

Corporation Income Tax Returns, 1999

by Patrice Treubert

Within a growing economy, corporate pre-tax profits reported on income tax returns for 1999 increased from 1998 levels. The growth rate in the gross domestic product, or GDP (determined by the U.S. Bureau of Economic Analysis, Department of Commerce), was 5.5 percent for 1999 (in current dollars), and overall pre-tax profits (less losses) reported on corporate tax returns were up by 10.8 percent to nearly \$1.0 trillion. Total receipts from business operations and investments increased by \$1.6 trillion and 9.1 percent to \$18.9 trillion, while total deductions, including the cost of goods sold, increased by \$1.4 trillion and 9.0 percent to \$18.0 trillion.

The number of corporations reporting pre-tax profits increased by 1.9 percent to 2.8 million; their pre-tax profits increased from \$1.1 trillion to \$1.2 trillion. In contrast, the number of corporations reporting net losses increased 1.7 percent to 2.1 million, and their net losses increased from \$0.25 trillion to \$0.30 trillion.

The overall increase in pre-tax profits was reflected in the amount reported as “income subject to tax” (pre-tax profits adjusted to reflect special deductions and exemptions to determine an income tax base), which increased to \$693.7 billion, an increase of \$30.4 billion and 4.6 percent from 1998. Paralleling the increase in income subject to tax, “total income tax before credits” rose 4.6 percent to \$242.0 billion. “Total income tax after credits” (the amount payable to the U.S. Government) increased by 6.3 percent to \$193.0 billion. The “alternative minimum tax” (AMT), represented in both “total income tax before credits” and “total income tax after credits,” declined 8.2 percent to \$3.1 billion, as the number of corporations reporting AMT decreased 23.2 percent to 14,901.

Income tax after credits increased by more than income tax before credits because tax credits decreased slightly. Most of the decrease in tax credits was due to the general business credit, which dropped 15.0 percent from \$5.6 billion to \$4.8 billion, and the possessions tax credit, which decreased 37.9 percent from \$2.4 billion to \$1.5 billion. These de-

clines more than offset the increase in the largest of the credits, the foreign tax credit, which grew 2.7 percent to \$38.4 billion.

Net Income and Income Statement

Following a decline for 1998, pre-tax corporate profits increased for Tax Year 1999 (Figure A). Pre-tax profits, or “net income (less deficit)” in the statistics, increased from \$838.2 billion in 1998 to \$929.0 billion in 1999, a 10.8-percent increase (Figure B) [1]. Much of the increase in pre-tax profits was reported by “pass-through entities,” corporations that pass through reported income and deductions to their shareholders and, in general, pay no Federal income tax directly. These corporations are regulated investment companies, real estate investment trusts, and S corporations (qualifying corporations electing to be taxed through their shareholders). Pre-tax profits for these corporations were up 28.7 percent to \$393.7 billion and accounted for 96.6 percent of the total increase, or \$87.7 billion out of the \$90.7-billion increase in overall pre-tax profits. Regulated investment companies, classified with other finance corporations, reported most of the gain, up \$68.1 billion to \$225.9 billion. The statistics for pre-tax profits do not include either long-term capital gains reported by regulated investment companies or investment and portfolio income, including capital gains, for S corporations [2].

Other corporations (corporations other than pass-through entities) contributed much less to the total increase in pre-tax profits, up by only \$3.1 billion. Pre-tax profits for these other corporations were \$535.3 billion, compared to \$532.2 billion for 1998 (Figure B). For corporations in general (Table 1), the 10,380 returns with total assets of \$250 million or more (0.2 percent of the total) contributed 81.6 percent of total pre-tax profits.

Starting in Tax Year 1998, the North American Industry Classification System (NAICS) was used to classify corporate income tax returns by business activity. The hierarchy for presenting statistics in this article is division, sector, major, and minor industry. Though NAICS does not include the alternative aggregation above the sector level by division, nine divisions are utilized for Statistics of Income (SOI) to allow for an additional basis of comparison for SOI data between years under NAICS. These divisions consist of: Raw materials and energy production;

Patrice Treubert is an economist with the Corporation Returns Analysis Section. William P. Jauquet provided technical assistance. This article was prepared under the direction of Marty Shiley, Chief.

¹ Pre-tax profits are net income (less deficit) in the statistics.

² Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment income, including capital gains of S corporations (qualifying corporations electing to be taxed through their shareholders).

³ Includes corporations not allocable by industrial division, not shown separately.

NOTE: Detail may not add to totals because of rounding.

Goods production; Distribution and transportation of goods; Information; Finance, insurance, real estate, and rental and leasing; Professional and business services; Education, health and social assistance; Leisure, accommodation, and food services; and Other services.

Based on business activity, corporations classified in the finance, insurance, real estate, and rental and leasing division (which excludes bank holding companies) were primarily responsible for the increase in pre-tax profits for 1999 [3]. The pre-tax profits for this division rose by \$73.1 billion, increasing 24.9 percent to \$367.2 billion (Table 1). Underlying this increase, total receipts, defined as the sum of business receipts from sales and operations and investment income, was up 25.8 percent, from \$2.6 trillion to \$3.2 trillion.

Most of the increase in pre-tax profits for the finance, insurance, real estate, and rental and leasing division was reported by regulated investment companies, whose pre-tax profits were up \$68.1 billion to \$225.9 billion. This gain was likely due to higher stock prices [4]. The corresponding increase in total receipts was \$76.7 billion, to \$301.4 billion. Net short-term capital gain was the component of total receipts that increased the most, up by \$56.1 billion to \$80.5 billion. Long-term capital gains for regulated investment companies were not included in pre-tax profits,

consistent with reporting on the tax form. However, these gains were reported elsewhere on the return, and they amounted to \$252.3 billion, an increase of \$59.7 billion over 1998. If long-term capital gains for regulated investment companies had been included, pre-tax profits for the finance, insurance, real estate, and rental and leasing division would have increased \$132.8 billion to \$619.4 billion. Total deductions, which offsets total receipts, was up by only \$6.8 billion for regulated investment companies. "Other deductions," composed of registration fees, insurance, and accounting and legal fees, was the largest component of total deductions and increased by \$6.7 billion to \$46.8 billion.

The raw materials and energy production division also reported increased pre-tax profits, which increased by \$7.1 billion to \$40.3 billion. The rise was due to an increase in total receipts that exceeded the rise in total deductions. Total receipts increased by \$39.4 billion to \$756.9 billion. Business receipts, or gross operating receipts, contributed most to this increase, increasing by \$25.0 billion, to \$693.2 billion. Total deductions also increased, by \$31.9 billion, to \$717.7 billion. Cost of goods sold was the largest component of total deductions, increasing \$24.0 billion to \$423.6 billion.

Within the raw materials and energy production division, the utilities sector accounted for the largest gain in pre-tax profits. The sector gained \$7.5 billion,

Corporation Income Tax Returns, 1999

Figure B

Corporate Pre-Tax Profits, Tax Years 1991-1999¹

¹ Pre-tax profits are net income (less deficit) in the statistics.

² Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment income, including capital gains of S corporations (qualifying corporations electing to be taxed through their shareholders).

to \$39.0 billion, representing more than the total gain for the division because the mining sector exhibited an overall loss of \$1.2 billion to -\$0.1 billion. Corporations classified in combined gas and electric utilities reported most of the gains. Their pre-tax profits were up by \$8.3 billion, to \$18.9 billion, which represents more than the total increase for the utilities sector as a whole. All the other industry classifications within the utilities grouping reported a decrease in pre-tax profits.

Most of the gains in pre-tax profits for gas and electric utilities were attributable to total receipts. Total receipts for the industry rose \$31.3 billion to \$179.4 billion, possibly due, in part, to an increase in the price of natural gas [5]. More than 80 percent of the gain in total receipts was due to business receipts, which increased \$25.6 billion to \$165.7 billion.

Corporations in the information division also reported increased pre-tax profits between 1998 and 1999, as pre-tax profits rose \$7.0 billion to \$39.7

billion. The publishing sector within the division exceeded the division's gain in pre-tax profits because of the losses recorded for other component industry groups. Pre-tax profits for publishing corporations increased \$10.9 billion to \$24.3 billion. Possibly due in part to the increased purchase of software by businesses for the purposes of expansion and century-date-change enhancement, almost 80 percent of the gain for the sector was attributable to software publishers [6]. The increase in pre-tax profits for software publishers rose from \$8.4 billion to \$11.3 billion. Software publishers exhibited a significant gain in total receipts, as well, up by \$40.7 billion to \$93.9 billion. Business receipts contributed most to the gain in total receipts, up by \$21.9 billion to \$66.3 billion. Software publishers' total deductions were up as well, by \$32.2 billion to \$83.1 billion.

The professional and business services division showed a significant decrease in pre-tax profits from 1998 to 1999, despite the gain in the number of re-

Corporation Income Tax Returns, 1999

turns by 50,246 to 905,410. Pre-tax profits for this division dropped by \$3.6 billion, from \$82.2 billion to \$78.6 billion. Most of the decrease was due to companies classified in computer systems design and related services. Pre-tax profits for this industry group declined by \$4.8 billion to -\$1.9 billion.

The decline in pre-tax profits for the professional and business services division and underlying computer systems design services industry group resulted from an increase in deductions. However, total receipts for the division also increased by \$27.8 billion to \$1,419.5 billion, with business receipts increasing by \$56.5 billion to \$951.6 billion. These increases were offset by a \$27.2-billion decrease in interest income to \$328.9 billion. For computer systems design services, total receipts increased by \$9.6 billion to \$128.5 billion, while business receipts increased by \$6.3 billion to \$120.3 billion with no offsetting decrease for interest income.

Total deductions for professional and business services increased more than total receipts, up by \$31.7 billion to \$1,339.0 billion. Deductions for computer systems design services paralleled the gain, up by \$14.5 billion to \$130.5 billion. The salaries and wages deduction was the component of total

deductions that increased the most. Although only a partial indication of financial payments to employees, salaries and wages, not deducted elsewhere on the tax return, were up by \$21.4 billion to \$257.3 billion for the division and up by \$4.0 billion to \$35.0 billion for computer systems design services. Corporations likely report most of the remaining wages as part of the following deductions: cost of labor (which is included in cost of goods sold), compensation of officers, and "other deductions." Company-provided benefits, another form of compensation, are reported in the employee benefit programs deduction and the pension and profit-sharing deduction. "Other deduc-

The increase in income subject to tax for 1999 resulted in an increase in the corporation income tax (before reduction by credits and including AMT) to \$242.0 billion, an increase of 4.6 percent or \$10.6 billion more than for 1998.

tions," which includes commissions, as well as insurance, administrative costs, and utilities and supplies, was up by \$14.1 billion to \$247.7 billion for professional and business services and up by \$4.9 billion to \$27.9 billion for computer systems design services.

Income Tax and Credits

Income subject to tax (the base on which the regular corporation income tax is computed) increased to \$693.7 billion, a 4.6-percent increase from 1998 [7]. For most returns, income subject to tax equaled "positive" net income minus certain "statutory special deductions" [8]. The increase in income subject to tax for 1999 resulted in an increase in the corporation income tax (before reduction by credits and including AMT) to \$242.0 billion, an increase of 4.6 percent or \$10.6 billion more than for 1998. This increase in corporation income tax followed a 1-year decline for 1998.

Total statutory special deductions, the components of which are shown in Figure C, increased 36.4 percent to \$356.5 billion for 1999. Approximately 71 percent of this total and 80 percent of the current year's increase were accounted for by the "other financial vehicles and other investments" industry group. As already noted, this major group includes regulated investment companies and real estate investment trusts, which are required to distribute most of their net income to shareholders for taxation and are allowed special deductions for dividends paid, as a result.

Approximately 20 percent of total statutory special deductions were accounted for by the \$64.9-billion "net operating loss" deduction (NOLD), an increase of 23.3 percent from \$52.7 billion over 1998. The NOLD increased primarily because rising pre-tax profits allowed many corporations with positive net income to deduct much of their accumulated prior-year losses from current-year net income. In general, "net operating loss deductions" include a portion of losses from prior years' returns (excluding those of S corporations whose deficits were allocated to their shareholders in the year they occurred), augmented by "unused" portions of the deductions for intercorporate dividends received and for dividends paid on certain preferred stock of public utilities. Net operating losses can be carried forward 15 years to reduce income subject to tax (or 20 years for net operating losses incurred after August 5,

¹ Net income of "S corporations" is distributed (with few exceptions) through their shareholders and is taxed as the shareholders' income. This income is not a part of the corporation's income subject to tax. Also excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies.

² Includes certain other taxes, not shown separately.

³ For purposes of the statistics, this tax is included in both total income tax before credits and total income tax after credits. By law, tax credits could offset only income tax.

⁴ Includes certain other credits, not shown separately.

NOTE: Detail may not add to totals because of rounding.

1997). With an increase in corporations reporting positive net income for 1999, more companies were able to claim the deduction for the tax year.

Corporations classified in the information division accounted for most of the increase in the NOLD, claiming \$9.8 billion of the deduction for 1999, or \$6.1 billion more than for 1998. Within the information division, broadcasting and television services claimed \$4.6 billion more than for 1998, increasing from \$1.8 billion to \$6.5 billion. The publishing industry group, also within the information division, reported a significant increase in NOLD, \$1.6 billion, to \$2.9 billion.

The increase in income tax before credits (defined to include "alternative minimum tax" or AMT) was concentrated primarily in the information division, where income tax before credits increased by \$4.8 billion to \$25.3 billion. Most of the increase in the information division was accounted for by the publishing industries, up by \$3.0 billion to \$7.9 billion. Income tax after credits (which also includes AMT) was the amount payable to the U.S. Government. It increased by 6.3 percent or \$11.5 billion, to \$193.0 billion.

Income tax before credits was reduced by tax credits, with the principal credits being the foreign

tax, U.S. possessions tax, nonconventional source fuel, general business, and prior-year minimum tax credits. Although income tax before credits in the statistics includes AMT, by law AMT is not reduced by these same credits. By far, the largest tax credit for 1999 was still the foreign tax credit, which increased 2.7 percent, from \$37.4 billion to \$38.4 billion. In the goods production division, the credit shrank by \$0.7 billion to \$26.1 billion, with machinery manufacturers showing the largest decline, decreasing by 58.8 percent or \$1.2 billion, to \$0.8 billion. Overall, goods producers accounted for 67.9 percent of the foreign tax credit claimed, with petroleum and coal manufacturers reporting \$6.0 billion and chemical manufacturers reporting \$5.3 billion.

The U.S. possessions tax credit decreased 37.9 percent, from \$2.4 billion to \$1.5 billion for 1999. No new companies were allowed to claim this credit for tax years beginning after December 1995, and special phase-out rules gradually reduced the amount that existing credit users could claim each year thereafter. The credit is to be completely eliminated after 2005. The possessions tax credit had dropped every year since 1993, with the exception of a slight in-

Corporation Income Tax Returns, 1999

crease for 1996 [9]. Historically, manufacturers have claimed the majority of this credit, principally pharmaceutical companies operating in Puerto Rico.

The general business credit reported for Tax Year 1999 decreased for the first time since Tax Year 1995 [9]. It decreased by \$0.8 billion to \$4.8 billion in Tax Year 1999, likely due to a change to one of its components, the credit for incremental research expenditures. Part or all of the credit for incremental research expenditures that could otherwise be claimed was suspended, but could be claimed at a later time [10].

Goods producers claimed \$1.9 billion of the general business credit, which amounts to about 40 percent of the total. This was also \$0.8 billion less than the amount claimed for 1998. However, the finance, insurance, real estate, rental and leasing division accounted for most of the growth for 1999, with a \$0.1-billion increase over 1998, to \$0.8 billion. The general business credit included: the investment credit (i.e., the sum of the rehabilitation credit, the energy credit, and the reforestation credit); the work opportunity credit; the credit for alcohol used as a fuel; the credit for increasing research activities; the low-income housing credit; the enhanced oil recovery credit; the disabled access credit; the renewable electricity production credit; the Indian employment credit; the credit for Social Security and Medicare taxes paid on certain employee tips; the "orphan drug credit"; the credit for contributions to selected community development corporations; the welfare to work credit; and the Trans-Alaskan pipeline credit. The empowerment zone employment credit was also included as part of the general business credit total taken against income tax, but was not included on the general business credit form (Form 3800) [11].

The "alternative minimum tax" or AMT was instituted in its present form by the Tax Reform Act of 1986. For 1998, corporations reported \$3.3 billion of AMT. For 1999, AMT was \$3.1 billion, a decline of 8.2 percent. The number of corporations reporting the tax decreased 23.2 percent to 14,901. Corporations with business receipts of \$0.5 billion or more reported more than half of the decline [12]. Corporations in this category were also largely responsible for the increase in income subject to tax and income tax. Therefore, these large corporations did not have as much AMT liability as they did for 1998. However, a corporation that does not make positive AMT

payments may also be affected by the AMT by having its use of tax credits limited. The AMT rules prevent companies from using business tax credits to offset AMT or reduce regular tax below tentative minimum tax.

As with previous years, corporations without a current-year "alternative minimum tax" liability that reported AMT in prior years could generally elect to take a credit against a portion of regular income tax liability for the previously-paid AMT. A corporation's potential credit was limited to the excess of its current-year regular income tax over its current-year "tentative" AMT. The number of corporations claiming the credit for prior-year AMT decreased 25.4 percent for 1999, to 12,699. Despite this significant decrease in the number of companies claiming the credit, the credit amount claimed stayed consistent at \$3.4 billion.

Income tax after credits (including the AMT), the amount payable to the U.S. Government, increased 6.3 percent or \$11.5 billion, to \$193.0 billion. Returns classified in goods production led the increase, rising by \$5.5 billion to \$61.0 billion. Beverage and tobacco manufacturers reported the largest increase in this division, rising by \$3.7 billion to \$7.2 billion. The information division also reported a significant increase, up by \$4.6 billion to \$23.1 billion. Publishing industries within the information grouping were responsible for most of the increase, up by \$2.9 billion to \$7.0 billion.

Summary

Characteristic of a growing economy in 1999, corporate pre-tax profits, as reported on income tax returns for 1999, increased 10.8 percent to nearly \$1.0 trillion. "Positive" net income increased from \$1.1 trillion to \$1.2 trillion while net losses increased from \$0.25 trillion to \$0.30 trillion.

Income subject to tax, the tax base, increased along with positive net income, from \$663.4 billion to \$693.7 billion, or 4.6 percent. Reflecting this increase, income tax before credits also increased 4.6 percent to \$242.0 billion, and income tax after credits, the amount payable to the U.S. Government, increased 6.3 percent to \$193.0 billion. A decrease in total tax credits claimed (notwithstanding an increase in the foreign tax credit), particularly the general business credit and the U.S. possessions tax credit, caused a relative increase in total income tax after

Corporation Income Tax Returns, 1999

credits, at a rate exceeding that for tax before credits. The general business credit decreased 15.0 percent to \$4.8 billion, and the U.S. possessions tax credit decreased 37.9 percent to \$1.5 billion. The AMT, included in both income tax before credits and income tax after credits, decreased 8.2 percent to \$3.1 billion.

Data Sources and Limitations, Form 1120, Tax Year 1999

Estimates for Tax Year 1999 are based on a sample of corporation income tax returns with accounting periods ending July 1999 through June 2000 that posted to the Internal Revenue Service Business Master File from the beginning of July 1999 through the end of June 2001. These returns represent domestic corporations filing Form 1120 or 1120-A (short form); foreign corporations with income “effectively connected” with a U.S. business filing Form 1120-F; life insurance companies filing Form 1120-L; property and casualty insurance companies

filing Form 1120-PC; S corporations filing Form 1120S; regulated investment companies filing Form 1120-RIC; and real estate investment trusts filing Form 1120-REIT.

A stratified probability sample was used to produce the statistics. A sample of 141,398 corporation income tax returns was drawn from a total population of 5,315,397. Based on the 135,039 returns of active corporations in the sample, the population estimate of corporation returns was 4,935,904. The sample was selected after administrative processing was complete, but before any amendments or audit examinations, and was stratified based on combinations of net income and total assets at rates ranging from 0.25 percent to 100 percent.

Because the estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CV's) are used to measure the magnitude of this sampling error. The CV is defined in the section on sampling variability in the “SOI Sampling

¹ Includes returns not allocable by industrial division, which are not shown separately.

NOTE: NAICS is the abbreviation for the North American Industry Classification System.

Corporation Income Tax Returns, 1999

Methodology and Data Limitations” appendix of this publication. Figure D presents the CV’s for total assets, business receipts, total income tax before credits, and total income tax after credits by industrial division and sector. The smaller the CV, the more reliable the estimate is judged to be. The estimates corresponding to the CV’s in Figure D can be found in Table 1.

Footnotes

- [1] Numbers used in this article are from *Statistics of Income--1998, Corporation Income Tax Returns*, and *Statistics of Income--1999, Corporation Income Tax Returns* (in preparation at the time this article was written).
- [2] Starting with Tax Year 1987, Statistics of Income (SOI) corporate statistics for “net income (less deficit)” (pre-tax profits) and for receipts and deductions of S corporations are limited to those derived “from a trade or business.” Investment or portfolio income (or loss), such as from interest, dividends, rents, royalties, and gain (loss) from sales of investment property, and the deductions related to this income are not included in the SOI corporate statistics. Therefore, the overall statistics for receipts, deductions, and net income or deficit are slightly understated; it is estimated that, for 1999, total net income (less deficit) alone is understated by \$56.4 billion as a result (see Bennett, Kelly, “S Corporation Returns, 1999,” *Statistics of Income Bulletin*, Spring 2002, Volume 21, Number 4).
- Net income (or deficit) and receipts also exclude regulated investment company net long-term capital gain (reduced by net short-term capital losses), which were not tabulated. If included, these gains would have totaled \$192.6 billion for 1998 and \$252.3 billion for 1999. Including regulated investment company capital gain and S corporation investment income less deductions in the computation of overall pre-tax profits would have increased corporate pre-tax profits for 1999 by 13.8 percent, from \$1,087.8 billion to \$1,237.6 billion.
- [3] The primary business activity of returns is based on the business activity that produces the largest percentage of total receipts.
- [4] *The Mutual Fund Fact Book*, The Investment Company Institute, 2000. See online at http://www.ici.org/facts_figures/factbook00_toc.html.
- [5] The spot market price for natural gas was 60-percent higher in October 1999 than in October 1998. See the Executive Summary of “Natural Gas Supply Infrastructure and Pricing,” online at http://www.eia.doe.gov/oil_gas/natural_gas/analysis_publications/nat_analysis_publications.html.
- [6] *Economic Report of the President*, 2000, p. 54. See online at http://www.access.gpo.gov/usbudget/fy2001/pdf/2000_erp.pdf.
- [7] Several adjustments are required to compute income subject to tax from net income, or pre-tax profits. The statistics for statutory special deductions include the unused portions of deductions reported by corporations that had no positive income subject to tax, either because they had no positive net income or because their deductions were sufficient to completely offset their net income. In addition, the relationship between net income and income subject to tax was defined differently for life insurance businesses and real estate investment trusts. Therefore, the net income shown in the statistics (which also includes the net income of S corporations, regulated investment companies, and real estate investment trusts, which do not bear entity level income taxes), minus statutory special deductions will not yield the statistics shown for income subject to tax.
- [8] For 1999, statutory special deductions include the following: net operating loss deduction (NOLD); the various dividends received deductions; the deductions for dividends paid on certain preferred stock of public utilities; the deduction for dividends paid by regulated investment companies and real estate investment trusts; the special deduction for taxes paid by real estate investment trusts allowed under Internal Revenue Code section 857; and the special deduction allowed for small life insurance companies.

Corporation Income Tax Returns, 1999

- [9] *Statistics of Income, Corporation Income Tax Returns*, for 1993-1999 (the 1999 report was in preparation at the time this article was written).
- [10] The credit for incremental research expenses (computed on the Form 6765) that could otherwise be claimed for the period July 1, 1999, through September 30, 2000, could not be claimed before October 1, 2000. For further details, see *IRS Cumulative Bulletin*, Notice 2001-2, December 6, 2000.
- [11] The purpose of combining these credits into the general business credit was to provide a single combined limitation on the component credits and to establish uniform rules for the unused amounts in excess of this limitation for the carryback and carryforward of “unused” amounts to other years. However, each of the current year’s components of the general business credit was computed separately (since

the limitation applied to the total, the sum of the current year’s components is generally larger than the actual credit claimed). Because the empowerment zone employment (EZE) credit can offset 25 percent of the alternative minimum tax liability, the limitation varies from the other general business credits. The empowerment zone employment credit was computed separately after the general business credit was calculated. The amount of the EZE credit was then added to the general business credit, and the combined amount was taken against the income tax (it is this combined amount that is reported as the general business credit in Figure C).

- [12] Size of total receipts was used in lieu of business receipts to classify certain financial industries. For details, see *Statistics of Income--1999, Corporation Income Tax Returns* (in preparation at the time this article was written).

* Estimates should be used with caution because of the small number of sample returns on which they were based.

¹ Zero assets class includes returns of liquidating or dissolving corporations that disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

² Includes returns not allocable by industrial division, which are not shown separately.

³ Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and investment income, including capital gains of "S corporations" (qualifying corporations electing to be taxed through shareholders).

⁴ For purposes of the statistics, includes not only income tax, but alternative minimum tax, tax from recapture of investment and low-income housing credits, and certain other taxes. By law, only income tax could be reduced by tax credits.

NOTE: Detail may not add to totals because of rounding.

*Estimate should be used with caution because of the small number of sample returns on which it was based.

¹ Zero assets class includes returns of liquidating or dissolving corporations that had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

² For purposes of the statistics, gains from regulated investment companies and S corporations are excluded.

³ Prior to the publication of the Source Book of Statistics of Income--1994, Corporation Income Tax Returns, data for "salaries and wages" were included in the totals for "other deductions." The figure shown here excludes amounts in the cost of goods sold as well as amounts in certain other deductions.

⁴ Net Income of "S corporations" is distributed (with few exceptions) through their shareholders and is taxed as the shareholders' income. This income is not a part of the corporation's income subject to tax.

⁵ Also includes deductions for dividends paid by regulated investment companies and real estate investment trusts. These deductions are not shown separately.

⁶ See Footnote 4. Also excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies.

⁷ For purposes of the statistics, the Personal Holding Company tax, recapture taxes, and the alternative minimum tax, plus certain others not shown, are included in total income tax before and after credits. By law, tax credits could only offset income tax.

⁸ The amount shown for "Recapture taxes" includes recapture taxes of investment, low-income housing, qualified electric vehicle, and Indian employment credits.

⁹ Amount is less than \$500.

¹⁰ Amount for total income tax after credits includes certain other credits not shown separately.

NOTE: Detail may not add to totals due to rounding.
