## Individual Income Tax Shares, 2015

## by Adrian Dungan

## Income and Tax Shares

Tables 1 and 2 present statistics on adjusted gross income (AGI) and income tax, by cumulative percentiles of returns with positive AGI, for Tax Years 2006-2015. (All tables and figures included in this article are for total individual income tax returns filed excluding dependents. ${ }^{1}$ ) The tables show distributions of AGI for each tax year, by descending and ascending cumulative percentiles of returns, and can be used to make comparisons across cumulative percentile classes within each year. Table 1 shows percentiles of returns cumulated downward, starting with the highest income returns, and presents data for 14 different percentiles, from the top 0.001 percent through the top 50 percent of all returns. Table 2 shows percentiles of returns cumulated upward, starting with the lowest income returns, and presents data for the bottom 5 percentiles: 50 percent, 75 percent, 90 percent, 95 percent, and 99 percent of all returns.

For TY 2015, nondependent taxpayers filed 141.2 million individual income tax returns (Table 1), an increase of 1.2 percent over the 139.6 million returns filed for TY 2014. Total AGI increased 4.5 percent to $\$ 10.14$ trillion in 2015, while total income tax increased 5.8 percent to $\$ 1.45$ trillion.

For TY 2015, the top 0.001 percent of individual income tax returns had an AGI of $\$ 59.4$ million or more, an increase of 4.2 percent from the previous year when the top 0.001 percent of tax returns had an AGI of $\$ 57$ million or more (Figure A). This amount was still below the peak during the 10 years of this study, which was $\$ 63.0$ million in TY 2007. These returns accounted for 2.1 percent of total AGI in 2015, unchanged from 2014; and as a percentage of total individual income tax, these returns accounted for 3.5 percent of the total income tax in 2015 (Figure B), down from 3.6 percent in TY 2014. Total AGI for the 0.001 percentile increased by 3.6 percent from $\$ 207.1$ billion in 2014 to $\$ 214.6$ billion in 2015. The average AGI for this percentile was $\$ 152.0$ million (Figure C). In comparison, the average AGI reported on all returns was $\$ 71,829$, up from $\$ 69,565$ for the previous year.

For TY 2015, the average tax rate for the top 0.001 percent of tax returns was 23.9 percent, just below the average tax rate for TY 2014 ( 24.0 percent). As has been the case for all 10 years of this study, the average tax rate for the top 0.001 percent remained lower than the average tax rates of all percentiles from the top 0.01 percent through the top 3 percent of returns (Figure D). Taxpayers in the top 0.1 percent paid the highest average tax rate ( 27.4 percent), and each successive percentile paid lower average tax rates, falling to 15.7 percent for the top 50 percent of returns.

For TY 2015, taxpayers filing returns that were in the top 1 percent reported an AGI of $\$ 480,930$ or more, a 3.3 -percent increase from the AGI floor for this group for TY $2014(\$ 465,626)$ (Figure E). These taxpayers accounted for 20.7 percent of total AGI and 39.0 percent of the total income tax, a decrease from 39.5 percent in 2014 (Figure F). A juxtaposition of the bottom 50 percent of returns in 2015 reveals they account for less total AGI ( 11.3 percent) and less total income tax ( 2.8 percent) than the top 1 percent in 2015. The bottom 50 percent of returns also had a much lower average tax rate of 3.6 percent in 2015.

In constant dollars, the AGI threshold for the top 50 percent of returns was trending downward between 2006 and 2011 going from a threshold of $\$ 22,320$ (2006) to $\$ 20,234$ (2011) (Figure G and Table 1). Between 2012 and 2015 the AGI threshold steadily increased, reaching $\$ 21,663$ in 2015, but remaining below the peak of $\$ 22,409$ in 2007. In contrast, all percentiles from the top 25 percent through the top 1 percent have a higher AGI cutoff in 2015 than they did for 2006 (Figure H and Table 1).

As expected for a graduated income tax system, the top 0.001 percent through the top 50 percent of returns recorded a larger share of the income tax compared to their respective share of AGI. For TY 2015, the top 0.001 percent and the top 0.01 percent of returns reported 0.8 - and 0.4 -percent decreases

## Highlights

- For Tax Year (TY) 2015, the adjusted gross income (AGI) threshold for the top 50 percent of all individual income tax returns was $\$ 39,275$. These taxpayers accounted for 88.7 percent of total AGI and paid 97.2 percent of total income tax.
- The top 0.001 percent of tax returns had an AGI of $\$ 59,380,503$ or more. These taxpayers accounted for 2.1 percent of total AGI and paid 3.5 percent of total income tax.
- The top 0.01 percent of tax returns had an AGI of $\$ 11,930,649$ or more. These taxpayers accounted for 4.9 percent of total AGI and paid 8.7 percent of total income tax.
- The top 1 percent of tax returns had an AGI of $\$ 480,930$ or more. These taxpayers accounted for 20.7 percent of total AGI and paid 39.0 percent of total income tax.
- The top 3 percent of tax returns accounted for more than half ( 52.5 percent) of total income tax. These taxpayers had an AGI of $\$ 253,979$ and accounted for 29.9 percent of total AGI.
- The average tax rate of 14.34 percent for all returns filed for 2015 was the highest of this 10-year study, Tax Years 2006-2015.

## AGI threshold

[^2]in their share of total AGI, respectively. These same percentiles also reported a 2.4 -percent decrease (top 0.001 percent) and a 2.5-percent decrease (top 0.01 percent) in their share of total income tax. All other percentiles through the top 50 percent also experienced a decrease in their respective share of total income tax. In TY 2015, the amount of AGI needed for inclusion in the top 50 percent of returns (i.e., the AGI threshold) was $\$ 39,275$. These returns accounted for 88.7 percent of total AGI and paid 97.2 percent of total income tax.

## Changes in Law and Data Sources and Limitations

SOI publishes an annual report that contains complete individual income tax data by tax year, including sections on "Changes in Law" and "Data Sources and Limitations." The statistics are based on a sample of individual income tax returns, selected before audit, which represents the population of Forms 1040, 1040A, and 1040 EZ , including electronic returns. The report contains data on sources of income, adjusted gross income,
exemptions, deductions, taxable income, income tax, modified taxable income, tax credits, self-employment tax, and tax payments.

For a detailed description of changes in law that may affect the data in this article, see Statistics of Income-2015 Individual Income Tax Returns-Complete Report, Publication 1304, Section 1. For a detailed description of the data sources and limitations, see Section 2. This report is available for download on IRS' Tax Stats Web site at: http://www.irs.gov/uac/SOI-Tax-Stats-Individual-Income-Tax-Returns-Publication-1304-(Complete-Report).

Adrian Dungan is an economist with the Individual and Tax-Exempt Branch's Special Studies Section. Michael Weber, Chief, Special Studies Section, and Michael Strudler, Chief, Individual Returns Processing and Data Perfection Section, provided technical assistance and reviewed the article.

N/A-Not applicable.
[1] The total number of returns does not include the returns filed by individuals to only receive the economic stimulus payment and who had no other reason to file.
[2] For Table 1, constant dollars were calculated using the U.S. Bureau of Labor Statistics' consumer price index for urban consumers (CPI-U, 1990=100). For 2014 the CPI-U=236.736.
[3] Total income tax was the sum of income tax after credits (including the subtraction of the earned income credit, American opportunity credit, regulated investment credit, health insurance credit, and the refundable prior-year minimum tax credit) limited to zero plus the tax from Form 4970, Tax on Accumulation Distribution of Trusts.
[4] The average tax rate was computed by dividing total income tax (see footnote 3) by adjusted gross income.

[1] The total number of returns does not include the returns filed by individuals to only receive the economic stimulus
payment and who had no other reason to file.
[2] Total income tax was the sum of income tax after credits (including the subtraction of the earned income credit, American opportunity credit, regulated investment credit, health insurance credit, and the refundable prior-year minimum tax credit) limited to zero plus the tax from Form 4970, Tax on Accumulation Distribution of Trusts.
[3] The average tax rate was computed by dividing total income tax (see footnote 2) by adjusted gross income.
