Item #	Date Added	Scenario #	Description of the Change
1	10/21/2015 REVISED 11/04/15	All	Issue: Missing data is not being identified as an error. Submissions with missing data are erroneously given the status "Accepted". Workaround: All data elements in the schema (even the blank ones) must be included in the submission. (This is for the November 7.0 AATS character by character environment only.) Revision: This workaround is no longer required. If you do not have a value for an element, do not include the element in the submission.
2	11/20/2015	All	Issue: Earlier versions of the schema for November ATTS allowed periods in PersonMiddleNameType. However, version 3.0 of the schema has added a pattern value to PersonMiddleNameType that does not allow periods. Workaround: Remove periods from middle initials within the test scenarios. Until the IRS completes reprogramming the scenarios, the system will report errors for the middle initial. Help Desk Assistors will be aware of these inconsistencies.
