Corporation Source Book of Statistics of Income, 1991

INDUSTRY STATISTICS AND THEIR LIMITATIONS

Prior to 1951, the Corporation Source Book was based on information compiled from all returns filed. Since then, Corporate Statistics of Income has been derived from a stratified probability sample of corporation income tax returns. For all years, the returns used were selected after revenue processing but before audit examination. Returns of the largest corporations are generally in the sample from year to year. For more detailed information on the sample for a specific tax year, see "Description of the Sample and Limitations of the Data" in the complete report Statistics of Income, Corporation Income Tax Returns.

Year to year comparability of Source Book statistics is affected by consolidations and mergers, as well as by changes in the law, the tax forms, and the industrial classification systems used over the years. Changes in the law and tax forms are described each year in Statistics of Income, Corporation Income Tax Returns.

The industry groupings used for Statistics of Income, Corporation Income Tax Returns, conform with the Enterprise Standard Industrial Classification (ESIC), which classifies companies, rather than their individual establishments. The structure of the classification follows closely along the lines of the Standard Industrial Classification (SIC), which designed as a means of classifying establishments. (Both of these publications are issued by the Office of Management and Budget.) Some departures from the enterprise classification system are made for Statistics of Income for the finance industries in order to reflect particular provisions of the Internal Revenue Code. A comparison between the Standard Industrial Classification, 1972, the Enterprise Standard Industrial Classification, 1974 and the groupings used for Statistics of Income, 1977 can be found in the "General Description of the Corporation Source Book."

Even though the Statistics of Income classification system is designed to apply to the company rather than the establishment, its application to corporation income tax return statistics has limitations. A return is classified by industry based on the activity accounting for the largest percentage of total receipts. This means that large corporations with diversified activities are included in only one industry even though many of their business operations are unrelated to the industry in which they are classified. Therefore, statistics for an industry may be either understated by amounts reported by corporations whose principal activity lies elsewhere, or overstated by amounts reported by corporations classified in the industry but having substantial operations in other industries. When a company's operations are diversified among related minor industries, the diversification effect may be mitigated somewhat when data for related minor industries are aggregated into the major industries and to a greater degree when related major industries are aggregated into industrial divisions. Major industries and industrial divisions are featured in the published Statistics of Income reports.

Corporation Source Book of Statistics of Income, 1991

NOTES

* Estimate should be used with caution because of the small number of sample returns on which it is based.

** In order to avoid disclosure of information for specific corporations, these data have been combined with data in a lower asset size class.

*** In order to avoid disclosure of information for specific corporations, these data have been deleted. Data are included in appropriate totals.

✓ This asset size class includes data from one or more higher size classes. See note number 3 below for further explanation.

(-0) Less than $500 per return.

1. Income year 1991 covers corporation accounting periods ended July 1991 through June 1991.

2. Size of total assets are in thousands of dollars, except for the third asset column which should be read as $1 under $100,000.

3. Detail may not add to totals due to rounding and deletion of data. The statistics at the major group level were derived by adding the appropriate minor industries after combinations of asset size classes had been made. The statistics of industrial divisions and the U.S. Totals were similarly derived by adding the appropriate major groups and industrial divisions, respectively. These differences are particularly evident for the Net Income, Total lines when comparing identical industries between the two sections ("Returns With and Without Net Income" and "Returns With Net Income").

4. "Iron ores", which was shown seperately in previous years, is now included in "Other metal mining".

5. When data are the same for minor and major industries, only the major industry is shown. When data are the same for minor, major and industrial division industries, only the industrial division is shown.

6. See the report STATISTICS OF INCOME--1991, CORPORATION INCOME TAX RETURNS, for a discussion of these statistics including:

   Description of the sample and limitations of the data
   Explanation of terms

   This report may be obtained from the Superintendent of Documents, U.S. Government Printing Of Office, Washington, DC 20402.
