# SOI BULLETIN

## A QUARTERLY STATISTICS OF INCOME REPORT | Volume 36, Number 1

2

**55** 

The Statistics of Income (SOI) Bulletin is issued quarterly by the Statistics of Income Division of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers, and tax administrators. Selected historical and other data tables, previously published in the spring issue of the Bulletin are now only available on SOI's pages of the IRS Website (https://www.irs.gov/uac/soi-tax-stats-historical-data-tables).

Information on the availability of supplemental data on the topics included in this issue or other SOI subjects, may be obtained by sending an email to SOI's Statistical Information Services at sis@irs.gov, or by writing to the Director, Statistics of Income Division RAAS:S, Internal Revenue Service, 1111 Constitution Avenue, NW, K-Room 4112, Washington, D.C. 20224.

The *SOI Bulletin* is prepared under the direction of Wayne Kei, Chief, Communications and Data Dissemination Section. Paul Bastuscheck (layout and graphics), Clay Moulton (layout and graphics), Lisa Smith (layout and graphics editor), and Camille Swick (layout and graphics) are the editorial staff who prepare the manuscript. Jim Hobbs, Emily Gross, and Beth Kilss also made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

**NOTE:** When using information from this report, cite the publication as follows—

Internal Revenue Service Statistics of Income Bulletin Summer 2016 Washington, D.C.

### **Inside This Issue:**

## **High-Income Tax Returns for 2013**

by Justin Bryan

For 2013, there were slightly more than 5.6 million individual income tax returns with an income of \$200,000 or more, accounting for 3.8 percent of all returns for the year. Of these, 12,794 returns had no income tax liability, a 4.9-percent decline from the number of returns with no income tax liability for 2012, and the fourth decrease in a row since reaching an all-time high of 19,551 returns for 2009.

## **Individual Noncash Contributions, 2013**

by Pearson Liddell and Janette Wilson

For Tax Year 2013, individual taxpayers who itemized deductions reported a total of \$51.6 billion in noncash charitable contributions on a total of 22.2 million returns. About a third (7.7 million) of these returns reported \$46.4 billion in charitable contribution deductions using Form 8283, *Noncash Charitable Contributions*. Individual taxpayers use this form when the amount of taxpayer deductions for all noncash donations on Schedule A, *Itemized Deductions*, exceeds \$500.

### **Individual Income Tax Shares, 2013**

82

by Adrian Dungan

For Tax Year 2013, taxpayers filed 138.3 million individual income tax returns, excluding returns filed by dependents. The average adjusted gross income (AGI) reported on these returns was \$65,314, down from \$66,444 for the previous year. Total AGI decreased 0.1 percent to \$9.03 trillion, while total income tax increased 4.0 percent to \$1.23 trillion. For 2013, the adjusted gross income threshold for the top 50 percent of all individual income tax returns was \$36,841 for the year. These taxpayers accounted for 88.5 percent of total AGI and paid 97.2 percent of total income tax. The top 0.001 percent of tax returns had an AGI of \$45,097,112 or more. These taxpayers accounted for 1.9 percent of total AGI, and paid 3.3 percent of total income tax. The average tax rate of 13.64 percent for all returns in 2013 was the highest of this 10-year study.

## **Inside This Issue** (Continued)

## Corporate Foreign Tax Credit, Tax Year 2012 94

by Nuria McGrath

For Tax Year 2012, corporations reported over \$109.6 billion in foreign tax credits, which is almost identical to the amount claimed in 2011. Foreign source taxable income from corporations claiming the foreign tax credit decreased 1.6 percent from 2011, to \$420 billion for 2012, while their current foreign taxes paid increased 21.3 percent, to \$49.3 billion. Firms in the manufacturing industry accounted for almost three-fifths of the

foreign source taxable income. Together, the Netherlands, the United Kingdom, Canada, and Japan were responsible for 28.7 percent of the foreign source taxable income

#### In the Next Issue

Articles on the following topics are tentatively planned for inclusion in the Fall 2016 issue of the *Statistics of Income Bulletin*, scheduled to be published in November 2016:

- Partnership Returns, 2013
- Sole Proprietorship, 2013

## **High-Income Tax Returns for 2013**

#### by Justin Bryan

he Tax Reform Act of 1976 requires annual publication of data on individual income tax returns reporting incomes of \$200,000 or more, including the number of such returns reporting no income tax liability and the importance of various tax provisions in making these returns nontaxable. This article presents detailed data for high-income returns for 2013 and summary data for the period 1977 to 2012. Detailed data for the years 1974 through 2012 were published previously. (See the References section for more details.)

Two income concepts are used in this article to classify tax returns as high income: the statutory concept of adjusted gross income (AGI) and the "expanded income" concept.<sup>2</sup> The

expanded income concept uses items reported on the tax return to obtain a more comprehensive measure of income than AGI. Specifically, expanded income is AGI *plus* tax-exempt interest, nontaxable Social Security benefits, the foreign-earned income exclusion, and items of "tax preference" for alternative minimum tax (AMT) purposes *less* unreimbursed employee business expenses, moving expenses, investment interest expense to the extent it does not exceed investment income, and miscellaneous itemized deductions not subject to the 2-percent-of-AGI floor.<sup>3,4,5</sup>

AGI and expanded income differed for 43.9 million (29.8 percent) of the 147.4 million individual income tax returns filed for 2013 (Figure A). Expanded income exceeded AGI in

SCHOOL Detail may not not be to be because of recasting. This ligans to branch on U.S. Individual Innover Text Returns. The Appendix Actions on Connecting of this wild not be described of the second process of adjusted grown innovers of the second process of the s

<sup>&</sup>lt;sup>1</sup> The statutory requirement is contained in section 2123 of the Tax Reform Act of 1976 (90 Stat. at 1915).

The 1976 Act specified four income concepts for classifying tax returns: adjusted gross income (AGI), expanded income, AGI plus excluded tax preference items, and AGI less investment interest expense not in excess of investment income. Section 441 of the Deficit Reduction Act of 1984 (98 Stat. at 815) eliminated the requirement to use the last two income concepts.

<sup>3</sup> The definition of adjustments to AGI to obtain the expanded income given in the text is for the current year. See Appendix A for a discussion of AGI and expanded income and a list of adjustments covering all years since 1977.

See Notes to Appendix A, note A4

Tax-exempt interest had to be reported on the individual income tax return starting with Tax Year 1987 and is included in expanded income starting with that year. Beginning with Tax Year 1991, tax-exempt interest was incorporated into the criteria used for sampling returns for Statistics of Income, thus increasing the reliability of the estimates of expanded income.

two-thirds of these returns. The average difference between expanded income and AGI was \$6,545, and the median difference was \$3,392. Although expanded income is a more comprehensive measure of income than AGI, for some taxpayers the subtractions from AGI to arrive at expanded income exceed the additions, resulting in expanded income that is less than AGI. Returns where expanded income exceeded AGI were concentrated among returns with \$50,000 or less of AGI. Returns where AGI exceeded expanded income were concentrated among returns with more than \$50,000 of AGI.

There are also two tax concepts in this article used to classify returns as taxable or nontaxable: "U.S. income tax" and "worldwide income tax." U.S. income tax is total Federal income tax liability, which includes the AMT, *less* all credits against income tax, and does not include payroll or self-employment taxes. To be considered taxable, a return had to have a positive income tax liability after accounting for all credits (including refundable credits). A nontaxable return, on the other hand, could either have a zero or negative income tax liability after accounting for all credits (including refundable credits). Since the Federal income tax applies to worldwide income and allows a

credit (subject to certain limits) for income taxes paid to foreign governments, a return could be classified as nontaxable under the U.S. income tax concept even though income taxes had been paid to a foreign government. Worldwide income tax addresses this circumstance by adding back the allowable foreign tax credit and foreign taxes paid on excluded foreign-earned income to U.S. income tax.<sup>6,7</sup> The sum of these two items is believed to be a reasonable proxy for foreign taxes actually paid.

Figure B shows a cross-tabulation of tax returns based on whether a return has positive, zero, or negative U.S. income tax liability and whether it also has positive, zero, or negative worldwide income tax. By definition, returns with positive U.S. income tax liability have positive worldwide income tax liability; returns with zero U.S. tax liability have either positive or zero worldwide income tax liability; and returns with negative U.S. income tax liability have either positive or negative worldwide income tax liability. Almost 36 percent of the 147.4 million tax returns filed for 2013 had zero or negative U.S. income tax liability, and 97.0 percent of these returns had AGI of \$50,000 or less—unsurprising given the progressive nature of the U.S. income tax. Only 3 out of every 1,000 returns with

<sup>[1]</sup> Includes returns with adjusted gross deficit.

NOTES: Detail may not add to totals because of rounding. This figure is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. and worldwide income tax.

SOURCE: IRS. Statistics of Income Division. Individual High-Income Tax Returns. May 2016.

<sup>&</sup>lt;sup>6</sup> See Appendix B for a discussion of the tax concepts. In data published for years prior to 1989, either in articles presented in the *Statistics of Income Bulletin* or in chapters in *Statistics of Income—Individual Income Tax Returns* (see Reference section), the "U.S. income tax" concept was described as "total income tax," and the "worldwide income tax" concept was described as "modified total income tax"

The inclusion of foreign taxes paid on excluded foreign-earned income, beginning with Tax Year 1990, represents an improvement in the worldwide income tax concept. However, it also represents a slight break in the year-to-year comparability of data for worldwide income tax. Nevertheless, the number of returns with foreign taxes paid on excluded foreign-earned income is extremely small compared to the number of returns with the foreign tax credit.

zero or negative U.S. income tax liability had positive worldwide income tax liability, and 32.2 percent of these returns had AGI of \$50,000 or more.

## **Number of High-Income Returns**

For 2013, there were nearly 5.6 million individual income tax returns with an AGI of at least \$200,000, and slightly more than 5.6 million returns with an expanded income of \$200,000 or more (Figure C). The number of returns with AGI above the \$200,000 threshold increased 5.8 percent from 2012 and

accounted for 3.8 percent of all returns for 2013. Similarly, the returns with expanded incomes above the \$200,000 threshold also increased 5.8 percent from 2012 and also accounted for 3.8 percent of all returns for 2013.

The \$200,000 threshold for high-income returns is measured in current-year (nominal) dollars. Because it is fixed in nominal terms, as time passes, more and more tax returns have had incomes exceeding this threshold simply due to inflation. Therefore, to facilitate a comparison of tax returns across time, Figure C shows what the \$200,000 threshold in 1976 would be

[1] Inflation-adjusted dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers with 1976 as the base year. See footnote 8 of this article for further details.

NOTES: This figure is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016.

each year after adjusting for inflation and the number and share of returns above this threshold.<sup>8</sup> For Tax Year 2013, this inflation-adjusted threshold was \$818,830.

Adjusting for inflation, the number of returns above the AGI threshold was 470,906 for Tax Year 2013—0.32 percent of all returns—a 12.0-percent decrease from the previous year. Since

1977, the number of returns above this inflation-adjusted threshold has increased at a rate of approximately 6.7 percent per year. In comparison, the total number of returns has increased 1.5 percent per year since 1977. Similarly, the number of returns above the inflation-adjusted threshold using the expanded income concept was 480,987 for Tax Year 2013—0.33 percent of all

<sup>&</sup>lt;sup>8</sup> Inflation-adjusted dollars are based on the Consumer Price Index (CPI-U) as published by the U.S. Department of Labor, Bureau of Labor Statistics. The consumer price index approximates buying patterns of typical urban consumers. The annual index is the average of the monthly indices.

returns—an 11.8-percent decrease from the previous year. Since 1977, the number of returns above this threshold has increased 6.0 percent per year.

From 1977 to 2013, the number of returns reporting incomes of \$200,000 or more generally increased annually. The exceptions to this reflect the economic downturns in Tax Years 2001, 2002, 2008, and 2009. The general trend of a rise in the number of returns is similar when using the inflation-adjusted income threshold. However, the increases are much smaller, and the number of returns above the inflation-adjusted threshold decreased in additional years, e.g., Tax Years 1980, 1981, 1989, 1990, 1991, 1993 and 2013. Many of these years also coincided with economic downturns.<sup>9</sup>

The difference in the number of high-income returns between the two income concepts significantly decreased beginning with 1987, when AGI began to include 100 percent of long-term capital gains. This change in the definition of AGI made it more comparable to the expanded-income concept. In addition, due to the inclusion of tax-exempt interest in expanded income in 1987, expanded income for years after 1986 is not strictly comparable to expanded income for years before 1987.

#### **Nontaxable High-Income Returns**

Of the 5.6 million income tax returns with an AGI of \$200,000 or more, 12,517 showed no U.S. income tax liability for Tax Year 2013 (top panel of Figure D). Also, of the 5.6 million tax

[1] Inflation-adjusted dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers with1976 as the base year. See footnote 8 of this article for further details.

NOTES: This figure is based on U.S. Individual Income Tax Returns. See Figure M for the derivation of U.S. income tax and worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits were factored in to determine tax liability. In order to maintain historical comparability, Tax Years 2007 and 2008 data were recalculated using the new criteria However, 2007 and 2008 tables, published earlier, do not reflect these changes. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016

returns with expanded income of \$200,000 or more, 25,926 had no U.S. income tax liability. This represents a 38.4-percent decrease for high-AGI returns and 19.8-percent decrease for high expanded-income returns with no U.S. income tax from the number of returns for 2012.

Of the returns with an AGI of \$200,000 or more, 4,266 returns showed no worldwide income tax liability for Tax Year 2013. For returns with an expanded income of \$200,000 or

more, 12,794 had no worldwide income tax liability. This represents a 42.4-percent decrease for high-AGI returns and 4.9-percent decrease for high expanded-income returns with no worldwide income tax, compared to the number of returns for 2012. The decrease for the high-AGI returns without worldwide income tax represents the largest decrease since 1979. One possible explanation for this decrease was the inclusion of the net investment income tax (NIIT), which added a 3.8-percent tax

on investment income for high-income taxpayers after total tax credits were subtracted from income tax. <sup>10</sup> Tax-exempt interest was not subject to the NIIT and may explain why the decrease in high expanded-income returns without worldwide income tax was much smaller.

Tables 1 and 2 also show the number of all returns, taxable returns, and nontaxable returns cross classified by broad AGI and expanded-income size classes. Most returns fall in the same broad income-size class under both income concepts, but the number of nontaxable returns under the expanded-income concept is generally greater than the AGI concept in each income class over \$50,000. They also show that there were 5.5 million returns with incomes of \$200,000 or more as measured by both AGI and expanded income, of which 10,656 returns had no U.S. income tax liability and 2,494 returns had no worldwide income tax.

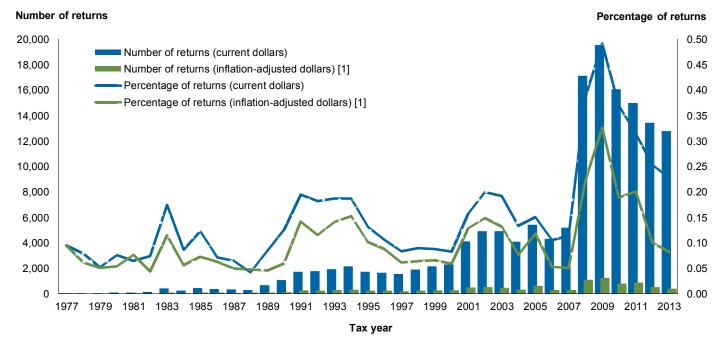

Of the roughly 471,000 returns with an AGI over the inflation-adjusted high-income threshold, 901 returns had no U.S. income tax liability in 2013, down 60.8 percent from the previous year (lower panel of Figure D). Additionally, 217 returns showed no worldwide income tax liability, down 59.4 percent from 2012. Measured using expanded income, of the almost

481,000 returns above the inflation-adjusted threshold, 1,158 returns had no U.S. income tax liability, a 52.7-percent decrease from the number of returns for 2012, as well as 398 returns that showed no worldwide income tax liability, down 27.2 percent from the previous year.

Moving from the nominal \$200,000 threshold to an inflation-adjusted threshold does not generally change substantially the share of high-income returns that are nontaxable. Using AGI, 0.2 percent of high-income returns had no U.S. income tax, using both a nominal \$200,000 threshold and an inflation-adjusted threshold, while 0.08 percent of high-income returns over the nominal threshold and 0.05 percent of high-income returns above the inflation-adjusted threshold had no worldwide income tax for 2013. When using expanded income with a nominal \$200,000 threshold, 0.5 percent of high-income returns had no U.S. income tax, and 0.2 percent had no worldwide income tax for 2013, while an inflation-adjusted threshold showed that 0.2 percent had no U.S. income tax and 0.1 percent had no worldwide income tax.

Figure E shows the evolution of the number and share of returns with an expanded income of \$200,000 or more with no worldwide income tax. The number of returns above the

<sup>10</sup> Tax Year 2013 was the first year for which the NIIT was in effect. (See section 1411 of the Health Care and Education Reconciliation Act of 2010 [P.L. 111-152].)

threshold is read off the left vertical axis, and the share of returns above the threshold is read off the right vertical axis. Two series are shown for each measure, one using a nominal \$200,000 threshold and one using an inflation-adjusted threshold.

In this figure, the spread between the two shares was small for the late 1970s, showed an increase for the early 1980s, and then narrowed before widening again after 1988. The spread generally narrowed after 1993 but increased or stayed fairly consistent from 2002 to 2007. From 2008 to 2012, the spread widened considerably. The gap (almost 0.15 percentage points) for 2013 was still high compared with most of the years in this study. 11

## **Reasons for Nontaxability**

Taxpayers may have their tax liability reduced—possibly to zero or beyond—in a number of ways. These include claiming tax credits, which directly reduces an individual's tax liability; claiming various deductions, which reduces taxable income; and receiving income that is excluded from the calculation of taxable income.

It is possible for certain itemized deductions and certain exclusions from income to lead to nontaxability by themselves, but high-income returns are more often nontaxable for a combination of reasons, none of which alone would result in nontaxability. Moreover, some items, either singly or in combination, may eliminate "regular tax" liability (i.e., income tax excluding the AMT), but cannot eliminate an AMT liability, since these items give rise to adjustments or preferences for AMT purposes.

Because they do not generate AMT adjustments or preferences, tax-exempt bond interest (not including private activity bonds), itemized deductions for interest expenses, miscellaneous itemized deductions not subject to the 2-percent-of-AGI floor, casualty or theft losses, and medical expenses (exceeding 10 percent of AGI) could, by themselves, produce nontaxability.

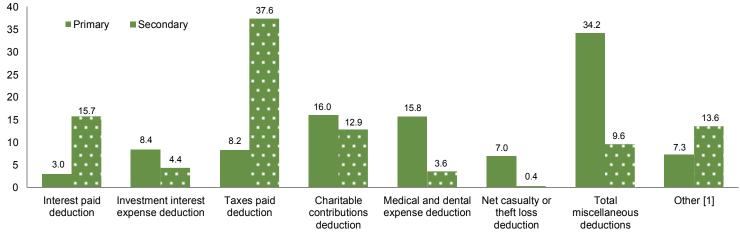

Due to the AMT exemption of \$80,800 for joint returns (\$51,900 for single and head-of-household returns and \$40,400 for returns of married taxpayers filing separately), a return could have been nontaxable even though it included some items that produced AMT adjustments or preferences. 12 Further, since the starting point for "alternative minimum taxable income" was taxable income for regular tax purposes, a taxpayer could have adjustments and preferences exceeding the AMT exclusion without incurring AMT liability. This situation could occur if taxable income for regular tax purposes was sufficiently negative due to itemized deductions and personal exemptions exceeding AGI, such that the taxpayer's AMT adjustments and preferences are less than the sum of the AMT exclusion and the amount by which regular taxable income is below zero. Note that, because of the AMT, taxpayers may have found it beneficial to report additional deduction items on their tax returns, even if the items did not produce a benefit for regular tax purposes.

The most important item in eliminating tax on the 4,266 returns without any worldwide income tax and AGI of \$200,000 or more was total miscellaneous deductions. This was the case in 34.2 percent (1,458 returns) of those returns (Figure F). The

Figure F

## Returns With Adjusted Gross Income of \$200,000 or More and No Worldwide Income Tax: Percentage of Primary and Secondary Reasons for No Income Tax Liability, Tax Year 2013

## Percentage of returns

<sup>[1]</sup> Includes 4 returns where the primary reason for nontaxability was not identified by the data items selected for this article. Does not include returns where there was no secondary reason for nontaxability.

NOTES: Detail may not add to 100 percent because of rounding. This figure is based on U.S. Individual Income Tax Returns. See Figure M for the derivation of worldwide income tax. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016.

Note that before 1991, the number of nontaxable returns with expanded income of \$200,000 or more was based on samples. Year-to-year differences in the number and percentages of nontaxable returns with expanded income of \$200,000 or more may have represented sampling variability, in addition to actual changes in the number of such returns. Beginning with Tax Year 1991, nontaxable returns with expanded income of \$200,000 or more were sampled at higher rates, which reduced the sampling variability of these returns and, therefore, provided improved estimates. Thus, the data for returns prior to 1991 are not entirely comparable with data for more recent years.

The AMT exclusion phases out above certain levels of "alternative minimum taxable income," based on filing status. However, since taxpayers will have some AMT liability in the phase-out range, the phase-out income is not relevant for nontaxable, high-income returns.

next three categories that most frequently had the largest effect in eliminating taxes were: 1) charitable contributions deduction (16.0 percent or 684 returns); 2) medical and dental expense deduction (15.8 percent or 672 returns); and 3) investment interest expense deduction (8.4 percent or 360 returns). The items that most frequently had the second largest effect in reducing regular tax liability for high-AGI returns with no worldwide income tax were the deduction for taxes paid (37.6 percent or 1,606 returns) and the interest paid deduction (15.7 percent or 671 returns).

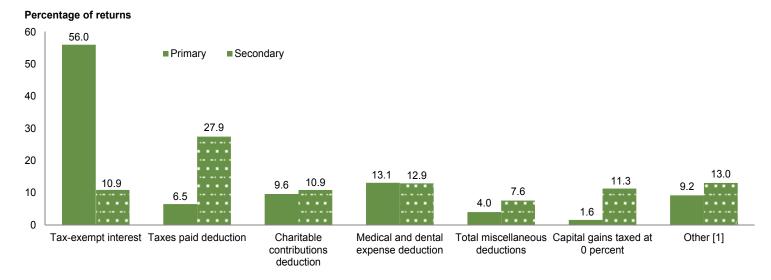

Of the 12,794 returns without any worldwide income tax and expanded incomes of \$200,000 or more, the most important item in eliminating tax, on 56.0 percent of returns, was the exclusion for interest income on State and local Government bonds ("tax-exempt interest") (Figure G). The next three categories that most frequently had the largest effect in eliminating taxes were: 1) medical and dental expense deduction (13.1 percent or 1,676 returns); 2) charitable contributions deduction (9.6 percent or 1,231 returns); and 3) taxes paid deduction (6.5 percent or 830 returns). The items that most frequently had the second largest effect in reducing regular tax liability on high expanded-income returns with no worldwide income tax were the deduction for taxes paid (27.9 percent or 3,574 returns) and medical and dental expense deduction (12.9 percent or 1,655 returns).

Tables 7 and 8 in this article also classify tax returns by items having the largest and second largest effects in reducing or eliminating income tax. For returns on which each of the largest effects was identified, the tables show each of the second

largest effects as well.<sup>13</sup> For example, Table 7 shows that on taxable returns with some U.S. income tax and expanded incomes of \$200,000 or more, the taxes paid deduction was the most important item 62.9 percent of the time. Where this was the primary item, the interest paid deduction was the second most important item 59.3 percent of the time, and the charitable contributions deduction was the second most important item 26.3 percent of the time. The foreign tax credit was the largest reason for nontaxability for both AGI (62.5 percent of the time) and expanded-income returns with no income tax (38.9 percent of the time). However, in determining worldwide tax, this no longer has an effect (by definition).

Figure H presents another way of illustrating the importance of selected tax provisions in reducing or eliminating income tax liability. It shows the number of high expanded-income tax returns with no worldwide income tax utilizing selected tax provisions by the percentage of income reduced. For example, the itemized deduction for medical and dental expenses reduced income by greater than 60 percent of expanded income on 1,226 returns (or 9.6 percent) of the 12,794 returns, but there were no medical and dental expense deductions on 5,574 returns or 43.6 percent. Conversely, the taxes paid deduction reduced income between 0 and 30 percent of expanded income on 10,093 returns (or 78.9 percent) of the 12,794 returns, but reduced income by greater than 60 percent on only 547 returns. Tables 9 and 10 report the frequencies of returns in finer detail by the percentage of income reduced.

Figure G
Returns With Expanded Income of \$200,000 or More and No Worldwide Income Tax: Primary and Secondary Reasons for No Income Tax Liability, Tax Year 2013

[1] Does not include returns where there was no secondary reason for nontaxability.

NOTES: Detail may not add to 100 percent because of rounding. This figure is based on U.S. Individual Income Tax Returns. See Figure M for the derivation of worldwide income tax. See Appendix A: Income Concepts of this article for a discussion of expanded income.

SOURCE: IRS, Statistics of Income Division, High-Income Tax Returns, May 2016.

<sup>&</sup>lt;sup>13</sup> Tax-exempt interest and the foreign-earned income exclusion were not included in Tables 7 and 8 as possible tax effects before Tax Year 1994. Thus, caution should be exercised in making comparisons between data prior to 1994 and after 1993.

Figure H
Returns With Expanded Income of \$200,000 or More and No Worldwide Income Tax: Number of Returns With Itemized Deductions, Credits, and Tax Preferences, by Percentage of Income Reduced, Tax Year 2013

		No	Number of returns on which income was reduced by percentage of income			
Type of deduction, credit, or tax preference	Total	deduction, credit, or tax preference	Under 30 percent	30 percent under 60 percent	60 percent or more	
	(1)	(2)	(3)	(4)	(5)	
Total itemized deductions	12,794	1,129	4,168	3,404	4,093	
Interest paid deduction:						
Total	12,794	9,019	3,678	55	41	
Investment interest expense deduction per income concept	12,794	9,937	2,776	43	38	
Taxes paid deduction	12,794	1,179	10,093	975	547	
Charitable contributions deduction	12,794	2,179	9,262	1,307	45	
Medical and dental expense deduction	12,794	5,574	5,201	793	1,226	
Net casualty or theft loss deduction	12,794	12,443	35	34	282	
Net limited miscellaneous deduction per income concept	12,794	4,710	7,029	625	430	
Non-limited miscellaneous deduction	12,794	11,613	1,163	11	5	
Deduction equivalent of:						
Total credits	12,794	12,099	464	155	75	
Foreign tax credit	12,794	12,794	0	0	0	
General business credit	12,794	12,553	107	113	20	
Refundable tax credits used to offset income tax before credits	12,794	12,790	0	0	4	
Tax preferences excluded from adjusted gross income	12,794	1,658	2,665	3,295	5,176	
Nontaxable Social Security benefits	12,794	5,674	7,120	0	0	
Capital gains taxed at 0 percent	12,794	7,428	5,134	232	0	

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, January 2016.

#### **Distribution of Tax Levels**

Figure I shows the distribution of high expanded-income returns by the ratio of "adjusted" worldwide taxable income to expanded income. Taxable income was adjusted for this figure by subtracting the deduction equivalents of tax credits and other items from taxable income. <sup>14</sup> Thus, the figure shows the extent to which expanded income is reduced before taxes are imposed on the remaining income. The figure illustrates three important facts about high-income tax returns:

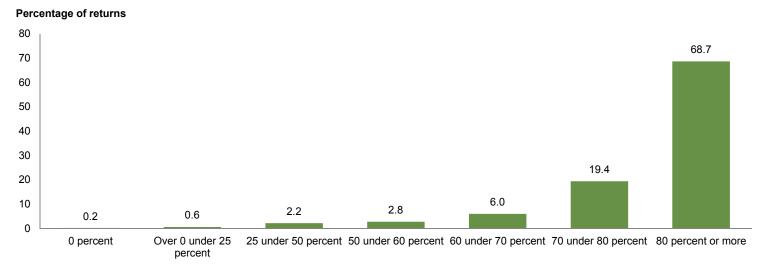

- Only a small portion of all high-income taxpayers did not pay any worldwide income taxes (0.2 percent).
- Another group of high-income taxpayers—small, but larger than the nontaxable group—was able to offset a very substantial fraction of income before being subject to tax. This type of high-income taxpayer pays income tax equal to only a small share of his or her income. Such taxpayers may be called "nearly nontaxable." About 0.6 percent of high expanded-income taxpayers who reported at least some worldwide tax liability were able to reduce

- their adjusted taxable income to less than 25 percent of their expanded income.
- Overall, most high-income taxpayers were subject to tax on a large share of their income (68.7 percent of high expanded-income taxpayers had adjusted taxable income equal to 80 percent or more of expanded income; and 96.9 percent had adjusted taxable income equal to 50 percent or more of expanded income).

Figure J shows the distribution of all expanded-income returns by worldwide income tax burden. It classifies tax returns by size of expanded income and effective tax rate, i.e., income tax as a percentage of expanded income. This figure illustrates the wide dispersion of effective tax rates for all returns. For example, while 2.9 percent of returns with expanded incomes of \$200,000 or more had worldwide income tax of less than 10 percent of income, 21.3 percent had effective tax rates of 25 percent or more. Also, 28.5 percent had effective tax rates between 20 and 25 percent. In contrast, only 2.5 percent of taxpayers with an expanded income between \$100,000 and \$200,000

<sup>14</sup> See Appendix B for a description of how the deduction equivalent of credits was computed.

had effective tax rates of 20 percent or more, including only 0.1 percent with effective tax rates of 25 percent or more.

#### **Characteristics of Tax Returns**

By comparing nontaxable returns with taxable returns, some of the different characteristics of nontaxable returns can be deduced. For example, under the expanded-income concept, returns without worldwide income tax were much more likely (87.0 percent) than taxable returns (27.3 percent) to have tax-exempt interest, and when they did, the average amount for nontaxable returns (\$234,576) was much higher than the average amount for all taxable returns (\$28,794) (Figure K). Similarly, nontaxable returns (37.4 percent) were much less likely than high-income taxable returns (87.5 percent) to have income from salaries and wages. Tables 5 and 6 show the aggregate frequencies and amounts of all the types of income, the items of tax preference, and the various deductions, credits, and income taxes on high-income returns.

#### More Detailed Data for 2013

Tables 1 through 12 present data based on income tax returns for 2013, mainly those with income of \$200,000 or more (measured in current-year dollars) of AGI or expanded income. Most of the data are shown for taxable and nontaxable returns, both separately and combined. In summary, the tables show:

- The numbers of returns under the two tax concepts, crossclassified by broad AGI and expanded-income size classes (Tables 1 and 2);
- The distributions of taxable income as a percentage of AGI and expanded income (Tables 3 and 4);
- The frequencies and amounts of various sources of income, exclusions, deductions, taxes, and tax credits, as well as the relationship between the two income concepts (Tables 5 and 6);

- The frequencies with which various deductions and tax credits are the most important and second most important items in reducing (or eliminating) income tax (Tables 7 and 8):
- The frequencies with which various itemized deductions, tax credits, and tax preference items occur as certain percentages of income (Tables 9 and 10); and
- The distributions of effective tax rates, i.e., income tax under each definition as a percentage of income as well as the percentage of income that is subject to preferential tax rates, by broad income-size classes (Tables 11 and 12).

The odd-numbered tables use the U.S. income tax concept to classify returns as taxable or nontaxable, whereas the even-numbered tables use the worldwide income tax concept.

## **Appendix A: Income Concepts**

Congress wanted data on high-income taxpayers classified by an income concept that was more comprehensive than adjusted gross income (AGI), but that was based entirely on items already reported on income tax returns. To derive such an income concept, it was necessary to begin with a broad, inclusive concept of income. AGI must then be compared to this broad income concept, and the differences identified (both additions and subtractions) from items reported on tax returns.

This appendix begins by defining "Haig-Simons income," a very broad concept of income used by economists and others as a standard. AGI is then compared to Haig-Simons income, and the major differences between the two income concepts are listed. The next section defines "expanded income," a more comprehensive income measure than AGI, based entirely on tax return data, and the final section explains in some detail the adjustment to income for investment expenses.

#### **Haig-Simons Income**

The broadest measure of annual income generally used by economists and others is defined as the value of a household's consumption plus the change, if any, in its net worth. This income concept is referred to as Haig-Simons income, or H-S income, after the two economists who wrote extensively about it [A1]. The H-S income of a household that consumed \$25,000 and saved \$2,000 in a year would be \$27,000. Alternatively, the H-S income of a household that consumed \$25,000 and had no additions to savings, but had assets that declined in value by \$1,000 in a year, would be \$24,000.

H-S income consists of three broad components: labor income, capital income (income from assets), and income from transfer payments. The major elements of each of these three components are as follows:

Labor income—This includes all forms of employee compensation (including wages and salaries), employee fringe benefits (such as employer-provided health insurance and accrued pension benefits or contributions), and the employer share of payroll taxes (such as Social Security taxes). Labor income also includes the labor share of self-employment income. Expenses of earning labor income would be deducted in arriving at H-S income. Deferred labor income (such as pension benefits) would be counted in the year it was earned, rather than in the year it was received.

Capital income—This includes all income from assets, including interest, dividends, rents, royalties, accrued capital gains (whether or not realized), the capital income share of self-employment income, and the rental value of consumer durables (most importantly, the rental value of owner-occupied housing). Capital income is measured in real (inflation-adjusted) terms and is net of real, economic depreciation and all other expenses (which could exceed capital income).

*Transfer payments*—These include payments in cash such as Social Security benefits, workers' compensation, unemployment

benefits, Aid to Families with Dependent Children (AFDC), and noncash benefits (such as Medicare, Medicaid, and the Supplemental Nutrition Assistance Program (SNAP)).

For purposes of tax analysis, H-S income should be measured on a pretax basis, the amount that would be earned if there were no Federal income tax in place. Most items of income are unaffected, or little affected, by the income tax and so these are reported on a pretax basis. However, certain income items from tax-preferred sources may be reduced because of their preferential treatment. An example is interest from tax-exempt State and local Government bonds. The interest rate on tax-exempt bonds is generally lower than the interest rate on taxable bonds of the same maturity and risk, with the difference approximately equal to the tax rate of the typical investor in tax-exempt bonds. Thus, investors in tax-exempt bonds are effectively paying a tax, referred to as an "implicit tax," and tax-exempt interest as reported is measured on an after tax, rather than a pretax, basis. Income from all tax-preferred sources should be "grossed up" by implicit taxes to measure H-S income properly.

#### **Adjusted Gross Income**

AGI is the statutory definition of income for Federal income tax purposes. AGI differs from H-S income by excluding some components of H-S income and by allowing accelerated business deductions and deductions unrelated to income, but also by disallowing or limiting certain expenses of earning income and certain losses. In addition, AGI is not "grossed up" for implicit taxes.

The components of H-S income excluded from AGI include most employee fringe benefits, the employer share of payroll taxes, accrued but deferred employee compensation, accrued but unrealized real capital gains, the rental value of consumer durables, nontaxable Social Security benefits, most other cash transfers, all noncash transfers, and the real income of borrowers due to inflation [A2].

Depreciation and certain other expenses allowed in determining AGI may be accelerated (relative to economic depreciation and other costs) in the early years of an investment, thus understating investment income. In later years, however, investment income in AGI will be overstated because depreciation and other accelerated expenses will then be understated. AGI also excludes some expenses not related to earning income, such as contributions to self-employed retirement (Keogh) plans, deductible contributions to Individual Retirement Arrangements (IRAs), the portion of Social Security contributions for self-employed workers that is analogous to the employer share of such contributions for employees, and contributions to medical savings accounts.

AGI generally exceeds H-S income to the extent that expenses of earning income and losses are limited or disallowed. Most of the expenses of earning income are deductible from AGI in calculating taxable income, but only if the taxpayer "itemizes" deductions and then, in some cases, only to the extent that the sum of all such items exceeds 2 percent of AGI. Expenses incurred in the production of income that are itemized deductions include certain expenses of employees (such as union dues;

expenditures for items used on the job but not reimbursed by the employer; and the employees' travel, meal, and entertainment expenses); and expenses attributable to a taxpayer's (passive) investments (as opposed to active participation in a trade or business, for example), including, but not limited to, interest expense incurred in connection with investments in securities [A3]. Note that there are limits on certain types of deductible expenses. In particular, deductible meal and entertainment expenses are limited to 50 percent of total meal and entertainment expenses.

Although net capital losses reduce economic income, only the first \$3,000 of net realized capital losses may be deducted in computing AGI. Any additional realized losses must be carried forward to future years. In a somewhat similar manner, passive losses (from investments in a trade or business in which the tax-payer does not materially participate) can also reduce economic income, but, in computing AGI, they can only be deducted from passive income from other, similar investments (although a larger amount may be deducted when the losses are from rental real estate activities).

AGI can also exceed H-S income because of differences in the timing of income between the two concepts. For example, a taxpayer may realize more capital gains in a year than he or she accrues in capital gains. Since AGI includes only realizations of capital gains, whereas H-S income includes only accruals, AGI in this circumstance would exceed H-S income.

Finally, just as AGI understates the income of borrowers due to inflation, it overstates the income of lenders, who include bond owners and owners of bank deposits.

#### **Expanded Income**

Expanded income is meant to be a measure of income that is conceptually closer to H-S income than AGI, but which is derived entirely from items already reported on income tax returns. Figure L shows the adjustments made to AGI to arrive at expanded income. Since the definition of AGI was changed by legislation several times since 1977, and certain reporting requirements also changed, the adjustments differ over the years, as indicated for each item [A4]. Most of these adjustments are relatively straightforward, but the adjustment for investment requires some explanation.

### **Investment Expenses**

In measuring H-S income, it generally would be appropriate to deduct all expenses incurred in the production of income, including those related to any income-producing investments, without limit. Investment expenses in excess of investment income would then represent net economic losses. However, such a liberal deduction for investment-related expenses is not necessarily correct when not all income items have been included currently. (Investment income includes interest, dividends, and capital gains.)

If all income has not been included currently, full deduction of investment expenses might represent a mismatching of receipts and expenses and might result in understating income. For example, if a taxpayer borrowed funds to purchase securities,

#### Figure L

## Derivation of Expanded Income From Adjusted Gross Income, Tax Years 1977–2013

Adjusted gross income (AGI)

PLUS:

- Excluded capital gains (tax years prior to 1987)
- Tax-exempt interest (1987 and later tax years)
- Nontaxable Social Security benefits (1987 and later tax years)
- Tax preferences for alternative minimum tax purposes [A5]
- Foreign-earned income exclusion (1990 and later tax years)

MINUS:

- Unreimbursed employee business expenses [A4]
- Nondeductible rental losses (Tax Year 1987)
- Moving expense deduction (Tax Years 1987 through 1993) [A4]
- Investment interest expense deduction to the extent it does not exceed investment income
- Miscellaneous itemized deductions not subject to the 2-percent-of-AGI floor (1989 and later tax years)

#### EQUALS: • Expanded income

NOTE: Footnotes to this figure are included with the footnotes to Appendix A: Income Concepts, which also includes an explanation of adjusted gross income and expanded income

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016

net income would be understated if the taxpayer deducted all interest payments on the loan, but did not include as income any accrued gains on the securities. A similar mismatching of income and expenses would occur if investment expenses that should properly be capitalized were deducted when paid. In these instances, a more accurate measure of income might be obtained by postponing the deduction of the expense until the income was recognized for tax purposes.

Additional problems are created when a person with a loan has both income-producing assets, such as securities, and non-income-producing assets, such as a vacation home or yacht. It is not possible to determine what portion of the interest expense should be attributed to taxable income-producing assets, and therefore, ought to be deductible against the gross receipts from such taxable assets. As a result of these problems, it has been necessary to set arbitrary limits on the amount of investment expenses that are deductible in calculating expanded income.

Investment expenses that have not been deducted in determining AGI generally can appear on a Federal individual income tax return in two places. Investment interest expense is taken into account in the calculation of the itemized deduction for interest paid. Deductible investment interest expense is a separate part of the total interest deduction. Other investment expenses, such as management fees, are included in the miscellaneous category of itemized deductions [A5]. Beginning with 1987, most types of income-producing expenses included as miscellaneous itemized deductions are only deductible to the extent that their total exceeds 2 percent of AGI. To determine expenses that should be deductible in calculating an approximation of H-S income, investment expenses have been defined as deductible investment interest expense. Other investment expenses could not

be separated from the remainder of miscellaneous deductions. Hence, they have not been used in the adjustment for investment expenses.

To the extent that interest expenses do not exceed investment income, they are generally allowed as a deduction in the computation of deductible investment interest expense and thus expanded income. Investment interest expenses that exceed investment income are not deductible in calculating expanded income. One consequence of this definition is that investment expenses can never turn positive investment income into investment losses. Generally, allowing investment expenses to offset all investment income is generous and tends to understate broadly measured income. However, in some instances, limiting investment expenses to investment income may overstate income by disallowing genuine investment losses.

## **Notes to Appendix A**

- [A1] Haig, Robert M. (ed.), *The Federal Income Tax*, Columbia University Press, 1921, and Simons, Henry C., *Personal Income Taxation*, University of Chicago Press, 1938.
- [A2] Borrowers receive income due to inflation because the real value of debt is reduced by inflation. Even though inflation may be anticipated and reflected in interest rates, tax deductions for nominal interest payments overstate interest costs because part of these payments represent a return of principal to the lender, rather than interest.
- [A3] See references and footnote A4.
- [A4] For 1977, about 50 percent of net long-term capital gains were included in AGI. During 1978, the inclusion ratio was changed to 40 percent. This inclusion ratio remained unchanged through 1986. Beginning with 1987, there was no exclusion allowed for capital gains in computing AGI, and, thus, this adjustment was not made in computing expanded income for returns for years after 1986.

Beginning in 1987, taxpayers were required to report on their Federal income tax returns the amount of their tax-exempt interest income from State and local Government bonds. Since 1987, tax-exempt interest has been included in expanded income.

Taxpayers are also required to report Social Security benefits. Since 1988, nontaxable Social Security benefits have been included in expanded income. However, if none of a particular taxpayer's Social Security benefits are taxable, then gross Social Security benefits are not required to be shown on the income tax return. In such instances, which generally only affect lower- and middle-income taxpayers, Social Security benefits are not included in expanded income.

The subtraction of unreimbursed employee business expense and the moving expense deduction is to make the concept of expanded income comparable to years prior to 1987. All current-year moving expenses beginning with Tax Year 1994 were deducted in the calculation of

AGI as a statutory adjustment. Due to subtracting nonlimited miscellaneous deductions and not subtracting the nondeductible rental loss for 1989, the expanded income concept for 1989 is not strictly comparable to expanded income for 1988. Nor is the expanded income concept for 1990 strictly comparable to expanded income for 1989 because of the addition of the foreign-earned income exclusion. Specific details on the definition of expanded income for any given year are available in the reports and publications found under the References section.

[A5] Some income deferrals and accelerated expense deductions may also be involved in income or losses from rental property, from royalties, from partnerships, and from S Corporations, only the net amounts of which are included in adjusted gross income.

## **Appendix B: Tax Concepts**

This appendix discusses in more detail two tax concepts used in this article. The first section provides a brief summary of the U.S. taxation of worldwide income and the foreign tax credit. The two tax concepts used in this article are then defined in the next section. That section is followed by an explanation of deduction equivalent of credits and other items. A final section discusses the possible implications of the use of unaudited tax return data for this article.

### U.S. Taxation of Worldwide Income and the Foreign Tax Credit

Citizens and residents of the United States, regardless of where they physically reside, must generally include in income for Federal income tax purposes income from all geographic sources. Thus, for example, dividends and interest received from a foreign corporation or income earned working abroad is subject to Federal income tax in the same manner as income received from sources inside the United States [B1]. Income from sources outside the United States may also be subject to tax by foreign governments.

To reduce, if not eliminate, the possibility of double taxation of the foreign-source income of U.S. citizens and residents, the Federal income tax allows a credit for income taxes paid to foreign governments. This foreign tax credit is generally limited to the amount of (pre-credit) U.S. tax liability attributable to foreign-source income. This limit prevents the foreign tax credit from offsetting the U.S. tax on U.S.-source income.

As a result of taxing citizens and residents on a worldwide basis but allowing a foreign tax credit, some Federal income tax returns may report substantial income but little or no U.S. tax liability after credits. This may occur, for example, if a taxpayer has income only from foreign sources, e.g., the taxpayer may live abroad the entire year and have no income-producing assets in the United States. It may also occur if a taxpayer has foreign-source income that exceeds a net loss from U.S. sources and pays income taxes comparable to the U.S. tax to a foreign government [B2].

For taxpayers with income from foreign sources, these procedures understate the taxpayers' true worldwide income tax liabilities and effective income tax rates. For such taxpayers, it does not seem appropriate to classify U.S. income tax credits for foreign tax payments as reducing tax liabilities. This is particularly true for tax filers who appear to be nontaxable because they do not have any U.S. tax liability, but who have paid foreign income taxes. A more accurate measure of overall income tax burden, as well as the numbers of nontaxable returns, can be obtained by considering all income taxes-U.S. as well as foreign. Thus, a second tax concept, worldwide income tax, has been used in addition to the traditional U.S. income tax.

#### **Two Tax Concepts**

Two tax concepts are used in this article to classify tax returns as taxable (i.e., returns showing an income tax liability) or nontaxable (i.e., returns showing no income tax liability) and to measure the tax burdens on taxable returns: U.S. income tax and worldwide income tax. Worldwide income tax is defined for purposes of this article as U.S. income tax, plus the foreign tax credits reported on the U.S. income tax return, and foreign taxes paid on excluded foreign-earned income (obtained from Form 1116, Foreign Tax Credit). The amount of the foreign tax credits and foreign taxes paid on excluded foreign-earned income is used as a proxy for foreign tax liabilities [B3]. The relationship of U.S. income tax to tax items reported on individual income tax returns, and to worldwide income tax, is shown in Figure M.

#### Comparing Exclusions, Deductions, Tax Credits, and Special Tax **Computations**

To compare the importance of various exclusions, deductions, tax credits, and special tax computations (such as the alternative minimum tax on tax preferences), the different types of items must be placed on the same basis. One way of doing so is to calculate the size of the deduction that would reduce (or increase)

## Figure M

Derivation of "U.S. Income Tax" and "Worldwide Income Tax	, "
Tax Year 2013	

Tax at regular rates (tax generated)

PLUS: Additional taxes (such as tax on accumulation

distributions from qualified retirement plans,

Form 4972)

PLUS: Alternative minimum tax (Form 6251)

**EQUALS**: Income tax before credits MINUS: Tax credits (nonrefundable)

PLUS: Net investment tax MINUS: Refundable tax credits [1]

EQUALS: U.S. income tax

PLUS: Foreign tax credit

PLUS: Foreign taxes paid on excluded foreign-earned

income (Form 1116)

EQUALS: Worldwide income tax

[1] Includes the earned income credit, additional child tax credit, refundable American opportunity credit, regulated investment company credit, and the health insurance credit. NOTE: See Appendix B: Tax Concepts for further discussion of the information in this figure. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016. income tax by the same amount as a tax credit or special computation. This amount is called the "deduction equivalent" of the tax credit or special computation.

The deduction equivalent of a tax credit or a special tax computation is the difference between the taxable income that, using the ordinary tax rate schedules, would yield the actual tax before the provision in question is considered and the actual tax after the provision. For example, the "deduction equivalent of all tax credits" is equal to the difference between "taxable income that would yield income tax before credits" and "taxable income that would yield income tax after credits."

Using this method of equating the value of deductions, exclusions, credits, and special tax computations, the order in which the various credits and special tax computations are calculated may affect the value of their deduction equivalents. Because the tax rate schedules are progressive, with successive increments to income taxed at successively higher tax rates, the deduction equivalent of the credit converted last to a deduction equivalent will be larger (for the same amount of a credit) than the item converted first, unless all relevant taxable income amounts are within a single tax-rate bracket.

The deduction equivalents of tax credits shown in Tables 9 and 10 were computed by assuming that deductions and exclusions reduce taxes before credits. As a result, the deduction equivalent of tax credits may be overstated.

#### **Unaudited Data**

Tax return data used for Statistics of Income have been tabulated as they were reported on tax returns filed with the Internal Revenue Service (IRS). Certain obvious arithmetic errors have been corrected and certain adjustments have been made to achieve consistent statistical definitions. Otherwise, the data have not been altered. In particular, the data do not reflect any changes that either may have or could have been made because of IRS audits. While this is true of data throughout the entire Statistics of Income program, it is particularly relevant for

high-income tax returns. Because of the greater complexity of these returns, there is a higher probability of error and a broader scope for disagreement about the proper interpretation of tax laws.

The fact that the data have been drawn from unaudited returns is of even greater importance for those high-income returns that are nontaxable. Almost any audit changes would make such returns taxable. Even where the tax consequences are minor, such returns could be reclassified from nontaxable to taxable, thereby changing the counts of nontaxable returns.

## **Notes to Appendix B**

- [B1] An exception is that certain income earned abroad may be excluded from AGI. Any foreign taxes paid on such income are not creditable against U.S. income tax. The tables in this article include such excluded income in expanded income. Foreign taxes paid on such income are reflected in worldwide income tax, as discussed later.
- [B2] Although the foreign tax credit is an item of tax preference for AMT purposes, taxpayers below the AMT exclusion thresholds, or with preferences or deductions not subject to AMT, could completely offset pre-credit U.S. income tax liability with foreign tax credits.
- [B3] Where foreign tax rates exceed U.S. rates, foreign tax credits will be less than foreign tax liabilities. In such cases, using foreign tax credits as a proxy for foreign tax liabilities understates worldwide income tax liability. In other cases, when foreign tax credits are for taxes paid on income from previous years, use of foreign tax credits as a proxy may overstate or understate worldwide taxes on current-year income.

Justin Bryan is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Michael Strudler, Chief, Individual Research Section.

<sup>\*</sup> Estimate should be used with caution because of the small number of sample returns on which it is based.

<sup>[1]</sup> Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.

<sup>[2]</sup> Includes tax-exempt interest and tax preference items subject to alternative minimum tax.

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016.

Equals: Expanded income	5,616,056	2,891,159,374	5,603,262	2,886,961,657	12,794	4,197,717				

<sup>\*</sup> Estimate should be used with caution because of the small number of sample returns on which it is based.

<sup>\*\*</sup> Data combined to avoid disclosure of information for specific taxpayers.

<sup>[1]</sup> Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.

<sup>[2]</sup> Includes tax-exempt interest and tax preference items subject to alternative minimum tax.

<sup>[3]</sup> For returns without worldwide income tax, refundable credits offset the amount of foreign taxes paid.

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016.

<sup>[1]</sup> Investment interest expense deduction only has an effect when using the adjusted gross income concept.

<sup>[2]</sup> Tax-exempt interest, foreign-earned income exclusion, AMT tax preference, and nontaxable Social Security benefits only have an effect when using the expanded income concept.

<sup>[3]</sup> Less than 0.05 percent.

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016.

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, May 2016.

<sup>[1]</sup> Investment interest expense deduction only has an effect when using the adjusted gross income concept.

<sup>[2]</sup> Tax-exempt interest, foreign-earned income exclusion, AMT tax preference, and nontaxable Social Security benefits only have an effect when using the expanded income concept.

<sup>[3]</sup> Less than 0.05 percent.

<sup>\*\*</sup> Data combined to avoid disclosure of information for specific taxpayers.

SOURCE: IRS, Statistics of Income Division, High-Income Tax Returns, January 2016.

<sup>[1]</sup> Includes returns with adjusted gross deficit or with negative expanded income.

<sup>[2]</sup> Less than 0.05 percent.

<sup>[3]</sup> Percentage not computed.

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Income Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

<sup>\*\*</sup> Data combined to avoid disclosure of information for specific taxpayers.

NOTES: Detail may not add to totals because of rounding. This table is based on U.S. Individual Tax Returns. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

<sup>[1]</sup> Includes returns with adjusted gross deficit or with negative expanded income.

<sup>[2]</sup> Less than 0.05 percent.

<sup>[3]</sup> Percentage not computed.

## **Individual Noncash Contributions, 2013**

by Pearson Liddell and Janette Wilson

or Tax Year 2013, individual taxpayers who itemized deductions reported a total of \$51.6 billion in noncash charitable contributions on a total of 22.2 million returns. About a third (7.7 million) of these returns reported \$46.4 billion in charitable contribution deductions using Form 8283, *Noncash Charitable Contributions*. Individual taxpayers use this form when the amount of taxpayer deductions for all noncash donations on Schedule A, *Itemized Deductions*, exceeds \$500.

The number of individual returns filed by taxpayers with a Form 8283 attached increased 2.4 percent, from 7.6 million for Tax Year 2012 to 7.7 million for Tax Year 2013. Total donations increased 8.1 percent, from \$42.9 billion for 2012. Corporate stock donations increased 17.7 percent from \$16.8 billion for 2012 to \$19.7 billion for 2013. Of the \$46.4 billion in noncash donations reported, almost half went to foundations (\$11.8 billion or 25.5 percent of the total) and large charitable organizations (\$11.0 billion or 23.7 percent of the total). Taxpayers 65 years and older made up a smaller percentage (18 percent) of the returns filed with Form 8283 than all other age groups except the under-35 group, but they accounted for the largest percentage (37.3 percent or \$17.3 billion) of noncash charitable contributions.

The American Taxpayer Relief Act of 2012 (Public Law 112-240) was introduced in the summer of 2012, passed both houses of Congress on January 1, 2013, and was signed into law on January 2, 2013. This legislation allowed a series of temporary, though long-standing, tax cuts to expire for high-income individuals for 2013 and beyond. The net effect was an increase in the top marginal tax rate on ordinary income, long-term capital gains, and qualified dividends. This legislation therefore had the potential to induce some taxpayers to shift their charitable contributions from 2012 to 2013.

The legislation also extended for 2012 and 2013 the provision authorizing qualified charitable distributions—otherwise taxable distributions from an IRA owned by someone 70 1/2 years or older—to be paid directly to an eligible charitable organization. Each year, the IRA owner can exclude from gross income up to \$100,000 of such distributions. For Tax Year 2012 only, IRA owners had the choice to report such contributions made in January 2013 as if they occurred in 2012. In addition, IRA owners who received IRA distributions during December 2012 could contribute, in cash, all or part of the distributions to eligible charities during January 2013 and have them count as qualified distributions for 2012.

Finally, the legislation extended for 2012 and 2013 special rules that temporarily raised the percentage-of-income limitations for gifts of certain conservation easements. This allowed individuals to deduct up to 50 percent of their contribution base and allowed individuals who are qualified farmers and ranchers to deduct up to 100 percent of their contribution base. In addition, the donors could deduct any remaining value of the donated easement over the succeeding 15 years.

#### **Types of Noncash Contributions**

Corporate stock accounted for the largest amount and percentage (\$19.7 billion, 42.5 percent) of taxpayers' total noncash charitable contributions for 2013, followed by clothing (\$9.7 billion, 21 percent), and household items (\$4.2 billion, 9.1 percent) (Figure A). Only about 138,000 returns included stock donations, compared to 6.0 million returns with clothing donations and 2.9 million with donations of household items. The average corporate stock donation, however, was \$143,369 per return, while the average donation for clothing (\$1,611 per return) and household items (\$1,467 per return) was much smaller. In comparison, the highest average donation amount per return was for easements, followed by other investments (excluding corporate stocks or mutual funds). Slightly more than 2,000 returns had donations of easements totaling \$1.1 billion, or \$535,311 per return, and 6,050 returns had donations of other investments totaling \$2.2 billion, or \$368,880 per return.

Donation amounts changed between 2012 and 2013 for several categories of noncash assets (Figure B). The most notable negative percentage changes occurred in airline tickets and miles (-72.9 percent); planes, boats, and other vehicles (-39.2 percent); other investments (-37.7 percent); and land (-32.7 percent). While these percentage decreases were large, their overall significance is muted by the fact that their share of the overall donation amount was small. Combined, they represented only 6.5 percent of the total donation amount (less than .01 percent, 0.2 percent, 1.4 percent, and 4.8 percent, respectively). The most notable positive percentage changes occurred in corporate stock, increasing from \$16.8 billion in 2012 to \$19.7 billion in 2013 (17.7 percent), real estate, increasing from \$0.8 billion in 2012 to \$1.4 billion in 2013 (66.4 percent), and other donations, increasing from \$2.7 billion in 2012 to \$3.6 billion in 2013 (29.4 percent).

In terms of the average donation amount, noncash contributions increased 5.6 percent per return, from \$5,676 per return

<sup>1</sup> For further details on Tax Year 2013 individual income and tax statistics, see Statistics of Income—2013, Individual Income Tax Returns (IRS Publication 1304).

<sup>[1]</sup> Total number of returns does not equal the sum of returns by donation type because a return could have more than one type of donation.

<sup>[2]</sup> Less than 0.05 percent.

<sup>[2]</sup> Other donations include donations of intellectual property.

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS Statistics of Income Division, Noncash Charitable Contributions, March 2016.

with Form 8283 attached in 2012 to \$5,995 per return in 2013.<sup>2</sup> Despite this overall increase in the contribution average, other investment donations declined greatly from more than \$695,000 to about \$369,000. While appearing to be a significant, this decrease was nominal as the category only accounted for 4.8 percent of all donations. Donations of mutual funds also experienced a significant decline in average donation size, decreasing 32.6 percent from around \$110,600 to approximately \$74,500. While one of the smallest categories with respect to number of donations, easements also had a large decrease in average donation amount per return, decreasing by 38.6 percent from \$872,250 to just over \$535,300.

Average 2013 corporate stock donations increased by 1.4 percent to more than \$143,000. Clothing donations, the second largest group in terms of overall amount claimed, saw its average donation rise 2.8 percent, to \$1,611 per return in 2013. For household items, the average donation rose 6.3 percent, from about \$1,380 per return to approximately \$1,465 per return.

Over the years, taxpayer donations of corporate stock have consistently represented the highest amounts of donations. Clothing has accounted for the second largest share of donations in nearly every year since 2006; the sole exception was 2007 when taxpayers reported slightly larger noncash contributions for real estate, land, and easements. However, while the amount of clothing donations has remained consistent since 2006, the amounts deducted for corporate stock and real estate, land, and easements declined significantly between 2007 and

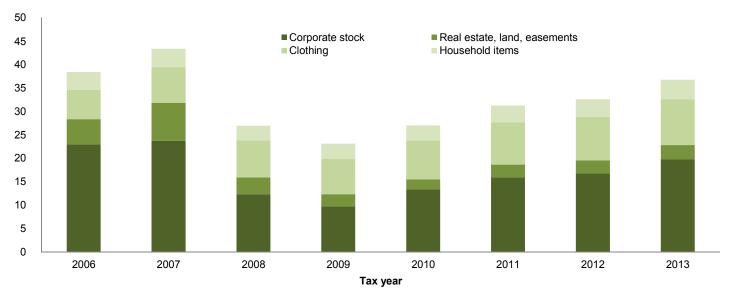

2009. Donations of corporate stock have almost recovered since that time, but donations of real estate, land, and easements have remained relatively low (Figure C).<sup>3</sup> In 2007, taxpayers reported \$23.7 billion in corporate stock donations, and, together, the declines in 2008 and 2009 represented a 59.0-percent decrease since 2007. For 2010, stock donations rose 37.3 percent, followed by increases for 2011 (19.5 percent), 2012 (5.1 percent), and 2013 (17.7 percent).

#### **Donations by Size of Adjusted Gross Income**

Taxpayers with an adjusted gross income (AGI) of \$10 million or more, who claimed noncash contributions, collectively deducted 8.7 percent of their AGI, claiming \$14.2 billion in contributions on a little more than 4,600 Forms 8283 (Figure D). Donations from taxpayers in this AGI category represented 30.6 percent of all individual taxpayer noncash donations reported on Forms 8283 in 2013, while representing only 0.1 percent of the returns filed and 11.7 percent of the AGI by taxpayers who claimed noncash contributions. Taxpayers in the \$100,000 to \$200,000 category reported \$6.6 billion in contributions on 2.8 million tax returns; these contributions represented 1.7 percent of their AGI and 14.2 percent of all donations claimed. Taxpayers in the \$200,000 to \$500,000 category reported \$5.4 billion, or 11.7 percent of donations claimed. Taxpayers in these two income groups accounted for 51.5 percent of the AGI among taxpayers who had noncash charitable contribution deductions on Form 8283 in 2013. As stated above, the average

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, March 2016.

donation for all taxpayers who claimed noncash donation deductions on Forms 8283 was \$5,995 per return. In comparison, the highest average amount claimed was \$3.1 million per return by taxpayers in the \$10 million-or-more category, followed by approximately \$420,400 claimed per return by those in the \$5 million-to-\$10 million category.

The percentage change in the number of returns claiming noncash charitable contributions and the amount of those contributions claimed on Forms 8283 between 2012 and 2013 varied by size of adjusted gross income (Figure E). With overall donations rising by 8.1 percent between Tax Years 2012 and 2013, taxpayers in a majority of AGI categories reported increases in charitable contributions (unlike between 2011 and 2012). All AGI classes above \$50,000, with the exception of taxpayers in the \$10-million-or-more category, reported increases. Taxpayers in this income group gave contributions of \$12.9 million less in 2013 representing a 0.1-percent decrease in donations. The largest percentage increase was made by taxpayers in the \$1 million-to-\$1.5 million category, who reported a 57.2-percent increase in noncash donations from \$1.0 billion in 2012 to \$1.5 billion in 2013.

## **Types of Charitable Organizations**

Organizations that received noncash charitable contributions included, among others, arts groups, educational institutions, environment and animal related organizations, health and medical research organizations, religious organizations, and public and societal benefit organizations (Figure F). In terms of the noncash contribution amounts claimed by individual taxpayers, foundations (\$11.8 billion) and large organizations (\$11.0 billion) received the largest amount of donations for 2013. Donations to large organizations (23.7 percent of all donations) and foundations (25.5 percent) made up just under half of all donations reported by individual taxpayers for the year. While donations to large organizations accounted for a little less than a quarter of all noncash charitable contributions, large organizations received the second lowest average donation (about \$1,800 per return). In contrast, foundations received the largest average donation, approximately \$141,250 per return. Despite having the second largest average donation (\$130,280 per return), donoradvised funds received only 8.5 percent of the total amount deducted by taxpayers on the Schedule A. Educational institutions went from being the fourth highest in terms of amount carried in 2012 to the third highest, increasing from \$3.6 billion to \$4.6 billion, or 27.3 percent, the largest percentage increase of 2013 (Figure G).

Donations to most organization types increased between 2012 and 2013, but public and societal benefit organizations received about \$0.9 billion less in noncash contributions in 2013 than in 2012 (down 24.1 percent). The donation amounts given to large organizations, which received the second most in terms of the amount claimed for 2012 and for 2013, increased 8.6 percent, from \$10.1 billion to \$11.0 billion. Donations to foundations increased 7.4 percent, from \$11.0 billion in 2012 to \$11.8 billion

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, March 2016.

in 2013, whereas donations to health and medical research decreased 13.2 percent, from \$1.8 billion to \$1.6 billion.

Over the 2007 through 2013 timeframe, most organization types received the highest donation amounts in Tax Year 2007 (Figure H). Donations to each type of charitable organization declined between 2007 and 2009, the most notable being the \$8.2-billion decline (down 59 percent) in noncash donations to foundations. The organizations receiving the highest donations

in 2013 included foundations, large organizations, educational institutions, and donor-advised funds. Notably, large organizations had their highest donations over this timeframe starting with donations of \$9.7 billion in 2011, followed by \$10.1 billion in 2012, and \$11.8 billion in 2013. Following that same trend, and with similar increases, were foundations, which, over this timeframe, had \$8.8 billion in donations in 2011, followed by \$11.0 billion in 2012, and \$11.8 billion in 2013.

## **Donations by Age**

Taxpayers 65 years and older who reported noncash contributions on Form 8283 gave the most in terms of the total amount of contributions (both cash and noncash) reported on Schedule A (Figure I). This group reported \$12.7 billion in cash contributions (35.1 percent of the \$36.2 billion given in cash by filers of Form 8283) and \$17.3 billion in noncash contributions (37.3 percent of the \$46.4 billion noncash contributions reported on Form 8283) in 2013. These same taxpayers filed 17.8 percent (1.4 million) of the 7.7 million individual income tax returns with noncash donation deductions on Form 8283 for 2013. They also received 19.1 percent of the AGI among these taxpayers in 2013. The average noncash donation for taxpayers ages 65 and older was approximately \$12,575 per return, more than twice the average of the next largest group, taxpayers between 55 and 65 years old. Taxpayers in this latter age category donated 3.1 percent of their total AGI (\$369.2 billion) in noncash contributions; combined with their cash gifts, these taxpayers donated 5.7 percent of their AGI.

Donations of corporate stocks, mutual funds, and other investments accounted for \$11.5 billion (66.5 percent) of all noncash contributions made by taxpayers ages 65 and older and represented 48.8 percent of donations of this type of property and 25.3 percent of all noncash charitable contributions donated in 2013 (Table 4). For these taxpayers, real estate, land, and easement donations was the next largest category, at just under \$1.5 billion, closely followed by clothing donations (\$1.5 billion). Taxpayers in the 55 under 65 age category claimed noncash donations of \$11.6 billion, with an average donation of \$6,115 per return. Those in the 45 under 55 age category donated less (\$9.0 billion or 2.2 percent of their AGI), with an average donation just under \$4,175 per return. For cash contributions, taxpayers 55 under 65 years old gave \$9.6 billion in cash donations, and those in the 45 to 55 age group gave \$8.2 billion.

All age groups donated more in noncash donations in 2013 than in 2012. Donation amounts in the ages 65 and older category increased 9.8 percent, from \$15.8 billion (Figure J). Taxpayers in the 55 under 65 age category donated 5.5 percent

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, March 2016.

Figure J
All Individual Returns With Noncash Charitable Contributions Reported on Form 8283, by Age of Donor, Tax Years 2012 and 2013
[Money amounts are in thousands of dollars—average amounts are in whole dollars]

		2012			2013	Percentage change		
Donor age	Number of returns	Amount carried to Schedule A	Average donation per return	Number of returns	Amount carried to Schedule A	Average donation per return	Number of returns	Amount carried to Schedule A
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
All ages	7,560,739	42,913,291	5,676	7,740,032	46,403,763	5,995	2.4	8.1
Under 35	725,791	2,836,295	3,908	706,977	3,052,943	4,318	-2.6	7.6
35 under 45	1,636,099	4,866,712	2,975	1,603,737	5,428,184	3,385	-2.0	11.5
45 under 55	2,099,900	8,425,159	4,012	2,153,420	8,985,867	4,173	2.5	6.7
55 under 65	1,827,881	11,001,107	6,019	1,897,939	11,606,556	6,115	3.8	5.5
65 and older	1,271,067	15,784,018	12,418	1,377,959	17,330,214	12,577	8.4	9.8

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, March 2016.

more in 2013 than 2012 (giving \$11.0 billion in Tax Year 2012). Taxpayers under age 35, the smallest group in terms of the amount donated and number of returns, increased their donation amount 7.6 percent to \$3.1 billion for 2013.

#### **Explanation of Selected Terms**

Age—Defined by the primary taxpayer's age at the time of filing.

Amount carried to Schedule A—This is the fair market value from Form 8283, Section A, (items with a deduction of \$5,000 or less and certain publicly traded securities) plus the lesser of the fair market value or amount claimed on Section B (items with a deduction of more than \$5,000 except contributions of certain publicly traded securities). The dollar amounts of donations reported in this article reflect the amounts reported on Form 8283 that are carried to Schedule A for reporting itemized deductions.

Donor's cost—This is also known as the adjusted basis or tax basis, and is generally the amount the owner paid for the property. If the owner received property as a gift, the original cost carries over to the recipient of the gift, increased by any gift tax paid on the appreciated portion of the property. If acquired from a decedent, the basis is the fair market value of the property used for estate tax purposes.

Fair market value—The fair market value is the value a willing and knowledgeable buyer would pay a seller in a voluntary situation.

Number of donations—For this study, the IRS Statistics of Income (SOI) Division collected data in the manner reported by taxpayers. For example, if a tax return had clothing listed twice, even if it was given to the same donee organization, it was counted as two separate donations.

Number of returns—The number of returns in the Individual SOI sample with Form 8283 attached. For this study, SOI counted all returns with Form 8283 attached, whether or not the taxpayer carried Form 8283 amounts to Schedule A.

Note that the allowable amount of a noncash deduction depends on whether the property is ordinary income or capital gain property. Ordinary income property is property that, if sold, would generate ordinary income or short-term capital gain. Examples are clothing, household items, inventory, and capital assets held less than a year. Capital gain property results in a long-term gain, if sold. Examples of this are real property used for a taxpayer's business and corporate stock held more than 1 year.

The total charitable deduction is generally limited to no more than 50 percent of AGI. Taxpayers can reduce this amount (to 30 percent or 20 percent), depending on the type of property donated and type of charitable organization. The statistics in this article include the entire deduction amount reported by taxpayers and transcribed from Form 8283 to line 17 of Schedule A. The limitations are then applied to the amount reported on line 19 of that schedule.

## **Donated Property Types**

*Accessories*—Includes belts, furs, jewelry, purses, scarves, and watches.

Art and collectibles—Includes art works, such as ceramics, drawings, paintings, photographs, and sculptures; and collectibles, including coins, books, historical documents, memorabilia, rare or valuable clothing, jewelry, and stamps.

Cars and other motor vehicles—Includes vehicles designed for road transportation, such as cars, buses, motorcycles, motor homes, SUVs, and trucks.

*Clothing*—Includes apparel for children, men, and women, such as coats, dresses, hats, shoes, and suits. Also includes sports and school uniforms.

Conservation easements—Includes land and right-of-way easements. Donations of this type must be a qualified real property interest contributed to a qualified organization for conservation purposes.<sup>4</sup>

*Corporate stock*—Includes shares of publicly traded and closely held common and preferred stock, as well as stock rights.

*Electronics*—Includes cameras, computer systems, copiers, DVD players, fax machines, stereo systems, televisions, telephones, and video games.

*Façade easements*—Includes real estate easements and historical preservation or architectural easements.

*Food*—Includes beverages, individual food items or meals, snacks, restaurant coupons, vitamins, and wine.

*Household items*—Includes appliances, books, exercise equipment, furniture, luggage, tools, and toys.

Intellectual property—Includes copyrights, patents, trademarks, trade names, trade secrets, and certain types of software. Land—Includes farms, orchards, and open lots.

Mutual funds—Includes shares of taxable and nontaxable mutual funds, exchange-traded funds, and unit investment trusts.

Other investments—Includes annuities, bonds, certificates of deposit (CDs), life insurance policies, notes, options, partnership interests, and real estate investment trusts.

*Planes, boats, and other vehicles*—Includes all-terrain vehicles, airplanes, and watercraft vehicles, such as boats, canoes, ships, and waterskis.

*Real estate*—Includes apartments, cabins, houses, and other residential and commercial property.

*Services*—Includes audio presentations, catering, healthcare services, transport and travel expenses, tutoring, and other professional services.

*Other*—Includes animals, building materials, cemetery plots, medical equipment, tickets to events, and donated vacations or use of vacation property.

### **Donee Organizations**

Arts, culture, and humanities—Includes organizations involved with the arts, music, history, and cultural activities, such as museums, libraries, science centers, and theaters.

<sup>&</sup>lt;sup>4</sup> Notice 2007–50, Guidance Regarding Deductions by Individuals for Qualified Conservation Contributions, includes a tax law change for conservation contributions such that the 50-percent-of-AGI limitation is increased to 100 percent (the 100-percent limitation) for eligible farmers and ranchers.

Donor-advised funds—A segregated fund within a public charity that permits the donor to have advisory privileges on distributions or investments. Donations to donor-advised funds may be understated due to the difficulty of identifying all such donations because they ultimately distribute to another charity that could be of any type.

Educational institutions—Includes organizations whose primary function is educational, such as fraternities, schools (including those with a religious affiliation), scholarship funds, and universities.

Environmental and animal organizations—Includes organizations that protect, promote, or seek to improve the environment or welfare of animals, such as local animal shelters, botanical gardens, and garden clubs.

Foundations—A foundation is a type of philanthropic organization set up by individuals or institutions as a legal entity (usually either a corporation or trust) with the purpose of distributing grants to support causes in line with the goals of the foundation. For the purpose of this study, this includes private foundations, which are often specific to a person or family, and community foundations.

*Health and medical research*—Includes hospitals, medical associations, nursing homes, and hospices.

Large organizations—Includes large national and international organizations that have local chapters, such as Goodwill Industries International, The Salvation Army, United Way International, Habitat for Humanity International, and Boy Scouts of America.

*Other*—Includes all other organizations that are not included in any other category.

Public or societal benefit—These are organizations that benefit individuals or communities and do not meet the conditions of other categories such as education, health, and religion. These include homeless shelters, food banks, and political think tanks.

*Religious organizations*—Includes churches, synagogues, and bookstores and thrift stores run by religious organizations.

#### **Data Source and Limitations**

These statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ, including electronically filed returns) filed during Calendar Year 2014. The IRS Statistics of Income (SOI) Division stratified the returns in the sample based on the: (1) larger of positive income or negative income (absolute value); (2) size of business and farm receipts; (3) presence or absence of specific forms or schedules; and (4) usefulness of returns for tax policy modeling purposes. SOI then selected returns at rates ranging from 0.10 percent to 100 percent.

SOI based the Tax Year 2013 data on a sample of 332,040 returns and an estimated final population of 147,759,485 returns.<sup>5</sup> The number of returns in the sample with an attached Form 8283 was 44,579.

Since the data presented here are estimates based on a sample of returns filed, they are subject to sampling error. To use the statistical data provided properly, the magnitude of the potential sampling error must be known; coefficients of variation (CVs) are used to measure that magnitude and are estimated for the number of returns and money amounts for selected income items (Figure K). The reliability of estimates based on samples and the use of CVs for evaluating the precision of estimates based on samples are discussed in SOI Sampling Methodology and Data Limitations (see https://www.irs.gov/uac/SOI-Tax-Stats-Statistical-Methodology).

Pearson Liddell and Janette Wilson are economists with the Individual Research Section. This article was prepared under the direction of Michael Strudler, Chief.

<sup>&</sup>lt;sup>5</sup> For further details on sampling methodology, see Statistics of Income—2013, Individual Income Tax Returns (IRS Publication 1304).

## Figure K

# All Individual Returns With Noncash Charitable Contributions Reported on Form 8283, Coefficients of Variation for Selected Items, by Size of Adjusted Gross Income, Tax Year 2013

[Coefficients of variation are in percentages]

Size of adjusted gross income	Number of returns	Donor's cost	Amount carried to Schedule A	Fair market value

<sup>[1]</sup> Not every donation has a donor cost reported.

<sup>[2]</sup> Amount carried to Schedule A is the fair market value from Section A (items with a deduction of \$5,000 or less or publicly traded securities) plus the lesser of the fair market value or the amount claimed on Section B (items with a deduction of more than \$5,000).

<sup>[3]</sup> Other donations includes intellectual property, services, airline tickets and miles, and other donations.

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, May 2016.

\$10,000,000 or more	1,000	1,685	384,144	971,388	945,836		

<sup>\*</sup> Estimates should be used with caution because of the small number of sample returns on which they are based.

<sup>[1]</sup> Not every donation has a donor cost reported.

<sup>[2]</sup> Amount carried to Schedule A is the fair market value from Section A (items with a deduction of \$5,000 or less or publicly traded securities) plus the lesser of the fair market value or amount claimed on Section B (items with a deduction of more than \$5,000).

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, May 2016.

<sup>[1]</sup> Amount carried to Schedule A is the fair market value from Section A (items with a deduction of \$5,000 or less or publicly traded securities) plus the lesser of the fair market value or amount claimed on Section B (items with a deduction of more than \$5,000).

<sup>[2]</sup> Other donees includes donor-advised funds.

NOTE: This figure is based on data reported on Form 1040, U.S. Individual Income Tax Return; Schedule A, Itemized Deductions; and Form 8283, Noncash Charitable Contributions. SOURCE: IRS, Statistics of Income Division, Noncash Charitable Contributions, May 2016.

## **Individual Income Tax Shares, 2013**

by Adrian Dungan

or Tax Year 2013, taxpayers filed 138.3 million individual income tax returns, excluding returns filed by dependents. (All tables and figures included in this article are total returns filed excluding dependents.) The average AGI reported on these returns was \$65,314, down from \$66,444 for the previous year. Total AGI decreased 0.1 percent to \$9.03 trillion, while total income tax increased 4.0 percent to \$1.23 trillion The income tax increase was due in part to new tax rates on certain high-income taxpayers and a new net investment income tax. The top marginal rate was increased from 35 percent to 39.6 percent while the top rate for most long-term capital gains and qualified dividends was increased from 15 percent to 20 percent. Married couples filing joint returns with taxable incomes above \$450,000 faced these higher rates. For married couples filing joint returns with AGI above \$250,000 and reporting investment income, a new 3.8 percent tax was paid on this income. For a more detailed description of the changes in law, see the complete report, Statistics of Income—2013 Individual Income Tax Returns, Publication 1304, Section 1.

For Tax Year 2013, the top 0.001 percent of tax returns had an AGI of \$45.1 million or more a decrease of 27.3 percent from the previous year when the top 0.001 percent of tax returns had an AGI of \$62.1 million or more (Figure A). These returns accounted for 1.9 percent of total AGI in 2013 down from 2.4 percent in 2012 and as a percentage of total individual income tax, these returns accounted for 3.3 percent of the total income tax in 2013, the same as in 2012 (Figure B). Total AGI for the 0.001 percentile decreased by 22.9 percent from \$219.1 billion in 2012 to \$169.0 billion in 2013. As a result of this decrease, returns within the top 0.001 percent had an average reported AGI of \$122.2 million per return (Figure C).

The average tax rate for the top 0.001 percent of tax returns for 2013 (24.1 percent) was the highest by more than 3 percentage points (20.9 percent in 2009) for all years of this 10-year study. The average tax rate for the top .001 percent remained lower than the rates of all percentiles through the top 3 percent of returns as it has for all years of this study (Figure D). Taxpayers in the top 0.1 percent paid the highest average tax rate (27.9 percent) and each successive percentile paid lower average tax rates, falling to 15.0 percent for the top 50 percent of returns. For most years of this study, (the exceptions being 2009 and 2013), the highest rate was paid at the top 1 percentile level.

For 2013, taxpayers filing returns that were in the top 1 percent reported an AGI of \$428,713 or more a 1.4-percent decrease from the AGI floor for this category in 2012 (\$434,682). These

taxpayers accounted for 19.0 percent of total AGI (Figures E and F) and 37.8 percent of the total income tax, a decrease from 38.1 percent in 2012.

#### **Income and Tax Shares**

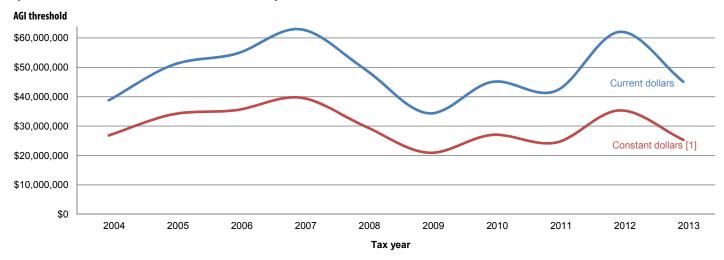

Tables 1 and 2 present statistics from 2004 through 2013 on income and tax by cumulative percentiles for returns with positive AGI. Excluded from the data are individual income tax returns filed by dependents. The tables show distributions of AGI for each tax year, by descending and ascending cumulative percentiles of returns, and can be used to make comparisons across cumulative percentile classes within each year. Table 1 shows percentiles of returns cumulated downward, starting with the highest-income returns and presents data for 14 different percentiles from the top 0.001 percent through the top 50 percent of all returns. Table 2 shows percentiles of returns cumulated upward, starting with the lowest-income returns and presents data for the bottom 5 percentiles: 50 percent, 75 percent, 90 percent, 95 percent, and 99 percent of all returns.

In constant dollars, the AGI threshold for the top 50 percent of returns has been trending downward throughout the last 10 years from \$22,576 in 2004 to \$20,670 in 2013 (Figure G and Table 1). Conversely, all percentiles from the top 10 percent

## **Highlights:**

- For 2013, the adjusted gross income (AGI) threshold for the top 50 percent of all individual income tax returns was \$36,841 for the year. These taxpayers accounted for 88.5 percent of total AGI and paid 97.2 percent of total income tax.
- The top 0.001 percent of tax returns had an AGI of \$45,097,112 or more. These taxpayers accounted for 1.9 percent of total AGI, and paid 3.3 percent of total income tax.
- The top 0.01 percent of tax returns had an AGI of \$9,460,540 or more. These taxpayers accounted for 4.3 percent of total AGI, and paid 8.2 percent of total income tax.
- The top 1 percent of tax returns had an AGI of \$428,713 or more.
   These taxpayers accounted for 19.0 percent of total AGI and paid 37.8 percent of total income tax.
- The top 3 percent of tax returns had an AGI of \$231,507 or more.
   These taxpayers accounted for more than half (51.3 percent) of the total income tax.
- The average tax rate of 13.64 percent for all returns in 2013 was the highest of this 10-year study.

AGI threshold \$23,000 \$22,500 Top 50 percent of returns \$22,000 \$21,500 \$21,000 \$20,500 \$20,000 2004 2005 2006 2007 2008 2009 2010 2011 2012 2013 Tax year

Figure G
Adjusted Gross Income (AGI) Threshold for the Top 50 Percent of Returns in Constant Dollars, Tax Years 2004—2013

NOTE: AGI threshold is the minimum amount of adjusted gross income needed for inclusion in each percentile. Figure is based on all returns excluding dependents. SOURCE: IRS, Statistics of Income Division, Individual Income Tax Shares, January 2016.

through the top 1 percent have a higher AGI cutoff in 2013 than they did for 2004 (Figure H and Table 1).

As expected for a graduated income tax system, the top 0.001 percent through the top 50 percent of returns recorded a larger share of the income tax compared to their respective share of AGI. In 2013, every single percentile from the top 0.001 percent through the top 50 percent, reported a decrease in its share of AGI and with the exception of the top 0.001 percent, every percentile also experienced a decrease in its share of income tax.

For 2013, the top 3 percent of returns reported a 0.5-percent decrease in its share of total income tax, which was the largest percentage point decrease for all percentiles in their respective share of income tax (Table 1). The top 1 and 2 percent of returns both reported a 2.8 percent decrease in their share of AGI, which was the largest decrease in share of total AGI of all the percentile groups. The amount of AGI needed for inclusion in the top 2 percent of returns (i.e., the AGI threshold) was \$287,018 and these returns accounted for nearly a quarter (24.3 percent) of total AGI and 46.1 percent of total income tax. The top 50 percent of returns for 2013 (reporting AGI of \$36,841 or more) accounted for 88.5 percent of AGI and paid 97.2 percent of total income tax.

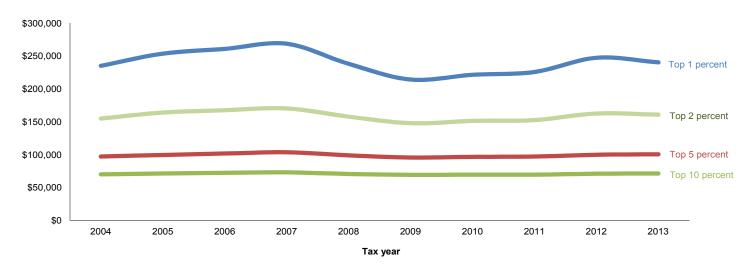

### **Changes in Law and Data Sources and Limitations**

SOI publishes a complete report annually that contains complete individual income tax data by tax year, including sections on "Changes in Law" and "Data Sources and Limitations." The statistics are based on a sample of individual income tax returns, selected before audit, which represents a population of Forms 1040, 1040A, and 1040EZ, including electronic returns. The report contains data on sources of income, adjusted gross income, exemptions, deductions, taxable income, income tax, modified taxable income, tax credits, self-employment tax, and tax payments.

For a detailed description of other changes in law that may affect the data in this article, see the complete report, *Statistics of Income—2013 Individual Income Tax Returns*, Publication 1304, Section 1. For a detailed description of the data sources and limitations, see Section 2. This report is available for download on IRS Tax Stats Webpages at: <a href="http://www.irs.gov/uac/SOI-Tax-Stats-Individual-Income-Tax-Returns-Publication-1304-(Complete-Report)">http://www.irs.gov/uac/SOI-Tax-Stats-Individual-Income-Tax-Returns-Publication-1304-(Complete-Report)</a>.

Adrian Dungan is an economist with the Individual Returns Analysis Section. Michael Weber, Chief Individual Returns Analysis Section, and Michael Strudler, Chief Individual Research Section, provided technical assistance and reviewed the article.

## **Corporate Foreign Tax Credit, 2012**

by Nuria McGrath

or Tax Year 2012, there were 7,190 U.S. corporations that claimed a foreign tax credit, a 6.9-percent increase from 2011. These corporations claimed over \$109.6 billion in foreign tax credits and reduced their U.S. tax by over 37 percent, from \$292 billion to \$183 billion. The credit reduced total U.S. corporate tax reported for all corporations by almost 27 percent. Taxpayers claiming the corporate foreign tax credit reported almost \$420 billion in foreign source taxable income,<sup>1</sup> representing only a slight increase of 0.4 percent from 2011 in constant 2012 dollars.2 For these corporations, foreign-source income represented almost 50 percent of their total worldwide taxable income for 2012 and was nearly 37 percent of total taxable income reported by all corporations. Current year foreign taxes<sup>3</sup> paid by these corporations increased by 5.3 percent to \$125 billion from 2011 to 2012, while the amount of foreign tax credits claimed in 2012 remained nearly constant with an increase of a mere 0.2 percent from 2011.

# What Makes Up Foreign Source Gross Income and Taxes?

For Tax Year 2012, these corporations reported \$792 billion in gross foreign-source income,4 an increase of 1.9 percent from 2011. The reported foreignsource income was 36.5 percent of worldwide taxable income reported by all corporations (Figure A). When examining types of income, other income, which often includes sales and foreign branch income,5 accounted for 43 percent of the total gross foreign-source income while dividends and dividend gross-up<sup>6</sup> comprised

Fact: Gross foreign-source income has increased by 87.6 percent since 2002, while total deductions increased by 71.7 percent. Moreover, total foreign taxes paid has increased 92 percent since 1992.

Fact: In 1992, income from oil and gas extraction comprised just 7 percent of gross foreign-source income. Fast forward to 2012, oil and gas extraction income comprised almost 19 percent of gross foreign-source income.

### What is the Corporate Foreign Tax Credit?

United States corporations are subject to U.S. taxation on their worldwide income, regardless of whether it is earned in the United States or abroad. In addition, U.S. corporations may also be taxed on their foreign-source income by the foreign jurisdiction in which the income is earned, resulting in double taxation of the foreign-source income. The foreign tax credit, introduced in the Revenue Act of 1918, was designed to alleviate the problem of being taxed twice on the same income. The credit allows firms to reduce their U.S. tax by an amount equal to all or part of their foreign income taxes. Currently, the credit is limited to the amount of U.S. tax a corporation would have paid on foreign source taxable income in the absence of the credit. Unused credits can be carried back 1 year and carried forward for 10 years. Corporations claiming a foreign tax credit report their foreign source gross income, deductions, and taxes on Form 1118, Computation of Foreign Tax Credit—Corporations.

Alternatively, corporations have the option of deducting foreign taxes from their taxable income. The total foreign tax credit for a corporation is computed by summing the foreign tax credits for each applicable statutory category (or "basket") of foreign-source income. The four income categories that applied for Tax Year 2012 were passive income, general limitation income, section 901(j) income, and income re-sourced by treaty (see Explanation of Terms section of this article).

<sup>&</sup>lt;sup>1</sup> Foreign source taxable income is also referred to as "taxable income (less loss) before adjustments."

<sup>&</sup>lt;sup>2</sup> For comparability purposes, money amounts in this article are adjusted to 2012 constant dollars. These adjustments were made utilizing the average Consumer Price Index for Calendar Year 2012 and earlier years as determined by the Bureau of Labor Statistics.

<sup>&</sup>lt;sup>3</sup> Current-year taxes include taxes paid, accrued, and deemed paid.

<sup>&</sup>lt;sup>4</sup> Dividend income reported on Form 1118 is already net of many deductions. The gross income reported on Form 1118 is income before the deductions that are specifically included on that form

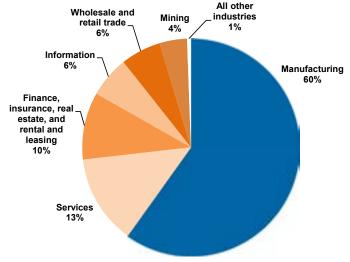

<sup>&</sup>lt;sup>5</sup> Gross Income and Definitely Allocable Deductions for foreign branches are included in Other Income and Other Deductions on Form 1118, Schedule A, but are reported separately on Form 1118, Schedule F.

<sup>6</sup> Dividend income is "grossed-up" by the amount of foreign income taxes that are deemed to have been paid on the income from which the dividend payments are made.

Tax Year 2012

SOURCE: IRS, Statistics of Income Division, Corporate Foreign Tax Credit Study, August 2016.

27.5 percent. Taxes deemed paid<sup>7</sup> on dividends made up 60.6 percent of the total current year foreign taxes. Taxes paid on branch income comprised another 14.6 percent. Together, taxes on interest, service income,<sup>8</sup> and rent and royalty income were responsible for 6.0 percent of the total current year foreign taxes. The remaining 18.8 percent of total foreign taxes reported for 2012 was accounted for by taxes on other sources of income.

These included taxes on dividends and section 863(b) income,<sup>9</sup> in addition to other taxes not attributable to interest, rents, royalties, license fees, branch income, or service income.

#### **Industry Data**

Corporations whose primary business was manufacturing accounted for almost 60 percent of the total foreign source taxable income earned by corporations claiming a foreign tax credit (Figure B). These corporations reported 66.3

Fact: In 2007, corporations engaged in the services industry reported 1.2 percent of the total foreign source taxable income and 9.4 percent of the foreign tax credit.

percent of the total foreign tax credit. Within this industry, corporations primarily engaged in the manufacturing of petroleum and coal products were responsible for 28.2 percent of the total foreign source taxable income and about 38.1 percent of the foreign tax credit. Although corporations engaged in the finance industry accounted for only 13.4 percent of all corporations with a foreign tax credit, they accounted for 35.8 percent of total assets, 10 percent of total foreign source taxable income, and 5.3 percent of the foreign tax credit. In comparison, corporations in the services industry accounted for 33.4 percent of all returns, 30.5 percent of assets, 13.3 percent of foreign source taxable income, and 12.5 percent of the foreign tax credit.

### **Geographic Spotlight**

About 40 percent of the foreign source taxable income reported by corporations claiming a foreign tax credit was reported for European countries. Twenty-one percent was reported for Asian countries. The country with the largest share of foreign source taxable income was

Fact: In 2002, less than 0.3 percent of the foreign source taxable income reported by corporations claiming a foreign tax credit was reported for Qatar. In 2007, that percentage rose to 1.14 percent; ultimately, the percentage increased to 4.46 in 2012.

the Netherlands with \$29.9 billion (10.3 percent), followed by the United Kingdom (7.1 percent), and Canada (6.4 percent) (Figure C). The largest percentage of all foreign taxes paid by companies that claimed a foreign tax credit in 2012 was the Netherlands with 13.7 percent. Other countries responsible for a noticeable share included the United Kingdom (8.3 percent), Norway (6.9 percent), Canada (5.3 percent), Luxembourg (4.7 percent) and Nigeria (4.6 percent).

## **Summary**

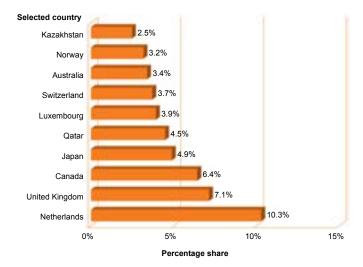

Corporations reported over \$109.6 billion in foreign tax credits, which is almost identical to the amount claimed in 2011. Foreign source taxable income from corporations claiming the foreign tax credit decreased 1.6 percent from 2011, to \$420

<sup>&</sup>lt;sup>7</sup> Taxes deemed paid are a portion of taxes paid on profits from which dividends were distributed. Such taxes are eligible for credit for U.S. corporations that satisfy ownership and other requirements.

<sup>8</sup> Service income includes compensation, commissions, fees, and other income for technical, managerial, engineering, construction, scientific, or similar services performed outside the United States.

<sup>9</sup> Internal Revenue Code section 863 provides special rules for determining taxable income from sources outside the United States with respect to gross income derived partly from within and partly from outside the United States.

Country, Tax Year 2012

SOURCE: IRS, Statistics of Income Division, Corporate Foreign Tax Credit Study, August 2016

billion for 2012, while their current foreign taxes paid increased 21.3 percent, to \$49.3 billion.

Firms in the manufacturing industry accounted for almost three-fifths of the foreign source taxable income. Together, the Netherlands, the United Kingdom, Canada, and Japan were responsible for 28.7 percent of the foreign source taxable income.

#### **Data Sources and Limitations**

Internal Revenue Code sections 901 and 909 specify the provisions for the foreign tax credit. Corporations report the foreign income and taxes related to the credit on Form 1118, Computation of Foreign Tax Credit—Corporations, and file it together with their corporate tax return. The statistics in this data release are based on information reported on Forms 1118 and related corporate tax forms for those corporation income tax returns with a foreign tax credit that were included in the 2012 Statistics of Income sample of corporate returns with accounting periods ending between July 2012 and June 2013. These returns were selected after administrative processing, but prior to any amendments or audit examination. The 2012 corporation income tax return sample included Forms 1120, 1120-F, 1120-L, 1120-PC, and 1120-REIT. However, the statistics in this data release do not include any foreign tax credit data filed specifically for the computation of the alternative minimum tax (AMT), even if the corporation reported both the regular and AMT foreign tax credits.

There are small discrepancies between the more complete foreign tax credit data presented in this data release and those published in *Statistics of Income—2012, Corporation Income Tax Returns*. Some of the differences can be attributed to returns selected for the Statistics of Income sample that were received too late to be included in the corporation income tax statistics.

Also, for the foreign tax credit statistics presented here, additional data were requested from some corporations that submitted preliminary data on their original returns because they lacked complete information on their foreign operations at the time of filing.

Foreign income and taxes available for credit are understated to the extent that they were not reported on the Form 1118 filed with the Form 1120. This study includes credits that were carried forward from prior years and were used in Tax Year 2012. However, because amended returns are not included, these statistics do not contain foreign taxes carried back to 2012 from subsequent tax years or credits for foreign taxes from 2012 that were carried back to earlier years. In addition, corporations that had foreign income and taxes but could not claim a foreign tax credit because they did not have a U.S. tax liability are not included. Finally, some corporations may have deducted their foreign taxes from their gross income rather than claim a foreign tax credit. These deductions are not included in this study. Because of the multi-tiered structure of firm ownership and the multi-country location of firms and their subsidiaries, foreignsource income and deductions that are reported on Form 1118 as earned in one country can include income and deductions that originate in another country. In addition, deductions that are not definitely allocable are usually not reported by country. For this study, these deductions are prorated across all countries based on the gross income reported for each.

Because the estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CVs) are used to measure the magnitude of this sampling error. The CV concept is defined in the section on sampling variability in the "SOI Sampling Methodology and Data Limitations" appendix found on the Tax Stats portion of the IRS Website at <a href="https://www.irs.gov/pub/irs-soi/sampling.pdf">https://www.irs.gov/pub/irs-soi/sampling.pdf</a>. The smaller the CV, the more reliable the estimate is judged to be. The CVs for corporations with foreign tax credits are shown by selected North American Industry Classification System (NAICS) divisions and industrial sector or group (Figure D).

### **Description of Tables 1 and 2**

In Table 1, columns 2 through 13 present statistics on assets, receipts, income, and taxes reported on the basic corporation income tax returns for those corporations claiming a foreign tax credit. Columns 14 through 37 contain statistics from Form 1118. Foreign branch income (column 21) is also contained in the summary columns but is reported separately on Form 1118 (Schedule F, *Gross Income and Definitely Allocable Deductions for Foreign Branches*). Table 2 includes foreign income, deductions, and taxes paid, accrued, or deemed paid from Form 1118, by selected geographic region and country.

#### **Explanation of Selected Terms**

Adjustments to taxable income—Foreign source taxable income is adjusted, when applicable, by the allocation of current year foreign losses; re-characterization of income due to prior year loss allocations; and adjustments related to overall foreign losses, including recapture of prior overall foreign losses, and

SOURCE: IRS, Statistics of Income Division, Corporate Foreign Tax Credit Study, August 2016.

allocations of current year U.S. losses. See Table 1, column 26. Adjusted taxable income is included in worldwide U.S. corporate taxable income.

Carryover of foreign taxes—Corporations can carry taxes paid in excess of the limitation back 1 year or forward for up to 10 years.

Controlled foreign corporations (CFCs)—As defined in Internal Revenue Code section 957(a), a CFC is any foreign corporation in which U.S. shareholders own directly, indirectly, or constructively more than 50 percent of either the total combined voting power or total value of all stock on any day of the taxable year of the corporation.

Deemed dividends—Certain types of income earned by controlled foreign corporations (CFCs) are recognized under section 951 of the Internal Revenue Code ("Subpart F Income") as current-year income of the U.S. corporation, even if no income is actually received from the CFC in the current tax year. In such cases, the U.S. corporation is deemed to have received a pro rata share of this income and required to report it as a deemed dividend on Form 1118.

Foreign source taxable income—Gross income (less loss) less deductions from sources outside the United States, including U.S. possessions.

General limitation income—This separate limitation category contains all foreign income not included in any other separate limitation category.

Income re-sourced by bilateral tax treaty—This separate limitation category includes certain U.S.-source income that has been subject to tax in another country pursuant to a bilateral income tax treaty. In order to appropriately relieve double taxation, these items of income are reclassified by a treaty provision as arising from foreign sources. A separate foreign tax credit limitation has to be computed for each amount re-sourced by a tax treaty.

Limitation—This is the maximum amount that can be credited for each separate limitation income category. It is the U.S. income tax before credits multiplied by the ratio of the foreign source taxable income after adjustments to the worldwide taxable income. The foreign tax credit is the lesser of the limitation or the foreign taxes paid.

Passive income—This separate limitation category is comprised of dividends, interest, rents, royalties, annuities, and net capital gains, as well as commodity transactions not connected with the active conduct of a trade or business. Passive income subject to a foreign tax rate that exceeds the highest applicable U.S tax rate is excluded from this separate limitation category and included in general limitation income.

Section 901(j) income—This separate limitation category includes income and taxes paid to countries sanctioned by the United States. Internal Revenue Code section 901(j) denies credit for taxes paid or accrued to these countries. For 2012, countries

subject to these restrictions included Cuba, Iran, North Korea, Sudan, and Syria. A separate limitation credit is computed for each section 901(j) country for informational purposes.

#### **Additional Tabular Data on Tax Stats**

For additional Form 1118 tabular data, see the Corporate Foreign Tax Credit Statistics section of the Tax Stats Webpage at <a href="https://www.irs.gov/uac/soi-tax-stats-corporate-foreign-tax-credit-statistics">https://www.irs.gov/uac/soi-tax-stats-corporate-foreign-tax-credit-statistics</a>. Income, deduction, and tax data items for corporations claiming a foreign tax credit are available annually beginning with Tax Year 2004. Data are available by major and selected minor industry, as well as by geographic region and country.

Nuria McGrath is an economist with the Special Studies Returns Analysis Section. This data release was prepared under the direction of Chris Carson, Chief.

d—Data suppressed to avoid disclosure.

NOTES: Detail may not add to totals because of rounding. Columns 2 through 13 present statistics on assets, receipts, income, and taxes reported on Form 1120, Corporation Income Tax Return, series for corporations claiming a foreign tax credit. Columns 14 through 37 present statistics from Form 1118, Foreign Tax Credit—Corporations. Adjustments to foreign source taxable income (reported in column 26) include allocations of current year U.S.-source losses and recapture of foreign losses, as well as other adjustments. These adjustments (reported on Schedule J) affect the numerator of the limitation fraction used to compute the foreign tax credit. The foreign source taxable income (less loss) after adjustments (the numerator of the limitation fraction) is reported in column 27. The limitation fraction, which represents the ratio of foreign source taxable income after adjustments to total (U.S. and foreign) taxable income after adjustments, is applied to the total U.S. tax against which the credit is allowed to determine any limitation on the foreign tax credit.

SOURCE: IRS, Statistics of Income Division, Corporate Foreign Tax Credit Study, October 2015.

<sup>[1]</sup> Includes adjustments and recapture of certain tax credits not included in column 11.

<sup>[2]</sup> In addition to the credits shown in columns 11 and 12, this is after reduction by other credits, such as the jobs credit and the investment credit, which are not shown separately in this table.

<sup>[3]</sup> Included in gross income (less loss), columns 14-20.

<sup>[4]</sup> This calculation does not include the reduction for participation in an international boycott and certain other adjustments. Therefore, the amounts presented in this column may differ slightly than subtracting the foreign tax credit claimed (column 11) from the limitation (column 29). The difference between the foreign tax credit limitation and the foreign tax credit is a measure of the U.S. tax owed on foreign source corporate income. The foreign tax credit limitation is the ratio of foreign-source income (after deductions) to total taxable income from all sources multiplied by the total U.S. income tax against which the credit is allowed. A limitation of this measure of the U.S. tax owed on foreign source corporate income is that it relies on the definition of foreign-source income contained in the tax code. Thus, it assumes that the allocation of expenses to foreign-source income accurately reflects the cost of earning that income. Current law also allows expenses allocable to foreign-source income to be deducted even when all of the income associated with those expenses is deferred. In that case, the computed residual U.S. tax would be zero, rather than negative. In addition, the definition of foreign-source income includes income that may be considered domestic-source income, such as certain income from sales of U.S. inventory property.

 $d-Not \ shown \ to \ avoid \ disclosure \ of \ information \ about \ specific \ taxpayers. \ However, \ the \ data \ are \ included \ in \ the \ appropriate \ totals.$ 

<sup>[1]</sup> Total number of returns may not equal the sum of returns for specific areas or countries because a return could include two or more countries.

<sup>[2]</sup> Included in gross income (less loss), columns 2-8.

<sup>[3]</sup> Includes taxes on dividends and section 863(b) income, in addition to other taxes not attributable to interest, rents, royalties, license fees, branch income, or services income.

<sup>[4]</sup> Includes Latin America not allocable, which is not shown separately.

 $<sup>\</sup>cline{1.5}$  Includes Asia not allocable, which is not shown separately.

NOTE: Detail may not add to totals because of rounding. Form 1118 is entitled Foreign Tax Credit—Corporations.
