasing for use) of a vessel or aircraft in foreign commerce, (2) income from services

## Corporate Foreign Tax Credit, 2007

Statistics of Income Bulletin | Summer 2011
directly related to the use of a vessel or aircraft, (3) gains on the sale or exchange of a vessel or aircraft used in the performance of such services, and (4) income generated from other space and oceanic activities not included elsewhere. This category was phased out beginning with Tax Year 2007.

Specifically allocable income-Internal Revenue Code section 863 provides special rules for determining taxable income from sources outside the United States with respect to gross income derived partly from within and partly from outside the United States.

Tax deemed paid-See "dividend gross-up."

Table 1. U.S. Corporation Income Tax Returns with a Foreign Tax Credit, 2007: Total Assets, Income, Taxes, and Credits, and Foreign Income, Deductions, and Taxes Reported on Form 1118, by Major and Selected Minor Industry

## Footnotes

* Data should be used with caution because of the small number of sample returns on which they were based.
[1] Interest-Charge Domestic International Sales Corporation (IC-DISC) and Domestic International Sales Corporation (DISC).
[2] Less than $\$ 500$.
[3] Includes adjustments and recapture of certain tax credits not included in column 11.
[4] In addition to the credits shown in columns 12 and 13 , this is after reduction by other credits, such as the jobs credit and the investment credit, which are not shown separately in this table.
[5] Included in gross income (less loss), columns 15-21. See notes below.
[6] Column 30 exceeds the sum of columns 31 through 33 because some corporations do not file a Schedule $H$ to support the not allocable deductions reported on Schedule $A$.
[7] Included in deductions, columns 24-33. See notes below.
[8] This calculation does not include the reduction for participation an international boycott and certain other adjustments. Therefore; the amounts presented in this column may differ slightly than subtracting the foreign tax credit (column 12) from the limitation (column 42). The difference between the foreign tax credit limitation and the foreign tax credit is a measure of the U.S. tax owed on foreign source corporate income. The foreign tax credit limitation is the ratio of foreign source income (after deductions) to total taxable income from all sources multiplied by the total U.S. income tax against which the credit is allowed. A limitation of this measure of the U.S. tax owed on foreign source corporate income is that it relies on the definition of foreign source income contained in the tax code. Thus, it assumes that the allocation of expenses to foreign source income accurately reflects the cost of earning that income. Current law also allows expenses allocable to foreign source income to be deducted even when all of the income associated with those expenses is deferred. In that case, the computed residual U.S. tax would be zero, rather than negative. In addition, the definition of foreign source income includes income that may be considered domestic source income, such as certain income from sales of U.S. inventory property.

NOTES: Detail may not add to totals because of rounding. Columns 2 through 14 present statistics on assets, receipts, income, and taxes reported on Form 1120 (Corporation Income Tax Return) series for corporations claiming a foreign tax credit. Columns 15 through 53 present statistics from Form 1118, Foreign Tax Credit-Corporations. Schedule references indicate the schedule of Form 1118 from which the data were obtained. Columns 15 through 34 present statistics on foreign income (i.e., income from sources outside the United States) and deductions reported primarily on Schedule A, Form 1118. Although the amounts of oil and gas income and deductions (columns 22 and 35 , respectively) are contained in the summary columns (i.e., columns 15 through 21 and 24 through 33), these amounts are also reported separately (on Schedule I) because oil and gas income is subject to special rules under Internal Revenue Code section 907, which may result in a reduction of foreign taxes available for credit. Foreign branch income and code section 863(b) income (income partly within and partly without the United States) also are included in the summary amounts reported in columns 15 through 21. Foreign branch income also is reported separately on Schedule F, shown in column 23. Total deductions not allocable to specific types of income (column 30) are equal to the sum of columns 31 through 33 (any differences are due to taxpayer reporting practices). Total foreign-source gross income (column 15) less total foreign deductions (column 24) is equal to foreign-source taxable income (less loss) before adjustments (column 36).

Adjustments to foreign-source taxable income (reported in column 37) include allocations of current-year U.S.-source losses and recapture of foreign losses, as well as other adjustments. These adjustments (reported on Schedule J) affect the numerator of the limitation fraction used to compute the foreign tax credit. The foreign-source taxable income (less loss) after adjustments (the numerator of the limitation fraction) is reported in column 38. The limitation fraction, which represents the ratio of foreign-source taxable income after adjustments to total (U.S. and foreign) taxable income after Statistics on foreign taxes are reported in columns 40 through 54. Data on foreign taxes paid, accrued, and deemed paid (through related foreign corporations or their subsidiaries) from Schedule B, Form 1118, are reported in columns 45 through 54 . Total foreign taxes paid or accrued (column 46 ) are the sum of columns 47 through 53. Total foreign taxes paid, accrued, and deemed paid (column 45 ) are equal to the sum of total taxes paid or accrued (column 46 ) and taxes deemed paid (column 54). Total foreign taxes paid, accrued, and deemed paid are then adjusted for certain items (e.g., reductions of foreign taxes under Code section 907 related to oil and gas income), which are reported in column 41, as well as carryovers of foreign taxes not credited in prior years, which are reported in column 42 . Thus, total foreign taxes available for credit (column 40) are equal to total foreign taxes paid, accrued, and deemed paid (column 45) less certain foreign taxes (column 41 ), plus any carryover of prior-year foreign taxes (column 42). adjustments, is applied to the total U.S. tax against which the credit is allowed to determine any limitation on the foreign tax credit.

Statistics on foreign taxes are reported in columns 40 through 54. Data on foreign taxes paid, accrued, and deemed paid (through related foreign corporations or their subsidiaries) from Schedule B, Form 1118, are reported in columns 45 through 54 . Total foreign taxes paid or accrued (column 46) are the sum of columns 47 through 53 . Total foreign taxes paid, accrued, and deemed paid (column 45) are equal to the sum of total taxes paid or accrued (column 46) and taxes deemed paid (column 54). Total foreign taxes paid, accrued, and deemed paid are then adjusted for certain items (e.g., reductions of foreign taxes under Code section 907 related to oil and gas income), which are reported in column 41 , as well as carryovers of foreign taxes not credited in prior years, which are reported in column 42. Thus, total foreign taxes available for credit (column 40 ) are equal to total foreign taxes paid, accrued, and deemed paid (column 45) less certain foreign taxes (column 41), plus any carryover of prior-year foreign taxes (column 42).

Table 2. U.S. Corporation Income Tax Returns with a Foreign Tax Credit, 2007: Foreign Income, Deductions, and Taxes Reported on Form 1118, by Selected Country to Which Foreign Taxes Were Paid [All figures are estimates based on a sample-money amounts are in thousands of dollars]

# Federal Estate Tax Returns Filed For 2007 Decedents 

by Brian Raub and Joseph Newcomb

There were an estimated 36,706 estate tax returns (Forms 706) filed for decedents who died in 2007. These decedents represented approximately 1.5 percent of all adult deaths during that year. Estate tax returns filed for 2007 decedents with total assets of $\$ 2$ million or more, the filing threshold in effect for that year, reported a combined $\$ 224.8$ billion in total gross estate. Publicly traded stock was the largest asset class for these decedents, accounting for $\$ 56$ billion, or 24.9 percent, of their combined asset portfolio. Investment real estate, taxexempt bonds, cash, and stock in privately held corporations combined to make up another 41.3 percent of their combined portfolio.

Just less than one-half of returns filed for 2007 decedents ( 47.3 percent) included a deduction for a bequest to a surviving spouse. The combined amount of these spousal bequest deductions was $\$ 65.8$ billion. About 1 in 5 returns included a deduction for charitable bequests. The combined total of these charitable bequest deductions was $\$ 27.9$ billion. After accounting for charitable bequest deductions, marital bequest deductions, and other deductions and credits, about 45.2 percent of returns filed for 2007 decedents reported an estate tax liability. These 16,608 taxable returns combined to report $\$ 24.6$ billion in net estate tax.

## Background on the Estate Tax

The Federal estate tax, passed into law with the Revenue Act of 1916 and described in Internal Revenue Code (IRC) section 2001, is neither a tax on property nor an inheritance tax on the receipt of property. Rather, the estate tax is a tax on the right to transfer property at death. The estate of a decedent who, at death, owns assets valued in excess of the estate tax applicable exemption amount, or filing threshold, must file a Form 706, U.S. Estate (and GenerationSkipping Transfer) Tax Return. For estate tax purposes, the value of property included in gross estate is its fair market value (FMV), defined as the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or to sell and both having reasonable knowledge of all relevant facts.

[^358]The gross estate consists of all property, whether real or personal, tangible or intangible. Specific items of gross estate include real estate, cash, stocks, bonds, businesses, and decedent-owned life insurance policies, among others. Assets of gross estate are valued on a decedent's date of death, unless the estate's executor or administrator elects to value assets on an alternate valuation date, 6 months from the date of death. Alternate value may be elected only if the value of the estate, as well as the estate tax, is reduced between the date of death and the alternate date.

Deductions allowed in the calculation of taxable estate, which is defined as gross estate less deductions, include funeral expenses, executors' commissions, attorneys' fees, other administrative expenses and losses, debts and mortgages, medical debts, marital bequests, and charitable contributions. Charitable contributions include all bequests to qualifying charitable institutions, including organizations that conduct religious, charitable, scientific, literary, and educational activities, among others.

An estate is subject to the estate tax law in effect on the decedent's date of death. The estate tax return is due 9 months from the date of death, although a 6 -month extension is commonly allowed. In a small number of cases, longer extensions may be granted. Therefore, several years of death will be represented in the population of estate tax returns filed in a given calendar year.

## The Federal Transfer Tax System

The estate tax is a key component of the Federal transfer tax system, which also includes with the gift tax and the generation-skipping transfer (GST) tax. The gift tax is applied to transfers of property during life. For Calendar Year 2011, an individual may give up to $\$ 13,000$ per year to any number of recipients with no Federal gift tax liability.

The GST tax was enacted to ensure taxation of wealth transfers from one generation to the next, regardless of the form of the transfer. Specifically, the GST tax was designed to prevent taxpayers from avoiding estate tax in one or more generations by transferring property, either directly or through trust, to individuals two or more generations younger than the transferor. Direct transfers that skip over a younger generation are taxed at the maximum marginal Federal estate tax rate under the GST and are also subject to the estate or gift tax.

# Federal Estate Tax Returns Filed For 2007 Decedents 

Statistics of Income Bulletin | Summer 2011

Since 1976, the Federal transfer tax system has featured a unified estate and gift tax rate schedule that applies to both cumulative lifetime gifts and wealth transfers at death. The estate tax exclusion and the lifetime gift tax exclusion are combined into a single "unified credit" that can be used to offset tax liability incurred both during the donor's life (gift tax) and at death (estate tax).

## A Decade of Changes

Between 2001 and 2010, Federal transfer tax law changed significantly, starting with the Economic Growth and Tax Relief Reconciliation Act (EGTRRA) of 2001. This legislation set forth a schedule of incremental increases to the estate tax and GST exemption levels, accompanied by a schedule of incremental decreases to the highest marginal tax rates for estate, GST, and gift taxes (Figure A). The exemption level for estates increased from $\$ 675,000$ for 2001 deaths to $\$ 3.5$ million for 2009 deaths. The highest marginal estate tax rate decreased from 55 percent for 2001 deaths to 45 percent for deaths in 2007-2009. For estate, gift, and GST taxes, the lowest marginal tax rate remained unchanged at 18 percent between 2001 and 2010.

Primarily because of the rising exemption levels, the number of estate tax returns filed for all decedents fell significantly between 2001 and 2009, from 108,071 to 38,031 (Figure B). Because most returns are filed in the year after the year of the decedent's death, the sharpest declines in the total number of returns filed occurred in the years following an increase in the exemption level. For example, in 2003, following an increase in the exemption level to $\$ 1$ million for 2002 deaths, the total number of returns filed fell 26.6 percent. Similar drops of 30.7 percent and 22.5 percent occurred in 2005 and 2007, following increases in the exemption level for 2004 and 2006 decedents. Likewise, the number of returns with an estate tax liability ("taxable returns") fell from 51,736 in 2001 to 14,713 in 2009. As shown
in Figure C, the number of taxable estate tax returns filed as a percentage of all adult deaths fell from 2.2 percent to 0.6 percent over this period. Despite the notable decrease in the number of estate tax returns filed between 2001 and 2009, the estate tax liability reported annually on taxable returns stayed within a relatively narrow of range of $\$ 20.6$ billion to $\$ 24.8$ billion during this period.

Under EGTRRA, the estate tax was scheduled to be repealed for 2010 decedents. After 2010, the estate provisions of this law were to "sunset," with a return to an estate tax exemption level of $\$ 1$ million and a top marginal estate tax rate of 55 percent for deaths in 2011 and future years. Although the 1 -year elimination of the estate tax under EGTRRA did occur as scheduled, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 effectively reinstated the estate tax on a retroactive basis for the estates of 2010 decedents with a $\$ 5$ million exemption level and a top marginal tax rate of 35 percent. ${ }^{1}$ This exemption level and top marginal rate will stay in effect for the estates of 2011 decedents. The estates of 2012 decedents will be subject to an exemption level of $\$ 5$ million plus an inflation adjustment and a top marginal rate of 35 percent. Without further action by Congress, the estate tax exemption level will return to $\$ 1$ million with a top marginal rate of 55 percent for the estates of individuals dying in 2013 and later years. ${ }^{2}$

In the following paragraphs, this article will focus on decedents who died in 2007, as the estates of these individuals were subject to the same estate tax law and general economic conditions.

## Demographic Profile of 2007 Decedents

The estimated 36,706 individuals who died in 2007 with $\$ 2$ million or more in gross estate had an average age of 79.7 years at death. As shown in Figure D, female decedents were somewhat older on average, 82 years, than their male counterparts, 78 years. Both male and female estate tax decedents outlived

[^359]

Federal Transfer Tax Rates and Exemptions, by Year of Transfer, 2001-2011

| Year of transfer | Estate tax and generation-skipping transfer (GST) tax exemption (\$) | Lowest estate and GST tax rate (percent) | Highest estate and GST tax rate (percent) | Gift tax exemption (\$) | Lowest gift tax rate (percent) | Highest gift tax rate (percent) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (1) | (2) | (3) | (4) | (5) | (6) |
| 2001 | 675,000 | 18 | 55 | 675,000 | 18 | 55 |
| 2002 | 1,000,000 | 18 | 50 | 1,000,000 | 18 | 50 |
| 2003 | 1,000,000 | 18 | 49 | 1,000,000 | 18 | 49 |
| 2004 | 1,500,000 | 18 | 48 | 1,000,000 | 18 | 48 |
| 2005 | 1,500,000 | 18 | 47 | 1,000,000 | 18 | 47 |
| 2006 | 2,000,000 | 18 | 46 | 1,000,000 | 18 | 46 |
| 2007 | 2,000,000 | 18 | 45 | 1,000,000 | 18 | 45 |
| 2008 | 2,000,000 | 18 | 45 | 1,000,000 | 18 | 45 |
| 2009 | 3,500,000 | 18 | 45 | 1,000,000 | 18 | 45 |
| 2010 [1] | 5,000,000 | 18 | 35 | 1,000,000 | 18 | 35 |
| 2011 | 5,000,000 | 18 | 35 | 1,000,000 | 18 | 35 |

[1] After initially being repealed for 2010 decedents by EGTRRA 2001, the estate tax was reinstated retroactively by the Tax Relief, Unemployment Insurance Reauthorization, and Job
Creation Act of 2010. The estates of 2010 decedents will be permitted to elect out of the estate tax and instead file the forthcoming Form 8939 , Allocation of Increase in Basis for Property Acquired From a Decedent. Estates making this election will lose the "step-up" in basis value conferred by the estate tax system, in which the basis of an asset for capital gains tax purposes is determined to be its market value at the time of the decedent's death, rather than the value at which the original party purchased the asset. This stepped-up basis value may reduce capital gains tax liability when an inherited asset is later sold. On the other hand, assets transferred through the election will not be subjected to estate taxation.

## Figure B

Number of Estate Tax Returns Filed, All Returns and Taxable Returns, Filing Years 2001-2009

## Number

## Figure C

Number of Taxable Estate Tax Returns as a Percentage of U.S. Adult Deaths, Filing Years 2001-2009

NOTE: Total adult deaths represent those of individuals age 20 and over, plus deaths for which age was unavailable, for the year prior to the Estate tax filing year. Data on adult deaths are taken from the National Vital Statistics Reports, National Center for Health Statistics, U.S. Department of Health and Human Services.
their counterparts in the general population. In 2007, the average age at death for men in the general population was 75.3 , or 2.7 years younger than that of male estate tax decedents. For women, the average at death for the general population was 80.4 , or 1.6 years younger than that of female estate tax decedents. This is consistent with research demonstrating that wealthier individuals live longer and are healthier than less wealthy individuals. ${ }^{3}$

Figure D also shows that the longevity of both the general population and the estate tax population improved overall between 1992 and 2007. For men in the overall U.S. population, longevity improved a total of 3 years over this period, while the improvement was a slightly better 3.4 years for males in the estate tax decedent population. For women in the overall U.S. population, the total longevity improvement was 1.3 years, trailing the 1.8 -year
improvement for females in the estate tax decedent population.

As shown in Figure E, males accounted for a majority, 56.8 percent, of 2007 estate tax decedents. Nearly half, 48.5 percent, of all decedents were married, although the marital status profile of male decedents was markedly different than that of their female counterparts. While 64.2 percent of male decedents were married and the other 35.8 percent were widowed or otherwise single, the corresponding percentages for female decedents were 27.9 percent and 72.1 percent, respectively. These differences in the marital status profile of estate tax decedents are primarily due to the likelihood of a male being the first to die in a traditional marriage-a function of the greater longevity of women relative to men and the fact that U.S. males are, on average, older at the time of first marriage than U.S. females. ${ }^{4}$

[^360]
## Figure D

Average Age at Death for Estate Tax and U.S. Decedents, Selected Years of Death, 1992-2007

NOTE: Life expectancy data produced by the National Center for Health Statistics, U.S. Department of Health and Human Services. See http://www.cdc.gov/nchs/fastats/deaths.htm.

## Asset Portfolios

In accordance with Internal Revenue Service (IRS) rules and to substantiate reported values of total gross estate, estate tax return preparers must report inventories of decedents' asset portfolios on Federal estate tax returns. Consequently, these returns provide a rich source of data on the asset holdings of decedents. For estate tax purposes, the value of property included in gross estate is fair market value (FMV). Reported asset values may be reduced from FMV by the use of valuation discounts for certain characteristics or qualities like minority ownership or lack of marketability. The estimates reported in this section are post-discount estimates, i.e., after the value of ownership interests have been reduced by any discounts.

Of the $\$ 224.8$ billion in gross estate reported by the estates of 2007 decedents, the largest share, 24.9 percent, was held in publicly traded stock (Figure F). Investment real estate made up the second-largest
share of the asset portfolio, at 13.5 percent. Taxexempt bonds and cash assets made up the thirdlargest and fourth-largest shares, at 9.8 percent and 9.1 percent, respectively. As shown in Figure F, the asset distribution of decedents' portfolios varied significantly with the size of total gross estate. In some figures and text below, estates are categorized by size of total gross estate: small (estates with less than $\$ 3.5$ million in gross estate), medium (estates with at least $\$ 3.5$ million but less than $\$ 5$ million in gross estate), and large (estates with $\$ 5$ million or more in gross estate).

Several asset types, including publicly traded and closely held stock, and limited partnerships, accounted for larger portions of the portfolio of larger estates than of smaller estates. Large estates had a portfolio consisting of 26.2 percent publicly traded stock, 12.2 percent closely held stock, and 4.7 percent limited partnerships. In contrast, medium estates consisted of 24.8 percent publicly traded stock, 4.0 percent

| Female decedents | $\mathbf{1 5 , 8 6 8}$ | 43.2 |
| Married | 4,423 | 12.0 |
| Widow or widowed | 9,544 | 26.0 |
| Single or other [1] | 1,901 | 5.2 |

[1] "Other" includes decedents who were legally separated or divorced at the time of their deaths, as well as decedents whose marital status was unknown
NOTE: Detail may not add to total because of rounding
closely held stock, and 1.7 percent limited partnerships. Small estates owned portfolios containing 21.4 percent publicly traded stock, 2.6 percent closely held stock, and 1.5 percent limited partnerships. In contrast, cash assets, personal residence, retirement assets, farms, insurance, and other financial assets all made up larger shares of the portfolio of small estates and smaller shares of the portfolio of larger estates.

As shown in Figure G, the asset composition of estates also varied significantly by the marital status and age of decedents. Overall, publicly traded stock was the largest asset type for both married and unmarried decedents, although unmarried decedents, on average, held more of their portfolios in this asset type, 27.7 percent to 21.9 percent. Unmarried decedents also held more of their assets in tax-exempt bonds (11.9 percent), cash assets (10.4 percent), Federal bonds ( 2.6 percent), and other financial assets ( 2.3 percent) than married decedents. Compared to their unmarried counterparts, married decedents tended to hold more of their portfolios in investment real estate, personal residences, limited partnerships, retirement assets, and insurance.

For both married and unmarried decedents, publicly traded stock made up a larger share of the portfolio of older decedents than of younger decedents. For the youngest unmarried decedents (under age 70), this asset made up 19.2 percent of portfolios. For unmarried decedents between 70 and 80 , this asset made up 23.9 percent of portfolios, and for decedents over age 80 , it made up 29.5 percent of portfolios. The same general pattern holds for married decedents. Along with publicly traded stock, tax-exempt bonds and cash assets made up a larger portion of the portfolio of older decedents, whether they were married or unmarried. For the youngest unmarried decedents, tax-exempt bonds made up 7 percent of their asset holdings, for the middle age group, 7.2 percent, and for the oldest group, 13.4 percent. A similar pattern can be observed for married decedents.

For both married and unmarried decedents, investment real estate made up a larger share of the combined portfolio of younger decedents than of older decedents. For the youngest married decedents, investment real estate made up 17.7 percent of the portfolio, for the middle age group, 15.9 percent, and for the oldest decedents, 14 percent. A similar pattern appears for unmarried decedents. Insurance also accounted for a larger share of the portfolio of younger decedents, whether they were married or unmarried. For example, insurance made up 7.2 percent of the portfolio of the youngest married decedents, compared to 1.6 percent of the portfolio of the middle age group, and 0.9 percent of the portfolio of the oldest decedents. This finding is consistent with research suggesting that households headed by older individuals tend to purchase less life insurance due to higher premiums and substitution with other financial assets. ${ }^{5}$

## Marital Bequests

As noted above, Federal estate tax law allows deductions in the calculation of taxable estate for funeral expenses, executors' commissions, attorneys' fees, other administrative expenses and losses, debts and mortgages, medical debts, marital bequests, and charitable contributions. Marital bequests, defined as assets bequeathed to a surviving spouse at death,

[2] Includes farm land.
[3] Value is shown net of policy loans.
NOTE: Detail may not add to total because of rounding
accounted for the largest value of deductions taken by the estates of 2007 decedents. Marital bequest deductions were claimed by the estates of nearly all ( 97.7 percent) 2007 decedents who were married at the time of death.

As shown in Figure H, marital bequests totaled $\$ 65.8$ billion, or 60.4 percent of the aggregate value of gross estate of married decedents. Estates with higher gross estate amounts claimed, on average, larger marital bequest deductions, as a percentage of gross estate, than their smaller counterparts. This was likely due, in part, to the fact that the maximum unified credit used in the calculation of estate tax liability, $\$ 2$ million for 2007 decedents, did not vary with the size of the estate. The fixed unified credit amount offsets a larger share of the potential estate
tax liability of smaller estates than of larger estates.
This enabled the executors of smaller estates to leave greater shares of estates to non-spousal heirs without incurring additional estate tax liability, as bequests to non-spousal heirs are not deductible in the calculation of taxable estate.

## Charitable Bequests

About 19.4 percent of all estate tax decedents who died in 2007 left bequests to qualifying charitable organizations (Figure I). ${ }^{6}$ Total charitable bequests were approximately $\$ 28.5$ billion, making up 12.7 percent of all decedents' total gross estate. Larger estates were more likely to report a charitable bequest than their smaller counterparts. While 15.4 percent of estates with a total gross estate greater than $\$ 2$ mil-

[1] Charitable bequests presented in this figure are gross charitable bequests. Unlike the charitable deduction value reported in Table 2 of this article, gross charitable bequests have not been reduced by Federal estate, generation-skipping, and State death taxes. Since the charitable deduction is not allowed for these taxes that are paid out of property designated for charity, gross charitable bequests are larger than the charitable deduction.
NOTE: Detail may not add to total because of rounding.
gregate bequests. This large percentage of aggregate bequests was largely driven by bequests from a small number of the wealthiest decedents. The 15 estates with the largest charitable bequests accounted for a combined total of more than $\$ 13$ billion in such bequests.

Charitable organizations can be divided into categories that describe their general activities as set forth in the National Taxonomy of Exempt Entities (NTEE) Classification System developed by the National Center for Charitable Statistics. ${ }^{7}$ As shown in

Figure J, decedent donors in the 2007 estate tax population left the largest share of total bequests, 72.3 percent, to organizations that promote philanthropy and volunteerism. This category includes private foundations, a type of charitable organization that is typically financed and controlled by an individual or family for a specific charitable purpose. ${ }^{8}$ Bequests to private foundations accounted for most of the aggregate dollar value of all bequests to organizations that promote philanthropy and volunteerism. For 2007 decedent donors, the 15 largest bequests to pro-

[1] National Taxonomy of Exempt Entities (NTEE) code is given in parentheses. In all, there are 26 entity types in the NTEE coding system. Here, the "other/unknown" category includes all entity types not specifically listed and entity types unknown. In Table 4 of this article, entity types are combined into 10 broad categories.
[2] Charitable bequests presented in this figure are gross charitable bequests. Unlike the charitable deduction value reported in Table 2 of this article, gross charitable bequests have not been reduced by Federal estate, generation-skipping, and State death taxes. Since the charitable deduction is not allowed for these taxes that are paid out of property designated for charity, gross charitable bequests are larger than the charitable deduction.
NOTE: Detail may not add to total because of rounding.
mote philanthropy and volunteerism went to private foundations.

Educational institutes received $\$ 2.9$ billion in bequests from decedents who died in 2007. These bequests represented 10 percent of total bequests. Religious and spiritual development charities received $\$ 1.2$ billion in bequests, or 4.1 percent of the total value of all bequests. This category does not include educational institutions, hospitals, etc., operated by religious groups, as institutions are allocated to charitable contribution categories by activity rather than ownership.

Figure J also shows that the charitable giving of decedents varies significantly by size of estate. Compared to the average estate, small estates left a much smaller share of their charitable bequests to philanthropic organizations, 18.3 percent. Small estates left substantially larger shares, 27.4 and 20.9 percent, respectively, to educational and religious organizations. Medium estates reported a somewhat larger share of bequests to philanthropic organizations, 29.2 percent, while the pattern of their remaining bequests was broadly similar to the smallest estates. Large
estates gave the majority of their bequests to philanthropic organizations, 78.3 percent, a figure primarily attributable to bequests to private foundations by the wealthiest decedents, as noted above.

## Taxable Returns

After accounting for the marital and charitable bequest deductions and other deductions and credits, fewer than half of the estimated 36,706 estate tax returns filed for 2007 decedents had a net estate tax liability, as shown in Figure K. The taxability of returns was closely linked to the marital status of the decedent, since the estates of nearly all married decedents claimed a marital bequest deduction to offset gross estate, thus reducing or eliminating estate tax liability. As a result of the marital bequest and other deductions, a much smaller percentage of returns filed for married decedents were taxable, 10.1 percent, as compared with returns filed for widowed or other decedents, 78.4 percent.

Figure K shows that the percentage of returns that were taxable also varied considerably by the age of the decedent. Only 25.1 percent of returns filed

## Figure K

## Estate Tax Returns Filed for 2007 Decedents, by Decedent Marital Status and Age

[All figures are estimates based on samples]

| Decedent marital status and age | All returns | Taxable returns | Percent |
| :---: | :---: | :---: | :---: |
|  | (1) | (2) | (3) |
| All decedents | 36,706 | 16,608 | 45.2 |
| Under 70 | 7,052 | 1,773 | 25.1 |
| 70 under 80 | 8,084 | 2,810 | 34.8 |
| 80 and older | 21,570 | 12,025 | 55.7 |
| Married decedents | 17,801 | 1,795 | 10.1 |
| Under 70 | 4,928 | 301 | 6.1 |
| 70 under 80 | 5,073 | 433 | 8.5 |
| 80 and older | 7,801 | 1,061 | 13.6 |
| Unmarried decedents [1] | 18,905 | 14,813 | 78.4 |
| Under 70 | 2,124 | 1,471 | 69.3 |
| 70 under 80 | 3,011 | 2,377 | 78.9 |
| 80 and older | 13,769 | 10,964 | 79.6 |

[1] "Unmarried decedents" includes decedents who were widowed, single, legally separated, or divorced at the time of their deaths, as well as decedents whose marital status was unknown.
NOTE: Detail may not add to total because of rounding.
for decedents under age 70 were taxable, compared to 34.8 percent of returns filed for decedents at least 70 but under 80 years old and 55.7 percent of returns filed for decedents age 80 or older. The higher percentage of taxable returns among returns filed for older decedents is largely due to the relationship between age and marital status, as a higher percentage of older decedents were widowed compared to their younger counterparts.

As shown in Figure L, a higher percentage of returns filed for decedents with large gross estates were taxable compared to returns filed for less wealthy decedents. While only 40.2 percent of returns filed for decedents with $\$ 2$ million but less than $\$ 3.5$ million in gross estate were taxable, the figure for returns filed for the wealthiest decedents, those with $\$ 20$ million or more in gross estate, was 63.1 percent. Figure L also shows a relationship between decedent marital status, size of gross estate, and taxability of the estate tax return. Of returns filed for married decedents, the percentage that were taxable ranged from 5.1 percent for decedents with $\$ 2$ million but less than $\$ 3.5$ million in gross estate to 37.1 percent for returns filed for the wealthiest decedents. The pattern was similar for returns filed for unmarried decedents, with the percentage taxable ranging from
78.4 percent for returns filed for decedents with the smallest estates to 93.5 percent for returns filed for the wealthiest decedents.

## Summary

An estimated 36,706 individuals died in 2007 with total gross estates of $\$ 2$ million or more, the threshold for filing the estate tax return, Form 706. These decedents reported a combined $\$ 224.8$ billion in total gross estate, with publicly traded stock, investment real estate, and tax-exempt bonds accounting for the largest shares of their combined portfolio.

Bequests to a surviving spouse and bequests to charity made up most of the deductions claimed against total gross estate. The returns of nearly all married decedents included a spousal bequest deduction. About 1 in 5 of all returns included a deduction for charitable bequests. A higher percentage of decedents with the largest estates made charitable be-

| \$3.5 million < \$5.0 million | 3,215 | 2,863 | 89.1 |
| $\$ 5.0$ million < \$10.0 million | 2,855 | 2,576 | 90.2 |
| \$10.0 million < \$20.0 million | 1,041 | 964 | 92.6 |
| \$20.0 million or more | 550 | 514 | 93.5 |

[1] "Unmarried decedents" includes decedents who were widowed, single, legally separated, or divorced at the time of their deaths, as well as decedents whose marital status was unknown.
NOTE: Detail may not add to total because of rounding.

## Federal Estate Tax Returns Filed For 2007 Decedents

Statistics of Income Bulletin | Summer 2011
quests, and these decedents left, on average, a larger share of total gross estate to charity.

Just less than half of all estate tax returns filed for 2007 decedents included a net estate tax liability, but the taxability of returns varied significantly by marital status and size of gross estate. Most estate tax returns filed for unmarried (mostly widowed) decedents had a net estate tax liability, including 93.5 percent of returns filed for unmarried decedents with $\$ 20$ million or more in gross estate.

## Data Sources and Limitations

Analysts in the Special Projects Section of SOI's Special Studies Branch, with SOI staff in the Cincinnati Submission Processing Center, conduct the Estate Tax Study, which extracts demographic, financial, and bequest data from Form 706, the Federal estate tax return. SOI conducts the Estate Tax Study on an annual basis, which allows annual production of filing year data on estate taxation. By focusing on a single year of death for a period of 3 years, SOI is also able to produce periodic year-of-death estimates. Year-of-death estimates are advantageous in that the included estates have been subject to the same tax law and similar economic conditions. A single year of death is sampled for 3 calendar years, and 99 percent of all returns for decedents who die in a given year are filed by the end of the second calendar year following the year of death. The Estate Tax Study for the period 2007-2009 concentrates on year-ofdeath 2007, the most recent year-of-death estimates available.

For each study year, 2007-2009, a sample was selected from returns filed. The sample for Filing Year 2007 included 9,674 returns out of a total population of 38,000 . In 2008, the year in which most returns for 2007 decedents were filed, 11,710 returns were sampled out of a total of 38,354 . There were 9,105 returns from a total population of 33,515 sampled during Filing Year 2009. Of the 30,489 returns sampled during 2007-2009, there were 12,426 returns filed for 2007 decedents.

Estate tax returns were sampled while the returns were being processed for administrative purposes, but before any audit examination. Returns were selected on a flow basis, using a stratified random probability sampling method, whereby the sample rates were preset based on the desired sample size and an estimate of the population. The design had three stratification variables: year of death, age at
death, and size of total gross estate plus adjusted taxable gifts. For the 2007-2009 filing years, the year-of-death variable was separated into two categories: 2007 year of death and non-2007 year of death. Age was disaggregated into four categories: under 40, 40 under 50, 50 under 65, and 65 and older (including age unknown). Total gross estate plus adjusted taxable gifts was limited to six categories: under $\$ 1.5$ million, $\$ 1.5$ million under $\$ 2$ million, $\$ 2$ million under $\$ 3$ million, $\$ 3$ million under $\$ 5$ million, $\$ 5$ million under $\$ 10$ million, and $\$ 10$ million or more. Sampling rates ranged from 1 percent to 100 percent. Returns for more than half of the strata were selected at the 100 -percent rate.

Because almost 99 percent of all returns for decedents who die in a given year are filed by the end of the second calendar year following the year of death, and because the decedent's age at death and the length of time between the decedent's date of death and the filing of an estate tax return are related, it was possible to predict the percentage of unfiled returns within age strata. The sample weights were adjusted accordingly, in order to account for returns for 2007 decedents not filed by the end of Filing Year 2009.

## Explanation of Selected Terms

Brief definitions of some of the terms used in the tables are provided below:

Adjusted taxable estate-This is the sum of taxable estate and adjusted taxable gifts.

Adjusted taxable gifts-Certain gifts made during the life of an individual who died before 1982 were automatically included in the gross estate. However, for the estate of an individual who died after 1981, these gifts were not generally included in the gross estate. Instead, they were added to the taxable estate, creating the "adjusted taxable estate" for the purposes of determining the "estate tax before credits."

Bequests to surviving spouse-This is the value of property interests passing from the decedent to the surviving spouse, and it is taken as a deduction from the total gross estate.

Charitable deduction-This is the deduction allowable for decedent's contributions to qualifying charitable organizations.

Estate tax before credits-This is the tax obtained by applying the graduated estate tax rates to the adjusted taxable estate reduced by the amount of Federal gift taxes previously paid.

## Federal Estate Tax Returns Filed For 2007 Decedents

Statistics of Income Bulletin | Summer 2011

Exclusion or exemption amount-The value of property transfers that individuals may give during life or at death.

Federal gift taxes previously paid-A credit was allowed against the estate tax for the Federal gift tax paid on a gift made by a decedent before 1977. No credit, apart from the unified credit, is allowed for any gift tax paid on gifts made after 1976.

Filing threshold-Same as exclusion or exemption amount.

Net estate tax-This is the tax liability of the estate after subtraction of credits for State death taxes, foreign death taxes, credit for tax on prior transfers, and Federal gift taxes previously paid. In addition, a unified credit, graduated according to the year of death and a "credit" for gift taxes paid on post-1976 gifts, is allowed (see also "unified credit").

Net worth-Net worth is equal to total gross estate less mortgages and other debts calculated at a decedent's date of death.

Nontaxable return-A nontaxable return is one with no estate tax liability after credits.

Other tax credits-This is the sum of all tax credits for foreign death taxes, Federal gift taxes, and taxes on prior transfers taken as a deduction against the estate tax before credits.

Tax on prior transfers-A tax credit is allowed for Federal estate tax paid on property received by the decedent or the estate from a transferor who died within 10 years before, or 2 years after, the decedent. The credit is intended to lessen the burden of double taxation between successive estates whose owners had died within a short period of time. Depending on the time that has elapsed between the deaths, a credit is allowed for all or part of the Federal estate tax paid by the transferor's estate with respect to the transfer.

Taxable estate-Taxable estate is the base to which the graduated Federal estate tax rates are applied in computing the estate tax before credits.

Taxable estate is equal to the value of the total gross estate less deductions for the following: funeral and administrative expenses; casualty and theft losses; debts, mortgages, losses, and other claims against the estate, including pledges to charitable organizations; bequests to the surviving spouse; and the employee stock ownership plan (ESOP) deduction (included in the statistics for "other expenses and losses").

Taxable return-A taxable return is one with estate tax liability after credits.

Total gross estate-An estate tax return is required in the case of every decedent whose gross estate, at the date of death, exceeded the legal filing requirement in effect for the year of death. For estate tax purposes, the gross estate includes all property or interest in property before reduction by debts (except policy loans against insurance) and mortgages, or administrative expenses. Included in the gross estate are items such as real estate, tangible and intangible personal property, certain lifetime gifts made by the decedent, property in which the decedent had a general power of appointment, the decedent's interest in annuities receivable by the surviving beneficiary, the decedent's share in community property, life insurance proceeds (even though payable to beneficiaries other than the estate), dower or curtesy of the surviving spouse (inherited property), and, with certain exceptions, joint estates with right of survivorship and tenancies by the entirety. In this article, total gross estate refers to the value of assets at the date of the decedent's death.

Unified credit-The unified credit is applied as a dollar-for-dollar reduction in estate and/or gift taxes. The unified credit represents the amount of tax on that part of gross estate that is below the filing requirement. The credit must be used to offset gift taxes on lifetime transfers made after 1976. However, to the extent it is so used, the amount of credit available at death is reduced.

[^368]d-Data were deleted to prevent disclosure of individual taxpayer data. However, the data are included in the appropriate totals
[1] Includes U.S. territories, U.S. citizens domiciled abroad, and a small number of returns for whom State of residence was unknown
NOTE: Detail may not add to total due to rounding.

# SOI Sampling Methodology and Data Limitations 

This article discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports. More technical information is available, on request, by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

## Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on such criteria as: industry, presence or absence of a tax form or schedule, and various income factors or other measures of economic size (such as total assets, total receipts, size of gift, and size of estate). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years- 3 for corporations because of the incidence of fiscal (noncalendar) year reporting and extensions of filing time. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from those planned. However, these factors do not compromise the validity of the estimates.

The probability of a return's selection depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated pro-
cessing costs or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the Social Security number (SSN) or the Employer Identification Number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TINs designated from one year's sample are, for the most part, selected for the next year's, so that a very high proportion of the returns selected in the current year's sample are from taxpayers whose previous years’ returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

## Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. "Weights" are computed by dividing the count of returns filed for a given stratum by the number of population sample returns for that same stratum. These weights are usually adjusted for unavailable returns and outliers. Weights are used to adjust for the various sampling rates used, relative to the population-the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "poststrata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these poststrata using additional population counts. The data on each sample return in a stratum are then multiplied by that weight. To produce the tabulated estimates, the weighted

> Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

## SOI Sampling Methodology and Data Limitations

## In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.

data are summed to produce the published statistical totals.

## Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different samples usually
vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports, the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its CV to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68 -percent confidence interval estimate:

| 150,000 | (sample estimate) |
| ---: | :--- |
| $\times 0.02$ | (coefficient of variation) |
| $=3,000$ | (standard error of estimate) |

then:

$$
\begin{aligned}
150,000 & \text { (sample estimate) } \\
+ \text { or }-3,000 & \text { (standard error) } \\
=\{147,000,153,000\} & \text { (68-percent confidence } \\
& \text { interval) } .
\end{aligned}
$$

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible samples similarly selected. To obtain this interval es-
timate with 95-percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained, on request, by writing to the Director, Statistics of Income Division, at the address given above.

## Nonsampling Error Controls and Limitations

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors and inconsistencies, processing errors, and the effects of any early cutoff of sampling. Additional information on nonsampling error as it applies to individual and corporation income tax returns is presented in the separate SOI reports on these returns.

In transcribing and tabulating the information from returns or forms selected for the sample, steps are taken to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during the statistical abstracting and "editing" process that takes place in IRS submission processing centers. This is done to improve data consistency from return to return and to achieve definitions of the data items more in keeping with the needs of major users. In some cases, not all of the data are available from the tax return as originally filed. Sometimes, the missing data can be obtained by the Statistics of Income Division in Washington, DC, through field followup. More often, though, they are obtained through manual or computerized imputation. For this purpose, other information in the return or in accompanying schedules may be sufficient to serve as the basis for making an estimate. Prior-year data for the same taxpayer can be used for this same purpose, or comparable data from business reference books may be substituted.

Data abstracted or "edited" from returns for statistical use are subjected to a number of validation checks, including systematic verifications of a sampling of the work of each tax examiner involved in the SOI process. Data reported on sampled returns and previously transcribed as part of processing for

## SOI Sampling Methodology and Data Limitations

the IRS Master Files are subject to validation as part of the administrative process before SOI processing begins. However, during the administrative process, it is only practical to transcribe corrections to errors that have a direct bearing on the tax reported or the refund claimed. Therefore, during the SOI process, checks must also be made to correct any errors or inconsistencies left in the administrative data before the data can be accepted for the statistics.

The Statistics of Income program includes many more tax return items than are transcribed and perfected for IRS tax administration needs, especially for items reported in tax return schedules in support of the various summary totals reported on the return. Therefore, checks must also be designed to validate these additional data items and to assure that they are consistent with other data entries.

Most of the data validation checks made during the SOI process take the form of computerized tests of each record. In addition to verifying that internal consistency and proper balance and relationships among the tax return items and statistical classifications are maintained, this process is intended to check on consistency with tax law provisions, acceptable reporting practices, and generally accepted accounting principles. Most testing occurs during the data abstracting and editing operation, while the tax return source document is still on hand, although some testing for certain programs occurs later on. Records failing the tests are subjected to further review and correction.

Finally, before publication, the statistics are reviewed for accuracy and reasonableness in light of the tax law provisions, taxpayer reporting variations and other limitations, tolerances and statistical techniques allowed or employed in data processing and estimating, economic conditions, and comparability with other statistical series. However, these controls do not completely eliminate the possibility of error. When discovered, errors in Bulletin tables are corrected, through a published errata.

## Table Conventions

Published estimates subject to excessive sampling variability are identified for most of the statistics by means of an asterisk $\left({ }^{*}\right)$ presented alongside the estimate or in place of an estimate. Presence of an asterisk means that the sampling rate was less than 100 percent of the population and that there were fewer than 10 sample observations available for estimation purposes. This method produces a rough indication of excessive sampling variability. However, the results will differ somewhat from more precise indicators of excessive sampling variability based on the standard statistical formula. For some of the statistics based on samples, asterisking was not possible because of resource and other constraints. Users should keep this limitation in mind when using these data.

A zero, in place of a frequency or an amount, in any given table cell presenting data based on an SOI sample, indicates either that (1) there were no returns in the population with the particular characteristic, or (2) because of its rarity, instances of the characteristic were not present among the sampled returns. However, for statistics based on returns selected for the sample at the 100-percent rate, a zero indicates a presumption of no returns with the particular characteristic in the population.

In addition to sampling variability, Statistics of Income is required to prevent disclosure of information about specific taxpayers or businesses in its tables. Therefore, a weighted frequency (and the associated amount, where applicable) of less than 3 is either combined with data in an adjacent cell(s) so as to meet the criteria, or deleted altogether. Similar steps are taken to prevent indirect disclosure through subtraction. However, any combined or deleted data are included in the appropriate totals. Most data on tax-exempt, nonprofit organizations are excluded from disclosure review because the Internal Revenue Code and regulations permit public access to most of the information reported by these organizations.

## SOI Projects, Contacts, and Public Release Information

|  |  |  |  | Regular | With extensions of time |  |  |
| Foreign-Controlled Domestic Corporations: James Hobbs | This annual study covers domestic corporations with 50-percent-or-more stock ownership by a single foreign "person." It covers balance sheet, income statement, and tax-related data, which are classified by industry group, country, and size and age of the corporations. Data are compared to those for other domestic corporations. | 2009 | June 2010 | September 2010 | March 2011 | June 2011 | December 30, 2011 |
| Foreign Recipients of U.S. Income: <br> Scott Luttrell | This annual study provides data by country on income paid to nonresident aliens and the amount of tax withheld for the U.S. Government. | $\begin{aligned} & 2009 \\ & 2010 \end{aligned}$ | December 2009 <br> December 2010 | March 2010 <br> March 2011 | April 2010 <br> April 2011 | March 2011 <br> March 2012 | September 30, 2011 <br> September 30, 2012 |
| Foreign Trusts: <br> Dan Holik | This periodic study, conducted every 4 years, provides data on foreign trusts that have U.S. "persons" as grantors, transferors, or beneficiaries. Data include country where the trust was created, value of transfer to the trust, and year the trust was created. The most recent study is for Tax Year 2006. | 2010 | December 2010 | April 2011 | October 2011 | March 2012 | December 2012 |
| Gift Tax: <br> Melissa Belvedere | This annual study provides data for type and amount of gift, information on donee, and tax computation items. Information about the donor and gift splitting is also available. The most recent available data are for Filing Year 2009. | 2010 | [3] | [3] | [3] | December 2010 | October 31, 2011 |
| Individual Foreign Tax <br> Study: <br> Scott Hollenbeck <br> Maureen Keenan Kahr | This periodic study is conducted every 5 years. It covers foreign income, foreign taxes paid, and foreign tax credit shown on individual income tax returns. Data are classified by size of adjusted gross income and country. | 2011 | December 2012 | April 2012 | October 2012 | December 2012 | March 31, 2014 |
| Individual Income Tax <br> Returns: <br> Maureen Keenan Kahr <br> Scott Hollenbeck <br> Mike Parisi | Basic data are produced annually and cover income, deductions, tax, and credits reported on individual income tax returns and associated schedules. Data are classified by size of adjusted gross income, marital status, or type of tax computation. | $\begin{aligned} & 2009 \\ & 2010 \end{aligned}$ | December 2009 <br> December 2010 | $\begin{aligned} & \text { April } 2010 \\ & \text { April } 2011 \end{aligned}$ | October 2010 <br> October 2011 | December 2010 <br> December 2011 | $\begin{aligned} & \text { August 31, } 2011 \\ & \text { Augus 31, } 2012 \end{aligned}$ |
| Interest-Charge Domestic International Sales Corporations: Dan Holik | These corporations replaced the Domestic International Sales Corporations, or DISCs, as of 1985. Balance sheet, income statement, and exportrelated data are tabulated every 2 years. The most recent study is for Tax Year 2006. | 2010 | June 2011 | September 2011 | March 2012 | June 2012 | February 28, 2013 |

| Tax-Exempt Organizations, (Private Foundations) [6]: Cynthia Belmonte Mike Graham | This annual study provides balance sheet and income statement data for domestic private foundations and charitable trusts filing a Form 990-PF. The most recent data are for Tax Year 2008 returns filed in Calendar Years 2009-2010. | 2009 | November 2010 | April 2011 | October 2011 | December 2011 | July 31, 2012 |
| Tax-Exempt Organizations, Unrelated Business Income [6]: Jael Jackson | This annual study provides tabulations of unrelated business income and deductions for organizations classified as tax-exempt under the Internal Revenue Code. The most recent data are for Tax Year 2007 returns filed in Calendar Years 2008-2009. | 2008 | November 2009 | April 2010 | October 2010 | December 2010 | October 31, 2011 |
| Transactions of ForeignControlled Corporations: Isaac Goodwin Gerry Skurkki | This biennial study provides data on transactions between U.S. corporations and their foreign owners. Data are classified by country and industry group. | 2008 | June 2009 | September 2009 | March 2010 | June 2010 | April 2011 |
| ZIP Code Area Data: <br> Kevin Pierce | Statistics on CD-ROM show number of individual income tax returns, exemptions, and several income items by State and 5-digit ZIP Code. Data are available for 2002 and 2004-2008 on a reimbursable basis. Data for Tax Years 1998 and 2001 are also available, free of charge, on the IRS Web site: http://www.irs.gov/taxstats/ article/0,id=96947,00.html. | 2009 | December 2009 | April 2010 | October 2010 | December 2010 | December 2012 |

[1] Data for 2008 represent accounting periods ending July 2008 through June 2009. Data for other study years are similarly defined.
[2] Corporation statistics for 2009 represent accounting periods ended July 2009 through June 2010. Study Year 2010 is similarly defined.
[3] Estate and gift tax data are processed on a filing-year, rather than on a year-of-death or gift-year (tax-year) basis. At a later stage (not shown here), filing years are combined by year of death or gift year, respectively.
[4] Split-interest trust and fiduciary income tax statistics are processed on a filing-year rather than a tax-year basis.
[5] Tax-exempt private activity governmental bond statistics are collected annually based on issue year. Arbitrage rebate and penalty are conducted biennially, for tax years ending in odd numbers.
[6] Data for 2008 represent tax years ending between December 2008 and November 2009. Study Year 2009 is similarly defined.

## SOI Products and Services

statistics of Income (SOI) data are available in electronic formats and in print. For further information on any of the following products and services, or for answers to questions on the availability of SOI data, other statistical services, or release dates for data, contact SOI's
Statistical Information Services (SIS):

Statistical Information Services (sis@irs.gov) Statistics of Income Division Internal Revenue Service<br>P.O. Box 2608 • Washington, DC 20013-2608 (202) 874-0410 • Fax: (202) 874-0964

As its name implies, SIS is best able to answer questions about data. It does not supply tax forms or information about the status of an individual's tax refund or audit examination. Media requests should be directed to the IRS Media Relations Branch, Communications Division, on (202) 622-4000.

## Free Products on the Internet

SOI's Internet site offers a combination of files presenting SOI tables, articles about SOI data, and information about SOI products and services, as well as non-SOI products, including Compliance Research projections and nonprofit Master File microdata records. At present, almost 12,000 files reside there.

## Web site: www.irs.gov/taxstats

There is also a direct link to our Web site from FedStats, the gateway to official statistics from the Federal Government: www.fedstats.gov.

## Tax Stats

On the Tax Stats Home Page, you will find the following list of topics that will lead to a wide range of tables, articles, and data that describe and measure elements of the U.S. tax system. There is also a link to check out What's New.

Questions on Tax Statistics?

## Products for Sale From SOI

Many of SOI's data files are available for sale on CD-ROM or via e-mail through Statistical Information Services. Prepayment is required for orders of $\mathbf{\$ 1 0 0}$ or more, with checks made payable to the IRS Accounting Section. Credit and debit card payments are also accepted. Contact SIS for information on specific products, prices, sources, media, and ordering instructions.

The following files are currently available on a reimbursable basis and include data from returns for corporations, individuals, exempt organizations, and private foundations and charitable trusts. Most of these files are tabulations of aggregated data, but some are files of microdata records.

## Corporation Income Tax Returns

## Corporation Source Book

CD-ROMs containing data from the Corporation Source Book are available for Tax Years 1996-2003 at a cost of $\$ 250$ per year. Data from the 2004 through 2008 Corporation Source Books are available at no charge from the Tax Stats Web site. Data tables from the 2000 through 2008 Source Books are also available at no charge from the Tax Stats Web site at: www.irs.gov/taxstats/bustaxstats/article/0,,id=149687,00.html.

## Individual Income Tax Returns

## Individual Public-Use Microdata Files

Files for 1992 through 2006 are available on CD-ROM from the SOI Division for $\$ 4,000$ per year. These microdata files have been edited to protect the confidentiality of individual taxpayers.

## County-to-County Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by county for the entire United States, including inflows and outflows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1991-2009. Price is $\$ 200$ per year for the entire United States or $\$ 10$ per State per year for Filing Years 1991-2004. All years for the entire United States are also available for $\$ 500$. Filing Years 2005-2009 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data."

## State-to-State Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by State for the entire United States, including inflows and outflows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1989-2009. Price is $\$ 50$ per year for the entire United States or $\$ 10$ per State per year for Filing Years 1989-2004. Filing Years 2005-2009 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data."

## County Income Data

One table, based on the population of returns from the IRS Individual Master File system. This table presents data for adjusted gross income (total and for selected sources), number of returns (which approximates the number of households), and number of personal exemptions (which approximates the population). The data are presented by county (including State totals) and are available for Tax Years 1989-2009 for the entire United States. Price is $\$ 50$ per year for the entire United States or $\$ 10$ per State per year for Tax Years 1989-2004. Tax Years 2005-2009 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data."

## ZIP Code Area Data

Statistics are available for Tax Years 2002 and 2004-2008 on CD-ROM showing the number of individual income tax returns; the total number of exemptions and number of dependent exemptions (which approximates population); adjusted gross income; salaries and wages; taxable interest; total tax; and contributions; by State and 5-digit ZIP Code. In addition to these items, data for Tax Year 2004-2008 also show the amount of taxable dividends; net capital gain/loss; IRA payment adjustment; self-employed pension adjustment; taxes paid deduction; alternative minimum tax; income tax before credits; earned income credit; and number of returns prepared by paid preparers. Price is $\$ 500$ for the entire United States; $\$ 25$ for a single State. Data for Tax Years 1998, 2001, and 2008 are available free on SOI's Internet site. Go to www.irs. gov, select the Tax Stats option; Individual Tax Statistics; Individual Income Tax; Zip Code Data (SOI) under Data by Geographic Areas.

## Tax-Exempt Organizations

## Compendium of Studies of Tax-Exempt Organizations, 1989-1998

This is a compilation of articles on SOI studies of charitable and other nonprofit organizations described in Internal Revenue Code sections 501(c)(3)-(c)(9), private foundations, charitable remainder trusts, and nonprofit organizations' unrelated business income. All of these articles were published previously in various issues of the Statistics of Income Bulletin. In addition, the Compendium includes papers on statistical sampling of tax-exempt organization returns, and other topics relating to tax-exempt organizations and philanthropy that were authored by IRS staff and others who use SOI study data for research. Available at no charge on CD-ROM.

## SOI Products and Services

## Microdata Records for Tax Year 2008

Microdata records of all Forms 990 and 990 -EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 15,708 Internal Revenue Code section 501(c)(3) organizations and 6,450 section 501(c) (4)-(9) organizations. All returns for organizations with assets of $\$ 50,000,000$ or more are included in the sample. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/ 0, ,id= $=97176,00 . \mathrm{html}$, or may be purchased on CD-ROM for $\$ 20$.

## Microdata Records for Tax Years 1992-2007

Microdata records of all Forms 990 and 990 -EZ sampled for the annual SOI study of tax-exempt organizations. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/ 0, ,id $=97176,00$.html, or may be purchased on CD-ROM for $\$ 20$.

## Private Foundations (and Charitable Trusts)

## Microdata Records for Tax Year 2008

Microdata records of all Forms 990 -PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes 15,710 returns. (All returns filed by foundations with assets of $\$ 10$ million or more, as well as the population of returns filed by nonexempt charitable trusts, are included in the sample.) Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article $/ 0$, ,id $=96996,00 . \mathrm{hmtl}$, or may be purchased for $\$ 20$.

## Microdata Records for Tax Years 1992-2007

Microdata records of all Forms $990-\mathrm{PF}$ sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each
foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article $/ 0, \mathrm{id}=96996,00 . \mathrm{html}$, or may be purchased for $\$ 20$.

## Publications

Statistics of Income-2008, Corporation Source Book Publication 1053, Price: $\$ 175$, plus $\$ 10$ for shipping and handling

This document presents detailed income statement, balance sheet, tax, and selected items, by sector, major and minor industrial groups, and size of total assets for all returns and separately for returns with net income. Separate statistics on S corporations are included by sector. Industry detail is based on the North American Industry Classification System (NAICS). The report, which underlies the Statistics of Income-Corporation Income Tax Returns publication, is part of an annual series and can be purchased in its entirety or by page. Corporation Source Book industry pages and notes for 1963 through the present are available at a cost of $\$ 30$, plus $\$ 1$ per page copying charge (free for orders under 5 pages). The complete, printed version of the Source Book for selected prior years, 1984-2008, is also for sale at $\$ 175$ per year, plus $\$ 10$ for shipping and handling.

## Compendium of Federal Estate Tax and Personal Wealth Studies

Publication 1773, Price: \$26,
plus $\$ 10$ for shipping and handling
Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting sample data for the estate studies and presents statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estatemultiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years 1962-1989, and a discussion of the relationship among realized income, wealth, and well-being.

## Products for Sale From GPO

Recent SOI publications are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC, by calling (202) 512-1800, or faxing (202) 512-2250. Credit cards are accepted. Publications may also be obtained by using the order form at the end of this Bulletin or writing to:

## Superintendent of Documents

* If you determine from the Government Printing Office that any of the following items is out of print, call Statistical Information Services on (202) 874-0410 for assistance.

Statistics of Income-2008, Corporation Income Tax Returns
Publication 16 Stock No. 048-004-02532-9
Price: $\$ 52.00$
This report presents comprehensive data on corporation income tax returns with accounting periods that ended July 2008 through June 2009. Data are classified by industry, size of total assets, and size of business receipts

Statistics of Income-2008, Individual Income Tax Returns
Publication 1304, Stock No. 048-004-02530-2
Price: $\$ 43$ Foreign: $\$ 60.20$

This report presents more comprehensive and complete data on individual income tax returns for Tax Year 2008 than those published earlier in the SOI Bulletin.

Presents information on: Classifies data by:
■ sources of income ■ size of adjusted

- exemptions
- itemized deductions
- tax computations
gross income
- marital status
- type of tax computation
- age

IRS Data Book, 2010
Annually, Publication 55B, Stock No. 048-004-02531-1 Price: \$14.00 International: $\$ 19.60$

This volume pertains to Fiscal Year (FY) 2010-October 1, 2009, through September 30, 2010. The report provides information on returns filed and taxes collected, enforcement, taxpayer assistance, the IRS budget and workforce, and other selected activities. The FY 2011 issue of the Data Book will be available in late March 2012.

## Statistics of Income Bulletin

Quarterly, Publication 1136, Stock No. 748-005-00000-5
Subscription price: $\$ 67$ International: $\$ 93.80$
Spring 2011 Single copy, Stock No. 748-005-00107-9
Single copy price: $\$ 44$ International: $\$ 61.60$
This series provides the earliest published financial statistics from individual and corporation income tax returns. The Bulletin also includes annual data on nonfarm sole proprietorships and partnerships, as well as periodic or special studies of particular interest to tax analysts, administrators, and economists. Historical tables, published in the spring issue, include data from SOI, as well as tax collections and refunds by type of tax.

# SOI BULLETIN 

A Quarterly Statistics of Income Report

Volume 31, Number 2

The Statistics of Income (SOI) Bulletin is issued quarterly by the Statistics of Income Division of the Internal Revenue Service. The report provides the earliest published annual f nancial statistics obtained from the various types of tax and information returns f led, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers, and tax administrators. Selected historical and other data tables, previously published in every issue of the SOI Bulletin, now are published only in the spring issue of the Bulletin. These tables are also available on SOI's pages of the IRS Web site (www.irs.gov/taxstats).

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephoning the SOI's Statistical Information Services (202-8740410), or by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

The SOI Bulletin is prepared under the direction of Paul Arnsberger, Acting Chief, Communications and Data Dissemination Section. Paul Bastuscheck (layout and graphics), Martha Gangi (writer/editor), Clay Moulton (layout and graphics), Lisa Smith (layout and graphics editor), and Camille Swick (layout and graphics) are the editorial staff who prepare the manuscript. Jim Hobbs, Emily Gross, and Beth Kilss also made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

## Individual Income Tax Returns, 2009

by Justin Bryan

Taxpayers fled 140.5 million individual income tax returns for Tax Year (TY) 2009, a decrease of 1.4 percent from the 142.5 million returns fled for TY 2008. The adjusted gross income (AGI) less def cit reported on these returns totaled $\$ 7.6$ trillion, a 7.7-percent decrease from the previous year. This was the second year in a row that AGI has decreased. Only four income items increased during 2009. These items were unemployment compensation, farm net income (less loss), taxable Social Security benef ts, and taxable pensions and annuities, which increased 91.3 percent, 5.1 percent, 3.9 percent and 3.4 percent, respectively. This was the third year in row of large increases in taxable unemployment compensation.

Many items decreased appreciably during 2009, including sales of property other than capital assets, net gain (less loss), net capital gain (less loss), total rental and royalty net income (less loss), and ordinary dividends, which decreased 130.8 percent, 50.7 percent, 31.8 percent, and 25.5 percent, respectively. Taxable income decreased 10 percent from 2008, to $\$ 5.1$ trillion.

Statutory income tax rates remained constant for 2009 (although the tax brackets were widened due to inf ation indexing) for the sixth straight year, following 3 consecutive years of reductions. However, total tax credits increased by 46.1 percent to $\$ 110.1$ billion, largely due to the introduction of the making work pay (and government retiree) credit. With this increase, combined with the drop in taxable income, total income tax fell 16.1 percent to $\$ 865.9$ billion. This was the second straight year that total income tax decreased after 4 years of increases. For the frst year after 6 years of increases, the alternative minimum tax (AMT) showed a substantial decrease, dropping $\$ 3.1$ billion ( 12 percent) to $\$ 22.6$ billion. The number of returns with AMT liability decreased to 3.8 million ( 2.7 percent) from 3.9 million in 2008. This marked the second year in a row that the number of returns with AMT liability has decreased.

## Partnership Returns, 2009

by Nina Shumofsky and Lauren Lee
The number of partnerships and partners continued to grow between Tax Years 2008 and 2009. For 2009, the number of partnerships increased 0.7 percent, from 3,146,006 for 2008 to $3,168,728$ for 2009.

Since 2000, the number of partnerships has increased at an average annual rate of 5.1 percent. The number of partners increased by 9.5 percent, from 19,300,250 for 2008 to $21,141,979$ for 2009 . The number of partners has increased in 8 out of the last 10 years. Nearly half of all partnerships and a third of all partners were classif ed in the real estate and rental and leasing sector.

Total assets, total receipts, and total net income (loss), or prof t , continued to decline. Total assets decreased 2.4 percent between 2008 and 2009, from $\$ 19.3$ trillion to $\$ 18.8$ trillion. Total receipts decreased by 18.1 percent between 2008 and 2009, from almost $\$ 5.9$ trillion in 2008 to $\$ 4.8$ trillion in 2009. Total net income (loss), or prof t, decreased 10.5 percent, from $\$ 458.2$ billion in 2008 to $\$ 409.9$ billion in 2009.

## Municipal Bonds, 2009

by Aaron Barnes
The American Recovery and Reinvestment Act (ARRA) of 2009 changed the landscape of the municipal bonds market by introducing direct payment bonds through the Build America Bond and the Recovery Zone Economic Development Bond Programs. More than 900 direct payment bonds raised $\$ 65.3$ billion in proceeds in 2009. ARRA also created qualif ed school construction bonds, which raised nearly $\$ 3.4$ billion in proceeds for 288 qualifying public educational facilities. However, the market was still dominated by more than 22,000 taxexempt governmental bonds issued in 2009, raising $\$ 340.7$ billion of proceeds for public projects, such as schools, transportation infrastructure, and utilities. Of the $\$ 262.4$ billion of long-term governmental bonds issued, $\$ 151.1$ billion in proceeds were used to f nance new projects, while the remaining $\$ 111.4$ billion in proceeds refunded prior governmental bond issues. In addition, more than 2,700 tax-exempt private activity bonds were issued in 2009, for a total of $\$ 105.6$ billion in proceeds. These tax-exempt private activity bond proceeds f nanced qualif ed private facilities (such as residential rental facilities, single family housing, and airports), as well the facilities of IRC section 501(c)(3) organizations (such as hospitals and private universities). Of the $\$ 102.8$ billion in long-term private activity bonds issued, $\$ 52.2$ billion in proceeds were used to f nance new projects, while the remaining $\$ 50.6$ billion in proceeds refunded prior tax-exempt private activity bond issues.

## Inside this Issue

## Charities, Fraternal Beneficiary Societies, and Other Tax-Exempt Organizations, 2008

by Paul Arnsberger and Mike Graham
For 2008, nonprof t charitable organizations (excluding private foundations) tax exempt under IRC Section 501(c)(3) reported $\$ 2.5$ trillion in total assets and $\$ 1.4$ trillion in revenue, both decreases from 2007. The number of returns $f$ led by these organizations was 315,184 , including 148,821 Forms 990 and 166,363 Forms 990-EZ. There were major changes in both the content of Form 990 and the fling threshold between Tax Years 2007 and 2008.

While many sources of nonproft charitable organization revenue dropped between Tax Years 2007 and 2008, the major component, program service revenue, increased slightly to $\$ 1$ trillion. Large nonprof $t$ charitable organizations, def ned as having total assets of $\$ 10$ million or more, represented just 6 percent of all Forms 990 and 990-EZ f led, but accounted for more than 84 percent of the total revenue reported.

Using National Taxonomy of Exempt Entities codes, health care was the predominant category, accounting for 39 percent of total assets and 58 percent of total revenue reported by nonprof $t$ charitable oganizations.

Fraternal benef ciary societies exempt under section 501(c)(8) f led 7,163 information returns with the IRS; they reported $\$ 100.1$ billion in assets and $\$ 14.7$ billion in revenue. The asset and revenue fg ures represent slight decreases from Tax Year 2007.

The major source of revenue reported by fraternal benef ciary societies was program service revenue, while cash, savings, and investments was, by far, the largest asset component held by these organizations.

## In the Next Issue

Articles on the following topics are tentatively planned for inclusion in the winter 2012 issue of the Statistics of Income Bulletin, scheduled to be published in March 2012:

- Preliminary individual income tax data, Tax Year 2010;
- Individual income tax rates and tax shares, Tax Year 2009;

ㅁ Split-interest trusts, Filing Year 2010;

- Unrelated business income tax returns, Tax Year 2008;
- Nonresident alien estate tax returns;
- Private foundations and associated excise taxes, Tax Year 2008;
- Personal wealth, 2007; and

ㅁ Projections of tax return flings.

# Individual Income Tax Returns, 2009 

by Justin Bryan

Taxpayers f led 140.5 million individual income tax returns for Tax Year (TY) 2009, a decrease of 1.4 percent from the 142.5 million returns f led for TY 2008. The adjusted gross income (AGI) less def cit reported on these returns totaled $\$ 7.6$ trillion, a 7.7-percent decrease from the previous year. This was the second year in a row that AGI has decreased. Only four income items increased during 2009. These items were unemployment compensation, farm net income (less loss), taxable Social Security benef ts, and taxable pensions and annuities, which increased 91.3 percent, 5.1 percent, 3.9 percent, and 3.4 percent, respectively. This was the third year in row of large increases in taxable unemployment compensation.

Many items decreased appreciably during 2009, including sales of property other than capital assets, net gain (less loss), net capital gain (less loss), total rental and royalty net income (less loss), and ordinary dividends, which decreased 130.8 percent, 50.7 percent, 31.8 percent, and 25.5 percent, respectively. Taxable income decreased 10 percent from 2008, to $\$ 5.1$ trillion.

Statutory income tax rates remained constant for 2009 (although the tax brackets were widened due to inf ation indexing) for the sixth straight year, following 3 consecutive years of reductions. However, total tax credits increased by 46.1 percent to $\$ 110.1$ billion, largely due to the introduction of the making work pay (and government retiree) credit. With this increase, combined with the drop in taxable income, total income tax fell 16.1 percent to $\$ 865.9$ billion. This was the second straight year that total income tax decreased after 4 years of increases. For the frst year after 6 years of increases, the alternative minimum tax (AMT) showed a substantial decrease, dropping $\$ 3.1$ billion ( 12 percent) to $\$ 22.6$ billion. The number of returns with AMT liability decreased to 3.8 million ( 2.7 percent) from 3.9 million in 2008. This marked the second year in a row that the number of returns with AMT liability has decreased.

For 2009, itemized deductions decreased by 9.0 percent to $\$ 1,203.8$ billion. Interest paid, the largest itemized deduction, decreased 11.2 percent to $\$ 442.1$

[^371]billion. Taxes paid, the second largest itemized deduction, decreased 7.5 percent to $\$ 432$ billion. Casualty and theft losses, the smallest itemized deduction, experienced the largest percentage decline, dropping 46.4 percent to $\$ 2.3$ billion from $\$ 4.3$ billion in 2008.

## Adjusted Gross Income and Selected Sources of Income

As shown in Figure A, adjusted gross income (AGI) decreased 7.7 percent to $\$ 7.6$ trillion for 2009 . As shown in Figure B, the largest component of AGI, salaries and wages, decreased 4.1 percent from $\$ 6.0$ trillion to $\$ 5.7$ trillion. With even larger percentage decreases in other components of AGI, the share of salaries and wages in AGI increased to 74.8 percent for 2009 , up from 72 percent for 2008. The ffth largest nonwage component of AGI was net capital gain (less loss). With $\$ 231.5$ billion of net capital gain (less loss) reported for $2009,50.7$ percent less than for 2008 , this marked the second year in a row that capital gains declined precipitously. One component of net capital gains, capital gain distributions (reported on either Schedule D with other sales of capital assets or alone on the 1040 or 1040A), fell 89 percent to $\$ 2.4$ billion.

Several other components of AGI also decreased for 2009, including sales of property other than capital assets, net gain (less loss), total rental and royalty net income (less loss), ordinary dividends, and taxable interest, which decreased by 130.8 percent, 31.8 percent, 25.5 percent, and 24.8 percent, respectively. Items that did increase for 2009 included taxable retirement income. The taxable portions of Social Security benef ts and pensions and annuities rose by 3.9 percent and 3.4 percent, respectively. However, taxable IRA distributions decreased 16.6 percent for 2009. While business income mostly declined in 2009, farm net income (less loss) increased modestly by $\$ 0.75$ billion or 5.1 percent (that is, net losses declined from $\$ 14.8$ billion to $\$ 14.1$ billion). However, when looking at just farm net income, it declined by 1.1 percent from 2009. Taxable unemployment compensation income increased for the third year in a row to $\$ 83.5$ billion from $\$ 43.7$ billion ( 91.3 percent) in 2008. The number of individual tax returns reporting taxable unemployment compensation also increased greatly, by 18.5 percent, to 11.3 million. Table 1 shows detailed information for the components of AGI.

| Farm net income | 549 | 11,749 | 523 | 11,616 | -133 | -1.1 |
| Unemployment compensation | 9,533 | 43,675 | 11,299 | 83,538 | 39,863 | 91.3 |
| Taxable pensions and annuities | 25,540 | 506,269 | 26,020 | 523,296 | 17,027 | 3.4 |
| Taxable Individual Retirement Account distributions | 11,259 | 162,150 | 9,659 | 135,203 | -26,948 | -16.6 |
| Gambling earnings | 1,890 | 27,197 | 1,768 | 23,776 | -3,421 | -12.6 |
| Other net income (less loss) [4] | n.a. | 34,267 | n.a. | 31,316 | -2,951 | -8.6 |

n.a.-Not available.
[1] Sources of adjusted gross income shown are not comprehensive and, therefore, do not add to total adjusted gross income.
[2] Includes both Schedule D and non-Schedule D capital gain distributions.
[3] Includes farm rental net income (less loss).
[4] Other net income (less loss) represents data reported on Form 1040, line 21, except net operating losses, foreign-earned income exclusions, cancellation of debt, and gambling earnings (shown separately in this figure). See footnote 1 of Table 1.

## Losses

Total negative income includes net negative income line items from individual income tax returns. ${ }^{1}$ Total negative income, i.e., net loss, included in AGI increased 3.4 percent to $\$ 493.5$ billion for 2009 (Figure C). The increases in net operating loss and sales of property other than capital assets net loss were the main reasons for the $\$ 16$-billion increase in net loss, as many of the other loss items decreased in 2009. ${ }^{2}$ The largest dollar increase in net loss from 2008 to 2009 was $\$ 27.1$ billion for net operating loss, which represented 25.1 percent of all losses in AGI. For 2009, sales of property other than capital assets net loss represented the largest percentage increase in losses, at 44.1 percent, followed by net operating loss, at 27.9 percent. Net capital loss had the third largest percentage increases at 11.7 percent, which
marked the second year in a row it increased. With respect to net capital losses, decreases in this item for 2003 through 2007 followed a period of increases from 1997 through $2002 .{ }^{3}$

## Statutory Adjustments

Statutory adjustments, which are subtracted from total income in the computation of AGI, decreased 7.1 percent to $\$ 113$ billion for 2009 (Figure D). Several statutory adjustments increased for 2009. The largest percentage increase in statutory adjustments was the deduction for certain business expenses of reservists, performing artists, etc., which increased 34.1 percent to $\$ 0.6$ billion. Other adjustments that also saw increases included the health savings account deduction, student loan interest deduction, self-employment health insurance deduction, and the

NOTE: Detail may not add to totals because of rounding.
educator expenses deduction, which increased 17.2 percent, 7.9 percent, 3.0 percent, and 2.5 percent, respectively. The largest statutory adjustment was the self-employment tax deduction, representing 21.1 percent of the total. This adjustment decreased 1.9 percent to $\$ 23.8$ billion for 2009. The tuition and fees deduction represented the largest percentage decrease in statutory adjustments, falling 50.4 percent to $\$ 5.5$ billion. This was mostly due to a change in the law expanding education credits with the new American Opportunity Credit (see the Changes in Law section of this article). Other adjustments that decreased included the moving expenses adjustment, the domestic production activities deduction, and the penalty on early withdrawal of savings, which decreased 30.1 percent, 18.7 percent, and 12.9 percent, respectively.

## Deductions

The total standard deduction claimed on 2009 individual income tax returns (the basic standard deduction plus the additional standard deduction for age or blindness plus deductions for real estate
taxes (limited to a maximum of $\$ 1,000$ ), net disaster losses, and, new for 2009, motor vehicle taxes (see the Changes in Law section of this article)) increased 7.5 percent to $\$ 747.8$ billion (Figure E). Total de-ductions-the sum of the total standard deduction and total itemized deductions (after limitation)-decreased by 3.3 percent to $\$ 2$ trillion. The number of returns claiming a standard deduction increased 0.5 percent for 2009, accounting for 65.7 percent of all returns f led. The average standard deduction rose $\$ 526$ from the 2008 average, to $\$ 8,104$.

Statistics for returns with itemized deductions are presented in Figure E and Table 3. Itemized deductions were claimed on 32.5 percent of all returns $f$ led and represented 61.7 percent of the total deductions amount. ${ }^{4}$ The average for total itemized deductions (after limitation) was $\$ 26,344$, down $\$ 1,108$ from the average for 2008.

Total itemized deductions (before limitation) decreased for 2009 by 9.2 percent, and the number of taxpayers who itemized decreased by 5.1 percent from 2008 levels. Interest paid, the largest itemized deduction for 2009 ( 36.3 percent of the total),

## Figure E

|  | (1) | (2) | (3) | (4) | (5) | (6) |
| Total itemized deductions before limitation | 48,167 | 1,339,354 | 45,696 | 1,216,313 | -5.1 | -9.2 |
| Medical and dental expenses after 7.5-percent AGI limitation | 10,155 | 76,387 | 10,090 | 79,866 | -0.6 | 4.6 |
| Taxes paid [2] | 47,836 | 467,212 | 45,424 | 432,032 | -5.0 | -7.5 |
| State and local income taxes | 35,403 | 270,958 | 33,755 | 236,096 | -4.7 | -12.9 |
| State and local general sales taxes | 11,045 | 17,686 | 10,262 | 15,563 | -7.1 | -12.0 |
| Interest paid [3] | 39,200 | 497,618 | 37,004 | 442,051 | -5.6 | -11.2 |
| Home mortgage interest | 38,684 | 470,408 | 36,542 | 420,813 | -5.5 | -10.5 |
| Charitable contributions | 39,250 | 172,936 | 37,243 | 158,017 | -5.1 | -8.6 |
| Other than cash contributions | 23,027 | 40,421 | 21,867 | 31,816 | -5.0 | -21.3 |
| Casualty and theft losses | 337 | 4,348 | 134 | 2,330 | -60.1 | -46.4 |
| Miscellaneous deductions after 2\% AGI limitation | 12,437 | 89,924 | 11,868 | 80,903 | -4.6 | -10.0 |
| Gambling losses and other unlimited miscellaneous deductions | 1,642 | 30,929 | 1,411 | 21,114 | -14.0 | -31.7 |
| Itemized deductions in excess of limitation | 6,783 | 17,077 | 5,706 | 12,504 | -15.9 | -26.8 |
| Total itemized deductions after limitation | 48,167 | 1,322,276 | 45,696 | 1,203,808 | -5.1 | -9.0 |
| Total standard deduction | 91,781 | 695,488 | 92,269 | 747,780 | 0.5 | 7.5 |
| Total deductions (after itemized deduction limitation) | 139,948 | 2,017,764 | 137,965 | 1,951,588 | -1.4 | -3.3 |

[1] Returns with no adjusted gross income are excluded from the deduction counts. For this reason, the sum of the number of returns with total itemized deductions and the number of returns with total standard deduction is less than the total number of returns for all filers.
[2] Includes real estate taxes, personal property taxes, and other taxes not shown separately.
[3] Includes investment interest, deductible mortgage "points," and qualified mortgage interest premiums not shown separately.
NOTE: Detail may not add to totals because of rounding.
decreased 11.2 percent to $\$ 442.1$ billion. For 2009, the number of returns and the amount reported for the largest component of the interest paid deduction, home mortgage interest, decreased by 5.5 percent and 10.5 percent, respectively. The total deduction for State and local income and sales taxes combined decreased by 12.8 percent to $\$ 251.7$ billion for 2009 . The general sales tax deduction portion of this was claimed by 10.3 million taxpayers, for a total of $\$ 15.6$ billion, down 12 percent from 2008, while the State and local income taxes portion decreased by 12.9 percent from 2008 levels. These were included in taxes paid, the second largest itemized deduction, which decreased 7.5 percent to $\$ 432$ billion for 2009.

The third largest itemized deduction, charitable contributions, decreased 8.6 percent for 2009 , to $\$ 158$ billion. More than half of this decrease was from other than cash contributions, which went down 21.3 percent to $\$ 31.8$ billion. Itemized deductions for medical and dental expenses in excess of 7.5 percent of AGI rose 4.6 percent to $\$ 79.9$ billion for
2009. This represented the only itemized deduction that increased between 2008 and 2009. Miscellaneous itemized deductions subject to a 2 -percent of AGI foor, including unreimbursed employee business expenses and tax preparation fees, decreased 10 percent to $\$ 80.9$ billion, while unlimited miscellaneous deductions (such as gambling losses) decreased 31.7 percent to $\$ 21.1$ billion for 2009. Casualty and theft losses, the smallest itemized deduction, saw the largest percentage decline, dropping 46.4 percent, from $\$ 4.3$ billion in 2008 to $\$ 2.3$ billion in 2009.

The AGI threshold for the limitation of itemized deductions increased to $\$ 166,800$ ( $\$ 83,400$ if married f ling separately) for 2009. Itemized deductions in excess of limitation decreased $\$ 4.6$ billion, or 26.8 percent, to $\$ 12.5$ billion. As shown in Figure A, for 2009, the number of personal exemptions for taxpayers and dependents was 284.2 million, an increase of just 0.5 percent from 2008. However, because the deductible amount per exemption increased by

## Individual Income Tax Returns, 2009

Statistics of Income Bulletin | Fall 2011
$\$ 150$ to $\$ 3,650$ (for exemptions that were not limited by AGI), total deductions for exemptions went up to $\$ 1,029.1$ billion from $\$ 981$ billion, a 4.9-percent increase.

## Taxable Income and Total Income Tax

Taxable income, which is the result of AGI less exemptions and deductions, fell 10 percent to $\$ 5.1$ trillion for 2009 (Figure A). With the large decrease in taxable income and the indexing of tax brackets for the effects of inf ation for 2009, total income tax fell 16.1 percent to $\$ 865.9$ billion. This was the second year in a row of large decreases in total income taxes after 4 years of growth. In each of the 3 years prior to 2004, the Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA) and the Jobs and Growth Tax Relief Reconciliation Act of 2003 (JGTRRA) had lowered tax rates each year contributing to declining income taxes each year.

After 7 years of increases, the alternative minimum tax decreased for 2009, with the total AMT liability declining by $\$ 3.1$ billion, or 12 percent, to $\$ 22.6$ billion. The number of returns with AMT liability also decreased, declining 2.7 percent from 3.9 million in 2008 to 3.8 million in 2009. This marks the second straight year and the third year in the previous 4 years that the number of returns with AMT has decreased.

Average AGI reported on all 2009 individual income tax returns was $\$ 54,283$, and average taxable income was $\$ 48,851.5^{5}$ These amounts represent decreases of 6.4 percent and 6.7 percent, respectively, from the 2008 amounts of $\$ 58,005$ and $\$ 52,345$.

Figure F shows that the average tax rate for 2009 (i.e., total income tax divided by AGI reported on all returns, taxable and nontaxable) was 11.4 percent, a decrease of 1.1 percentage points from 2008. While the average tax rate fell for all income levels below $\$ 200,000$ of AGI, every income class above $\$ 500,000$ had higher average tax rates for 2009. The increases in the average tax rate ranged from 0.3 percentage point ( $\$ 500,000$ to $\$ 1,000,000$ ) to 1.5 percentage points ( $\$ 5,000,000$ and over). The main reason for these increases was the signif cant drop
in the percentage of AGI that was reported as longterm capital gains (in excess of short-term losses) and qualif ed dividends. This income was taxed at a maximum of 15 -percent rate as opposed to up to a 35 -percent rate for ordinary income. In 2008, for example, taxpayers with AGI $\$ 10$ million or more reported 47.5 percent of their income as capital gains and dividends, while in 2009, this same income group reported 35.8 percent. Including every group from $\$ 200,000$ to $\$ 10$ million or more, the percentage dropped from 19.4 percent in 2008 to 12.3 percent in 2009.

For 2009, average tax rates increased for each income category up to AGI of $\$ 5$ million or less. The average tax rate peaked at 25.7 percent for returns in the AGI class $\$ 2$ million under $\$ 5$ million. For the classes above this level, average tax rates declined to a low of 22.4 percent for taxpayers with AGI of $\$ 10$ million or more. The main reason for this decline is that individuals in the classes above $\$ 5$ million or more tended to report a larger percentage of their AGI as long-term capital gains and qualif ed dividends, compared to individuals in the lower AGI classes. For example, while individuals reporting AGI of $\$ 1.5$ million under $\$ 2$ million averaged 14.4 percent of their income as capital gains and dividends, this share increased in each succeeding class, reaching 35.8 percent for those individuals reporting AGI of $\$ 10$ million or more.

## Tax Credits

For 2009, total tax credits (excluding the "refundable" portions of the child tax credit, refundable prior-year minimum tax credit, making work pay credit, American opportunity credit, frst-time homebuyer credit (FTHC), and the earned income credit (EIC), as well as any amount of these credits used to offset any other taxes) increased 46.1 percent to $\$ 110.1$ billion. Statistics for tax credits, including the refundable portions, are shown in Tables 2 and 4 and summarized in Figures G, H, and I.

New for 2009, the portion of the making work pay (and government retiree) credit used to offset income tax before credits was claimed by 68.6 million

|  | Number of returns | Amount | Number of returns | Amount | Number of returns | Amount |
|  | (1) | (2) | (3) | (4) | (5) | (6) |
| Total tax credits [1] | 55,229 | 75,352 | 87,501 | 110,076 | 58.4 | 46.1 |
| Child care credit | 6,587 | 3,527 | 6,286 | 3,317 | -4.6 | -5.9 |
| Earned income credit [2] | 3,382 | 971 | 1,489 | 489 | -56.0 | -49.6 |
| Foreign tax credit | 6,708 | 16,572 | 6,310 | 13,060 | -5.9 | -21.2 |
| General business credit | 304 | 1,649 | 293 | 1,601 | -3.7 | -2.9 |
| Prior-year minimum tax credit | 416 | 945 | 320 | 759 | -23.1 | -19.7 |
| Refundable prior-year minimum tax credit [3] | n.a | n.a | 195 | 908 | [8] | [8] |
| Child tax credit [4] | 25,174 | 30,538 | 23,563 | 28,417 | -6.4 | -6.9 |
| Nonrefundable education credits | 7,741 | 7,633 | 10,599 | 10,837 | 36.9 | 42.0 |
| American opportunity credit [5] | n.a | n.a | 4,394 | 3,502 | [8] | [8] |
| Retirement savings contribution credit | 5,961 | 977 | 6,253 | 1,040 | 4.9 | 6.4 |
| Residential energy credits | 226 | 217 | 6,712 | 5,823 | 2,873.3 | 2,587.2 |
| First-time homebuyer credit [6] | 912 | 3,787 | 1,097 | 4,886 | 20.2 | 29.0 |
| Making work pay credit [7] | n.a. | n.a. | 68,570 | 34,429 | [8] | [8] |

n.a.-Not available.
[1] Includes credits not shown separately. See Table 2.
[2] Represents portion of earned income credit used to offset income tax before credits.
[3] Represents portion of prior-year minimum tax credit used to offset income tax before credits.
[4] Excludes refundable portion, which totaled $\$ 20.4$ billion for 2008 and $\$ 27.5$ billion for 2009.
[5] Represents portion of American opportunity credit used to offset income tax before credits.
[6] Represents portion of first time homebuyer credit used to offset income tax before credits.
[7] Represents portion of making work pay credit used to offset income tax before credits.
[8] Percentage not computed.
taxpayers for a total of $\$ 34.4$ billion, which made it the largest credit, accounting for 31.3 percent of total tax credits (see the Changes in Law section of this article). The child tax credit decreased 6.9 percent to $\$ 28.4$ billion, but was still the second largest credit, accounting for 25.8 percent of total tax credits reported for 2009. Although the child tax credit decreased, the additional child tax credit (shown in Table 2 and Figure I) increased $\$ 7.1$ billion, or 34.6 percent, to $\$ 27.5$ billion.

The credits that showed the largest percentage increases for 2009 were the residential energy credit and the nonrefundable education credits. These credits were claimed by 6.7 million and 10.6 million taxpayers respectively, for a total of $\$ 5.8$ billion and $\$ 10.8$ billion respectively, increases of more than 2500 percent and 42 percent from 2008, respectively. The large increases are due mostly to changes in the law that reinstated the nonbusiness energy property credit for the residential energy credits and the addition of the American opportunity credit for the education credits (see the Changes in Law section of
this article). For 2009, several credits decreased, including the foreign tax credit, the child tax credit (as cited above), and the child care credit, which showed declines of 21.2 percent, 6.9 percent, and 5.9 percent, respectively.

More than 27 million taxpayers claimed the earned income credit for 2009, an increase of 9.2 percent from 2008. The total earned income credit increased 16.9 percent to $\$ 59.2$ billion. The number of returns receiving the credit, but having no qualifying children, increased 12.9 percent for 2009. The number of returns having one qualifying child and receiving the credit increased 6 percent, while the number of returns having two qualifying children and receiving the credit decreased 21.6 percent, or 2.1 million returns. This large decrease was, in part, due to the expansion of the EIC to include returns with three or more qualifying children. For 2009, there were 3.1 million returns that claimed the EIC with three or more qualifying children (see the Changes in Law section of this article). Thus, for 2009, the number of EIC returns with two or more eligible children

| Child tax credit and additional child tax credit [1] | 23,563 | 28,417 | 346 | 289 | 21,291 | 27,210 | 36,600 | 55,916 |

[1] The sum of "used to offset other taxes" and "refundable portion" comprise the additional child tax credit found in Table 2.

## Individual Income Tax Returns, 2009

Statistics of Income Bulletin | Fall 2011
actually increased by 1 million. The amount of EIC claimed for returns with no qualifying children increased 15.7 percent. Returns with one qualifying child reported an increase in EIC of 11.9 percent, and returns with two qualifying children showed a decrease of 16.3 percent. Returns with three or more qualifying children reported a total EIC of $\$ 11.1$ billion. If you combine this new classif cation with the returns of those taxpayers with two qualifying children, the group's EIC increased by 20 percent from the EIC levels of taxpayers with two or more qualifying children in 2008.

The number of returns claiming the refundable portion of the EIC increased 14.6 percent for 2009, while the amount of the refundable portion of the EIC increased 22 percent. The number of returns with the refundable portion of the EIC and without any qualifying children increased 32.3 percent, while the corresponding f gure for the number of returns with one qualifying child increased by 9.8 percent, and the number of returns with two qualifying children decreased by 20.5 percent. There were 3.1 million returns with three or more qualifying children claiming the refundable portion of the EIC. The amount of refundable EIC claimed on returns with no qualifying children increased 28.6 percent for 2009. The amount of refundable EIC claimed on returns with one qualifying child increased 17.3 percent, while the amount on returns with two qualifying children decreased 13.2 percent. The amount on returns with three or more qualifying children was $\$ 10.2$ billion.

Both the EIC and the child tax credit may offset income tax before credits, all other taxes, and may even be refundable. The second part of the EIC, the portion used to offset all other taxes besides income tax, was $\$ 4.8$ billion for 2009 ( 12.4 percent less than for 2008). The refundable portion, the largest component of the EIC, was treated as a refund and paid directly to taxpayers who had no tax against which to apply the credit or whose EIC exceeded income tax (and other income-related taxes). The refundable portion of the EIC totaled $\$ 54$ billion for 2009, an increase of 22 percent from 2008 (Figure H). When the additional child tax credit was included, child tax credits actually increased ( 9.7 percent) from 2008
levels. As shown in Figure I, for 2009, the combined total of these two ( $\$ 55.9$ billion) was just shy of the levels of total EIC ( $\$ 59.2$ billion). Of this total, 21.3 million returns had the refundable additional child tax credit portion, claiming $\$ 27.2$ billion.

There were several other credits besides the EIC and the child tax credit that could be used to offset other taxes and could also be refundable. The largest of these credits, after the EIC and child tax credit, was the making work pay credit, which was claimed by 101 million returns for a total of $\$ 50.7$ billion. Of this, 32.1 million returns claimed a refundable amount of $\$ 12.8$ billion. The fourth largest of these credits was the f rst-time homebuyer credit (FTHC). The FTHC was claimed by 1.4 million returns for a total of $\$ 9.8$ billion, of which 1 million returns claimed a refundable amount totaling $\$ 4.7$ billion. For 2009, a portion of the new American opportunity credit could have been refundable. The American opportunity credit was claimed by 8.8 million returns with a total of $\$ 7.6$ billion, of which 4.9 million returns claimed a refundable amount totaling $\$ 3.9$ billion. This made it the fourth largest refundable credit by number of returns, but the ffth largest by amount. Adding all the portions of the refundable credits, the amount claimed by taxpayers was $\$ 185.8$ billion, with $\$ 104.2$ billion of that amount being refundable.

## Historical Trends in Constant Dollars

As shown in Figure J, salaries and wages, AGI, and real gross domestic product (GDP) all fell sharply in constant dollars for 2009. ${ }^{6}$ The 8.7-percent decline in real AGI marked the second large decline in a row, dropping it to its lowest level since 2002. As shown in Figure K, real total income tax rose continually from $\$ 599.8$ billion for 1991 to its high of $\$ 1,106.2$ billion for 2000, but then declined each year through 2003, when it was $\$ 794.9$ billion. From 2004 to 2007, real total income tax increased each year, reaching $\$ 1,050.2$ billion in 2007, leaving it just shy of its high in 2000. For 2008 and 2009, real total income tax has dropped dramatically, falling to $\$ 789.2$ billion for 2009. This is the lowest amount since 1995. Tax as a percentage of real GDP behaved similarly. During the mid- to late 1990s, tax as a percentage of real GDP increased. Part of this

[^374]
## Figure J

Real Adjusted Gross Income, Salaries and Wages, and Gross Domestic Product, Tax Years 1979-2009 [1]

Constant dollars
(billions) [2,3]

[1] The definition of adjusted gross income (less deficit) (AGI) changed beginning in Tax Year 1987. Therefore, AGI should be examined separately from 1979 to 1986 and from 1987 to 2009. Real gross domestic product (GDP) does not include capital gains, while AGI does include capital gains.
[2] AGI and salaries and wages are shown in constant dollars, calculated using the U.S. Department of Commerce, Bureau of Economic Analysis, GDP implicit price deflator (2005=100).
[3] GDP is based on chained 2005 dollars (billions) as reported by the U.S. Department of Commerce, Bureau of Economic Analysis, in the Survey of Current Business, June 2011.
increase was attributable to the substantial increase in realizations of net capital gains and, thus, income taxes on those capital gains. The income taxes on these capital gains are included in the numerator of the income tax-to-GDP ratio, but, by def nition of GDP, the capital gains are not included in the denominator. However, from 2000 to 2003, the ratio of income tax to GDP fell from 9.9 percent to 6.7 percent in conjunction with an overall decline in reported net capital gains for all years except 2003 (in addition, income tax rates were decreased over these
years). For 2003, although capital gains increased by 20.5 percent in real terms, this was accompanied by a signif cant decrease in tax rates, especially those on long-term capital gains. From 2002 to 2007, real net capital gain (less loss) had increased 229.8 percent (Figure L). Concurrently, the ratio of income tax to GDP increased every year since 2003 to 7.9 percent in 2007, still well below the 9.9 percent cited above for Tax Year 2000. For 2008 and 2009, real net capital gain (less loss) decreased 50.2 percent and 50.5 percent, respectively. ${ }^{7}$ The ratio of income tax

[^375]
## Individual Income Tax Returns, 2009

Statistics of Income Bulletin | Fall 2011

## Figure K

Real Total Income Tax and Tax as a Percentage of Real Gross Domestic Product, Tax Years 1979-2009 [1]

[^376]to GDP fell accordingly from 7.9 percent for 2007 to 6.2 percent for 2009.

Net capital gain (less loss) is the sum of gains and losses from the sale of capital assets. Figure L shows that, in constant dollars, net capital gain (less loss) decreased 50.5 percent for 2009. TY 2003 through TY 2007 saw a trend of large annual increases for real net capital gain (less loss), which also occurred during most of the 1990s. From 1991 to 2000, real net capital gains increased almost fve fold from a low of $\$ 75.5$ billion for 1991 to a high of $\$ 366.2$ billion for 2000. During that period, capital gain (less loss) was affected by both tax law changes and a rising stock market. Due to several signif cant tax law changes enacted during the 1990s (including
the Omnibus Budget Reconciliation Act of 1993-OBRA93-and the Taxpayer Relief Act of 1997), the maximum differential between ordinary income and long-term capital gain income increased from 3 percentage points for 1991 and 1992 to 19.6 percentage points for 1997 through 2000. For 2003 through 2008, this differential was 20 percentage points. Real gains peaked at $\$ 437.8$ billion for 2007 . With the large decline in 2008 and 2009, real net capital gain (less loss) was $\$ 107.9$ billion, the lowest amount since 1994.

Along with net capital gain (less loss), the con-stant-dollar amount of capital gain distributions from mutual funds increased tremendously during the 1990 s, reaching a high of $\$ 45.9$ billion in TY 2000.

## Figure $\mathbf{L}$

Net Capital Gains and Capital Gain Distributions from Mutual Funds, Tax Years 1988-2009
[Number of returns is in thousands-money amounts are in millions of dollars]

| Tax year | Net capital gain (less loss) [1] |  |  |  | Capital gain distributions [3] |  |  |  |

| 2009 | 20,291 | 231,548 | 107,929 | -50.5 | 4,191 | 2,411 | 1,124 | -89.0 |

N/A-Not applicable.
[1] Losses were limited to a maximum of $\$ 3,000$ per return ( $\$ 1,500$ for married persons filing separately)
[2] Constant dollars were calculated using the U.S. Bureau of Labor Statistics consumer price index for urban consumers (CPI-U, 1982-84=100). See footnote 7 of this article for further details.
[3] Capital gain distributions are included in net capital gain (less loss). For 1988-1996 and 1999-2009, capital gain distributions from mutual funds were the sum of the amounts reported on Form 1040 and Schedule D. For 1997 and 1998, capital gain distributions were reported entirely on Schedule D.

Capital gain distributions declined greatly between 2000 and 2003. The decline of reported capital gain distributions over this period brought them to $\$ 2.6$ billion for 2003, below the 1990 inf ation-adjusted level of just under $\$ 3.0$ billion. These rose again through 2007 to $\$ 41.7$ billion. For 2008 and 2009, real capital gain distributions fell by 75.5 percent and then 89 percent to $\$ 1.1$ billion, the lowest amount recorded since before 1988.

Figure M presents constant dollar data for selected income, deduction, and tax items for 1988 to 2009. Real taxable interest income fuctuated over the period. Having decreased from 1990 to 1994, it rebounded 19.3 percent to $\$ 101.6$ billion for 1995. For 2000, it jumped again, by 9.8 percent. For 2008 and 2009, real taxable interest declined 19.8 percent
and 24.5 percent, after 3 years of double-digit percentage growth. Dividends had increased for 6 of the previous 7 years before 2001 and then had 2 consecutive years of large decreases for 2001 and 2002. From 2003 through 2007, however, dividends increased appreciably. Starting with 2008, dividends reversed this trend, decreasing a dramatic 25.2 percent (in real terms) for 2009 to $\$ 76.2$ billion.

Constant-dollar business or profession net income (less loss) decreased 7 percent to $\$ 114.2$ billion for 2009. This was the third year of declines in real terms after 5 years of increases. Partnership and S corporation net income (less loss) also saw its third year in a row of decline in real terms after 6 years of increases, falling 5.6 percent to $\$ 160.9$ billion. Other income items that declined included total rental and

N/A-Not applicable.
[1] Constant dollars were calculated using the U.S. Bureau of Labor Statistics consumer price index for urban consumers (CPI-U, 1982-84=100). See footnote 9 of this article for further details.
[2] Includes farm rental net income (less loss).
[3] Itemized deductions for 1991 and later years were limited if adjusted gross income exceeded specified levels.
[4] Percentage not calculated.
[5] Less than 0.05 percent.
royalty net income and taxable Individual Retirement Account distributions, which declined 31.5 percent and 16.3 percent, respectively.

For 2009, real taxable Social Security benef ts and taxable pensions and annuities increased 4.3 percent, and 3.7 percent, respectively. The inf ationadjusted amount of total itemized deductions decreased 8.6 percent for 2009, making 2 consecutive years of decreases. Real charitable contributions decreased by 8.3 percent for 2009. This marked the second year in a row that real charitable contributions decreased, and it also marked the lowest amount deducted on individual returns since 1998.

Much of the fuctuation in AMT (alternative minimum tax) liability shown for 1988 through 2009 refects changes in law. The large increases in the real AMT for 1991 and 1993 were the result of increases in the rates at which alternative minimum taxable income was taxed. After a large decline in AMT for 2001, partially resulting from a statutory increase in the AMT exemption, there was virtually no change in constant-dollar AMT for 2002. However, for 2003, while AMT tax rates were stable, other tax rates declined signif cantly. Thus, despite the fact that there was another increase in AMT exemption amounts, real AMT increased by 34.8 percent. Constant-dollar AMT increased by 34.3 percent and 29.3 percent for 2004 and 2005, respectively, with the AMT exemption amounts and all tax rates remaining the same for both years. For 2006 through 2008, exemption amounts were increased, but, despite this, AMT liability increased 19.9 percent, 8.7 percent, and 2.5 percent, respectively. For 2009, the AMT exemption amounts were again increased, but, this time, AMT decreased by 11.7 percent. This marked the f rst drop in AMT liability since 2002.

The real value of the total EIC increased each year between 1988 and 1998, exhibiting double-digit growth for several of these years. Beginning with Tax Year 1991, the EIC consisted of three components: the basic credit; the health insurance credit; and an extra credit for a child born in that year. The maximum amount of the credit for 1991 was more than twice the maximum for 1990. Later, OBRA93 modif ed the EIC by expanding the eligibility requirements to allow some taxpayers without children to qualify for the credit and eliminating the health insurance credit and extra credit components of the

EIC. In addition, the income eligibility levels and the maximum amounts of the credit increased. In 2009, the EIC expanded for taxpayers with three or more qualifying children. Accordingly, the EIC increased 17.3 percent in constant dollars for 2009, thus exceeding the previous high set the preceding year.

## Changes in Law

The def nitions used in this article are generally the same as those in Statistics of Income-2009, Individual Income Tax Returns (IRS Publication 1304). The following is a partial list of tax law and Internal Revenue Service administrative changes that had a major bearing on the Tax Year 2009 data presented in this article.

Additional child tax credits-Modif cations were made to the additional child tax credit for 2009. For Tax Year 2008, the credit limit based on earned income was 15 percent of a taxpayer's earned income that exceeded $\$ 8,500$. For 2009, the limit was 15 percent of a taxpayer's earned income that exceeded $\$ 3,000$.

Alternative minimum tax (AMT)-For Tax Year 2009, the alternative minimum tax exemption rose to $\$ 70,950$ for a married couple f ling a joint return, up from $\$ 69,950$ in 2008, and to $\$ 46,700$ for singles and heads of household, up from \$46,200, and to \$35,475 from $\$ 34,975$ for a married person fling separately.

Earned income credit-The maximum amount of the earned income credit increased, as did the amounts of earned income and investment income an individual could have and still claim the credit. The maximum amount of investment income (interest, dividends, and capital gain income) a taxpayer could have and still claim the credit increased to $\$ 3,100$ from $\$ 2,950$. The maximum credit for taxpayers with no qualifying children increased to $\$ 457$ from $\$ 438$. For these taxpayers, earned income and AGI had to be less than $\$ 13,440$ ( $\$ 18,440$ if married fling jointly) to get any EIC. For taxpayers with one qualifying child, the maximum credit increased $\$ 126$ to $\$ 3,043$ and for taxpayers with two qualifying children, the maximum credit increased to $\$ 5,028$ from $\$ 4,824$. New for 2009, the maximum credit was $\$ 5,657$ for taxpayers with three or more qualifying children. To be eligible for the credit, a taxpayer's earned income and AGI had to be less than $\$ 35,463$

## Individual Income Tax Returns, 2009

Statistics of Income Bulletin | Fall 2011
( $\$ 40,463$ for married fling jointly) for one qualifying child, less than $\$ 40,295$ ( $\$ 45,295$ for married f ling jointly) for two qualifying children, or less than $\$ 43,279$ ( $\$ 48,279$ for married $f$ ling jointly) for three or more qualifying children.

Education credits-The American opportunity credit was a new education credit (a modif cation of the Hope credit) available for 2009. The maximum credit per student was $\$ 2,500$ ( 100 percent of the frst $\$ 2,000$ and 25 percent of the next $\$ 2,000$ of qualifed education expenses). The credit was available for the frst 4 years of postsecondary education, and 40 percent of the credit (up to $\$ 1,000$ ) was refundable. The American opportunity credit was phased out for AGI between $\$ 80,000$ and $\$ 90,000(\$ 160,000$ and $\$ 180,000$ if married fling jointly). A taxpayer could not take the credit if he or she was claimed as a dependent on another return, married fling separately, or took a deduction for tuition and fees for the same student.

First-time homebuyer credit-For Tax Year 2009, a taxpayer may have claimed this credit (up to $\$ 8,000$, or $\$ 4,000$ if married f ling separately) if he or she bought a home after 2008 and before October 1, 2010 (if the taxpayer entered a written binding contract before May 1, 2010), and did not own a main home during the prior 3 years. Taxpayers were only allowed to claim this credit in Tax Year 2009 if their modif ed AGI was below $\$ 95,000$ ( $\$ 170,000$ if married fling jointly), and they purchased the home before November 7, 2009. If the home was purchased after November 6, 2009, this income limit was increased to $\$ 145,000$ ( $\$ 245,000$ if married fling jointly). For homes purchased in 2009 or 2010, taxpayers had to repay the credit only if the home ceases to be their main home within a 36 -month period beginning on the purchase date.

Government retiree credit-Taxpayers were eligible for this new credit if they received a pension or annuity payment in 2009 for service performed for the Federal, State, or local government, and the service was not covered by Social Security. The credit was $\$ 250$ ( $\$ 500$ if married f ling jointly and both the taxpayer and spouse received qualifying pensions or annuities). A taxpayer could not take the credit if he or she already received a $\$ 250$ economic recovery payment (or in the case of joint returns, where both received $\$ 250$ payments) in 2009. The credit reduced the making work pay credit. This credit was taken on approximately 922,000 individual tax
returns and totaled $\$ 0.3$ billion. These were included in the statistics with the making work pay credit.

Health savings account deduction-The deduction was limited to the annual deductible on the qualifying high deductible health plan, but not more than $\$ 3,000$ ( $\$ 5,950$ if family coverage), an increase from $\$ 2,900$ ( $\$ 5,800$ if family coverage) for 2008. These limits were $\$ 1,000$ higher if the taxpayer was age 55 or older ( $\$ 2,000$ if both spouses were 55 or older). For 2008, these limits were $\$ 900$ and $\$ 1,800$ respectively.

Indexing-The following items increased due to indexing for inf ation: personal exemption amounts, the basic and additional standard deduction amounts, the tax bracket boundaries, and the beginning income amounts for limiting certain itemized deductions and for the phaseout of personal exemptions. Also, the maximum amount of earnings subject to self-employment Social Security tax increased based on the percentage change in average covered earnings.

Individual retirement arrangement deductionFor 2009, a taxpayer (both taxpayers for taxpayers f ling jointly) may have been able to take an IRA deduction up to $\$ 5,000$ ( $\$ 6,000$ if age 50 or older). Taxpayers not covered by a retirement plan may have been able to deduct all contributions. For taxpayers covered by a retirement plan, the IRA deduction phased out between $\$ 55,000$ and $\$ 65,000$ of modifed AGI for single f lers ( $\$ 85,000$ and $\$ 105,000$ for married f ling jointly or qualifying widow(er)). This was up from $\$ 53,000$ and $\$ 63,000$ for single flers ( $\$ 83,000$ and $\$ 103,000$ for married fling jointly or qualifying widow(er)) in 2008. If one spouse was an active participant in an employer plan but the other was not, the deduction for the IRA contribution of the spouse not covered by an employer plan phased out between modif ed AGI of $\$ 166,000$ and $\$ 176,000$, up from $\$ 159,000$ and $\$ 169,000$ for 2008.

Making work pay credit-Taxpayers were able to take a credit equal to 6.2 percent of their earned income up to $\$ 400$ ( $\$ 800$ if married f ling jointly) if they had earned income from work and were not a dependent on another tax return. Taxpayers could not take the credit if their modif ed AGI was greater than or equal to $\$ 95,000$ ( $\$ 190,000$ if married fling jointly). The credit phased out between $\$ 75,000$ and $\$ 95,000$ ( $\$ 150,000$ and $\$ 190,000$ if married fling jointly). The credit was reduced if the taxpayer received a $\$ 250$ economic recovery payment in 2009
or took the government retiree credit. However, the government retiree credit portion of this was included in the statistics for the making work pay credit.

Motor vehicles tax deduction-New for 2009, a taxpayer could have deducted any State or local sales or excise taxes on the purchase of a new motor vehicle. In States without a sales tax, the taxpayer may have been able to deduct other taxes or fees. The motor vehicle must have been purchased after February 16,2009 , and the amount the taxpayer could include for State or local sales and excise taxes was limited to the taxes imposed on the $\mathrm{frst} \$ 49,500$ of the purchase price. Taxpayers were allowed to take this deduction if their AGI was less than $\$ 135,000$ ( $\$ 260,000$ if married f ling jointly). The deduction of the taxes was taken on Schedule A, if the taxpayer itemized. If the taxpayer did not itemize, the taxes increased the taxpayer's standard deduction using Schedule L, Standard Deduction for Certain Filers.

Residential energy credit-For 2009, the nonbusiness energy property credit was reinstated for qualif ed property placed in service after 2008. A taxpayer was able to take a credit of 30 percent of the costs paid or incurred in 2009 for qualif ed energy eff cient improvements and residential energy property. The credit was limited to a total of $\$ 1,500$. The credit was not available for nonbusiness property in 2008. There was also a credit for residential energy eff cient property in 2009. For 2009, the annual maximum credit limits were eliminated for qualif ed solar, small wind energy, and geothermal heat pump property costs. A taxpayer could have taken a credit of 30 percent of their costs of qualif ed solar electric
property, solar water heating property, small wind energy property, and geothermal heat pump property.

## Data Sources and Limitations

These statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ, including electronically fled returns) fled during Calendar Year 2010. Returns in the sample were stratif ed based on: (1) the larger of positive income or negative income (absolute value); (2) the size of business and farm receipts; (3) the presence or absence of specif c forms or schedules; and (4) the usefulness of returns for tax policy modeling purposes. ${ }^{8}$ Returns were then selected at rates ranging from 0.10 percent to 100 percent. The 2009 data are based on a sample of 295,133 returns and an estimated f nal population of $140,599,266$ returns. The corresponding sample and population for the 2008 data were 328,630 and $142,580,866$ returns, respectively ${ }^{9}$

Since the data presented here are estimates based on a sample of returns fled, they are subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known; coeff cients of variation (CVs) are used to measure that magnitude. Figure N shows estimated CVs for the numbers of returns and money amounts for selected income items. The reliability of estimates based on samples, and the use of coeff cients of variation for evaluating the precision of estimates based on samples, are discussed in SOI Sampling Methodology and Data Limitations located later in this issue of the SOI Bulletin.

## Individual Income Tax Returns, 2009

Statistics of Income Bulletin | Fall 2011

## Figure N

Coefficients of Variation for Selected Items, Tax Year 2009
[Money amounts are in thousands of dollars-coefficients of variation are percentages]

| Item | Number of returns | Coefficient of variation | Amount | Coefficient of variation |
| :---: | :---: | :---: | :---: | :---: |
|  | (1) | (2) | (3) | (4) |
| Adjusted gross income (less deficit) | 140,494,127 | 0.01 | 7,626,430,723 | 0.10 |
| Salaries and wages | 116,668,680 | 0.11 | 5,707,088,487 | 0.17 |
| Business or profession: <br> Net income | 16,539,498 | 0.38 | 308,887,694 | 0.78 |
| Net loss | 5,572,286 | 1.05 | 63,904,867 | 1.29 |
| Net capital gain (less loss): <br> Net gain | 6,007,930 | 1.10 | 263,099,445 | 0.73 |
| Net loss | 13,531,912 | 0.65 | 31,912,136 | 0.69 |
| Taxable Individual Retirement Account distributions | 9,659,133 | 0.92 | 135,202,708 | 1.43 |
| Taxable pensions and annuities | 26,020,252 | 0.50 | 523,295,800 | 0.75 |
| Partnership and S-corporation: <br> Net income | 5,006,112 | 1.10 | 497,773,276 | 0.65 |
| Net loss | 3,006,468 | 1.47 | 152,675,851 | 0.90 |
| Estate and trust: <br> Net income | 600,258 | 3.49 | 20,488,202 | 2.99 |
| Net loss | 51,777 | 10.72 | 3,106,050 | 4.03 |
| Unemployment compensation | 11,298,837 | 0.86 | 83,538,098 | 1.15 |
| Taxable social security benefits | 15,320,332 | 0.67 | 174,649,879 | 0.82 |
| Other income: <br> Net income | 6,237,495 | 1.13 | 38,137,780 | 2.27 |
| Net loss | 250,441 | 5.21 | 6,821,833 | 5.45 |
| Payments to an Individual Retirement Account | 2,587,823 | 1.83 | 11,215,140 | 2.11 |
| Moving expenses adjustment | 856,242 | 3.28 | 2,099,707 | 4.71 |
| Self-employment tax deduction | 17,436,420 | 0.43 | 23,833,849 | 0.75 |
| Self-employed health insurance deduction | 3,625,543 | 1.30 | 21,819,844 | 1.41 |
| Total statutory adjustments | 34,764,363 | 0.38 | 112,967,222 | 0.71 |
| Taxable income | 104,160,741 | 0.14 | 5,088,387,918 | 0.13 |

Table 1. All Returns: Sources of Income, Adjustments, Deductions and Exemptions, by Size of Adjusted Gross Income, Tax Year 2009

| Size of adjusted gross income | Number of returns | Adjusted gross income less deficit | Total income |  | Salaries and wages |  | Taxable interest |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

* Estimate should be used with caution because of the small number of sample returns on which it is based
** Data combined to avoid disclosure of information for specific taxpayers.
[1] Not included in total income.
[2] Other income includes all items reported on line 21 of Form 1040, such as prizes, awards, recoveries of bad debts, insurance received as reimbursement for medical expenses taken as a deduction in the previous year, and any other income subject to tax for which no specific line was provided on the form. Any foreign-earned income exclusion or net operating loss in an earlier year (that was not carried forward and deducted for 2009) was entered as a negative amount on line 21 by the taxpayer but was edited into separate fields during Statistics of Income (SOI) processing. Gambling earnings entered on line 21 by the taxpayer were also edited into a separate field during SOI processing
[3] Other adjustments does not include the foreign housing adjustment and the archer MSA deduction.
NOTE: Detail may not add to totals because of rounding.

## Individual Income Tax Returns, 2009

Statistics of Income Bulletin | Fall 2011

Table 2. All Returns: Tax Liability, Tax Credits, and Tax Payments, by Size of Adjusted Gross Income, Tax Year 2009
[All figures are estimates based on samples-money amounts are in thousands of dollars]

| Size of adjusted gross income |  | All returns | Taxable income |  | Alternative minimum tax |  | Income tax before credits |  |

## Partnership Returns, 2009

by Nina Shumofsky and Lauren Lee

Apartnership is an unincorporated organization formed by two or more entities or persons that join to carry on a trade or business. Each partner contributes money, property, labor, or skill, and each expects to share in the prof ts and losses. Every partnership that engages in a trade or business, or has income from sources in the United States, must fle an annual information return, Form 1065, U.S. Partnership Return of Income, or Form 1065-B, U.S. Return of Income for Electing Large Partnerships, with the Internal Revenue Service.

The number of partnerships and partners continued to grow for Tax Year 2009, during which partnerships f led more than 3 million tax returns representing more than 21 million partners. Nearly half of all partnerships and a third of all partners were classif ed in the real estate and rental and leasing sector. While the number of partnerships and partners increased, total assets, total receipts, and total net income (loss) continued to decline. The f nance and insurance sector made up the largest portion of each of these three critical f nancial f gures.

Most partnerships do not pay taxes on their income but "pass through" any prof ts and losses to the partners, who must include those prof ts and losses on their tax returns. For 2009, partnerships passed through $\$ 391.3$ billion in total income (loss) minus total deductions available for allocation to their partners. ${ }^{1}$ This amount was a slight increase over 2008, the year for which partnerships had the largest year-to-year decline ever for total income available for allocation, a decrease of 65.1 percent from $2007 .{ }^{2}$ Consistent with prior years, the largest portion of this income was passed through to partners classif ed as individuals. Despite the overall increase for 2009, the real estate and rental and leasing sector, reported

Nina Shumofsky and Lauren Lee are economists with the Corporation Special Projects Section. This article was prepared under the direction of Joseph Koshansky, Chief.

## Figure A

Partnership Annual Percentage Change for Tax Years 2000-2009

| Tax <br> year | Number of <br> partnerships | Number of <br> partners | Total <br> assets | Total <br> receipts | Total net <br> income <br> (loss) |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $(1)$ | $(2)$ | $(3)$ | $(4)$ | $(5)$ |
| 2001 | 6.2 | -11.0 | 11.6 | 26.7 | 17.8 |
| 2002 | 3.6 | 4.2 | 25.9 | 6.4 | 2.7 |
| 2003 | 5.1 | 0.7 | 5.2 | 2.6 | -2.1 |
| 2004 | 5.9 | -1.5 | 9.1 | 7.4 | 11.4 |
| 2005 | 7.2 | 10.3 | 20.0 | 16.2 | 27.7 |
| 2006 | 6.5 | 4.2 | 18.3 | 23.1 | 41.9 |
| 2007 | 5.1 | 3.2 | 24.8 | 12.5 | 22.1 |
| 2008 | 1.6 | 4.7 | 18.9 | 14.9 | 2.5 |
| 2009 | 0.7 | 9.5 | -5.5 | -0.3 | -33.0 |

a negative total for the frst time since 1992 and recorded the largest sector drop ( $\$ 97.8$ billion).

For 2009, the number of partnerships increased 0.7 percent, from 3,146,006 for 2008 to 3,168,728 for 2009 (Figures A and B). Since 2000, the number of partnerships has increased at an average annual rate of 5.1 percent. The majority of this growth has been from partnerships classif ed as limited liability companies. The number of partners increased by 9.5 percent, from 19,300,250 for 2008 to 21,141,979 for 2009. The number of partners has increased 8 out of the last 10 years.

Partnerships with assets greater than $\$ 100,000,000$ made up just 0.6 percent of the 2009 population of 3,168,728 (Figure C). Despite the small number, these 18,542 partnerships represented a large portion of many key f nancial fgures. These partnerships were concentrated in the $f$ nance and insurance ( 57.4 percent) and real estate and rental and leasing ( 22.4 percent) sectors. The largest portion of their net income (loss) was passed though to partners classif ed as corporations ( $\$ 134.5$ billion) and partnerships ( $\$ 96.2$ billion). The large amount of partnership income passed through to other partnerships highlighted the complexity of partnerships' structures and relationships. ${ }^{3}$

## Industry Trends

Historically, partnerships classif ed in the real estate and rental and leasing sector have dominated the statistics for both the number of partnerships and partners. For 2009, this sector included 48.1 percent of all partnerships and 33.4 percent of all partners, approximately the same as the 47.3 percent and 35.5
percent for the prior year (Figure B). In addition, partnerships classif ed in this sector accounted for 6.3 percent of total receipts and 23.7 percent of total assets for all partnerships (Figure D).

Compared to the real estate and rental and leasing sector, the f nance and insurance sector represented a smaller portion of the partnerships and partners

## Figure $C$

## Comparison of Partnerships with More Than $\$ 100,000,000$ in Assets to the Entire Population of Partnerships, Tax Year 2009

| Item | Entire population of partnerships | Partnerships with \$100,000,000 or more in assets | \% of Total |
| :---: | :---: | :---: | :---: |
|  | (1) | (2) | (3) |
| Number of partnerships | 3,168,728 | 18,542 | 0.6 |
| Number of partners | 21,141,979 | 6,570,634 | 31.1 |
| Total assets | 18,798,108,367 | 13,585,680,384 | 72.3 |
| Total income | 3,886,378,924 | 1,916,952,605 | 49.3 |
| Total deductions | 3,748,565,614 | 1,816,407,724 | 48.5 |
| Ordinary business income (loss) | 137,813,309 | 100,544,882 | 73.0 |
| Portfolio income (loss) distributed directly to partners | 222,071,989 | 185,016,474 | 83.3 |
| Net rental real estate income (loss) | -3,663,647 | -9,957,886 | *271.8 |
| Other net rental income (loss) | 3,815,928 | 1,315,446 | 34.5 |
| Total net income (loss) | 409,878,549 | 294,916,238 | 72.0 |

*This percentage is over $100 \%$ because the $\$ 100,000,000$ category contributed a large number of "loss" returns to the overall figure.
in the population but a larger percentage of several key money amounts (Figures D and B). Of the total population for 2009, partnerships classif ed in the f nance and insurance sector reported the largest share of total net income (loss) ( 50.6 percent), total receipts ( 19.2 percent), and total assets ( 54.4 percent). In addition, the sector accounted for 9.9 percent of all partnerships and 26.7 percent of all partners. For the prior year, the sector's shares were 10.2 percent and 24.8 percent, respectively. These percentages were fairly constant in recent years.

The "other f nancial investment activities" industry remained the dominant industry in the f nance and insurance sector for 2009 (Figures B and D). This industry represented 70.2 percent of the sector's partnerships, 67.1 percent of the sector's partners, 73.1 percent of the sector's total assets, 78.6 percent of the sector's total net income (loss), and 73.4 percent of the sector's total receipts for 2009. The industry accounted for 66 percent or more of these categories for 2008,69 percent or more for 2007 , and 65 percent or more for 2006.

## Total Assets

Total assets declined for the second consecutive year. Total assets of partnerships reporting balance sheet
information decreased 2.4 percent between 2008 and 2009, from $\$ 19.3$ trillion to $\$ 18.8$ trillion (Figure D). ${ }^{4}$ Three industrial sectors accounted for the majority of the decline. Total assets for the f nance and insurance sector, which represented 54.4 percent of all assets, declined $\$ 180.2$ billion to $\$ 10.2$ trillion. Real estate and rental and leasing sector assets dropped $\$ 136.3$ billion to $\$ 4.5$ trillion, and the manufacturing sector's assets fell $\$ 110.6$ billion to $\$ 718.6$ billion (Figures D and E). Before 2008, total assets had not decreased since 1987, when partnerships reported a 1.6 -percent decline.

## Total Net Income (Loss)

Partnerships reported a 10.5 -percent decrease in their total net income (loss), or prof t , from $\$ 458.2$ billion for 2008 to $\$ 409.9$ billion for 2009 (Figure F). For the second consecutive year, the largest of the six components of prof $t$ was interest income, which represented 43.4 percent of the total. Interest income also showed the largest decline from the previous year, falling $\$ 67$ billion to $\$ 178.1$ billion. Decreases were also recorded for dividend and royalty income. These declines were countered by increases in ordinary business income (loss), net rental real estate income (loss), and other net rental income (loss).

| Other net rental income (loss) | -3,661,014 | 3,815,928 | 7,476,942 | [P] |

[1] Total net income (loss) is discussed in the Explanation of Selected Terms section.
[P] Percent change is not provided if the current year data contains a positive value (income) compared to a prior year negative value (loss).
NOTE: Detail may not add to totals because of rounding
exchanges industries was offset by a $\$ 59.7$-billion decrease in the other f nancial investment activities industry. The decline in total net income (loss) in the f nance and insurance sector was the frst decrease in 7 years. For 2009, partnerships in 12 of the 20 industrial sectors reported a decrease in prof ts, down from 16 for 2008.

For the f rst time since the introduction of the North American Industry Classif cation System (NAICS) in 1998, the real estate and rental and leasing sector reported an overall loss for net income (loss). This total dropped $\$ 16.3$ billion to $-\$ 12$ billion for 2009 , following decreases for the past 3 years. ${ }^{5}$

## Total Receipts

Partnerships reported an 18.1-percent decrease in total receipts between 2008 and 2009, from almost $\$ 5.9$ trillion for 2008 to $\$ 4.8$ trillion for 2009 (Figure D). Business receipts, which represented 74 percent of total receipts, showed a corresponding decrease of $\$ 781.6$ billion to $\$ 3.6$ trillion (Table 7). The manufacturing sector reported the largest dollar decline in total receipts, falling from $\$ 1.1$ trillion for 2008 to $\$ 798$ billion for 2009 (Figure D). The next largest decrease occurred in the $f$ nance and insurance sector, which declined from $\$ 1.1$ trillion to $\$ 924.7$ billion. Overall, 18 out of the 20 sectors reported a decrease for 2009. The exceptions to the widespread decline in total receipts were the information sector and the health care and social assistance sector. ${ }^{6}$

## Partnerships by Entity Type

Partnerships classify their business structures as one of the following six entity types: domestic general partnership, domestic limited partnership, domestic limited liability company, domestic limited liability partnership, foreign partnership, or "other" partnership. ${ }^{7}$ Between 2008 and 2009, the number of limited liability companies (LLCs) increased 3.8 percent to $1,969,446$ (Figure G). These companies represented 62.2 percent of all partnerships and surpassed all other entity types for the eighth
consecutive year (Figures G and H). Prior to 2002, domestic general partnerships were consistently the most common type of partnership. They have ranked second since that time. Between 2008 and 2009, the number of general partnerships decreased 6.8 percent to 624,086 , which is a 53.5 -percent decrease from a peak of $1,167,036$ for 1995. The number of domestic general partnerships has decreased every year for more than 10 years, except for a slight increase for 2005. In contrast, the number of limited liability companies increased more than 1,500 percent during the same period, from 118,559 for 1995 to 1,969,446 for 2009.

Even though LLCs were the most prevalent type of partnership, limited partnerships continued to report the largest share of overall partnership prof ts (34 percent) (Figure I). This total amount for limited partnerships declined $\$ 39$ billion to $\$ 139.3$ billion for 2009 (Table 8). This was the third consecutive decline since 2002. Prof ts for general partnerships also decreased from $\$ 80.4$ billion to $\$ 62$ billion. In contrast, prof ts for LLCs increased from $\$ 54.7$ billion for 2008 to $\$ 88.9$ billion for 2009. Looking at gains and losses, the $\$ 234.4$-billion loss for LLCs continued to exceed the combined losses, $\$ 126.5$ billion, for both general and limited partnerships (Figure I).

Both limited partnerships and limited liability companies showed increases in the number of partners reported for 2009, while general partnerships reported a decrease (Figure J). LLCs, which have dominated the increases in the number of partners each year for more than a decade, reported approximately $8,236,000$ partners for 2009, compared to approximately $7,524,000$ for $2008 .{ }^{8}$ The number of partners in limited partnerships increased from approximately $7,055,000$ to $8,014,000$. In contrast, the number of partners in general partnerships decreased from approximately $2,623,000$ to $2,226,000$. The number of partners in both general and limited partnerships that show a prof $t$ exceeded the number that showed a loss. Limited liability companies, however, had almost the same numbers of partners reporting a prof $t$ or loss for 2009.

[^388]
## Figure G

Number of Partnerships by Type of Entity, Tax Years 2000-2009

[1] Data for "other" partnerships include foreign partnerships, as well as partnerships which checked the "other" box, Form 1065, Schedule B, line 1, Type of Entity, or did not check a box. See Figure H for the number of partnerships for each of these categories.

## Allocations to Partners

Partners may be corporations, individuals, other partnerships, tax-exempt organizations, nominees, and other legal entities. Table 5 presents data on the different types of partnership income (or losses) and deductions allocated to these different kinds of partners for selected industrial groups.

For 2009, all partnerships reported a total of $\$ 632.9$ billion in total income (loss) available for allocation, before deductions. For separately stated deductions (such as contributions and interest investment expense), all partnerships reported a total of $\$ 241.6$ billion. The difference between total income (loss) and total deductions resulted in $\$ 391.3$ bil-
lion of total income (loss) minus total deductions available for allocation to partners. For 2009, \$400 billion of this amount was identif ed as allocated by type of partners. The difference between total income (loss) minus total deductions available for allocation and income (loss) allocated to partners was due to some partnerships' failure to report loss allocations, by type of partner, on their originally fled returns.

Between 2008 and 2009, total income (loss) minus total deductions available for allocation increased slightly from $\$ 390.8$ billion to $\$ 391.3$ billion. This small increase followed the largest decrease ( $\$ 1.1$ trillion) ever recorded in SOI statistics between

2007 and 2008. The f nance and insurance sector, which had the largest decline between 2007 and 2008, reported the largest increase between 2008 and 2009 , rising $\$ 107.1$ billion to $\$ 171.1$ billion. The real estate and rental and leasing sector, which had declined for 3 years, continued this trend with the largest sector decrease for this amount. For 2009, the sector decreased $\$ 81$ billion to $-\$ 16.8$ billion, which
was the frst negative total in this sector since 1992. The mining sector reported the second largest decrease in total income (loss) minus total deductions available for allocation, decreasing by $\$ 29.5$ billion to $\$ 9.5$ billion.

Despite these declines between 2008 and 2009, 5 out of the 20 industrial sectors reported increases in total income (loss) minus total deductions. These

[1] Other partnerships are those which checked the "other" box, Form 1065, Schedule B, line 1, Type of Entity, or did not check a box.
NOTES: Detail may not add to totals because of rounding. Domestic limited liability companies, domestic limited liability partnerships, and foreign partnerships are discussed in the Explanation of Selected Terms section. Net income or loss refers to "total net income or loss." Breakeven returns are included in the "loss" columns.
sectors included agriculture; information; f nance and insurance; manufacturing; and administrative and support and waste management and remediation services. Only three sectors reported increases between 2007 and 2008.

Since NAICS data were f rst reported in 1998, partnerships classif ed in the f nance and insurance sector, compared to those in other sectors, have reported the largest share of allocations (with the exception of 2002). This trend continued for 2009, when partnerships classif ed in f nance and insurance reported the largest portion (43.7 percent) of total income (loss) minus total deductions available for allocation. Partnerships classif ed in the professional, scientif c, and technical services sector allocated the second largest share (24.4 percent) (Table 5).

As shown in Figure K, earlier trends in dollars allocated by partner type have changed in recent years. Partners classif ed as individuals have consistently surpassed corporations as the top income (loss) recipients, with the exception of 2006 and 2007. For 2009, partners classif ed as individuals again reported the largest share, receiving $\$ 168.2$ billion, a decrease from the $\$ 231.6$ billion for 2008. This decrease brought them much closer to the corporate dollar amount after a signif cant difference for 2008. For 2009, partners classif ed as corporations received
$\$ 138$ billion, an increase from the $\$ 52.2$ billion received the previous year (Table 5).

## Net Rental Real Estate Income (Loss)

For all industries, net rental real estate income (loss) increased $\$ 8.9$ billion between 2008 and 2009, the frst reported increase since 2001 (Figure L). However, all industries still reported an overall \$3.7-billion loss. The loss is the second consecutive overall def cit and the third reported since 1994. The majority of the increase in net rental real estate income (loss), $\$ 6.1$ billion, came from net income (loss) from partnerships, estates, and trusts. An additional \$3.7-billion increase resulted from gross rents from rental real estate increasing more rapidly than total real estate rental expenses. Total real estate rental expenses increased $\$ 0.4$ billion to $\$ 425.3$ billion, while gross rents from rental real estate increased $\$ 4.1$ billion to $\$ 435.8$ billion (Table 4). A $\$ 1$-billion decline in net gain (loss) from sales of business property slightly offset the other increases.

The largest changes in net rental real estate income (loss) were reported in the real estate and rental and leasing sector (Figure L). The lessors of nonresidential buildings (except miniwarehouses) industry reported $\$ 29.7$ billion for net rental real estate income, while other real estate activities and lessors

NOTE: Detail may not add to totals because of rounding.

## Partnership Returns, 2009

Statistics of Income Bulletin | Fall 2011
of residential buildings and dwellings reported net losses of $\$ 14.8$ billion and $\$ 14.1$ billion, respectively. Outside the real estate and rental and leasing sector, partnerships classif ed in the $f$ nance and insurance sector reported net losses from rental real estate of $\$ 3.9$ billion for 2009 .

## Electronically Filed (ELF) Partnership Returns

 In 1986, the Internal Revenue Service (IRS) frst offered partnerships the option of using electronic media to fll their Form 1065, U.S. Partnership Return of Income, returns. Beginning in Tax Year 2000, the IRS required partnerships with more than 100 partners to fle their returns electronically; however, the IRS could waive the electronic fling rules if a partnership demonstrated that a hardship would result from the requirement. For returns with less than 100 partners, electronic fling was optional.For 2009, 1,222,199 partnerships fled electronically, an increase of 25.4 percent from the 974,739 returns $f$ led electronically for 2008. These partnerships represented 13.6 million partners for 2009, a 24.8-percent increase from the 10.9 million partners for 2008. The electronically $f$ led returns for 2009 represented 38.6 percent of all partnerships, 64.3 percent of all partners, 31.5 percent of total assets, and 40 percent of total net income (loss), all increases from 2008.

## Electing Large Partnerships

Form 1065-B, U.S. Return of Income For Electing Large Partnerships, was introduced for Tax Year 1998. Unlike regular partnerships that report the distribution of partners' allocated shares of income, gain, loss, deductions, or credits to each partner, electing large partnerships combine most items at the partnership level and only pass the net amounts through to the partners. For 2009, 109 partnerships f led Form 1065-B, an increase from the 99 fled for 2008. The number of partners decreased from 29,873 for 2008 to 28,612 for 2009. Total net income (loss) decreased from $\$ 491$ million for 2008 to $\$ 287.8$ million for 2009. Total assets also decreased from $\$ 13.2$ billion for 2008 to $\$ 11.2$ billion for 2009.

## Net Income (Loss) Reconciliation for Certain Partnerships (Schedule M-3)

For the past 4 years, certain partnerships were required to fle Schedule M-3, Net Income (Loss) Reconciliation for Certain Partnerships, instead of Schedule M-1, Reconciliation of Income (Loss) per Books With Income (Loss) per Return. For 2009, 241,959 partnerships f led a Schedule M-3, an increase from the $238,726 \mathrm{f}$ led for 2008. Schedule $\mathrm{M}-3$ provided more detail on the reconciliation between f nancial accounting net income and tax accounting net income. Differences were divided into two categories: temporary and permanent. Temporary (or timing) differences between book income and taxable income were due to items of revenue or expense that were recognized in different periods for tax and book reporting. Permanent differences were differences that partnerships never reversed; they were either nontaxable book revenues or nondeductible book expenses. For 2009, partnerships that f led a Schedule M-3 reported $\$ 947.6$ billion in income (loss) per income statement, $-\$ 649$ billion in temporary differences, $\$ 27$ billion in permanent differences, and $\$ 318$ billion in income (loss) per tax return.

## Data Sources and Limitations

Tax Year 2009 statistics are estimates based on a stratif ed probability sample of 40,278 returns selected from a population of $3,361,143$ partnerships. ${ }^{9}$ Tax Year 2009 covers returns processed by the IRS during Calendar Year 2010. All partnerships engaged in business in, or having income from sources within, the United States were required to fle either Form 1065, U.S. Partnership Return of Income, or Form 1065-B, U.S. Return of Income For Electing Large Partnerships, to report income or loss, deductions, tax credits, and other tax-related items the partnerships generated during the tax period. The statistics are only for active partnerships, which are def ned as those that reported any items of income or deduction derived from a trade or business, or from rental or portfolio income.

The population was stratif ed into classes based on industry, type of return, size of total assets, and

[^390]size of certain receipt or income amounts from both ordinary business income (loss) and portfolio income (loss). Returns were selected from these classes at various probabilities ranging from 0.04 percent to 100 percent and were weighted to represent the total population. There were 525 sampled returns that were ruled "out of scope," as they had no activity or duplicated other returns already in the study. This resulted in a f nal sample of 39,753 returns and an estimated overall active population of $3,168,728$.

Because the data presented in this article were based on a sample of returns, they were subject to sampling error. To properly use the data, coeff cients of variation (CVs), the ratio of an estimate's standard error to the estimate, were used to measure the magnitude of potential sampling error. Figure M presents the coeff cients of variation. Smaller values for the CV indicate that the sampling error is small relative to the estimate.

## Table Conventions

All money amounts and frequencies in the data tables were subject to rounding errors. As a result, a row or column of frequencies or amounts may fail to add exactly to the corresponding total amount. Money amounts were rounded to the nearest $\$ 1,000$ at the table level. Amounts of $\$ 500$ or more were rounded up to the next thousand. Total amounts between $+\$ 500$ and $-\$ 500$ were footnoted to indicate that an amount greater than zero was present.

Whenever a cell frequency was less than 3, the estimate was combined or deleted in order to avoid disclosure of information about specifc partnerships. A footnote at the end of the table described how to identify such combinations or deletions. In other cases, an estimate based on fewer than 10 returns, not selected at the 100 -percent rate, was indicated by an asterisk (*) and considered statistically unreliable. These estimates should typically be used in combination with other tabulated values due to the small sample size.

The statistical reliability of each cell in the tables was determined separately from all other cells. Thus, it was possible for a total f gure to be marked with an asterisk (*), indicating statistical unreliability, while a subset of the total is not so marked. For example, a sector amount could be based on seven returns, three not sampled at the 100 -percent rate. The amount

## Partnership Returns, 2009

Statistics of Income Bulletin | Fall 2011
would receive an asterisk. However, an industry amount, within the sector, may include all of the four returns sampled at the 100 -percent rate and would not receive an asterisk.

## Explanation of Selected Terms

Assets and liabilities-A partnership was required to provide balance sheet information, in general, only if it had total receipts of $\$ 250,000$ or more and total assets of $\$ 1,000,000$ or more. For partnerships with accounting periods ending before 2008, the total asset requirement was $\$ 600,000$. The assets and liabilities of partnerships that did not provide this information were not estimated. If a partnership provided balance sheet data in a format of its own, instead of that provided on the return form, an effort was made during data collection to associate the amounts provided with the items on the partnership balance sheet. Also, for returns with accounting periods ending after December 31,2005 , total assets should have been determined without offset by liabilities and should not have been reported as a negative amount. If, however, the partnership continued to report negative total assets, no effort was made during data collection to change the amount.

Business receipts-Business receipts represent the gross receipts or sales less returns and allowances from trade or business income. Business receipts were not adjusted to include rental real estate activity, which was separately reported on the partnership return. Business receipts were the largest component of gross receipts for industry groups, such as manufacturing.

Electing large partnerships-Partnerships that had 100 or more partners in the preceding year could elect to fle Form 1065-B, U.S. Return of Income For Electing Large Partnerships, in lieu of the more general Form 1065, U.S. Partnership Return of Income. Unlike a regular partnership that reports the partner's allocated share of income, gain, loss, deductions, or credits to each partner, an electing large partnership combines most items at the partnership level and passes through net amounts to partners.

Electronically filed (ELF) partnerships-Certain partnerships with more than 100 partners were requiredto f le their returns electronically. ELF returns were submitted via electronic media in lieu
of paper returns and were verif ed for mathematical consistency on submission.

Foreign partnerships-A foreign partnership that has gross income effectively connected with the conduct of a trade or business within the United States or has gross income derived from sources in the United States must f le a Form 1065, U.S. Partnership Return of Income, even if its principal place of business was outside the United States or all its partners were foreign persons.

Limited liability companies (domestic)-A limited liability company (LLC) is an entity formed under State law by f ling articles of organization as an LLC. Limited liability companies that choose to be taxed as partnerships f le Form 1065, U.S. Partnership Return of Income. They were identif ed by their response to a question on Form 1065, Schedule B, Other Information. Limited liability companies combine the corporate characteristics of limited liability for all members with the pass-through tax treatment of a partnership. (The owners of an LLC are called members, not partners.) These businesses offer more organizational f exibility than S corporations. ( S corporations pass through their income, gains and losses, deductions and credits to their shareholders for tax purposes, like partnerships.) For example, unlike S corporations, LLCs are not limited in the number and type of owners. Unlike partners in limited partnerships, all members of LLCs have limited liability protection, even if they actively participate in the management of the business. In some cases, LLCs f le as sole proprietorships on individual income tax returns or as corporations on corporation income tax returns. LLC data reported on these returns were not included in this article.

## Limited liability partnerships (domestic)—A

 limited liability partnership (LLP) is formed under a State limited liability partnership law. Limited liability partnerships fle Form 1065, U.S. Partnership Return of Income. They were identif ed by their response to a question on Form 1065, Schedule B, Other Information. Organizationally, LLPs are available in some States only for professional partnerships, such as law frms or accounting frms. A partner in an LLP receives liability protection from the actions of other partners, but is liable for the partnership debts as well as for the consequences of his or her own actions.Nonrecourse loans-Nonrecourse loans are those liabilities of the partnership for which no partner bears the economic risk of loss.

North American Industry Classification SystemStarting with the 1998 SOI partnership study, data were classif ed using the North American Industry Classif cation System (NAICS). NAICS replaced the Standard Industry Classif cation system (SIC). NAICS is a hierarchical system that classif es businesses, including partnerships, into sectors, subsectors, industry groups, and industries. Although the complete NAICS system uses 20 sectors, for presentation purposes, the partnership data in the Tax Year 1998 through Tax Year 2001 articles were grouped into 10 industrial divisions, in order to more easily compare NAICS data to SIC data. Beginning with the Tax Year 2002 article, the industrial division was dropped, and the partnership data were grouped into the same 20 industrial sectors used in the NAICS system, except for the exclusion of public administration and the addition of nature of business not allocable. Businesses are only classif ed in the nature of business not allocable sector when a more specifc activity cannot be identif ed from the tax return. Data within these industrial sectors were classif ed in industrial groups. The most detailed classif cation in this article and related data tables is the "industry." The 20 sectors used in this article are listed below.

- Agriculture, forestry, f shing, and hunting
- Mining
- Utilities
- Construction
- Manufacturing
- Wholesale trade
- Retail trade
- Transportation and warehousing
- Information
- Finance and insurance
- Real estate and rental and leasing
- Professional, scientif c , and technical services
- Management of companies (holding companies)
- Administrative and support and waste management and remediation services
- Educational services
- Health care and social assistance
- Arts, entertainment, and recreation
- Accommodation and food services
- Other services
- Nature of business not allocable

In addition, in 2002 and 2007, the NAICS classif cation system was updated. In 2002, the new version included a revised structure for both the construction and information sectors and additional detail for the retail trade sector. In 2007, the information sector was updated again, along with one f nancial industry. The North American Industry Classif cation publication contains appendices comparing the 2002 and 2007 NAICS United States structure to the 1997 NAICS United States structure. ${ }^{10}$

Partnership industries were determined based on the activity from which the business derived the largest percentage of its total receipts. Total receipts, for industry-coding purposes only, was def ned as the sum of:

- gross receipts or sales less returns and allowances (i.e., business receipts in the statistics);
- ordinary income from other partnerships, estates, and trusts;
- net farm prof t;
- net gain from Form 4797;

■ other income (Form 1065, page 1, line 7);

- other gross rental income;
- interest income;
- dividend income;

[^391]
## Partnership Returns, 2009

Statistics of Income Bulletin | Fall 2011

- royalties;
- net short-term capital gain;
- net long-term capital gain;
- net section 1231 gain;
- other income (Form 1065, page 4, line 11);
- gross rents from rental real estate;
- net gain from the disposition of property from rental real estate activities; and
- net income from rental real estate activities from partnerships, estates, and trusts in which the partnership is a partner or benef ciary.

Total receipts for the partnership industry coding purposes differ from total receipts used elsewhere in this article and is def ned under Total receipts in this section.

Partner-Partners can be individuals, corporations, other partnerships, or any other legal entity. Partners are classif ed as either general or limited. General partners are those who assume liability for the partnership's debts and losses. Limited partners are those whose liability in the partnership is limited to their investment. By def nition, a partnership must have at least two partners, at least one of which must be a general partner. A general partnership is composed entirely of general partners. A limited partnership has at least one general partner and one or more limited partners.

Partnerships-A partnership is a relationship between two or more entities or persons who join to carry on a trade or business, with each partner contributing money, property, labor, or skill, and each expecting to share in the prof ts and losses. Every partnership that engages in a trade or business or has income from sources in the United States must fle an annual information return, Form 1065, U.S. Partnership Return of Income, or Form 1065-B, U.S. Return of Income For Electing Large Partnerships, with the Internal Revenue Service, showing the partnership's taxable income or loss for the year. A partnership must $f$ le this return even if its principal place of business is outside the United States and even if all of its members are nonresident aliens.

Total net income (loss)-Through Tax Year 1986, amounts for total net income (loss) were reported
on Form 1065, U.S. Partnership Return of Income, as ordinary income (loss). After tax law changes and tax form revisions in 1987, Statistics of Income studies began computing a similar total f gure as the sum of:

- ordinary business income (loss);
- interest income;
- dividend income;
- royalties;
- net rental real estate income (loss) from Form 8825, Rental Real Estate Income and Expenses of a Partnership or an S Corporation; and
- other net rental income (loss).

The sum of these components is a measure of overall partnership prof ts or losses, which enable comparisons with total net income (loss) reported for years before 1987. The prof $t$ status of a partnership is determined based on the sum of these six amounts. Partnerships where the sum of these six amounts equals zero are included with loss partnerships. For 2004, the def nition of total net income (loss) was revised because other portfolio income (loss) was excluded since it was no longer reported separately on the Schedule K, Partners' Distributive Share Items, but was included on Schedule K, Line 11, other income (loss). This resulted in the 2004 total net income (loss) being understated by that amount when compared to years prior to 2004. However, this understatement was small since, for 2003, other portfolio income (loss) for all partnerships was only $\$ 3.1$ billion or 1 percent of the $\$ 301.4$ billion reported for total net income (loss).

Total receipts-Total receipts is computed for the statistics to ref ect similar computations published in other Statistics of Income (SOI) studies. It is the sum of positive income received by partnerships for the specif c items listed below (negative amounts or losses are included in the statistics as deduction items):

- gross receipts or sales less returns and allowances (i.e., business receipts in the statistics);
- ordinary income from other partnerships, estates and trusts;
- net farm proft;
- net gain from Form 4797, Sales of Business Property;
- other income (Form 1065, U.S. Return of Partnership Income, page 1, line 7);
- net rental real estate income;
- other net rental income;
- interest income;
- dividend income;
- royalties;
- net short-term capital gain;
- net long-term capital gain;
- net section 1231 gain; and
- other income (Form 1065, page 4, line 11).

Total receipts in Table 7 of this article differs from total receipts presented in Table 11 in the Selected Historical and Other Data section of the spring issue of the Statistics of Income Bulletin. Table 11 excludes certain income items allocated directly to
partners (such as net short-term and long-term capital gains, net gain under Internal Revenue Code section 1231, and other ingcome (Schedule K, Line 7)).

## Additional Tabular Data on Tax Stats Web Site

For additional partnership tabular data, by size of total assets, see the Partnership section of the Tax Stats Web pages: www.irs.gov/taxstats/index.html. This site also includes tabular data on partnership returns for prior years, as well as information on fling requirements, sample designs, an explanation of terms, and links to other SOI studies. Beginning in 2007, tabular data for partnerships that reported foreign transaction data on Form 1065, Schedule K, Partners' Distributive Share Items, lines 16a-m, were added to Tax Stats. Table 23 shows these foreign transaction data by selected industry group. Table 24 shows total assets, trade or business income and deductions, portfolio income, rental income, and total net income, by size of total assets, for partnerships that reported these foreign transaction data. In addition, Table 25 is the same as Table 24, except that it displays data for partnerships that did not report foreign transaction data.

* Estimate should be used with caution because of the small number of sample returns on which it is based.
[1] Total net income (loss) is the sum of ordinary business income (loss), interest income, dividend income, royalties, net rental real estate income (loss) and other net rental income
(loss). For more information, see Explanation of Selected Terms section for total net income (loss) at the end of the article text.
[2] Between $-\$ 500$ and $+\$ 500$.
NOTE: Detail may not add to totals because of rounding

Table 2. Partnerships with Net Income: Total Assets, Trade or Business Income and Deductions, Portfolio Income, Rental Income, and Total Net Income, by Selected Industrial Group, 2009

* Estimate should be used with caution because of the small number of sample returns on which it is based.
[d] In order to avoid disclosure for specific partnerships, these data are not shown. However, the data are included in the appropriate totals.
[1] Total net income is the sum of ordinary business income (loss), interest income, dividend income, royalties, net rental real estate income (loss) and other net rental income (loss)
For more information, see Explanation of Selected Terms section for total net income (loss) at end of article text.
[2] Between - $\$ 500$ and $+\$ 500$.
NOTE: Detail may not add to totals because of rounding.

[^397][d] In order to avoid disclosure for specific partnerships, these data are not shown. However, the data are included in the appropriate totals
[1] The difference between "number of partnerships" and "number of partnerships reporting balance sheet data" is due to partnerships exempt from filing balance sheets. Since these partnerships
are generally small-total assets less than $\$ 500,000$ and total receipts less than $\$ 250,000$-balance sheet data for partnerships are slightly understated.
NOTE: Detail may not add to totals because of rounding.

* Estimate should be used with caution because of the small number of sample returns on which it is based.
[d] In order to avoid disclosure for specific partnerships, these data are not shown. However, the data are included in the appropriate totals.
[1] Total income (loss) minus total deductions does not equal income (loss) allocated to partners by type of partner because not all partnerships report their allocations. [2] Between $-\$ 500$ and $+\$ 500$.
NOTE: Detail may not add to totals because of rounding.

*Estimate should be used with caution because of the small number of sample returns on which it is based.
[1] Total net income (loss) is the sum of ordinary business income (loss), interest income, dividend income, royalties, net rental real estate income (loss) and other net rental income (loss). For more information, see Explanation of Selected Terms section for total net income (loss) at end of article text.
NOTE: Detail may not add to totals because of rounding.

Table 7. All Partnerships: Total Receipts by Selected Industrial Group, 2009

| Nature of business not allocable | 0 | 0 | 0 | 0 | 0 | 0 | * 3,300 | * 6,601 | * 8,040 |

* Estimate should be used with caution because of the small number of sample returns on which it is based.
** Nature of business not allocable has been added to other services for domestic limited partnerships due to disclosure.
NOTES: Detail may not add to totals because of rounding. The sum of the number of partnerships for all three categories does not sum to the total number of partnerships in other tables and figures because companies classified as limited liability partnerships (LLPs), foreign partnerships, "other" or "nonresponse" were not included in this table due to the small number of returns. For 2009 there were 117,660 "LLPs," 12,275 foreign, 6,350 "Other," 42,299 "unidentified."

# Municipal Bonds, 2009 

by Aaron Barnes

The municipal bond market experienced signif cant changes in 2009, when Congress expanded bond f nance options to include: tax-exempt bonds, tax credit bonds, and direct payment bonds. Traditionally, State and local governments across the United States and its territories have been able to issue tax-exempt bonds to f nance essential operations, facilities, infrastructure, and services for their constituents. ${ }^{1}$ Tax credit bonds are a f nance option that allows municipalities to borrow funds under certain qualifying bond programs. Direct payment bonds were created by the American Recovery and Reinvestment Act of 2009 (ARRA), in response to the f nancial crisis.

ARRA expanded f nancing options for projects by allowing State and local governments to issue direct payment bonds through the Build America Bonds (BABs) and the Recovery Zone Economic Development Bond (RZEDs) Programs. ${ }^{2}$ Direct payment bonds are taxable bonds for which the issuer receives a direct subsidy at either 35 percent or 45 percent of borrowing costs, depending on the type of bond. These direct payments are generally deeper subsidies than the implicit subsidy in traditional taxexempt bonds. Unlike tax credit bonds, the market, and not the Treasury, sets the interest rate paid on the bonds. Additionally, ARRA authorized new types of tax-exempt bonds, tax credit bonds, and an increased volume cap, or total allowable issuance amounts, for existing tax credit bonds.

The data presented in this article are based on the populations of Forms 8038, Information Return for Tax-Exempt Private Activity Bond Issues, and Forms 8038-G, Information Return for Tax-Exempt Governmental Obligations, f led with the Internal Revenue Service (IRS) for bonds issued during Calendar Year 2009. The vast majority of these returns were f led in 2009 and 2010 for tax-exempt bonds. ${ }^{3}$ However, for 2009, the issuers of direct payment bonds and tax credit bonds were also required to use these returns

[2] Bonds reported on the Form 8038-G, Information Return for Tax-Exempt Governmental Obligations, with a specific reference to "Build America Bond" or "Recovery Zone Economic Development Bond" in either their issue name or other description.
[3] Includes data from governmental and private activity bond returns (Forms 8038G and 8038) that specifically reference "qualified school construction," "clean renewable energy," "qualified zone academy," or "Midwestern tax credit" bonds. NOTE: Detail may not add to totals because of rounding.
to report certain information to the IRS. For this reason, the article also includes separate discussions of direct payment bonds and tax credit bonds.

Figure A provides an overview of the municipal bond market in 2009. State and local governments raised $\$ 515.3$ billion in proceeds from tax-exempt, direct payment, and tax credit bonds. Tax-exempt bond proceeds totaled $\$ 446.2$ billion, or 86.6 percent, of all municipal bonds proceeds in 2009. Proceeds from newly introduced direct payment bonds totaled $\$ 65.3$ billion and made up 12.7 percent of all municipal bond proceeds in 2009. Tax credit bond proceeds were a little more than $\$ 3.7$ billion and accounted for 0.7 percent of all municipal bond proceeds in 2009.

## Tax-Exempt Bonds

Tax-exempt bonds issued by State and local governments are classif ed as either "governmental" or "private activity," depending on whether the proceeds are used and secured by public or private entities and resources. The total amount of tax-exempt bonds issued by State and local governments decreased by 4.9 percent between Calendar Years 2008 and

[^401]2009, from $\$ 469.4$ billion in 2008 to $\$ 446.2$ billion in $2009 .{ }^{4}$ For 2009, governmental bonds accounted for $\$ 340.7$ billion ( 76.3 percent) of total tax-exempt bond proceeds. Private activity bonds accounted for the remaining $\$ 105.6$ billion ( 23.7 percent).

When a bond is issued, the issuer is obligated to repay the borrowed bond proceeds, at a specif ed rate of interest, by some future date. For Federal income tax purposes, investors who purchase governmental bonds and certain types of private activity bonds are able to exclude the bond interest from their gross incomes. ${ }^{5,6}$ This tax exemption lowers the borrowing cost incurred by tax-exempt bond issuers, since holders of tax-exempt bonds are generally willing to accept an interest rate lower than that earned on comparable taxable bonds. The interest exclusion for tax-exempt bonds is not allowed for arbitrage bonds and bonds not in registered form. 7,8

Both governmental and private activity bonds are obligations issued by, or on behalf of, State and local governmental units; use of the proceeds differentiates the two. Governmental bond proceeds f nance essential government operations, facilities, and services that are for general public use, and the debt service on these bonds is paid from general governmental sources. Private activity bonds are issued by, or on behalf of, State or local governments for the purpose of $f$ nancing the project of a private user. Since private activity bond proceeds are used
by one or more private entities, the debt service is paid or secured by one or more private entities. ${ }^{9}$ Interest income earned on most private activity bonds is taxable. However, over the years, Congress has deemed certain types of private activities necessary for the public good, and, therefore, interest income earned on "qualif ed private activity bonds," as def ned in Internal Revenue Code (IRC) section 141(e), is generally tax exempt. ${ }^{10,11}$

## Tax-Exempt Bond Volume, by Term of Issue

Bonds are classif ed as either short-term or longterm, depending on the length of time from issuance to maturity. Bonds having maturities of less than 13 months are typically classif ed as short-term, while those having maturities of 13 months or more are classif ed as long-term. Tax-exempt governmental bond issues totaled $\$ 340.7$ billion in 2009, a 1.9-percent increase over the $\$ 334.4$ billion issued in 2008. Long-term bonds accounted for $\$ 262.4$ billion, more than 77 percent of all governmental bond proceeds. Long-term bonds are generally used to f nance construction or other capital improvement projects.

The remaining $\$ 78.2$ billion of governmental bonds were issued for short-term projects. Most short-term governmental bonds are issued in the form of tax anticipation notes (TANs), revenue anticipation notes (RANs), or bond anticipation notes (BANs). TANs and RANs generally mature within 1

[^402]
## Municipal Bonds, 2009

Statistics of Income Bulletin | Fall 2011
year of issuance, at which time the proceeds are paid from specif c tax receipts or other revenue sources. The proceeds of a BAN are typically used to pay for startup costs associated with a future long-term, bond-f nanced project. A renewal BAN can be issued on maturity of an outstanding BAN, until, eventually, the proceeds of the future bond issue are used to pay off, or retire, the outstanding BAN. Short-term bonds accounted for almost $\$ 2.8$ billion, only 2.6 percent, of the total private activity bond proceeds for 2009.

## Long-Term, Tax-Exempt Bond Volume, by Type of Issue

Total bond issuance is composed of both nonrefunding ("new money") issues and refunding issues. The proceeds of new money issues $f$ nance new capital projects, while proceeds of refunding issues retire outstanding debt of prior bond issues. A bond issue can include both new and refunding proceeds.

Figures B and C show total long-term issuance, as well as its distribution between new money and refunding proceeds, for both governmental and taxexempt private activity bonds issued between 2005 and 2009. In 2009, 57.5 percent of all long-term governmental bond proceeds were new money issues (Figure B). New money governmental bond proceeds fell 11.9 percent from its preceding 4 -year average of $\$ 171.4$ billion to $\$ 151.1$ billion in 2009, while refunding proceeds fell approximately 8.3 percent from its preceding 4 -year average of $\$ 121.5$ billion to $\$ 111.4$ billion in $2009 .{ }^{12}$

In 2009, 50.8 percent of all long-term private activity bond proceeds were new money issues (Figure C). New money private activity bond proceeds fell 18.8 percent from its preceding 4 -year average of $\$ 64.3$ billion to $\$ 52.2$ billion in 2009, while refunding proceeds fell by 12.2 percent from its preceding 4 -year average of $\$ 57.6$ billion to $\$ 50.6$ billion in 2009.

## Figure B

## Volume of Long-Term, Tax-Exempt Governmental Bonds Issued, by Type and Issue Year, 2005-2009

[^403]
## Figure C

Volume of Long-Term, Tax-Exempt Private Activity Bonds Issued, by Type and Issue Year, 2005-2009

## Long-Term Bond, Tax-Exempt Volume, by Selected Purpose

Figures D and E present the composition of longterm tax-exempt bond proceeds, by selected purpose as well as type of issue, for both governmental and private activity bond issues. Figures D shows that during 2009, $\$ 142.0$ billion of long-term governmental bond proceeds f nanced education, utilities, and transportation projects. "Other bond purposes" had the largest long-term governmental bond proceeds by purpose totaling $\$ 90.3$ billion. ${ }^{13}$ For almost all of the governmental bond purposes shown in Figure D, more proceeds were spent $f$ nancing new capital projects than were used to refund prior bond issues with the exception of utilities.

Qualif ed section 501(c)(3) bonds, which include total qualif ed hospital bonds and qualif ed nonhospital bonds issued to benef $t$ entities exempt from income tax under IRC section 501(c)(3), combined,
accounted for $\$ 65.7$ billion in long-term private activity bond proceeds for 2009 (see Figure E). Private activity bonds issued to provide housing assistance were expended upon in 2009 with the creation of the Housing Assistance Tax Act of 2008 (the 2008 Housing Act) which provided a temporary increase in the annual volume cap for qualif ed housing issues and allowed certain issuers of qualif ed mortgage bonds to ref nance subprime mortgage loans under IRC sections 142 and $143 .{ }^{14}$ Private activity bonds issued to provide housing assistance in the form of qualif ed residential rental projects, qualif ed mortgages, and other qualif ed purposes under the 2008 Housing Act accounted for another 10 percent of total proceeds. ${ }^{15}$ Of the total private activity bond proceeds allocated towards housing assistance, $\$ 1.5$ billion were the result of the 2008 Housing Act.

The ARRA added IRC section 1400U-3, which authorized tax-exempt recovery zone exempt facility bonds. Recovery zone exempt facilities bonds are

private activity bonds that may be issued by State and local governments to f nance qualif ed projects located in certain areas having signif cant poverty, unemployment, home foreclosure rates, general distress, or distress from the closure of a military installation, or those areas designated as an empowerment zone or renewal community. ${ }^{16}$ For 2009, there were 17 recovery zone exempt facility bonds issued for a total of $\$ 95$ million in proceeds.

## Overview of Tax-Exempt Bond Issues, by State

Figure F presents States with the largest absolute decreases and increases in amount of new money longterm, tax-exempt governmental bonds from 2008 to 2009. Total new money long-term governmental bond proceeds decreased $\$ 2.7$ billion (1.8 percent) from 2008 to 2009 (Figure F). Texas and Florida, whose issuance fell 32.8 percent and 31.8 percent, respectively, experienced the largest absolute decreases in new money long-term governmental bond proceeds in 2009. Illinois also experienced a decrease
(39 percent) in new money long-term governmental bond proceeds in 2009. In all, 26 States decreased the amount of new money long-term governmental bond proceeds from 2008 to 2009 , by nearly $\$ 25.9$ billion.

California experienced the largest absolute increase ( 75.1 percent) in new money long-term governmental bond proceeds in 2009. States with signif cant increases in new money long-term governmental bond proceeds from 2008 to 2009 included Oregon, whose proceeds increased 122.6 percent; Connecticut, whose proceeds increased by 46.7 percent; and New York, whose proceeds grew by 6.9 percent. In all, 26 States increased the amount of new money long-term governmental bond proceeds from 2008 to 2009, by slightly less than $\$ 23.2$ billion. ${ }^{17}$

Figure G presents the amount of bonds proceeds for the top 15 States, in terms of total dollar volume of new money long-term, tax-exempt bonds issued for 2009, for governmental bonds. Combined, the top 15 States accounted for 71.8 percent of the total $\$ 151.1$ billion of new money long-term governmental bond proceeds for the year (see Figure G). About $\$ 71.6$ billion ( 47.4 percent) of the total proceeds were issued by authorities in the following f ve States: California ( 18.5 percent), New York ( 10.8 percent), Texas ( 9.6 percent), Florida ( 4.8 percent), and Pennsylvania ( 3.8 percent). According to 2009 Census estimates, together, these f ve States accounted for almost 30.6 percent of the total U.S. population. ${ }^{18}$

An examination of issuance by State reveals some differences in the allocation of proceeds by bond purpose. Overall, for 2009, 30.4 percent of the $\$ 151.1$ billion of new money long-term governmental bonds was issued for educational purposes. However, of the total amount of new money long-term bonds issued in Texas, 43.1 percent was issued for education. In contrast, 14 percent of long-term governmental bonds issued in Connecticut and 9 percent in Georgia were for this purpose.

Transportation projects accounted for 13.3 percent of States' total new money long-term proceeds. In New Jersey, however, 38.1 percent of the total amount of new money long-term governmental

[^405]

information. However, the data are included in the appropriate totals.
NOTE: Detail may not add to totals because of rounding.

Jersey allocated 0.9 percent of its total amount of new money long-term bonds to utility projects.

Figure H presents States with the largest absolute decreases and increases in amount of new money long-term, tax-exempt private activity bonds from 2008 to 2009. Total new money long-term, taxexempt private activity bond proceeds decreased by roughly $\$ 0.3$ billion ( 0.5 percent) of $\$ 1.5$ billion from 2008 to 2009 (Figure H). Louisiana experienced the largest absolute decrease ( 61.6 percent) in new money long-term, tax-exempt private activity bond proceeds in 2009. States with signif cant relative decreases in new money long-term, tax-exempt private activity bonds from 2008 to 2009 included Missouri, whose proceeds fell 46.8 percent; Maryland, whose proceeds fell 57.3 percent; and Arizona, whose proceeds fell 65.2 percent. For the 30 States that reduced their issuance of new money long-term, tax-exempt private activity bonds in 2009, the overall reduction in proceeds totaled $\$ 1.1$ billion.

New York experienced the largest relative increase ( 40.5 percent) in new money long-term, taxexempt private activity bond proceeds. Other States with signif cant increases in new money long-term, tax-exempt private activity bond issues from 2008
to 2009 included California, whose proceeds increased 34.6 percent; and Illinois, whose proceeds increased 58.1 percent. In all, 22 States increased their new money long-term, tax-exempt private activity bond proceeds from 2008 to 2009, by just less than $\$ 0.9$ billion.

Figure I shows the amount of bond proceeds for the top 15 States, in terms of total dollar volume of new money long-term, tax-exempt bonds issued for 2009, for private activity bonds. Combined, the top 15 States accounted for 73.3 percent of the total $\$ 52.2$ billion of new money long-term, tax-exempt private activity bond proceeds for the year. Almost $\$ 23.6$ billion ( 45.1 percent) of the total proceeds was issued by authorities in the following $f$ ve States: New York (14.5 percent), California (14.2 percent), Illinois (5.8 percent), Pennsylvania (5.7 percent), and Texas ( 5.0 percent). According to 2009 Census estimates, together, these f ve States accounted for almost 34.8 percent of the total U.S. population. Interestingly, with the exception of IIlinois and Florida, the same States have the highest amount of proceeds of both governmental bonds and private activity bonds.

Similar to governmental bond issuance, there were differences in the composition of total new money long-term, tax-exempt private activity bond issuance, by purpose, among the States. Examining the bond allocations by purpose for 2009, overall, 34.1 percent of the amount of new money long-term private activity bond proceeds was for qualif ed IRC section 501(c)(3) nonhospital organizations. Another 26.9 percent was issued for qualif ed hospital bonds.

Of the total amount of new money long-term, tax-exempt private activity bond proceeds raised in Georgia, 67.8 percent was issued for IRC section 501(c)(3) nonhospital organizations, compared to 11.8 percent in Ohio and 10.5 percent in New Jersey for the same purpose. Qualif ed hospital bonds accounted for 57.3 percent of Ohio's new money long-term, tax-exempt private activity bond proceeds, compared to 10.6 percent and 6 percent Texas and Georgia, respectively. Of the top 15 States, New York had the lowest total issuance for qualif ed hospitals, with only 3.7 percent of its State total proceeds allocated for this purpose.

Bonds issued for airports, docks, and wharves accounted for 7.1 percent of all new money longterm, tax-exempt private activity bond proceeds in 2009 , totaling $\$ 3.7$ billion. California committed

d-Data deleted to avoid disclosure of individual issuer information. However, the data are included in the appropriate totals.
[1] For purposes of this figure, certain bond purposes were combined. For this reason, data in this figure will differ slightly from the data in Tables 7 and 9 .
NOTE: Detail may not add to totals because of rounding
18.2 percent of its total new money long-term private activity bond proceeds toward airports, docks, and wharves. Florida allocated 25.9 percent of its total new money long-term private activity bond proceeds toward airports, docks, and wharves.

Together, States allocated only 6.9 percent of the $\$ 52.2$ billion of new money long-term tax-exempt private activity bonds in 2009 for water, sewage, and solid waste disposal facilities. However, both Florida and Ohio directed a much larger share of their total new money long-term proceeds to this purpose, 23.3 percent and 21.4 percent, respectively. In contrast, California directed only 2.2 percent of its new money long-term bond proceeds to water, sewage, and solid waste disposal facilities.

## Tax Credit Bonds

Tax credit bonds differ from tax-exempt bonds in that they are not explicitly interest-bearing obligations. In lieu of receiving periodic interest payments from the issuer, a bondholder is generally allowed an annual income tax credit while the bond is outstanding. The amount of the credit is determined by multiplying the bond's credit rate by the face amount on the holder's bond. The credit rate on the bonds is determined by the Secretary of the Treasury and is an estimate of the rate that permits issuance of such bonds without discount and interest cost to the qualif ed issuer. The credit is includable in the bondholder's gross income (as if it were an interest payment on the bond), and it can be claimed against regular income tax liability and alternative minimum tax liability.

The Taxpayer Relief Act of 1997 created the frst type of tax credit bond - the qualif ed zone academy bond. In 2005, two additional types - clean renewable energy bonds and Gulf tax credit bonds-were created. Since then, various legislation has authorized additional types of tax credit bonds, such as qualif ed
forestry conservation bonds, new clean renewable energy bonds, qualif ed energy conservation bonds, Midwestern tax credit bonds, and qualif ed school construction bonds. ${ }^{19,20}$ Issuers of tax credit bonds are required to submit to the IRS information flings similar to those required of tax-exempt bond issuers. ${ }^{21}$

ARRA included several provisions that affected tax credit bonds. Most notably, the Act created qualif ed school construction bonds. Qualif ed school construction bonds (QSCBs) allow schools to borrow at lower interest rates. Issuers of QSCBs must use 100 percent of available project proceeds to construct, rehabilitate, or repair a public school facility or to purchase land where a public school facility will be constructed. A State or local government must issue QSCBs within the schools jurisdiction, and the issuer of the bond must designate the bond as a QSCB. QSCBs were subject to a national volume cap of $\$ 11$ billion for 2009, and an issuer could not exceed its volume cap allocation. ${ }^{22}$

ARRA also amended various IRC sections to increase the allowable volume cap for several types of existing tax credit bonds. Specif cally, IRC section $54 \mathrm{E}(\mathrm{c})(1)$ increased the national volume cap for qualif ed zone academy bonds from $\$ 400$ million to $\$ 1.4$ billion. ARRA legislation also increased the national volume cap for new clean renewable energy bonds, from $\$ 800$ million to $\$ 2.4$ billion, and amended IRC section 54D(d) to increase the national volume cap for qualif ed energy conservation bonds from $\$ 800$ million to $\$ 3.2$ billion.

ARRA created "Build America Bonds (tax credit)," which provided a subsidy through Federal tax credits to bondholders (investors). ${ }^{23}$ This tax credit equaled 35 percent of the total coupon interest payable by the issuer. The bondholder was required to report the interest income associated with the Build America Bond (tax credit) as part of their

[^406]gross income, causing a net tax subsidy of less than 35 percent. Build America Bonds (tax credit) could be issued for any purpose for which traditional taxexempt governmental bonds were issued and were subject to the same restrictions that apply to taxexempt governmental bonds under IRC section 103. Build America Bonds (tax credit) are interest-bearing obligations, which differentiates them from traditional tax credit bonds that provide bondholders a tax credit in lieu of any interest payment. Build America Bond (tax credit) proceeds must have been used for capital expenditures and working capital expenditures. Working capital expenditures included any costs that were not capital expenditures and allowed for bonds to refund prior obligations and issue short-term f nancing. No Build America Bonds (tax credit) were issued in 2009.

In 2009, State and local governments issued $\$ 3.7$ billion in tax credit bonds. This amount included nearly $\$ 3.4$ billion in qualif ed school construction bonds, a combined $\$ 192$ million in clean renewable energy bonds and Midwestern tax credit bonds, and $\$ 179$ million in qualif ed zone academy bonds. ${ }^{24}$

Figure J shows tax credit bonds classif ed by purpose and size of entire issue. For 2009, tax credit bond issuance had the following distribution by entire issue size: 21.7 percent of all tax credit bond issues were under $\$ 1$ million, almost 376.6 percent
were in the $\$ 1$ million to $\$ 5$ million range, and 40.7 percent were in excess of $\$ 5$ million. More than three-quarters ( 76.2 percent) of the total 378 tax credit bonds issued were QSCBs. Qualif ed zone academy bonds accounted for 17.4 percent of all tax credit bonds issued in 2009. The combined issuance of clean renewable energy bonds and Midwestern tax credit bonds were 6.4 percent of all tax credit bonds issued in 2009.

The top f ve States with the highest dollar issuance of tax credit bonds were California, Illinois, Texas, Florida, and Louisiana (Figure K). Combined, these States issued slightly more than $\$ 1.4$ billion ( 38.5 percent) of all tax credit bonds. California issued the largest amount of tax credit bonds, accounting for $\$ 486$ million ( 13.1 percent) of the total. Illinois and Texas had similar amounts of tax credit bond issuance, with $\$ 280$ million ( 7.5 percent) and $\$ 267$ million ( 7.2 percent), respectively.

## Direct Payment Bonds

In response to the domestic economic crisis, on February 17, 2009, the $111^{\text {th }}$ Congress enacted ARRA in order to implement new programs and policies aimed at bolstering the economy. Several ARRA provisions had direct implications for the municipal bond market, through creation of the direct payment BAB program. This program, autho-

NOTE: Detail may not add to totals because of rounding.
rized by IRC section 54AA, enabled State and local governments to issue Federally subsidized taxable bonds for qualif ed purposes to provide economic stimulus and promote employment.

The BAB program applied to certain bonds issued between February 17, 2009, and January 1, 2011. BABs provided a direct subsidy payment to the bond issuer. This direct payment to the issuer equaled 35 percent of the total coupon interest payable to bondholders. BABs must have been qualifed to receive credit payments under IRC section $54 \mathrm{AA}(\mathrm{g})(2)$, which imposed a set of requirements on the issuer. Specif cally, the bond must have been a BAB issued before January 1, 2011, the bond's excess proceeds over the required reserve fund are only to be used for capital expenditures, and the bond issuer must have made an irrevocable election to have these requirements apply. ${ }^{25}$

BABs may have been issued for any governmental purpose for which tax-exempt governmental
bonds were issued, but excess proceeds must have been used on capital expenditures. Capital expenditures included the costs of acquiring, constructing, or improving land, buildings, and equipment. In general, BAB proceeds could not have been used to refund prior issue or fund short-term obligations. ${ }^{26}$

ARRA under IRC section 1400U-2 authorized State and local governments to issue RZEDs (recovery zone economic development bonds). Issuers of RZEDs received a direct subsidy payment in an amount equal to 45 percent of the total coupon interest payable to the bondholders. Like BABs, RZEDs must have been qualif ed to receive direct subsidy payments. Specif cally, the bond must have been a BAB issued before January 1, 2011, the bond's excess proceeds (as def ned by IRC section 54A) over the required reserve fund are only to be used for capital expenditures, the bond proceeds are to be used for a qualif ed economic development purpose, and the bond's issuer designated its purpose. ${ }^{27}$ Unlike BABs, RZEDs were subject to a national volume cap of $\$ 10$ billion and must $f$ nance projects in distressed areas as designated by the issuer. ${ }^{28}$

For Calendar Year 2009, issuers of direct payment bonds were required to fle Form 8038-G, Information Return for Tax-Exempt Governmental Obligations. Direct payment bond issuers were required to attach a schedule that declared the type and purpose of the bond. Additionally, direct payment bond issuers were required to attach a debt service schedule with the following information: the type of interest rate-variable or $f$ xed, the frequency of interest payments, the total principal outstanding on each interest payment date, the credit payment expected from the IRS, and the earliest call date of the bond.

Figure $L$ shows direct payment bond issuance allowed under ARRA for 2009. A total of 911 direct payment bonds raised $\$ 65.3$ billion in proceeds.

[^409]
## Figure $L$

Direct Payment Bonds Allowed Under the American Recovery and Reinvestment Act by Bond Type, 2009
[Money amounts are in millions of dollars]

| Bond type | Number | Amount | Percentage <br> of total <br> amount |
| :---: | ---: | ---: | ---: |
| Total [1] | $(1)$ | $(2)$ | $(3)$ |
|  | 911 | 65,326 | 100.0 |
|  | 862 | 64,855 | 99.3 |
| Development Bonds | 49 | 471 | 0.7 |
| [1] Includes bonds reported on the Form 8038-G, Information Return for Tax-Exempt |  |  |  |

[1] Includes bonds reported on the Form 8038-G, Information Return for Tax-Exempt
Governmental Obligations, with a specific reference to "Build America Bond" or "Recovery Zone Economic Development Bond" in either their issue name or other description.

BABs made up 99.3 percent of the total dollar amount of direct payment bonds issued under ARRA for 2009. There were 49 RZEDs, which made up less than 1 percent (nearly $\$ 0.5$ billion) of the total dollar amount of direct payment bonds issued.

The $\$ 65.3$ billion in direct payment bonds allowed under ARRA, by purpose, for 2009 are shown in Figure M. Education constituted 30 percent of
total direct payment proceeds with $\$ 19.6$ billion, followed by transportation, which accounted for 28 percent of total proceeds, or $\$ 18.3$ billion. Other signif cant purposes included utilities (10.7 percent) and environment ( 6.3 percent), with $\$ 7.0$ billion and $\$ 4.1$ billion in proceeds, respectively.

In 2009, the overwhelming majority of direct payment bonds were large issues, as shown in Figure N . Nearly $\$ 52.5$ billion ( 80.3 percent) of all bond proceeds were attributable to bond issues with an entire issue price in excess of $\$ 75$ million. Another $\$ 8.5$ billion (13 percent) of bond proceeds were attributable to bonds with an entire issue price ranging from $\$ 25$ million to under $\$ 75$ million. Direct payment bonds with an entire issue size of less than $\$ 25$ million accounted for just over $\$ 4.4$ billion ( 6.7 percent) of total issuance.

As shown in Figure O, 15 states accounted for $\$ 50.9$ billion ( 78 percent) of total direct payment bond issuance. The 2009 Census estimate for these 15 states, combined, was 61.2 percent of the U.S. population. California had $\$ 15.9$ billion in bond issuance, which made it the single largest issuer of direct payment ARRA bonds. Nearly one quarter (24.4 percent) of all direct payment bonds were is-

## Figure M

[^410] Obligations.

## Figure N

## Direct Payment Bonds Allowed Under the American Recovery and Reinvestment Act by Size of Entire Issue, 2009

$\$ 75$ million or more
sued in California, while its population represents a little more than 12 percent of the U.S. population. In contrast, Florida and Pennsylvania issued $\$ 2.2$ billion ( 3.4 percent) and more than $\$ 1.3$ billion ( 2 percent) of all direct payment bonds, but their populations represent 6 percent and 4.1 percent of the U.S. population, respectively. Texas had $\$ 7.1$ billion ( 10.8 percent) in bond issuance in 2009, making it the second largest issuer of direct payment bonds. New York and Illinois ranked $3^{\text {rd }}$ and $4^{\text {th }}$ in largest amount of direct payment bond issuance, with $\$ 5.8$ billion ( 8.9 percent) and $\$ 3.7$ billion ( 5.7 percent), respectively. As Figure O shows, Massachusetts had six direct payment bonds issued for a total of almost $\$ 2$ billion in proceeds, averaging $\$ 327.7$ million per bond issued, which was signif cantly higher than the national average of $\$ 71.7$ million per bond issued.

Direct payment bond issuers are required to fle Form 8038-CP, Return for Credit Payments to Issuers of Qualified Bonds in order to receive payments. Filing requirements for Form 8038-CP vary depending on whether the bond has a $f$ xed or variable rate of interest. Issuers of direct payment bonds must fle Form 8038-CP each time a credit payment is
requested. Figure P shows 152 total credit payments to issuers of direct payment bonds totaled 128.3 million in 2009. Credit payments to issuers of f xed rate direct payment bonds were $\$ 123.3$ million (96.1) percent of the Forms 8038-CP f led in 2009.

## Summary

The American Recovery and Reinvestment Act of 2009 changed the landscape of the municipal bonds market by introducing direct payment bonds through the Build America Bond and the Recovery Zone Economic Development Bond Programs. More than 900 direct payment bonds raised $\$ 65.3$ billion in proceeds in 2009. ARRA also created qualif ed school construction bonds, which raised nearly $\$ 3.4$ billion in proceeds for 288 qualifying public educational facilities. However, the market was still dominated by more than 22,000 tax-exempt governmental bonds issued in 2009 , raising $\$ 340.7$ billion of proceeds

| NOTE: Detail may not add to totals because of rounding. |  |  |  |

for public projects such as schools, transportation infrastructure, and utilities. Of the $\$ 262.4$ billion of long-term governmental bonds issued, $\$ 151.1$ billion of proceeds were used to $f$ nance new projects, while the remaining $\$ 111.4$ billion of proceeds refunded prior governmental bond issues. In addition, more than 2,700 tax-exempt private activity bonds were issued in 2009, for a total $\$ 105.6$ billion in proceeds. These tax-exempt private activity bond proceeds fnanced qualif ed private facilities (such as residential rental facilities, single family housing, and airports), as well the facilities of IRC section 501(c)(3) organizations (such as hospitals and private universities). Of the $\$ 102.8$ billion of long-term private activity bonds issued, $\$ 52.2$ billion of proceeds were used to f nance new projects, while the remaining $\$ 50.6$ billion of proceeds refunded prior tax-exempt private activity bond issues.

## Data Sources and Limitations

The data presented in this article are based on the populations of Forms 8038 and 8038-G f led with the Internal Revenue Service for bonds issued during Calendar Year 2009. Tax-exempt bond data exclude returns f led for commercial paper transactions, as well as issues that are loans from the proceeds of another tax-exempt bond issue, pooled $f$ nancings. Data for taxable bonds issued under the American Recovery and Reinvestment Act of 2009 are based on Forms 8038 -G with a specif c reference to "Build America Bonds" or "recovery zone economic
development bonds" in either the issue name or other description. Data for tax credit bonds are based on Forms 8038 and 8038-G with a specif c reference to "qualif ed school construction," "clean renewable energy," "qualif ed zone academy," or "Midwestern tax credit" bonds. Data for credit payments are based on Forms 8038-CP f led for interest paid to bondholders in 2009. Bond issuers were required to fle Forms 8038 and $8038-\mathrm{G}$ by the $15^{\text {th }}$ day of the second calendar month after the close of the calendar quarter in which the bond was issued. The fling deadline for Form 8038-CP varied based on the structure of the interest payments. In an effort to include as many applicable returns for a particular year, each of the respective study periods extended well beyond established f ling deadlines. The Forms 8038 -G and 8038 data include returns processed from January 1, 2009, to April 30, 2011, for bonds issued in 2009. The Form 8038-CP data include returns processed from May 2009 to May 2, 2011, for interest paid in 2009. Where possible, data from amended returns $f$ led and processed before the cutoff dates were included. Late-f led returns processed after the respective cutoff dates were not included in the statistics.

During statistical processing, returns were subject to thorough testing and correction procedures to ensure data accuracy and validity. Additional checks were conducted to identify and exclude duplicate returns. Wherever possible, returns with incomplete information, mathematical errors, or other reporting anomalies were edited to resolve internal inconsistencies. However, in other cases, it was not possible to reconcile reporting discrepancies. Thus, some reporting and processing error may remain.

## Explanation of Selected Terms

American Recovery and Reinvestment Act of 2009 ("ARRA")—An act of the 111th Congress passed on February 17, 2009, in response to the economic crisis. The passage of ARRA added to the Internal Revenue Code (IRC) sections 54AA and $1400 \mathrm{U}-1$ through $1400 \mathrm{U}-3$, authorizing State and local governments to issue two general types of Build America Bonds, recovery zone economic development bonds, and recovery zone exempt facility bonds.

Arbitrage bond-A bond where at the time of issuance, the issuer of the bond intentionally uses all
proceeds or a portion of its proceeds for the purpose of acquiring a higher yield or to replace funds which are used to acquire higher yielding investments.

Bond anticipation note ("BAN")-A type of short-term Governmental bond issue, the proceeds of which are generally used to pay the startup costs associated with a future, long-term bond-f nanced project. A renewal BAN can be issued on maturity of an outstanding BAN, until, eventually, the proceeds of the future bond issue are used to pay off, or retire, the outstanding BAN.

Build America Bond ("BAB")-The American Recovery and Reinvestment Act (ARRA) added IRC section 54AA to enable State and local governments to issue bonds for authorized purposes to promote economic recovery and job creation. These new types of bonds would be issued as taxable governmental bonds with federal subsidies to help offset a portion of issuers' borrowing costs. The two distinct types of Build America Bonds-Build America Bond tax credit and Build America Bond direct payment subsidy-vary by the structure of federal subsidy. For calendar year 2009, issuers of Build America Bonds were required to fle IRS Form 8038-G, Information Return for Tax-Exempt Governmental Obligations.

Build America Bond tax credit bond-This type of BAB provides a tax credit to investors in an amount equal to 35 percent of the total coupon interest payable by the issuer of the taxable government bonds.

Build America Bond direct payment bondThis type of BAB provides a refundable credit payment to state or local governmental issuers in an amount equal to 35 percent of the total coupon interest payable to investors.

Clean renewable energy bond ("CREB")-A type of tax credit bond used to $f$ nance eligible clean renewable energy projects which are subject to a national volume cap. Issuers of clean renewable energy bonds under IRC Section 54 must be eligible to apply for volume cap allocations. Clean renewable energy bonds were f rst authorized under the Energy Tax Incentive Act of 2005. For additional information, see Internal Revenue Notice 2007-26.

Commercial paper-Commercial paper consists of short-term notes that are continually rolled-over. Maturities average about 30 days but can extend up to 270 days. Many localities use commercial paper to raise cash needed for current transactions.

Enterprise zone facility bond-Established by the passage of the Revenue Reconciliation Act of 1993, this type of exempt facility bond may be issued for certain businesses in designated "empowerment zones" or "enterprise communities." These designations are made by the Secretaries of Agriculture and Housing and Urban Development and last for a 10year period. The Taxpayer Relief Act of 1997 provided certain economically depressed census tracts within the District of Columbia designation as the "District of Columbia Enterprise Zone." Qualif ed enterprise zone facility bonds are generally subject to the same rules as exempt facility bonds.

Exempt facility bond-Bond issue of which 95 percent or more of the net proceeds is used to $f$ nance a tax-exempt facility (as listed in IRC sections 142(a) (1) through (15) and 142(k)). These facilities include airports, docks and wharves, mass commuting facilities, facilities for the furnishing of water, sewage facilities, solid waste disposal facilities, qualif ed residential rental projects, facilities for the local furnishing of electric energy or gas, local district heating or cooling facilities, qualif ed hazardous waste facilities, high-speed intercity rail facilities, environmental enhancements of hydroelectric generating facilities, and qualif ed public educational facilities.

Governmental bond-Any obligation that is not a private activity bond (see below) and is issued by a State or local government unit. The interest on a governmental bond is excluded from gross income under IRC section 103.

Gulf Opportunity Zone bond-The Gulf Opportunity Zone Act of 2005, signed into law as Public Law 109-135 on December 21, 2005, authorized a new category of tax-exempt bonds. The proceeds of such bonds are used to f nance the construction and rehabilitation of certain residential and nonresidential property located in certain localities of Alabama, Louisiana, and Mississippi, designated as the "Gulf Opportunity Zone." This area constitutes the portion of the Hurricane Katrina disaster area, determined by the President to warrant individual or individual and public assistance from the Federal government, under the Robert T. Stafford Disaster Relief and Emergency Assistance Act.

IRC section $1400 \mathrm{~N}(\mathrm{a})(2)$ def nes a qualif ed Gulf Opportunity Zone Bond as any bond issued as part of an issue if it meets the following requirements: (1) 95 percent or more of the net proceeds is to be used for qualif ed project costs, or such issue meets the

## Municipal Bonds, 2009

Statistics of Income Bulletin | Fall 2011
requirements of a qualif ed mortgage issue, except as otherwise provided in IRC section $1400 \mathrm{~N}(\mathrm{a})$; (2) such bond is issued by the State of Alabama, Louisiana, or Mississippi or any political subdivision thereof; (3) such bond is designated for purposes of IRC section 1400 N (a) either by the Governor, or approved bond commission, of such State; (4) the bond is issued after December 21, 2005, and before January 1, 2012; and (5) no portion of the proceeds of such issue is to be used to provide any property described in IRC section 144(c)(6)(B).

Gulf Opportunity Zone bonds that meet the general requirements of a qualif ed mortgage bond issue, and the proceeds of such bond issues that $f$ nance residences located in the Gulf Opportunity Zone, shall be treated as qualif ed mortgage bonds ("Gulf Opportunity Zone Mortgage Bonds"), as described in IRC section $1400 \mathrm{~N}(\mathrm{a})(2)(\mathrm{A})(\mathrm{ii})$. The Act also authorized the issuance of "Gulf Opportunity Zone Advance Refunding Bonds," which allow for an additional advance refunding for certain bonds, issued by the States of Alabama, Louisiana, or Mississippi (or any political subdivision thereof), and outstanding on August 28, 2005. This provision was effective for bonds issued between December 21, 2005, and January 1, 2012. (See Internal Revenue Service Notice 2006-41, Internal Revenue Bulletin 2006-18, for additional information.)

Midwestern tax credit bond-A type of tax credit bond whose issuers are located in specif c counties in Arkansas, Illinois, Indiana, Iowa, Missouri, Nebraska, and Wisconsin that were adversely affected by severe storms, tornadoes, or fooding (collectively referred to as "the Midwestern disaster area"). Midwestern tax credit bonds were only authorized for issuance during Calendar Year 2009. See Internal Revenue Notice 2008-109 for additional information.

New York Liberty Zone bonds-The Job Creation and Worker Assistance Act of 2002 created Section 1400L of the Internal Revenue Code of 1986 to provide various tax benef ts for the area of New York City damaged or affected by the terrorist attack on September 11, 2001. IRC section 1400L(d) authorizes the issuance of an additional type of exempt facility bond, namely, "Liberty Bonds." Liberty Bonds are subject to the following additional requirements: (1) 95 percent or more of the net proceeds of such issue must be used for qualif ed project costs; (2) the bond must be issued by the State of New York or any political subdivision thereof; (3) the Governor of the

State of New York or the Mayor of the City of New York must designate the bond for purposes of section $1400 \mathrm{~L}(\mathrm{~d})$; and (4) the bond must be issued after March 9, 2002, and before January 1, 2012. The maximum aggregate face amount of bonds that may be designated as Liberty Bonds is $\$ 8$ billion.

Nongovernmental output property bond-Bonds used to $f$ nance the acquisition of property used by a nongovernmental entity in connection with an output facility (such as an electric or gas power project). This bond must meet additional tests under IRC section 141(d).

Pooled financing - An arrangement whereby a portion of the proceeds of a governmental bond issue is used to make loans to other governmental units.

Private activity bond-Bond issue of which more than 10 percent of the proceeds is used for any private business use and more than 10 percent of the payment of the principal or interest is either secured by an interest in property to be used for private business use (or payment for such property) or is derived from payments for property (or borrowed money) used for a private business use. A bond is also considered a private activity bond if the amount of the proceeds used to make or f nance loans (other than loans described in IRC section 141(c)(2)) to persons other than governmental units exceeds the lesser of 5 percent of the proceeds or $\$ 5$ million.

Qualified green building and sustainable design project-Bond issue of which 95 percent or more of the net proceeds is used to f nance qualif ed green building and sustainable design projects, as designated by the Secretary of the Treasury, after consultation with the Administrator of the Environmental Protection Agency. The project must be nominated by a State or local government, and the issuer must submit a detailed application to the Treasury Department for consideration, and, on approval, allocation of a specifed issuance amount. Section 701 of the American Jobs Creation Act of 2004 added IRC sections 142(a) (14) and 142(1), authorizing up to $\$ 2$ billion of taxexempt private activity bonds, not subject to the unif ed volume cap, for qualif ed green building and sustainable design projects, to be issued between December 31, 2004, and October 1, 2012. (See Internal Revenue Service Notice 2006-41, Internal Revenue Bulletin 2006-18, for additional information.)

Qualified highway or surface transfer freight facility bond-Bond issue of which 95 percent or more of the net proceeds is used to provide qualif ed
highway or surface freight transfer facilities. Section 11143 of the Safe, Accountable, Flexible, Eff cient, Transportation Equity Act: A Legacy for Users (SAF-ETEA-LU) Public Law 109-59, signed into law on August 10, 2005, added IRC sections 142(a)(15) and 142(m). Section 142(m)(1) def nes the term "qualifed highway or surface freight transfer facilities" as: (a) any surface transportation project that receives Federal assistance under title 23, United States Code (as in effect on August 10, 2005); (b) any project for an international bridge or tunnel for which an international entity authorized under Federal or State law is responsible and that receives Federal assistance under title 23, United States Code (as so in effect); or, (c) any facility for the transfer of freight from truck to rail or rail to truck (including any temporary storage facilities directly related to such transfers) that receives Federal assistance under either title 23 or title 49, United States Code (as so in effect). This legislation authorized issuance of up to $\$ 15$ billion of such bonds, not subject to the unif ed volume cap, applicable to bonds issued after August 10, 2005. Allocation of the $\$ 15$-billion national limitation is under the jurisdiction of the Department of Transportation. (See Internal Revenue Service Notice 2006-45, Internal Revenue Bulletin 2006-20, for additional information.)

Qualified hospital bond-Type of qualif ed section 501(c)(3) bond issue of which 95 percent or more of the net proceeds are to be used to fnance a hospital.

Qualified mortgage bond-Bond issue of which the proceeds (except issuance costs and reasonably required reserves) are used to provide f nancing assistance for single-family residential property, and which meets the additional requirements in IRC section 143. Bond proceeds can be applied toward the purchase, improvement, or rehabilitation of owneroccupied residences, as well as to f nance qualif ed home-improvement loans.

Qualified public educational facility bondBond issue of which 95 percent or more of the net proceeds is used to provide qualif ed public educational facilities, def ned by IRC section 142(k)(1) as any school facility that is: (a) part of a public elementary or secondary school; and (b) is owned by a private, for-prof $t$ corporation under a public-private partnership agreement with a State or local educational agency. Under a "public-private partnership
agreement," the corporation agrees to construct, rehabilitate, refurbish, or equip a school facility and, at the end of the term of the agreement, to transfer the school facility to the State or local educational agency for no additional consideration. Such bonds are not subject to the unif ed volume cap; rather, the annual State limit is equal to the lesser of $\$ 10$ per resident or $\$ 5$ million.

Qualified redevelopment bond-Bond issue of which 95 percent or more of the net proceeds is used to $f$ nance certain specif ed real property acquisition and redevelopment in blighted areas (see IRC section 144(c) for additional requirements).

Qualified section 501(c)(3) bond-Bonds issued by State and local governments to f nance the activities of charitable organizations that are tax-exempt under IRC section 501(c)(3). A bond must meet the following conditions to be classif ed as a section 501(c)(3) bond: 1) all property f nanced by the net proceeds of the bond issue is to be owned by a section 501(c)(3) organization or a governmental unit; and 2) the bond would not be a private activity bond if section 501(c)(3) organizations were treated as governmental units with respect to their activities that are not related trades or businesses, and the private activity bond def nition was applied using a 5 -percent threshold rather than a 10 -percent threshold. The primary benef ciaries of these bonds are private, nonprof t hospitals, colleges, and universities. A qualif ed hospital bond issue is one in which 95 percent or more of the net proceeds is to be used for a hospital.

Qualified small issue bond-Bond issue generally not exceeding $\$ 1$ million and of which 95 percent or more of the net proceeds is used to f nance the acquisition of land and depreciable property or to refund such issues. In certain instances, an election to take certain capital expenditures into account can increase the limit on bond size, from $\$ 1$ million to $\$ 10$ million. These bonds may only be used to f nance manufacturing facilities and to benef t certain f rst-time farmers.

Qualified student loan bond-Bond issue of which 90 percent or more of the net proceeds is used to make or f nance student loans under a program of general application subject to the Higher Education Act of 1965 (see IRC section 144(b)(1)(A) for additional requirements) or of which 95 percent or more of the net proceeds is used to make or f nance

## Municipal Bonds, 2009

Statistics of Income Bulletin | Fall 2011
student loans under a program of general application approved by the State (see Code section 144(b)(1)(B) for additional requirements).

Qualified veterans'mortgage bond- In general, a bond issue of which 95 percent or more of the net proceeds is used to f nance the purchase, improvement, or rehabilitation of owner-occupied residences for veterans who: 1) served prior to January 1,1977 ; and 2 ) applied for such a mortgage prior to the date 30 years after leaving active service or January 31,1985 , whichever is later. The payment of interest and principal must be secured by a general obligation of the State, and the bond must meet certain of the requirements of IRC section 143. The issuance of qualif ed veterans' mortgage bonds was limited to the following $f$ ve states: Alaska, California, Oregon, Texas, and Wisconsin, each of which had a veterans' mortgage bond program in effect prior to June 22, 1984.

Qualified zone academy bond ("QZAB")—A type of tax credit bond issued by a State or local government to f nance certain eligible public school purposes authorized under IRC section 54E. QZABs are subject to a national volume cap to be allocated by the Treasury among the States. See Internal Revenue Notice 2009-30 for additional information.

Recovery zone bond-The American Recovery and Reinvestment Act (ARRA) added IRC Sections 1400U-1 through 1400U-3 authorizing State and local governments to issue recovery zone bonds. These bonds provide tax incentives through lower borrowing costs and are intended to promote job creation and economic recovery in targeted areas particularly affected by employment declines. See Internal Revenue Notice 2009-50 for additional information.

Recovery zone economic development bondAuthorized under IRC section 1400U-2, this type of bond provides for a deeper Federal subsidy through a refundable credit payment to state or local governmental issuers in an amount equal to 45 percent of the total coupon interest payable to investors. A recovery zone economic development bond must be
a Build America Bond, the proceeds of which must be used for one or more qualif ed economic development purposes. Recovery zone economic development bonds are allocated under a $\$ 10$ billion national bond volume cap. For Calendar Year 2009, issuers of recovery zone exempt facility bonds were required to f le IRS Form 8038-G, Information Return for Tax-Exempt Governmental Obligations.

Recovery zone exempt facility bond-Authorized under IRC section 1400U-3, which expanded the def nition of the term "exempt facility bond" to include any recovery zone facility bond. A recovery zone exempt facility bond must be a qualif ed private activity bond under IRC Section 142, the proceeds of which may be used to $f$ nance certain "recovery zone property." Recovery zone exempt facility bonds are allocated under a $\$ 15$ billion national bond volume cap. For Calendar Year 2009, issuers of recovery zone exempt facility bonds were required to fle IRS Form 8038, Information Return for Tax-Exempt Private Activity Bonds.

Tax credit bond-Tax credit bonds are not in-terest-bearing obligations. The holder of a tax credit bond is generally allowed an annual Federal income tax credit while the bond is outstanding. The amount of the credit is equal to the face amount of the bond multiplied by the credit rate of the bond. For additional information, see Internal Revenue Notice 2009-15.

Tax Reform Act transition property bond-A bond issued under transitional rules contained in the Tax Reform Act of 1986. Proceeds from bonds issued under these rules include issues used to fund such items as pollution control facilities, parking facilities, industrial parks, sports stadiums, and convention facilities. Proceeds from other bonds issued under the transitional rules are included in this category only if they could not be identif ed as another issue type.

NOTE: Additional tax-exempt bond data, including data for prior years, can be found on the SOI's Tax Stats web site: http://www.irs.gov/taxstats. Click on "Tax-Exempt Bonds."

Table 1. Tax-Exempt Governmental Bonds, by Type and Term of Issue, 2009
[Money amounts are in millions of dollars]

| Type and term of issue | Number | Amount |
| :--- | ---: | ---: |
| All issues, total [1] | $\mathbf{2 2 , 3 6 3}$ | $\mathbf{3 4 0 , 6 5 8}$ |
| Short-term | 6,462 | 78,217 |
| Long-term | 15,901 | 262,441 |
| New money issues, total | $\mathbf{1 6 , 8 9 2}$ | $\mathbf{2 1 5 , 3 1 9}$ |
| Short-term | 4,771 | 64,269 |
| Long-term | 12,121 | 151,050 |
| Refunding issues, total | $\mathbf{7 , 7 0 3}$ | $\mathbf{1 2 5 , 3 3 9}$ |
| Short-term | 2,406 | $\mathbf{1 3 , 9 4 8}$ |
| Long-term | 5,297 | 111,391 |

[1] A given bond issue can include both new money and refunding proceeds. Thus, the number of new money issues plus the number of refunding issues will sometimes exceed the total number of issues. However, the money amounts add to the totals.
NOTE: Detail may not add to totals because of rounding.

Table 2. Long-Term, Tax-Exempt Governmental Bonds, by Bond Purpose and Type of Issue, 2009 [Money amounts are in millions of dollars]

| Bond purpose | All issues |  | New money issues |  | Refunding issues |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number | Amount | Number | Amount | Number | Amount |
|  | (1) | (2) | (3) | (4) | (5) | (6) |
| Total [1] | 15,901 | 262,441 | 12,121 | 151,050 | 5,297 | 111,391 |
| Education | 5,455 | 72,365 | 4,005 | 45,935 | 1,884 | 26,430 |
| Health and hospital | 333 | 5,272 | 264 | 2,637 | 96 | 2,635 |
| Transportation | 1,014 | 31,784 | 791 | 20,089 | 384 | 11,696 |
| Public safety | 1,864 | 5,505 | 1,712 | 4,291 | 277 | 1,214 |
| Environment | 1,238 | 16,637 | 944 | 10,921 | 510 | 5,715 |
| Housing | 100 | 757 | 71 | 326 | 40 | 432 |
| Utilities | 2,149 | 37,919 | 1,546 | 18,169 | 953 | 19,749 |
| Bond and tax/revenue anticipation notes | 275 | 1,903 | 246 | 1,612 | 54 | 291 |
| Other purposes [2] | 4,613 | 90,300 | 3,383 | 47,072 | 1,844 | 43,228 |

[1] A given bond issue can include more than one purpose and can include both new money and refunding proceeds. Thus, the summation of number of issues by purpose or by type of issue will sometimes exceed the total number of issues. However, the money amounts add to the totals.
[2] "Other purposes" refers to obligations for which a specific purpose either did not apply or was not clearly indicated on the Form 8038-G, Information Return for Tax-Exempt Governmental Obligations.
NOTE: Detail may not add to totals because of rounding.

| U.S. Possessions [2] | 0 | 0 | 7 | 1,870 |

d—Data deleted to avoid disclosure of information about specific bonds. However, the data are included in the appropriate totals
[1] A given bond issue can include more than one purpose. Thus, the summation of number of issues by purpose will sometimes exceed the total number of issues. However, the money amounts add to the totals.
[2] U.S. Possessions include Guam, Puerto Rico, and the U.S. Virgin Islands.
[3] "Other purposes" refers to obligations for which a specific purpose either did not apply or was not clearly indicated on the Form 8038-G, Information Return for Tax-Exempt Governmental Obligations
NOTE: Detail may not add to totals because of rounding

Table 6. Tax-Exempt Private Activity Bonds, by Type and Term of Issue, 2009
[Money amounts are in millions of dollars]

| Type and term of issue | Number | Amount |
| :--- | ---: | ---: |
| All issues, total [1] | 2,732 | $\mathbf{1 0 5 , 5 7 5}$ |
| Short-term | 66 | 2,790 |
| Long-term | 2,666 | 102,785 |
| New money issues, total | $\mathbf{1 , 6 6 2}$ | 52,425 |
| Short-term | 36 | 209 |
| Long-term | 1,626 | 52,216 |
| Refunding issues, total | 1,421 | 53,150 |
| Short-term | 36 | 2,581 |
| Long-term | 1,385 | 50,569 |

[1] A given bond issue can include both new money and refunding proceeds. Thus, the number of new money
issues plus the number of refunding issues will sometimes exceed the total number of issues. However, the money amounts add to the totals.
NOTE: Detail may not add to totals because of rounding.

d—Data deleted to avoid disclosure of information about specific bonds. However, the data are included in the appropriate totals.
[1] A given bond issue can include more than one purpose. Thus, the summation of number of issues by purpose will sometimes exceed the total number of issues. However, the money amounts add to the totals.
[2] For purposes of this table, certain bond purposes were combined. For this reason, data in this table will differ slightly from the data in Tables 7 and 9 .
[3] For purposes of this table, this category includes all issues for which a specific purpose either did not apply or was not clearly indicated on the Form 8038, Information Return for Tax-Exempt Private Activity Bond Issues, as well as bonds issued for: local electricity or gas furnishing facilities, facilities issued under a transitional rule of the Tax Reform Act of 1986, qualified enterprise zone facilities, new empowerment zone facilities, District of Colombia Enterprise Zone facilities, qualified public educational facilities, qualified green building and sustainable design projects, qualified highway or surface freight transfer facilities, New York Liberty Zone bonds, mass commuting facilities, local district heating and cooling facilities, hazardous waste facilities, high-speed intercity rail facilities, environmental enhancements of hydroelectric generating facilities, Midwestern disaster exempt facilities, Hurricane Ike disaster exempt facilities, Midwestern disaster mortgage bonds, Hurricane lke disaster mortgage bonds, qualified veterans' mortgage bonds, qualified redevelopment bonds, nongovernmental output property bonds, Gulf Opportunity Zone advanced refunding bonds, and New York Liberty Zone advanced refunding bonds.
[4] U.S. Possessions include Guam.
NOTE: Detail may not add to totals because of rounding.

d—Data deleted to avoid disclosure of information about specific bonds. However, the data are included in the appropriate totals.
[1] Bonds reported on the Form 8038-G, Information Return for Tax-Exempt Governmental Obligations, with a specific reference to "Build America Bond" or "Recovery Zone Economic Development Bond" in either their issue name or other description.
[2] A given bond issue can include more than one purpose. Thus, the summation of number of issues by purpose will sometimes exceed the total number of issues. However, the money amounts add to the totals.
[3] "Other purposes" refers to obligations for which a specific purpose either did not apply or was not clearly indicated on the Form 8038-G, Information Return for Tax-Exempt Governmental Obligations.
NOTE: Detail may not add to totals because of rounding.

# Charities, Fraternal Beneficiary Societies, and Other Tax-Exempt Organizations, 2008 

by Paul Arnsberger and Mike Graham

Nonprof $t$ charitable organizations exempt from income tax under Internal Revenue Code (IRC) section 501(c)(3) f led 315,184 Forms 990 and 990-EZ for Tax Year 2008, a slight increase from 2007. These organizations held $\$ 2.52$ trillion in assets, a decrease of 6 percent from the previous year. They also reported 5 percent less in total revenue ( $\$ 1.38$ trillion) and 6 percent more in total expenses ( $\$ 1.40$ trillion), resulting in a net def cit for the year. Certain revenue items, such as investment income and sales of assets, decreased signif cantly from Tax Year 2007 (Figure A). ${ }^{1}$

Fraternal benef ciary societies exempt under IRC section 501(c)(8) f led 7,163 Forms 990 and 990 -EZ for 2008. ${ }^{2}$ These organizations, which include fraternal orders of police, certain life insurance societies, and other member-beneft lodges and chapters, reported assets totaling $\$ 100.1$ billion. Of the $\$ 14.7$ billion in revenue reported by section 501(c)(8) organizations, most came from program service revenue ( $\$ 10.7$ billion).

The statistics for charities and other taxexempt organizations reported in this article are based on data compiled from Form 990, Return of Organization Exempt from Income Tax, which was signif cantly re-designed for Tax Year 2008, and Form 990-EZ, the short form version of this information return. For Tax Year 2008, the latter form could be completed by certain organizations with end-of-year assets less than $\$ 2.5$ million and gross receipts less than $\$ 1$ million. ${ }^{3}$

## Charitable Organizations Tax-Exempt Under IRC Section 501(c)(3)

In order to qualify for tax-exempt status, an organization must show that its purpose serves the public good, as opposed to a private interest. The activities of a

[1] Includes membership dues.
[2] For Tax Year 2007, this figure included "interest on savings and temporary cash investments," "dividends and interest from securities," and "other investment income" from Form 990 and "investment income" from Form 990-EZ. For Tax Year 2008, it includes "investment income" and "tax-exempt bond proceeds" from Form 990 and "investment income" from Form 990-EZ.
NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than $\$ 25,000$, as well as most churches and certain other types of religious organizations. Detail may not add to totals because of rounding.
nonprof $t$ organization are limited in that they must further one or more of the purposes for which the organization was granted tax-exempt status. Organizations that are exempt under IRC section 501(c)(3) are those whose purposes are religious, charitable, scientifc, literary, or educational. In practice, these categories cover a broad range of activities. Examples of the varied exempt purposes of these charitable organizations include nonprof $t$ hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing organizations, historical societies, and environmental preservation groups. These organizations may not allow net earnings to inure to the benef $t$ of a shareholder or individual. Activities

Statistics of Income Bulletin | Fall 2011

attempting to inf uence legislation cannot be a substantial part of an organization's activities, and the organization may not intervene in a political campaign on behalf of, or in opposition to, any candidate. ${ }^{4}$ Generally, a donor's contribution to one of these organizations is deductible for income tax purposes.

Of the $1,186,915$ active organizations recognized by the Internal Revenue Service (IRS) under IRC section 501 (c)(3), 315,184 f led Form 990 or $990-E Z$ returns for accounting periods that began in Calendar Year 2008. ${ }^{5}$ Certain nonprof t charitable organizations were not required to fle either Form 990 or 990-EZ; these included churches and certain other religious organizations, as well as organizations with annual gross receipts totaling less than $\$ 25,000 .{ }^{6}$ Nonprof t private foundations, which are also tax exempt under section 501(c)(3) (and included in the 1,186,915 f gure above), are required to fle on Form 990-PF, Return of Private Foundation. ${ }^{7}$

## Form and Threshold Changes for Tax Year 2008

The Tax Year 2008 Form 990 was signif cantly revised from previous versions. The new form included an 11-page main form and 16 supplemental schedules. Changes to the main form were: a summary section on the frst page; a checklist of required schedules and other IRS f lings; additional questions on employment and governance; and expanded reporting on compensation and revenue. The expense statement and balance sheet were also revised slightly. Of the 16 supplemental schedules, 14 were introduced for Tax Year 2008. These schedules were to be completed by certain $f$ lers based on their organization type or the activities in which they engaged. Figure B shows a list of the 16 schedules that were included in the Form 990 package for Tax Year 2008.

For Tax Year 2008, the Form 990-EZ was modified slightly. Changes included additional compensation reporting and the introduction

of Schedules C, E, G, L, and N. As with previous years, very limited balance sheet and income statement reporting was required of Form 990-EZ filers.

In order to reduce f ling burden for small and medi-um-sized organizations, the IRS increased the threshold at which organizations were required to fle the redesigned Form 990, as opposed to the shorter, simpler Form 990-EZ. For Tax Year 2008, most organizations with assets less than $\$ 2.5$ million and gross receipts less than $\$ 1$ million were eligible to fle the Form 990-EZ. ${ }^{8}$ In previous years, only organizations with assets less than $\$ 250,000$ and gross receipts less than $\$ 100,000$ or more were eligible to fle the short form. ${ }^{9}$ As a result of this threshold change, more than 100,000 additional nonprof t charitable organizations elected to fle Form 990-EZ for Tax Year $2008(166,363)$ than for Tax Year

[1] Includes returns with zero assets or assets not reported.
NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations tax exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than $\$ 25,000$, as well as most churches and certain types of religious organizations. Detail may not add to totals because of rounding.
$2007(63,359)$. In 2008, short-form f lers accounted for 53 percent of all information returns $f$ led by nonprof $t$ charitable organizations compared to 20 percent in Tax Year2007.

## Financial Highlights and Characteristics

As a result of the recession that lasted from of December 2007 until June 2009, Tax Year 2008 total revenue and total assets reported by nonprof $t$ charitable organizations decreased from the previous year. This marked the frst time since Tax Year 1985-the frst year for which these statistics were regularly collected by the IRS-that total assets and total revenue reported by nonprof $t$ charitable organizations were lower than the prior year. ${ }^{10}$ Total assets dropped 6 percent to $\$ 2.5$ trillion. Cash, savings, and investments, the major component of assets for the nonprof $t$ charitable sector, dropped 17 percent, from $\$ 1.5$ trillion in Tax Year 2007 to $\$ 1.2$ trillion in Tax Year 2008. ${ }^{11}$

Between Tax Years 2007 and 2008, total revenue reported by charities decreased nearly 5 percent to slightly less than $\$ 1.4$ trillion. Several sources of revenue for these organizations experienced small to signif cant decreases from 2007: contributions, gifts, and grants dropped 4 percent to $\$ 322$ billion; investment income fell 42 percent to $\$ 25.6$ billion; and net gain from sales of assets decreased 178 percent to a reported total loss of $\$ 40.2$ billion. However, program
service revenue, which is the major source of revenue for nonprof $t$ charitable organizations, grew 6 percent to $\$ 1$ trillion. This revenue includes fees collected by organizations in support of their tax-exempt purposes, such as tuition; hospital patient charges (including Medicare and Medicaid payments); and admission fees collected by museums, performing arts groups, and community organizations.

Although 41 percent of the returns $f$ led by section 501(c)(3) organizations for 2008 were fled by small organizations, def ned to be those organizations with assets less than $\$ 100,000$, these organizations collectively held just 0.2 percent of total assets and reported less than 2 percent of total revenue (Figure C). In comparison, large organizations, def ned to be those organizations with assets of $\$ 10$ million or more, represented just over 6 percent of the returns $f$ led but accounted for nearly 91 percent of total asset holdings and 84 percent of total revenue reported.

Figure D illustrates the types of revenue reported by organizations of different sizes. Large organizations received nearly 81 percent of their total revenue from program service revenue. In contrast, small and medium-sized organizations received less than half of their revenue from this source. For Tax Year 2008, large organizations reported total net "other revenue" of less than zero. For Figure D, the "other" category includes revenue items such as:

[^414]
## Figure D

Sources of Nonprofit Charitable Organization Revenue, by Asset Size, Tax Year 2008

[1] Includes returns with zero assets or assets not reported
[2] Includes "investment income" and "tax-exempt bond proceeds" from Form 990 and "investment income" from Form 990-EZ.
[3] Net "other revenue" was less than zero for the "Total" and " $\$ 10,000,000$ or more" asset classes.
NOTES: Data are from Forms 990 and 990 -EZ for nonprofit charitable orḡanizations that are tax exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than $\$ 25,000$, as well as most churches and certain other types of religious organizations. Detail may not add to 100 percent because of rounding and negative components.
"net rental income," "net gain from sales of assets," and "other revenue." Because these large organizations account for the vast majority of total revenue reported, aggregate "other" revenue reported by all Form 990 f lers exempt under IRC section 501(c)(3) was negative, as well.

## Nonprofit Charitable Organizations Classified by NTEE Codes

The National Taxonomy of Exempt Entities (NTEE) is a classif cation system developed by the National Center for Charitable Statistics, which classif es organizations by institutional purpose and major programs and activities. ${ }^{12}$ Organizations are classif ed for statistical purposes by the IRS Statistics of Income Division on the basis of information provided
in the "Statement of Program Service Accomplishments" section of Forms 990 and 990-EZ. Figure E shows data by NTEE's 10 major program categories.

Health-related organizations constituted the largest NTEE category in terms of f nancial activity, with 39 percent of all assets ( $\$ 990.7$ billion) and 58 percent of all revenue ( $\$ 803.9$ billion) reported by charitable organizations for 2008. Program service revenue was the dominant source of income for health organizations, accounting for 91 percent of total revenue. While total revenue was virtually unchanged from Tax Year 2007, the $\$ 730$ billion in program service revenue reported by health organizations represented an increase of 5 percent. Total expenses also increased 5 percent to $\$ 797.6$ billion, or $\$ 6.2$ billion less than the revenue reported by health organizations.

| Religion related | 20,537 | 23,879 | 19,017 | 9,424 | 7,190 | 1,643 | 9,535 | -111 |
| Other, unclassified | 122 | 28 | 28 | 29 | 28 | 1 | 2 | 27 |

[1] The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that are aggregated into the 10 categories shown above. It was developed by the National Center for Charitable Statistics.
NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than $\$ 25,000$, as well as most churches and certain other types of religious organizations. Detail may not add to totals because of rounding

The education category ranked second in terms of assets with $\$ 840.8$ billion. Total revenue ( $\$ 240.3$ billion) reported by these organizations decreased 18 percent from 2007, while program service revenue ( $\$ 164.2$ billion) increased 10 percent. Education organizations reported total expenses of $\$ 263.2$ billion for Tax Year 2007. The resulting net def cit of $\$ 23$ billion was largest of any of the 10 NTEE categories and larger than the def cit reported by the nonprof $t$ sector as a whole ( $\$ 181$ billion).

Organizations in the human services category f led 38 percent of all Forms 990 and 990 -EZ for 2008, constituting the largest proportion among the 10 categories. Program service revenue ( $\$ 108.0$ billion) and contributions, gifts, and grants received (\$76.8 billion) together represented more than 96 percent of the total revenue reported by these organizations.

## Fraternal Beneficiary Societies Tax Exempt Under IRC Section 501(c)(8)

IRC section 501(c)(8) grants tax exemption to fraternal benef ciary societies, orders, or associations. Examples of these types of organizations include fraternal orders of police, certain life insurance
societies, and other member-beneft lodges and chapters. To be recognized as tax exempt under section 501 (c)(8), a fraternal benef ciary society must meet three major requirements. It must act as a fraternal organization; operate under the lodge system or for the exclusive beneft of the members of a fraternal organization operating under the lodge system; and provide for the payment of life, sick, accident, or other benef ts to the members of the organization or their dependents.

To meet the f rst condition, an organization must have a fraternal purpose. This means that organizational membership is based on common ties or the pursuit of common objectives and that the organization offers a substantial program of fraternal activities. Fraternal activities include regular meetings or rituals or the performance of civic or charitable functions in lieu of regular meetings or rituals.

Additionally, a fraternal benef ciary society qualif es for tax exemption only if it operates under a lodge system or for the beneft of members of organizations operating under the lodge system. The lodge system refers to an organization that "holds regular meetings at a designated place, adopts a representative form of government, and performs its work according to

# Charities, Fraternal Beneficiary Societies, and Other Tax-Exempt Organizations, 2008 

Statistics of Income Bulletin | Fall 2011

ritual." ${ }^{13}$ Operating under the lodge system requires at least two active entities: a parent and a subordinate (a local branch often referred to as a lodge). The lodge must be chartered by the parent organization and must be largely self-governing.

The third condition for tax exemption under IRC section 501(c)(8) requires fraternal benef ciary societies to provide for the payment of life, sick, accident, or other benef ts to the members of the organization or their dependents. It is not essential that benef ts be paid to all the society's members, as long as most of the members are eligible for benef ts and the benef ts are paid from contributions or dues paid by those members. ${ }^{14}$ A fraternal organization that does not provide benef ts to members may qualify for tax exemption under IRC section 501(c)(10).

## Highlights of IRC Section 501(c)(8) Organization Financial Data

Of the 63,194 active organizations exempt under IRC section 501(c)(8), 7,163 f led Forms 990 and 990-EZ for Tax Year 2008. Organizations with total gross receipts below the $\$ 25,000$ Form 990 -EZ fling threshold and some noncompliant organizations comprise the difference. Those organizations that did fle information returns reported total assets of $\$ 100.1$ billion and total revenue of $\$ 14.7$ billion for Tax Year 2008.

Fraternal benef ciary societies exempt under IRC section 501(c)(8) held a much larger percentage of their Tax Year 2008 assets in the form of cash and investments than their counterparts exempt under section 501(c)(3). Figure F shows the types of assets reported on Forms 990 and 990 -EZ by charities and fraternal benef ciary societies. A little less than half of the assets held by nonprof $t$ charitable organizations for Tax Year 2008 were in the form of cash and investments, with an additional 31 percent in land, buildings, and equipment. By comparison, section 501(c)(8) organizations reported 94 percent of their assets in the form of cash and investments.

The $\$ 14.7$ billion in total revenue reported by fraternal benef ciary societies represented a decrease of less than 1 percent from Tax Year 2007. Program service revenue, which includes insurance premiums, was the major source of revenue for these organizations. For Tax Year 2008, they reported $\$ 10.7$ billion, or 73 percent of their total revenue, as income from program services.

## Summary

For 2008, nonprof $t$ charitable organizations (excluding private foundations) tax exempt under IRC section 501(c)(3) reported $\$ 2.5$ trillion in total assets and $\$ 1.4$ trillion in revenue, both decreases from 2007. The number of returns $f$ led by these organizations was 315,184 , including 148,821 Forms 990 and 166,363 Forms 990 -EZ. There were major changes in both the content of Form 990 and the fling threshold between Tax Years 2007 and 2008.

While many sources of nonprof $t$ charitable organization revenue dropped between Tax Years 2007 and 2008, the major component, program service revenue, increased slightly to $\$ 1$ trillion. Large nonprof t charitable organizations, def ned as having total assets of $\$ 10$ million or more, represented just 6 percent of all Forms 990 and $990-E Z$ f led, but accounted for almost 84 percent of the total revenue reported.

Using National Taxonomy of Exempt Entities codes, health care was the predominant category, accounting for 39 percent of total assets and 58 percent of total revenue reported by nonproft charitable organizations.

Fraternal benef ciary societies exempt under section 501(c)(8) f led 7,163 information returns with the IRS; they reported $\$ 100.1$ billion in assets and $\$ 14.7$ billion in revenue. The asset and revenue f gures represent slight decreases from Tax Year 2007. The major source of revenue reported by fraternal benef ciary societies was program service revenue, while cash, savings, and investments was, by far, the largest asset component held by these organizations.

## Data Sources and Limitations

The statistics in this article are based on a sample of Tax Year 2008 Forms 990, Return of Organization Exempt From Income Tax, and Forms 990-EZ, Short Form Return of Organization Exempt From Income Tax. Organizations were required to fle the 2008 form when their accounting periods ended any time between December 31, 2008, and November 30, 2009. The sample did not include private foundations, which were required to f le Form 990-PF. Most churches and certain other types of religious organizations were also excluded from the sample because they were not required to fle Form 990 or Form 990-EZ. The sample included only those returns with average receipts of more than the $f$ ling threshold of $\$ 25,000$.

14 See Internal Revenue Service Publication 557, Tax-Exempt Status for Your Organization, page 50.

## Figure F

Components of Assets for Nonprofit Charitable Organizations and Fraternal Beneficiary Societies, Tax Year 2008

Nonprofit Charitable Organizations

Fraternal Beneficiary Societies

Cash, savings, and investments
Land, buildings, and equipment
Other assets

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations and fraternal beneficiary societies tax exempt under Internal Revenue Code (IRC) sections 501 (c)(3) and 501 (c)(8), respectively, and exclude private foundations, most organizations with receipts less than $\$ 25,000$, as well as most churches and certain other types of religious organizations. Percentages may not add to 100 percent because of rounding.

The sample design was divided into two parts: the f rst sampling frame included all returns f led by organizations exempt under IRC section 501(c)(3); the second sampling frame included all returns fled by organizations exempt under sections 501(c)(4) through (9). Organizations tax exempt under other IRC sections were excluded from the sample frames. The data presented were obtained from returns as originally f led with the IRS. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into SOI's database.

The two samples were classif ed into strata based on the size of end-of-year total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 15,708 returns was selected from a population of 317,865 . Sampling rates ranged from 100 percent for organizations with total assets of $\$ 50,000,000$ or more to 0.82 percent for organizations reporting total
assets less than $\$ 500,000$. The second sample contained 6,450 records selected from the population of 117,782 returns $f$ led by organizations exempt under sections 501(c)(4) through (9). Sampling rates ranged from 100 percent for organizations with assets of $\$ 10,000,000$ or more to 1.17 percent for organizations with assets between $\$ 150,000$ and $\$ 399,999$. The f ling populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations f led with tax periods prior to 2008 . However, these returns were excluded from the f nal sample and the estimated population counts.

Because the data are based on samples, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coeff cient of variation (CV), should be taken into account. Figure G shows CVs for selected f nancial data. A discussion of methods for evaluating the nonsampling error can be found later in this issue in SOI Sampling Methodology and Data Limitations. ${ }^{15}$

Estimate should be used with caution because of the small number of sample returns on which it is based.
[1] Includes returns with zero assets or assets not reported.
NOTES: Data exclude private foundations, most organizations with receipts less than $\$ 25,000$, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding.

[1] Excludes private foundations, most churches, and certain other types of religious organizations
NOTES: For Tax Year 2008, organizations with end-of-year total assets under $\$ 2,500,000$ and gross receipts under $\$ 1,000,000$ could elect to file Forms $990-E Z$ rather than Forms 990 . Data exclude most organizations with receipts less than $\$ 25,000$. Detail may not add to totals because of rounding.

# SOI Sampling Methodology and Data Limitations 

This article discusses typical sampling procedunesedin most Statistics of Income (SOI) programAspectscovered brief y include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specif c SOI studies can be found in the separate SOI reports. More technical information is available, on request, by writing to the Director, Statistics of Income Division RAS:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

## Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratifed probability samples of income tax returns or other forms $f$ led with the Internal Revenue Service (IRS). The statistics do not ref ect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are fled and processed for tax purposes, they are assigned to sampling classes (strata) based on such criteria as: industry, presence or absence of a tax form or schedule, and various income factors or other measures of economic size (such as total assets, total receipts, size of gift, and size of estate). The samples are selected from each stratum over the appropriate $f$ ling periods. Thus, sample selection can continue for a given study for several calendar years- 3 for corporations because of the incidence of f scal (noncalendar) year reporting and extensions of f ling time. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fxed . This means, in practice, that both the population and the sample size can differ from those planned. However, these factors do not compromise the validity of the estimates.

The probability of a return's selection depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated pro-
cessing costs or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identif cation number (TIN), which is either the Social Security number (SSN) or the Employer Identif cation Number (EIN). A f xed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specif ed for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specif ed digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TINs designated from one year's sample are, for the most part, selected for the next year's, so that a very high proportion of the returns selected in the current year's sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

## Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classif ed. "Weights" are computed by dividing the count of returns $f$ led for a given stratum by the number of population sample returns for that same stratum. These weights are usually adjusted for unavailable returns and outliers. Weights are used to adjust for the various sampling rates used, relative to the population - the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "poststrata," based on additional criteria or ref nements of those used in the original stratif cation. Weights are then computed for these poststrata using additional population counts. The data on each sample return in a stratum are then multiplied by that weight. To produce the tabulated estimates, the weighted

> Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

## SOI Sampling Methodology and Data Limitations

## In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.

data are summed to produce the published statistical totals.

## Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different samples usually
vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed conf dence that this interval includes the actual population value.

In SOI reports, the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coeff cient of variation (CV). The user of SOI data may multiply an estimate by its CV to recreate the standard error and to construct conf dence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coeff cient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68 -percent conf dence interval estimate:
150,000

x $\quad$\begin{tabular}{rr}
(sample estimate) <br>

$=3,002$ \& | (coeff cient of variation) |
| :--- |
| (standard error of estimate) |

\end{tabular}

then:

$$
\begin{array}{ll}
150,000 & \text { (sample estimate) } \\
=\{147,000,153,000\} & \text { (standard error) } \\
\text { (68-percent conf dence } \\
\text { interval) }
\end{array}
$$

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible samples similarly selected. To obtain this interval es-
timate with 95 -percent conf dence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained, on request, by writing to the Director, Statistics of Income Division, at the address given above.

## Nonsampling Error Controls and Limitations

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be signif cant in evaluating the usefulness of SOI data. These include taxpayer reporting errors and inconsistencies, processing errors, and the effects of any early cutoff of sampling. Additional information on nonsampling error as it applies to individual and corporation income tax returns is presented in the separate SOI reports on these returns.

In transcribing and tabulating the information from returns or forms selected for the sample, steps are taken to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during the statistical abstracting and "editing" process that takes place in IRS submission processing centers. This is done to improve data consistency from return to return and to achieve def nitions of the data items more in keeping with the needs of major users. In some cases, not all of the data are available from the tax return as originally f led. Sometimes, the missing data can be obtained by the Statistics of Income Division in Washington, DC, through feld followup. More often, though, they are obtained through manual or computerized imputation. For this purpose, other information in the return or in accompanying schedules may be suff cient to serve as the basis for making an estimate. Prior-year data for the same taxpayer can be used for this same purpose, or comparable data from business reference books may be substituted.

Data abstracted or "edited" from returns for statistical use are subjected to a number of validation checks, including systematic verif cations of a sampling of the work of each tax examiner involved in the SOI process. Data reported on sampled returns

## SOI Sampling Methodology and Data Limitations

and previously transcribed as part of processing for the IRS Master Files are subject to validation as part of the administrative process before SOI processing begins. However, during the administrative process, it is only practical to transcribe corrections to errors that have a direct bearing on the tax reported or the refund claimed. Therefore, during the SOI process, checks must also be made to correct any errors or inconsistencies left in the administrative data before the data can be accepted for the statistics.

The Statistics of Income program includes many more tax return items than are transcribed and perfected for IRS tax administration needs, especially for items reported in tax return schedules in support of the various summary totals reported on the return. Therefore, checks must also be designed to validate these additional data items and to assure that they are consistent with other data entries.

Most of the data validation checks made during the SOI process take the form of computerized tests of each record. In addition to verifying that internal consistency and proper balance and relationships among the tax return items and statistical classif cations are maintained, this process is intended to check on consistency with tax law provisions, acceptable reporting practices, and generally accepted accounting principles. Most testing occurs during the data abstracting and editing operation, while the tax return source document is still on hand, although some testing for certain programs occurs later on. Records failing the tests are subjected to further review and correction.

Finally, before publication, the statistics are reviewed for accuracy and reasonableness in light of the tax law provisions, taxpayer reporting variations and other limitations, tolerances and statistical techniques allowed or employed in data processing and estimating, economic conditions, and comparability with other statistical series. However, these controls do not completely eliminate the possibility of error. When discovered, errors in Bulletin tables are corrected, through a published errata.

## Table Conventions

Published estimates subject to excessive sampling variability are identif ed for most of the statistics by means of an asterisk $\left({ }^{*}\right)$ presented alongside the estimate or in place of an estimate. Presence of an asterisk means that the sampling rate was less than 100 percent of the population and that there were fewer than 10 sample observations available for estimation purposes. This method produces a rough indication of excessive sampling variability. However, the results will differ somewhat from more precise indicators of excessive sampling variability based on the standard statistical formula. For some of the statistics based on samples, asterisking was not possible because of resource and other constraints. Users should keep this limitation in mind when using these data.

A zero, in place of a frequency or an amount, in any given table cell presenting data based on an SOI sample, indicates either that (1) there were no returns in the population with the particular characteristic, or (2) because of its rarity, instances of the characteristic were not present among the sampled returns. However, for statistics based on returns selected for the sample at the 100 -percent rate, a zero indicates a presumption of no returns with the particular characteristic in the population.

In addition to sampling variability, Statistics of Income is required to prevent disclosure of information about specif c taxpayers or businesses in its tables. Therefore, a weighted frequency (and the associated amount, where applicable) of less than 3 is either combined with data in an adjacent cell(s) so as to meet the criteria, or deleted altogether. Similar steps are taken to prevent indirect disclosure through subtraction. However, any combined or deleted data are included in the appropriate totals. Most data on tax-exempt, nonprof $t$ organizations are excluded from disclosure review because the Internal Revenue Code and regulations permit public access to most of the information reported by these organizations.

|  |  |  |  | Regular | $\begin{aligned} & \text { With } \\ & \text { extensions } \\ & \text { of time } \end{aligned}$ |  |  |
| Tax-Exempt Bond Issues: Aaron Barnes | This annual study provides information on private activity and Governmental bond issues by type of property financed, size of face amount, and State. The most recent data are for Issue Year 2009 public purpose bonds and private activity bonds. | 2010 | [5] | [5] | [5] | December 2011 | July 31, 2012 |
| Tax-Exempt Organizations (Except Private Foundations): Paul Arnsberger | This annual study provides balance sheet and income statement data for organizations classified as taxexempt under subsections 501(c) (3)-(9) of the Internal Revenue Code. The most recent data are for Tax Year 2008 returns filed in Calendar Years 2009-2010. | 2009 | November 2010 | April 2011 | October 2011 | December 2011 | July 31, 2012 |
| Tax-Exempt Organizations, (Private Foundations): Cynthia Belmonte | This annual study provides balance sheet and income statement data for domestic private foundations and charitable trusts filing a Form 990-PF. The most recent data are for Tax Year 2008 returns filed in Calendar Years 2009-2010. | 2009 | November 2010 | April 2011 | October 2011 | December 2011 | July 31, 2012 |
| Tax-Exempt Organizations, Unrelated Business Income: Jael Jackson | This annual study provides tabulations of unrelated business income and deductions for organizations classified as tax-exempt under the Internal Revenue Code. The most recent data are for Tax Year 2008 returns filed in Calendar Years 2009-2010. | 2009 | November 2010 | April 2011 | October 2011 | December 2011 | October 31, 2012 |
| Transactions of ForeignControlled Corporations: Isaac Goodwin | This biennial study provides data on transactions between U.S. corporations and their foreign owners. Data are classified by country and industry group. | 2010 | June 2011 | September 2011 | March 2012 | June 2012 | April 2013 |

[^420][2] Corporation statistics for 2009 represent accounting periods ended July 2009 through June 2010. Study Year 2010 is similarly defined.
[3] Estate and gift tax data are processed on a filing-year, rather than on a year-of-death or gift-year (tax-year) basis. At a later stage (not shown here), filing years are combined by year of death or gift year, respectively.
4] Split-interest trust and fiduciary income tax statistics are processed on a filing-year rather than a tax-year basis.
[5] Tax-exempt private activity governmental bond statistics are collected annually based on issue year. Arbitrage rebate and penalty are conducted biennially, for tax years ending in odd numbers.

## SOI Products and Services

statistics of Income (SOI) data are available in electronformats and in print. For furtheimformation on any of the following products and services, or for answers to questions on the availability of SOI data, other statistical services, or release dates for data, contact SOI's
Statistical Information Services (SIS):

Statistical Information Services (sis@irs.gov) Statistics of Income Division Internal Revenue Service<br>P.O. Box 2608 • Washington, DC 20013-2608 (202) 874-0410 • Fax: (202) 874-0964

As its name implies, SIS is best able to answer questions about data. It does not supply tax forms or information about the status of an individual's tax refund or audit examination. Media requests should be directed to the IRS Media Relations Branch, Communications Division, on (202) 622-4000.

## Free Products on the Internet

SOI's Internet site offers a combination of f les presenting SOI tables, articles about SOI data, and information about SOI products and services, as well as non-SOI products, including Compliance Research projections and nonprof $t$ Master File microdata records. At present, almost 12,000 f les reside there.

## Products for Sale From SOI

Many of SOI's data f les are available for sale on CD-ROM or via e-mail through Statistical Information Services. Prepayment is required for orders of $\mathbf{\$ 1 0 0}$ or more, with checks made payable to the IRS Accounting Section. Credit and debit card payments are also accepted. Contact SIS for information on specif c products, prices, sources, media, and ordering instructions.

The following f les are currently available on a reimbursable basis and include data from returns for corporations, individuals, exempt organizations, and private foundations

## SOI Products and Services

and charitable trusts. Most of these $f$ les are tabulations of aggregated data, but some are $f$ les of microdata records.

## Corporation Income Tax Returns

## Corporation Source Book

CD-ROMs containing data from the Corporation Source Book are available for Tax Years 1996-2003 at a cost of $\$ 250$ per year. Data from the 2004 through 2008 Corporation Source Books are available at no charge from the Tax Stats Web site. Data tables from the 2000 through 2008 Source Books are also available at no charge from the Tax Stats Web site at: www.irs.gov/taxstats/bustaxstats/article/0,,id=149687,00.html.

## Individual Income Tax Returns

## Individual Public-Use Microdata Files

Files for 1992 through 2006 are available on CD-ROM from the SOI Division for $\$ 4,000$ per year. These microdata f les have been edited to protect the conf dentiality of individual taxpayers.

## County-to-County Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by county for the entire United States, including inf ows and outf ows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1991-2009. Price is $\$ 200$ per year for the entire United States or $\$ 10$ per State per year for Filing Years 1991-2004. All years for the entire United States are also available for \$500. Filing Years 2005-2009 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## State-to-State Migration Data

Data are based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. Data present migration patterns by State for the entire United States, including inf ows and outf ows, and include the number of returns (which approximates the number of households); the number of personal exemptions (which approximates the population); and total "adjusted gross income." Available for Filing Years 1989-2009. Price is $\$ 50$ per year for the
entire United States or $\$ 10$ per State per year for Filing Years 1989-2004. Filing Years 2005-2009 are available at no cost at www.irs.gov/taxstats. Click on "U.S. Population Migration Data" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## County Income Data

One table, based on the population of returns from the IRS Individual Master File system. This table presents data for adjusted gross income (total and for selected sources), number of returns (which approximates the number of households), and number of personal exemptions (which approximates the population). The data are presented by county (including State totals) and are available for Tax Years 1989-2009 for the entire United States. Price is $\$ 50$ per year for the entire United States or $\$ 10$ per State per year for Tax Years 1989-2004. Tax Years 2004-2009 are available at no cost at www.irs.gov/taxstats. Click on "County Income" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## ZIP Code Area Data

Statistics are available for Tax Years 2002 and 2004-2008 on CD-ROM showing the number of individual income tax returns; the total number of exemptions and number of dependent exemptions (which approximates population); adjusted gross income; salaries and wages; taxable interest; total tax; and contributions; by State and 5-digit ZIP Code. In addition to these items, data for Tax Year 2004-2008 also show the amount of taxable dividends; net capital gain/loss; IRA payment adjustment; self-employed pension adjustment; taxes paid deduction; alternative minimum tax; income tax before credits; earned income credit; and number of returns prepared by paid preparers. Price is $\$ 500$ for the entire United States; $\$ 25$ for a single State. Data for Tax Years 1998, 2001, and 2008 are available at no cost at www.irs.gov/taxstats. Click on "Zip Code Data (SOI)" under Individual Tax Statistics; Individual Income Tax; Data by Geographic Areas.

## Tax-Exempt Organizations

## Compendium of Studies of Tax-Exempt Organizations, 1989-1998

This is a compilation of articles on SOI studies of charitable and other nonprof $t$ organizations described in Internal Revenue Code sections 501(c)(3)-(c)(9), private foundations, charitable remainder trusts, and nonproft organizations' unrelated business income. All of these articles were published previously in various issues of the Statistics of Income Bulletin. In addition, the Compendium
includes papers on statistical sampling of tax-exempt organization returns, and other topics relating to tax-exempt organizations and philanthropy that were authored by IRS staff and others who use SOI study data for research. Available at no charge on CD-ROM.

## Microdata Records for Tax Year 2008

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 15,708 Internal Revenue Code section 501(c)(3) organizations and 6,450 section 501(c) (4)-(9) organizations. All returns for organizations with assets of $\$ 50,000,000$ or more are included in the sample. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/0,,id=97176,00.html, or may be purchased on CD-ROM for $\$ 20$.

## Microdata Records for Tax Years 1992-2007

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitable stats/article/0, id= $=97176,00 . \mathrm{html}$, or may be purchased on CD-ROM for $\$ 20$.

## Private Foundations (and Charitable Trusts)

## Microdata Records for Tax Year 2008

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The f le contains both operating and nonoperating foundations and trusts. The sample includes 15,710 returns. (All returns $f$ led by foundations with assets of $\$ 10$ million or more, as well as the population of returns fled by nonexempt charitable trusts, are included in the sample.) Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article/0,id=96996,00.hmtl, or may be purchased for $\$ 20$.

## Microdata Records for Tax Years 1992-2007

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal

Revenue Code section 4947 (a)(1) charitable trusts. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Available for download from SOI's Tax Stats Web site at www.irs.gov/taxstats/charitablestats/ article/0,,id=96996,00.html, or may be purchased for $\$ 20$.

## Publications

## Statistics of Income-2008, Corporation Source Book

Publication 1053, Price: \$175, plus $\$ 10$ for shipping and handling

This document presents detailed income statement, balance sheet, tax, and selected items, by sector, major and minor industrial groups, and size of total assets for all returns and separately for returns with net income. Separate statistics on S corporations are included by sector. Industry detail is based on the North American Industry Classif cation System (NAICS). The report, which underlies the Statistics of Income-Corporation Income Tax Returns publication, is part of an annual series and can be purchased in its entirety or by page. Corporation Source Book industry pages and notes for 1963 through the present are available at a cost of $\$ 30$, plus $\$ 1$ per page copying charge (free for orders under 5 pages). The complete, printed version of the Source Book for selected prior years, 1984-2008, is also for sale at $\$ 175$ per year, plus $\$ 10$ for shipping and handling.

## Compendium of Federal Estate Tax and Personal Wealth Studies <br> Publication 1773, Price: \$26, <br> plus $\$ 10$ for shipping and handling

Part I of this report focuses on data from estate tax returns, describing decedents, their benef ciaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting sample data for the estate studies and presents statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estatemultiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years 1962-1989, and a discussion of the relationship among realized income, wealth, and well-being.

## Statistics of Income-2008,

## Corporation Income Tax Returns

Publication 16 Stock No. 048-004-02532-9
Price: $\$ 52.00$
This report presents comprehensive data on corporation income tax returns with accounting periods that ended July 2008 through June 2009. Data are classif ed by industry, size of total assets, and size of business receipts.

Statistics of Income-2008, Individual Income Tax Returns
Publication 1304, Stock No. 048-004-02530-2
Price: $\$ 43$ Foreign: $\$ 60.20$
This report presents more comprehensive and complete data on individual income tax returns for Tax Year 2008 than those published earlier in the SOI Bulletin.

Presents information on:
■ sources of income

- exemptions

■ itemized deductions

- tax computations

Classif es data by:
■ size of adjusted gross income

- marital status
- type of tax computation

■ age

IRS Data Book, 2010
Annually, Publication 55B, Stock No. 048-004-02531-1 Price: $\$ 14.00$ International: $\$ 19.60$

This volume pertains to Fiscal Year (FY) 2010-October 1, 2009, through September 30, 2010. The report provides information on returns $f$ led and taxes collected, enforcement, taxpayer assistance, the IRS budget and workforce, and other selected activities. The FY 2011 issue of the Data Book will be available in late March 2012.

## Statistics of Income Bulletin

Quarterly, Publication 1136, Stock No. 748-005-00050-5
Subscription price: $\$ 67$ International: $\$ 93.80$
Summer 2011 Single copy, Stock No. 748-005-00107-9
Single copy price: $\$ 44$ International: $\$ 61.60$
This series provides the earliest published f nancial statistics from individual and corporation income tax returns. The Bulletin also includes annual data on nonfarm sole proprietorships and partnerships, as well as periodic or special studies of particular interest to tax analysts, administrators, and economists. Historical tables, published in the spring issue, include data from SOI, as well as tax collections and refunds by type of tax.

## Sole proprieforship returns:

2007, Summer 2009 (29-1)
2009, Summer 2011 (31-1)
Income statements by industry:
2006, Fall 2008 (28-2)

## Tax-exempt bond issues:

2008, Winter 2011 (30-3)

Publication 1136 (Rev. 12-2011) Catalog Number 46996F Department of the Treasury Internal Revenue Service www.irs.gov

[^0]:    The remaining 1.7 percent of returns did not need to claim either a standard deduction or itemized deduction, because no AGI was reported.

[^1]:    ${ }^{2}$ Returns in the sample were stratified based on the presence or absence of one or more of the following forms or schedules: Form 2555 , Foreign Earned Income; Form 1116, Foreign Tax Credit (Individual, Fiduciary, or Nonresident Alien Individual); Schedule C, Profit or Loss from Business (Sole Proprietorship); and Schedule F, Profit or Loss from Farming.

[^2]:    Footnotes at end of table.

[^3]:    Footnotes at end of table

[^4]:    Footnotes at end of table

[^5]:    Footnotes at end of table

[^6]:    Kyle Mudry is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Jeff Hartzok, Chief.

[^7]:    ${ }^{1}$ For Tax Years 1988 through 1990, the tax rate schedules provided only two basic rates: 15 percent and 28 percent. However, taxable income over certain levels was subject to a 33 -percent tax rate to phase out the benefit of the 15 -percent tax bracket (as compared to the 28 -percent rate) and the deduction for personal exemptions. At the taxable income level, where these benefits were completely phased out, the tax rate returned to 28 percent.

[^8]:    2 Nontaxable (i.e., tax-exempt) forms of income, such as interest on State and local government obligations, were not included in AGI and generally did not affect the marginal tax rate. However, in some situations the receipt of some forms of tax-exempt income, such as tax-exempt interest, could have influenced the taxability of other income, in particular Social Security benefits. When this situation occurred, the income made taxable by the receipt of other forms of nontaxable income was included in AGI.
    3 The 2007 data are from Dungan, Adrian and Kyle Mudry, Individual Income Tax Rates and Shares, 2007, Statistics of Income Bulletin, Winter 2010, Volume 29, Number 3, p. 18-75.

[^9]:    4 Tax generated does not include certain other taxes reported on the individual income tax return, such as self-employment tax (the Social Security and Medicare tax on income from self-employment), the Social Security tax on certain tip income, household employment taxes, tax from the recapture of prior-year investment, low-income housing, or other credits, penalty tax applicable to early withdrawals from an Individual Retirement Arrangement (IRA) or other qualified retirement plans, and tax on trusts, accumulation, and distributions. The statistics for "total tax liability," shown in Bryan, Justin, "Individual Income Tax Returns: 2008," Statistics of Income Bulletin, Fall 2010, Volume 29, Number 2, include these taxes.
    5 The income amounts on which these special computations for lump-sum distributions were based were not reflected in current-year AGI or current-year taxable income.
    ${ }^{6}$ For 2008 , the total earned income credit was $\$ 50.7$ billion. This amount includes the amount used to reduce the income tax ( $\$ 1.0$ billion), the amount used to reduce other taxes reported on individual income tax returns ( $\$ 5.4$ billion), and the amount refunded to taxpayers ( $\$ 44.3$ billion). Table 4 in Bryan, Justin, "Individual Income Tax Returns: 2008," Statistics of Income Bulletin, Fall 2010, Volume 29, Number 2, shows these amounts.
    ${ }^{7}$ Dependents with income of more than $\$ 1,800$ other than earned income could file their own returns but were suggested to calculate their tax on other than earned income in excess of $\$ 1,800$ as if it were their parent's or guardian's marginal income. Form 8814 was used to compute the higher tax. For dependents with only modest amounts of investment income, the parent or guardian could elect to include the dependent's income on the parent's tax return, relieving the dependent of having to file his or her own tax return.

[^10]:    [1] See Figures I and J for the calculation of alternative minimum taxable income and the list of alternative minimum tax adjustments and preferences.
    [2] Includes returns with adjusted gross deficit.
    NOTE: Detail may not add to totals because of rounding.

[^11]:    ${ }^{8}$ Other tax returns may not have had AMT liability but the size of their tax credits may have been reduced because of the AMT.
    ${ }^{9}$ The percentile groupings of tax filers exclude returns with zero or negative AGI.

[^12]:    ${ }^{10}$ For an explanation of the osculatory interpolation technique, see Oh, H. Lock, "Osculatory Interpolation with a Monotonicity Constraint," 1977 Proceedings of the American Statistical Association, Section on Statistical Computing, 1978.

[^13]:    11 Taxpayers fall into one of five filing statuses: single; married filing jointly; married filing separately; head of household; or surviving spouse. Being age 65 or older or being legally blind affects the amount of the standard deduction and, hence, the filing requirements. Taxpayers who are (or could be) dependents of other taxpayers have different filing requirements. For more information on the general filing requirements, see Bryan, Justin, "Individual Income Tax Returns: 2008," Statistics of Income Bulletin, Fall 2010, Volume 30, Number 2.
    12 As defined under section 61 of the Internal Revenue Code, gross income includes amounts from wages and salaries, interest and dividends, alimony, bartering income, canceled debt income, gambling winnings, rents and royalties, and gains from property sales or exchanges, as well as gross income from sole proprietorships and farming, income from partnerships and S corporations, and distributions from estates and trusts. This definition of gross income is slightly different from the Form 1040 , U.S. Individual Income Tax Return, concept of "total income," which is a component of the adjusted gross income (AGI) calculation on Form 1040. Total income includes net amounts rather than gross amounts (income prior to deductions) from such items as business income and rents and royalties.
    13 As defined under Internal Revenue Code section 62, deductible expenses are those incurred in the course of a trade or business or in connection with rents and royalties; losses from property sales or exchanges; and certain statutory adjustments, such as deductible contributions to an IRA or Keogh plan, moving expenses, the health insurance deduction for certain self-employed taxpayers, and one-half of self-employment tax.
    14 Income tax before credits includes tax on lump-sum distributions from qualified retirement plans.

[^14]:    ${ }^{15}$ For taxable income between $\$ 0$ and $\$ 5$ and between $\$ 5$ and $\$ 25$, the tax brackets were $\$ 5$ and $\$ 10$ wide, respectively. For taxable income between $\$ 25$ and $\$ 3,000$, the brackets were $\$ 25$ wide. For taxable income above $\$ 3,000$, the brackets were $\$ 50$ wide.
    ${ }^{16}$ For example, assume a taxpayer filing as "married filing separately" reported taxable income of $\$ 99,950$. Using the tax table, the tax would be $\$ 22,365$, but, using the tax rate schedules, the tax would be $\$ 22,358$, a difference of $\$ 7.00 .17$ For more details on the income computation under the 1979 Income Concept for 2008, see Individual Income Tax Returns 2008, Statistics of Income Division, Internal Revenue Service, Publication 1304.

[^15]:    ${ }^{17}$ For more details on the income computation under the 1979 Income Concept for 2008, see Individual Income Tax Returns 2008, Statistics of Income Division, Internal Revenue Service, Publication 1304.

[^16]:    ${ }^{18}$ For some taxpayers, the statutory marginal tax rate may differ from the effective marginal tax rate. For example, extra income received by certain taxpayers may result in the partial phaseout of their personal exemptions as well as some of their itemized deductions. Therefore, an extra $\$ 1$ of income could add more than $\$ 1$ of taxable income. While this taxpayer could face a statutory marginal tax rate of 35 percent, the effective marginal rate faced by the taxpayer would be somewhat higher.

[^17]:    ${ }^{19}$ Returns in the sample were stratified based on the presence or absence of one or more of the following forms or schedules: Form 2555 , Foreign Earned Income; Form 1116, Foreign Tax Credit (Individual, Fiduciary, or Nonresident Alien Individual); Schedule C, Profit or Loss from Business (Sole Proprietorship); and Schedule F, Profit or Loss From Farming.
    ${ }^{20}$ This population includes an estimated 130,297 returns that were excluded from other tables in this report because they contained no income information or represented amended or tentative returns identified after sampling or were filed to receive a stimulus payment only.

[^56]:    ${ }^{1}$ Split-interest trusts created before May 27, 1969, are exempt from the requirement to file a Form 5227, as long as no amounts have been transferred to the trust since May 27, 1969.
    2 A filing year includes all returns submitted to IRS processing between January 1 and December 31.
    ${ }^{3}$ Figure A includes data for six charitable remainder unitrusts that otherwise distorted the analysis presented in this article. Data for these trusts are also included in the aggregate tables presented at the conclusion of this article, as well as the online versions. All other figures and calculations in this article exclude data for these six trusts.
    4 The period may be either a fixed duration, statutorily limited to 20 years, or the lifetime of a noncharitable beneficiary. For more information on the allowable duration of charitable remainder trusts, see Internal Revenue Code section 664(d)(1)(A) and 664(d)(2)(A).
    5 In order to qualify, the individual or individuals must be the donor, the donor's spouse, a linear ancestor of a noncharitable beneficiary, or the spouse of a linear ancestor of a noncharitable beneficiary. For more information, see Treasury Regulations 1.1170A-6(c)(2)(i).
    6 The qualifications for a "charitable beneficiary" are detailed in Internal Revenue Code section 170(c).
    7 Pooled income funds are further discussed under Internal Revenue Code section 642(c)(5).

[^57]:    NOTE: Detail may not add to totals due to rounding.

[^58]:    ${ }^{8}$ Any income that a charitable remainder trust received that is the result of a trade or business that is not substantially related to its exempt purpose is subject to tax. One example of unrelated business income is debt financed income, which includes dividends from stock purchased through a margin account. For more information, see IRS
    Publication 598, Tax on Unrelated Business Income of Exempt Organizations.

[^59]:    ${ }^{9}$ Other investments includes all investment holdings that could not be classified as a government obligation, corporate stock, corporate bonds, or land, buildings, and equipment. Examples include obligations issued by foreign governments and shares of hedge funds.

[^60]:    ${ }^{10}$ For more information regarding net income charitable remainder unitrusts, see Internal Revenue Code section 664(d)(3)(A).

[^61]:    11 For more information regarding net income with makeup charitable remainder unitrusts, see Internal Revenue Code section 664(d)(3)(B).

[^62]:    *Estimate should be used with caution because of the small number of sample returns on which it is based.

[^63]:    *Estimate should be used with caution because of the small number of sample returns on which it is based

[^64]:    *Estimate should be used with caution because of the small number of sample returns on which it is based.

[^65]:    ${ }^{1}$ The term "State" includes the District of Columbia and any possessions of the United States.
    ${ }^{2}$ In addition, for State income tax purposes, most States allow for the exclusion of interest on bonds issued by government agencies within their own States, thus increasing the benefit to the bondholder.
    ${ }^{3}$ An arbitrage bond is one in which any portion of the proceeds is used to purchase higher-yielding investments, or is used to replace proceeds which have been used to purchase higher-yielding investments. Certain rules allow for arbitrage earnings with respect to tax-exempt bonds within a specified time period, as long as these earnings are rebated to the Department of the Treasury.
    ${ }^{4}$ A registered bond is defined as: "a bond whose owner is designated on records maintained by a registrar, the ownership of which cannot be transferred without the registrar recording the transfer on its records." (From the Municipal Securities Rulemaking Board's Glossary of Municipal Securities Terms http://www.msrb.org/msrbl/glossary See also IRC section 149(a) for additional information).
    ${ }^{5}$ The private business tests of IRC section 141 (b) define a bond as a private activity bond if both of the following criteria are met: 1) more than 10 percent of the bond proceeds are used for a private business purpose; and, 2) more than 10 percent of the bond debt service is derived from private business use and is secured by privately used property. The private loan financing test of IRC section 141 (c) defines a bond as a private activity bond if the amount of the proceeds used to (directly or indirectly) finance loans to nongovernmental persons exceeds the lesser of $\$ 5$ million or 5 percent of the proceeds.
    ${ }^{6}$ Tax-exempt private activity bonds include "exempt facility bonds," qualified mortgage bonds, qualified veterans' mortgage bonds, qualified small issue bonds, qualified student loan bonds, qualified redevelopment bonds, and qualified section 501(c)(3) bonds (all of which are defined in the "Explanation of Terms" section of this article). Examples of exempt facilities include airports; docks and wharves; sewage facilities; solid waste disposal facilities; qualified residential rental projects; and facilities for the local furnishing of electricity or gas. Qualified section 501 (c)(3) bonds are issued by State and local governments to finance the activities of charitable and similar organizations that are tax-exempt under IRC section 501(c)(3). The primary beneficiaries of these bonds are hospitals, universities, and organizations that provide low-income housing or assisted-living facilities.
    ${ }^{7}$ The interest income from qualified private activity bonds (other than qualified section 501 (c)(3) bonds) is considered a tax preference for the alternative minimum tax calculations.

[^66]:    ${ }^{1}$ The Food, Conservation, and Energy Act of 2008 created qualified forestry conservation bonds. The Energy Improvement and Extension Act of 2008 produced new clean renewable energy bonds and qualified energy conservation bonds. The Tax Extenders and Alternative Minimum Tax Relief Act of 2008 created Midwestern tax credit bonds.
    ${ }^{2}$ Different categories of tax credit bonds vary in terms of the allowable tax credit rate, maturity, and other features. For example, clean renewable energy bonds and qualified zone academy bonds have a 100 -percent tax credit subsidy; however, new clean renewable energy bonds and qualified energy conservation bonds have a 70 -percent subsidy. Borrowers are likely to issue at a discount or pay taxable interest in addition to the lender receiving a tax credit.
    ${ }^{3}$ Issue Year 2008 data do not include direct payment bonds, such as build America bonds or recovery zone economic development bonds created by the American Recovery and Reinvestment Act of 2009. Additionally, the 2008 data do not contain any data with regard to direct payment tax credit bonds (i.e., qualified forestry conservation bonds, new clean renewable energy bonds, qualified energy conservation bonds, and qualified school construction bonds authorized by the Hiring Incentives to Restore Employment Act of 2010).

[^67]:    8 Bond issuers were required to file these tax-exempt bond information returns by the 15 th day of the second calendar month after the close of the calendar quarter in which the bond was issued. The study includes returns processed from January 1, 2008, to May 2, 2010, for bonds issued in 2008.

[^68]:    ${ }^{10}$ The resident population estimates for July 1, 2008, were produced by the U.S. Bureau of the Census and are available at http://www.census.gov/popest/states/NST-ann-est.html.

[^69]:    11 For 2008 , the volume cap was the greater of $\$ 85$ per capita or $\$ 262,095,000$. Volume caps for U.S. possessions, with the exception of Puerto Rico, are determined under IRC section 146 (d)(4).
    12 Disproportionate use occurs when the proceeds to be used for the private business use exceed the amount of proceeds used for the related governmental use.
    ${ }^{13}$ IRC section $141(\mathrm{~b})(5)$ states that a governmental bond will be treated as a private activity bond if: (1) the "nonqualified amount" exceeds $\$ 15$ million, but is less than the amount needed to meet any of the private activity bond tests; and (b) the issuer does not allocate a portion of its volume cap to the issue in an amount equal to the excess of such nonqualified amount greater than $\$ 15$ million.

[^70]:    d-Data deleted to avoid disclosure of information about specific bonds. However, the data are included in the appropriate totals.

[^71]:    Footnotes at end of table.

[^72]:    Jael Jackson is an economist with the Special Studies Special Projects Section. Melissa Ludlum is Chief of the Special Studies Special Projects Section. This article was prepared under the direction of Barry W. Johnson, Chief, Special Studies Branch.

[^73]:    ${ }^{1}$ A membership organization that was tax exempt under Internal Revenue Code sections 501(c)(4), 501(c)(5), or 501(c)(6) was liable for the proxy tax in cases where it did not notify its members of the entire amount of the shares of their dues that were allocated to the nondeductible lobbying and political expenditures. The proxy tax of $\$ 1.7$ million used in the total tax computation includes only proxy tax reported by Form 990 T filers with gross unrelated business income greater than the $\$ 1,000$ filing threshold. Filers that reported gross unrelated business income less than the $\$ 1,000$ threshold were not eligible for selection into the Statistics of Income (SOI) sample. Therefore, proxy tax reported by organizations that had no unrelated business income or those that had unrelated business income less than the filing threshold is not included.
    ${ }^{2}$ Churches, which are tax exempt under Internal Revenue Code section 501(c)(3), are not required to apply for exemption unless they desire to obtain an Internal Revenue Service ruling, and they do not have to file a Form 990 information return. However, these churches are required to file Form 990 T if they received $\$ 1,000$ or more of gross income from business activities that were considered unrelated to their religious purposes. Charitable remainder trusts, a type of Internal Revenue Code section 4947(a) (2) "split-interest trust," were required to report unrelated business income on Form 1041, Estate and Trust Income Tax Return, rather than Form 990 T, for tax years before 2007. Beginning with Tax Year 2007, charitable remainder trusts were required to report unrelated business income on Form 4720, Return of Certain Excise Taxes on Charities and Other Persons under Chapters 41 and 42 of the Internal Revenue Code. Published statistical reports on charitable and other nonprofit organizations, private foundations, and split-interest trusts are available from the Tax Stats pages of the IRS Web site at http://www.irs.gov/taxstats. Also available on the site in a "snapshot" page that provides data highlights and products.

[^74]:    ${ }^{3}$ For additional information on the Forms 990 and 990 T integrated sample design, see Harte, James M. and Cecelia H. Hilgert, "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," Statistics of Income: Compendium of Studies of Tax-Exempt Organizations, 1989-1998, 2002.

[^75]:    Footnotes at end of table.

[^76]:    * Estimate should be used with caution because of the small number of sample returns on which it is based.

[^77]:    1 A tax year includes all accounting periods beginning in its corresponding calendar year-e.g., Tax Year 2007 includes all accounting periods beginning in Calendar Year 2007 and thus ending between December 2007 and November 2008.
    ${ }^{2}$ Dollar values were adjusted for inflation using the 2005 chain-type price index for Gross Domestic Product (GDP) as reported by the U.S. Department of Commerce, Bureau of Economic Analysis. Inflation-adjusted money amounts were calculated in 2007 constant dollars and are referred to in this article as "constant dollars" or "real dollars."
    ${ }^{3}$ For additional discussion of organizations other than private foundations that are tax-exempt under Internal Revenue Code section 501(c)(3), see Arnsberger, Paul and Mike Graham, "Charities and Other Tax-Exempt Organizations, 2007," Statistics of Income Bulletin, fall 2010.
    4 An organization's status as a nonoperating or operating foundation was indicated on Form 990-PF, Part VII, line 9.
    5 A foundation could qualify as operating under the income requirement if it spent at least 85 percent of the lesser of its "minimum investment return" or "adjusted net income" on the direct, active conduct of tax-exempt, charitable activities. Adjusted net income represented the amount of income from charitable functions, investment activities, set-asides, unrelated business activities, and short-term capital gains that exceeded the cost incurred in earning the income and was calculated in Part I, Column (c) of Form 990-PF for operating foundations. To meet the assets test, a foundation had to use 65 percent or more of its assets directly for the active conduct of charitable activities. To meet the endowment test, a foundation regularly had to make distributions for the active conduct of charitable activities in an amount not less than two thirds of its "minimum investment return." To meet the support test, a foundation regularly had to receive substantially all of its support (other than from gross investment income) from the public or from five or more qualifying exempt organizations, and (a) no more than 25 percent of its support (other than from gross investment income) from any one such qualifying exempt organization; and (b) no more than 50 percent of its support from gross investment income. See "Operating Foundations" in the Explanation of Selected Terms section for additional information.

[^78]:    ${ }^{6}$ Information on excise taxes paid under IRC section 4940 and reported on Form 990-PF, as well as tabulations for excise taxes paid under IRC sections $4941-4945$ and reported on Form 4720, are available via the Internet at http://www.irs.gov/taxstats/charitablestats/article/0,,id=96996,00.html.

[^79]:    7 Disbursements for charitable purposes were reported separately from investment expenses and were required to be calculated as actual disbursements, on a cash basis.
    8 Complete information on Forms 990-PF filed by both private foundations and section 4947(a)(1) nonexempt charitable trusts for Tax Year 2007, as well as additional data for previous tax years, may be accessed via the Internet at http://www.irs.gov/taxstats/charitablestats/article/0,,id=96996,00.html.

[^80]:    ${ }^{9}$ Conversely, assets used directly to conduct charitable activities, such as office buildings, art held by museums, and computers, are "charitable-use assets." These assets are excluded from the minimum investment return calculation.
    ${ }^{10}$ Only data from returns that were included in the sample for 2 consecutive tax years were used in the calculations. For example, the Tax Year 2007 net investment income yield and rate of return on total assets were calculated only for organizations that filed sampled returns for each of Tax Years 2006 and 2007 . Thus, approximately 73 percent of returns for nonoperating foundations included in the Tax Year 2003 sample were eligible for this analysis. Eligible returns represented 90 percent, 91 percent, 88 percent, and 91 percent of the Tax Year 2004, Tax Year 2005, Tax Year 2006, and Tax Year 2007 samples, respectively. Because some organizations may have exited the sample in consecutive years due to decreases in their fair market values of total assets, these results may reflect some bias toward organizations with positive investment performance.

[^81]:    ${ }^{11}$ The net investment income amount used in calculating the net investment income yield was obtained from column (b) of the income statement, found in Part I of Form $990-\mathrm{PF}$.

[^82]:    12 The rate-of-total-return formula used here is the same as that developed and used by Salamon and Voytek in their studies on foundation assets. See Salamon, Lester M. and Voytek, Kenneth P., Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance, Washington, DC: The Council on Foundations, 1989, p. 32. The formula for this calculation is shown below:

    Rate of Total Return $=$ [Ending Fair Market Value of Assets Indexed Beginning Fair Market Value of Assets Contributions Received

    + Grants Paid+ Operating and Administrative Expenses+ Excise Tax Paid on Net Investment Income] DIVIDED BY
    [Indexed Beginning Fair Market Value of Assets +50 percent of Contributions Received]
    To calculate the rate of total return shown in Figure D, samples of private foundation information returns for consecutive tax years were matched in order to analyze both the beginning and end-of-year fair market value data.

    In order to obtain an inflation-adjusted real rate of return, the beginning-of-year fair market value of assets was indexed based on the 2005 chain-type price index for Gross Domestic Product as published by the Bureau of Economic Analysis, using the year corresponding with the latter tax year as the base year. For example, to calculate the 2007 rate of total return, the 2006 ending fair market value of total asset amount was adjusted, using 2007 as the base.
    ${ }^{13}$ Under IRC section 4948, exempt foreign private foundations are subject to a 4 -percent tax on their gross investment income derived from U.S. sources (from line 12 , column (b) of the income statement, found in Part I of Form 990-PF). For domestic private foundations, net investment income is income received from investments worldwide.

[^83]:    14 Only those operating and administrative expenses included in qualifying distributions are discussed in this section.

[^84]:    ${ }^{15}$ Additional time-series data, including both current and constant dollar amounts for operating and administrative expenses, qualifying distributions, and distributable amounts, may be accessed via the Internet at http://www.irs.gov/taxstats/charitablestats/article/0,,id=96996,00.html.
    ${ }^{16}$ The payout rate was calculated by dividing the amount of (adjusted) qualifying distributions by the value of noncharitable-use assets. This payout formula is as follows:
    Payout Rate = Qualifying Distributions (Part XII, line 4)+ Taxes (Part XI, line 2c)- Recoveries of Amounts Treated as Qualifying Distributions (Part XI, Line 4)+ Deduction from Distributable amount (Part XI, Line 6) + Excess Distributions Applied (Part XIII, Col. A, Line 5)
    DIVIDED BY
    Net value of Noncharitable-use Assets (Part X, Line 5)

[^86]:    Footnotes at end of table.

[^87]:    Footnotes at end of table.

[^88]:    ${ }^{1}$ Based on unpublished data.
    2 The current definition of a controlled foreign corporation is provided in Internal Revenue Code section 957. Ownership attribution rules are provided in section 958.
    ${ }^{3}$ The statistics in this article pertain only to foreign corporations for which one U.S. corporation satisfies the requirements for control. Generally, complete Form 5471 filings are required only for foreign corporations controlled by a single U.S. shareholder (i.e., those shareholders meeting the definition of a "Category of Filer 4 " taxpayer per the Form 5471 instructions). Partial filing requirements exist for noncontrolled foreign corporations and for controlled foreign corporations that are not controlled by a single U.S. shareholder. For more details, refer to the instructions for Form 5471.
    4 The prevention of tax avoidance was a primary tax policy objective that led to the enactment of the Subpart F provisions of the Internal Revenue Code. Other policy considerations also contributed to the enactment of Subpart F. For more detailed information on the history of Subpart F, see "The Deferral of Income Earned Through U.S. Controlled Foreign Corporations: A Policy Study," Office of Tax Policy, Department of the Treasury, December 2000.

[^89]:    5 The countries with the most CFCs are: United Kingdom $(8,688)$, Canada $(6,935)$, Mexico $(4,701)$, Germany $(4,160)$, China $(3,426)$, France $(3,381)$, Netherlands $(3,123)$, Australia $(2,651)$, Japan $(2,554)$, and Hong Kong $(1,978)$.

[^90]:    NOTE: Detail may not add to totals because of rounding

[^91]:    ${ }^{7}$ Based on unpublished data.
    ${ }^{8}$ See Statistics of Income, Corporation Income Tax Returns, 2006 for a more complete description of the SOI Corporate sample. The SOI Corporate sample is the basis for the SOI Controlled Foreign Corporation sample. In other words, the Controlled Foreign Corporation sample includes every Form 5471 filed by each corporation in the SOI Corporate sample.

[^125]:    [1] Data for 2008 represent accounting periods ending July 2008 through June 2009. Data for other study years are similarly defined.

[^126]:    Justin Bryan is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Jeff Hartzok, Chief.

[^127]:    1 The statutory requirement is contained in section 2123 of the Tax Reform Act of 1976 (90 Stat. at 1915).
    2 The 1976 Act specified four income concepts for classifying tax returns: adjusted gross income (AGI), expanded income, AGI plus excluded tax preference items, and AGI less investment interest expense not in excess of investment income. Section 441 of the Deficit Reduction Act of 1984 ( 98 Stat. at 815 ) eliminated the requirement to use the last two income concepts.
    ${ }^{3}$ The definition of adjustments to AGI to obtain the expanded income given in the text is for the current year. See Appendix A
    for a discussion of AGI and expanded income and a list of adjustments covering all years since 1977.
    ${ }^{4}$ See Notes to Appendix A, Note A4.
    5 Tax-exempt interest had to be reported on the individual income tax return starting with Tax Year 1987 and is included in expanded income starting with that year. Beginning with Tax Year 1991, tax-exempt interest was incorporated into the criteria used for sampling returns for Statistics of Income, thus increasing the reliability of the estimates of expanded income.

[^128]:    ${ }^{6}$ Inflation-adjusted constant dollars are based on the Consumer Price Index (CPI-U) computed and reported by the U.S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review. The consumer price index approximates buying patterns of typical urban consumers. The annual index is the average of the monthly indices.

[^129]:    7 See Appendix B for a discussion of the tax concepts. In data published for years prior to 1989, either in articles presented in the Statistics of Income Bulletin or in chapters in Statistics of Income-Individual Income Tax Returns (see Reference Section), the "U.S. income tax" concept was described as "total income tax," and the "worldwide income tax" concept was described as "modified total income tax."
    8 The inclusion of foreign taxes paid on excluded foreign-earned income, beginning with Tax Year 1990, represents an improvement in the worldwide income tax concept. It does, however, represent a slight break in the year-to-year comparability of data for worldwide income tax. However, the number of returns with foreign taxes paid on excluded foreign-earned income is extremely small compared to the number of returns with the foreign tax credit.

[^130]:    10 The AMT exclusion phases out above certain levels of "alternative minimum taxable income," based on filing status, but since taxpayers will have some AMT liability in the phaseout range, the phaseout income is not relevant for nontaxable, high-income returns.

[^131]:    11 Tax-exempt interest and the foreign-earned income exclusion were not included in Tables 7 and 8 as possible tax effects before Tax Year 1994. Thus, caution should be exercised in making comparisons between data prior to 1994 and after 1993.

[^132]:    [1] Includes returns with adjusted gross deficit or with negative expanded income

[^133]:    Footnotes at end of table.

[^134]:    [1] Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.
    [2] Includes tax-exempt interest and tax preference items subject to alternative minimum tax.
    NOTE: Detail may not add to totals because of rounding.

[^135]:    Footnotes at end of table.

[^136]:    Footnotes at end of table.

[^137]:    Footnotes at end of table.

[^138]:    ${ }^{1}$ The age of the taxpayer is the age of the primary taxpayer listed on the return.
    ${ }^{2}$ All 1997 amounts used in this article have been adjusted for inflation and are in constant 2007 dollars. The conversion to 2007 dollars was performed using the Consumer Price Index for Urban Consumers (CPI-U), as published by the Bureau of Labor Statistics of the U.S. Department of Labor. CPI-U for each calendar year represents an annual average of monthly indices. $(1982-1984=100) ; 1997=160.5$; and $2007=207.342$.

[^139]:    ${ }^{3}$ Of the 142,978,806 total returns filed by taxpayers for 2007, 1.3 percent did not need to claim either a standard deduction or itemized deductions because no positive AGI was reported.

[^140]:    ${ }^{4}$ Returns in the sample were stratified based on the presence of one or more of the following forms or schedules: Form 2555, Foreign Earned Income; Form 1116, Foreign Tax Credit (Individual, Fiduciary, or Nonresident Alien Individual); Schedule C, Profit or Loss from Business (Sole Proprietorship); and Schedule F, Profit or Loss from Farming.
    ${ }^{5}$ For further details on the description of the 1997 sample and the 2007 sample, see Statistics of Income—Individual Income Tax Returns (IRS Publication 1304 ), 1997 and 2007. ${ }^{6}$ This population includes an estimated $10,853,574$ returns that were excluded from other tables in this report because they contained no income information or represented amended or tentative returns identified after sampling or were filed to receive a stimulus payment only. Individuals only filing for the stimulus payment, those who would not ordinarily have a legal requirement to file a Federal income tax return-had to show on their returns at least $\$ 3,000$ of qualifying income (defined as wages, self-employment income, Social Security income, Railroad Retirement benefits, certain Veterans Affairs benefits, and nontaxable combat pay). In addition, they could not be claimed as a dependent on someone else's Federal tax return.

[^141]:    [2] For comparability, 1997 amounts have been adjusted for inflation to 2007 constant dollars.

    2 For further details on the definitions for data variables used in this text, see Statistics of Income-2007, Individual Income Tax Returns (IRS Publication 1304).

[^210]:    [1] Total number of returns does not include returns filed by individuals who had no other reason to file except to receive the economic stimulus payment.
    [2] Includes returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees
    [3] These data are based on the address listed on the Form 1040. This differs from the data in Historical Table 2 published in the spring 2009 issue of the Statistics of Income Bulletin, in which the State is based on the universal location code, a code used for IRS administrative processing.
    NOTE: The 10 States shown in this figure have the largest average salaries and wages (Column 5).

[^211]:    [1] Total number of returns does not include returns filed by individuals who had no other reason to file except to receive the economic stimulus payment.
    [2] Includes returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.
    [3] These data are based on the address listed on the Form 1040. This differs from the data in Historical Table 2 published in the spring 2009 issue of the Statistics of Income Bulletin, in which the State is based on the universal location code, a code used for IRS administrative processing
    NOTE: The 10 States shown in this figure have the largest average alternative minimum tax (Column 5).

[^212]:    [1] Total number of returns does not include the returns filed by individuals to only receive the economic stimulus payment and who have no other reason to file.
    [2] Income tax was the sum of income tax after credits (including the subtraction of earned income credit) plus the tax from Form 4970 . For a more detailed explanation, see Statistics of Income-2007, Individual Income Tax Returns (IRS Publication 1304).
    [3] Includes returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto ico with income from sources outside Puerto Rico or with income earned as U.S. government employees
    [4] These data are based on the address listed on the Form 1040. This differs from the data in Historical Table 2 published in the spring 2009 issue of the Statistics of Income Bulletin, in which the State is based on the universal location code, a code used for IRS administrative processing.
    NOTE: The 10 States shown in this figure have the largest average income tax (Column 5).

[^213]:    3 Returns in the sample were stratified based on the presence or absence of one or more of the following conditions, forms, or schedules: income of $\$ 200,000$ or more with no tax liability; Schedule C Business Receipts of $\$ 50,000,000$ or more; Form 2555, Foreign Earned Income; Form 1116, Foreign Tax Credit (Individual); Schedule C, Profit or Loss from Business (Sole Proprietorship); Schedule F, Profit or Loss from Farming. States are divided into three size groups, where size is determined by the number of individual income tax returns filed.

[^224]:    1 U.S. Department of the Treasury, Internal Revenue Service, Instructions for Form 1042-S. Bank deposit interest is generally excluded from Form 1042-S reporting, although an exception exists for Canadian residents who are not U.S. citizens. Bank deposit interest paid to Canadian residents is subject to Form 1042-S reporting but is exempt from withholding tax. In addition to bank deposit interest, other payments to foreign persons that are not subject to reporting on Form 1042 -S include: interest and original issue discount (OID) from short-term obligations, registered obligations targeted to foreign markets, bearer obligations targeted to foreign markets, notional principal contract payments that are not effectively connected income, and accrued interest and OID. These types of income are not available from other sources
    2 An exception to this general rule exists in some cases for personal services income.

[^228]:    Footnotes at end of table.

[^229]:    Footnotes at end of table.

[^230]:    ${ }^{1}$ As defined in Internal Revenue (IR) Code section 7701(a)(30), U.S. persons are U.S. citizens or residents, domestic partnerships, domestic corporations, and estates or trusts. This excludes foreign trusts or estates whose income from sources outside the United States is not includible in the income of their beneficiaries.

[^231]:    2 A foreign corporation is considered to be a CFC if (on any day during the foreign corporation's tax year) U.S. shareholders own more than 50 percent of its outstanding
    2 A foreign corporation is considered to be a CFC if (on any day during the foreign corporation's tax year) U.S. shareholders own more than 50 percent of its outstanding
    voting stock or more than 50 percent of the value of all its outstanding stock. For more information on CFCs, see Mahony, Lee and Randy Miller, "Controlled Foreign Corporations, 2004," Statistics of Income Bulletin, Summer 2008, Volume 27, Number 1, pp. 49-110.
    ${ }^{3}$ To elect I-C DISC status, a domestic corporation must have "qualified export receipts" that constitute at least 95 percent of its gross receipts and must be able to classify at least 95 percent of its assets as "qualified export assets." Qualified export receipts are gross receipts from the sale of qualified export assets and other types of income related to exporting. Qualified export assets consist of property related to exporting. For more information on IC-DISCs, see Holik, Daniel, "Interest-Charge Domestic International Sales Corporations, Tax Years 2004, 2005, 2006," Statistics of Income Bulletin, Winter 2010, Volume 29, Number 3, pp. $173-212$.
    4 This exclusion allowed businesses to deduct qualifying foreign trade income from their U.S. gross incomes. Qualifying foreign trade income was defined as the greatest of the following income amounts, that when excluded would reduce taxable income by (1) 1.2 percent of foreign trading gross receipts, ( 2 ) 15 percent of foreign trade income, or (3) 30 percent of foreign sales and leasing income.

[^232]:    d-Data eliminated to avoid disclosure of information about specific taxpayers.
    [1] Calendar year for 1998-2006, tax year for 2007-2008. Tax years run from June 30 to July 1 of the following year. Data for the gap between Calendar Year 2006 and Tax Year 2007 is not shown in order to avoid disclosure.
    [2] Extraterritorial exclusion was added to the tax code in 2000 and repealed with some exceptions in 2004. Further repeal ended the exceptions for tax years beginning after May 18 , 2006.

    NOTE: For comparability, amounts have been adjusted for inflation to 2008 constant dollars.

[^233]:    ${ }^{1}$ The remaining 10 percent of returns filed during Calendar Year 2009 report gifts made prior to 2008. These are likely returns filed by taxpayers who had received extensions to file, or who were fiscal year filers. They are considered an appropriate proxy for gifts made in 2008 that will be reported in subsequent filing periods.
    ${ }^{2}$ For more detailed information regarding the history of the transfer tax system in the United States, see Luckey, John R. "A History of Federal Estate, Gift, and GenerationSkipping Taxes," April 9, 2003, Congressional Research Service, Library of Congress.

[^234]:    [1] "Stock" includes publicly traded and closely held stock.
    [2] "Real estate" includes personal residences, vacant land, improved real estate, farm land, real estate partnerships, and real estate mutual funds.
    [3] "Other assets" includes annuities, retirement assets, futures, face value of insurance policies, art, depletable/intangible property, and other assets.
    [4] "Bonds" includes state and local bonds, Federal savings bonds, other Federal bonds, corporate and foreign bonds, and bond funds.
    [5] "Partnerships" includes family limited partnerships and unidentified limited partnerships.

[^281]:    [1] Data for 2008 represent accounting periods ending July 2008 through June 2009. Data for other study years are similarly defined.
    [2] Corporation statistics for 2008 represent accounting periods ended July 2008 through June 2009. Study Year 2009 is similarly defined.
    [3] Estate and gift tax data are processed on a filing-year, rather than on a year-of-death or gift-year (tax-year) basis. At a later stage (not shown here), filing years are combined by year of death or gift year, respectively.
    [4] For Forms 1065 that are due after December 31, 2008, the automatic extension period was reduced from 6 months to 5 months.
    [5] Split-interest trust and fiduciary income tax statistics are processed on a filing-year rather than a tax-year basis.
    [6] Tax-exempt private activity governmental bond statistics are collected annually based on issue year. Arbitrage rebate and penalty are conducted biennially, for tax years ending in odd numbers.
    [7] Data for 2007 represent tax years ending between December 2007 and November 2008. Study Year 2008 is similarly defined.

[^282]:    ${ }^{1}$ Dungan, Adrian, "Sole Proprietorship Returns, 2008," Statistics of Income Bulletin, Summer 2010, Volume 30, Number 1, pp. 6-71. Profits in the finance and insurance sector decreased from $\$ 20.2$ billion in 2007 to $\$ 18.0$ billion in 2008.
    ${ }^{2}$ For 2009, the $22,659,976$ nonfarm sole proprietorship returns accounted for an estimated $25,210,614$ nonfarm businesses. For purposes of the statistics, if a proprietor owned more than one business, the statistics for each business were combined with those of the proprietor's dominant business and included in the industrial group for that business activity. When this occurred, the sum of net incomes (for businesses reporting a positive net income) reduced by the sum of net deficits (for businesses reporting a deficit) yielded the profits for a specific industrial group.
    The North American Industry Classification System (NAICS) was used to classify data by industries for 2009.
    These classifications were applied on a "per business" (rather than on a "per establishment") basis for Statistics of Income by combining various industry groups, although businesses were further combined as described above.
    While the wording of the industry titles used for the sole proprietorship statistics diverge somewhat from those appearing in NAICS, the definitions are consistent.
    The North American Industry Classification System for industrial coding was introduced in Tax Year 1998. Due to coding changes, comparisons between data by industries from 1998-2009 with 1997 and prior years may show inconsistencies. A reason for this was that several types of sole proprietorships under the NAICS system were classified in completely different industrial groups, which makes prior-year comparisons inappropriate. For example, in 1997, finance, insurance, and real estate were grouped by Standard Industrial Classification (SIC) codes as one industry, while, under the NAICS system, the group has been split into two industrial sectors. The industrial sectors based on the NAICS codes are reported in Tables 1 and 2.

[^283]:    ${ }^{3}$ Statistics for "business receipts, total" in Table 2 represent the total receipts of the business, mainly gross receipts from sales and operations. Business receipts also include miscellaneous business receipts, such as incidental sales of scrap, shown separately in the statistics as "other business income." However, business receipts exclude incidental investment income received through the business. Examples of such incidental investment income are interest, dividends, income or loss from rents or royalties, and capital or ordinary gain or loss from the sale of investment and business property. Sole proprietors report incidental investment income, in combination with nonbusiness related investment income, as part of their total income on their individual income tax returns.

[^284]:    5 Sole proprietors report personal, i.e., nonbusiness, income and expense items apart from business income or loss, which is reported on the attached Schedule C, Profit or Loss From Business (or, to a lesser extent, on Schedule C-EZ, Net Profit From Business). Salaries paid to owners are neither deducted as wages paid on Schedule C nor included as wages received on the Form 1040. Similarly, sole proprietors deduct charitable contributions made through the business as personal expenses on Schedule A, Itemized Deductions. However, the owner of a sole proprietorship may choose to deduct any foreign taxes paid as a business expense, unless the owner elects to claim these taxes as a credit against U.S. income tax.
    6 Business deductions include the home office business deductions. After 1990, home office expenses were calculated separately on Form 8829 , Expenses for Business Use of Your Home, and the deductible portion brought forward to the Schedule C. In some cases, these expenses were limited. Prior to 1990 , these expenses were not limited and were included with other expenses, such as depreciation deductions, utilities, and "other" expenses on Schedule C.

[^285]:    7 Under section 179 of the Internal Revenue Code, the cost of certain tangible property may be treated as a current expense rather than a capital expenditure subject to depreciation deductions. The Omnibus Budget Reconciliation Act of 1993 (OBRA93) increased the maximum amount of investment that could immediately be deducted on property placed in service after 1992 , from $\$ 10,000$ to $\$ 17,500$. The increase in the constant dollar depreciation deductions for 1993 , and subsequent decline in 1995 , may be attributed, in part, to this provision of OBRA93. Following the enactment of this provision, the 179 deduction for all individuals (not just sole proprietors) filing Form 4562 , Depreciation and Amortization, increased 32.4 percent to $\$ 13.5$ billion for 1993.

[^286]:    ${ }^{8}$ Under the Jobs and Growth Tax Relief Reconciliation Act of 2003, the maximum amount of section 179 deduction increased from $\$ 24,000$ for 2002 to $\$ 100,000$ for 2003, $\$ 102,000$ for $2004, \$ 105,000$ for 2005 , and $\$ 108,000$ for 2006 . This was further expanded to $\$ 125,000$ for 2007 by the U.S. Troop Readiness, Veterans' Care, Katrina Recovery, and Iraq Accountability Appropriations Act, 2007, signed May 25, 2007. The Jobs Creation and Worker Assistance Act of 2002 introduced 30 -percent bonus depreciation and the Jobs and Growth Tax Relief Reconciliation Act of 2003 increased the bonus percentage to 50 percent, for property placed in service by January 1 , 2005. While bonus depreciation was available to sole proprietors, it was generally not as advantageous as immediate expensing and, therefore, likely had less effect on their depreciation deductions.

[^287]:    [1] Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from prior years.
    NOTES: Certain smaller sole proprietorships could elect not to itemize business expenses by filing Schedule C-EZ, Net Profit from Business. See the text of this article for a full list of the requirements to be eligible to file Schedule C-EZ.
    Detail may not add to totals because of rounding. Percentages were calculated before rounding.

[^288]:    9 For 2008, the Economic Stimulus Act of 2008 increased the maximum expensing deduction under section 179 to $\$ 250,000$. The American Recovery and Reinvestment Act of 2009 extended that level through 2009. For all individual tax returns that filed Form 4562, Depreciation and Amortization, the Section 179 property deducted as an expense increased by 5.1 percent to $\$ 49.8$ billion for 2008 . For 2009 , when the maximum 179 deduction remained at $\$ 250,000$, the amount deducted for all returns decreased by 17.2 percent to $\$ 41.3$ billion for 2009 . The amount deducted as section 179 property on returns that had a Schedule C dropped 19.6 percent to $\$ 16.2$ billion between 2008 and 2009. This number does not reflect depreciation solely deducted on the Schedule C, as this could also include depreciation taken on the Schedule E, Supplemental Income and Loss, the Schedule F, Profit or Loss from Farming, and the Form 4835, Farm Rental Income and Expenses.
    10 Based on the NAICS system, the full name of the administrative and support services sector is administrative and support and waste management and remediation services sector. The waste management and remediation services portion make up a small percentage of the overall numbers reported under this classification, which are detailed in Table 1.

[^289]:    ${ }^{11}$ Net income minus deficit (loss) before Federal income tax yields profits. Proprietors compute their tax on total "taxable income," which includes their business profits, plus any other income.

[^290]:    12 The difference between the number of returns in the population and the total number of returns in Tables 1 and 2 , is mainly due to returns in which Schedule C income was moved to other income or wages to avoid double counting of taxpayers for Gross Domestic Product calculations. In addition, data from amended returns and tentative returns are not reflected in these statistics.

[^291]:    Footnotes at end of table

[^292]:    * Estimate should be used with caution because of the small number of sample returns on which it is based.
    ** Data combined to prevent disclosure of taxpayer information.
    [1] Excludes amounts reported on Schedule C-EZ filed by certain small businesses not required to itemize their business deductions. Therefore, totals shown may be slightly understated.
    [2] Includes depreciation claimed on Form 8829, Expenses for Business Use of Your Home.
    [3] Interest paid is the sum of mortgage interest and other interest paid on business indebtedness.
    [4] Payroll is the sum of salaries and wages plus the cost of labor reported as part of cost of sales and operations.
    NOTE: Detail may not add to totals because of rounding.

[^298]:    Footnotes at end of table.

[^299]:    Footnotes at end of table.

[^300]:    Footnotes at end of table.

[^301]:    Footnotes at end of table.

[^302]:    James R. Hobbs is a management official with the Special Studies Branch. This article was prepared under the direction of Barry W. Johnson, Chief.

[^303]:    ${ }^{1}$ For additional 2008 statistics covering foreign-controlled domestic corporations (FCDCs), see Tables 24 and 25 of Statistics of Income-2008, Corporation Income Tax Returns, IRS Publication 16, April 2011. Statistics for tax years prior to 2008 are available in earlier editions of Publication 16. Additionally, for 2007 statistics covering FCDCs, see Hobbs, James R., "Foreign-Controlled Domestic Corporations, 2007," Statistics of Income Bulletin, Summer 2010, Volume 30, Number 1. In addition, FCDC data are included on the IRS Internet site at www.irs.gov, under Tax Stats/International/Foreign-Controlled Domestic Corporations.
    2 Total corporate data referenced throughout this article come from: (1) Statistics of Income Bulletin, Publication 1136, selected issues; (2) Statistics of IncomeCorporation Income Tax Returns, Publication 16, selected years; (3) Source Book of Statistics of Income-Corporation Income Tax Returns, Publication 1053, selected years; and (4) unpublished Statistics of Income tabulations.
    ${ }^{3}$ Sections 7701 (a)(4) and (5) of the Internal Revenue Code define a domestic corporation as one created or organized in the United States or under the laws of the United States or any State. A foreign corporation is "one which is not domestic."
    ${ }^{4}$ In addition to the foreign-controlled domestic corporations study discussed in this article, the Statistics of Income program conducts a separate study covering branches of foreign corporations operating in the United States. For the most recent statistics from that study, see Tables 10 and 11 that cover branch operations of foreign corporations with income "effectively connected" with a U.S. trade or business, in Statistics of Income-2008, Corporation Income Tax Returns, IRS Publication 16 , April 2011. Statistics for tax years prior to 2008 are available in earlier editions of Publication 16 and on the IRS Internet site at www.irs.gov, under Tax Stats/International/Foreign Corporations with U.S. Business Operations.

[^304]:    ${ }^{5}$ This study excludes returns of domestic corporations with stock owned by a single foreign person of 49 percent or less. However, the tax forms filed by domestic corporations do indicate the presence of 25 -percent to 49 -percent foreign owners, and the Statistics of Income program does separately compile data on these domestic corporations. For 2008, there were only 3,931 returns that indicated a level of foreign ownership between 25 percent and 49 percent. These companies reported $\$ 221.3$ billion of assets, $\$ 145.1$ billion of receipts, $\$ 6.8$ billion of taxable income, and $\$ 2.0$ billion of total income tax after credits. All of these amounts were small in comparison to data for the corporations with at least 50 -percent foreign ownership.
    ${ }^{6}$ Returns of certain domestic companies that are effectively controlled by foreign persons, i.e., those public companies in which "control" may be exercised with as little as 10 percent to 20 percent of the stock holdings, are excluded from both the 50 -percent-or-more and the 25 -percent to 49 -percent tabulations. Tax return forms filed by domestic corporations do not include information about foreign persons with less than 25 -percent stock holdings.
    ${ }^{7}$ As a result of the Statistics of Income (SOI) sampling process, data shown in this article for "all corporations" exclude certain out-of-scope returns, such as returns for homeowners' associations (Form 1120-H) and certain political organizations (Form 1120-POL). For a more complete listing of the returns excluded from the SOI corporation sample, see the Description of the Sample and Limitations of the Data section of Statistics of Income-2008, Corporation Income Tax Returns. On the other hand, in addition to legally defined corporations, the Internal Revenue Code recognizes many types of businesses as corporations, including joint stock companies and unincorporated associations (e.g., certain partnerships, savings and loan associations, and mutual savings banks). These organizations possess characteristics typical of the corporate form, such as continuity of life, limited liability of owners, and transferability of shares of capital ownership. They filed Forms 1120 and were included in the SOI corporation sample.

[^305]:    ${ }^{8}$ For additional information on foreign investment in the United States, see Survey of Current Business reports, produced by the U.S. Department of Commerce, Bureau of Economic Analysis (BEA). BEA periodically produces several articles related to this subject. Electronic versions of the articles can be obtained from the Internet at www.bea.gov/international/index.htm. The data in these reports may not be directly comparable to the information shown in this article because of definitional differences, such as those relating to time periods covered, levels of foreign ownership, and levels of company consolidation.
    ${ }^{9}$ The percentage changes in the assets between 1999 and 2008 of domestic corporations controlled by foreign persons, as well as those of all corporations, may overstate the actual "change in investment." Assets are generally reported at book value on tax returns (i.e., the value at the time of acquisition). The book value of newly acquired assets is generally greater than the book value of similar assets they replaced. New corporations may tend to have a greater percentage of new assets with greater book values. To the extent that new corporations may have comprised a different portion of FCDCs than they did for other companies, the comparability of the two percentages may be limited.

[^306]:    [1] Less than 0.05 percent.

[^307]:    ${ }^{10}$ Statistics classified by industry do have certain limitations. For example, FCDCs accounted for 24.9 percent and 24.7 percent of the receipts of all companies classified as wholesalers and manufacturers, respectively. However, these percentages may overstate the FCDC portion of wholesaling and understate the FCDC portion of manufacturing. This is because certain U.S. companies (not foreign-controlled) and their subsidiaries may have been involved in both manufacturing and wholesaling of the same product(s) and reported tax information for these activities on a single (consolidated) income tax return, which was statistically classified under the industry of its principal business activity, that being manufacturing, rather than trade. Conversely, many FCDCs acted as wholesalers in the United States for products manufactured overseas by their parent, or other related, companies. These foreign-controlled domestic companies were classified in the wholesale trade industrial sector. See the Data Sources and Limitations section for additional information about industrial classification limitations.

[^308]:    ${ }^{11}$ Dates of incorporation are reported on Form 1120, page 1, question C. This information is also reported on Forms 1120L, 1120-PC, 1120-REIT, and 1120-RIC, in different locations.

[^309]:    ${ }^{2}$ For the most recent detailed information on transactions between "foreign-owned domestic corporations" and their related foreign persons, see Lowe, Mark R.,
    "Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 2006," Statistics of Income Bulletin, Fall 2009, Volume 29, Number 2. The data contained in that article are not completely comparable to the data contained in this article, since they cover different time periods and are for U.S. corporations that were owned, 25 percent or more, by a foreign person. By contrast, the foreign ownership level used for the FCDC statistics shown in this article was 50 percent or more Additionally, returns included in the "foreign-owned" study showed total receipts of $\$ 500$ million or more and reported transactions with related foreign persons on Form 5472, Information Return of a 25-Percent Foreign-Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business. Neither of these conditions was a requirement for inclusion in the FCDC study.

[^310]:    ${ }^{13}$ In general, the computation of net income (less deficit) can be shown as follows:
    Begin With: Total Receipts (Includes Business Receipts)
    Less: Total Deductions (Includes Cost of Goods Sold)
    Equals: Total Receipts Less Total Deductions
    Plus: Constructive Taxable Income from Related Foreign Corporations (Includes Includable Income from Controlled Foreign Corporations and Foreign Dividend Gross-Up)
    Less: Nontaxable Interest on State and Local Government Obligations (Included in Total Receipts, above)
    Equals: Net Income (Less Deficit)

[^311]:    14 The 38,398 companies reporting a deficit may include a small number of "break-even" companies, i.e., those whose receipts and deductions were equal.
    15 When a company carried back a deficit to a previous tax year, it could file Form 1120X, Amended U.S. Corporation Income Tax Return, or Form 1139 , Corporation Application for Tentative Refund.
    16 There were certain exceptions to the relationship of positive net income minus statutory special deductions equaling taxable income. First, in some cases, the statutory special deductions for dividends received and for dividends paid on certain preferred stock of public utilities exceeded net income. Second, the tax bases of S corporations and life insurance companies were not defined as net income less statutory special deductions. Rather, these types of corporations computed taxable income using special provisions of the Internal Revenue Code. Also, regulated investment companies and real estate investment trusts generally passed their net incomes on to be taxed at the shareholder level; but any taxable amounts not distributed were included in income subject to tax.

[^312]:    ${ }^{17}$ Data for domestic corporations that filed Forms 1120-REIT (real estate investment trusts), 1120-RIC (regulated investment companies), and 1120S (S corporations) are excluded from the comparisons between large FCDCs and other large domestic corporations shown in Figures G through I, and Table 4. However, returns filed on these forms are included in the data of other figures and tables contained in this article, as appropriate. While corporations filing these income tax returns report their incomes, they generally have little or no tax liabilities. Through separate special provisions of the Internal Revenue Code applicable to each of these types of corporations, the incomes of these corporations are generally taxed at the shareholder level. The Explanation of Selected Terms section discusses in greater detail the nature of real estate investment trusts (REITs), regulated investment companies (RICs), and S corporations.

[^313]:    18 Net profits (i.e., net income (less deficit)) is one of the key factors that affect the amount of retained earnings of corporations. Columns $12-14$ of Table 4 show corporate total, appropriated, and unappropriated retained earnings, respectively. The amounts of retained earnings were reported in the end-of-year balance sheets of the corporations' books of account. They represent earnings and profits of the corporations retained from normal and discontinued operations of previous years, as well as "extraordinary" gains and losses, and prior period adjustments. The amounts are also after reductions for dividends and distributions made to stockholders. (For a more extensive discussion of retained earnings, see Statistics of Income-2008, Corporation Income Tax Returns.) Appropriated retained earnings were earnings set aside for specific purposes, such as reserves for plant expansion or bond retirements, and not available for distribution to stockholders. For 2008, the oldest and largest FCDCs reported $\$-67.0$ billion of total retained earnings, while other domestic corporations reported $\$ 2.7$ trillion of retained earnings. Retained earnings is a component of net worth and thus affects the ratio of net income (less deficit) to net worth, which is shown in column 56 of Table 4
    ${ }^{19}$ In using total income tax after credits as a percentage of total receipts, it should also be noted that a small portion of total income tax after credits (for example, the tax recapture of prior-year investment credits) does not relate to the current-year total receipts reported by corporations. However, this is not considered to be a major limitation in using the percentage because the regular income tax and the alternative minimum tax represented over 99 percent of the total income tax for both FCDCs and ODCs.

[^314]:    ${ }^{20}$ One focus of this article is U.S. total income tax after credits. The reader might choose to focus instead on total worldwide taxes, which may be approximated by adding the foreign tax credits claimed by corporations to the U.S. tax liabilities (i.e., total income tax after credits) of these corporations. There are limitations in using this procedure, and the foreign tax credit only approximates the foreign tax liabilities of the corporations. Table 4 shows amounts of foreign tax credits in addition to U.S. total income tax after credits. For the most recent statistics covering corporate foreign tax credits in depth, see McGrath, Nuria E., "Corporate Foreign Tax Credit, 2006," in the Summer 2010 issue of the Statistics of Income Bulletin (Volume 30, Number 1). In addition, foreign tax credit data are included on the IRS Internet site at www.irs.gov, under Tax Stats/International/Corporate Foreign Tax Credits

[^315]:    21 While this article has been able to compare several key ratios related to the profits and taxes reported by foreign-controlled domestic corporations and other domestic corporations on the same bases of size, age, and industry, additional research is needed to explain the differences in those ratios. For additional information on this subject, see "Tax Administration: Comparison of the Reported Tax Liabilities of Foreign- and U.S.-Controlled Corporations, 1998-2005," U.S. Government Accountability Office, GAO-08-957, July 2008. Also, see Grubert, Harry, "Another Look at the Low Taxable Income of Foreign-Controlled Companies in the United States," U.S. Department of the Treasury, Office of Tax Analysis, Paper 74, 1997; and Mataloni, Raymond J., Jr., "An Examination of the Low Rates of Return of Foreign-Owned U.S. Companies," U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, March 2000.

[^316]:    ${ }^{23}$ Shown in Appendix A of this article are Tax Year 2008 data for all REITs, RICs, and S corporations, regardless of size, filed by foreign-controlled domestic corporations ( FCDCs ) and by other domestic corporations (ODCs).

[^317]:    ${ }^{24}$ The count of 47 Forms 1120 L does not include returns of life insurance companies that were filed as part of consolidated returns under IRC section 1504 (c). Under this section, a nonlife insurance parent company could include a domestic life insurance subsidiary in a consolidated return. For 2008, there were 162 section 1504 (c) returns of foreign-controlled domestic corporations. Of this number, 81 returns had a property/casualty insurance company as the largest subsidiary, another 68 returns had a noninsurance company as the largest subsidiary, and 13 returns had a life insurance company as the largest subsidiary.

[^318]:    ${ }^{25}$ On Form 1120, Page 4, Schedule K, the actual questions were: "(7) At any time during the tax year, did one foreign person own, directly or indirectly, at least 25 percent of: (a) the total voting power of all classes of the corporation's stock entitled to vote, or (b) the total value of all classes of the corporation's stock?" and "(7i) If 'Yes,' enter percentage owned." There was an additional question used for the country distribution of these statistics, which was: "(7ii) If 'Yes,' enter owner's country."
    ${ }^{26}$ The FCDC statistics include data from returns in which the first question (see footnote 25 ) was answered "Yes," and the second question covering percentage owned was not answered. There were 1,656 returns for Tax Year 2008 that were included in the FCDC data, although the exact foreign ownership percentage was not specified. These returns reported $\$ 71.4$ billion of assets and $\$ 34.0$ billion of receipts.

[^331]:    ${ }^{1}$ For additional information about IC-DISCs for Tax Years 1996, 2000, 2004, 2005, and 2006 see Belmonte, Cynthia, "Interest-Charge Domestic International Sales Corporations, 1996," Statistics of Income Bulletin, Fall 2000, Volume 20, Number 2; Belmonte, Cynthia, "Interest-Charge Domestic International Sales Corporations, 2000," Statistics of Income Bulletin, Spring 2004, Volume 23, Number 4; and Holik, Daniel, "Interest-Charge Domestic International Sales Corporations, Tax Years 2004, 2005, and 2006," Statistics of Income Bulletin, Winter 2010, Volume 29, Number 3. An "active" IC-DISC return is a return that has item(s) of income, deductions, and/or distributions.
    ${ }_{2}$ All statistics in this article are in current dollars.
    ${ }^{3}$ The creation of the IC-DISC entity was a culmination of the extensive discussions, both within the United States and between the United States and its trading partners, over the nature, form, and scope of export preferences incorporated within the Internal Revenue Code.
    4 An IC-DISC that does not meet the gross receipts test during the tax year will still be considered to have qualified if, at the end of the tax year, the IC-DISC distributes the portion of its taxable income attributable to gross receipts that are not qualified export gross receipts. Similarly, an IC-DISC that does not meet the qualified export asset test during the tax year will still be considered to have qualified if, at the end of the tax year, it makes a distribution equal to the fair market value amount of the nonqualified assets.
    5 See the Explanation of Selected Terms section for additional information about producer's loans.

[^332]:    6 The interest charge is computed by IC-DISC shareholders on Form 8404, Computation of Interest Charge on DISC-Related Deferred Tax Liability. For example, for Tax Year 2008, the interest-charge to an IC-DISC shareholder filing a full calendar-year return was calculated using an interest charge of approximately 2.5 percent. (See Form 8404 for Tax Year 2008, page 2, instructions for Line 8.)

[^333]:    7 Amounts deemed distributed shown in Figure A and Tables 1 through 3 include amounts deemed distributed under Internal Revenue Code sections 995 (b)(1) (from current-year taxable income) and $995(\mathrm{~b})(2)$ (generally from prior-year taxable income). In general, these deemed distributions included income amounts not eligible for tax deferral and distributions from IC-DISCs that had not qualified or revoked their election.
    ${ }^{8}$ The statistics presented in Table 1 are classified by amounts shown in column (12) divided by the number of returns shown in column (1).

[^334]:    9 The computation of current-year tax-deferred income reported to shareholders is complex and generally depends upon the IC-DISC's current-year taxable income, previous tax year's accumulated IC-DISC income, and current-year actual distributions to shareholders. A more complete description of the computations is beyond the scope of this article.

[^338]:    Scott Luttrell is an economist with the Special Studies Returns Analysis Section. This data release was prepared under the direction of Chris Carson, Chief.

[^339]:    ${ }^{1}$ A foreign tax credit is not allowed for foreign taxes paid to countries sanctioned by the U.S. government. Nevertheless, a foreign tax credit limitation is computed for each sanctioned country. These countries for Tax Year 2007 were Cuba, Iran, North Korea, Sudan, and Syria.

[^340]:    ${ }^{2}$ According to Internal Revenue Code section 999, U.S. persons who participate or cooperate in international boycotts not sanctioned by U.S. law, regulation, or executive order are penalized under special boycott provisions. Under the boycott provisions, penalties include a reduction of foreign tax credits, an increase in taxable income for Controlled Foreign Corporations under subpart F, and the exclusion of extraterritorial income, as applicable. For more information, see Costa, Melissa, "International Boycott Reports, 2005 and 2006," Statistics of Income Bulletin, Spring 2009.
    ${ }^{3}$ Taxes carried back to 2007 returns from 2008 are not reflected in the data, as amended returns and refund claims are not included in the statistics.

[^341]:    ${ }^{4}$ See "The One-Time Received Dividend Deduction," SOI Bulletin, Spring 2008, by Melissa Redmiles.
    ${ }^{5}$ In certain instances foreign taxes may not be creditable in the current tax year. The most common reasons are that the foreign tax rate on foreign-source income exceeds the U.S. tax rate or the taxpayer could have a foreign-source loss or an overall loss. The current-year taxes that cannot be used in the current year can be carried over or carried back subject to the applicable foreign tax credit provisions. For taxes paid or accrued prior to October 22, 2006, taxpayers were able to carryover up to five years and carry back up to 2 years.

    The estates of 2010 decedents will be permitted to elect out of the estate tax and instead file the forthcoming Form 8939 , Allocation of Increase in Basis for Property
    Acquired From a Decedent. Estates making this election will lose the "step-up" in basis value conferred by the estate tax system, under which the basis of an asset for capital gains tax purposes is determined to be its market value at the time of the decedent's death, rather than the value at which the original party purchased the asset. This stepped-up basis value may reduce capital gains tax liability when an inherited asset is later sold. However, assets transferred through the election will not be subjected to
    estate taxation. Because Form 8939 has not been finalized at the time of this writing, the Internal Revenue Service does not have projections on the number of estates that stepped-up basis value may reduce capital gains tax liability when an inherited asset is later sold. However, assets transferred through the election will not be subjected to
    estate taxation. Because Form 8939 has not been finalized at the time of this writing, the Internal Revenue Service does not have projections on the number of estates that will elect out of the estate tax and file Form 8939.

[^370]:    Footnotes at end of table.

[^371]:    Justin Bryan is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Jeff Hartzok, Chief.

[^372]:    ${ }^{1}$ For purposes of this article, total negative income is a sum of all income items on individual income tax returns (Forms 1040, 1040A, 1040EZ, and electronically fled returns) for which a net loss for an income category was reported by the taxpayer. In particular, the Form 1040 income tax return entry for Schedule E, Supplemental Income and Loss (from rental real estate, royalties, partnerships, S corporations, estates, trusts, REMICs, etc.), was separated into the following components: rent and royalty net income or loss, partnership and S corporation net income or loss, and estate and trust net income or loss. When any one of these components was negative on a return, the
    corresponding loss (rather than the netted total amount from Schedule E) was included in the statistics for total net loss. For example, if a return showed estate and trust net income or loss, partnership and S corporation net income or loss, and estate and trust net income or loss. When any one of these components was negative on a return, the
    corresponding loss (rather than the netted total amount from Schedule E) was included in the statistics for total net loss. For example, if a return showed estate and trust net income of $\$ 20,000$ and rent and royalty net loss of $\$ 12,000$, total net loss would include the $\$ 12,000$ of rent and royalty net loss.
    ${ }^{2}$ Net operating loss is a carryover of the loss from a business when taxable income for a prior year was less than zero. A loss could be applied to the AGI for the current year and carried forward for up to 15 years. Net operating loss is included in other income (loss) on individual income tax returns but edited separately for Statistics of Income purposes.
    ${ }^{3}$ No more than $\$ 3,000$ per return of net capital loss is allowed. For married $f$ ling separate returns, this loss is limited to $\$ 1,500$. Any excess is carried forward to future years.

[^373]:    ${ }^{5}$ Average AGI is def ned as the amount of AGI divided by the number of returns $f$ led. Average taxable income is def ned as the amount of taxable income divided by the number of returns with taxable income. Average total income tax is def ned as the amount of total income tax divided by the number of taxable returns. Taxable returns are def ned as returns with "total income tax" (the sum of income tax after credits and tax on Form 4970, Tax on Accumulation Distribution of Trusts, less EIC used to offset other taxes less any refundable credits, including the refundable minimum tax credit, making work pay credit, etc., limited to zero) present.

[^374]:    6 AGI, salaries and wages, and total income tax are shown in constant dollars, calculated using the U.S. Department of Commerce, Bureau of Economic Analysis, GDP implicit price def ator $(2005=100): 2009=109.729 ; 2008=108.582$. GDP is based on chained 2005 dollars (billions) as reported by the U.S. Department of Commerce, Bureau of Economic Analysis, in the Survey of Current Business, September 2011.

[^375]:    ${ }^{7}$ U.S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review. The Consumer Price Index (CPI-U) approximates the prices of goods and services purchased by typical urban consumers. CPI-U for each calendar year represents an annual average of monthly indices. (1982-84=100): 2009=214.537; 2008=215.303. See ftp://ftp.bls.gov/pub/special.requests/cpi/cpiai.txt for previous years.

[^376]:    [1] Real GDP does not include capital gains, while adjusted gross income and taxable income (thus affecting income tax) do include these gains.
    [2] Total income tax is shown in constant dollars, calculated using the U.S. Department of Commerce, Bureau of Economic Analysis, GDP implicit price deflator (2005=100).
    [3] GDP is based on chained 2005 dollars (billions) as reported by the U.S. Department of Commerce, Bureau of Economic Analysis, in the Survey of Current Business, June 2011.

[^377]:    ${ }^{8}$ Returns in the sample were stratif ed based on the presence or absence of one or more of the following forms or schedules: Form 2555 , Foreign Earned Income; Form 1116, Foreign Tax Credit (Individual, Fiduciary, or Nonresident Alien Individual); Schedule C, Profit or Loss from Business (Sole Proprietorship); and Schedule F, Profit or Loss from Farming.
    ${ }^{9}$ For further details on the description of the sample, see Statistics of Income-2009, Individual Income Tax Returns (IRS Publication 1304).

[^399]:    Footnotes at end of table

[^400]:    Footnotes at end of table

[^401]:    The term "State" includes the District of Columbia and any possessions of the United States.
    ${ }^{2}$ Issuers had the option of either receiving a direct payment or issuing a tax credit version, such that the bondholder receives a 35-percent credit. BABs were not issued using the tax credit option.
    ${ }^{3}$ Bond issuers were required to $f$ le these tax-exempt bond information returns by the $15^{\text {th }}$ day of the second calendar month after the close of the calendar quarter in which the bond was issued. The study includes returns processed from January 1, 2009, to April 30, 2011, for bonds issued in 2009.

[^402]:    4 Data that reference Calendar Year 2008 are available in the Statistics of Income Bulletin, Winter 2011, Volume 30, Number 3, "Tax-Exempt Bonds, 2008," and do not appear in any of the tables computed for Calendar Year 2009.
    ${ }^{5}$ In addition, for State income tax purposes, most States allow for the exclusion of interest on bonds issued by government agencies within their own States, thus increasing the benef $t$ to the bondholder.
    ${ }^{6}$ The extent of exclusion of interest income can vary with taxpayer characteristics. For example, banks and insurance companies may be limited as to how much taxexempt interest they can exclude.
    ${ }^{7}$ An arbitrage bond is one in which any portion of the proceeds is used to purchase higher-yielding investments or is used to replace proceeds that have been used to purchase higher-yielding investments. Certain rules allow for arbitrage earnings with respect to tax-exempt bonds within a specif ed time period, as long as these earnings are rebated to the Department of the Treasury.
    ${ }^{8}$ A registered bond is def ned as "a bond whose owner is designated on records maintained by a registrar, the ownership of which cannot be transferred without the registrar recording the transfer on its records," according to the Municipal Securities Rulemaking Board's Glossary of Municipal Securities Terms, http://www.msrb.org/msrbl/ glossary/. See also Internal Revenue Code (IRC) section 149(a) for additional information.
    ${ }^{9}$ Section 141(a) of IRC provides that the term private activity bond means any bond issued as part of an issue that meets: 1) the private business tests set forth in the IRC section 141(b); or 2) the private loan f nancing test set forth in IRC section 141(c). The private business tests of IRC section 141(b) def ne a bond as a private activity bond if both of the following criteria are met: 1) more than 10 percent of the bond proceeds are used for a private business purpose; and 2) more than 10 percent of the bond debt service is derived from private business use and is secured by privately used property. The private loan $f$ nancing test of IRC section 141 (c) def nes a bond as a private activity bond if the amount of proceeds used to (directly or indirectly) f nance loans to nongovernmental persons exceeds the lesser of $\$ 5$ million or 5 percent of the proceeds. ${ }^{10}$ Tax-exempt private activity bonds include exempt facility bonds, qualif ed mortgage bonds, qualif ed veterans' mortgage bonds, qualif ed small issue bonds, qualif ed student loan bonds, qualif ed redevelopment bonds, and qualif ed section 501(c)(3) bonds, all of which are def ned in the "Explanation of Terms" section of this article. Examples of exempt facilities include airports; docks and wharves; sewage facilities; solid waste disposal facilities; qualif ed residential rental projects; and facilities for the local furnishing of electricity or gas. Qualif ed section 501 (c)(3) bonds are issued by State and local governments to f nance the activities of charitable and similar organizations that are tax exempt under IRC section 501(c)(3). The primary benef ciaries of these bonds are hospitals, universities, and organizations that provide low-income housing or assisted living facilities.
    ${ }^{11}$ The interest income from qualif ed private activity bonds (other than qualif ed section $501(\mathrm{cc}$ (3) bonds) is considered a tax preference for the alternative minimum tax calculations.

[^403]:    ${ }^{12}$ Additional tax-exempt bond data, including data for prior years, can be found on SOI's Tax Stats web site: http://www.irs.gov/taxstats. Click on "Tax-Exempt Bonds."

[^404]:    13 Instructions for Form 8038, Information Return for Tax-Exempt Private Activity Bond Issues, requires a f ler to enter the issue price of the bond on Line 20c and provide a description of the bond only if the bond does not apply to any other type of issue. "Other bond purposes" may also contain issues that were not separately allocated by the issuer.
    14 See Internal Revenue Notice 2008-79 for additional information.
    15 This f gure does not include the relatively small amount of proceeds issued for qualif ed veterans' mortgage bonds and Gulf Opportunity Zone mortgage bonds, which are excluded to avoid disclosure of information about specifc bonds.

[^405]:    ${ }^{16}$ See Internal Revenue Notice 2009-50 for additional information.
    ${ }^{17}$ The term "State" includes the District of Columbia and any possessions of the United States.
    ${ }^{18}$ The resident population estimates for July 1, 2009, were produced by the U.S. Bureau of the Census and are available at http://www.census.gov/popest/states/ NST-ann-est.html.

[^406]:    19 The Food, Conservation, and Energy Act of 2008 created qualif ed forestry conservation bonds. The Energy Improvement and Extension Act of 2008 produced new clean renewable energy bonds and qualif ed energy conservation bonds. The Tax Extenders and Alternative Minimum Tax Relief Act of 2008 created Midwestern tax credit bonds.
    ${ }^{20}$ Different categories of tax credit bonds vary in terms of the allowable tax credit rate, maturity, and other features. For example, clean renewable energy bonds and qualif ed zone academy bonds have a 100 -percent tax credit subsidy; however, new clean renewable energy bonds and qualif ed energy conservation bonds have a 70 -percent subsidy. Borrowers are likely to issue at a discount or pay taxable interest in addition to the lender receiving a tax credit.
    ${ }^{21}$ In 2009, issuers of tax credit bonds were instructed to f le Form 8038, Information Return for Tax-Exempt Private Activity Bond Issues. The 2009 data also include a small number of tax credit bonds that were reported on Form 8038-G, Information Returns for Tax-Exempt Governmental Obligations, that specif cally reference "qualif ed school construction" bonds, "clean renewable energy" bonds, "Midwestern tax credit" bonds, or "qualif ed zone academy" bonds. For tax credit bonds issued after March 2010, issuers were required to f le the new Form 8038-TC, Information Return for Tax Credit Bonds and Specified Tax Credit Bonds.
    ${ }^{22}$ Section 54 F (d) provides details about a national volume cap for QSCBs. See Internal Revenue Notice 2009-35 for further information on QSCB volume cap allocations. ${ }^{23}$ ARRA created two varieties of BABs, which differed based on the federal subsidy and use of proceeds. The one variety of BAB was structured as a tax credit bond and the other was a direct payment bond.

[^407]:    [1] Includes data from governmental and private activity bond returns (Forms 8038-G and 8038) that specifically reference "qualified school construction," "clean renewable energy," "Midwestern tax credit," or "qualified zone academy" bonds.
    [2] Clean renewable energy and Midwestern tax credit bonds were combined to avoid disclosure of individual issuer information.
    NOTE: Detail may not add to totals because of rounding.

[^408]:    24 The 2009 data combine clean renewable energy bonds and Midwestern tax credit bonds to avoid taxpayer disclosure.

[^409]:    25 Internal Revenue Notice 2009-26 states, "100 percent of the excess of (i) the available project proceeds (as def ned in section 54A to mean sale proceeds of such issue less not more than two percent of such proceeds used to pay issuance costs plus investment proceeds thereon), over (ii) the amounts in a reasonably required reserve fund (within the meaning of $\S 150(\mathrm{a})(3))$ with respect to such issue, are to be used for capital expenditures."
    ${ }^{26}$ Internal Revenue Notice 2009-26 states, "Build America Bonds (direct payment) may be used to reimburse otherwise-eligible capital expenditures under Treas. Reg. section 1.150-2 that were paid or incurred after the effective date of ARRA and that were $f$ nanced originally with temporary short-term f nancing issued after the effective date of ARRA, and such reimbursement will not be treated as a refunding issue under Treas. Reg. §§ 1.150-1(d) or 1.150-2(g)."
    ${ }^{27}$ IRC Section 1400 U-2(c) def nes a qualif ed economic development purpose as expenditures for purposes of promoting development or other economic activity in a recovery zone, including (1) capital expenditures paid or incurred with respect to property located in the recovery zone, (2) expenditures for public infrastructure and construction of public facilities, and (3) expenditures for job training and educational programs.
    28 See IRC section (b) for details.

[^410]:    [1] "Other purposes" refer to obligations for which a specific purpose either did not apply or was not clearly indicated on the Form 8038-G, Information Return for Tax-Exempt Governmental

[^411]:    Footnotes at end of table.

[^412]:    1 The statistics in this article exclude private foundations, most organizations with receipts totaling less than $\$ 25,000$, as well as most churches and certain other types of religious organizations.
    2 Beginning with the Tax Year 2004 study, the annual SOI Bulletin article on charities and other tax-exempt organizations has featured data on nonprof tharitable organizations exempt under IRC section 501(c)(3), as well as one other category of organizations def ned under IRC section 501(c). For 2008, section 501(c)(8) fraternal benef ciary societies are presented. SOI continues to collect annual data on organizations exempt under sections 501(c)(4) through (c)(7), as well as 501(c)(9). Data from these organizations are found in Tables 2, 3, and 4 at the end of this article. Additional tax-exempt organizations are described under sections 501(c)(1), (2), and (10) through (27). Because they constitute a small proportion of $f$ nancial activity for the nonprof $t$ sector, SOI does not collect data for these organizations.
    ${ }^{3}$ Unless otherwise indicated, data presented in this article were reported by both Forms 990 and 990 -EZ f lers. The tables at the end of the article present data by type of form. Detailed data for Form 990 f lers are provided in Tables 1, 2, and 3. Form 990-EZ data are found in Table 4.

[^413]:    4 For more information on the requirements for tax exemption under section 501(c)(3) and other IRC sections, see Internal Revenue Service Publication 557, Tax Exempt Status for Your Organization.
    ${ }_{5}$ Data presented in this article are from Tax Year 2008 Forms 990 and 990 -EZ f led in Calendar Years 2009 and 2010. The total number of nonprof t charitable organizations, including those not required to f le Form 990 or Form 990-EZ, was obtained from the 2010 IRS Data Book Table 25.
    ${ }^{6}$ Th e $\$ 25,000 \mathrm{f}$ ling threshold is an average of an organization's gross receipts over the previous three years. These organizations are required to annually f le a very short electronic document called the Form 990-N.
    ${ }^{7}$ For information on private foundations, see Belmonte, Cynthia and Melissa Ludlum, "Domestic Private Foundations, Tax Years 2003-2007," Statistics of Income Bulletin, Winter 2011, Volume 30, Number 3.
    ${ }^{8}$ Certain organizations that fell below the Form 990 f ling threshold were still required to f le the long form due to activities in which they engaged during the year. These included activities that must be reported on supplemental schedules that are not part of the Form 990-EZ package.
    9 The Form 990-EZ f ling thresholds were revised again for Tax Years 2009 and 2010. For 2009, only organizations with assets less than $\$ 1.25$ million and gross receipts less than $\$ 500,000$ were eligible to f le the Form $990-E Z$. For Tax Year 2010, organizations with assets less than $\$ 500,000$ and gross receipts less than $\$ 200,000$ were eligible to f le the Form 990-EZ.

[^414]:    ${ }^{10}$ Aggregate total assets and total revenue reported by nonprof t charitable organizations appeared to decrease between Tax Years 1997 and 1998. This was due to a certain cat-
    egory of organization that fled returns for 1997, but not for 1998. The Taxpayer Relief Act of 1997 (Public law 105-34, Section 1042) provided for the "termination of certain egory of organization that fled returns for 1997, but not for 1998. The Taxpayer Relief Act of 1997 (Public law 105-34, Section 1042) provided for the "termination of certain ${ }^{11}$ "Cash, savings, and investment" is a line item on the Form 990-EZ, but not on the Form 990." For Tax Year 2007, this f gure comprises: "cash," "savings and temporary exceptions from rules relating to exempt organizations which provide commercial-type insurance." ${ }^{11}$ Cash, savings, and investment" is a line item on the Form 990-EZ, but not on the Form 990. For Tax Year 2007, this f gure comprises: "cash," "savings and temporary cash investments," "investments in publicly traded securities," "investments in other securities," and "other investments" from the Form 990 and "cash, savings, and investments" from the Form $990-E Z$. For Tax Year 2008, the f gure comprises: "cash," "savings and temporary cash investments," "investments in public securities," "investments in other securities," and "program-related investments" from the Form 990 and "cash, savings, and investments" from the Form 990-EZ.
