

# Corporation Income Tax Returns, 2002

by Heather R. Duffy

**C**orporate pretax profits, or net income (less deficit), reported on income tax returns for 2002 continued to decline from 2001 levels, decreasing 6.6 percent from \$603.6 billion for 2001 to \$563.7 billion for 2002. This decrease in pretax profits led to a reduction in total income tax after credits, the amount payable to the U.S. Government, which fell by 7.9 percent, from \$166.7 billion for 2001 to \$153.6 billion for 2002. These declines occurred despite an increase in gross business profits, which grew 3.5 percent to \$6.7 trillion for Tax Year 2002, due to a decrease in cost of goods sold.

## Data Highlights

Both total receipts and total deductions decreased for 2002. Overall, total receipts decreased by \$0.6 trillion for Tax Year 2002, from \$20.3 trillion to \$19.7 trillion [1]. Total receipts from business operations and investments declined \$0.2 trillion to \$17.3 trillion, a 1.2-percent decrease. Total deductions also decreased from \$19.7 trillion to \$19.2 trillion, a decline of 2.5 percent. Given that total receipts decreased at a higher rate than total deductions, corporate pretax profits decreased for 2002.

Although corporate pretax profits weakened for Tax Year 2002, gross business profits, the amount of business receipts less cost of goods sold, showed an increase for the year. Gross profits increased by \$227.0 billion to \$6.7 trillion for 2002, an increase of 3.5 percent. The increase in gross business profits was primarily due to a decrease in cost of goods sold, which fell from \$11.0 trillion for 2001 to \$10.6 trillion for 2002.

As for the components of pretax profits, interest received and interest paid both showed declines for Tax Year 2002, decreasing \$266.4 billion to \$1.2 trillion and \$290.3 billion to \$912.8 billion, respectively. This is likely due to low interest rates that were in effect during Tax Year 2002. The Federal funds rate, which is commonly used as a point of reference for other interest rates, fell from an average of 2.28 percent for Tax Year 2001 to an average of 1.42 percent for Tax Year 2002 [2].

*Heather R. Duffy is an economist with the Corporation Returns Analysis Section. This article was written under the direction of Marty Harris, Chief.*

Special legislation resulted in larger deductions for depreciation and lower pretax profits. The Job Creation and Worker Assistance Act of 2002 provided an additional first year depreciation deduction for qualified property, usually equal to 30

percent of the cost. This deduction is in addition to the normal depreciation deduction [3]. For Tax Year 2002, this special depreciation allowance amounted to \$93.7 billion, contributing to an increase in the deduction for depreciation and a decrease in pretax profits. Depreciation increased from \$650.0 billion for Tax Year 2001 to \$710.9 billion for Tax Year 2002, an increase of \$60.9 billion, or 9.4 percent.

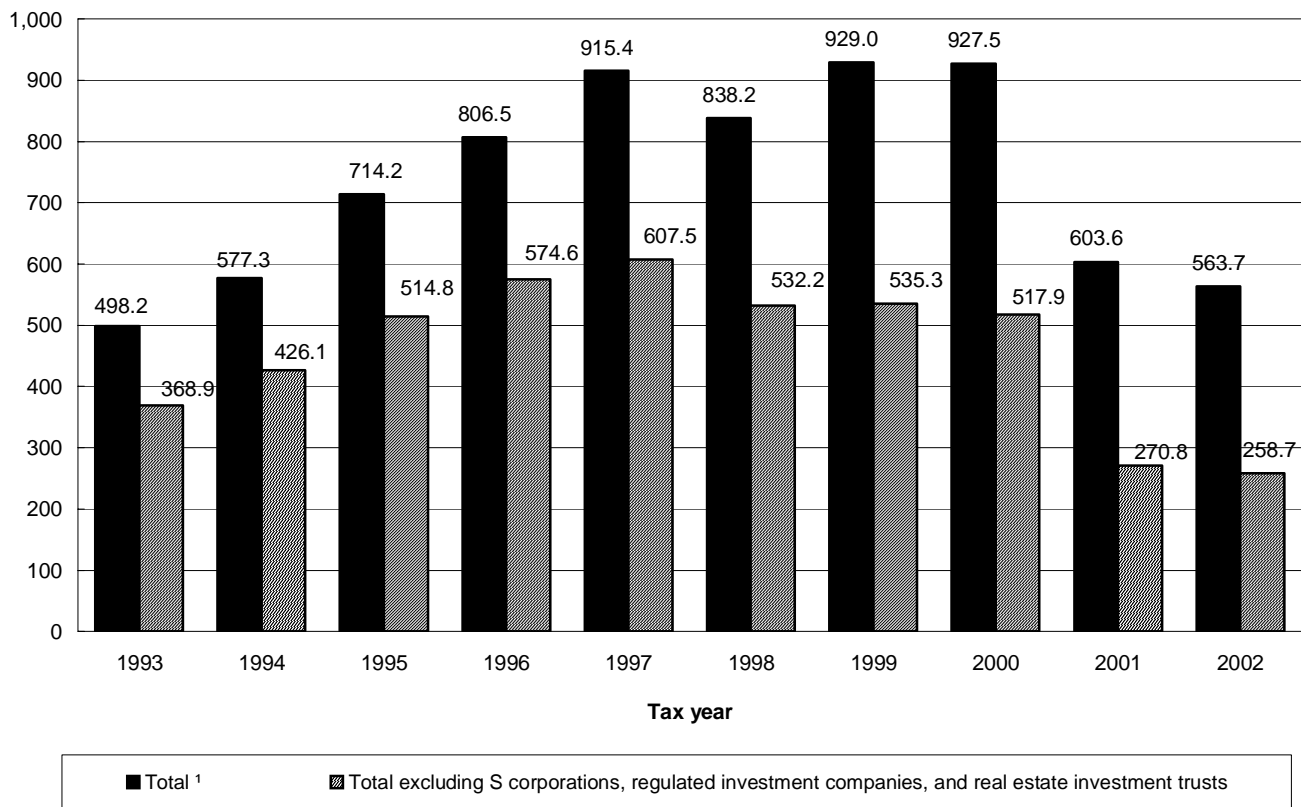

Pretax corporate profits continued to decline for Tax Year 2002, after a significant drop for 2001. Pretax profits, as they appear in the statistics, were \$603.6 billion for 2001 compared to \$563.7 billion for 2002 (Figure A). Pretax profits of corporations other than "passthrough entities" decreased 4.5 percent from \$270.8 billion for 2001 to \$258.7 billion for 2002. Passthrough entities are regulated investment companies, real estate investment trusts, and S corporations. These corporations pass through allocated profits and losses to their shareholders and, in general, pay no Federal income tax directly. Along with the decreases shown by corporations excluding passthrough entities, pretax profits for passthrough entities were down 8.4 percent, from \$332.8 billion for 2001 to \$305.0 billion for 2002. The number of corporations reporting positive pretax profits remained stable at 2.8 million; however, their profits decreased from \$1.11 trillion for Tax Year 2001 to \$1.05 trillion for Tax Year 2002, a decline of 5.3 percent. The largest corporations, those with total assets greater than \$2.5 billion, reported slightly more than half of the total for positive pretax profits (Figure B). The number of corporations reporting net losses increased by 6.6 percent to 2.5 million; however, their net losses decreased from \$508.9 billion to \$489.5 billion, a decrease of \$19.4 billion, or 3.8 percent.

Although corporate pretax profits weakened for Tax Year 2002, gross business profits, the amount of business receipts less cost of goods sold, showed an increase for the year.

Figure A

Corporate Pretax Profits, Tax Years 1993-2002

Billions of dollars

<sup>1</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of S corporations (qualifying corporations electing to be taxed through their shareholders).

NOTE: Pretax profits are net income (less deficit) in the statistics.

The finance and insurance sector saw the largest decrease in pretax corporate profits for Tax Year 2002, falling \$21.1 billion to \$247.0 billion (Figure C). This was primarily due to a large decrease in pretax profits of regulated investment companies, which fell \$41.3 billion to \$115.1 billion (Figure D). Utilities also saw a large decrease, falling from a positive \$16.8 billion to a negative \$1.0 billion. The combination gas and electric industry saw the largest decrease, \$14.0 billion, while the natural gas distribution industry fell by \$3.5 billion.

While overall corporate pretax profits declined, wholesale and retail trade pretax profits improved by \$11.7 billion, to \$87.0 billion. Substantial increases in

corporate pretax profits were also observed for professional, scientific, and technical services, which increased 143.9 percent, mostly due to a \$6.9-billion increase in the computer systems design and related services industry. Pretax profits for educational services rose 139.0 percent, and arts, entertainment, and recreation saw an increase of 111.9 percent.

The overall decrease in pretax positive profits was reflected in the amount corporations reported for “income subject to tax,” the tax base for the regular income tax [4]. The tax base decreased to \$600.6 billion for 2002, a decrease of \$34.7 billion and 5.5 percent from 2001 (Figure E). For most returns, income subject to tax equaled positive pretax profits

<sup>1</sup> Pretax profits are net income (less deficit) in the statistics.

<sup>2</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of S corporations (qualifying corporations electing to be taxed through their shareholders).

NOTE: Detail may not add to totals due to rounding.

minus certain statutory special deductions [5]. Certain corporations that elect to be taxed through their shareholders, in general, pay no Federal income tax directly. More specifically, S corporations, which are not usually taxable at the corporate level, did not have income subject to tax. Some, however, had a limited tax liability on capital gains and certain other income and were, therefore, included in the statistics for this item [6]. While regulated investment companies and real estate investment trusts generally passed their net incomes to be taxed through their shareholders, any amounts not distributed were included in income subject to tax, though the long-term capital gains of regulated investment companies are excluded from their profits (Figure D).

Total statutory special deductions, the components of which are shown in Figure E, decreased 11.9 percent to \$248.6 billion for 2002. Regulated investment companies are responsible for virtually all of the total decrease, dropping \$38.0 billion to \$125.2 billion. These companies are required to distribute most of their net incomes to shareholders for taxation and are allowed special deductions for dividends paid as a result.

The net operating loss deduction (NOLD) accounted for more than a quarter of total statutory special deductions. The NOLD increased 8.7 percent to \$65.8 billion. In general, net operating loss deductions, as defined in these statistics, include a portion of net losses from prior-year returns (exclud-

<sup>1</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of S corporations (qualifying corporations electing to be taxed through their shareholders).

<sup>2</sup> Pretax profits are net income (less deficit) in the statistics.

<sup>3</sup> This item includes other dividend deductions, not shown separately.

<sup>4</sup> Includes certain other taxes, not shown separately.

<sup>5</sup> For purposes of the statistics, this tax is included in both total income tax before credits and total income tax after credits. By law, tax credits could offset only income tax.

<sup>6</sup> Includes certain other credits, not shown separately.

NOTE: Detail may not add to totals due to rounding.

## Corporation Income Tax Returns, 2002

able Income (AMTI). For other tax years, net operating losses could be carried back to reduce any taxes paid in the 2 years previous to the loss year, and any remaining amounts could be carried forward 20 years to reduce income subject to tax (or carried back 3 years and carried forward 15 years for net operating losses incurred before August 6, 1997). The statistics for net operating losses represent only amounts carried forward from prior years and applied to reduce taxable income of the current year.

As a result of the decrease in income subject to tax, "total income tax before credits" decreased 5.1 percent to \$209.7 billion. This tax is the total of the corporations' U.S. taxes based on their total worldwide profits [7]. However, tax credits claimed by corporations increased for Tax Year 2002. Corporations use credits to reduce their regular tax liabilities. The principal credits were the foreign tax, U.S. possessions tax [8], nonconventional source fuel [9], general business, and prior-year minimum tax credits. Most of the increase in tax credits was due to increases in amounts reported for the general business credit, which increased by 27.0 percent to \$8.6 billion. The general business credit is the sum of other credit components in general, most of which are subject to a common limitation [10]. Amounts reported for the foreign tax credit also contributed to the overall increase in reported tax credits, increasing \$1.0 billion for Tax Year 2002.

The number of corporations reporting the "alternative minimum tax" (AMT) remained relatively stable around 7,100 for 2002, but the AMT itself, represented in the statistics for both "total income tax before credits" and "total income tax after credits," increased 40.6 percent from \$1.8 billion in 2001 to \$2.5 billion in 2002. Tax Year 2001 AMT payments were at an all-time low. Even with the increase for Tax Year 2002, AMT payments were the second lowest in over a decade. Under AMT, corporations are required to compute their regular tax liabilities, then their "tentative minimum tax" liabilities. The difference between the "tentative minimum tax" and the regular tax is the legally defined alternative minimum tax. The AMT was originally designed to ensure that a minimum amount of income tax was paid in spite of the legitimate use of exclusions, deductions, and credits. For Tax Years beginning after 1997, certain new and small corporations were not subject to AMT. Generally, a corporation was con-

sidered small for AMT purposes if the average annual gross receipts for 3 years prior to the 2002 Tax Year were \$7.5 million or less, and it was treated as a small corporation exempt from the AMT for all prior tax years beginning after 1997 [11].

### Summary

After a significant decline for Tax Year 2001, corporate pretax profits continued to fall for 2002. Declining total receipts led to a decrease of \$40.0 billion in pretax profits, a drop of 6.6 percent. Positive pretax profits decreased from \$1.11 trillion to \$1.05 trillion, while net losses decreased from \$508.9 billion to \$489.5 billion. Although pretax profits were down, gross business profits increased by \$0.2 trillion to \$6.7 trillion.

Income subject to tax, the tax base, decreased at a rate similar to positive pretax profits, down by 5.5 percent, to \$600.6 billion. Reflecting this decrease, income tax before credits decreased by 5.1 percent to \$209.7 billion, and income tax after credits, the amount payable to the U.S. Government, decreased by \$13.1 billion to \$153.6 billion. The AMT, included in the statistics for both income tax before credits and income tax after credits, increased 40.6 percent to \$2.5 billion.

### Data Sources and Limitations, Form 1120, Tax Year 2002

Estimates for Tax Year 2002 are based on a sample of corporation income tax returns with accounting periods ending July 2002 through June 2003 that posted to the Internal Revenue Service Business Master File from the beginning of July 2002 through the end of June 2004. These returns represent domestic corporations filing Form 1120 or 1120-A (short form); foreign corporations with income "effectively connected" with a U.S. business filing Form 1120-F; life insurance companies filing Form 1120-L; property and casualty insurance companies filing Form 1120-PC; S corporations filing Form 1120S; regulated investment companies filing Form 1120-RIC; and real estate investment trusts filing Form 1120-REIT.

A stratified probability sample was used to produce the statistics. A sample of 146,706 corporation income tax returns was drawn from a total population of 5,700,951. Based on the 137,939 returns of active corporations in the sample, the population estimate of

## Corporation Income Tax Returns, 2002

corporation returns was 5,266,607. The sample was selected after administrative processing was complete, but before any amendments or audit examinations, and was stratified based on combinations of net income and total assets at rates ranging from 0.25 percent to 100 percent.

Because the estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CV's) are used to measure the magnitude of this sampling error. The CV is defined in the section on sampling variability in the "SOI Sampling Methodology and Data Limitations" appendix of this publication. Figure F presents the CV's for total assets, business receipts, total income tax before credits, and total income tax after credits by industrial sector. The smaller the CV, the more reliable the estimate is judged to be. The estimates corresponding to the CV's in Figure F can be found in Table 1.

## Corporation Income Tax Returns, 2002

provided a special depreciation allowance of 50 percent for qualified property acquired after May 5, 2003.

- [4] Several adjustments are required to compute income subject to tax from net income, or pretax profits. The statistics for statutory special deductions include the previously unused portions of deductions reported by corporations that had no positive incomes subject to tax, either because they had no positive net incomes or because their deductions were sufficient to completely offset their net incomes. In addition, the relationship between net income and income subject to tax was defined differently for life insurance businesses and real estate investment trusts. Therefore, the net incomes shown in the statistics (which also includes the net incomes of S corporations, regulated investment companies, and real estate investment trusts, which do not bear entity level income taxes), minus statutory special deductions will not yield the statistics shown for incomes subject to tax.
- [5] For Tax Year 2002, statutory special deductions include the following: net operating loss deduction (NOLD); the various dividends received deductions; the deductions for dividends paid on certain preferred stock of public utilities; the deduction for dividends paid by regulated investment companies and real estate investment trusts; the special deduction for taxes paid by real estate investment trusts allowed under Internal Revenue Code section 857; and the special deduction allowed for small life insurance companies.
- [6] Beginning in Tax Year 1987, Statistics of Income (SOI) corporate statistics for “net income (less deficit)” (pretax profits) and for receipts and deductions of S corporations are limited to those derived “from a trade or business.” Investment or portfolio income (or loss), such as from interest, dividends, rents, royalties, and gain (loss) from sales of investment prop-

erty, and the deductions related to this income are not included in the SOI corporate statistics. Therefore, the overall statistics for receipts, deductions, and pretax profits are slightly understated; it is estimated, that for 2002, total pretax profits alone are understated by \$32.9 billion as a result (see Luttrell, Kelly, “S Corporation Returns, 2002,” *Statistics of Income Bulletin*, Spring 2005, Volume 24, Number 4).

Pretax profits and receipts also exclude regulated investment company net long-term capital gains (reduced by net short-term capital losses), which were not tabulated. If included, these gains would have totaled \$13.6 billion for 2002 and \$41.1 billion for 2001.

- [7] The U.S. taxes of foreign corporations that filed an 1120-F return are based on their incomes effectively connected with the conduct of a trade or business in the United States. The SOI calculation for “total income tax before credits” has not changed from prior years.
- [8] In 1996, the Small Business Job Protection Act repealed the credit for any corporation not already using it and instituted a phaseout of the credit for existing users until 2005.
- [9] For a complete listing of qualified fuels for this credit, see the explanation of terms in *Statistics of Income--2001, Corporation Income Tax Returns*, page 252.
- [10] For information on the components of the general business credit and its computation, see the explanation of terms in *Statistics of Income--2001, Corporation Income Tax Returns*, page 245.
- [11] The special depreciation allowance was allowed for both regular tax and the Alternative Minimum Tax (AMT). If this special depreciation was claimed, depreciation resulting from the “normal” (MACRS) deduction from the qualified property was considered equal for AMT and regular tax purposes.

\*Estimates should be used with caution because of the small number of sample returns on which they were based.

\*\*In order to avoid disclosure of information for specific corporations, these data have been combined with data in a lower asset-size class.

<sup>1</sup> Zero assets class includes returns of liquidating or dissolving corporations that disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

<sup>2</sup> Includes returns not allocable by industrial sector, not shown separately.

<sup>3</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of S corporations (qualifying corporations electing to be taxed through shareholders).

<sup>4</sup> For purposes of the statistics, the alternative minimum tax, plus certain other taxes not shown, is included in total income tax before and after credits. Only regular income tax could be reduced by tax credits. Amount for total income tax after credits reflects certain credits not shown separately.

<sup>5</sup> Includes wholesale and retail trade not allocable, not shown separately.

NOTE: Detail may not add to total due to rounding.

\*Estimate should be used with caution because of the small number of sample returns on which it was based.

<sup>1</sup> Zero assets class includes returns of liquidating or dissolving corporations that had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

<sup>2</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment, rental, and portfolio income (including capital gains) of S corporations (qualifying corporations electing to be taxed through shareholders).

<sup>3</sup> For purposes of the statistics, net capital gains from regulated investment companies and S corporations are excluded.

<sup>4</sup> Net income of S corporations is distributed through their shareholders and is taxed as the shareholder's income. This income is not reflected in the statistics for income subject to tax.

<sup>5</sup> Also includes deductions for dividends paid by regulated investment companies and real estate investment trusts. These deductions are not shown separately.

<sup>6</sup> See also Footnote 4. Also excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies.

<sup>7</sup> For purposes of the statistics, the alternative minimum tax, plus certain other taxes not shown, are included in total income tax before credits. Only regular income tax could be reduced by tax credits. The amount for total income tax after credits reflects certain credits not shown separately.

NOTE: Detail may not add to total due to rounding.
