

Corporation Income Tax Returns, 2001

by Patrice E. Treubert

Corporate pretax profits, or net income (less deficit), reported on income tax returns for 2001 declined significantly from 2000 levels, decreasing 34.9 percent from \$927.5 billion for 2000 to \$603.6 billion for 2001. Corresponding to the decrease of pretax profits, total income tax after credits, the amount payable to the U.S. Government, decreased by 18.3 percent, from \$204.0 billion for 2000 to \$166.7 billion for 2001.

Data Highlights

While total deductions remained stable for 2001, total receipts decreased, resulting in a decrease in profits. Total receipts from business operations and investments were down \$0.3 trillion to \$20.3 trillion, a 1.6-percent decrease [1]. The reduction in profits reflected the slowdown of economic growth as real GDP growth dropped from 3.7 percent for 2000 to 0.5 percent for 2001 (determined by the U.S. Bureau of Economic Analysis, Department of Commerce).

The number of corporations reporting positive pretax profits remained stable at 2.8 million; their profits, however, decreased from \$1.3 trillion to \$1.1 trillion, a decrease of \$0.2 trillion, or 16.8 percent. Corporations with assets of \$250 million or more reported well over half of the total of positive pretax profits, and these corporations showed the greatest amount of decreased pretax profits from 2000 levels (Figure A). The number of corporations reporting net losses increased by 3.9 percent to 2.3 million, and their net losses increased from \$409.1 billion to \$508.9 billion, a change of \$99.8 billion.

The overall decrease in pretax positive profits affected the amount corporations reported for “income subject to tax,” the tax base for the regular income tax. The tax base decreased to \$635.3 billion for 2001, a decrease of \$125.1 billion and 16.5 percent less than 2000. Certain corporations that elect to be taxed through their shareholders, in general, pay no Federal income tax directly. More specifically, S corporations, which are not usually taxable at the corporate level, did not have income

subject to tax. Some, however, had a limited tax liability on capital gains and certain other income and were, therefore, included in the statistics for this item [2]. While regulated investment companies and real estate investment trusts generally passed their net incomes to be taxed through their shareholders, any amounts not distributed were included in income subject to tax, though the long-term capital gains of regulated investment trusts are excluded from their profits (Figure B).

Paralleling the decrease in income subject to tax, “total income tax before credits” decreased 17.1 percent to \$220.9 billion. This tax is the total of the corporations’ U.S. taxes based on their total worldwide profits [3].

The number of corporations reporting the “alternative minimum tax” (AMT) declined by half to 7,101 for 2001, and the AMT itself, represented in the statistics for both “total income tax before credits” and “total income tax after credits,” decreased from \$3.9 billion for 2000 to \$1.8 billion for 2001.

Both income tax before credits and income tax after credits decreased for 2001. Tax credits also decreased from their 2000 levels. Most of the decrease for tax credits was due to the foreign tax credit. The foreign tax credit alone decreased 15.3 percent to \$41.1 billion.

Asset Classification Change

Statistics of Income Corporation data asset-size classifications have changed for Tax Year 2001. Corporations previously classified in the categories of \$1 to under \$100,000, \$100,000 to under \$250,000, and \$250,000 to under \$500,000 are now grouped under one category, \$1 to under \$500,000. Meanwhile, corporations classified with assets of \$250 million or more are now distributed in three categories: \$250 million to under \$500 million; \$500 million to under \$2,500 million; and \$2,500 million and more. The last time asset classifications were changed was 1970.

The number of corporations classified in the \$250 million or more asset category has steadily increased over the past decade, almost doubling from 5,933 returns for 1991 to 10,969 returns for 2001. Since the largest corporations report the most tax and related items, it is beneficial from a research perspective to segregate these corporations into more categories. The 1,896 corporations in the

¹ Pretax profits are net income (less deficit) in the tables.

² The inclusions to pretax profits are: net long-term capital gain reduced by net short-term capital loss for regulated investment companies and investment, rental, and portfolio income (including capital gains) for S corporations. The amounts listed under "All corporations" include both aforementioned amounts.

also responsible for a large amount of the tax credits, reporting over 80 percent of the total credits, \$45.7 million. The large percentage of total credits reported by corporations with assets over \$2.5 billion is likely a reflection of the large percentage of income

tax: they reported 67.4 percent of the total, or \$147.5 billion. However, the ratio between the percentage of total tax and the percentage of total credits is different for each of the new large asset classes (Figure C).

Figure C

Tax Credits of Corporations with Large Assets, Tax Year 2001

Percentage of total

Corporation Income Tax Returns, 2001

Among the new asset classes, the \$500 million under \$2,500 million category, comprised of 4,935 corporations, reported the next largest percentage of total receipts, income subject to tax, and total income tax after credits: 12.1 percent, 14.5 percent, and 16.6 percent, respectively. The \$250 million under \$500 million category, representing 4,158 corporations, reported the smallest percentage of total receipts (3.5 percent), income subject to tax (3.8 percent), and total income tax after credits (4.6 percent).

Pretax Profits and Income Statement
Pretax corporate profits dropped significantly for Tax Year 2001 after remaining stable the previous tax year (Figure D). Pretax profits, as they appear in the statistics, were \$927.5 billion for 2000 compared to \$603.6 billion for 2001 (Figure E). Pretax profits of

corporations other than pass-through entities decreased 47.7 percent, from \$517.9 billion for 2000 to \$270.8 billion for 2001. "Pass-through entities" are regulated investment companies, real estate investment trusts, and S corporations (qualifying corporations that pass through allocated profits and losses to their shareholders and, in general, pay no Federal income tax directly). Along with the decreases shown by corporations excluding pass-through entities, pretax profits for pass-through entities were down 18.7 percent, from \$409.6 billion for 2000 to \$332.8 billion for 2001. The statistics for pretax profits, however, do not include either long-term capital gains reported by regulated investment companies or investment or rental or portfolio income, including capital gains, for S corporations.

Corporation Income Tax Returns, 2001

Figure E

Corporate Pretax Profits, Tax Years 1992-2001

Billions of dollars

¹ Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income of S corporations (qualifying corporations electing to be taxed through their shareholders).

Overall, total receipts for 2001 decreased by \$0.3 trillion, from \$20.6 trillion to \$20.3 trillion, a decrease of 1.6 percent; total deductions, including the cost of goods sold, remained stable at \$19.7 trillion. Given that total receipts decreased and total deductions remained stable, corporate pretax profits decreased for 2001.

Many industry sectors, including the manufacturing sector, the finance and insurance sector, and the

information sector, showed decreases in pretax profits. The decrease in profits for these sectors was proportional to the drop in total receipts.

In the manufacturing sector, the decrease in pretax profits was \$142.8 billion, bringing the sector total to \$129.1 billion. The largest change by far was for computer and electronic product manufacturers. Part of the explanation may be that corporations made significant purchases of technology equipment prior to 2001 in

Corporation Income Tax Returns, 2001

anticipation of Y2K [4]. Consequently, after 2000, the demand for such products decreased significantly and likely affected this sector's profits. Pretax profits for these companies dropped from a positive \$37.8 billion in 2000 to a negative \$30.4 billion in 2001.

Pretax profits for the information sector, which includes publishing industries, motion picture and sound recording industries, broadcasting and telecommunications, and information services and data processing services, decreased by \$43.5 billion to negative \$37.7 billion. Total receipts decreased 2.1 percent to \$946.6 billion, while total deductions increased 2.4 percent to \$986.2 billion. Business receipts, the largest component of total receipts, fell \$1.4 billion to \$815.8 billion. "Other deductions," which include administrative fees, commissions, product development, training, supplies, and travel and entertainment expenses, were the largest component of total deductions and increased by \$175.4 billion to \$409.0 billion.

The finance and insurance sector showed large declines in pretax profits, dropping \$110.9 billion from 2000 to a total of \$268.1 billion. As indicative of this industry, business receipts, interest, and net short-term capital gain less net long-term loss all decreased by large amounts. Business receipts for banks and other financial institutions were composed of fees, commissions, credit card income, and other operating receipts and declined \$94.7 billion to \$1,430.9 billion [5]. The decrease of taxable interest income in this sector was so great that it accounted for most of the decrease of that type of corporate income for the year. Taxable interest income reported by finance and insurance companies decreased \$88.6 billion to \$806.5 billion in 2001, likely a reflection of decreased interest rates in the slowed economy. Net short-term capital gain less net long-term loss decreased \$56.8 billion to \$13.0 billion for the sector, also accounting for most of the change in the income item for the year. Much of the decrease was concentrated in regulated investment companies, which dropped by \$54.8 billion to \$8.9 billion.

Income Tax and Credits

Reflecting the decrease in pretax profits for 2001, income subject to tax, the tax base for the regular income tax, decreased to \$635.3 billion for 2001, a decrease of \$125.1 billion, 16.5 percent less than 2001 [6]. For most returns, income subject to tax

equaled "positive" pretax profits minus certain "statutory special deductions" [7]. The decrease in income subject to tax for 2001 resulted in a decrease in the corporation income tax before credits (defined to include AMT) to \$220.9 billion, a decrease of 17.1 percent, or \$45.4 billion from 2000.

Total statutory special deductions, the components of which are shown in Figure F, decreased 26.5 percent to \$282.1 billion for 2001. Regulated investment companies reported over three-quarters of the total decrease, dropping \$77.7 billion to \$163.2 billion. These companies are required to distribute most of their net incomes to shareholders for taxation and are allowed special deductions for dividends paid as a result.

As in the past few years, the "net operating loss" deduction (NOLD) accounted for approximately 20 percent of total statutory special deductions. The NOLD, however, fell 21.6 percent to \$60.5 billion. The decrease was likely due to the fall in "positive" pretax profits of corporations for Tax Year 2001: corporations could not deduct as much of their accumulated prior-year losses from current-year net incomes. In general, net operating loss deductions, as defined in these statistics, include a portion of net losses from prior year returns (excluding those of S corporations whose deficits were allocated to their shareholders for the year in which they occurred). The Job Creation and Worker Assistance Act of 2002 allowed net operating losses (NOL's) for taxable year ending 2001 and 2002 to be carried back to reduce any taxes paid for 5 years previous to the loss. The Act also allowed NOL's arising in or carried forward to taxable years ending in 2001 and 2002, to offset 100 percent (from 90 percent) of a taxpayer's Alternative Minimum Taxable Income (AMTI). For other tax years, net operating losses could have been carried back to reduce any taxes paid in the 2 years previous to the loss year, and any remaining amounts could be carried forward 20 years to reduce income subject to tax (or 3 years of carryback and 15 years of carryforward for net operating losses incurred before August 6, 1997), though, for these statistics, this item represents only amounts carried forward from prior years and applied to reduce taxable income of the current year.

The largest decrease in the NOLD came from companies in the manufacturing sector, accounting for \$15.4 billion of the deduction, and from compa-

Total income tax after credits	204,043,788	166,711,988	-18.3

¹ Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income, including capital gains of S corporations (qualifying corporations electing to be taxed through their shareholders).

² Pretax profits are net income (less deficit) in the tables.

³ This item includes other dividend deductions that are not shown separately.

⁴ Includes certain other taxes, not shown separately.

⁵ For purposes of the statistics, this tax is included in both total income tax before credits and total income tax after credits. By law, tax credits could offset only income tax.

⁶ Includes certain other credits, not shown separately.

NOTE: Detail may not add to totals because of rounding.

nies in the information sector, accounting for \$7.2 billion of the deduction for 2001. Within manufacturing, the NOLD taken by companies classified as computer and peripheral equipment manufacturers decreased from \$3.2 billion to \$1.8 billion. Net operating loss deductions of manufacturers of semiconductor and other electronic components decreased from \$3.0 billion to \$0.4 billion, and those of petroleum refiners decreased from \$1.3 billion to \$0.6 billion.

Income tax before credits, which includes "alternative minimum tax," was affected by the decrease in income subject to tax. Income tax before credits decreased from \$266.3 billion in 2000 to \$220.9 billion. Corporations use credits to reduce their regular tax liabilities. The principal credits were the

foreign tax, U.S. possessions tax, nonconventional source fuel, general business, and prior-year minimum tax credits. The largest tax credit for 2001 was the foreign tax credit, which accounted for 75.8 percent of all credits. The foreign tax credit decreased 15.3 percent, from \$48.5 billion for 2000 to \$41.1 billion for 2001. The manufacturing sector accounted for approximately 73 percent of this decrease. Within this sector, computer and peripheral equipment dropped the most, by \$2.1 billion to \$3.0 billion.

U.S. corporations earning at least 80 percent of their gross incomes in Puerto Rico or a U.S. possession were eligible for a credit against U.S. income tax from some or all of the tax on incomes earned in the possessions. For 2001, this credit, the U.S.

Corporation Income Tax Returns, 2001

possessions tax credit, decreased 11.8 percent, from \$1.4 billion to \$1.3 billion. The possessions tax credit has dropped every year since 1993, with the exception of a slight increase for 1996. Its decline should continue until the credit is eliminated for 2005, inasmuch as no new companies were allowed to claim the credit after 1995, and special phaseout rules for companies previously able to claim the credit will gradually reduce the amount they could claim each year thereafter [8].

Another tax credit, the nonconventional source fuel credit, increased 19.1 percent to \$1.8 billion. This credit was allowed for the sale of qualified fuels produced from nonconventional sources including, but not limited to, fuels produced from shale and tar sands, qualifying processed wood fuels, and liquid, gaseous, or solid synthetic fuel produced from coal [9]. Approximately 40 percent of the overall total was concentrated among manufacturers, which increased from \$586.2 million to \$698.7 million for 2001. As would be expected, within this sector, petroleum and coal manufacturers showed the largest growth, increasing by \$84.2 million to \$505.0 million for 2001.

The “general business credit” for Tax Year 2001 showed a 20.6-percent increase to \$6.7 billion [10]. This credit is the sum of other credit components in general, all subject to a common limitation. An increase in the incremental research expenditures credit generated the largest component increase in the general business credit. From a business sector perspective, the information sector was responsible for most of the increase of the general business credit, up by \$1.1 billion to \$1.5 billion.

After a 27.0-percent increase to \$3.9 billion in 2000, AMT decreased 53.5 percent to \$1.8 billion in 2001. The Tax Reform Act of 1986 instituted the “alternative minimum tax” (AMT) in place of the “minimum tax.” Under AMT, corporations are required to compute their regular tax liabilities then their “tentative minimum tax” liabilities. The difference between the “tentative minimum tax” and the regular tax is the legally defined alternative minimum tax. The AMT was originally designed to ensure that, at least, a minimum amount of income tax was paid in spite of the legitimate use of exclusions, deductions, and credits. For Tax Years beginning after 1997, certain new and small corporations were not subject to the AMT. Generally, a corporation

was considered small for AMT purposes if their average annual gross receipts for 3 years prior to the 2001 Tax Year (and after Tax Year 1993) were \$7.5 million or less, and their average annual gross receipts for 1995 through 1997 did not exceed \$5 million [11].

As with previous years, corporations without a current-year “alternative minimum tax” liability that had reported an AMT for a prior year generally could elect to take a credit against a portion of regular income tax liability for the previously-paid AMT. A corporation’s potential credit was limited to the excess of its current-year regular income tax over its current-year “tentative” AMT. The number of corporations claiming the credit for prior-year AMT decreased 26.0 percent for 2001, to 7,951. The credit claimed decreased from \$5.2 billion to \$3.3 billion. This is the seventh consecutive year that prior-year AMT credits claimed by corporations exceeded AMT payments.

Total income tax after credits (which also includes the AMT) is the amount payable to the U.S. Government. For 2001, it decreased 18.3 percent, or \$37.3 billion, to \$166.7 billion. Returns classified as manufacturing led the decrease, down by \$18.9 billion, to \$43.3 billion. The information sector reported the next largest decrease, 46.4 percent, to \$11.8 billion. Wholesale trade companies also reported a significant decrease, down by \$3.1 billion to \$8.6 billion. Durable goods wholesalers reported the largest decrease for the sector, down by \$2.6 billion to \$4.5 billion.

Summary

The decline in the growth in the economy was evident in the significant decrease of corporate pretax profits as reported on income tax returns for 2001. This decrease, \$323.9 billion, to \$603.6 billion was likely due to the decrease of total receipts. “Positive” pretax profits also decreased from \$1.3 trillion to \$1.1 trillion, while net losses increased from \$0.4 trillion to \$0.5 trillion.

Income subject to tax, the tax base, decreased at a similar rate as positive pretax profits, down by 16.5 percent, to \$635.3 billion. Reflecting this decrease, income tax before credits decreased \$45.4 billion to \$220.9 billion, and income tax after credits, the amount payable to the U.S. Government, decreased 18.3 percent to \$166.7 billion. Total tax credits

Corporation Income Tax Returns, 2001

claimed also decreased 13.0 percent to \$54.2 billion. The foreign tax credit, alone, decreased 15.3 percent to \$41.1 billion. The AMT, included in the statistics for both income tax before credits and income tax after credits, decreased 53.3 percent to \$1.8 billion.

Data Sources and Limitations, Form 1120, Tax Year 2001

Estimates for Tax Year 2001 are based on a sample of corporation income tax returns with accounting periods ending July 2001 through June 2002 that posted to the Internal Revenue Service Business Master File from the beginning of July 2001 through the end of June 2003. These returns represent domestic corporations filing Form 1120 or 1120-A (short form); foreign corporations with income “effectively connected” with a U.S. business filing Form 1120-F; life insurance companies filing Form 1120-L; property and casualty insurance companies filing Form 1120-PC; S corporations filing Form 1120S; regulated investment companies filing Form

1120-RIC; and real estate investment trusts filing Form 1120-REIT.

A stratified probability sample was used to produce the statistics. A sample of 147,093 corporation income tax returns was drawn from a total population of 5,563,663. Based on the 139,096 returns of active corporations in the sample, the population estimate of corporation returns was 5,135,591. The sample was selected after administrative processing was complete, but before any amendments or audit examinations, and was stratified based on combinations of net income and total assets at rates ranging from 0.25 percent to 100 percent.

Because the estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CV’s) are used to measure the magnitude of this sampling error. The CV is defined in the section on sampling variability in the “SOI Sampling Methodology and Data Limitations” appendix of this publication. Figure G presents the CV’s for total assets, business receipts, total income tax before

Figure G

credits, and total income tax after credits by industrial sector. The smaller the CV, the more reliable the estimate is judged to be. The estimates corresponding to the CV's in Figure G can be found in Table 1.

Notes and References

- [1] Data for 2000 used in this article are from *Statistics of Income--2000*. Data for 2001 are from *Corporation Income Tax Returns*, and *Statistics of Income--2001, Corporation Income Tax Returns*. Also consulted was *The Economic Report of the President, 2002*. See online at http://www.access.gpo.gov/usbudget/fy03/pdf/2002_erp.pdf.
- [2] Beginning in Tax Year 1987, Statistics of Income (SOI) corporate statistics for "net income (less deficit)" (pretax profits) and for receipts and deductions of S corporations are limited to those derived "from a trade or business." Investment or portfolio income (or loss), such as from interest, dividends, rents, royalties, and gain (loss) from sales of investment property, and the deductions related to this income are not included in the SOI corporate statistics. Therefore, the overall statistics for receipts, deductions, and pretax profits are slightly understated; it is estimated that, for 2001, total pretax profits alone are understated by \$45.1 billion as a result (see Bennett, Kelly, "S Corporation Returns, 2001," *Statistics of Income Bulletin*, Spring 2004, Volume 23, Number 4).
- Pretax profits and receipts also exclude regulated investment company net long-term capital gain (reduced by net short-term capital loss), which were not tabulated. If included, these gains would have totaled \$41.1 billion for 2001 and \$296.6 billion for 2000.
- [3] The U.S. taxes of foreign corporations that filed an 1120-F return are based on their incomes effectively connected with the conduct of a trade or business in the United States. The SOI calculation for "total income tax before credits" has not changed from prior years.
- [4] *The Economic Report of the President, 2002*, p. 38. See online at http://www.access.gpo.gov/usbudget/fy03/pdf/2002_erp.pdf.

- [5] For a more thorough definition of business receipts for financial institutions, see the explanation of terms in *Statistics of Income--2000, Corporation Income Tax Returns*, p.232.
- [6] Several adjustments are required to compute income subject to tax from net income, or pretax profits. The statistics for statutory special deductions include the previously unused portions of deductions reported by corporations that had no positive incomes subject to tax, either because they had no positive net incomes or because their deductions were sufficient to completely offset their net incomes. In addition, the relationship between net income and income subject to tax was defined differently for life insurance businesses and real estate investment trusts. Therefore, the net incomes shown in the statistics (which also include the net incomes of S corporations, regulated investment companies, and real estate investment trusts, which do not bear entity-level income taxes), minus statutory special deductions, will not yield the statistics shown for incomes subject to tax.
- [7] For 2001, statutory special deductions include the following: net operating loss deduction (NOLD); various dividends received deductions; deductions for dividends paid on certain preferred stock of public utilities; deduction for dividends paid by regulated investment companies and real estate investment trusts; special deduction for taxes paid by real estate investment trusts allowed under Internal Revenue Code section 857; and special deduction allowed for small life insurance companies.
- [8] *Statistics of Income, Corporation Income Tax Returns*, for 1993-2001. Prior to August 1996, a U.S. corporation earning at least 80 percent of its gross income in Puerto Rico or a U.S. possession (and earning at least 75 percent of its gross income from the active conduct of trade or business within a U.S. possession) was eligible for a credit against U.S. income tax for some or all of the tax on income earned in the possessions. In 1996, the Small Business Job Protection Act repealed the credit for any corporation not already using it and instituted a phaseout of the credit for existing users until 2005.

Corporation Income Tax Returns, 2001

[9] For a complete listing of qualified fuels for this credit, see the explanation of terms in *Statistics of Income--2000, Corporation Income Tax Returns*, p. 247.

[10] The general business credit included the investment credit (i.e., the sum of the rehabilitation credit, the energy credit, and the reforestation credit); the work opportunity credit; the credit for alcohol used as a fuel; the credit for increasing research activities; the low-income housing credit; the enhanced oil recovery credit; the disabled access credit; the renewable electricity production credit; the Indian employment credit; the credit for Social Security and Medicare taxes paid on certain employee tips; the "orphan drug credit"; the new markets credit; the credit for contributions to selected community development corporations; the welfare to work credit; and the Trans-Alaskan pipeline credit. The empowerment zone employment (EZE) credit and the New York Liberty Zone credit were also included as part of the general business credit. Though these credits are not included on Form 3800, *General Business Credit*, they are included in the amount for the general business credit on Schedule J, *Tax Computation*, as well as the statistics for SOI data.

The purpose of combining these credits into the general business credit was to provide a single combined limitation on the component credits and to establish uniform rules for the unused

amounts in excess of this limitation for the carryback and carryforward of "unused" amounts to other years. However, each of the current year's components of the general business credit was computed separately (since the limitation applied to the total, the sum of the current year's components, is generally larger than the actual credit claimed). Because the EZE credit and the New York Liberty Zone credit could offset 25 percent of the alternative minimum tax liability, the limitation varies from the other general business credits. The EZE credit and the New York Liberty Zone credit were computed separately after the rest of the general business credit was calculated. The amount of the EZE credit and the New York Liberty Zone credit was then added to the general business credit, and the combined amount was taken against the income tax (it is this combined amount that is reported as the general business credit in Figure F).

[11] The Job Creation and Worker Assistance Act of 2002 (JCWAA) allowed a business to take an additional first-year depreciation allowance on qualified MACRS property, usually equal to 30 percent of the cost. Generally, property must be acquired after September 10, 2001, and before May 6, 2003. The bonus depreciation was allowed for both regular tax and the AMT. If this bonus depreciation was claimed, depreciation resulting from the "normal" MACRS deduction from the qualified property was considered equal for AMT and regular tax purposes.

*Estimates should be used with caution because of the small number of sample returns on which they were based.

**In order to avoid disclosure of information for specific corporations, these data have been combined with data in a lower asset class.

¹ Zero assets class includes returns of liquidating or dissolving corporations that disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

² Includes returns not allocable by industrial sector.

³ Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of "S corporations" (qualifying corporations electing to be taxed through shareholders).

⁴ For purposes of the statistics, the alternative minimum tax, plus certain other taxes not shown, is included in total income tax before credits. Only regular income tax could be reduced by tax credits. The amount for total income tax after credits reflects certain other credits not shown separately.

NOTE: Detail may not add to totals because of rounding.

² Estimate should be used with caution because of the small number of sample returns on which it was based.

¹ Zero assets class includes returns of liquidating or dissolving corporations that had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

² Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of S corporations (qualifying corporations electing to be taxed through shareholders).

³ For purposes of the statistics, net capital gains from regulated investment companies and S corporations are excluded.

⁴ Net income of "S corporations" is distributed through their shareholders and is taxed as the shareholder's income. This income is not reflected in the statistics for income subject to tax.

⁵ Also includes deductions for dividends paid by regulated investment companies and real estate investment trusts. These deductions are not shown separately.

⁶ See also Footnote 4. Also excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies.

⁷ For purposes of the statistics, the alternative minimum tax, plus certain other taxes not shown, is included in total income tax before credits. Only regular income tax could be reduced by tax credits. The amount for total income tax after credits reflects certain other credits not shown separately.

NOTE: Detail may not add to totals due to rounding.
