Overview

Office of Research staff within the Research, Analysis and Statistics organization provides calendar year projections of information and withholding documents on an annual basis to accommodate more recent filing experience. These projections of Information Reporting Program (IRP) documents also incorporate current legislative and administrative initiatives, as well as relevant economic and demographic trends. Forecasts of economic/demographic data used to develop some of these information document projections were provided by Global Insight.

The information and withholding document projections contained within this publication are used primarily by the IRS operational and resource planning functions to assist in the formulation of their budget submissions and staffing requirements, and to complete various other analyses. Enacted tax law changes and confirmed administrative plans are reflected in these projections. However, legislative or administrative initiatives simply under consideration are generally not used to adjust the projections due to the uncertain nature of their eventual outcome.

A comparison of projections for filing year 2007 made in the 2005 version of this document versus the current update is contained in Table 1. This table compares both the “all media grand total” and “paper” components. Table 2 contains the U.S. level projections through calendar year (CY) 2014 for the grand total volumes for all media. The U.S. forecasts for the “paper” segment are provided in Table 3, while Table 4 presents the “non-paper” component.

Detailed breakouts for the paper component at the IRS processing campus level are provided in Tables 4A through 4E. The current alignment of states by IRS processing campus for paper Schedules K-1 is presented in Table 5, and Table 6 contains the current alignment of states by processing campus for the other paper documents. The listed alignments are reflected at the campus level projections for the entire forecast horizon, although changes are likely to occur in the near future¹. Subsequent to the alignment tables, we have provided definitions of the IRP forms projected, as well as the methodology we used to forecast these items.

Impact of Recent Legislative and Administrative Changes

Changes to Form K-1 1041

In this update of Document 6961, we have made revisions to the Form 1041 Schedule K-1's received for CY 2006 and on. A dramatic decrease in the number of

¹ It is anticipated that the IRS will redistribute the processing of paper IRP volumes (Forms 1099 and 1098) from Ogden and Cincinnati service centers to Austin and Kansas City beginning CY 2007. No changes are expected for any of the Schedules K-1. Final decisions were not available at the time of publication, and changes to relevant tables will be made upon receipt of more information.

Schedule K-1s is expected due to erroneous filings of several large filers of Schedule K-1s. The IRS has encouraged taxpayers not to file if they satisfy the criteria in the instructions for Form 1041. As a result, some 480,000 Schedule K-1 filers have indicated that they will not include K-1 schedules with their Form 1041. We expect that a few more filers in the next couple of years will not file, hence the total and electronic Schedule K-1s for Form 1041 volumes reflect this change and the projections of filings show the corresponding drop in Form 1041 Schedule K-1 filings.

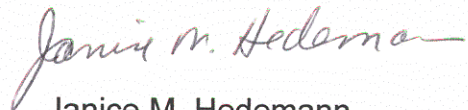

Revisions to (CY) 2007 Forecasts Relative to Forecasts Produced Last Year

For filing year (i.e., calendar year) 2007, the grand total number of information and withholding documents projected in this update is about 2.8 percent (42.5 million forms) higher than the total volume projected last year (see Table 1, left side). A major portion of the net revision is driven by the increase in the projections of Form 1099-B (i.e., 36 million more) and Form 1099-INT (i.e., 16 million more). These upward revisions are in response to the actual 2005 filing experience.

For paper submissions of IRP documents, the CY 2007 estimate is about 5.1 percent (i.e., 2.9 million forms) more than the paper volumes projected in last year's update of this document (Table 1, right side). Embedded in this net change for paper volumes is an increase of approximately 3.6 million in the forecast of paper Form 1099-MISC, also a result of the actual 2005 filing experience.

Statement of Methodology

Three major sets of projections are included in this document. The first group in Table 2 contains all media grand total projections for withholding and other Information Reporting Program (IRP) documents received by the IRS. Table 3 contains the second set of projections, which includes the paper portion (magnetic tape, electronic, and diskette filing). The third group, found in Table 4, includes the non-paper portion of the projections. All of these projections are at the U.S. level. In compliance with customer requests, Tables 4 A-E present projections of all paper documents, except Currency Transaction Reports (CTRs), for IRS processing campuses. CTRs are all processed by the Detroit Computing Center.

Data Sources and 2005 Historical Paper Volumes

Actual (historical) data on the volume of IRP documents filed are provided by program staff under the operating divisions and Information Technology Services. Data sources include: MCC IRP Reformat Report, IRMF File Report, CAWR W-2 Control Report, IRP Counts for 1099-SSA/RRB, Paper IRP Production Report, other campus sources, and the national calendar year Currency Transaction Report receipts. Counts for non-paper Form 1042-S were provided by relevant program staff. Most of the paper form types filed in Calendar Year (CY) 2005 were fully counted by IRS staff within the processing campuses with the exception of paper Form 1042-S, and paper Form 1099-LTC. The 2005 actual paper component of these two forms were estimated by Research staff via time trend extrapolations of prior history. Additionally, paper counts of Foreign Information Return Program (FIRP) are no longer available as funding for the processing of FIRP is no longer provided. Non-paper counts of Foreign Information Returns were provided by program staff at MCC.

U.S. Level Forecasts

The U.S. level grand total (all media) paper projections were forecasted through a combination of time series extrapolations and regression analysis. Each form type was forecasted separately. In some instances, regression models were developed using appropriate economic/demographic variables. In other instances, forecasts for grand total volumes were built from historical time trends. Several variables used in the regression models included employment, population counts, and gross domestic product. Time trend models were used to forecast the paper IRP document volumes, again by form type. Projections of most IRP non-paper documents were then derived by subtracting projections of the IRP paper documents from the grand total projections. For Forms 1099-Q, 1099-SA, 5498-SA, 1099-CAP, 1099-H, 1099-Q, 1098-C and 1042-S, the non-paper portions were first modeled, and paper subtracted from the grand total. Moreover, for Forms 1096, Form 8300, and FinCen 103 (formerly form 8362/8852), paper is the only accepted transmittal format. Therefore, for these form types, the grand total and paper volumes were the same.

Campus Level Forecasts and Impact of Modernization Alignment

The Service Center Recognition/Imaging Processing System (SCRIPS) enables IRS campuses to optically scan most paper IRP documents. As a result, the IRS consolidated the filing/processing of these forms into four designated "SCRIPS" sites in CY 2005. Most paper documents were processed at the Austin, Cincinnati, Kansas City, and Ogden campuses. The paper Schedule K-1 series documents were handled exclusively by the Cincinnati, Ogden and Philadelphia campuses. Paper forms submitted from the International area are still processed by the Philadelphia campus. However, as the Philadelphia campus ceases to process returns in 2007, all Schedule K-1 forms as well as International forms will be directed to the Ogden Campus.

The campus level forecasts were derived based on their relative shares of the U.S. totals in CY 2005 by applicable form type. These shares were held constant throughout the forecast horizon through 2014. In addition, all paper Currency Transaction Reports (CTRs) continue to be handled at the Detroit Computing Campus. Thus, campus level forecasts are not applicable for CTRs.

Table 5 reflects the current processing campus alignment of states/international for paper Schedules K-1. Table 6 shows the current alignment of states/international by processing campus for all other paper documents. However, as noted earlier in Footnote 1, paper Forms 1099 and 1098 will likely be processed at the Austin and Kansas City service centers instead of the Ogden and Cincinnati campuses from January 2007. The campus level tables will change to reflect any new alignment as final decisions become available.
