## **Overview**

The Statistics of Income staff within the Research, Applied Analytics, and Statistics organization provides calendar year projections of information returns and withholding documents on an annual basis to accommodate more recent filing experiences. These IRP documents also incorporate current legislative and administrative initiatives, wherever possible, as well as relevant economic and demographic trends. Forecasts of economic/demographic data used to develop some of these projections are provided by IHS Markit.

The information and withholding document projections contained in this publication are used primarily by the IRS operational and resource planning functions to assist in the formulation of their budget submissions and staffing requirements, and to complete other analyses. Enacted tax law changes and confirmed administrative plans are reflected in these projections. However, legislative or administrative initiatives under consideration are not included due to the uncertain nature of their eventual outcome.

## **Data Sources and Projection Methodology**

Three major sets of projections are included in this publication. Table 2 contains all media grand total projections for withholding and other IRP documents received by the IRS. Table 3 includes the paper portion of the projections, and Table 4 includes the nonpaper portion. All these projections are at the U.S. level. In compliance with customer requests, Tables 5 A–D present projections of all paper documents, except Currency Transaction Reports (CTRs), for IRS processing campuses.

### ***Data Sources and 2018 Actual Paper Volumes***

Actual data on the volume of IRP documents filed are provided by program staff under the operating divisions and the Information Technology Services area. Data sources include: Martinsburg Computing Center (MCC) IRP Reformat Report (405-02-12); IRMF (Information Returns Master File) Report (417-91-40); CAWR (Combined Annual Wage Reporting) W-2 Control Report, IRP Counts for 1099-SSA/RRB; Paper IRP Production Report from SCRIPS (Service Center Recognition Image Processing System); other campus sources; and the national calendar year Currency Transaction Report receipts. Counts for nonpaper Form 1042-S were provided by relevant program staff. Nonpaper counts of Foreign Information Returns were provided by operating division program staff.

### ***U.S.-Level Forecasts***

The U.S.-level grand total (all media) projections were forecasted through a combination of time series extrapolations and regression analysis. Each form type was forecasted separately. In some instances, regression models were developed using appropriate economic/demographic variables. In other instances, forecasts for grand total volumes were built from historical time trends. Time-trend models were used to forecast the paper IRP document volumes by form type. Projections of most IRP nonpaper documents were then derived by subtracting the IRP paper documents from the grand total projections. For Form 1099-Q, first, the number of nonpaper returns was modeled, and then the number of paper returns was obtained by subtracting the nonpaper volumes from the grand total. Moreover, for Forms 1096 and FinCEN Form 8300, paper is the only accepted transmittal format.

## ***Campus-Level Forecasts and Impact of Modernization Alignment***

The Service Center Recognition Image Processing System (SCRIPS) enables IRS campuses to optically scan most paper Information Returns Processing (IRP) documents. As a result, the IRS has been consolidating the filing/processing of most of these forms since Calendar Year (CY) 2007. In CY 2018, further changes were made to the campus alignments designating three “SCRIPS” sites (the Cincinnati, Kansas City, and Ogden campuses) to process paper Schedule K-1 series and International documents. Starting in CY 2019, the paper Schedule K-1 series documents were handled exclusively by the Kansas City and Ogden campuses. Paper forms submitted from the International area were processed at the Ogden campus. Processing of all other information return paper documents were performed in the Austin, Kansas City, and Ogden campuses. Starting in CY 2025, the Kansas City and Ogden campuses will process the paper information return and withholding documents. The campus-level paper forecasts were derived based on the updated campus alignments. The relative shares of the U.S. totals in CY 2018 by applicable form type were calculated and applied to the U.S.-level projections.

Table 6 reflects the current processing campus alignment of States/International for paper Schedules K-1 and International documents. Tables 7A through 7C show the current alignment of States by processing campus for all other paper documents.

## **Significant Trends and Revisions**

The major trends and other significant factors embedded in the return forecasts for this edition of Publication 6961 are summarized below.

For Calendar Year (i.e., Filing Year) 2020, the grand total number of information and withholding documents projected in this update is about 12.4 percent (463.9 million forms) more than the total volume projected last year (see Table 1, left side). A major portion of the net revision is driven by the increase in the projections of Form 1099-B (i.e., 438.6 million more forms). These results are based on actual CY 2018 and year-to-date CY 2019 filing experiences.

For paper submissions of IRP documents, the CY 2020 estimate is about 6.9 percent (i.e., 3.0 million forms) less than the paper volumes projected in last year’s update of this publication (Table 1, right side). Embedded in this net change for paper volumes is a decrease of almost 3.0 million returns in the forecast of the number of paper Form 1099-MISC filed. These results are also based on actual CY 2018 and year-to-date CY 2019 filing experiences.
