Publication 1136 (Rev. 6-89)

Michael J. Murphy
Acting Commissioner

Charles H. Brennan
Deputy Commissioner
(Operations)

Charles J. Peoples
Assistant Commissioner
(Returns Processing)

Fritz Scheuren
Director, Statistics of Income Division

The SOI Bulletin provides the earliest published annual financial statistics from various types of tax and information returns filed with the Internal Revenue Service. It also includes information from periodic or special analytical studies of particular interest to tax administrators. In addition, historical data are provided for selected types of taxpayers, as well as the gross internal revenue collections and other tax related items.

Information on the availability of additional unpublished data concerning the topics in this issue may be obtained by writing to the Statistics of Income Division, TR:S Internal Revenue Service, Washington, DC 20224.

In addition, special Statistics of Income tabulations based on income tax returns can be produced upon request on a reimbursable basis. Requests for this service should be addressed to the Director, Statistics of Income Division, at the address shown above.

Overall policy review of the SOI Bulletin is conducted by the Office of Tax Analysis, under the direction of Thomas Neubig. For this issue, those assisting in the review were Tracy Gomes, Allen H. Lerman, Carolyn Lynch, Susan Nelson, and Jerry Tempalski. Robert A. Wilson and Bettye Jamerson of the Statistics of Income Division were the technical editors and were assisted by Wendy Alvey and Beth Kilss, editors of the SOI Bulletin Board, and Clementine D. Brittain who provided editorial assistance and prepared the copy.

SOI STATISTICAL SERVICES

(Available from Statistics of Income Division)

As part of the Statistics of Income program a series of special services is now being offered to data users (see below). Detailed information on these statistical services can be obtained by writing to Director, Statistics of Income Division (TR:S), Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, DC 20224. Purchase is by check made payable to the IRS Accounting Section.

Studies of International Income and Taxes, Publication 1267 — Price \$45.00

Purchase price includes a 516-page document for 1979–83 that presents information from 13 Statistics of Income studies in the international area, including:

- Foreign activity of U.S. corporations
- Activity of foreign corporations in the U.S.
- Foreign interests in U.S. corporations
- Statistics related to individuals, trusts, and estates
- Data presented by—geographical area or industrial activity, as well as other classifiers

Purchasers of this service also will be provided with additional information for one year as it becomes available. The one year period for receiving additional information can be extended at a cost of \$35.00 per year. A long-term subscription (\$150) includes the compendium and additional information as it becomes available through August 1990. (The next compendium is scheduled for release in September 1990.)

Individual Income Tax Returns, Publication 1304 — Price \$32.00

Purchase price includes a 196-page document for 1985 presenting Statistics of Income data and tables on:

- Sources of income
- Exemptions
- Itemized deductions
- Tax computations
- Data presented by—size of adjusted gross income, marital status

Purchasers of this service also will be provided with additional articles relating to 1985 data and preliminary 1986 data as they become available and will be notified of future statistical releases relating to individual income tax returns.

Partnership Returns, Publication 369 — Price \$22.00

Purchase price includes a 314-page document for 1978–82 presenting previously unpublished Statistics of Income data for 1980, 1981 and 1982, as well as data previously issued in other publications. Features include:

- Number of partnerships
- Limited partnerships
- Receipts
- Cost of sales and operations
- Deductions
- Net income
- Capital gains
- Data presented by—industry size of total assets state number of partners

Purchasers of this service also will be provided with data for 1983–1985 as they become available and will also be notified of future statistical releases relating to partnership returns.

Other Services — Price dependent on the request

- Unpublished tabulations from SOI program are available. Includes detailed tables underlying those published in SOI Bulletin.
- Special tabulations produced to user specifications.
- Public use tape files, including the Individual Tax Model (1978–1985), among others. (Earlier files are available from the Machine Readable Branch (NNSR) of the National Archives, Washington, DC 20408.

BUSINESS SOURCE BOOKS

(Available from Statistics of Income Division)

In addition to the Corporation Source Book, two others are now being offered by the Statistics of Income Division (see below). Information can be obtained by writing to Director, Statistics of Income Division (TR:S) at the address above. Purchase of Source Books is by check made payable to the IRS Accounting Section.

Corporation Source Book, 1985, Publication 1053 — Price \$175.00

This is a 480-page document that presents detailed income statement, balance sheet, tax and investment credit items by major and minor industries and size of total assets. This report is part of an annual series and can be purchased for \$175 (issues prior to 1982 are for sale at \$150). A magnetic tape containing the tabular statistics for 1985 can be purchased for \$1,500.

Partnership Source Book, Publication 1289 — Price \$30.00

This is a 291-page document showing key partnership data for 1957 through 1983, at the minor, major and division industry level. Includes a historical definition of terms section and a summary of legislative changes affecting partnerships during that period. Tables feature:

- Number of partnerships
- Number of partners
- Business receipts
- Depreciation
- Taxes paid deduction
- Interest paid
- Payroll
- Payments to partners
- Net income

Purchasers of this service also will be advised of the release of subsequent years' data. A magnetic tape containing the tabular statistics can be purchased for an additional \$200.

Sole Proprietorship Source Book, Publication 1323 — Price \$95.00

This Source Book is a companion to that for partnerships, shown above. It is a 244-page document showing key proprietorship data for 1957 through 1984. Each page contains statistics for a particular industry. Included will be data on:

- Number of business
- Business receipts
- Interest paid
- Depreciation
- Taxes paid deduction
- Payroll
- Net income

As with Partnerships, a magnetic tape containing the tabular statistics can be purchased for \$245.

OTHER PUBLICATIONS

(Available from Superintendent of Documents GPO, Washington, D.C. 20402)

The Statistics of Income (SOI) Bulletin (Quarterly) — Publication No. 1136

Subscription price \$16.00; Single copy price \$6.00

The SOI Bulletin provides the earliest published financial statistics from the various types of tax and information returns filed with the Internal Revenue Service. The Bulletin also includes information from periodic or special analytical studies of particular interest to tax administrators and economists.

Statistics of Income—1985, Corporation Income Tax Returns, Publication No. 16

Price \$9.50

Presents information on—

- Receipts
- Deductions
- Net income
- Taxable income
- Income tax
- Tax credits
- Distribution to stockholders
- Assets
- Liabilities

Data classified by—

- industry
- accounting period
- size of total assets
- size of business receipts

SOI Bulletin Board	1
Individual Income Tax Returns, Preliminary 1987	5
By Susan Hostetter and Jeffrey Bates	
For Tax Year 1987, the first year of transition under the Tax Reform Act of 1986, preliminary data show that adjusted gross income reached \$4,788 billion, an increase of 12.3 percent. However, much of the increase was due to the major definitional changes included in the Act. Total income tax for 1987 was \$371 billion, up only slightly from \$367 billion for 1986. Tax liability, when looked at as a percentage of adjusted gross income, declined sharply from 14.8 percent for 1986 to 13.3 percent for 1987.	
Individual Income Tax Rates, 1986	27
By John Labate and Dan Holik	
Tax Year 1986 marked the final year of individual income tax adjustments under the Economic Recovery Tax Act of 1981 (ERTA). This article presents statistics on marginal tax rates for 1986, with summary statistics for 1980, the last year before ERTA, and for 1981 through 1985, the other 5 years under ERTA. For Tax Year 1986, individual income tax totaled roughly \$367 billion, or 13 percent more than 1985. For returns that showed some tax liability, the average income tax was \$4,374, an increase of more than \$443 from 1985. The average tax rate for "taxable returns" increased to 15.05 percent of adjusted gross income, the highest rate since 1982.	
Individual Income Tax Shares and Average Tax Rates, 1951-1986	39
By Janet McCubbin and Fritz Scheuren	
This is the second article in a series that when completed will present a history of individual income and tax data from 1916 to more recent times. The first article covered Tax Years 1916 through 1950. This sequel provides data for later years, focusing on percentile shares of tax for 1951 through 1986. A third article due to be published in an upcoming issue will include an overall look at income and tax shares for the entire period.	
Foreign Corporate Investment and Activity in the United States, 1984 and 1985	75
By James R. Hobbs	
For Tax Year 1985, the 36,700 domestic corporations that were "controlled" by a "foreign person" generated \$514 billion of worldwide receipts and reported total assets amounting to \$656 billion. Also for 1985, there were nearly 11,700 "foreign" corporations that reported \$51 billion of receipts generated from activities "effectively connected" with a U.S. trade or business. Fifty-two percent of these receipts were for foreign banks with U.S. branch operations.

Spring 1989

SOME OBSERVATIONS AND INSIGHTS

While the rest of IRS concerns itself with collecting taxes and issuing refunds, the end of the 1989 filing season finds the SOI Division deeply engrossed in processing statistical samples of tax returns so that the Treasury Department and you, the public, can learn more about how the Tax Reform Act of 1986 is working. (Some of the first effects of the Act are reflected in the 1987 preliminary data, which are presented in this issue of the *Bulletin*.) A number of provisions of that legislation were implemented for Tax Year 1988 and, thus, were felt by taxpayers for the first time when they filed their returns this year. Since mid-January we have been compiling some early statistics on a weekly basis from our Taxpayer Usage Study. These results will be reported on in detail in the Summer issue of the *Bulletin*, but a few tidbits from data compiled through April 28, 1989, are presented below for your information.

- Approximately 101.8 million returns were filed. This was up from 98.2 million returns that had been filed as of the same time last year.
- Forms 1040 accounted for 63.3 percent of the Tax Year 1988 returns filed, a 1.0 percent decline from Tax Year 1987. Forms 1040A and 1040EZ were filed by 18.0 percent and 18.7 percent of the filers, respectively, which were increases over last year's rates of 17.4 percent for Forms 1040A and 18.3 percent for Forms 1040EZ.
- About 69.6 percent of the taxpayers claimed a refund, down from the 71.9 percent who claimed a refund last year.
- The percentage of Forms 1040 showing itemized deductions declined to 47.9 percent from 51.1 percent for 1987.

- Use of paid tax return preparers increased slightly for Forms 1040, by 0.2 percent—from 65.0 for 1987 to 65.2 percent for 1988. For Forms 1040A and 1040EZ, use of tax preparers declined from 24.0 to 22.1 percent for 1040A's and from 4.1 to 3.6 percent for 1040EZ's.
- The percentage of those eligible to claim the deduction for contributions to an Individual Retirement Arrangement (IRA) continued to decline, from 7.2 percent last year to 6.0 percent this year.

The indicators provided by these early statistics from the 1989 filing season are currently being studied closely by all concerned. We now await the preliminary statistics that cover all 1988 returns which will become available early next year.

Fritz Scheuren
Director
Statistics of Income
Division

Individual Income Tax Returns, Preliminary Data, 1987.—This article, presenting preliminary data, is featured annually in the *SOI Bulletin*. This time it presents statistics for 1987 based on a sample of individual income tax returns filed in 1988 and shows some of the first detailed results of the recent tax reform.

Individual Income Tax Rates, 1986.—This article is also an annual feature of the *Bulletin* and provides data on average and marginal tax rates for Tax Year 1986.

Foreign Investment and Activity in the U.S. through Corporations, 1984 and 1985.—This article presents data on domestic corporations controlled by a foreign person and on foreign corporations doing business in the United States. This information is based on corporation income tax returns for both 1984 and 1985.

Selected Historical Data.—These tables contain historical and current financial statistics from the various tax returns and supporting schedules filed with the IRS, as well as the most recent information about tax collections and refunds.

THIS ISSUE AT A GLANCE

Three articles featured in the Spring 1989 issue of the *Bulletin* focus on data from the individual income tax area. The fourth presents data on foreign corporate activity. A brief abstract of each article is provided below:

Individual Income and Tax Shares, 1951-1986.—This is the second article in a series of three that present an analysis of selected percentile shares of income and tax over time. This second article focuses on percentile shares of the income tax for the more recent years; the first article concentrated on the earlier years.

BEHIND THE SCENES

Among the many sounds that can be heard throughout the halls of the SOI Division at lunchtime every Tuesday are the voices of the IRS chorus. This group rehearses weekly for its periodic performances at IRS-sponsored special events under the capable leadership of PETER SAILER. A long-time Division employee, Pete also "conducts" the many activities of our Individual Special Projects Section in the Individual Statistics Branch. But it was for his musical skills—in particular, his dedication and commitment to the chorus for the past 2-1/2 years—that Pete was honored in March by former Commissioner Lawrence Gibbs and joined the

SOI Bulletin Board

Spring 1989

ranks of those who have received the coveted "IRS Commissioner's Award." By the way, on Tax Day (April 17), Pete and the chorus could be heard serenading taxpayers as they entered our building for tax forms and tax advice with some old ("Little Tommy Tax") and some new ("Deep in the Heart of Taxes") tax songs. Other SOI Division employees in the IRS Chorus include SANDY BYBERG, NANCY DUTTON, BARRY JOHNSON, BETH KILSS, BRIAN MADIGAN, VERGIE MOSE, RAY SHADID, AND JEANETTE SIMMS.

If you had visited the SOI Division lately, you might have thought we were playing "musical chairs." Not so, but there are a number of people who, since March, have been occupying new leadership positions. All of our newest group of program managers have previously been statisticians or economists in the Division for several years before moving into their current jobs.

DAVE PARIS, our new Chief, Individual Statistics Branch, oversees and manages the income tax statistical program relating to individuals and sole proprietorships, plus such special studies as sales of capital assets and TPUS, which I've already mentioned. Along with Pete, he is responsible for developing the tax model of individual income tax returns both as a public-use file and as a research tool for use by Treasury's Office of Tax Analysis and the Congressional Joint Committee on Taxation. Assisting Dave in carrying out some of these functions is the new chief of the Individual Returns Analysis Section, JEFF HARTZOK. Jeff and his staff conduct the basic SOI program for individuals and sole proprietorships, producing data annually which cover size distributions of income, deductions, tax, and tax credits. They also are responsible for periodic studies of sales of capital assets and on the foreign income and taxes of Americans living abroad.

Our Corporation Statistics Branch also has benefited from these new managerial selections. The Corporation Returns Analysis Section is now headed by KEN SZEFLINSKI, with ALAN ZEMPEL promoted to the management staff as Chief, Corporation Special Projects Section. Ken oversees the basic SOI program relating to corporations which produces data annually that cover the complete income statement, balance sheets, tax, and tax credits, by industry and size. Alan and his staff have responsibility for several studies including the annual basic SOI program for partnerships and the annual computation of the percentage used in determining the income tax of foreign life insurance companies with U.S. operations.

YOUR CALL

We are proud to announce the recent establishment of a statistical information services office under the supervision of BOB WILSON (202-376-0218), who also coordinates publication of the *Bulletin*. Currently on the statistical information staff are DAVE JORDAN, SANDY BYBERG, and DARLENE REYNOLDS.

If you have questions about the availability of our SOI data or when our next publications are due to be released, our staff in this newly formed office is waiting to answer your inquiry *Monday-Friday from 8:00 am to 5:00 pm on (202) 376-3900.*

During the past 2 years, many people in the SOI Division have been involved in the planning, organizing, and launching of this new office in an effort to better serve our customers and handle the numerous inquiries for SOI data and SOI publications. By centralizing a function that was previously spread throughout the Division's program branches, we have been able to introduce many efficiencies and

eliminate a lot of inconsistencies in the way information requests were previously answered.

In making the transition from a decentralized system of answering outside requests for information to a centralized one, we are doing a number of specific things which we feel will help us achieve our objectives:

- All incoming information calls and letters requesting information are being referred directly to the "information desk" first. The staff will answer all calls and letters about the *availability* of statistical information in one of several ways: the caller's questions will be answered immediately; the staff will research the answer and call back; or the staff will respond in writing.
- When the inquiry concerns *technical details* about one of our projects, the staff will refer it to a subject-matter specialist in one of the program branches. The names and telephone numbers of the specialists are available on pages 18-24 of the Fall 1988 issue of the *Bulletin*. The projects they work on are also listed and described there. Plans are to update this information annually, but current information will also be available from our information desk.
- We have moved responsibility for our statistical subscription series (corporation "source book," "source books" for unincorporated businesses, and reports in the IRS methodology series) out of the various branches to the new information desk. To obtain information on how to request these special reports, users may call or write the statistical information services office directly.
- Our information desk is also handling requests for data on area-to-area migration, as well as some of the requests for

SOI Bulletin Board

Spring 1989

other small area data based on individual income tax returns. Customers requesting special tabulations of the latter information, however, will be referred to the subject-matter specialists or may want to get in touch with them directly.

There will be other procedures and areas of responsibility incorporated into the functions of this office. Our information desk, however, is still in an early stage of development and is not yet very widely known. Despite this, since its opening day(s) in February, the number of phone calls and letters requesting information has averaged between 55 and 60 each week and continues to grow. In each case a response was given, either immediately, in the case of many phone requests, or on the average of about a week for letters and calls requiring research.

Though we are pleased with this strong beginning, we are looking forward to learning how to do this job even better, and we are anxious to learn how well we are serving you. We would, therefore, welcome your comments or any suggestions you may have for improvement. There will also be personal follow-ups with some of you to see how satisfied you are with our service and how well you feel your questions were answered. At the same time, individuals are urged to call me if they feel the written replies they have received are unresponsive in any way. (My telephone number is 202-376-0216.)

UPCOMING FEATURES

The following are a few of the articles to look for in upcoming issues of the *SOI Bulletin*:

- Private Foundations, 1985;
- Sole Proprietorships, 1987;
- Social Security Taxation, 1986-1991;
- Partnerships, 1987;
- Corporation Income Tax Returns, 1986, (preliminary data);
- Taxpayer Usage of Individual Income Tax Returns, 1988; and
- High Income Individual Income Tax Returns, 1985-1986.

Individual Income Tax Returns, Preliminary Data, 1987

By Susan Hostetter and Jeffrey Bates*

In 1987, the first year of transition under the Tax Reform Act of 1986, there were major changes in the definitions of income (items included in gross income, adjusted gross income, and taxable income), statutory adjustments to income, deductions, and personal exemptions, as well as in tax rates and the income tax computation. Despite these changes, when computed similarly for 1986 and 1987, recomputed total income increased by only 1 percent from \$2,781 billion to \$2,808 billion [1]. On the other hand adjusted gross income (AGI), the traditional tax measure of income, reached \$2,788 billion for 1987, an increase of 12.3 percent, much of which was due to definitional changes. Recomputed total income is the measure of comparable income used for this article and is discussed later on. See Figure A for a comparison of 1986 and 1987 AGI and recomputed total income [2].

Total income tax (the sum of income tax after credits and the alternative minimum tax) for 1987 was \$371 billion, up only slightly from \$367 billion for 1986. Tax liability, when looked at as a percentage of adjusted gross income, declined sharply from 14.8 percent for 1986 to 13.3 percent for 1987; however, when looked at as a percentage of a comparable income total, the percentage remained the same at 13.2 for both years.

There were substantial modifications in reporting requirements throughout the individual income tax return, and these changes are dramatically evident in the statistics. Even though, in the aggregate, income and tax changed very little, individual taxpayers may have experienced considerable change in either adjusted gross income or tax as a result of tax reform.

Because of the extensive alterations in the individual tax law and the major effect this had on the traditional statistical measures (like AGI), this article is presented somewhat differently for 1987 than for prior years in order to focus on the tax law changes and their effects on the data. To this end, the article begins with a section on definitions and changes in the law, followed by an analysis using a comparable income concept.

DEFINITIONS AND CHANGES IN THE LAW

The changes in law summarized below are covered in the order in which they are reflected on the Form 1040

* Susan Hostetter is Assistant Chief, Individual Statistics Branch; Jeffrey Bates is an economist, Individual Statistics Branch. Significant contributions were made by Allen H. Lerman, Office of Tax Analysis, U.S. Department of the Treasury.

Figure A.—Recomputed Total Income (RTI), Adjusted Gross Income (AGI), and Percentage Change, Tax Years 1986 and 1987

[Amounts are in millions of dollars]

Income concept	1986 income	1987 income	Percentage change
	(1)	(2)	(3)
Recomputed total income ¹	\$2,781,145	\$2,807,749	+ 1.0%
Adjusted gross income	\$2,481,681	\$2,788,011	+ 12.3

¹ For 1986, adjusted gross income plus statutory adjustments, plus dividend exclusion, plus capital gains exclusion, plus unemployment compensation exclusion; for 1987, adjusted gross income plus statutory adjustments less disallowed passive losses.

individual income tax return. Whenever possible, statistics showing the effects of the change from 1986 to 1987 are presented. Figure B shows a comparison of selected sources of income, total income (i.e., income before deducting statutory adjustments), statutory adjustments, and adjusted gross income for 1986 and 1987.

Filing Requirements

The tax return filing thresholds based on income, age, and marital status were changed for all filing status groups for 1987. The two largest categories in terms of the number of taxpayers affected were single persons and married persons filing jointly. While, for 1986, a single taxpayer was required to file a return if his or her gross income was at least \$3,560, for 1987 the threshold was \$4,440 [1]. For married couples filing jointly where both spouses were under age 65, the filing threshold increased from gross income of \$5,830 for 1986 to \$7,560 for 1987. Figure C shows that, while there was little increase (less than 1 percent) in the number of married taxpayers filing joint returns, the number filing single returns increased about 8 percent, and the number of married taxpayers filing separate returns increased 55 percent.

For 1987 filing thresholds for dependents were reduced, especially for those with earned income. Children and others eligible to be claimed as dependents were required to file a return if all of their income was earned (such as salaries and wages), and it exceeded \$2,540, or if their gross income was more than \$500 and any of it was unearned income (such as interest or dividends). A major change for 1987 was the elimination of the effective double exemption for dependents who filed returns and who, for 1986, could be claimed as a dependent and still claim an exemption for themselves. Regardless of income level, a dependent could not claim an exemption on his or her own return if he or she could be claimed as a dependent on the parent's return. Also, if gross income was \$1,900 or more,

¹ Sources of income shown above represent an incomplete list and do not add to total income. "Other income" represents data reported on Form 1040, line 21 for 1987 (line 22 for 1986).

n.a.—Not available.

NOTE: Detail may not add to total because of rounding.

children over age 19 (with some exceptions) could not be claimed as dependents. A child under the age of 14 who had investment income that exceeded \$1,000 generally had that income taxed at the highest tax rate applicable to his or her parents' income for the year.

Interest

Starting with 1987 (for the first time since 1942), tax-exempt interest on State or local Government obligations had to be shown on Federal income tax returns, even

though it generally was not subject to Federal taxation. More than 3 million people reported almost \$31 billion in such interest. Nearly half of the total tax-exempt interest was reported on returns with AGI of \$100,000 or more.

Taxable interest received decreased by 2.2 percent, while the number of returns with taxable interest increased by more than 4 percent from 65 million to 68 million. In contrast to tax-exempt interest, only 20 percent of taxable interest was reported on returns with AGI of \$100,000 or more.

Dividend Exclusion

The dividend exclusion of up to \$100 (\$200 on joint returns) was repealed for 1987. Total dividends (before exclusion), the amount most comparable for both years, increased by about 4.4 percent for 1987, down from an increase of 11.6 percent the year before. Dividends in AGI rose 7.8 percent from 1986 to 1987, with over two-fifths of the increase in dividends due to the elimination of the exclusion.

The total number of returns with any dividend income increased by 6.5 percent for 1987, from 20.9 million to 22.3 million. However, those reporting dividend income included in AGI increased by 33 percent from 16.8 million to 22.3 million.

Figure C.—Summary of Filing Thresholds and Number of Returns, Tax Years 1986 and 1987

[Number of returns are in thousands]

Type of return	1986		1987		Percentage change in returns
	Filing threshold ¹	Number of returns	Filing threshold ¹	Number of returns	
	(1)	(2)	(3)	(4)	
Total	—	103,045	—	107,070	+3.9%
Married filing:					
Jointly	\$5,830	47,870	\$7,560	47,901	+1
Separately	1,080	1,015	1,900	1,574	+55.1
Single	3,560	43,800	4,440	47,362	+8.1
Head of household	3,560	10,279	4,440	10,179	-1.0
Surviving spouse	4,750	82	5,660	55	-40.2

¹ Special filing thresholds were set for taxpayers 65 or older or blind.

Note: There were other reasons for being required to file such as the presence of self-employment income of \$400 or more, regardless of the filing threshold shown above. In addition, many people filed returns in order to claim a refund because of overwithholding of tax on wages.

Capital Gains

Long-term (assets held over 6 months): For 1987, the 60-percent exclusion of long-term capital gains was repealed so that the full amount of capital gains was included in AGI as ordinary income. However, for 1987 only, the maximum tax rate on long-term capital gains was limited to 28 percent (up from 20 percent in 1986), which was lower than the top rate of 38.5 percent on ordinary income for 1987. Full taxation at the same tax rates as "ordinary" income began in 1988.

Short-term (assets held for 6 months or less): For 1987, the top tax rate on short-term gains was the same as for "ordinary" income, 38.5 percent. For 1986, the top rate was 50 percent.

Net capital gains realizations (i.e., capital gains net of capital losses and before the 1986 exclusion) dropped from nearly \$300 billion in 1986 to about \$133 billion in 1987 [3]. The latter amount was more in line with the 1984 and 1985 realizations of \$135 and \$168 billion, respectively. The "spike" in capital gains for 1986 was an anomaly as taxpayers sold assets they might not otherwise have sold in order to take advantage of the 60 percent capital gains exclusion before it was rescinded beginning for 1987 by the Tax Reform Act. With the exclusion eliminated, capital gains in AGI were almost the same for 1987 as for 1986, increasing only about 0.5 percent.

Figure D shows the steady rise from 1980 through 1986 in net gains from sales of capital assets before exclusion and the comparable 1987 amount. By and large, the increase follows stock market trends in sales of corporate stock which comprises the largest component of capital assets sold [4]. Stock market activities in 1986 and 1987 would also have affected the sales of capital assets figures, in that 1986 saw a favorable stock market, and 1987 saw a decline that may have caused taxpayers to realize losses. However, the effects of these activities appear to be insignificant compared to the sales of capital assets in anticipation of the elimination of the 60-percent exclusion.

Figure D.—Net Capital Gains Before Exclusion, and Percent Increase, Tax Years 1980–1987

(Number of returns are in thousands, money amounts are in millions of dollars)

Tax year	Number of returns	Net Capital gains before exclusion	Percentage increase
	(1)	(2)	(3)
1980	8,929	\$ 72,073	1.4%
1981	9,485	77,799	7.9
1982	9,636	86,676	11.4
1983	9,543	119,271	37.6
1984	10,927	135,348	13.5
1985	11,126	167,540	23.8
1986	15,658	295,882	76.6
1987	15,274	133,487	-54.9

Pensions and Annuities

Pensions in AGI increased by 16.4 percent from Tax Year 1986 to more than \$125 billion, and the number of returns reporting pensions in AGI increased by 12.1 percent to 16.6 million. Both the number of returns reporting pension income and the total amount reported has been increasing steadily for years. However, the increase in pension income reported in AGI from 1986 to 1987 may have been partially attributable to the elimination of the 3-year recovery rule.

Prior to the Tax Reform Act of 1986, the 3-year recovery rule allowed retirees' annuities to be tax-free until the amount of their contribution to a pension plan was recovered, provided they could recover the entire contribution within 3 years. As a result of tax reform, all retirees were required to prorate the exclusion of their contributions over their lifetimes.

Passive Losses

Passive activity losses, a concept introduced in the Tax Reform Act of 1986, are losses that are generated by any trade, business, or rental activity in which the taxpayer did not *materially* participate. A taxpayer materially participates in an activity if he or she is involved on a regular, continuous, and substantial basis in the operations of the activity.

The 1986 Act also imposed limitations on the extent to which these losses were recognized for income tax purposes. Beginning for 1987, passive losses could only be used to offset income from passive activities. Any excess passive losses could be carried forward to the following years without limit. (Previously, any business losses could be used to offset income from any other activity.)

An exception to this limitation is made for taxpayers with passive losses from rental activities in which they are actively involved. Net losses of up to \$25,000 can be deducted to offset "nonpassive" income, such as wages or dividends. For taxpayers whose AGI exceeded \$100,000, the \$25,000 exception is reduced by 50 percent of the amount by which AGI exceeded \$100,000. This effectively eliminated the \$25,000 exception altogether for taxpayers with an AGI of \$150,000 or more.

The 1986 Act provided a 5-year phase in of the limitations on losses from passive activities entered into before October 23, 1986. This phase in allowed a diminishing percentage of passive losses to offset nonpassive income and taxes. Sixty-five percent of passive activity losses from such interests were allowed to offset nonpassive income for Tax Year 1987. Passive activity losses disallowed for 1987 by reason of the limitation could, in many cases, also be carried forward to 1988.

Individual Income Tax Returns, Preliminary Data, 1987

Total 1987 passive activity losses allowed were \$42 billion, and the total of those disallowed was \$9.8 billion. Even though rental activity is regarded as a passive activity regardless of whether the taxpayer materially participates, about \$23 billion of allowable passive losses were attributable to rental activities where there was active participation and the taxpayer was eligible for all or part of the \$25,000 exception. About \$3 billion in rental losses was disallowed.

Most of the passive loss activity was reported on Schedule E, Supplemental Income. However sole proprietorships (Schedule C) and farms (Schedule F) frequently included passive losses or passive income which could be used to offset other passive losses. Figure E shows the numbers of returns and dollar amounts of net losses (after reduction by allowable passive losses) reported on these more frequently used schedules. These losses include both passive and nonpassive losses. Net passive losses for one of the income sources shown were allowed if they were offset by passive income from another source.

Figure E shows a consistent decrease in net losses, much of which may be attributable to 1986 tax laws providing passive loss limitations and decreases in the amount of depreciation deducted in computing business net income.

Since the purpose of the passive loss limitations was to reduce or eliminate benefits that previously resulted from "tax shelter" activities, it is likely that their effect is most concentrated in the statistics for income or loss from partnerships, since partnerships (particularly limited partnerships) were frequently used for this purpose. The SOI Bulletin article on 1986 Partnership Returns documents a 32 percent increase in net losses in limited partnerships for 1986, with much of the increase attributable to industries generally associated with tax shelter activities, such as real estate operators, lessors of buildings, and oil and gas extraction [5, 6]. As Figure E shows there was a decrease of 36.7 percent in losses claimed from partnerships and S Corporations.

Unemployment Compensation

For 1987, all unemployment compensation was included in AGI, whereas for 1986 all or part of unemployment compensation was excluded, depending on the taxpayer's filing status and income level. Although total unemployment compensation reported for 1987 decreased by 12.8 percent, the amount included in AGI increased by 76.7 percent, from \$7.0 billion to \$12.3 billion.

Statutory Adjustments

Statutory adjustments were the amounts deducted from "total income" in order to determine adjusted gross income. These adjustments decreased by 70 percent from 1986 to 1987, mainly as the result of statutory changes. Figure F provides a summary of the changes before and after tax reform.

Moving Expenses.—Moving expenses were no longer deductible as an adjustment in computing AGI; instead taxpayers could subtract them as an itemized deduction. For 1986, about \$4.6 billion was claimed for this adjustment. For those who itemized, the 1987 deduction was \$3.7 billion (see Itemized Deductions, below).

Employee Business Expenses.—For 1987, unreimbursed employee business expenses, in contrast to reimbursed expenses, were deductible only as a "miscellaneous" itemized deduction. As such they were deductible only by those who itemized and then only to the extent that all miscellaneous deductions exceeded 2 percent of AGI. For 1986, these expenses were statutory adjustments to income, and were fully deductible, even if the taxpayer did not itemize deductions. About \$19.6 billion was claimed as an adjustment for 1986 employee business expenses. For 1987, \$12.9 billion of employee business expenses were claimed as itemized deductions (subject to the 2 percent

¹ Adjustments do not add to total because "other adjustments" were not listed and, in some cases, adjustments on prior year returns were not included in 1987 data, but are included in the 1987 total.

limitation), leaving only the reimbursed portion, amounting to \$4.0 billion, to be claimed as statutory adjustments.

Individual Retirement Arrangements (IRAs).—The IRA contribution deduction was limited or disallowed for middle- and upper-income participants who were covered by employer-provided pension plans, although the tax-deferral feature was still allowed for any nondeductible contributions they made [7]. This was a change from 1986 when IRA contributions were deductible regardless of income level or pension coverage. As a result of the change in law, deductible IRA contributions dropped from nearly \$38 billion to slightly more than \$14 billion. Also, the number of returns with IRA deductions dropped by 52.7 percent from 15.5 million for 1986 to 7.4 million for 1987.

Deduction for Working Married Couple.—For 1986, a married couple, when both worked and they filed a joint return, could deduct as an adjustment to income 10 percent of the lesser of \$30,000 or the "qualified earned income" of the lower-earning spouse. This deduction was repealed effective for 1987. Figure F, shows that for 1986 this adjustment to income reduced AGI by \$26.7 billion. The 1986 Act reduced tax rates and increased the standard deduction and the personal exemption amounts. As a result, the "marriage penalty" was reduced thereby reducing the need for the special deduction for two-earner couples [8].

Itemized Deductions

Total itemized deductions decreased by 14.1 percent and the number of returns reporting them dropped by 12.7 percent. These declines reflect tax reform provisions that generally reduced several widely-used itemized deductions.

One of the major provisions of the 1986 Act that was not effected for 1987 was the increase in the standard deduction. The slight increase in the standard deduction for 1987 from \$2,480 to \$2,540 for a single taxpayer (\$3,670 to \$3,760 for joint returns) was about the same as the increase in the previous zero bracket amount (replaced for 1987 by the standard deduction) would have been under indexing mandated under prior law. (See next section on Standard Deduction for definition of standard deduction and zero bracket amount.) However, for taxpayers 65 or over or those who were blind, significantly increased standard deductions were instituted for 1987. Some taxpayers may have found the larger standard deduction more advantageous than itemizing. Figure G shows itemized deductions for both 1986 and 1987.

Medical and Dental Expenses.—For 1987 the deduction for medical and dental expenses was limited to expenses in excess of 7.5 percent of adjusted gross income, whereas for 1986 the threshold was 5 percent. There was a

Moving expense	—	—	963	3,711	+ 100.0
Miscellaneous deductions	33,454	26,787	9,086	20,075	- 25.1

decrease in the medical and dental expense deduction of about one-third, and the number of returns reporting it declined by almost one-half, from 10.5 to 5.3 million returns.

Taxes Paid.—Beginning for Tax Year 1987, State and local sales taxes could no longer be taken as an itemized deduction. Figure G shows that the total taxes paid deduction dropped by 17.6 percent, at least partly as a result. The number of returns on which the tax-paid deduction was claimed was down by 13.9 percent.

Other types of taxes paid that continued to be deducted for 1987 were individual State and local income taxes, real estate taxes, certain personal property taxes, and foreign income taxes. The decline in the amount of the deduction for taxes paid may also have been related to the increased use of the standard deduction.

Interest Paid.—The interest paid deduction decreased by more than \$22 billion from 1986 to 1987. There were two major modifications in the law that caused most of this decline: the "personal" interest deduction and the mortgage interest deduction were both modified. Only 65 percent of personal interest, i.e., credit card interest, revolving charge account interest, and interest on bank loans, was deductible for 1987, whereas for 1986 all of it was deductible.

For 1987, the mortgage interest deduction was limited to the amounts paid on a "qualified" principal and second residence, and to the interest associated with debt no greater than the cost of the residence plus improvements and mortgage loans taken to pay for qualified medical and educational expenses [9]. These limits applied to debt that was assumed after August 16, 1986. If the mortgage debt, as of August 16, exceeded the taxpayer's previous "cost basis," then this greater amount became the basis for calculating the loan limits of the amount of deductible interest on the residence.

Notwithstanding these limitations, the home mortgage interest increased by 7 percent for 1987.

Charitable Contributions.—For 1987, charitable contributions were deductible as an itemized deduction only. For 1986, they could also be deducted by taxpayers who did not itemize their deductions, even on short forms 1040A or 1040EZ. Thus, for 1987, taxpayers, who did not itemize, could no longer claim the deduction. Also, because of the higher standard deduction for 1987 (especially for the elderly), some taxpayers, who itemized previously may have found it more advantageous to claim the standard deduction for 1987. The deduction declined by 8.5 percent, and the total number of taxpayers claiming it fell by 12.4 percent.

A comparison of charitable contributions for 1986 and 1987 can also be made by including the amounts that were claimed by nonitemizers for 1986 (see Figure H). On this basis, the number claiming any charitable contributions fell by 50.3 percent, and the amount fell by 26.6 percent.

Moving Expense.—Moving expenses became an itemized deduction for 1987, instead of an adjustment to income as they were for 1986 (see Statutory Adjustments). Almost 1 million taxpayers claimed these expenses as an itemized deduction, but this was considerably fewer than the 1.8 million that claimed them for 1986 as a statutory adjustment. The amount of the deduction was \$3.7 billion compared to the \$4.6 billion claimed in 1986.

Miscellaneous Itemized Deductions.—For 1987, there were two tiers of "miscellaneous" itemized deductions. The first tier applied to those expense items that were fully deductible. Some of these included gambling losses (limited to gains), impairment-related work expenses for handicapped people, and amortizable bond premiums.

The second tier was for expenses that were subject to a new 2 percent AGI floor, such as unreimbursed employee business expenses (previously discussed under Statutory Adjustments) and those expenses of producing income which are not deductible in computing AGI.

Figure H.—Charitable Contributions Deduction, Tax Years 1986 and 1987

(Number of returns are in thousands, money amounts are in millions of dollars)

Item	1986		1987	
	Number of returns	Amount	Number of returns	Amount
	(1)	(2)	(3)	(4)
Total charitable contributions deduction...	64,755	\$67,094	32,172	\$49,261
Contributions deduction for itemizers.....	36,714	53,816	32,172	49,261
Contributions deduction for nonitemizers.....	28,041	13,278	—	—

The new Act also put additional restrictions on employee business expense claims for meals, entertainment, and travel.

- **Meals and Entertainment.**—Tax reform modified how meals and entertainment expenses were handled. First, only 80 percent of the cost of qualified meals or entertainment was deductible, whereas for 1986, the full cost was deductible.

Second, the cost of a business meal could be deducted only if the meal were *directly related* to the *active conduct* of the taxpayer's business (even to the extent that conducting business must be the principal aspect of the combined business and entertainment) where previously the rule was that meals or entertainment must be related to the taxpayer's business and conducted in an atmosphere conducive to business discussions.

And third, any unreimbursed expense could be deducted only as a "miscellaneous" itemized deduction, not as a statutory adjustment to income.

- **Travel Expenses.**—Expenses for travel used as a form of education and investment seminar expenses were no longer deductible, and the deduction for travel by cruise ship was limited for 1987. Previously, these expenses had been fully deductible. For example, under pre-tax reform law, taxpayers who attended conventions, seminars, or meetings could deduct expenses for registration fees, transportation costs, meals, and lodging expenses if such meetings were connected with their income-producing activities or investments. Under tax reform, such seminars or meetings must offer significant business related activities and participation for the taxpayer.

Total miscellaneous deductions decreased by 25 percent, and the number of returns claiming an amount for them dropped by more than 75 percent.

Standard Deduction

For 1987, the "zero bracket amount" (i.e., income "taxed" at a rate of zero percent), or ZBA, that was in effect since 1977, was replaced by a standard deduction. Unlike the ZBA, the "new" standard deduction was not incorporated into the tax tables and tax rate schedules, but instead, had to be specifically deducted in computing taxable income. For 1987, taxpayers subtracted the larger of the standard deduction or total itemized deductions. Figure I shows a comparison of the 1987 standard deductions and the equivalent 1986 zero bracket amounts [10].

Under the 1986 Act, the basic standard deduction was supplemented by additional deductions for taxpayers age

Individual Income Tax Returns, Preliminary Data, 1987

percent, instead of from 11 percent to 50 percent as for 1986 [13]. The 1987 rate schedules were the first step in a two-step phase in of lower tax rates which was to be completed for Tax Year 1988 [14]. For 1987, the 60-percent exclusion for net long-term capital gains was eliminated; but, as already noted, under a special provision for 1987 only, net long-term gains were taxed at a maximum rate of 28 percent.

Income Averaging

Income averaging was repealed for 1987. Previously, a taxpayer could reduce his or her income tax in peak income years by averaging income over a 4-year period [15].

Tax Credits

On 1987 tax returns, the total amount of tax credits claimed was \$6.1 billion, or 13.0 percent less than for 1986. The decrease was considerably less than the 31.5 percent decline from 1985 to 1986. The repeal of the investment tax credit had been the major contributor to the 1986 reduction. Figure K shows the major tax credits, together with income tax before and after credits, for both 1986 and 1987. Income tax before credits increased by 2.3 percent (from \$368 billion to \$376 billion) with income tax after credits increasing by 2.6 percent (from \$361 billion to \$370 billion).

Earned Income Credit.—The Tax Reform Act increased the rate of and base for the earned income credit. For 1987, the credit was 14 percent of the first \$6,075 of an eligible individual's "earned" income. But, if earnings or AGI exceeded \$6,920, the credit was reduced by 10 percent of such excess so that at income levels exceeding \$15,432, the credit was completely eliminated. For 1987, the maximum credit of \$851 compared to \$550 for 1986. Under

prior law, the earned income credit generally equaled 11 percent of the first \$5,000 of earned income, and it was completely phased out at \$11,000 [16].

Primarily as a result of these changes, the 1987 earned income credit nearly doubled from \$2.0 billion to \$3.9 billion, with an increase in the number of returns with an earned income credit rising from 6.3 million to 8.8 million.

For statistical purposes, the earned income credit has been divided into three categories. The first two categories were 1) used to offset income tax before credits (where \$328 million was claimed for 1986 and \$647 million for 1987), and 2) used to offset all other taxes (\$201 million for 1986 and \$351 million for 1987). The third category of the credit consisted of a refundable portion that individuals could receive whether or not they paid taxes (\$1.5 billion for 1986 and \$2.9 billion for 1987).

Credit for the Elderly or the Permanently and Totally Disabled.—The number of returns from taxpayers claiming the credit for the elderly or the permanently and totally disabled fell from 430,000 to 352,000, about 18 percent. The total amount of the credit claimed fell 23.3 percent, from \$86 million to \$66 million (see Figure K). Part of this reduction could have been caused by a reduced amount of income tax before credits in the group that is eligible to claim the credit.

Child Care Credit.—Growth of the child care credit, by far the largest credit for both Tax Years 1986 and 1987, slowed considerably. For 1985, the amount of child care credit claimed was \$3.1 billion, up 18.2 percent from 1984; for 1986 the amount was \$3.4 billion, an increase of 8.5 percent; for 1987 the amount was 3.5 billion, a rise of only 1.5 percent. For 1987, the credit was claimed on 5 percent fewer returns than for 1986.

Income tax after credits	83,898	360,571	86,732	370,024	+2.6
Alternative minimum tax	609	6,713	114	1,234	-81.6
Total income tax	83,967	367,287	86,750	371,258	+1.1

¹ The sum of the listed credits does not equal total credits because "other credits" are not listed and, in some cases, credits reported on prior year returns were not shown separately, but were included in the 1987 total.

² Represents the portion of the earned income credit that was used to offset income tax before credits. Additional earned income credit amounts were used to offset other taxes and some amounts were paid directly to the taxpayer.

General Business Credit.—The 1986 Tax Act, phased out, with certain exceptions, the investment credit (included in the general business credit) beginning with 1986. Thus, most depreciable business property placed in service after 1985 was not eligible for the investment credit, although taxpayers were allowed to claim “unused” credits carried over from 1985 and earlier years on their 1986 tax returns. For 1987, the law reduced the amount of unused credits that could be claimed by about 17.5 percent [17].

Political Contributions Credit.—The political contributions credit was repealed for 1987. Previously, a partial credit against tax had been allowed for 50 percent of the first \$50 (\$100 for a joint return) of political contributions.

Total Credits.—For 1987, the number of returns claiming any tax credits declined by 4.0 million, or 23.5 percent. This may have been partly due to the elimination of the political contributions credit. Of the 4.6 million taxpayers who claimed the political contributions credit for 1986, 3.8 million claimed no other credits.

Alternative Minimum Tax (AMT)

For 1987, the alternative minimum tax was revised in an attempt to insure that taxpayers with substantial economic income could not avoid a significant tax liability. To achieve this the method of calculating the “alternative minimum taxable income” (AMTI) was changed.

For 1987, the starting point for the calculation was taxable income. Taxpayers had to increase their regular taxable income by the amount of their “tax preferences” and add back certain exclusions or deductions allowed in calculating taxable income on the Form 1040. For 1986, the starting point had been adjusted gross income. AGI was reduced by the deductions that were not considered preferential, and increased by tax preferences. In addition, the AMT rate was increased from 20 percent of the AMTI in excess of an exemption amount for 1986 to 21 percent of such income for 1987. For both years, AMT was the excess of tax computed at these rates over the income tax (after credits) computed at the regular rates on taxable income and reduced by the foreign tax credit.

The AMT exemption for single (joint) filers of \$30,000 (\$40,000) was phased out above certain levels of AMTI. For single (joint) filers, the phase out began at \$112,500 (\$150,000) and ended at \$232,500 (\$310,000).

Because of other changes in the law described above, there were changes to the list of AMT adjustments and tax preference items. Since many exclusions were eliminated, they were no longer considered a tax preference. The most important of these was the 60-percent capital gains exclu-

sion. The principal addition to the list of tax preferences for 1987 was “passive losses,” already described.

Total Income Tax

Total income tax (the sum of income tax after credits and the alternative minimum tax) increased by 1.1 percent. This reflected the offsetting effect of many of the 1986 Act changes, including lower tax rates applied to a broader tax base.

RECOMPUTED TOTAL INCOME

As already discussed, the Tax Reform Act of 1986 altered the size and composition of AGI between 1986 and 1987. Thus, 1986 AGI cannot be compared meaningfully with AGI for 1987. In order to illustrate the effects of tax reform, a **recomputed total income** has been developed to provide comparable income data for Tax Years 1986 and 1987. By adding back the income exclusions for 1986, and disallowed passive losses for 1987, recomputed total income provided a standardized income concept for the two years. Figure L shows how recomputed total income was calculated.

The size of AGI in various years is normally used as a key indicator of income change. Comparisons, however, are not meaningful when the definition of AGI changes as it did for 1987. Between 1986 and 1987, AGI increased by 12.3 percent—a sizable increase. However, when the recomputed total income concept is used so that income data are on a comparable basis, the increase is only 1 percent, from \$2,781 billion to \$2,808 billion.

For 1987, the two income concepts produce very similar results—the increase in income by adding back statutory adjustments was partially offset in some cases by deducting passive losses that were not allowed under the 1987 tax law. By income size class, the number of returns, income, and tax also remained similar under both income concepts (see Figure M) [18].

¹ Less than 0.05 percent

For 1986, however, a comparison of the recomputed income and AGI data shows large differences in income and in tax as a percentage of income for all taxpayers, and even bigger differences for the various income classes. For 1986, recomputed total income was 12.1 percent higher than AGI. Moreover, under recomputed total income, more taxpayers are in higher income classes. For example, the number of taxpayers with incomes of \$1 million or more rose from 32,000 to 55,000, a 72 percent increase. Incomes for the \$1 million or more class rose even more dramatically, by 126 percent. For the \$1 million or more class alone, nearly \$92 billion was excluded for 1986 that would have been subject to tax for 1987. These differences are largely due to adding back the 60 percent of net capital gains that were excluded from AGI for 1986.

Since 1986 was an unusual year, with a 77 percent increase in capital gain realizations over 1985, it is possible that the dramatic increase from 1986 to 1987 in tax as a percentage of income for the highest income class (from 21.7 to 29.3) would not have been as great from 1985 to 1987 [19].

Using recomputed total income as a measure, total income tax as a percentage of income remained unchanged at 13.2 percent, but there were significant differ-

ences for some income classes. Overall, income classes under \$50,000 showed a lower effective tax rate for 1987 and those classes over \$50,000 showed a higher effective rate. The greatest difference was for the \$1 million or more class where the tax rate increased, as already noted, from 21.7 to 29.3 percent.

Figure N shows income tax as a percentage of **AGI** by income class for 1986 and 1987. For 1987, average tax rates were lower for all AGI classes. Figure O shows similar information with data based on **recomputed total income**. Using recomputed total income, Figure O indicates that for 1986 higher income classes had a considerably lower average tax rate than they did for 1987.

SUMMARY

Initial results of the Tax Reform Act of 1986 indicate that the major changes in the tax law were, in fact, reflected in reduced amounts of tax preferences claimed, a reduction in tax rates for lower income taxpayers, and an increase in effective tax rates for the highest income taxpayers.

Many of the components of income and taxes changed more dramatically than they had for years, reflecting the extent of the 1986 tax law overhaul. For example, adjusted

Figure N.

Tax Years 1986 and 1987

Figure O.
Income Tax As a Percentage of Recomputed Total Income,
Tax Years 1986 and 1987

Individual Income Tax Returns, Preliminary Data, 1987

gross income increased 12.3 percent, mainly because of the inclusion of income such as capital gains, dividends, and unemployment compensation which were partially excludable for 1986. Income, when computed more consistently for 1986 and 1987, increased by only 1.1 percent. Total income tax increased by only 1.1 percent. The changes from 1986 to 1987 should be considered cautiously in view of the 1986 "spike" in capital gains activity that was primarily due to taxpayers' anticipation of the elimination of the 60-percent exclusion.

DATA SOURCES AND LIMITATIONS

These preliminary statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ) filed in 1988. Returns in the sample were stratified based on the presence or absence of Schedule C, Profit (or Loss) from Business or Profession; Schedule F, Farm Income and Expenses; the larger of "total income" or "total loss"; and the size of business plus farm receipts. These returns were selected at rates ranging from 0.03 percent to 100 percent. There were 108,183 returns in the 1987 preliminary sample estimating a total population of 107,106,845. The corresponding sample size and population for the preliminary 1986 data were 74,985 and 103,299,845, respectively. Sample size and population for the final 1986 data referenced in this article were 89,165 and 103,423,606, respectively.

Because the data presented here are estimates based on a sample of returns filed, they are subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known. Coefficients of variation (CV's) are used to measure that magnitude.

Approximate coefficients of variation (CV's) for frequency estimates are presented in Figure P. These approximate CV's shown are intended only as a general indication of the reliability of the data. For a number other than those shown, the corresponding CV's can be estimated by interpolation. The reliability of estimates based on samples, and the use of coefficients of variation for evaluating the precision of estimates based on samples, are discussed in the Appendix.

Basic tables presented in this article are based on adjusted gross income (AGI) concepts, but because the

Figure P.—Estimated Number of Returns for Selected Coefficients of Variation, Tax Year 1987

Number of returns	Approximate coefficient of variation
30,293,000	0.01
7,573,300	0.02
1,211,700	0.05
302,900	0.10
75,700	0.20
33,700	0.30
24,700	0.35
12,100	0.50

1987 concept was revised substantially by tax reform, data for 1986 and 1987 may not be comparable. In addition, nonsampling errors in these 1987 tax statistics are potentially greater than usual. During a year of major change in forms, reporting methods, and changes in the law, taxpayers are much more likely to make reporting errors. Returns used in these statistics are pre-audit, and would, therefore, include such taxpayer reporting errors if they occurred.

While these preliminary estimates are intended to represent a full year of taxpayer reporting, they are actually based on returns processed between January and late September 1987. In general, those returns processed after September (which are sampled for use in the revised estimates for the year) tend to have somewhat different characteristics from those filed earlier. Compared to other returns, the characteristics of these later returns include higher income, a larger proportion of investment income (such as from capital gains), a higher average tax liability, and a larger proportion of such other items as the alternative minimum tax.

Figure Q provides a comparison of 1986 preliminary and final data. Figure Q shows, for example, that certain items, such as AGI and salaries and wages, which are reported on most returns, changed little between preliminary and final data. This contrasts with other items, such as net gain from sales of capital assets, which tend to be understated in all preliminary estimates.

Figure Q.— Comparison of Preliminary and Final Data, Tax Year 1986

(Millions of dollars)

Item	1986 preliminary data	1986 final data	Difference, 1986 preliminary and final data	Percentage difference, 1986 preliminary and final data

Total income tax	377,051	367,287	-9,764	-2.59

NOTES AND REFERENCES

- [1] **Gross Income** is all income from whatever source derived. This is reduced by income items that are specifically excluded (either completely or partially) for income tax purposes, and by excludable portions of income items reported on Form 1040 to arrive at **total income**. Total income is reduced by statutory adjustments to arrive at **adjusted gross income**. For more

complete definitions see Explanation of Terms, Section 4 of *Statistics of Income—1985, Individual Income Tax Returns*.

[2] For prior use of the recomputed total income concept see Weber, Michael E., "Individual Income Tax Returns for 1987: Selected Characteristics from the Taxpayer Usage Study," *Statistics of Income Bulletin*, Summer 1988, Volume 8, Number 1. Similar conclusions on income and tax were presented in this earlier article.

[3] In general, capital assets for tax purposes included all property held for personal use or investment. Realizations of capital gains represent sales and certain other taxable dispositions. Net capital gains represents net long-term gains less net short-term losses before the exclusion (for 1986 and earlier years before the exclusion was repealed). See Sales of Capital Assets Net Gain or Loss (plus other related definitions) in Explanation of Terms, Section 4 of *Statistics of Income—1986, Individual Income Tax Returns*.

[7] The amount of the allowable deduction for IRA contributions depended on the following criteria:

Full Deduction: IRA contributions up to \$2,000 a year (\$2,250 for a spousal IRA) were fully deductible if the taxpayer (or spouse) did not belong to a company-funded retirement plan or, if the taxpayer (or spouse) did belong to a company retirement plan and his or her adjusted gross income was less than \$25,000 (less than \$40,000, if taxpayer and spouse filed jointly).

Partial Deduction: The maximum amount of the allowable deduction for the IRA contribution was phased out (in some cases permitting a partial deduction) for taxpayers with adjusted gross income from \$25,000 to \$35,000 (\$40,000 to \$50,000, if taxpayer and spouse filed jointly) when a taxpayer (or spouse) belonged to a company retirement plan.

No Deduction: IRA contributions were not deductible for those taxpayers with company retirement plans and adjusted gross incomes greater than \$35,000 (\$50,000 for joint returns).

[8] The "marriage penalty" is the difference between the tax reported on a joint return when both spouses work and the combined amount of tax for the same two persons assuming that they are not married and each is taxed as a single person. If the two persons each have about the same amount of income, taxes after marriage may increase, providing a "marriage penalty." The two-earner marriage deduction was an attempt to reduce the marriage penalty. For other taxpayers, especially where one has most or all of the income, marriage may reduce combined taxes, providing a "marriage bonus." In some cases, the two-earner deduction may have increased such bonuses, or may have turned penalties into bonuses.

[9] The mortgage interest deduction could not be claimed for third homes.

[10] The allowable standard deductions shown in Figure I for 1987 were to increase significantly for 1988 and then be indexed for inflation for subsequent years:

[11] Further increases in the size of personal exemptions were also specified in the Act for 1988 and 1989, after which exemptions were to be indexed annually for inflation.

[12] In addition to changing the criteria for claiming dependents, the 1986 Act required the inclusion of social security numbers for dependents over age 5 who were claimed on 1987 tax returns. The purpose of the requirement was to eliminate improperly claimed exemptions.

[13] For 1987, tax rates and brackets were specified by statute. Unlike 1986 tax rate schedules, they were not the result of automatic indexing for the effects of inflation.

[14] Beginning for 1988, there will be only two rates (15 and 28 percent), plus an additional rate of 33 percent produced by the phaseout of certain benefits. For Tax Year 1989 and thereafter, the 1988 tax rate structure will be indexed.

Individual Income Tax Returns, Preliminary Data, 1987

- [15] For a definition and description of how income averaging could be used, see Explanation of Terms, Section 4 of *Statistics of Income—1986, Individual Income Tax Returns*.
- [16] Beginning with 1988 the earned income credit was to be adjusted for inflation, but also beginning for 1988 there was a permanent increase in the phase out income range.
- [17] The 1986 Act further reduced, by 35 percent, the amount of unused investment credit that could be claimed for 1988.
- [18] Recomputed total income was calculated for each individual return, and returns were reclassified by income class on the basis of the recomputed total income.
- [19] Comparisons of individual tax return data based on income concepts that provide comparable data among years with changes in the law will be presented in *Statistics of Income—1987, Individual Tax Returns* which will be available in November, 1989.

** Data combined to avoid disclosure of information for specific taxpayers.

† Not included in adjusted gross income.

NOTE: Detail may not add to total because of rounding.

Individual Income Tax Rates, 1986

By John Labate and Dan Holik*

Tax Year 1986 marked the final year of individual income tax adjustments under the Economic Recovery Tax Act of 1981 (ERTA). Foremost among the changes under ERTA was a series of tax rate cuts, effective over the first 4 years of the Act, 1981–1984. For 1985 and 1986, the primary changes involved indexing for inflation; tax rate brackets, the standard deduction (or “zero bracket amount”), and personal exemption amounts were indexed to offset inflation as measured by the Consumer Price Index (CPI) [1,2]. The Tax Reform Act of 1986, which took effect in 1987, replaced ERTA by establishing new tax rates for 1987 and 1988, and indexing for succeeding years.

Figures A and B present summary tax statistics for 1980 and the subsequent 6 years of policy change under ERTA. Individual income tax totaled roughly \$367 billion for 1986, or 13 percent more than 1985. For returns that showed some tax liability, or “taxable returns,” the average income tax was \$4,374, an increase of more than \$443 from 1985. The average tax rate for taxable returns increased to 15.05 percent of adjusted gross income (AGI), the highest rate since 1982. (For further information on the number of returns, income tax, and average tax by size of AGI, see Table 3 of the Selected Statistical Series at the end of the Bulletin.)

TAX RATES FOR 1986

“Taxable income” was the base used to determine initial tax liability. For 1986, taxable income equalled AGI less the personal exemption amount, and less either allowable charitable contributions for non-itemizers or total allowable itemized deductions for all other taxpayers.

Taxes were calculated on taxable income according to tax rate schedules that varied with taxpayer filing status. There were separate rate schedules for single persons, married persons filing joint returns, married persons filing separate returns from their spouses, and heads of household [3]. The rates for each filing status ranged from 0 to 50 percent [4].

Taxpayers used one of two methods when figuring their initial tax liability. Depending on the amount and computation of taxable income, they used either the tax rate schedules or the tax tables to determine tax. The tax rate schedules had to be used by persons with taxable income of \$50,000 or more. The tax table simplified the calculation of tax for those with taxable income under \$50,000. Those who could use income averaging needed an additional income computation, and were required to use the tax rate schedules [5].

Although taxpayers used either the tax table or tax rate schedules to figure tax, the two methods could show slightly different results for the same taxable income amount. The amounts shown in the tax tables were based on the same computations as the tax rate schedules, but used the midpoints of broad “taxable income brackets” (generally \$50 wide) to derive tax. Each amount in the tax table was rounded to the nearest whole dollar. Figure C demonstrates the slightly different amounts of tax derived when both methods are used for a single taxpayer with a \$25,000 AGI, one exemption, no itemized deductions, and \$23,920 of taxable income.

Figure A.—Adjusted Gross Income, Total Income Tax, Average Tax Rate, and Average Total Income Tax, Tax Years 1980–1986

Tax year	Total number of returns	Taxable returns					
		Number of returns	Adjusted gross income (billions)	Total income tax (billions)	Average tax rate ²	Average per return ¹	
						Adjusted gross income (dollars)	Total income tax (dollars)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	
1980.....	93,902,469	73,906,244	\$1,556	\$250	16.08%	\$21,055	\$3,387

1985.....	101,660,287	82,846,420	2,259	326	14.42	27,268	3,931
1986.....	103,045,170	83,967,413	2,440	367	15.05	29,062	4,374

¹ The average AGI, average total income tax, and average tax rate were calculated from unrounded data.

² Average tax rate is “Total income tax” as a percentage of adjusted gross income.

Figure B
Taxable Returns: Average Tax Rate and
Average Total Income Tax, Tax Years 1980-1986

Percentage

Dollars per Return

MARGINAL TAX RATES

As shown in Figure C, different portions of taxable income are taxed at different rates. The tax rate applied to the last dollar of income is called the "marginal tax rate" for that return. Since tax rates increase with income (from 0 to 50 percent), the marginal rate is the highest rate applied to taxable income. In Figure C, the taxpayer had portions of income taxed at ten rates ranging from 0 to 26 percent. The marginal rate was 26 percent for this taxpayer.

Tables 1 and 2 present 1986 marginal tax rate data. These data are based only on income included in AGI. Therefore, they do not include income from such sources as tax-exempt interest on state and local government obligations, from the portion of long-term capital gains excluded from AGI, and from the dividend exclusion. Consequently, income from these sources did not directly determine the marginal rates presented in Tables 1 and 2 [6].

Returns are classified by two different methods in Table 1. In columns 1 through 9, a return is classified by its marginal or highest tax rate. For example, column 1 shows that there were 8,877,093 returns for which the marginal tax rate was 18 percent. Columns 5 and 6 show that, for these returns, the amount of tax generated at the 11 through 18 percentage rates totaled \$17.3 billion, of which \$2.8 billion of tax was generated solely at the 18 percent marginal rate.

In columns 10 through 12, a return is classified by each rate that generated a tax. For example, columns 10, 11, and 12 show that 49,706,032 returns had some income taxed at the 18 percent rate; \$167.5 billion of income was taxed at this rate, generating \$30.2 billion of income tax.

Tax on \$23,920 of taxable income based on tax rate schedule for single taxpayers.....\$4,066.60

Tax Based on Tax Table

Tax on \$23,920 of taxable income from the 1986 tax table.....\$4,068.00

The amount of tax generated by each specific tax rate, from 11 to 50 percent, as well as the corresponding number of returns and the amount of "modified taxable income" (defined below), are presented in Table 2. These data are classified by size of AGI. For example, column 1 shows that 4,845,857 returns with taxable income had an AGI between \$14,000 and \$16,000; column 7 shows that 4,790,470 of these returns had a portion of income taxed at the 11 percent rate. These returns had roughly \$8.5 billion of modified taxable income at the 11 percent rate (column 8), and the 11 percent bracket generated nearly \$0.9 million of tax (column 9).

All returns included in Tables 1 and 2 had some amount of taxable income. Of the 103,045,170 individual tax returns filed for 1986, there were 97,358,296 that had taxable income, while 5,686,874 did not. "Modified taxable income," which served as the income amount used to compute income tax before credits and tax rate data in Tables 1 and 2, was developed solely for the statistics in these tables. This term was necessary because of returns with the income averaging computation. For taxpayers who did not use income averaging, modified taxable income was identical to taxable income. However, for taxpayers who used the income averaging computation, modified taxable income was computed by imputing a hypothetical taxable income amount necessary to yield the given amount of tax reported, using the tax rate schedules, as if income averaging had not been used.

DERIVATION OF TAX

Tables 1 and 2 include two amounts of income tax: "tax generated" and "income tax after credits." Both were used to determine the total income tax amount. Tax generated was the initial tax computed when tax rates were applied to modified taxable income. Column 5 in Table 1 shows that nearly \$366 billion of tax was generated by applying tax rates to taxable income. For most taxpayers, tax generated was equal to "income tax before credits." Income tax after credits was derived by adding three more taxes to tax generated from the tax rate schedules, and then subtracting tax credits. Total income tax after credits, shown in column 7 of Table 1, amounted to more than \$360 billion.

Figure D shows the derivation of aggregate tax for 1986. "Total income tax," which is not shown in Tables 1 and 2, is the sum of income tax after credits and the alternative minimum tax [7]. More than 609,000 returns reported \$6.7 billion of alternative minimum tax for 1986. Tables 1 and 2 do not include any tax attributable to the alternative minimum tax, which was computed on a different base from that used for the statistics in these two tables [8].

Figure D.—Derivation of 1986 Tax as Shown in Statistics of Income

	TAX
TAX GENERATED FROM TAX RATE SCHEDULES OR TAX TABLE	\$365.8 billion
PLUS: Taxes from special computations, total	\$ 1.8 billion
—Tax on accumulation distribution of trusts	
—10-year averaging tax for qualified retirement plans	
—Multiple recipient 10-year averaging tax	
EQUALS:	
INCOME TAX BEFORE CREDITS	\$367.6 billion
LESS: Tax credits, total	\$ 7.0 billion
—Child-care credit	
—Foreign tax credit	
—General business credit	
—Elderly or disabled credit	
—Political contributions credit	
—Earned income credit	
—Other credits	
EQUALS:	
INCOME TAX AFTER CREDITS	\$360.6 billion
PLUS: Alternative minimum tax	\$ 6.7 billion
EQUALS:	
TOTAL INCOME TAX	\$367.3 billion

DEFINITIONS

Brief definitions of the major tax concepts discussed in this article follow. For more extensive definitions, see *Statistics of Income—1986, Individual Income Tax Returns*.

Adjusted Gross Income.—Adjusted gross income (AGI) is computed by subtracting statutory adjustments (primarily business, investment or employee-related deductions, such as payments to an Individual Retirement Arrangement (or IRA), from "total income" recognized under the tax code. Total income includes the net amounts from sources such as salaries and wages, business income, rents and royalties, and capital and ordinary gains from asset sales. For 1986 it excluded most social security benefits and a certain portion of capital gains, among other items.

Average Tax Rate—The average tax rate presented in this article is the ratio of total income tax to AGI.

Marginal Tax Rate—The marginal tax rate presented in this article was the highest tax rate that applied to the last dollar of income included in AGI on a given return. (See Footnote 7 for a further discussion of effective marginal tax rates.)

Modified Taxable Income—Modified taxable income is the technical term used to describe the actual tax base computed for the statistics. For most taxpayers, modified taxable income was the same as taxable income. However, taxable income was modified to take into account returns with income averaging.

Taxable Income—For 1986, taxable income was AGI less the personal exemption amount, and less either allowable charitable contributions for non-itemizers or total allowable itemized deductions (in excess of the "zero bracket amount") for all others.

Taxable Returns—For 1986, a return was considered "taxable" if it showed an amount of income tax, after tax credits or if it had "total income tax." The following other taxes were not included in this computation of tax: self-employment tax; social security tax on tip income; and the penalty tax on premature distributions from, and excess contributions to, individual retirement arrangements (IRA's).

Tax Generated—This was tax calculated from the tax rate schedules (or tax tables) on modified taxable income. It did not take into account the alternative minimum tax or tax credits. For most returns (those without one of the "taxes from special computations" described in Footnote 6), tax generated equalled income tax before credits.

Total Income Tax—Total income tax was the sum of income tax after credits and the alternative minimum tax.

DATA SOURCES AND LIMITATIONS

These statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ) filed with the Internal Revenue Service in 1987. Returns in the sample were stratified based on the larger of total income or total loss; size of business plus farm receipts; the presence or absence of Schedule C, Profit (or Loss) from Business or Profession; and Schedule F, Farm Income and Expenses. Returns were selected at rates ranging from 0.03 percent (for the more numerous smaller size returns) to 100 percent (for the relatively few returns with large income amounts), resulting in 89,088 returns being selected from a population of 103,045,170.

Because the data presented in this article are estimates based on a sample, they are subject to sampling, as well as nonsampling, error. To make proper use of the statistical data provided, one must know the magnitude of the potential sampling error.

Figure E presents approximate coefficients of variation (CV's) for frequency estimates. The approximate CV's

Figure E.—Coefficients of Variation for Frequency Estimates, 1986

Estimated number of returns	Approximate coefficient of variation
19,796,900	0.02
3,167,504	0.05
791,876	0.10
197,969	0.20
87,986	0.30
31,675	0.50

shown here are intended only as a general indication of the reliability of the data. For a number other than those shown, the corresponding CV's can be estimated by interpolation.

The reliability of estimates based on samples, the use of coefficients of variation for evaluating the precision of sample estimates, and nonsampling error considerations are discussed in the methodological Appendix at the back of this issue of the Bulletin.

NOTES AND REFERENCES

- [3] Taxpayers who did not remarry after the death of a spouse, and who had a dependent living with them, could qualify for surviving spouse status if their spouse had died within 2 years prior to Tax Year 1986. Those who qualified could use the married filing joint tax rates when calculating their 1986 tax.
- [4] The 1986 tax rate schedules were published in the *Instructions for Preparing Form 1040*; they are reproduced in *Statistics of Income—1986, Individual Income Tax Returns*.
- [5] For 1986, the income averaging computation permitted part of an unusually large increase in a taxpayer's annual income to be taxed as if it had been received over a 4 year period. The result was a lower amount of tax due than would have resulted if taxpayers had computed their tax using the regular method. If the income averaging computation were used, income tax had to be computed from the tax rate schedules rather than from the tax tables.
- [6] For the tables presented in this article, the marginal tax rate was the rate at which the taxpayer's last dollar of modified taxable income was taxed. The last dollar did not include income "exclusions" from AGI.

The calculation of an "effective" marginal tax rate for a given return depends upon: (1) the type(s) of income (e.g., salaries and wages, long-term capital gains) reported on the return, (2) the order in which that income was assumed to be "stacked" (described below), (3) the type of tax computation used (regular or income averaging), and (4) whether an alternative minimum tax was reported. If a taxpayer reported income from both salaries and long-term capital gains, the calculation of an effective marginal tax rate would depend on the order in which the income sources were "stacked" or ordered. If the last dollar of income were assumed to be from salaries and wages, the effective marginal tax rate would be the tax rate derived directly from the appropriate tax rate schedule.

In contrast, if the last dollar of income were assumed to be from long-term capital gains, the effective marginal tax rate calculation would include the capital gains exclusion. For example, \$100 of long-term capital gains generated \$40 of AGI subject to the 50 percent marginal tax rate. While the stated marginal tax rate on AGI was 50 percent, the effective marginal tax rate computed on the \$100 of capital gains income was 20 percent. The income averaging tax computation is discussed in Footnote 5, and the alternative minimum tax is discussed in the "Derivation of Tax" section of the article.
- [7] Total income tax did not include certain other taxes reported on the individual income tax return, such as self-employment tax (social security tax for self-employed persons), tax from recapture of prior-year investment credit, and the social security tax on tip income. These taxes were included in "total tax liability," which is shown in *Statistics of Income—1986, Individual Income Tax Returns*. For Tax Year 1986, total tax liability equalled \$381 billion, and was reported on 85,803,688 returns.
- [8] The alternative minimum tax was computed on separately-determined "alternative minimum taxable income," which included certain income and deduction "tax preferences." The alternative minimum tax was the excess of the 20 percent tax on alternative minimum taxable income over tax generated on regularly-determined taxable income.

Table 1.—Returns with Modified Taxable Income and Tax Classified by Both the Marginal Rate and Each Rate at Which Tax was Computed

* Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to total because of rounding.

Individual Income Tax Shares and Average Tax Rates, Tax Years 1951–1986

By Janet McCubbin and Fritz Scheuren*

This is the second in a series of articles on the history of individual income tax shares and average tax rates. The first article appeared in the Winter 1988–89 *Bulletin* and covered the years 1916 through 1950 [1]. This brief sequel provides data to complete that time series. A third article, scheduled for publication in the Winter 1989–90 *Bulletin*, will include an overall (but still preliminary) look at income and tax shares for the entire 1916 through 1986 period.

As noted in the first article, all of the data presented in the series have been derived from previously published SOI annual reports. The original information on the number of returns, income and tax by income size class, was extracted from the printed volumes and transferred to computer tape. These data were then manipulated as described below, to produce the tables included here and in the earlier article. A principal goal of this historical treatment is to make available previously published data that would otherwise be difficult to find or inconvenient to use. There are plans to eventually provide all of the data produced on a "floppy" diskette to facilitate their use by outside researchers.

OVERVIEW OF DATA PREPARATION

The data captured from the original SOI publications have been subjected to a number of adjustments designed to overcome some of the problems inherent in using a set of annual cross-sections in a time-series context. Three adjustments were made to the data:

- First, the Consumer Price Index was used to eliminate the influence of the inflation (and deflation) of prices over the period; to this end, all money amounts are presented in 1986 dollars, unless otherwise noted [2] (see Figure A).
- Second, to achieve some measure of comparability over time, attention has been confined to returns with income of \$25,000 or more in 1986 dollars. A convention like this is useful for constructing the overall time series, since prior to 1940, the Federal income tax was not a "mass" tax, but was paid only by individuals with fairly high incomes [3].
- Finally, a relatively sophisticated interpolation technique was used to convert the published current dollar

income size classes and corresponding aggregate data to a usable constant dollar time series [4].

Six tables summarizing the adjusted data are provided at the end of this article. These generally parallel the tables provided earlier for 1916 to 1950, so that they can be used together to look at the entire period.

Table 1 summarizes, *in current dollars*, the number of returns, income and tax for each year, for *all* individual income tax returns. This table is not adjusted for variations in filing requirements; rather, it simply shows what the published Statistics of Income data would have looked like in the 1951 through 1986 period if they had always been tabulated by the same current dollar income size classes.

Tables 2 through 6 are *in constant dollars* and include only those returns with adjusted gross income (AGI) of \$25,000 or more in 1986 dollars. This means that for the percentages of returns, income and tax shown (the top 1 percent of returns, for example), the base is returns with AGI of \$25,000 or more in 1986 dollars.

- Table 2 presents selected statistics for groups of returns with *constant tax shares* (10 to 50 percent, in increments of 5) for each year. These statistics include the number of returns in the group, the percentage of returns (with AGI of \$25,000 or more) accounted for by the group, adjusted gross income, Federal income tax, mean income before and after tax, the average income tax, the minimum income required for a return to be included in the group, the income share of the group

before and after tax, the number of returns per 100,000 of U.S. population, the average income tax rate and the income tax share of the group. All groups are cumulated from the top.

- Table 3 provides the same statistics for groups of returns with *constant income shares* (5 to 50 percent, in increments of 5) for each year.
- Table 4 shows the same statistics again, for *constant percentiles of returns* (1 percent and then 5 to 50 percent, in increments of 5) for each year.
- Table 5 consists of the same data, tabulated by selected *constant dollar* (\$25,000 to \$1,000,000) *income size classes*. Part VIII of this table may be of particular interest, as it shows the statistics for the entire group of returns under consideration: returns with AGI of \$25,000 or more.
- Table 6 depicts the income and tax data tabulated by selected *constant numbers* (25 to 200) of returns for each 100,000 of U.S. population. That is, it shows the statistics for groups of returns representing selected constant percentages (0.025 to 0.20 percent) of the U.S. population.

BASIC REFERENCE GROUP

As noted above, the information in this article is generally limited to returns with income of \$25,000 or more in 1986 dollars. For the pre-World War II period, limiting analysis in this way is advantageous as it provides a reasonably stable percentage of the population for study (see Figure B); however, in the post-World War II period this approach does not come close to delineating a constant percentage of the U.S. population, due to the growth in real income over the period [5]. It is primarily for this reason that the use of the data (in their current form) *solely* for analyses of the more recent period is not recommended. While price effects have been accounted for by converting the data to constant dollars and fluctuations in the filing requirement have been circumvented by limiting analysis to returns with income of \$25,000 or more, changes in the distribution of real income have not been addressed. The growth in real income is indicated by the increase in the ratio of returns with AGI of \$25,000 or more to the U.S. population, over the 1951 to 1986 period (see Figure C).

A better way to study tax shares would be to examine returns that represent a constant portion (the top 1 percent, for example) of the real income distribution for each year; this is what Pechman and others have done [6]. However, as noted in the previously cited article on 1916 to 1950, neither the Census Bureau data on the number of families in the United States, nor the Bureau of Economic Analysis

series relating income tax data to data on all personal income in the United States, are available prior to 1940 [7,8]. These series will have to be estimated for earlier years before this more appropriate approach can be applied to the entire set of tax data.

Confining analysis to returns with income of \$25,000 or more (in 1986 dollars) does result in a loss of data. For the 1916 to 1950 period, this omission is not a very serious problem. During nearly all of the pre-1940 period, returns with income of \$25,000 or more accounted for over 90 percent of the reported income tax liability (see Figure D; 1916 is not shown because all returns filed for 1916 had income of over \$25,000 in 1986 dollars.) After a steep drop in the 1940's, the percentage of the total tax liability accounted for by this group began to rise, but not to the 90 percent level of the earlier years. In the 1951 to 1986 period, however, returns with \$25,000 or more still accounted for an average of over three-fourths of the tax liability reported for each year (see Figure E).

Trends in tax liability over the entire 1916 to 1986 period are shown in Figures F and G, where average tax rates for returns with \$25,000 or more are compared to those for all returns. In the early period (1916 to 1950), the two average tax rates generally move together. During 1940 to 1944, however, average tax rates increased dramatically; these rate increases were much larger for returns with income of \$25,000 or more. Tax rates for both groups generally fell from 1944 to 1949. This trend of declining average tax rates continued from 1952 to 1965, for returns with \$25,000 or more. Average tax rates for *all* returns, however, increased in most of those years. Beginning with 1963, the relationship between the average tax rates of the two groups is fairly constant. The difference between the average tax rates for the two groups ranges from 7.94 percentage points for 1951 to 2.08 percentage points for 1973.

EXTENDING EARLIER ANALYSES

The earlier article in this series included an example of one type of analysis that can be done with the tables provided. This vein of research was opened up through a column-by-column survey of data from the last panel of Table 6. In both articles, that panel consists of estimates for the top 200 returns per 100,000 U.S. population. (Note that the number of returns in this group is equal to 0.2 percent of the U.S. population in each year.)

The data at the end of this article allow researchers to extend such an analysis to the 1951 through 1986 period. To illustrate how this can be done using the corresponding information for the later years, tax shares and average tax rates (found in columns 12 and 13 of Table 6) are discussed below. The purpose of examining these data is not to provide a thorough analysis of tax shares and tax rates for

Percentage

1951 to 1986, but to show how these data relate to the earlier years in the time series. Before proceeding to this brief illustration, three general points should be made:

- Confining attention to returns constituting a fixed percentage of the total U.S. population (as is done in Table 6) may be the best device used in the tables to increase year-to-year comparability; even so, difficulties remain. For example, the number of exemptions generally claimed on returns (an indicator of the number of individuals represented by the returns) may have been changing; this has not been studied as yet.
- Comparisons in Table 6 (and in Tables 2 through 5) are all relative to the base of returns with income of \$25,000 or more. For some statistics, like tax shares, this is an extremely important consideration; for others, like tax rates, it does not matter at all.
- Finally, the top 200 returns per 100,000 U.S. population constitute a very small fraction of the income distribution and movements in this upper tail may be different from movements elsewhere; hence, any conclusions about this select group may not apply to the population as a whole.

Tax rates and tax shares were not constant over the 1916 to 1950 period. During the early part of the period, returns in the top 0.2 percent group were subject to very low tax rates, although their share of reported tax was quite high (see Figure H). In the early 1940's, however, tax rates increased sharply, while the tax shares of the group fell. The latter part of the 1916 to 1950 period was generally characterized by falling tax rates and constant tax shares.

In the 1951 to 1986 period, after an increase to 38.52 percent for 1952, average tax rates fell slightly and then were fairly constant, averaging over 34 percent (see Figure I). The tax share of the group declined in most years, from 43.19 percent for 1951 to 15.89 percent for 1981. After 1981, the tax share of the group increased steadily, reaching 23.87 percent for 1986, the highest it had been since 1961 [9].

ONGOING RESEARCH

The value of the data presented here and in the earlier article will be greatly enhanced when some of their limitations are addressed. A report on this work is currently scheduled for publication in an upcoming issue of the *SOI Bulletin*. This section contains a brief overview of those efforts.

Work to mitigate data limitations includes the development and application of a standardized income concept. Tax law changes have resulted in inconsistencies in the

income concept over the 1916 to 1986 period. In their current form, the data presented so far are not particularly useful for evaluating changes in the distribution of income, because they have not been adjusted for these changes in the composition of income. (That is one reason why tax shares, rather than income shares, have been emphasized.) As discussed in the previous article, the most serious inconsistency was introduced in (tax year) 1944, when adjusted gross income (AGI) was adopted in place of net income, as the income size classifier. Consequently, data for 1943 and earlier are not precisely comparable to data for later years. Cross-tabulations of AGI and net income are, however, available for a number of years after 1943; these and other data are being used to simulate how the net income distributions for 1944 and thereafter would look [10].

Other inconsistencies in the income concept will be addressed as well; for example, removing capital gains and losses from the computation of net or adjusted gross income would mitigate the problems caused by the many changes in their treatment over time. The data base will also be augmented by the addition of detail regarding the sources of income and deductions for each year.

The use of previously published tabulated data has been emphasized in these first two articles; however, there are also microdata files available for 1960 and most years thereafter. Adjusting for changes in the tax treatment of various items over time would allow for the creation of simulated microdata for earlier years. To accomplish this, the available microdata for a later year would be adjusted so that they conform to the tax treatment applicable to the earlier year for which data are needed; then they would be reweighted to agree with the aggregates tabulated for the earlier year. These reweighted data would serve as microdata for the earlier year.

Work to evaluate the tax and income shares of constant percentiles of the income distribution is now underway. This approach is more appropriate than using the constant dollar income cutoff now employed, because it takes into account real changes in the income distribution. Finally, an analysis of the sensitivity of the estimates to the use of various price indices is planned.

DEFINITION OF TERMS

Three items were obtained from the old SOI volumes for this study: the number of returns, income and tax liability, all distributed by size of income. These terms are defined below, essentially as they were in Part I.

Returns.—Joint returns have been allowed since the inception of the individual income tax. (However, income-splitting, whereby couples pay twice the tax computed on

Figure H.
Returns Accounting for the Top 0.2 Percent
of U.S. Population: Federal Income Tax Share
and Average Income Tax Rate, 1916-1950

Figure I.
Returns Accounting for the Top 0.2 Percent
of U.S. Population: Federal Income Tax Share
and Average Income Tax Rate, 1951-1986

one-half of their combined income and thus are subjected to lower tax rates, was not instituted until 1948.) The law also provided for returns for single persons and married persons filing separately. Head of household returns were introduced in 1952 and special returns for surviving spouses were added in 1954 [11]. Figure J provides information on the many changes in the filing requirements that have occurred over the 1916 to 1986 period [12]. An artificial, indexed filing threshold of \$25,000 or more in 1986 dollars was introduced to adjust for the fluctuations in the filing thresholds.

Prior to 1928, returns with deficits in income were not tabulated. To preserve the comparability of the data over the entire time series, returns with deficits in Adjusted Gross Income (or net income, prior to 1944) are excluded from data for all years, even though they are available in the original SOI publications for 1928 and thereafter. These omitted returns constitute a very small percentage of total filings—less than 1 percent, for the most part, and this omission does not affect the estimates on Tables 2 through 6 at all.

Income.—The income concept applicable to 1951 through 1986 is adjusted gross income (AGI). Introduced in 1944, AGI is generally defined as gross income less (1) allowable trade and business deductions, (2) travel, lodging and other reimbursed expenses connected with employment, (3) deductions attributable to rents and royalties, (4) deductions for depreciation and depletion allowable to beneficiaries of property held in trust, and (5) allowable losses from sales of property. (Personal deductions, such as those for medical expenses, personal interest paid and charitable contributions, are not subtracted from income until later, when the net income of itemizers is computed.)

The precise definition of AGI did change fairly often during this period, as various tax laws were enacted. The treatment of capital gains and losses was altered the most frequently, although other sources of income were included or exempted from time to time, as well. SOI data suggest that the definitional changes that occurred in the gross income concept did not greatly affect the distribution of returns with income of \$25,000 or more in 1986 dollars in the 1916 to 1950 period. However, the increasing frequency of significant tax law changes in the 1950 to 1986 period make these assertions more problematic. As noted in the previous section, research into the construction of an income classifier that is more consistently applicable to the entire data series is underway.

Income Tax.—The computation of the income tax changed repeatedly over the 1951 to 1986 period. In this article, tax refers to the total Federal individual income tax liability less tax credits. The tax includes the normal tax and surtax (called regular tax beginning in 1971), the optional

¹ Prior to 1944, the net income and gross income filing thresholds were applied to the combined income of the couple. For 1944 through 1969, the gross income filing criterion applied to income earned by either spouse. Beginning in 1970, the filing criterion again applies to the total gross income of the couple.

² Or \$3,949 earned by one spouse only, for purpose of the victory tax.

N/A—not applicable.

tax paid in lieu of surtax and normal tax, the alternative tax on capital gains income, the surcharge in effect for 1968 through 1972 and the alternative minimum tax effective in 1970 and thereafter. It does not include self-employment taxes, social security taxes, taxes from recomputing prior-year investment or work incentive credits, or State and local assessments [13].

NOTES AND REFERENCES

- [1] Scheuren, Fritz and McCubbin, Janet, "Individual Income Tax Shares and Average Tax Rates, Tax Years 1916-1950," *Statistics of Income Bulletin*, Volume 8, Number 3, 1989.
- [2] The Consumer Price Index, produced monthly by the Bureau of Labor Statistics, is a Laspeyres index; that is, it is a ratio of incomes needed in different years to purchase the base year's representative group of goods. For a recently published series, see U.S. Department of Commerce, Bureau of the Census, *Statistical Abstract of the United States: 1988*. The CPI might not be the most appropriate price index to use to convert these data to 1986 dollars, but it was the most readily available index extending back to 1916. A study of the use of alternative indices is planned.
- [3] "Income" is adjusted gross income (AGI). (Prior to 1944, SOI data are classified by net income, a less inclusive concept than AGI. This makes comparisons across this year problematic, as discussed in the Ongoing Research section of this article.) The amount \$25,000 was chosen because it is roughly the lowest level that can serve as an artificial filing requirement common to all years from 1916 through 1986. In fact, for 1916 and 1931, the net income filing threshold in 1986 dollars for joint returns is actually above the \$25,000 cutoff.
- [4] The basic approach taken was to employ "spline fitting" procedures to the tabulated income data. For a review of this area of statistical application, see Ramsay, J. O., "Monotone Regression Splines in Action," *Statistical Science*, Vol. 3, No. 4, 1988. For examples of applications of the procedure, see Oh, H. Lock and Scheuren, Fritz, "Osculatory Interpolation Revisited," *Statistics of Income and Related Administrative Record Research: 1986-1987*, U.S. Department of the Treasury, Internal Revenue Service; and Oh, H. Lock, "Osculatory Interpolation with a Monotonicity Constraint," *1977 Proceedings of the American Statistical Association, Section on Statistical Computing*, 1978.

For a more recent article on the reconciliation of the Bureau of Economic Analysis measure of personal income with AGI by source of income, see Park, Thae S. and Reeb, Jane S., "Personal Income and Adjusted Gross Income, 1984-1986," *Statistics of Income Bulletin*, Volume 8, Number 3, 1989.
- [9] The tax share of this group increased by 16 percent between 1985 and 1986. This unusually large increase reflects the increase in the realization of capital gains income, motivated by the elimination of the preferential tax treatment of such gains beginning with 1987. The recent increases in income and tax shares shown in these data are also reflected in other data from higher-income returns. See for example, U.S. Department of Treasury, "Changes in the Distribution of Federal Income Tax Payments Since 1981," *Treasury News*, April 5, 1988.
- [10] See Scheuren, Fritz and Oh, H. Lock, "Constant Income Distribution Percentile Estimation," *Statistics of Income and Related Administrative Record Research*, Internal Revenue Service, to be presented at the August 1989 meetings of the American Statistical Association.
- [11] Head of household returns were allowed for tax years beginning after October 31, 1951. Under this new filing classification, heads of households received approximately half of the income-splitting benefits accorded to a married couple. The 1954 Internal Revenue Code extended the full benefits of income splitting to widowed individuals, for two years following the death of a spouse, provided that the surviving spouse had not remarried and had a dependent child or stepchild.

[12] Higher filing requirements than those noted in Figure J were introduced for aged individuals in 1954 and for widowed individuals in 1975. A lower filing requirement applicable to self-employed individuals was introduced in 1951, to facilitate the collection of their social security taxes. See the first article in this series, Scheuren, Fritz and McCubbin, Janet, "Individual Income Tax Shares and Average Tax Rates, Part I: 1916-1950," *Statistics of Income Bulletin*, Winter

1988-89, for more detailed information on the operation of the filing requirements during 1916 to 1950.

[13] The self-employment tax (mandated by the Social Security Act Amendments of 1950) is included in the income tax data for 1951 through 1953. This inconsistency is not a serious problem as the self-employment tax constituted less than 1 percent of the total tax in each year, and well over half of the self-employment tax was reported on returns with less than \$25,000 or more in 1986 dollars.

Individual Income Tax Shares, 1951-1986

Individual Income Tax Shares, 1951-1986

Table 2.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Federal Income Tax Share Groups, Tax Years 1951-1986

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Individual Income Tax Shares, 1951-1986

Table 2.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Federal Income Tax Share Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	
Part III — Returns accounting for top 20 percent of Federal income tax

Individual Income Tax Shares, 1951-1986

Table 2.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Federal Income Tax Share Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

See notes at end of tables.

Individual Income Tax Shares, 1951-1986

Table 3.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Income Share Groups, Tax Years 1951-1986

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

See notes at end of tables.

Individual Income Tax Shares, 1951-1986

Table 3.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Income Share Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
Part III — Returns accounting for top 15 percent of income

Individual Income Tax Shares, 1951-1986

Table 3.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Income Share Groups, Tax Years 1951-1986—Continued

(All figures are estimates—money amounts are in 1986 dollars)

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Table 3.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Income Share Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)

Individual Income Tax Shares, 1951-1986

Table 3.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Income Share Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
Part IX — Returns accounting for top 45 percent of income

Individual Income Tax Shares, 1951-1986

Table 4.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Return Percentile Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Individual Income Tax Shares, 1951-1986

Table 4.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Return Percentile Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Individual Income Tax Shares, 1951-1986

Table 4.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Return Percentile Groups, Tax Years 1951-1986—Continued

(All figures are estimates—money amounts are in 1986 dollars)

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Individual Income Tax Shares, 1951-1986

Table 4.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Return Percentile Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)

Individual Income Tax Shares, 1951-1986

Table 4.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Return Percentile Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

See notes at end of tables.

Individual Income Tax Shares, 1951-1986

Table 5.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Size of Income in 1986 Dollars, Tax Years 1951-1986

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
Part I — Returns with adjusted gross income \$1,000,000 or more in 1986 dollars

Individual Income Tax Shares, 1951-1986

Table 5.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Size of Income in 1986 Dollars, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
Part III — Returns with adjusted gross income \$500,000 or more in 1986 dollars													
1951	14,289	.22	13,648,479	7,408,971	955,170	436,663	518,506	500,000	4.62	2.64	9.28	54.28	12.57

Individual Income Tax Shares, 1951-1986

Table 5.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Size of Income in 1986 Dollars, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
Part V — Returns with adjusted gross income \$100,000 or more in 1986 dollars

Individual Income Tax Shares, 1951-1986

Table 6.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Returns per 100,000 Population Groups, Tax Years 1951-1986

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Individual Income Tax Shares, 1951-1986

Table 6.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Returns per 100,000 Population Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

Individual Income Tax Shares, 1951-1986

Table 6.—Returns with Adjusted Gross Income \$25,000 or more in 1986 Dollars: Number of Returns, Income, and Federal Income Tax, Cumulated by Returns per 100,000 Population Groups, Tax Years 1951-1986—Continued

[All figures are estimates—money amounts are in 1986 dollars]

Tax year	Returns		Adjusted gross income (thousand dollars)	Federal income tax (thousand dollars)	Mean income		Average income tax (dollars)	Minimum income cutoff (dollars)	Income share		Returns per 100,000 population	Average income tax rate (percent)	Income tax share (percent)
	Number	Percent of total			Before tax (dollars)	After tax (dollars)			Before tax (percent)	After tax (percent)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)

See notes at end of tables.

NOTES TO TABLES

Detail may not add to totals due to rounding. Column numbers in the notes below generally refer to Tables 2 through 6.

Number of returns.—Table 1 includes all returns with positive adjusted gross income. Tables 2 through 6 include only returns with income of \$25,000 or more in 1986 dollars.

Percent of total (returns).—The number of returns in the group (column 1) divided by the number of returns with income of \$25,000 or more in 1986 dollars, multiplied by 100.

Income.—Adjusted gross income (AGI), which is gross income less certain deductions. Deductions allowed in the computation of AGI generally include expenses incurred in the generation of income, such as expenses related to employment or business losses.

Federal income tax.—Federal income tax liability less tax credits. Tax includes the normal tax and surtax (called regular tax beginning in 1971), the optional tax paid in lieu of surtax and normal tax, the alternative tax on capital gains income, the surcharge in effect for 1968 through 1972 and the alternative minimum tax effective in 1970 and thereafter. It does not include self-employment taxes, social security taxes, taxes from recomputing prior-year investment or work incentive credits, or State and local assessments.

1986 dollars.—All money amounts on Tables 2 through 6 are expressed in 1986 dollars. The conversion factors used were derived from the Consumer Price Index with 1967 weights, which was developed by the U.S. Department of Labor, Bureau of Labor Statistics.

Mean income (before or after tax).—The aggregate income (before or after Federal income tax) of the group divided by the number of returns in the group.

Average income tax.—The aggregate Federal income tax of the group divided by the number of returns in the group.

Minimum income cutoff.—The minimum amount of income (in 1986 dollars) required for a return to be included in the group (as defined at the top of each table). All groups are cumulated from the top.

Income share (before or after tax).—The aggregate income (before or after Federal income tax) of the group divided by the aggregate income (before or after Federal income tax) of all returns with income of \$25,000 or more in 1986 dollars.

Returns per 100,000 population.—The number of returns in the group (column 1) divided by the U.S. resident population, multiplied by 100,000. This number divided by 1,000 equals the number of returns in the group as a percentage of the U.S. resident population. For example, "200 returns per 100,000 population," as shown on Table 6, Part V, refers to the number of returns equal to 0.2 percent of the population. For population figures see U.S. Bureau of the Census, *Current Population Reports*, series P-25.

Average income tax rate.—The aggregate Federal income tax of the group divided by the aggregate income of the group.

Income tax share.—The aggregate Federal income tax of the group divided by the aggregate Federal income tax of all returns with income of \$25,000 or more in 1986 dollars.

Foreign Investment and Activity in the United States Through Corporations, 1984 and 1985

By James R. Hobbs*

For 1985, the 36,700 domestic corporations each "controlled" by a foreign person generated \$514 billion of worldwide receipts and reported total assets amounting to \$656 billion [1]. These corporations, 1 percent of the U.S. total, accounted for 5 and 6 percent of the assets and receipts, respectively, reported on U.S. corporation income tax returns for both 1984 and 1985 (see Figure A).

Figure A.—Domestic Corporations Controlled by a Foreign Person as a Percentage of All Corporations, Income Years 1983–1985

[All figures are estimates based on samples—money amounts are in thousands of dollars]

Year and Item	All corporation income tax returns	Returns of domestic corporations controlled by a foreign person	
		Number or amount	Percentage of all returns
	(1)	(2)	(3)
1983			
Number of returns	2,999,071	33,622	1.12%

Total receipts.....	7,800,711,226	459,161,616	5.89
1985			
Number of returns	3,277,219	36,677	1.12
Total assets.....	\$12,773,093,888	\$655,695,711	5.13
Total receipts.....	8,398,278,426	513,777,962	6.12

Nearly 11,700 "foreign" corporations (i.e., those incorporated abroad) reported \$51 billion of receipts generated for 1985 from activities "effectively connected" with a U.S. trade or business. The majority, 52 percent, of these receipts were for foreign banks with U.S. branch operations. For 1984, banking operations accounted for 61 percent of the nearly \$44 billion of receipts of foreign corporations from U.S. effectively-connected activities.

DIRECT FOREIGN INVESTMENT AND ACTIVITY IN THE UNITED STATES

Foreign direct investment in the United States can take several forms, including corporations, partnerships, and joint ventures. Under these forms of direct investment, the foreign investor has sufficient equity in the enterprise so as to control and participate in managing its operations [2].

A foreign direct investor can either gain control of an existing U.S. corporation, or create a new company incorporated in the United States. Another method of operating

in the United States is through a branch operation of a foreign corporation. This article focuses first on domestic corporations (i.e., companies incorporated in the United States) that are controlled (i.e., owned) by a foreign person, and second, on foreign corporations with branch operations in the United States [3].

There are several factors involved in the decision of a foreign investor to operate in the United States through either a "domestic" or "foreign" corporation [4]. These factors include, but are not necessarily limited to, the following: (1) the investor's short- and long-term objectives; (2) which type of corporation is best suited to penetrate the U.S. market; (3) availability of financial resources; (4) acceptable levels of risk, such as from product liability; (5) U.S. importation policies; (6) requirements on foreign investment by the investor's home country; and (7) both U.S. and home country tax considerations. The U.S. tax structure for both foreign-controlled domestic corporations and for foreign corporations operating in the United States are discussed in this article.

DOMESTIC CORPORATIONS CONTROLLED BY FOREIGN PERSONS

U.S. Taxation

Domestic corporations that are controlled by a foreign person are taxed by the United States in a manner similar to that of other domestic corporations. Control is defined for this purpose as 50 percent or more direct or indirect ownership of a corporation's voting stock by at least one foreign entity, such as by another corporation.

For 1985, only 8 percent (3,050 returns) of the 36,677 returns of foreign-controlled domestic corporations indicated an exact 50 percent foreign ownership level. The great majority (nearly 88 percent, or 32,152 returns) indicated that the level of ownership was over 50 percent. Another 1,475 returns (4 percent) only indicated that foreign ownership was 50 percent or more, but failed to provide the exact percentage of ownership [5].

Most domestic corporations are taxed on their worldwide income [6]. This includes corporations that are controlled by foreign persons. In general, the taxable income of a corporation is its gross receipts less ordinary and necessary business deductions and certain statutory special deductions [7].

*Assistant Chief, Foreign Statistics Branch. Prepared under the direction of Daniel Skelly, Chief, Foreign Statistics Branch.

Foreign Corporate Activity in the U.S., 1984 and 1985

Unfortunately, the tax return form which is the source of the statistics in this article does not separate U.S.-source taxable income from foreign-source taxable income. (See the section entitled "Data Sources and Limitations.") However, foreign-controlled domestic corporations claimed \$725 million of foreign tax credits for 1985. This amount reduced their total U.S. income tax before credits (\$5.2 billion) by 14 percent. The foreign tax credit is a credit allowed against U.S. income tax for income, war profits and excess profits taxes paid or accrued to foreign countries or U.S. possessions [8]. To claim a foreign tax credit, a corporation had to have generated foreign-source taxable income, paid or accrued foreign income tax on the foreign income, and had a U.S. income tax liability. By comparison, all of the approximately 3.3 million U.S. corporation income tax returns showed a total of \$24.3 billion of foreign tax credits for 1985. This amount reduced their total U.S. income tax before credits (\$111.3 billion) by almost 22 percent (see Table 1).

For taxable years beginning in 1984, the regular corporate tax rates were as follows:

Taxable income	Tax rate
\$25,000 or less	15 percent
\$25,001 to \$50,000	18 percent
\$50,001 to \$75,000	30 percent
\$75,001 to \$100,000	40 percent
Over \$100,000	46 percent

If a corporation's taxable income exceeded \$1 million, then the corporation was liable for an additional tax equal to the lesser of (a) 5 percent of the taxable income over \$1 million, or (b) \$20,250.

Corporations that had net long-term capital gains could use an alternative method of tax computation, if it produced a lower amount of tax than under the regular method. Under the alternative method, net long-term capital gains were taxed separately at a rate of 28 percent. The remainder of taxable income was then taxed at the regular rates.

Credits could be used to reduce the tax calculated under either the regular or alternative methods. For both 1984 and 1985, the two largest credits were the foreign tax credit (previously described) and the general business credit. Beginning in 1984, the Tax Reform Act of 1984 created the general business credit by merging together four tax credits that were previously available to taxpayers. They were the investment credit, targeted jobs credit, alcohol fuel credit, and the employee stock ownership plan credit. Other credits claimed by taxpayers for both 1984 and 1985 were the U.S. possessions tax, nonconventional source fuel, and research activities credits. In addition to the regular or alternative tax after credits, a corporation's tax liability could

include a tax from recomputing prior-year investment credits and an additional tax for tax preferences. (Tables 1, 2, and 4 show selected tax items.)

Dividends paid by domestic corporations to the foreign persons that controlled them were generally subject to a withholding tax of 30 percent. However, this tax rate was often lower than 30 percent for recipients of dividends that resided in a foreign country that had a tax treaty with the United States. The tax withheld represented final payment of the actual tax liability on dividend payments in most instances. The responsibility for withholding the tax belonged to the payer (corporation) or its representative (usually a financial institution), rather than the foreign recipient of the dividend [9].

Dividends paid by foreign-controlled domestic corporations to U.S. persons were not subject to the withholding tax applicable to foreign recipients. However, these dividend payments did have to be reported to the Internal Revenue Service by the corporations. In turn, these dividends were reported as income, and taxed accordingly, on the recipient's U.S. income tax return.

Growth Since 1983

Foreign involvement in the U.S. corporate sector through foreign-controlled domestic corporations continued to grow substantially during the 1983-1985 period (see Figure A).

Worldwide receipts of domestic corporations controlled by foreign persons increased from \$390 billion for 1983 to \$514 billion for 1985. This was a 32 percent increase, using current dollars. In comparison, receipts reported on all U.S. corporation income tax returns grew from \$7.1 trillion for 1983 to \$8.4 trillion for 1985, an 18 percent increase over the same time period. As a result of the growth rate of foreign-controlled domestic corporations, their share of receipts shown on all corporate returns increased from 5.46 percent for 1983, to 5.89 and 6.12 percents, for 1984 and 1985, respectively.

By making allowances for inflation through the use of the Gross National Product Implicit Price Deflator, the worldwide receipts, in constant dollars, reported on all U.S. corporation income tax returns increased by 9 percent between 1983 and 1985 [10]. Over the same period, the constant-dollar receipts of foreign-controlled domestic corporations increased by 22 percent.

Total assets of domestic corporations controlled by a foreign person grew at a rate similar to that of assets reported on all U.S. corporation income tax returns. Between 1983 and 1985, assets reported increased from \$530 billion, or 5.20 percent of the total for all returns, to \$656 billion, or 5.13 percent of the total.

Industry Characteristics

Foreign-controlled domestic corporations were involved in every type of industrial activity, but were concentrated mainly in three industrial divisions: wholesale and retail trade; manufacturing; and finance, insurance and real estate (see Figure B and Table 4). For both 1984 and 1985, these three divisions accounted for approximately three-fourths of the returns filed, 92 percent of the total receipts, and 90 percent of the total assets reported by all domestic corporations owned by a foreign person. By comparison, these percentages were higher than those for all companies which filed U.S. corporation income tax returns. For

this group of returns for 1985, the manufacturing; wholesale and retail trade; and finance, insurance, and real estate Industrial divisions accounted for 52 percent of the returns filed, 77 percent of the total receipts, and 84 percent of the total assets.

Figure B shows that companies whose principal activity was in one of the three industrial divisions had different characteristics. There were relatively few returns of manufacturing companies (4,011 returns, or 10.9 percent of the total for 1985). However, these companies tended to have large amounts of assets which generated large amounts of receipts. The foreign-owned manufacturers had \$255 bil-

Figure B
Domestic Corporations Controlled by a Foreign Person, by Selected Industrial Divisions, Income Years 1984 and 1985

[Percentage of All Industries]

Number of Returns

Total Receipts

Total Assets

1984 Total: 37,401

1985 Total: 36,677

1984 Total: \$459.2 billion

1985 Total: \$513.8 billion

1984 Total: \$552.6 billion

1985 Total: \$655.7 billion

Foreign Corporate Activity in the U.S., 1984 and 1985

lion of assets and \$202 billion in total receipts for 1985. On the average, each manufacturer had \$64 million of assets and produced \$50 million of receipts. By comparison, the average foreign-owned nonmanufacturing company had \$12 million and \$10 million of total assets and receipts, respectively [11].

Domestic corporations controlled by a foreign person were involved in the manufacture of many different products. Companies manufacturing petroleum and coal products (including integrated operations) had receipts totalling \$52 billion for 1985. This was 25 percent of all receipts for manufacturing industries. Chemical manufacturers accounted for another \$31 billion of total receipts. In terms of total receipts, other significant manufacturing activities were food and kindred products (\$19 billion), electrical and electronic equipment (\$15 billion), primary metals (\$12 billion), and fabricated metal products (\$10 billion).

Foreign-controlled domestic manufacturing corporations accounted for 7.2 percent of the \$2.8 trillion of worldwide receipts reported by all manufacturing corporations filing U.S. income tax returns for 1985. These companies played substantial roles in certain manufacturing industries, as shown in Figure C. In particular, foreign-controlled domestic corporations manufacturing tobacco products accounted for nearly 23 percent of the receipts of all companies classified in their industry.

The comparative levels of assets and receipts of foreign-owned companies engaged in wholesale and retail trade and those engaged in finance, insurance and real estate differed significantly. Trade companies produced large amounts of receipts (\$227 billion for 1985) with relatively few assets (\$88 billion). Stated another way, this amounted to \$2.58 of receipts for each dollar of assets. On the other hand, companies involved in finance, insurance and real estate had large amounts of assets (\$244 billion for 1985), but only \$41 billion of receipts. These companies produced less than \$0.17 of receipts for each dollar of assets.

Figure C. — Domestic Corporations Controlled by a Foreign Person as a Percentage of All Corporations, for Selected Manufacturing Industries, Income Year 1985

[All figures are estimates based on samples—money amounts are in millions of dollars]

Industry	Total receipts		
	All corporation income tax returns	Returns of domestic corporations controlled by a foreign person	Percentage of all returns
	(1)	(2)	(3)
Manufacturing, total.....	\$2,831,062	\$202,466	7.2%
Tobacco manufactures.....	41,353	9,409	22.8
Stone, clay, and glass products..	64,318	8,626	13.4
Chemicals and allied products..	266,812	30,959	11.6
Leather and leather products.....	14,679	1,626	11.1
Petroleum (including integrated) and coal products.....	469,260	51,629	11.0
Primary metal industries.....	117,347	12,388	10.6

The great majority of trade companies were wholesalers. Many of these companies were U.S. distributors of products made in foreign countries by their parent corporations. For 1985, wholesalers accounted for \$197 billion, or 87 percent, of all receipts by trade companies.

Banks accounted for over 52 percent (\$127 billion for 1985) of the total assets in the finance, insurance and real estate industrial division. These assets produced over \$12 billion of receipts, primarily interest. This 10:1 ratio of assets to receipts was similar to that for all U.S. (i.e., domestically-incorporated) banks.

Other significant areas (in terms of receipts) of the finance, insurance and real estate industrial division were nonbank holding and other investment companies, insurance companies, and real estate companies [12]. For 1985, these companies had total receipts of \$10.5, \$8.1, and \$5.0 billion, respectively.

The services industry (not shown in Figure B) accounted for over 4,000 returns filed for 1985 by foreign-owned domestic corporations. While this industry represented over 11 percent of all returns filed by these corporations, it comprised only about 2 percent of both total assets and receipts for the group.

Country Characteristics

Domestic corporations are owned by persons throughout the world. However, for 1985, owners from the eight countries shown in Figure D controlled nearly 53 percent of the 36,677 domestic corporations controlled by a foreign person. (The countries are ranked by decreasing number of returns. They represent the geographic location of the foreign owner's country of residence, incorporation, organization, creation, or administration.) The 19,352 corporations owned by persons from these eight countries accounted for 82 and 86 percent, respectively, of the total assets and receipts of all foreign-controlled domestic corporations.

As previously stated, the worldwide receipts of domestic corporations controlled by a foreign person increased by nearly 32 percent between 1983 and 1985. For the corporations shown in Figure D, the growth rates varied widely. Corporations owned by persons from Switzerland and Japan showed increases in total receipts of 88 and 52 percent, respectively. Percentage increases for Canada (37 percent), West Germany (34 percent), Netherlands Antilles (29 percent), and the United Kingdom (27 percent) approximated the 32-percent average for all countries. Corporations owned by persons from the Netherlands (18 percent) and France (16 percent) had smaller-than-average increases in receipts for the 1983-1985 period.

¹ Not computed.

Domestic corporations controlled by persons from Japan had worldwide receipts of \$133.5 billion for 1985. This amount was far larger than the receipts representing any other country. Japan also had the largest amount of receipts for 1983 and 1984 (see Table 2). Wholesale trade was the predominant activity of Japanese-controlled domestic corporations. This industry group accounted for \$115.7 billion, or 87 percent, of the 1985 receipts of all U.S. corporations with Japanese owners.

Domestic corporations controlled by persons from the United Kingdom had 1985 total receipts of \$83.3 billion. Manufacturing industries were the most common business activities of these corporations, accounting for 58 percent of the total receipts. The finance, insurance, and real estate; wholesale trade; and transportation and public utility industries accounted for an additional 16, 9, and 7 percents, respectively.

Companies owned by persons from the Netherlands had worldwide receipts of \$70.5 billion for 1985. To an even greater extent than those from the United Kingdom, manufacturing industries were the predominant activity of these U.S. corporations, accounting for 74 percent of the receipts of all companies with owners from the Netherlands.

Manufacturing was also the most common business activity of U.S. corporations owned by persons from Canada and Switzerland. This industrial division accounted for 49 and 67 percent, respectively, of the total receipts for these countries.

Manufacturing and wholesaling were equally important for U.S. companies owned by persons from West Germany, France and the Netherlands Antilles. For 1985, these two activities comprised 39 and 34 percent, respectively, of the total receipts of West German-controlled domestic corporations. Corresponding percentages for France were 34 and 41, respectively. Finally, for the Netherlands Antilles, the manufacturing and wholesaling industries accounted for 33 and 30 percent, respectively, of the total receipts of these U.S. companies.

Income Statement and Tax Items

The 36,677 domestic corporations controlled by a foreign person generated \$514 billion of total receipts for 1985. Over 92 percent of this total was "business receipts" (i.e., receipts from sales and operations). Interest income of \$22.7 billion accounted for an additional 4 percent of the total. Banks produced the largest part (\$10.5 billion) of the interest receipts. (Briefly, banking items such as fees, commissions, trust department earnings, exchange collections, discounts, and service charges were included in business receipts. Interest, the principal operating income of banks, was shown separately from business receipts.)

These same domestic companies claimed \$511 billion in deductions for 1985. Cost of sales and operations were \$358 billion, or 70 percent of the total. Interest paid (\$28 billion, including \$7.3 billion paid to depositors by banks) and depreciation (\$16 billion) accounted for 5 and 3 percent, respectively, of the total deductions.

The net income (less deficit) for these companies was \$3 billion for 1985 [13]. This was the result of 15,882 corporations reporting \$14.5 billion of profits (as computed under the Internal Revenue Code) and 20,795 companies reporting \$11.5 billion of deficits [14]. Thus, only 43 percent of the domestic corporations with foreign owners reported profits for 1985. By comparison, 56 percent of all corporations filing U.S. income tax returns for 1985 reported profits which totalled \$363.9 billion. The deficits for all corporations were \$123.7 billion, resulting in a net income (less deficit) amount of \$240.1 billion.

It is instructive to compare the rate of return on assets for all corporations filing U.S. tax returns to that for foreign-controlled corporations. For this purpose, rate of return on assets is defined as net income (less deficit) as a percentage of total assets. As shown in Figure E, foreign-controlled domestic corporations had a low (0.45 percent) rate of return as compared to all corporations (1.88 percent), for 1985.

The data for 1985 reflect an improving U.S. economy. For all corporations filing U.S. tax returns, the rate of return on assets rose slightly from 1.85 percent for 1983 to 1.88 percent for 1985. The rate of return on assets of domestic corporations owned by foreign persons improved by a greater margin, from 0.35 percent for 1983 to 0.45 percent for 1985. This reflects an increase in net income (less deficit) of 61 percent and a much smaller increase (24 percent) in total assets.

For 1985, profitable foreign-controlled domestic corporations had \$11.4 billion of "U.S. income subject to tax" (the base on which tax was computed), resulting in tax before credits of \$5.2 billion [15]. The difference between the \$14.5 billion of profits (or net income) and \$11.4 billion of income subject to tax was the result of statutory special deductions. These deductions were allowed to most corporations in computing their taxable income and were for net operating losses from prior years and deductions for both intercorporate dividends received and for dividends paid on certain preferred stock of public utilities.

Tax credits totalling \$1.6 billion reduced the U.S. tax liability of foreign-owned domestic corporations to \$3.6 billion, for 1985. The largest credits were \$778 million of general business credits and \$725 million of foreign tax credits.

Figure E.—Comparative Rates of Return on Assets, Income Year 1985

[All figures are estimates based on samples—money amounts are in billions of dollars]

Item	All corporations filing U.S. tax returns	Domestic corporations controlled by a foreign person
Total assets	\$12,773.1	\$655.7
Net income (less deficit)	240.1	3.0
Rate of return	1.88%	0.45%

FOREIGN CORPORATIONS WITH INCOME EFFECTIVELY CONNECTED WITH A U.S. TRADE OR BUSINESS

This section of the article switches the focus from foreign-controlled domestic companies to foreign corporations with income effectively connected with a U.S. trade or business:

U.S. Taxation

Foreign corporations are those that are incorporated abroad. Thus, they are not created or organized in the United States, or under the laws of the United States or any of its States. These corporations are, however, subject to U.S. income tax on income effectively connected with the conduct of a U.S. trade or business and on income from U.S. sources that is not "effectively connected." There are two methods of taxation that apply to the income, depending on whether or not it is considered to be effectively connected with a trade or business in the United States [16].

Foreign corporations are taxed on income effectively connected with a U.S. trade or business in a manner similar to that used to tax the income of domestic corporations. To determine their taxable income, gross income that is effectively connected with a U.S. trade or business is reduced by allowable deductions to the extent such deductions are related to this income [17]. The same tax rates, tax methods, and credits used to reduce tax liability are available to both foreign and domestic corporations. See the section entitled "Domestic Corporations Controlled by Foreign Persons: U.S. Taxation" for a discussion of how tax liability is determined.

Fixed or determinable annual or periodic income from U.S. sources, such as interest, dividends, rents, royalties, annuities, and certain gains (such as from the sale or exchange of patents and copyrights) may or may not be effectively connected income [18]. This is determined on the basis of whether the income is from assets used in the conduct of a U.S. trade or business and whether the activities of the U.S. trade or business are a principal factor in producing the income.

A foreign corporation could elect to treat income from U.S. real property as effectively connected income, even if it would not have otherwise been considered to be effectively connected income. This income included gross rents and gains from the sale or exchange of real property. This election permitted the corporation to apply deductions against this gross income as well.

Certain types of foreign-source income were also considered to be U.S. effectively connected income. For instance, interest received by a foreign bank from sources outside the United States was treated as effectively connected with the

conduct of a U.S. trade or business if the bank had an office in the United States to which the income was attributable and the interest was derived from banking activities in the United States.

As mentioned previously, foreign corporations were also taxed on U.S.-source income that was not effectively connected with the conduct of a U.S. trade or business. This included certain amounts of investment income, such as interest, dividends, rents, royalties, annuities, and gains from the sale or exchange of certain property (including patents, copyrights, timber and coal). Gross income in these categories was taxed at a rate of 30 percent unless the rate had been reduced as the result of a tax treaty between the United States and the foreign company's country of incorporation [19].

Basically, then, a foreign corporation's total U.S. tax was the sum of (1) the tax on income effectively connected with the conduct of a U.S. trade or business and (2) the tax on U.S.-source income that was not effectively connected. It could also include (1) tax from recomputing prior-year investment credits, (2) additional tax for tax preferences, and (3) Personal Holding Company tax. Foreign tax, general business, and other credits were used to reduce the corporation's tax liability (just as for domestic corporations).

The transfer of profits from a U.S. branch of a foreign corporation back to its main office in a foreign country was generally not subject to U.S. income tax. However, if the foreign corporation later distributed these profits as dividends and 50 percent or more of its gross income (over a 3-year period) was attributable to effectively connected income from its U.S. branch, then a portion of the distribution could become subject to a U.S. withholding tax of 30 percent. In addition, while interest paid by a U.S. branch of a foreign corporation to foreign creditors could be a tax deduction in calculating effectively connected taxable income, this interest could also be subject to a U.S. withholding tax similar to that described for dividends. These "second-level withholding taxes" could be reduced or eliminated by U.S. income tax treaties with other countries [20].

Only data for the 10,905 and 11,693 foreign corporations which had income effectively connected with a U.S. trade or business in 1984 and 1985, respectively, are included in this article. Foreign corporations with only U.S.-source investment income (i.e., income not effectively connected with a U.S. trade or business) are not covered by this article.

Growth Since 1983

The activity of foreign corporations in the United States has grown at a rapid pace. Total receipts of these corporations from activities effectively connected with a U.S. trade or business grew from \$20.8 billion for 1983 to \$50.9 billion

for 1985, a 145 percent increase using current dollars. This growth rate was notably higher than the 32 percent increase for domestic corporations controlled by foreign persons, as well as the 18 percent increase for all U.S. corporation income tax returns. (See the section entitled "Domestic Corporations Controlled by Foreign Persons: Growth Since 1983.") It should be noted that total receipts for domestic corporations includes income from both domestic and foreign activities. It also includes investment-type income, such as interest and dividends not directly connected with a business activity. The amount of U.S. source, business-related income of domestic corporations for 1983 through 1985 was not separately reported on the corporation income tax return and, thus, not available for comparison to the U.S. effectively connected income of foreign corporations.

As a result of the growth rate of foreign corporations with U.S. effectively connected income, their share of the receipts reported on all corporate returns increased from 0.29 percent for 1983, to 0.56 and 0.61 percents, for 1984 and 1985, respectively (see Table 1).

Industry Characteristics

As can be seen in Figure F, the finance, insurance and real estate industrial division accounted for the majority of business activity in the United States by foreign corporations. In fact, for 1985, this division accounted for 80 percent of the returns filed and 75 percent of the total receipts resulting from trade or business effectively connected with the United States.

Foreign banks reported receipts of \$26.6 billion, or 52 percent of the 11,693 foreign corporations' total U.S. effectively connected income. Nearly all (\$23.8 billion) of this income was interest. Only 234 banks, 2 percent of the foreign companies, generated these receipts for 1985.

By contrast, the 7,313 foreign corporations involved in real estate (63 percent of the total) generated only \$1.9 billion (or 4 percent) of total receipts. This was an average of just \$265,000 per company. As a group, foreign real estate companies reported a net deficit of \$609 million for 1985. For every company that reported a profit (for tax purposes), nearly three others reported losses (see Figure G).

Country Characteristics

Nearly three-fourths of the 11,693 foreign corporations which reported income effectively connected with a U.S. trade or business for 1985 were incorporated in the nine countries shown in Figure H. These 8,538 companies also accounted for 88 percent of the effectively connected receipts of all foreign corporations operating a U.S. trade or business.

Figure F

Foreign Corporations with Income Effectively Connected with a U.S. Business, by Industry, Income Year 1985

The Netherlands Antilles had the largest number of foreign-incorporated U.S. businesses, totalling 5,629, or nearly one-half of the total. However, these corporations

Figure H.—Foreign Corporations with Income Effectively Connected with a U.S. Trade or Business, by Selected Country of Incorporation, Income Year 1985

[All figures are estimates based on samples—money amounts are in millions of dollars]

Country	Number of returns	Total receipts
All countries	11,693	\$50,909
Total selected countries	8,538	44,571
Japan	197	11,931
Canada	1,586	10,883
Netherlands Antilles	5,629	7,724
United Kingdom	398	3,376
West Germany	221	3,353
Switzerland	219	2,797
Italy	21	1,787
France	36	1,476
Netherlands	231	1,244

accounted for only 15 percent of the effectively connected receipts of all foreign corporations. This coincided with the fact that 4,413 of these corporations were principally involved in real estate activities and produced only \$1.3 billion of receipts. As previously noted, foreign corporations involved in U.S. real estate activities tended to report relatively small amounts of receipts, as compared to those engaged in other business activities.

Japanese corporations produced the largest amount (\$11.9 billion) of U.S. effectively connected receipts. The majority of these receipts were produced by banks. In fact, U.S. branches of 24 Japanese banks produced \$11.5 billion of U.S. effectively connected receipts. These receipts accounted for 97 percent of the receipts of the 197 Japanese-incorporated businesses operating in the United States.

Sixteen of these 24 Japanese banks produced \$212 million of income subject to tax as a result of their U.S. effectively connected business activities. (The other 8 banks had deficits and, as a result, no taxable income.) This U.S. taxable income resulted in \$97 million of U.S. taxes, prior to credits. However, this amount was reduced by \$49 million through the use of foreign tax credits. This \$49

million represented over 75 percent of the total foreign tax credits claimed by all foreign corporations with income effectively connected with a U.S. trade or business. The United States allowed a foreign tax credit against income tax for certain taxes paid or accrued to foreign countries. These taxes were based on the corporation's foreign-source taxable income, certain types of which were considered to be U.S. effectively connected income. (See the section entitled "Foreign Corporations with Income Effectively Connected with a U.S. Trade or Business: U.S. Taxation.")

Canadian corporations produced the second largest amount (\$10.9 billion) of U.S. effectively connected receipts. Over 85 percent of these receipts were from companies classified in the finance, insurance and real estate industrial division. Insurance companies, banks, and non-bank holding and other investment companies accounted for most of these receipts, with \$4.3, \$2.6, and \$2.1 billion, respectively.

Income Statement and Tax Items

For 1985, 11,693 foreign corporations reported receipts totalling \$50.9 billion from activities effectively connected with a trade or business in the United States. Business receipts amounted to \$20.3 billion, while \$27.2 billion of the total was interest income.

Collectively, foreign corporations claimed \$51.9 billion in deductions for 1985. In conjunction with foreign banks producing large amounts of receipts in the form of interest income, they reported deductions for interest paid totalling \$22.3 billion. This amount was 87 percent of the \$25.7 billion of total interest paid by all of the foreign corporations.

Foreign corporations realized an overall net deficit of \$1.5 billion from their effectively connected activities. This was the result of 3,571 corporations having \$1.8 billion of profits and 8,122 companies that were without profits, totalling \$3.3 billion of deficits. (A small number of these 8,122 companies were actually "breakeven" companies with equal amounts of receipts and deductions.) Thus, only 31 percent of the foreign corporations reported profits for 1985, as compared to 56 percent of all corporations filing U.S. tax returns. The percentages for 1984 were very similar to those for 1985, with only 30 percent of the foreign corporations reporting profits, compared to 56 percent for all corporations.

For 1985, the profitable foreign corporations had \$1 billion of income subject to U.S. tax from their effectively connected activities with a U.S. trade or business. This resulted in a tax of \$412 million before credits. With reference to Form 1120F (the return form used by foreign corporations), this tax is called the "Section II" tax. Tax credits of \$73 million reduced the U.S. tax

liability to \$339 million, with foreign tax credits of \$65 million accounting for most of the credits. The \$339 million of U.S. tax after credits represents less than 1 percent (i.e., 0.67 percent) of the \$50.9 billion of total receipts generated by foreign corporations.

Foreign corporations with effectively connected U.S. trade and business income also incurred \$16 million of income tax on U.S.-source income that was not effectively connected with their U.S. operations (i.e., "Section I" tax), as well as \$5 million of additional tax for tax preferences, and \$2 million of tax from recomputing prior-year investment credits. (While Section I tax is reflected in the tax statistics, the income on which it was based was not tabulated.)

SUMMARY

Foreign investment and activity in the United States through corporations continued to grow at a relatively fast rate for 1984 and 1985. While total receipts reported on all U.S. corporation income tax returns increased from 1983 to 1985 by 18 percent (using current dollars), receipts of domestic corporations controlled by foreign persons increased by 32 percent, and those of foreign corporations with U.S. effectively connected income grew by 145 percent.

Foreign-controlled domestic corporations generated approximately 83 percent of their total receipts from two industrial divisions: manufacturing and trade. In contrast, foreign corporations with U.S. effectively connected income were largely involved in finance, insurance and real estate activities. For 1985, this division alone accounted for 75 percent of the total receipts, with only 234 banks actually generating 52 percent of the \$50.9 billion of total receipts for all 11,693 foreign corporations.

Both the 1984 and 1985 Income Years were not very profitable years for either foreign-controlled domestic corporations or foreign corporations with income effectively connected with a U.S. trade or business. For 1985, only 31 percent of the foreign corporations reported profits (as computed under the tax code), and only 43 percent of the domestic corporations with a 50 percent or more foreign owner had profits. By comparison, 56 percent of all corporations filing U.S. tax returns reported profits for 1985. Percentages for 1984 (30, 41, and 56, respectively) were similar to those for 1985.

EXPLANATION OF SELECTED TERMS

Attribution Rules.—In regard to domestic corporations that are 50 percent or more owned by a foreign "person," these rules provide that an individual shall be considered as owning the stock of a corporation that is owned, directly or indirectly, by or for his or her family. The family of an

individual includes his or her spouse, brothers and sisters, ancestors, and lineal descendants. For more information on these rules, see section 267(c) of the Internal Revenue Code. However, if a corporation is owned by two or more unrelated persons, neither of whom owned 50 percent or more of the corporation, then that corporation was excluded from the statistics even though, together, the persons may have met the 50 percent ownership criterion.

Foreign Person.—A foreign person (or entity) is defined as a person other than a U.S. person. A U.S. person includes: (1) a citizen or resident of the United States, (2) a domestic partnership, (3) a domestic corporation, and (4) any estate or trust (other than a foreign estate or trust). Section 7701 of the Internal Revenue Code further defines the term U.S. person.

Net Worth.—This is the stockholders' equity in the corporation, i.e., total assets less the claims of creditors. More specifically, it is the sum of capital stock plus paid-in or capital surplus plus appropriated and unappropriated retained earnings, less the cost of treasury stock. Table 4 shows this item for domestic corporations controlled by foreign persons.

Rate of Return on Assets.—For domestic corporations, this is the amount of before-tax net income (less deficit) calculated for U.S. tax purposes expressed as a percentage of total assets.

DATA SOURCES AND LIMITATIONS

Sample

The statistics for domestic corporations controlled by a foreign person shown in this article are based primarily on samples of Forms 1120 (U.S. Corporation Income Tax Return). For foreign corporations with income effectively connected with a U.S. trade or business, the statistics are based primarily on samples of Forms 1120F (Return of a Foreign Corporation). In addition to these forms, the statistics include data from Forms 1120L (U.S. Life Insurance Company Income Tax Return). Forms 1120L were filed by both domestic life insurance companies and foreign companies that carried on a life insurance business in the United States. Thus, data for both foreign-controlled domestic corporations and foreign corporations with income effectively connected with a U.S. trade or business could include information from Forms 1120L.

Form 1120 samples were stratified based on the size of total assets and net income (or deficit) and the business activity. For 1985, the Form 1120 achieved sampling rates ranged from 0.36 percent to 100 percent. Forms 1120F were stratified based on the size of total assets and the business activity, even though balance sheet information

was not actually tabulated from Forms 1120F. The sampling rates achieved for these forms ranged from 23.63 percent to 100 percent. Forms 1120L were stratified based solely on the size of total assets. The sample rates achieved for these forms ranged from 48.12 percent to 100 percent.

Because the data presented in this article are estimates based on samples, they are subject to sampling error. To properly use the data, the magnitude of the sampling error should be known. Coefficients of variation (CV's) are used to measure that magnitude. For a general discussion of CV's, see the Appendix to this publication. For a more detailed discussion of CV's for 1984 and 1985, see *Statistics of Income—Corporation Income Tax Returns*, for 1984 and 1985.

Nonsampling Limitations

Most of the data in this article relate to years 1984 and 1985 [21]. However, for each income year, the estimates cover returns with accounting periods that ended in a 12 month span beginning in July and ending in June. Thus, for Income Year 1984, the span was between July 1984 and June 1985. Similarly, for Income Year 1985, the span was from July 1985 through June 1986.

As a result of the 12 month span for ending accounting periods, the statistics for each year shown in this article include income received or expenses incurred during a 23 month span. For Income Year 1984, that span was from August 1983 through June 1985. Similarly, for Income Year 1985, the span was from August 1984 through June 1986.

Each return used for the studies described in this article had an industry code during statistical processing. This code was used as a classifier of the returns, as shown in Tables 4 and 5 of this article. (Tables 2 and 3 are classified by geographical area.) The industry code represented the principal business activity (i.e., the activity which accounted for the largest portion of total receipts) of the corporation filing the return. However, a given return may have been for a company engaged in several business activities or may have been a consolidated return filed for an affiliated group of corporations which conducted different business activities. In general, foreign corporations could not be members of such affiliated groups. To the extent that some consolidated (and nonconsolidated) corporations were engaged in many types of business activities, the data in this article are not entirely related to the industrial activity under which they are shown.

The income statement data for foreign corporations shown in this article are only for those corporations which had income effectively connected with a U.S. trade or business. U.S.-source investment income (including interest, dividends, rents, royalties, annuities, and other fixed or

determinable annual or periodic income) that was not effectively connected with the conduct of a U.S. trade or business is excluded from the data. The tax liability on this U.S. source investment income is, however, included in amounts of "Total U.S. Income Tax," shown in Tables 1, 3, and 5 of this article.

FOOTNOTES

- [1] For purposes of this article, "control" is defined as ownership by any foreign person (i.e., an individual, partnership, corporation, estate or trust), directly or indirectly, of 50 percent or more of a U.S. corporation's voting stock at the end of the tax year. For rules of attribution, see the "Explanation of Selected Terms" section of this article and section 267(c) of the Internal Revenue Code.
- [2] Portfolio investment is different from direct investment in that there is no control of the management of the enterprise, except to the extent, for example, of rights to vote periodically in stockholder meetings of corporations. Rather, the portfolio investor has a minimal interest in a company, and is primarily seeking dividend payments or an increase in the value of the shares of stock.
- [3] For additional information on these subjects, see, for example, Zagaris, Bruce, *Foreign Investment in the United States*, Praeger Publishers, 1980; Guillerm, Christine and Kirk, Richard, *Direct Investment Techniques for the USA*, Kleuver Law and Taxation Publishers, 1983; and *Doing Business in the United States*, Price Waterhouse, 1985. The Bureau of Economic Analysis of the U.S. Department of Commerce publishes data on foreign direct investment in the United States. See, for example, Herr, Ellen M., "U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1987," and Howenstine, Ned G., "U.S. Affiliates of Foreign Companies: Operations in 1986," *Survey of Current Business*, Volume 68, Number 5, May 1988.
- [4] Sections 7701(a)(4) and (5) of the Internal Revenue Code defined a domestic corporation as one created or organized in the United States or under the laws of the United States or any State. A foreign corporation was one which was not domestic.
- [5] Information on ownership levels was asked by questions on the corporation income tax return which requested the owner's name, country and percentage of voting stock owned when any foreign individual, partnership, corporation, estate or trust owned, directly or indirectly, 50 percent or more of the corporation's voting stock at the end of the tax year.
- [6] Domestic International Sales Corporations (through 1984) and Interest Charge Domestic International Sales Corporations (beginning in 1985) were not subject to U.S. taxation. Instead, the stockholders of these companies were subject to taxation when profits from these companies were distributed or deemed to be distributed to them. In addition, "S" Corporations were generally not taxed on their income, but rather passed the income on to their stockholders for taxation purposes. Finally, regulated investment companies and real estate investment trusts were only taxed on income that was not distributed to their stockholders.
- [7] For a more complete discussion of taxable income, see *Statistics of Income—1985, Corporation Income Tax Returns*.
- [8] For the most recent detailed information on corporate foreign tax credits, see Carson, Chris R., "Corporate Foreign Tax Credit, 1982: A Geographic Focus," *Statistics of Income Bulletin*, Fall 1986, Volume 6, Number 2.
- [9] For detailed information on U.S.-source dividends (and other types of income, such as interest) paid to foreign persons, see Lewis, Margaret P., "Foreign Recipients of U.S. Income, and Tax Withheld, 1985," *Statistics of Income Bulletin*, Fall 1987, Volume 7, Number 2.
- [10] The source of the GNP Implicit Price Deflator is the *Survey of Current Business*, Bureau of Economic Analysis, U.S. Department of Commerce.
- [11] Manufacturing companies had larger amounts of assets and receipts than did all other companies based on data reported on all U.S. corporation income tax returns. For this group for 1985, the average manufacturer had \$9.6 million of assets and \$10.2 million of receipts. The average for nonmanufacturing companies was \$3.4 million and \$1.9 million of total assets and receipts, respectively.
- [12] Bank holding companies are included in the banking industry, as opposed to the "holding and other investment companies" industry.
- [13] For statistical purposes, taxable net income (less deficit) is the difference between "modified" total receipts and total deductions. The \$514 billion of total receipts for 1985 is modified as follows: (1) tax-exempt interest from State and local Government obligations is subtracted and (2) "constructive" receipts are added. Constructive receipts are the sum of the following types of taxable income from related foreign corporations: (1) includable income from Controlled Foreign

Foreign Corporate Activity in the U.S., 1984 and 1985

Corporations and (2) foreign dividend income resulting from foreign taxes deemed paid.

- [14] The 20,795 companies reporting a deficit include a small number of "breakeven" companies, i.e., those whose receipts and deductions were equal.
- [15] The \$5.2 billion of total income tax before credits includes \$62 million from additional tax for tax preferences and tax from recomputing prior-year investment credits.
- [16] Section 864(c) of the Internal Revenue Code and the related Internal Revenue Regulations describe tests to be used in determining whether income is effectively connected with a U.S. trade or business.
- [17] Charitable contributions were deductible, subject to a limitation, whether or not they were related to effectively connected income.
- [18] While capital gains that were considered to be "effectively connected" with a U.S. trade or business were taxable income, other U.S.-source capital gains were exempt from the U.S. income tax.

[19] For a list of tax treaties, see U.S. Department of the Treasury, Internal Revenue Service, *Withholding of Tax on Nonresident Aliens and Foreign Corporations*, Publication 515.

[20] The Tax Reform Act of 1986 replaced the "second-level withholding taxes" with "branch level profits and interest taxes," subject to modification or elimination by tax treaties. For tax years beginning after 1986, the U.S. branch of a foreign corporation could be subject to a 30-percent tax on amounts of its "dividend equivalent" and on certain "excess interest" deductions used in calculating effectively connected taxable income. Dividend equivalent is the branch's effectively connected earnings and profits for the year, reduced (or increased) by the amount of increase (or decrease) in the branch's U.S. net equity position during the tax year. Section 884 of the Internal Revenue Code specifies the branch level profits and interest taxes.

[21] Tables 1 through 5 include data for 1983, as well as for 1984 and 1985. For more information on 1983, see Hobbs, James R., "Foreign Investment and Activity in the United States Through Corporations, 1983," *Statistics of Income Bulletin*, Summer 1987, Volume 7, Number 1.

Table 1.—Foreign Investment and Activity Through Corporations as a Percentage of All Corporations: Selected Items ¹

¹ Includes domestic corporations controlled by foreign persons and foreign corporations with U.S. effectively connected income. For the foreign corporations, income statement items shown in this table pertain only to income effectively connected with a U.S. trade or business.

² Balance sheets of foreign corporations with U.S. effectively connected income are generally not included in the statistics. However, balance sheets for U.S. branches of foreign insurance companies are included in the statistics for all corporation income tax returns.

³ For foreign corporations, includes tax both on U.S.-source income effectively connected and not effectively connected with a U.S. trade or business.

N/A—Not applicable.

* Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Geographic area is based on the location of the owner's country of residence, incorporation, organization, creation, or administration.

NOTE: Detail may not add to totals because of rounding.

Foreign Corporate Activity in the U.S., 1984 and 1985

89

¹ Geographic area is based on the location of incorporation of the foreign corporation.

² Total income tax before credits includes Section I tax, which was based on income from U.S. sources that was not effectively connected with a U.S. trade or business, and Section II tax (shown in column B), which was based on income effectively connected with a U.S. trade or business. It also includes additional tax for tax preferences and tax from recomputing prior-year investment credit.

³ Less than \$500.

NOTES: Detail may not add to totals because of rounding. Table excludes foreign corporation returns with only income from U.S. sources that was not effectively connected with a U.S. trade or business. Income statement items shown in this table pertain only to the effectively connected income of foreign corporations.

Foreign Corporate Activity in the U.S., 1984 and 1985

¹ Includes "Nature of business not allocable" which is not shown separately.
² Includes taxable interest received from obligations issued by the U.S. Government, as well as taxable amounts received on loans, notes, mortgages, bank deposits, and corporate bonds.
³ Total U.S. income tax includes Section I tax, which was based on income from U.S. sources that was not effectively connected with a U.S. trade or business, and Section II tax, which was based on income effectively connected with a U.S. trade or business. It also includes additional tax for tax preferences and tax from recomputing prior year investment credit.
⁴ Includes investment, jobs, and research activities credits.
⁵ Includes nonconventional source fuel and general business credits.
⁶ Includes research activities and general business credits.
 NOTES: Detail may not add to totals because of rounding. Table excludes foreign corporation returns with only income from U.S. sources that was not effectively connected with a U.S. trade or business. Income statement items shown in this table pertain only to the effectively connected income of foreign corporations.

General notations

N/A - Not applicable

n.a. - Not available

p - Preliminary

r - Revised

* - See Appendix, General Description of Statistics of Income Sample Procedures and Data Limitations.

Table 1

- [1] Excludes certain capital gain distributions from investment companies.
- [2] Includes total itemized deductions before subtraction of zero bracket amount, and charitable contributions and zero bracket amount on non-itemized deduction returns.
- [3] Includes itemized deductions, basic standard deduction and additional standard deduction. Excludes "zero bracket amount" reported on the small number of prior-year returns filed in 1988 that were included in the 1987 statistics.
- [4] Includes deductions not shown separately below.
- [5] Includes surcharge of \$2,018,078,000.
- [6] Includes credits not shown separately below.
- [7] Investment credit (generally not applicable after 1985) was included in the more-inclusive general business tax credit beginning with 1984.
- [8] Includes income tax after credits and the additional tax for tax preferences, i.e., "minimum tax" (applicable for 1970-1982) and "alternative minimum tax" (applicable after 1979).

SOURCE: *Statistics of Income—Individual Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 2

- [1] Totals in Table 2 do not agree with Tables 1 and 3 because they were obtained from a different source. For purposes of Table 2:

- a. Number of returns by State include, in addition to Forms 1040, 1040A and 1040EZ filed by U.S. citizens and residents, Forms 1040NR filed by non-resident aliens, as well as self-employment tax returns used in Puerto Rico and certain U.S. territories and possessions.
- b. "Total tax" liability includes total income tax plus tax from recomputing prior-year investment credit, tax applicable to Individual Retirement Arrangements (IRA's), self-employment tax, social security tax on tip income, and certain other income-related taxes. Total tax is before reduction by earned income credit (see also footnote 2(c), below).
- c. Earned income credit, available to certain low-income workers, could result in a refund (1) if there was no "total tax" (as defined in footnote 2(b), above), in which case the full amount was refundable, or (2) if the credit exceeded "total tax," in which case the excess was refundable. The difference between columns 19 and 21 is the refundable portion.

Total tax (column 16) minus earned income credit (column 19) is the amount most comparable to total tax in Tables 1 and 3. The total tax which results from this subtraction differs from Tables 1 and 3 because it includes additional taxes (see footnote 2(b), above) and because earned income credit used to offset tax also includes both the refundable portion (see footnote 2(c)), as well as amounts offset against these additional taxes.

- [2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by service men and women stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. Government employees.

NOTE: This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 1988. Data have not been edited for Statistics of Income purposes.

SOURCE: Internal Revenue Service, Tax Processing Systems Division, IMF Returns Systems Branch.

Table 3

- [1] Includes returns with adjusted gross deficit.
- [2] In addition to low income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in adjusted gross income or taxable income,

which are subject to the "alternative minimum tax" (included in "total income tax").

- [3] Includes income tax after credits and the additional tax for tax preferences, i.e., the "alternative minimum tax" (see footnote 2).
- [4] Because of major conceptual changes in the definition of adjusted gross income (AGI) for 1987, percentages based on AGI are not comparable with 1986 and earlier years. See "Individual Income Tax Returns, Preliminary 1987" in this issue of the *Bulletin* for a discussion of these changes.

SOURCE: *Statistics of Income—Individual Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

Table 4

- [1] Imputed interest received by persons from life insurance carriers and private non-insured pension plans.
- [2] Represents income of low-income individuals not required to file individual income tax returns, unreported income, and statistical errors or omissions.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, 1929–82: Statistical Tables, 1986*; for years after 1982, *Survey of Current Business*, various issues. For the revised 1986 data in Table 4, see Park, Thae S. and Reeb, Jane S., "Personal Income and Adjusted Gross Income 1984–1986," *Statistics of Income Bulletin*, Winter 1988–1989, Volume 8, Number 3. *Statistics of Income* data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

Tables 5 and 6

- [1] See Table 4 for the differences between personal income and adjusted gross income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, 1929–82: Statistical Tables, 1986*; for years after 1982, *Survey of Current Business*, various issues. For the revised 1986 data in Table 4, see Park, Thae S. and Reeb, Jane S., "Personal Income and Adjusted Gross Income 1984–1986," *Statistics of Income*

Bulletin, Winter 1988–1989, Volume 8, Number 3. *Statistics of Income* data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of the changes mentioned above.

Table 7

- [1] Amount of standard deduction for 1944–1957 estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of tax returns by income classes and marital status in *Statistics of Income—Individual Income Tax Returns*, and for 1958–1987 obtained directly from *Statistics of Income* tabulations for these years. Represents "zero bracket amount" for 1977–1986. For 1987, represents the sum of "basic" and "additional" (for age 65 and over and blindness) standard deductions; also includes zero bracket amount reported on the small number of prior-year returns filed in 1988 that were included in the 1987 statistics.
- [2] Returns with standard deduction, 1955–1987, includes a small number with no adjusted gross income and no deductions. (For 1977–1986, standard deduction is the "zero bracket amount," which was also reported on a small number of returns included in the 1987 statistics; see footnote 1.) For 1944–1954, includes a small number with no adjusted gross income and no deductions. For 1944–1954, returns with no adjusted gross income are included in the number of returns with itemized deductions.
- [3] For 1977–1986, itemized deductions are before subtraction of "zero bracket amount."
- [4] Sum of standard and itemized deductions, plus charitable deduction reported on standard deduction returns for Tax Years 1982–1986. For 1987, total deductions includes "zero bracket amount" reported on a small number of returns (see footnote 1).

SOURCE: Except as indicated in footnote 1, *Statistics of Income—Individual Income Tax Returns*, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and form changes affect the year-to-year comparability of the data. See the specific *Statistics of Income* reports for a description of sampling error and of changes mentioned above.

Table 8

- [1] See Table 4 for the differences between personal income and adjusted gross income.

[2] Taxable income excludes "zero bracket amount" for 1977-1986.

[3] For the definition of total income tax, see footnote 6, Table 1.

[4] Percentage not computed because preliminary SOI data for taxable income and tax may not be altogether comparable with Department of Commerce estimate for personal income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, 1929-82: Statistical Tables, 1986*; for years after 1982, *Survey of Current Business*, various issues; and *Statistics of Income—Individual Income Tax Returns*, appropriate years. Statistics of Income data are subject to sampling errors; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 9

[1] Excludes returns with refundable earned income credit only, starting with 1975; and returns with refundable crude oil windfall profit tax overpayment only, starting with 1980.

SOURCE: *Statistics of Income—Individual Income Tax Returns*, and unpublished tables; appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 10

SOURCE: *Statistics of Income—Sole Proprietorship Returns*, appropriate years, and *SOI Bulletin*, Summer issues. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 11

[1] Total assets, total liabilities, and partners' capital account are somewhat understated because not all partnership returns included a complete balance sheet.

[2] Short-term debt is the abbreviated title given to mortgages, notes, and bonds payable in less than 1 year.

[3] Long-term debt is the abbreviated title given to mortgages, notes, and bonds payable in 1 year or more. In addition, for Tax Year 1975, long-term debt included nonrecourse loans.

[4] See footnote 4, Table 12, for changes in the comparability of the statistics for receipts and deductions after 1980. Also, statistics for interest received are combined with dividends beginning with 1982.

[5] After 1980, represents the more all-inclusive amounts reported in depreciation computation schedules rather than the amounts reported as the depreciation deduction (augmented by depreciation identified in cost of sales and operations schedules).

SOURCE: *Statistics of Income—Partnership Returns*, appropriate years, and *SOI Bulletin*, Summer issues. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 12

[1] Size classes are based on business receipts, i.e., gross amounts from sales and operations, for industries except those in finance, insurance and real estate. For the latter industries, total receipts, which is the sum of business receipts and investment income, was used. For partnerships, see also footnote 4, below.

[2] Includes returns with no receipts as defined in footnote 1.

[3] Includes corporations with zero assets and liabilities. In addition, for partnerships, includes partnerships without balance sheet information (see also footnote 5, below).

[4] After 1980, "total receipts" in Table 11 includes, in part, only the net income or loss from farming and rentals. Previously, "total receipts" included the gross receipts from farming and rentals and, if rental receipts were the principal source of total receipts, they were treated as "business receipts" for the statistics. To help minimize the break in comparability caused by this change in statistical treatment of farm and rental income, an effort was made starting with 1981 to include rental (though not farm) gross receipts in the receipts used for the size distribution in Table 12. In Table 11, since only the net income or loss from farming and rentals was included starting with 1981, the deductions reported in computing these net incomes are excluded from the deduction statistics. For previous years, these deductions are reflected in the deduction statistics.

[5] Prior to 1979, partnerships that had liquidated were assumed to have zero assets and liabilities, even if their balance sheets showed otherwise, and were included in the "under \$25,000" asset size class. Beginning with 1980, balance sheet data reported for liquidated partnerships were tabulated as reported and were included in the appropriate asset size classes.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*, appropriate years, *Statistics of Income—Partnership Returns*, appropriate years, *Statistics of Income—Sole Proprietorship Returns*, appropriate years, and *SOI Bulletin*, Summer issues. Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 13

[*] Estimate should be used with caution because of the small number of sample returns on which it is based.

[1] Consolidated returns were filed on an elective basis for affiliated groups of corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates.

[2] Included in "Number of returns, total" and "Number with net income."

[3] Generally, small corporations with no more than 35 shareholders (10 prior to 1983), most of them individuals, electing to be taxed at the shareholder level.

[4] Domestic International Sales Corporations (DISC's) were designed to promote U.S. exports. They were taxed through parent corporations, but only when profits were distributed or deemed distributed to them. This system of tax deferral was generally replaced after 1984 with a new system of Foreign Sales Corporations (FSC's); see footnote 5. Tax benefits of DISC's remaining after 1984 were limited and an interest charge for tax deferred amounts was imposed on the parent corporations.

[5] Foreign Sales Corporations (FSC's) generally replaced DISC's as a means of promoting U.S. exports (see footnote 4). Under the FSC provisions, a portion of these subsidiaries' "foreign trade income" was exempt from U.S. income tax.

[6] For 1984, net long-term for capital gain reduced by net short-term capital loss from Forms 1120S, are not included in computed total receipts nor in net income.

Therefore, the components of total receipts do not equal the computed total receipts for that year.

[7] Includes dividends reported in combination with interest on Form 1120-S by S Corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 3). Based on prior years, when Form 1120-S required each to be reported separately, nearly all of the combined amount represents interest.

[8] For most years, "income subject to tax" (the corporate tax base) exceeds "net income less deficit" chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined as net income minus certain statutory special deductions); a variation of this base in combination with net long-term capital gains in certain situations when the lower capital gains tax applied; the special tax bases applicable to S Corporations and insurance businesses; and the amounts taxable to certain investment companies. Profits of Domestic International Sales Corporations were tax-deferred; most of those of qualifying Foreign Sales Corporations were tax-exempt and those of S Corporations were taxed (with few exceptions) through their individual shareholders, so that the net income of these corporations is excluded from income subject to tax.

[9] Includes surcharge of \$784,437,000.

[10] General business credit includes alcohol fuel, investment, jobs, and employee stock ownership plan (ESOP) credits which were reported separately for previous years.

NOTE: Detail may not add to totals because of rounding.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 14

[1] See footnote 7, Table 13.

[2] See footnote 9, Table 13.

[3] Also includes additional tax for tax preferences ("minimum tax"), tax from recomputing prior-year investment credit, and Personal Holding Company tax.

SOURCE: *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Table 15

[1] Profits shown are without inventory valuation and capital-consumption adjustment.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, 1929–82: Statistical Tables*, 1986; for years after 1982, *Survey of Current Business*, various issues; and *Statistics of Income—Corporation Income Tax Returns*, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

Tables 16 and 17

[1] Individual income tax collected includes that portion which was designated for the presidential election campaign fund by taxpayers on their returns. Also included is the fiduciary income tax collected (from estates and trusts). Fiduciary income tax collected was \$6.5 billion in 1988, \$8.4 billion in 1987, \$4.5 billion in 1986, \$4.1 billion in 1985, and \$2.9 billion in 1984. Presidential election campaign designations amounted to \$34.4 million in 1988, \$33.2 million in 1987, \$35.9 million in 1986, and \$34.8 million in 1985 and 1984.

[2] Corporation income tax collected includes various taxes applicable to tax-exempt organizations, including the tax on "unrelated business income." Total taxes collected from tax-exempt organizations were \$137.5 million (1988), \$119.9 billion (1987), \$30.2 million (1986), \$54.9 million (1985), and \$50.0 million (1984).

[3] Excise taxes are imposed on selected products, services, and activities, such as on sales of alcohol and tobacco products and on the manufacture of gasoline.

[4] Employment taxes include payroll taxes levied on salaries and wages, such as social security, railroad retirement, and unemployment taxes; plus the self-employment tax imposed on "self-employment income."

NOTES: Collections (or refunds) are those made during the time periods indicated, regardless of the year or other period during which the tax liability was incurred (or to which the refund applied).

Collections represent the gross amounts before refunds and include amounts paid with the return; prior to filing the return (as applicable, income tax withheld by employers and estimated tax payments); and subsequent to filing the return (chiefly the result of initial return processing or of examination and enforcement activities). Collections also include interest and penalties.

Refunds result chiefly from tax overpayments determined at time of filing a return. Also included are amounts subsequently determined as due the taxpayer as a result of an amended return or a claim for refund (including those produced by "net operating loss" and other carryback adjustments from future taxable years); or as a result of initial return processing or of examination and other activities. Individual income tax refunds are net of offsets under laws which require IRS to act as collection agent for delinquent payments owed various U.S. agencies under specific programs. All refund data include interest paid by IRS.

Detail may not add to totals because of rounding.

Table 18

[1] Effective January 1, 1984, taxes on tubes and tread rubber were repealed, and dealers holding taxable tires were assessed a one-time floor stock tax.

[2] Effective January 7, 1983, the excise taxes on parts and accessories for trucks and buses, which are included in this classification, were repealed. Beginning with the quarter ending December 1983, motor vehicles are excluded.

[3] Special fuels, total, includes diesel and special motor fuels which were classified as miscellaneous excise taxes in 1970. Beginning with the quarter ending December 1983, motor vehicles are included.

[4] Effective January 1, 1983, the excise tax increased from 1 percent to 3 percent.

[5] Expired September 30, 1985; reimposed in January 1987.

NOTES: For 1970 and 1975, the fiscal year was defined as July of the previous calendar year through June of the year noted. For 1980–1986, the fiscal year was defined as October of the previous calendar year through September of the year noted.

Except for alcohol and tobacco taxes, additional detail is published in the *Annual Report of the Commissioner and*

Chief Counsel, Internal Revenue Service. For additional detail for alcohol and tobacco taxes, see the Statistical Release, "Alcohol and Tobacco Tax Collections," Bureau of Alcohol, Tobacco and Firearms, U.S. Department of the Treasury, 1989.

Table 20

[1] Estimates of returns with paid preparer assistance for 1985 and earlier years are based on the full-year sample of returns used for *Statistics of Income—Individual Income Tax Returns*. Data for 1987 are based on the sample used to produce preliminary Statistics of

Income (SOI) data and are therefore subject to revision. Since data on paid preparers are not available from the 1986 SOI file, estimates were obtained by converting the 1986 Taxpayer Usage Study (TPUS) sample to the equivalent of the SOI sample. This was done because the TPUS sample represents returns filed through April, while the SOI sample represents all individual income tax returns filed in a calendar year. For additional information about the TPUS sample, see "Taxpayer Usage of Forms 1040, 1040A, and 1040EZ," *Statistics of Income Bulletin*, Summer 1988, Volume 8, Number 1.

[2] Data on IRS Taxpayer Service Programs are collected on a fiscal-year basis. In general, assistance rendered in a given fiscal year may be related to returns due on April 15th during that fiscal year and are for the tax year ending with the previous December. Therefore, data in Table 20, which are presented on a tax year basis, are actually for a fiscal year, so that data shown as for Tax Year 1987, for example, are actually for Fiscal Year 1988. However, data shown as for Tax Year 1986 in previous issues of the *SOI Bulletin* were actually for the first 7 months of Fiscal Year 1987; the revised data represent the entire Fiscal Year 1987.

NOTE: Data on IRS assistance represent taxpayer contacts. Some taxpayers make more than one contact. The number of taxpayers assisted (in contrast to the number of contacts made) is not known.

SOURCE: Data on paid preparers were obtained from Statistics of Income and Taxpayer Usage Study samples. Data on IRS assistance were compiled by the Taxpayer Service Division.

Appendix*

General Description of Statistics of Income Sample Procedures and Data Limitations

This appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see the References at the end of this Appendix). More technical information is available, upon request, by writing to the Director, Statistics of Income Division, Internal Revenue Service, Washington, DC 20224.

SAMPLE CRITERIA AND SELECTION OF RETURNS

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on criteria such as: industry, presence or absence of a tax form or schedule, accounting period, State from which filed, and various income factors or other measures of economic size (total assets, for example, is used for the corporation and partnership statistics). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years, 3 for corporations because of the prevalence of fiscal (non-calendar) year reporting. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means in practice, that both the population and the sample size can differ from that planned. However, these factors do not compromise the validity of the estimates.

The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All

*Compiled by Bettye Jamerson, Coordination and Publications Staff, under the direction of Robert Wilson, Chief, Publications Team. Major contributions were made by Paul McMahon, Mathematical Statistical Team.

this is subject to constraints based on the estimated cost or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master File based on the taxpayer identification number (TIN) which is either the social security number (SSN) or the employer identification number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise it is counted (for estimation purposes) but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designed from one year's sample are for the most part selected for the next year's, so that a very high proportion of the returns selected in the current sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from 1 year to the next.

METHOD OF ESTIMATION

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. Weights are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. "Weights" are used to adjust for the various sampling rates used—the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "post-strata," based on additional criteria or refinements of those used in the original stratification. Weights were then computed for these post-strata using additional population counts. The data on each return in a stratum are multiplied by that weight. To produce the tabulated estimates, these weighted data are summed to produce the published statistical totals.

SAMPLING VARIABILITY

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different samples usually vary. The standard error of the estimate is a measure of the variation

among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in decimal form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its coefficient of variation to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 0.02, then the following arithmetic procedure would be followed to construct a 68 percent confidence interval estimate:

150,000	(sample estimate)
× 0.02	(coefficient of variation)
= 3,000	(standard error of estimate)

150,000	(sample estimate)
+ or - 3,000	(standard error)
= 147,000-153,000	(68 percent confidence interval)

Based on these data, the interval estimate is from 147 to 153 thousand returns. A conclusion that the average estimate of the number of returns lies within an interval computed in this way would be correct for approximately two-thirds of all possible similarly selected samples. To obtain this interval estimate with 95 percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Generally in the *SOI Bulletin* only conservative upper limit CV's are provided for frequency estimates. These do, however, provide a rough guide to the order of magnitude of the sampling error.

Further details concerning confidence intervals, including the approximation of CV's for combined sample estimates, may be obtained on request by writing the Director, Statistics of Income Division.

NONSAMPLING ERROR CONTROLS AND LIMITATIONS

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant

in evaluating the usefulness of SOI data. These include taxpayer reporting errors, processing errors, and effects of an early cut-off of sampling. More extensive information on nonsampling error is presented in SOI reports, when appropriate.

In transcribing and tabulating the information from the returns or forms selected for the sample, checks are imposed to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during statistical "editing" in order both to improve data consistency from return to return and to achieve definitions of the data items that are more in keeping with the needs of major users. In some cases not all of the data are available from the tax return as originally filed. Sometimes the missing data can be obtained through field followup. More often though, they are obtained through imputation methods. As examples, other information in the return or in accompanying schedules may be sufficient to enable an estimate to be made; prior-year data for the same taxpayer may be used for the same purpose; or data from another return for the same year that has similar characteristics may be substituted. Research to improve methods of imputing data that are missing from returns continues to be an ongoing process [1].

Quality of the basic data abstracted from the returns is subjected to a number of quality control steps including 100-percent key verification. The data are then subjected to many tests based on the structure of the tax law and the improbability of various data combinations. Records failing these tests are then subjected to further review and any necessary corrections are made. In addition, the Statistics of Income Division in the National Office conducts an independent reprocessing of a small subsample of statistically-processed returns as a further check [2].

Finally, before publication, all statistics are reviewed for accuracy and reasonableness in light of provisions of the tax laws, taxpayer reporting variations and limitations, economic conditions, comparability with other statistical series, and statistical techniques used in data processing and estimating.

TABULAR CONVENTIONS

Estimates of frequencies and money amounts that are considered unreliable due to the small sample size on which they are based are noted in SOI tables by an asterisk (*) to the left of the data item(s). The presence of an asterisk indicates that the sample rate is less than 100 percent of the population and that there are fewer than 10 sample observations available for estimation purposes.

A dash in place of a frequency or amount indicates that no sample return had that characteristic. In addition, a dash

in place of a coefficient of variation for which there is an estimate indicates that all returns contributing to the estimate were selected at the 100-percent rate.

Whenever a weighted frequency in a data cell is less than 3, the estimate is either combined with other cells or deleted in order to avoid disclosure of information about individual taxpayers or businesses [3]. These combinations and deletions are indicated by a double asterisk (**).

NOTES

- [1] See, for example, Hinkins, Susan M., "Matrix Sampling and the Effects of Using Hot Deck Imputation," in *1984 Proceedings: American Statistical Association, Section on Survey Research Methods*. Other research efforts are included in *Statistical Uses of Administrative Records: Recent Research and Present Prospects*, Volume 1, Internal Revenue Service, March 1984.
- [2] Quality control activities for all SOI studies will be published in a series of forthcoming reports. These reports will provide detailed information relating to quality in all phases of SOI processing.

- [3] For geographic statistics, these same steps are taken when a weighted frequency is less than 10.

USER SURVEY SOI BULLETIN Spring 1989

Please take a few moments to answer the following questions concerning this *Statistics of Income* publication. Your responses will enable us to direct our efforts to meeting the needs of our users. After indicating your responses, please cut, tape, and mail. No postage or envelope is required. Thank you for your cooperation.

1. How did you obtain this publication?

- Purchased from the Government Printing Office Subscription Single copy
 From a public library
 From a university or college library
 Other (*Specify*) _____

2. Have you ever used any other *Statistics of Income* publication?

- Yes (*Specify*) _____
 No

3. What subject matter in the report interests you particularly?

- SOI Bulletin Board Individual Income Tax Shares
and Average Tax Rates, 1951-1986
 Individual Income Tax Returns,
Preliminary 1987 Foreign Corporate Activity in the
United States, 1984 and 1985
 Individual Income Tax Rates, 1985 Selected Historical Data

4. Which table(s) in the Selected Historical Data section did you find helpful to your needs?

- Individual income and taxes Corporation income and taxes Internal Revenue refunds
 Individual income and tax data
by State Comparisons between Commerce
Department estimates and SOI data Classes of excise taxes
 Sole proprietorship returns Gross Internal Revenue collections Number of returns filed
 Partnership returns Taxpayers receiving
assistance

5. If microdata files on computer tape were available in these subject matter areas, please check if you would be interested in purchasing them.

If so, which areas? _____

If tabulations were available on diskette, please check if you would be interested in purchasing them.

If so, which area? _____

6. How would you describe the usability of the text?

- Too technical About right
 Not detailed enough Did not use text

7. What type of organization are you connected with?

- Federal Government Consulting firm
 State or local Government Accounting firm
 Trade association University or college
 Other nonprofit organization Legal firm
 Other (*Specify*) _____

8. What changes (additions, deletions, alterations) would you like to see in the contents or format of this publication?

9. Other comments (Use other side if needed.)

IRS Methodology Reports on Statistical Uses of Administrative Records

Statistics of Income and Related Administrative Record Research: 1986-1987.—Selected papers given at the 1986 and 1987 Annual Meetings of the American Statistical Association in Chicago and San Francisco, respectively. Papers focus on on-going wealth estimation research and U.S. and Canadian efforts regarding methodological enhancements to corporate and individual tax data and recent refinements to disclosure avoidance techniques.

Record Linkage Techniques—1985.—The Proceedings of the Workshop on Exact Matching Methodologies held in Arlington, Virginia, May 9-10, 1985. Includes landmark background papers on record linkage use and papers describing methodological enhancements, applications and technological developments, as well as extensive bibliographic material on exact matching.

Statistical Uses of Administrative Records: Recent Research and Present Prospects.—A two-volume reference handbook on research results involving the use of administrative records for statistical purposes from 1979 through 1982.

- Volume I (March 1984) focuses on general considerations in administrative record research, applications of income tax data, uses based on data from other major administrative record systems, and enhancements to statistical systems using administrative data.
- Volume II (July 1984) focuses on comparability and quality issues, access to administrative records for statistical purposes, selected examples of end uses of linked administrative statistical systems, and a status report which sets goals for the future.

Statistics of Income and Related Administrative Record Research: 1984.—Selected papers given at the 1984 Annual Meeting of the American Statistical Association in Philadelphia. Papers focus on future policy issues, applications, exact matching techniques, quality control, missing data and sample design issues.

Statistics of Income and Related Administrative Record Research: 1983*.—Selected papers given at the 1983 Annual Meeting of the American Statistical Association in Toronto. Papers focus on use of administrative records in censuses and surveys, applications for epidemiologic research and other statistical purposes, and statistical techniques involving imputation and disclosure and confidentiality.

Statistics of Income and Related Administrative Record Research: 1982.—Selected papers given at the 1982 Annual Meeting of the American Statistical Association in Cincinnati. Papers focus on statistical uses of administrative records, resulting methodologic advances, and estimates and projections for intercensal updates.

Statistics of Income and Related Administrative Record Research.—Selected papers given at the 1981 Annual Meeting of the American Statistical Association in Detroit. Papers focus on applications and methodologies with an emphasis on IRS' Statistics of Income Program, and Small Business Data Base, nonprofit and pension data, and on Canada's Generalized Iterative Record Linkage System.

Economic and Demographic Statistics*.—Selected papers given at the 1980 Annual Meeting of the American Statistical Association in Houston. Papers focus on evaluation of the 1977 Economic Census, CPS hot deck techniques, and efforts to upgrade Social Security's Continuous Work History Sample.
