PARTICIPANTS

IRSAC MEMBERS IN ATTENDANCE:

- DENNIS VENTRY, IRSAC Chair and OPR Subgroup
- KATHY HETTICK, IRSAC Vice Chair and OPR Subgroup
- SHAWN O'BRIEN, Subgroup Chair, LB&I Subgroup
- STEPHANIE SALAVEJUS, Subgroup Chair, Digital Services Subgroup
- SHELDON KAY, Subgroup Chair, OPR Subgroup
- PHYLLIS JO KUBEY, Subgroup Chair, SB/SE and W&I Subgroup
- DIANA ERBSEN, LB&I Subgroup
- STUART HURWITZ, LB&I Subgroup
- DAVE THOMPSON, JR., LB&I Subgroup
- MARTIN RULE, Digital Services Subgroup
- ANTONIO GONZALEZ, Digital Services Subgroup
- BEN DENEKA, Digital Services Subgroup
- JEFFREY SCHNEIDER, OPR Subgroup
- SHARYN FISK, SB/SE and W&I Subgroup
- CHARLES READ, SB/SE and W&I Subgroup
- PATRICIA THOMPSON, SB/SE and W&I Subgroup

1 IRS ATTENDEES:

2 CHARLES RETTIG, Commissioner of Internal Revenue

3 TERRY LEMONS, Chief, Communications & Liaison

4 DOUG O'DONNELL, Commissioner, LB&I

5 DAVID ALITO, Deputy Commissioner, W&I

6 LISA BEARD NIEMANN, Deputy Commissioner, SB/SE

7 MICHELE CAUSEY, Acting Director, Office of Online
8 Services

9 MEL HARDY, Director, National Public Liaison

10 JOHN LIPOLD, IRSAC Designated Federal Official and
11 Branch Chief, National Public Liaison

12 ANNA MILLIKAN, National Public Liaison

13 MARIA JARAMILLO, National Public Liaison

14 BRIAN WARD, National Public Liaison

15 TINA BRISCOE, National Public Liaison

16 ROSE SMITH, National Public Liaison

17 JOHNNIE BEALE, W&I

18 SHAWN HOOKS, LB&I

19 BEN SWARTZ, SB/SE

20 HOWARD ZACH, Office of Online Services

P R O C E E D I N G S

[9:10 a.m.]

WELCOME

MR. HARDY: Good morning, everyone. Welcome to the annual IRSAC meeting. My name is Melvin Hardy. I'm the Director of National Public Liaison, and we are extremely happy to welcome all of you, all the distinguished guests.

So with all of that informality, Dennis, I will turn it over to you, and then Commissioner Rettig will grace us.

MR. VENTRY: Thank you, Mel.

Welcome, everybody, to IRSAC. We are delighted to present to the Commissioner and to the public our 2018 annual report. Much work went into this. We're looking forward to getting feedback thereafter and having discussion after the Commissioner, who is on a tight schedule, has to leave.

We're delighted to be joined by the Commissioner. He surprised us twice yesterday. It's almost like the uncle who just shows up for Thanksgiving.

COMMISSIONER RETTIG: Or the bad penny.

1 [Laughter.]

2 COMMISSIONER RETTIG: I appreciate the uncle
3 designation compared to where you could have gone with
4 that.

5 [Laughter.]

6 MR. VENTRY: I am respectful of my place.

7 So the way that it's going to work while the
8 Commissioner is here is that we will describe or
9 highlight some of our developments this year.

10 There are basically five reports. One is the
11 general report. Kathy and I will do that. And then we
12 have the four subgroup reports. Everybody has eight
13 minutes, and so now I have to start talking more
14 quickly.

15 For jumping right into the general report, the two
16 issues that I'll just briefly highlight, the first one
17 is the IRS budget and the critical need to provide the
18 IRS with appropriate and reliable funding.

19 In writing the general report, which falls to the
20 Chair and the Vice Chair, and doing a little bit of
21 digging, it was quite nice to see that in 2011 then-
22 Chair of the IRSAC, Chuck Rettig, had a single issue

1 that year as Chair in the general report, and that was,
2 in fact, the way you phrased it was "consistent,
3 adequate, and appropriate funding." That issue remains
4 of utmost importance and, in fact, has become more
5 critical in the intervening eight years.

6 The one thing that the IRSAC wanted me to
7 emphasize in the report is that we're well aware that
8 the IRS is not a tax policy or a tax legislation shop.
9 At the same time, the IRSAC believes that it's critical
10 that senior executives at the IRS consistently remind
11 Congress of the currently inadequate funding and tie
12 that, then, into some challenges with respect to
13 delivering on the mission of the IRS. In fact, we
14 can't really remind Congress often enough.

15 The second issue that I wanted to highlight is
16 that this body is going to look a lot different next
17 year. It's going to look a lot bigger. We have over
18 the last year, through NPL and through current IRSAC
19 leadership, past IRSAC leadership, and IRPAC
20 leadership, we've consolidated the IRSAC, IRPAC, and
21 the ACT. It's going to be a large body going forward,
22 36 members, next year with three co-chairs. We on

1 IRSAC are excited about it. We think it's a beneficial
2 change. It's going to take some time to work out some
3 kinks over the first year or two years, and the current
4 composition as we envision it might change over the
5 period. But it is an exciting time. It provides more
6 of a direct channel, we think, to the operating
7 divisions, and speaking with one voice rather than with
8 three different voices.

9 With that, I'll turn it over.

10 COMMISSIONER RETTIG: When he was talking about
11 this body is getting bigger, I'm just glad he didn't
12 look in my direction, because I'm trying to address
13 those issues, and I'm thinking, geez, I just met the
14 guy.

15 [Laughter.]

16 COMMISSIONER RETTIG: No, just kidding.

17 OPENING REMARKS

18 COMMISSIONER RETTIG: But I was Chair of IRSAC in
19 2011, and it was a tremendous experience for me. In
20 significant part, that led to one of my interests of
21 coming inside the IRS for the things that I learned as
22 Chair of IRSAC. I was a subgroup chair for SB/SE

1 before becoming chair of IRSAC, and things that I
2 learned, but most importantly the people that I met,
3 the people that worked for IRS and appreciation for a
4 lot of their struggles. I thought I knew a lot from
5 the outside because in private practice I had
6 interacted with IRS for 36 years on the other side, and
7 I probably know several thousand people that work for
8 the IRS. So when you're on the other side of the fence
9 but you're on that side of the fence the whole time,
10 you really think you have an appreciation for what's
11 going on.

12 As you come into an advisory board like IRSAC, you
13 get a new appreciation because it gives you a new look
14 and more contact with the IRS folks specifically, and
15 you get an appreciation that they're really a hard-
16 working, dedicated workforce, well-intentioned, and
17 they endure a lot of situations that the private side
18 wouldn't ordinarily endure. I was treated especially
19 nicely during my tenure on IRSAC. So when the call came
20 up from IRSAC with respect to becoming IRS
21 Commissioner, obviously anybody would be honored, but I
22 was especially honored because I'd had a look into the

1 IRS from IRSAC, and I couldn't be more honored or
2 privileged to be sitting here today.

3 I'd been on IRSAC and now have the opportunity to
4 come back as Commissioner. So, Dennis and Kathy, thank
5 you. Obviously, it's not easy to pull people together,
6 pull groups together, even with all the assistance, so
7 a personal thank-you to each of you for your efforts as
8 Chair and Vice Chair coming in, and then to the
9 subgroup chairs.

10 It's phenomenal. I've seen the information that
11 you're going to present today -- good job. You
12 sometimes wonder when you're on committees if anybody
13 is going to look at it after today, and let me assure
14 you that people, a lot of people will look at it after
15 today on the inside, and obviously on the outside.

16 I'd like to express appreciation to the people
17 from the public who are here, as well. It's meaningful
18 interactions with the press and others to get the
19 message out of what we're trying to accomplish, and
20 also the efforts that all of you put forward. It means
21 a lot to us.

22 On consolidating the committees, I think it's a

1 great idea. Having served on one of numerous
2 committees when I was there, a single voice helps.
3 Being able to not have too much overlap, I think that's
4 a significant issue. At IRS we need to hear from
5 people on the outside, and sort of in the single-voice
6 mode I think is phenomenal, so I look forward to that.

7 Those of you who are going on, thank you. Those
8 who will stay here, thank you. Those of you who are
9 rolling off today, a special thank you. I might not
10 see you in this capacity again, but I think as I said
11 yesterday in one of the two surprise visits, thank you
12 for putting up with me when I just open the door and
13 walk in and say hello to you. But that's sort of the
14 informal nature of how we're operating currently.

15 But for those of you who are rolling off, our
16 doors are open, and you don't need to go through a
17 formal process to provide comments on things that you
18 may see in your practice or your daily life or you may
19 hear about. We want to hear from people through the
20 organized committees or however you want to get us the
21 information.

22 So with that, I will turn it over to Kathy.

1 REPORT OVERVIEW

2 MS. HETTICK: Thank you. Certainly, thank you,
3 Commissioner, for being here, and the surprise visits
4 yesterday were great.

5 The issue that I want to bring forward in my short
6 talking minutes that is in the general report that
7 really hits a button for everyone is the Free File
8 issue. I would just like to thank the entire IRSAC
9 team. We spent an enormous amount of energy and time
10 on this particular issue as a group. We heard from the
11 IRS subject matter experts. We heard from the Free
12 File Alliance. We had an extra conference call. We
13 really spent a lot of time on this issue.

14 We were asked at the beginning of the year by the
15 IRS to look at the program, the existing program, the
16 value that it had, and then also to comment and to
17 provide feedback for going forward, improvements and
18 certainly recommendations surrounding the MOU, and we
19 did just that. We did, again, work hard, a lot of
20 discussion, and we were able to present in our report
21 two areas of recommendations. One is for the IRS, and
22 the other is for particularly the MOU.

1 Those recommendations encompass certainly the
2 integrity of the taxpayer and the tax system and the
3 goal of Free File, which is to have that electronic
4 filing Free File available to an underserved population
5 most certainly, and also the increase in electronic
6 filing.

7 So we did have a bit of a surprise two weeks ago
8 with a press release that came out on November 2nd of
9 which we were not aware, we as an IRSAC team, after
10 much energy all year was put into the recommendations
11 that we are bringing forward. A new MOU had been
12 signed already, and that was -- let's see, I think we
13 used a couple of different terms in the discussion
14 yesterday, but I think the most that the members on
15 IRSAC felt was "Really?" We didn't know that was
16 coming down the pike. We certainly anticipated that
17 there would be a re-negotiation of the MOU that was
18 going to currently expire in 2020, but we certainly
19 thought that the report would be looked at.

20 However, despite being surprised and feeling a bit
21 blindsided, there certainly is the positive piece of
22 that, which is a lot of the changes that were included

1 in the new MOU that was signed in October did include
2 our recommendations, some of the recommendations we
3 made, and we believe that to be very positive.
4 Certainly, it was our pieces that were added that
5 further protect the taxpayer using the Free File
6 system. So we feel that to be very positive.

7 Also, last year in this report there was mention
8 of do we need to do more real-time advising, and I
9 think that was an example of that, even though we
10 didn't particularly -- there wasn't the formality of it
11 and we weren't particularly aware of it. We certainly
12 believe that because of our discussions, because of the
13 presentations that we had, because of the importance of
14 this issue, that we were doing real-time advising, that
15 some of our recommendations were taken into
16 consideration even though the report had not yet been
17 published or released.

18 And so with that, we just would really encourage
19 the IRS to further look at the recommendations, the
20 pieces that can be implemented from just the IRS side,
21 but also going forward with the MOU, the other things
22 that we had. We believe in the program. We believe it

1 to be viable after looking at it very critically. But
2 we also believe there needs to be improvement, and
3 certainly in the area of oversight and accountability.

4 So, thank you very much.

5 MR. VENTRY: So we have our four subgroup reports.
6 The one thing I wanted to say before we got into it,
7 because the first subgroup is Digital Services, which
8 next year Digital Services is not going to be a
9 freestanding subgroup, we'll just have the four
10 business operating division subgroups. However, in our
11 general report we emphasize that we very much would
12 like to see an individual member with expertise on each
13 subgroup, expertise that is in digital services, only
14 because if there really is any kind of outside input
15 with respect to moving the agency forward in terms of
16 technology, digital services is of the utmost
17 importance. So it's not falling off the radar. If
18 anything, in fact, by having one person, one person
19 with expertise in each of the subgroups, it actually
20 might elevate that issue every single year or every
21 couple of years to the general report. That's our
22 hope.

1 So without further ado, we have Stephanie
2 Salavejus, who is going to talk about Digital Services.
3 She is the subgroup chair.

4 DIGITAL SERVICES SUBGROUP REPORT OVERVIEW

5 MS. SALAVEJUS: Thank you, Dennis.

6 I'm pleased to introduce the members of the
7 Digital Services Subgroup. I want you to know all
8 those members who worked so hard to put together this
9 report.

10 Brenda Bianculli, who unfortunately isn't able to
11 join us today. But to my right we have Martin Rule,
12 Ben Deneka, and Antonio Gonzalez. Without their
13 insight and hard work, this report would have
14 definitely been impossible. And I'm Stephanie
15 Salavejus.

16 We are privileged to have the opportunity to work
17 so closely with the IRS, and we want to express our
18 appreciation for their cooperation and partnership.
19 It's been a pleasure.

20 We are excited for and applaud the IRS' progress
21 towards enterprise-wide modernization and digital
22 services implementation, even in the face of a long

1 list of competing priorities relating to the Tax Cuts
2 and Jobs Act.

3 As we recommended in IRSAC's 2017 report, again we
4 recommend the IRS launch a service -- online account
5 for tax professionals -- to provide a digital method
6 for the tax professional community to assist taxpayers
7 efficiently and quickly with tax compliance and
8 resolution.

9 While we understand that the Service has many
10 priorities, especially regarding tax reform
11 implementation, in our opinion a digital tax pro
12 account should be highly prioritized due to the
13 substantial benefits it would provide to taxpayers and
14 the IRS.

15 Providing a method to quickly, efficiently, and
16 securely process authorizations through a digital
17 method will not only provide peace of mind to taxpayers
18 and allow timely assistance by representatives, but
19 will provide cost savings to the IRS and will permit
20 better use of IRS resources.

21 In terms of functionality that should be
22 considered for inclusion in the initial version of the

1 tax pro account, we believe the tax professional
2 community would find most useful the ability to obtain
3 digital notices and correspondences, a secure messaging
4 portal to communicate with the IRS and resolve
5 discrepancies, and the ability to upload documents.

6 To summarize, the implementation of a tax pro
7 account will not only benefit taxpayers and improve a
8 taxpayer's overall experience with the IRS but will
9 benefit the IRS by reducing traditional methods of
10 corresponding with taxpayers and tax professionals,
11 which should reduce cost and allow for better use of
12 IRS' resources.

13 I would be remiss if I did not mention the
14 paramount importance of a robust framework for
15 electronic authentication, authorization, and access,
16 or, as the IRS refers to it, eA3. These frameworks are
17 critical to appropriately safeguard taxpayer
18 information while also enabling the success of the tax
19 pro account and the digital services strategy overall.

20 eA3 is a linchpin capability to address the
21 challenge of identity theft-related tax refund fraud
22 and to enable secure digital interactions across the

1 ecosystem, including individuals, businesses, third
2 parties, tax professionals, and the IRS. In
3 particular, I'd like to stress the importance of the
4 authorization framework. As a practitioner yourself, I
5 know I don't have to explain to you the role that tax
6 professionals and other third parties in the tax
7 ecosystem play in filtering clients' questions,
8 resolving tax issues, and intervening on behalf of
9 taxpayers, many times without requiring IRS contact.

10 As IRS transitions from granular forms-based
11 authorization to a digital authorization system, an
12 adequate authorization framework is a critical
13 prerequisite to building and deploying digital services
14 that extend beyond taxpayer-only tools and enables
15 third parties to assist taxpayers in meeting their tax
16 obligations while safeguarding their information.

17 In conclusion, we recommend that IRS prioritize
18 development and implementation of an online tax
19 professional account to allow tax professionals who
20 have been vetted and approved by the IRS the ability to
21 assist in meeting their compliance obligations
22 efficiently, securely, and effectively. As eA3 is a

1 critical component to enabling the success of the tax
2 pro account, we accordingly recommend that the IRS
3 build upon their successes and momentum in this area to
4 roll out a robust framework for electronic
5 authentication, authorization, and access.

6 We thank you for your time and attention and wish
7 you all the best of luck during your tenure as
8 Commissioner.

9 Thank you.

10 MR. VENTRY: Thank you, Stephanie.

11 Shawn O'Brien will deliver the LB&I Subgroup
12 report.

13 LARGE BUSINESS AND INTERNATIONAL SUBGROUP REPORT
14 OVERVIEW

15 MR. O'BRIEN: Thank you. I'm Shawn O'Brien. I'm
16 the subgroup chair, and I'm joined by my subgroup
17 members. Starting to my right is Diana Erbsen, and to
18 her right Stuart Hurwitz, and to his right Professor
19 Dave Thompson. We have another subgroup member, Sandy
20 Macfarlane, who is unfortunately not able to make it
21 today, but everyone's contributions were greatly
22 appreciated.

1 I'd like to say thank you to Commissioner Rettig
2 for your support of IRSAC and the work that we do.
3 LB&I Commissioner O'Donnell and his team have been
4 great to us throughout my three years here. I think
5 Doug has pretty much made most, if not all, of the
6 meetings we've had, so thank you for your support. And
7 then Director of NPL, Mel Hardy, thank you so much for
8 your support of IRSAC.

9 We were asked to address two important
10 international tax issues this year, the first being how
11 LB&I could encourage taxpayers to increase the quality
12 of their transfer pricing documentation; and second,
13 how LB&I could use the new country-by-country reports
14 in its risk assessment. These were two important
15 issues, but today at this time we're going to address
16 the first one, the transfer pricing documentation
17 issue, and Diana Erbsen has done significant work on
18 this, along with the other subgroup members, so I'll
19 ask Diana to present the issue of transfer pricing
20 documentation.

21 MS. ERBSEN: Thanks, Shawn.

22 This is my first year on IRSAC, and it is really a

1 pleasure to be here with Commissioner Rettig and a
2 pleasure to have him as Commissioner, and a pleasure to
3 be here with LB&I Commissioner Doug O'Donnell and other
4 representatives of the IRS and the other public members
5 of IRSAC.

6 As Shawn said, at the beginning of this year we
7 were asked to look at how to improve transfer pricing
8 documentation for taxpayers, specifically with an eye
9 towards improving efficiency of transfer pricing
10 audits. This is an important issue for the IRS because
11 transfer pricing issues make up a substantial portion
12 of the LB&I inventory, and LB&I has recognized that it
13 needs to manage its resources in the most efficient and
14 effective way possible. That includes ensuring that
15 transfer pricing examinations are no longer than
16 required.

17 It's an important issue for taxpayers because
18 transfer pricing exams can be very lengthy, can be very
19 burdensome, and can be very expensive. Publication
20 5300 relating to the transfer pricing examination
21 process provides as exhibits examples of timelines for
22 two hypothetical examinations, one of 24 months and one

1 of 36 months. From the perspective of a taxpayer
2 representative, those are really long exams. We
3 believe that the potential for de-selection of issues
4 earlier in the examination process would be a powerful
5 incentive for many taxpayers to improve their transfer
6 pricing documentation, and that published guidance
7 discussing how taxpayers can achieve robust
8 documentation that may result in early de-selection and
9 more efficient examinations would be welcomed by both
10 taxpayers and tax practitioners.

11 Already, in order to avoid penalties in the event
12 of transfer pricing adjustments, taxpayers are
13 generally required to maintain fairly substantial
14 documentation supporting their tax return positions.
15 The principal documents that must be maintained in
16 order to satisfy those requirements are set forth in
17 Treasury Regulations 1.6662-6, and include a business
18 overview, a description of the taxpayer's
19 organizational structure, and a description of the
20 transfer pricing method selected, as well as
21 alternatives that were considered. Further information
22 that can be utilized by the IRS in analyzing transfer

1 pricing risk is required to be provided by certain
2 taxpayers on a variety of different forms, including
3 the previously mentioned country-by-country report,
4 which was adopted in connection with the OECD Base
5 Erosion and Profit Shifting project.

6 In an effort to increase efficiency in the
7 transfer pricing process, in January of 2018
8 Commissioner O'Donnell issued three directives to IRS
9 employees of direct relevance to the issue of improving
10 transfer pricing examinations through improved
11 documentation. Those three directives eliminated the
12 requirement that a transfer pricing IDR be issued in
13 every case involving cross-worker transactions,
14 implemented a formal approval process before an IRS
15 examiner can depart from a taxpayer determination as to
16 best method, and provides that Section 6662(e)
17 penalties should be applied, if appropriate. I
18 particularly like the "if appropriate" part. Amazing
19 how one's perspective changes.

20 These directives provide more transparency in the
21 form of when a transfer pricing IDR is issued -- it's
22 generally because risk has been determined to exist; a

1 carrot for improved documentation in the form of better
2 documentation, making it harder to obtain formal
3 approval for a change in method; and a stick for
4 insufficient documentation in the form of more likely
5 imposition of penalties if there's an adjustment.

6 We believe that the primary additional incentives
7 that can be offered to further encourage improved
8 documentation are the potential for de-selection
9 earlier in the audit process and for more efficient
10 audits where documentation is more robust and reliable.

11 We recommend increased direct guidance to the
12 taxpayers from the IRS as to best practices.
13 Specifically, following a format that the IRS has used
14 to great effect before, we are recommending that the
15 IRS issue non-binding FAQs and then hold periodic
16 public meetings with taxpayers and tax practitioners to
17 further expand upon the FAQs. We would expect these
18 discussions to include explanations of when and how de-
19 selections would generally occur, the benefits to
20 taxpayers of improved documentation, and current
21 observations of what the IRS believes are best
22 practices.

1 As noted in our report, the best defense is often
2 a good offense. Typically, the IRS did analytics
3 process flags of potential transfer pricing issues from
4 tax return information and from exam issues, unless the
5 review of a transfer pricing report with robust, high-
6 quality documentation shows mitigation of the initial
7 perceived compliance risk. In our report, based on
8 communications with representatives of LB&I, who were
9 beyond cooperative, which we really appreciate, we
10 provide draft FAQs that attempt to capture what we
11 understood to be the IRS's views of best documentation
12 practices in areas in which many taxpayers can improve
13 their documentation in a manner that could result in
14 more efficient exams, including de-selections of audit
15 issues.

16 One theme we heard repeatedly was that each
17 taxpayer should provide documentation to educate the
18 IRS about the taxpayer's industry and the way in which
19 different related parties operate, that taxpayers
20 should provide a narrative of the context in which
21 intra-company transactions take place, and that that
22 narrative and the accompanying analysis should provide

1 a sense of the total value which multinational
2 enterprise has created, essentially answering questions
3 before the IRS poses questions.

4 In essence and in conclusion, our recommendation
5 is that the IRS clarify to taxpayers and to tax
6 practitioners how documentation can be improved to
7 permit earlier de-selections and more efficiency for
8 the benefit of the IRS, taxpayers, and tax
9 practitioners.

10 MR. VENTRY: Thank you, Diana. Thank you, Shawn.

11 Next up is Shelly Kay, Office of Professional
12 Responsibility Subgroup.

13 OFFICE OF PROFESSIONAL RESPONSIBILITY SUBGROUP REPORT
14 OVERVIEW

15 MR. KAY: Thanks, Dennis.

16 I'd like to thank my team. I'm the chairman of
17 the subgroup for OPR, and I'm a practicing CPA and
18 licensed attorney. The members of our esteemed team
19 are Jeff Schneider, who is an enrolled agent down in
20 Florida; Kathy Hettick, who is not only in our subgroup
21 but she's also the Vice Chair for IRSAC and an enrolled
22 agent out in Washington; and Professor Dennis Ventry

1 from California, who is the Chair of IRSAC.

2 And I really want to thank Steve Whitlock, who
3 always provides his time, has done a great job.
4 Unfortunately he can't be here today for several
5 reasons, but he and Brian Ward have provided just
6 tremendous assistance to our group, as they have done
7 in every year.

8 The issue I want to deal with now, though, is a
9 vital issue, and it deals with updating Circular 230,
10 because, as I indicated, we're all professionals from
11 different backgrounds, and we all have different
12 standards that we need to meet for our professional
13 associations, but pretty much all practitioners look at
14 Circular 230 as the set of principles that we all
15 really need to follow, and it's the preeminent standard
16 of care.

17 However, we feel that that preeminence is in
18 jeopardy because of several inaccuracies. Certain
19 aspects haven't been updated, and it's really not user
20 friendly. But rather than try to tell the IRS to deal
21 with this all at one point, like building a house, we
22 think that we need to lay the foundation first and then

1 take additional steps. So we have a three-step process
2 for this.

3 The foundational process is just to make many
4 ministerial corrections. For example, Circular 230
5 refers in several places to the "Registered Tax Return
6 Preparer Program." There is no such thing. So for
7 someone who is trying to research it, the first time
8 looking at it, who is not familiar with the litigation
9 giving rise to the fact that there is no such thing,
10 will spend a lot of time and a lot of effort, maybe
11 they even think there is one, when there is no such
12 thing anymore. There should be references instead to
13 the "Annual Filing Season Program" and what it takes to
14 be part of that program.

15 We listed -- and it's not exclusive because
16 there's only four of us, but we listed a whole lot of
17 errors and suggested changes and typos that need to be
18 corrected, because we really think that if someone is
19 looking through the standards and they see misspelled
20 words or references, and then you go to that reference
21 and that reference isn't there anymore because there's
22 been a change to that section but this section hasn't

1 been changed that cites to that, we think that needs to
2 be done first, and that is relatively quick. Like I
3 said, we gave a list of maybe 20 corrections, clearly
4 not all-inclusive, but it's probably a pretty good
5 start.

6 The second thing is we think that Treasury and the
7 Service should look at completing the transition from
8 what is currently pretty much a standards-based set of
9 rules to a principles-based set of rules. They started
10 doing that a couple of years ago, in 2014, with the
11 prior head of OPR. They changed 10.37 dealing with
12 written advice, and 10.35 dealing with the competence
13 standards, and those are more principles-based, which
14 is really -- when you look at the ABA model rules, the
15 statement of standards of tax service for CPAs and
16 enrolled agents, they're all more principles-based
17 because it's really hard to list rules and make sure
18 you cover all rules, as opposed to listing principles
19 that you can guide.

20 I think it's a good idea to look at those other
21 rules, the ABA model rules, the AICPA and enrolled
22 agent rules, look at how their wording is, because a

1 lot of the wording within Circular 230 uses
2 "must/shall/will," and I'm not sure we actually know
3 the difference between those sometimes, but there must
4 be a difference because they're used differently,
5 versus "may." Sometimes they're using "may" when you
6 really might want to use "must," "will," or "shall."
7 Not all of them, just pick one.

8 [Laughter.]

9 MR. KAY: We also think Circular 230 should have a
10 definitional section. It does have a definitional
11 section, but it's probably one of the shortest
12 definitional sections I've ever seen because it only
13 defines things like attorneys and CPAs. I mean, it
14 doesn't define all the other terms and ideas that are
15 set forth within Circular 230, so there must be a much
16 more robust definitional section.

17 Circular 230 has been around for a long time. I
18 mean, circulars are numbered sequentially from when
19 they came out, so this one was, like, really old. It's
20 been around for a long time, so things just get globbed
21 together that don't necessarily make sense. So there
22 are Subparts A and D that are just there that really

1 aren't part of -- I mean, D tells you what to do in
2 disciplinary actions, which is all well and good, but
3 it's really not a standard that people should follow.
4 So if you're talking about professional standards for
5 what professionals should do to comply, telling them
6 what the disciplinary action is for how to proceed and
7 logistical things, really, it's important, but it
8 should be elsewhere and not in these type of rules.

9 And then finally, we think that the third element,
10 which really won't be all that hard, would be having
11 proper cross-references to code provisions dealing with
12 preparer penalties and other injunction-type items so
13 that there is a very clear cross-referencing between
14 your regulatory Circular 230 duties and your statutory
15 penalties and injunction type of activities.

16 I think if you put all three of those together,
17 you'll have a much clearer, easier to research, user
18 friendly set of guidelines for practitioners to follow.

19 MR. VENTRY: Thank you, Shelly.

20 Phyllis? Phyllis Kubey will provide the Subgroup
21 General Report on W&I and SB/SE.

SUBGROUP REPORT OVERVIEW

MS. KUBEY: Thank you and good morning, everyone. I'm very pleased to introduce my colleagues, Sharyn Fisk, attorney and professor from California; Charles Read, CPA and USTCP from Texas; and Pat Thompson, CPA from Rhode Island. I'm Phyllis Jo Kubey, enrolled agent from New York City.

So, we covered a wide range of topics this year, and it was really exciting to work through these issues. We actually started out with Free File in our subgroup, and then as we developed it we realized that that was really an issue that needed the attention of the entire group, so we moved it into the general report. But I'd like to thank Diane Fox, who briefed us on the issue. She did a terrific job, and we really enjoyed getting into the weeds on that.

We also looked at the issue of lockboxes and why people aren't using the lockbox addresses and what a tremendous burden it puts on the IRS when people are sending these paper payments to the wrong centers. One of the things that came out of that, which ties into our Digital Services colleagues, is we really think a

1 big solution to that is to drive taxpayers and the tax
2 professionals who help them to use electronic payment
3 methods.

4 We looked at third-party authentication of
5 representatives, third-party agents who are calling the
6 IRS. This is a big issue because of security and
7 fraud. Interestingly enough, IRPAC led their report
8 with this issue, and we had a lot of cross-pollination
9 with our colleagues at IRPAC, which was very
10 satisfying. We have in our report and will present in
11 more detail after the break some solutions and possible
12 modifications of the current procedures.

13 We also looked at the pilot program for digital
14 correspondence audits, looking at how that's going and
15 maybe some ways that we can increase usage of that
16 program.

17 And finally, virtual currency, which, of course,
18 is a rapidly developing area. Every day we read more
19 about it in the news and, of course, it's an area that
20 impacts many, many areas of tax administration.

21 Sharyn Fisk, who has been our lead on virtual
22 currency, has graciously agreed to present this issue

1 this morning.

2 Thank you, Sharyn.

3 MS. FISK: It's a pleasure presenting to Chuck
4 again.

5 The increased taxpayer use of virtual currencies
6 has generated quite a number of novel and new tax
7 issues, and correspondingly potential compliance
8 matters, and these compliance matters can arise both
9 from non-willful taxpayer conduct, just due to lack of
10 knowledge or education, as well as willful taxpayer
11 conduct with an intent to evade taxes.

12 IRSAC was asked for suggestions on how to focus
13 guidance to these taxpayers that use or invest in
14 virtual currencies, as well as the practitioners that
15 serve these taxpayers, as well as for input on
16 compliance and enforcement relating to collection
17 action on virtual currencies.

18 In our report we have made eight recommendations.

19 The IRS issued guidance on virtual currencies four
20 years ago in IRS Notice 2014-21. Considering the
21 increased prevalence of virtual currencies use and
22 transactions, the guidance in Notice 2014-21 does not

1 adequately address the number of tax issues that are
2 arising from these transactions. IRSAC recommends that
3 the IRS consider the guidance received from both the
4 AICPA and the ABA Tax Section on virtual currencies, as
5 well as the public comments they received in response
6 to Notice 2014-21 in issuing further guidance to
7 taxpayers. It's also recommended that the IRS add this
8 issue to its upcoming Priority Guidance Plan.

9 IRSAC recommends that the IRS implement a
10 coordinated strategy regarding virtual currencies and
11 designate a champion or a group that would head this
12 coordinated strategy. This would provide a point of
13 contact for taxpayers, for practitioners, and personnel
14 within the IRS as a focal point for all things known of
15 virtual currency.

16 The guidance provided in Notice 2014-21 is
17 directed to sophisticated taxpayers and practitioners,
18 and we believe the lay taxpayer may not understand how
19 to actually apply this guidance when reporting a
20 virtual currency transaction. Taxpayers typically look
21 at forms and instructions in publications when seeking
22 guidance, and therefore IRSAC recommends that the

1 guidance from Notice 2014-21 be incorporated into the
2 1040 instructions, reporting instructions, and other
3 tax forms and publications taxpayers use. We did
4 provide in the report, in Appendix C, a list of forms
5 that we thought would need that guidance.

6 IRSAC recommends that the IRS expand and develop
7 its VC webpage, a virtual currency webpage. It is a
8 bit difficult to locate, and it's a little sparse at
9 the moment, but we do know that there have been news
10 releases and announcements regarding virtual
11 currencies. These could be added to that website,
12 along with educational videos, brochures, things that
13 will help taxpayers, any other tools based on the
14 guidance at least set forth in Notice 2014-21.

15 We also recommended that the Frequently Asked
16 Questions that are in Notice 2014-21 be put on the
17 website so they're easily located by taxpayers, and as
18 additional guidance is issued those Frequently Asked
19 Questions can be updated for the taxpayers.

20 With respect to the information that the IRS may
21 have received from its Coinbase summons, it's
22 recommended that the IRS issue soft letters to

1 taxpayers discovered through the summons and allow them
2 the opportunity to file amended returns and explain any
3 substantial reporting failures. Also, it's recommended
4 that the IRS create IDR requests, information document
5 requests and other forms requiring these taxpayers to
6 disclose information regarding their virtual currency
7 transactions. This is similar to what the IRS has done
8 in its voluntary disclosure offshore and listed
9 transaction programs. It collects quite a lot of
10 information.

11 If the information from this Coinbase summons does
12 show that there is significant taxpayer noncompliance,
13 it's suggested that the IRS consider a voluntary
14 disclosure program. I do recall reading within the
15 last couple of weeks that the IRS specifically stated
16 that there was not going to be a voluntary disclosure
17 program, but I'm just putting it out there.

18 [Laughter.]

19 MS. FISK: Maybe not now, maybe a little later,
20 that would allow those taxpayers who have failed to
21 report their virtual currency transactions. The
22 program could generate a lot of valuable information to

1 the IRS and bring a lot of taxpayers back into
2 compliance.

3 IRSAC recommends that the IRS revise third-party
4 forms for reporting taxable transactions to indicate
5 when a transaction is conducted through virtual
6 currencies. That will assist the taxpayers not only in
7 properly reporting their transactions but also provide
8 the IRS with data that will help it analyze the risk of
9 taxpayer non-compliance regarding virtual currencies.

10 We also recommend that the IRS issue regulations
11 for reporting virtual currency transactions akin to
12 what's required for brokerage reporting, a 1099-B type
13 of form.

14 IRSAC was informed that the IRS has been in
15 contact with software providers regarding virtual
16 currencies, but it does not seem to have resulted in
17 anything, at least on the software provider side. So
18 it's suggested that the IRS re-engage with software
19 providers to incorporate questions regarding virtual
20 currencies into their questionnaires and diagnostics
21 and software programs.

22 And last, a bit novel, but we've suggested the IRS

1 consider the feasibility of accepting virtual currency
2 as a form of payment for taxes. I know some of the
3 states are currently doing that. It would require
4 amending the 6311 regulations, but if that were an
5 option, the IRS could learn considerable information on
6 how payments are used to strengthen its enforcement
7 collection side.

8 And those are all of our recommendations.

9 MR. VENTRY: Thank you, Sharyn.

10 Thank you, team.

11 I think we should note that the W&I and SB/SE
12 Subgroup picked up this issue, the virtual currency
13 issue, kind of late in the year and developed it just
14 incredibly impressively. So thanks for picking it up

15 MR. HARDY: So at this point, unfortunately, the
16 Commissioner has a tight schedule, so we are going to
17 take a 10-minute break.

18 All right. We are at break.

19 [Recess.]

20 MR. VENTRY: All right. So before we get back
21 into the reports where the subgroups address the IRS
22 personnel directly, Terry Lemons had a few things to

1 say.

2 REMARKS FROM IRS CHIEF, COMMUNICATIONS & LIAISON

3 MR. LEMONS: Thanks, Dennis. I appreciate it.

4 I had a few remarks. I did just want to note a
5 couple of things from my standpoint and on behalf of
6 our team, National Public Liaison. We really
7 appreciate all of the time and hard work you guys put
8 into it. This has certainly been an interesting year
9 for IRSAC, and I appreciate the way that you guys have
10 professionally handled all this. I think we're in a
11 much better spot on a number of issues.

12 I do in particular also want to thank you for the
13 work consolidating the three advisory committees into
14 one. Last year's report from IRSAC was I thought
15 insightful in terms of looking at the composition of
16 IRSAC, and there are some really good details in the
17 report today on the backstory about the consolidation.

18 When this came up, we really wanted to make sure
19 that IRSAC came out of this as a stronger advisory
20 group that can help the agency, and thanks to the work
21 of Dennis and Kathy, as well as last year's chair, Tim
22 McCormally, as well as the leadership of IRPAC, Dana

1 Flynn and Joel Levenson, and the ACT leadership, I
2 think we're going to be in a really good position in
3 2019 to make this an even more important group.

4 I'm really happy that we're going to be splitting
5 up the Wage & Investment and Small Business/Self-
6 Employed divisions into separate groups. I think
7 that's going to be very helpful to us.

8 And finally, just listening to the initial report-
9 outs from Phyllis and Stephanie, there's a lot of
10 synergy between these advisory groups. The IRPAC issue
11 came up a couple of times. I know you guys have been
12 working very closely with the ETAAC membership.

13 So anyway, I think it's a new opportunity, and I
14 think the leadership of IRSAC, as well as the other
15 advisory committees, has really made this happen. So
16 anyway, on behalf of Mel and me, just really want to
17 share my appreciation for your work on that.

18 MR. VENTRY: Thank you, Terry.

19 So we now will get into the actual subgroup
20 reports.

21 The first subgroup to report is Digital Services.
22 The IRS representative here is Michele Causey, Acting

1 Director of Office of Online Services. Take it away,
2 Digital Services.

3 DIGITAL SERVICES SUBGROUP REPORT

4 MS. CAUSEY: Good morning, everyone. Thank you
5 for allowing me to be here with you today, all the
6 various IRSAC members.

7 While I'm new to my position as the Acting
8 Director of Office of Online Services, I've actually
9 been a member of Online Services in numerous capacities
10 for the past seven years. So I bring to the
11 organization a varied perspective, from user experience
12 and design, product management, and all the various
13 digital products and services that we are looking to
14 deliver together.

15 First I would like to specifically thank Stephanie
16 Salavejus. Stephanie, thank you for your leadership
17 and leading the Digital Services Subgroup. As I
18 mentioned to you on the side here, the team has
19 thoroughly enjoyed working with you and your team
20 members. We appreciate the recommendations, and we're
21 sorry to see you go as this is your last year on the
22 committee. But thank you for your service, and thank

1 you for your leadership.

2 We've really enjoyed working and partnering with
3 all of you on developing and enhancing these
4 recommendations moving forward to actually see many of
5 them come to fruition. I know you heard from our
6 predecessor earlier in the year, Rene Schwartzman. She
7 shared with you a little background about our
8 organization. I'm just going to give a little
9 refresher for those of you who may be hearing this for
10 the first time.

11 We're a relatively small organization within the
12 IRS, only 100 federal employees, and we cannot do the
13 services that we do without the partnership of our
14 leadership in Wage & Investment, SB/SE, Large Business
15 & International, our Tax-Exempt Government Entities
16 organization, and IT, among others.

17 We do have some highlights that I'd like to share
18 with you on our progress moving forward. While our
19 primary focus is the digital services channel online
20 tools, any development or new capability that we
21 provide has an impact on the other channels, and our
22 optimal goal is to ensure that we have a unified

1 experience for the taxpayer, be it through the phones,
2 whether they go to a walk-in center or self-service
3 through IRS.gov. So that's why that partnership is
4 really important.

5 I do want to share some of our highlights from
6 this past year from the previous recommendations that
7 were set forth through the IRSAC report. As you may or
8 may not know, we moved to a new platform for IRS.gov in
9 August 2017. We've now moved to an open-source
10 platform to be able to publish content and tools and
11 services on IRS.gov. That open platform is Drupal.
12 That has allowed us the flexibility to create a mobile
13 responsive website and provide more mobile capability
14 for taxpayers since the majority of our interactions
15 are coming from mobile devices on IRS.gov.

16 To give you some context, in Fiscal Year 2018 we
17 had over 609 million visits to IRS.gov, with about half
18 of them coming from a mobile device, either through a
19 tablet or a cell phone. So it's really imperative that
20 we continue to work on improving our content, as well
21 as improving the digital tools that we have on the site
22 so that they're mobile responsive.

1 Additionally, we have enhanced our online accounts
2 application for individual taxpayers. For Fiscal Year
3 2018, we had 6.4 million visits from 2 million unique
4 taxpayers to the online account tool, and we've also
5 merged the capability for taxpayers to not only see
6 their balance in their online account but that they can
7 also make payments through the Direct Pay application
8 via the online account tool. And I'm proud to say that
9 last year, last fiscal year, we had 581,000 payments
10 through the online account tool, generating \$1.8
11 billion in revenue.

12 We've also seen a significant increase in our
13 Online Payment Agreement application, and the team has
14 a little inside joke because for Fiscal Year 2018,
15 actually two days after Fiscal Year 2018 concluded, we
16 surpassed 1 million contributions or completions
17 through the online payment agreement. And our internal
18 joke is, well, we had a couple of unintended vacation
19 days during Fiscal Year 2018, so we're going to say the
20 1 million completions occurred completely in 2018 and
21 not give credit to those two days.

22 The Office of Online Services is very grateful for

1 the recommendations that were included in the IRSAC
2 report. I know you mentioned a lot of interest in the
3 authentication, authorization, and access, which is our
4 eA3 capability. Office of Online Services will
5 continue to partner with the business operating
6 divisions, as well as IT, and also the Identity
7 Assurance Office in PGLD, to ensure that we're meeting
8 our legal obligations to protect taxpayer data, as well
9 as taxpayer identity, as we develop new online digital
10 solutions.

11 I am also pleased to announce that the Digital
12 Services IRS Authorization Strategy was approved by the
13 Services and Enforcement ESC on August 28th, 2018. So
14 that will allow us to move forward with our capability
15 for providing those services to individual taxpayers,
16 as well as practitioners.

17 We also recognize that with the new complexities
18 with the new NIST guidelines, with Publication 863-3,
19 that there are some challenges as we look at unique
20 taxpayers coming in, remote identity, whether you're
21 in-person or online. So we're working to navigate
22 those challenges so that we can make an informed

1 solution moving forward in the digital space.

2 And then also I would like to talk about taxpayer
3 digital communications and the need for a tax pro
4 account. I'm also pleased to let you know that the
5 ability to move forward with the tax pro account in
6 terms of requirements, definitions, and gathering was
7 approved by the Strategic Development ESC on August
8 2nd, 2018. So through our partnerships in the working
9 group, and through using iterative development
10 methodologies, we are elaborating on requirements for
11 what those capabilities will be moving forward to a
12 minimum viable product for tax pro account. So we look
13 forward to the continued partnership to define those
14 requirements so that we can move forward in that
15 direction.

16 We've also received lots of feedback on the need
17 to correspond with the Service digitally, and through
18 taxpayer digital communications we have a number of
19 pilot installations to really learn findings and see
20 what we really need to address internally in order to
21 make that a full-blown capability through the Service.
22 We have a number of pilots with SB/SE, and they have

1 done some service exams, correspondence exams, and
2 we've had over 2,000 correspondence exams during that
3 particular venue, and we're also looking at additional
4 pilot installations with TEGE and LB&I, and we're
5 looking to expand that capability moving forward as we
6 iterate on our findings.

7 We also are taking advantage of Tax Chat, and with
8 SB/SE we do right now unauthenticated live chat with
9 taxpayers, and we have a pilot working right now in
10 concert with SB/SE, and we've serviced over 29,000
11 chats in that pilot, and that particular pilot is
12 related to online payment agreements. So we are making
13 advancements in that area, and we do anticipate the
14 learnings and the findings from these pilot
15 installations will help to inform the requirements for
16 tax professional account as we evolve our thinking
17 there.

18 So with that, I just want to say thank you to
19 IRSAC. Again, thank you to Stephanie and the team for
20 your partnership and collaboration. Thank you for
21 allowing me to be here today.

22 MR. VENTRY: Thank you, Michele.

1 Stephanie's team is going to report on at least
2 one more issue.

3 MR. RULE: Yes. Thank you, Dennis.

4 And, Michele, thank you for that update.

5 I first want to just express my gratitude for all
6 the help that the IRS personnel has provided to us.
7 The information that we obtained allowed us to put
8 together the report for the Digital Services Subgroup.
9 Specifically, I would like to thank Howard Zach, who
10 coordinated all of the meetings for us.

11 You know, through this process, it appears to us
12 that the digital services are going to be extremely
13 important to the IRS to meet its goals of providing
14 top-quality customer service, and also for fair,
15 efficient tax administration. The challenge that the
16 IRS has is the security of data. We've all heard the
17 acronym eA3. The authentication, the authorization,
18 and the access is all very important to make sure that
19 the taxpayer data is not compromised, probably the
20 biggest challenge in moving forward with the digital
21 services.

22 What we discussed is the importance for the eA3 to

1 be compliant with the National Institute of Standards
2 and Technology, also known as NIST. The guidelines,
3 just like any set of rules, are going to have to be
4 followed very closely to make sure that the most up-to-
5 date protocols are followed to implement the services.

6 The application of eA3 should be risk-based. So,
7 for example, there might be access to data by a
8 taxpayer that would require different levels of access
9 controls. For example, if a taxpayer is going to check
10 on the status of a refund, that might be a different
11 level of access control than if they were actually to
12 require transcripts or other very sensitive data.

13 In summary, as we've gathered the information and
14 had our discussion with regard to the eA3, our
15 recommendations are to implement these control access
16 procedures on a risk basis; to implement eA3 on an
17 enterprise-wide basis; and also to implement a digital
18 process to facilitate the taxpayer's ability to
19 authorize third-party access to their data.

20 And with that, I'll turn it over to Antonio.

21 MR. GONZALEZ: Thank you, Martin.

22 My name is Antonio Gonzalez, and together with

1 Ben, we'll be discussing Issue 2 of the report, on
2 Application Program Interface (API) integration
3 strategies.

4 I, too, wanted to thank everyone both in the
5 Office of Online Services and Customer Account Services
6 for all the assistance we've received, and in
7 particular Howard, who was excellent not only in
8 getting us the meetings, but he also was able to get us
9 into the Innovation Lab at New Carrollton, which for us
10 was a great, great day. So, thank you all very much.

11 I also wanted to thank Stephanie. Stephanie has
12 been our leader, she's been our mentor. The first day
13 she took us to the meeting, showed us where to get the
14 I.D. badges, everything. So it's not just on the
15 Digital Services side but also in general.

16 Last year, the Digital Services Subgroup made a
17 recommendation in the public report that the IRS should
18 develop a realistic API integration strategy that
19 allows for safe and secure communication with other
20 internal or external parties. Building on last year's
21 important recommendation, the OLS experts and our
22 subgroup came up with a couple of potential success

1 stories that can become a standard for both internal
2 and external communications.

3 I'm first going to discuss the ACH payments API,
4 followed by Ben, who will discuss the tax information
5 sharing API.

6 As you know, the IRS has many different electronic
7 payment options. Some of them are credit and debit
8 cards, electronic funds transfers, the OPA, or online
9 payment agreements, and Direct Pay, which is
10 essentially an ACH payment that comes out from the
11 taxpayer's bank account.

12 The benefits of the electronic payments to the
13 IRS, besides a much lower cost, as is detailed in the
14 report, are substantial improvements in efficiency,
15 timing, and the accuracy of the way payments are
16 applied.

17 Given how much we all use our electronic devices
18 today, you would imagine taxpayers are keen to use the
19 electronic options, yet the majority of the payments
20 still today are being sent by mail, including an
21 incredible 87 percent of estimated tax payments which
22 are still done via paper.

1 The November 2013 introduction of Direct Pay was
2 considered a big success and continues to be a big
3 success when measured by both year-over-year increases
4 in adoption and the 66 percent success rate in
5 completed payments. For payments that are not
6 completed, user dropout usually occurs in the re-
7 authentication steps of entering tax information or
8 I.D. proof. For those that aren't as tech savvy, this
9 is the equivalent of making that call to a credit card
10 company when you receive some bill and you need to
11 speak to somebody. We give them our name, Social
12 Security, mother's maiden name, first vehicle, all that
13 information. The person on the other side confirms
14 that everything is great but that we need to speak to a
15 billing specialist or a customer support representative
16 or someone else, and after a brief hold you go through
17 the exact same process once or twice.

18 So this unnecessary re-authentication created an
19 excellent opportunity for the development of the ACH
20 payments API, technology that is going to allow your
21 credentials to travel with a repayment request all the
22 way through. In an effort to make an impact without

1 any modification to the eA3 framework, the first
2 planned use we identified was to enhance a current
3 online account platform with seamless integration to
4 schedule payments, change scheduled payments, check on
5 payment history or on the status of your current
6 payment. The benefits are clear for all stakeholders
7 involved.

8 Some of the benefits are a centralized and
9 improved user taxpayer experience, of course; greater
10 accuracy in the application of payments, which is an
11 issue; and the API also provides the IRS with a
12 reusable platform that can be used for other
13 applications, like IRS To Go Mobile, other IRS
14 applications, as well as the option to share with
15 trusted third parties.

16 In 2014, OLS worked with the Bureau of Fiscal
17 Services to define requirements for a payments API.
18 We're happy to report that earlier this summer, I
19 believe around August, they did re-engage and they were
20 able to finalize the requirements for the ACH payments
21 API. We're looking forward to seeing progress in the
22 near future, both as members of IRSAC and as taxpayers,

1 obviously.

2 Thank you.

3 MR. DENEKA: Thank you. As Tony mentioned, I'll
4 be discussing our recommendations around tax
5 information sharing API.

6 So by way of background, the current process to
7 obtain tax information is to request a transcript,
8 which can be done through a number of channels. One is
9 the Income Verification Express Service, or IVES.
10 Another is the transcript delivery system, often used
11 by tax professionals. Individuals can use the Get
12 Transcript system to request it online or by mail, and
13 third parties can also request it by mail, and I think
14 for a few more weeks by fax.

15 The channel that most closely parallels the API
16 we're recommending is the IVES, so I'll go into a
17 little bit more detail there.

18 IVES enables third parties, usually lenders or
19 those performing background checks, to electronically
20 receive, with taxpayer consent, tax information in the
21 form of tax transcripts at \$2.00 per transcript user
22 fee.

1 To participate in the IVES program, you must first
2 apply for enrollment and pass suitability checks before
3 being granted acceptance to participate. Once you're
4 enrolled you would submit a Form 4506-T or 4506T-EZ,
5 which is a request for transcript tax return. The IRS
6 personnel would then manually process the return and
7 upload the transcripts into the user's secure object
8 repository on the e-service platform.

9 While this does contain some user-friendly
10 aspects, like providing the transcript in electronic
11 format and use of electronic signatures on the 4506-T,
12 there is still room for improvement. It's still very
13 manually intensive, requiring the IRS to process and
14 upload the transcripts. That turns into a turn-around
15 time of around two to three business days, and then
16 there are some security concerns, as we've seen by the
17 updates to the transcript content and delivery channels
18 this fall.

19 So our recommendation for the tax information API
20 would essentially allow the Service to receive third-
21 party authorization requests for tax information,
22 process those requests and provide the data back, all

1 in an automated and electronic manner.

2 The benefits here, first of all, it would help
3 improve compliance. It would allow taxpayers to more
4 efficiently gain access to their tax information. So,
5 for instance, they'd go to work with a tax professional
6 in a single session of sitting down with that tax pro
7 to be able to obtain the information and know the next
8 steps they need to do to come back into compliance. It
9 would also produce cost savings for the Service in the
10 form of decreased calls for request transcripts,
11 decreased correspondence in and out of the Service.

12 And much like the IVES program, a user fee could be
13 used to help offset the cost of development and ongoing
14 maintenance of the program, as well as cost of audits.

15 And lastly, there would be improved security. As
16 my colleagues mentioned, the eA3 framework is critical
17 here. But also, like the IVES program, an up-front
18 vetting process of these third parties would also be
19 necessary. And then in turn, while using the API, the
20 identity proofing and authentication process must be
21 secure, and that's in turn going to make sure that we
22 have authorized access to the information.

1 And lastly, as Tony mentioned, this will really
2 help us develop standards for the external-facing APIs,
3 which aligns nicely with the IRS's strategy of
4 collaborating with third-party external stakeholders to
5 improve service and outreach to taxpayers.

6 So in conclusion, my colleagues and I feel that
7 the APIs are essential tools to enable the digital
8 services that people have come to expect when dealing
9 with financial institutions and other service
10 providers. We believe that leveraging APIs, both
11 internally within the IRS, as well as with other
12 government agencies and external third-party
13 stakeholders, will improve user experience, save IRS
14 resources, and facilitate taxpayer compliance.

15 So with that, we thank you for your time, and I'll
16 pass it back to Dennis.

17 MR. VENTRY: Thank you, Ben.

18 Michele, this is a time usually where -- there's
19 no obligation to do so, but to the extent you want to
20 engage the subgroup or other members of IRSAC with
21 respect to the specific recommendations, you're more
22 than welcome to.

1 MS. CAUSEY: Thank you. So, like I said in my
2 brief, we do recognize and acknowledge the importance
3 of eA3. That's critical for us to deliver additional
4 capabilities for taxpayers. We share a mutual goal in
5 that we want taxpayers and tax professionals to be able
6 to self-serve, where applicable, and ultimately
7 result in compliance. So these matters we will take
8 under advisement with the recommendations. We do have
9 some internal complexities, but we do have a shared
10 objective.

11 MR. VENTRY: Great. Thanks, Michele.

12 Next up we have, for the last time, the combined
13 subgroup W&I and SB/SE. With us we have Dave Alito,
14 Deputy Commissioner of W&I, and Lisa Beard Niemann,
15 Deputy Commissioner of Small Business/Self-Employed.
16 Welcome and thank you for your time.

17 SMALL BUSINESS/SELF-EMPLOYED and WAGE & INVESTMENT
18 SUBGROUP REPORT

19 MS. KUBEY: First of all I wanted to thank, as
20 well as my colleagues here, our wonderful liaison,
21 Maria Jaramillo, and Johnnie Beale and Cindy Jones, who
22 have been just our stalwart supporters and coordinators

1 from W&I. All of our subject-matter experts,
2 particularly LaJeana Shoffner on our Issue 1 Lockbox;
3 Vivian Dunn and retired Carol Walker on the Third-Party
4 Authentication; Scott Irick and his staff on the
5 Taxpayer Digital Correspondence; and Richard Goldstein
6 on the Virtual Currency. We really enjoyed our
7 collaboration with all of them.

8 So, we're going to present each of our issues
9 separately, but what we found when we were going
10 through all of these is that we did have some common
11 themes that all of these issues kind of touched upon.
12 One is improving the taxpayer and tax professional
13 experience with more efficient use of IRS resources.

14 Also, moving taxpayers and tax professionals and
15 the IRS away from paper and toward less expensive and
16 more efficient electronic methods. Obviously,
17 balancing the robust security with taxpayer and tax
18 professional access to sensitive information is
19 paramount.

20 And finally, improving communication in both
21 directions to enhance delivery of IRS services.

22 So for Issue 1, Lockbox, I would like to introduce

1 Pat Thompson, and she will lead on that issue.

2 MS. THOMPSON: Good morning, everyone. I would
3 like to echo everyone's comments about how helpful the
4 IRS has been in providing information to us to be able
5 to have us analyze it and make recommendations, and
6 also have a great report. And then with my topic, just
7 as well as everyone else's on my group, we did
8 collaborate quite a bit within our own subgroup, so
9 thank you all for that too.

10 As Phyllis mentioned, mine is the Lockbox program.
11 As we know, that is designed to collect taxes. So the
12 Lockbox Network mission is collecting, accurately
13 processing, and accelerating payments to the U.S.
14 Treasury while maintaining security and confidentiality
15 of the taxpayer information. So when we first met, the
16 IRS had identified an issue where payments were being
17 misdirected to taxpayer assistance centers rather than
18 using the Lockbox Network. And when the analysis was
19 done, it was determined that most of those misdirected
20 payments were coming from private delivery services.
21 So our recommendations are going to be based on trying
22 to help increase the use of the Lockbox Network, and

1 also maybe to even eliminate its use many years down
2 the road, I would suppose.

3 So the first recommendation is to encourage
4 electronic payment of your taxes or of the tax payments
5 because, as you know, if you're going to be paying
6 something electronically, you don't need the Lockbox
7 system. The majority of the taxpayers are already
8 using the electronic system, so we can only improve
9 from there.

10 But there are ways to improve or increase its use,
11 and that is to get the tax practitioner community on
12 board with making electronic payments, because as soon
13 as they're on board with it, then they can convince
14 their clients fairly easily -- there will be some
15 resisters -- to also continue with that. I think when
16 we're talking with our clients, most of them don't want
17 to give the IRS their bank account information because
18 they're thinking that it's going to be used for some
19 other purpose than what it's supposed to. I think
20 that's just an education process that could take place
21 to reassure them that the only bank information that
22 they're providing at that particular point in time is

1 for that tax payment, and that on Direct Pay that
2 immediately is eliminated. So it's not stored
3 anywhere. I think that might help go a long way with
4 increasing the electronic payments.

5 The other recommendation under electronic payments
6 is to allow tax practitioners to be able to pay the
7 taxes electronically for clients. Now, we would also
8 assume that the tax practitioner would need the
9 taxpayer's authorization to do that. We're not saying
10 that we're just going to do it for them. But it would
11 help because taxpayers may not have access to online
12 abilities or the network, or they could also just not
13 be familiar with paying their things electronically.
14 So it's a comfort level that the taxpayer would have by
15 allowing the tax practitioner to be able to do that.

16 The other part of electronic payments could be to
17 educate and make taxpayers more aware of it, and we can
18 look at the 1040 instructions to have that. Right now
19 there are two places within the instructions that
20 mention electronic payments, but they're not at the
21 very front of the package. One is in the middle maybe,
22 one is maybe at the end, but the other part is one of

1 the mentions is just to send the taxpayer to the
2 website. So we're thinking as soon as you try to send
3 somebody to a website, that's one more step that
4 they're not likely to do. So if you make it very easy
5 for them within the tax package itself, that would be
6 very helpful.

7 Also, there was a previous mention of the Form
8 1040 estimated tax payments that are still being made
9 by paper, so the recommendation was to change the 1040-
10 ES instructions to include information about being able
11 to pay electronically, and we do understand that that
12 particular recommendation has already been done. So in
13 the instructions for the 1040-ES, and also the voucher
14 itself, that has been implemented. We were talking
15 about real-time implementations, and that's an example.

16 The second recommendation is to increase the
17 awareness of the tax practitioner community about the
18 issue of misdirected payments because they may not
19 really be considering it as an issue. We know how
20 expensive it is to paper file a paper check anyway, but
21 now to have it go to a Taxpayer Assistance Center
22 that's not set up to receive those payments, as you

1 know, that's quite problematic.

2 There are many stakeholder liaison meetings that
3 the IRS has throughout the country. That would be a
4 great opportunity for them to be able to reinforce the
5 use of electronic payment, and also the Lockbox Network
6 system. And another possibility could be for either
7 the IRS or a trusted practitioner or liaison person to
8 actually write an article to describe what the issue is
9 and try to raise awareness and probably fix it that
10 way.

11 Some of the Taxpayer Assistance Centers know who
12 the tax practitioners are that are sending them the
13 information or the tax payments, so maybe it would be
14 worthwhile that somebody, the IRS, just contact them
15 directly and inform them of the proper addresses for
16 sending their tax payments. That would go a long way.

17 Another recommendation is to work with the
18 software developers. The majority of the tax returns
19 is done using software, and we talked earlier about
20 maybe having prompts in there, because as soon as the
21 software asks you a question, you're more likely to
22 answer it. So the question could very easily be, "Are

1 you using a private delivery service?" Yes, you are.
2 Then they know that when the instruction letter is
3 done, they're going to be putting in a street address
4 rather than the P.O. Box, which is causing a problem to
5 start with. And the software developer could also have
6 diagnostics that are very helpful. Maybe you don't
7 need them to prepare the return, but it just puts the
8 tax practitioner on notice: "Oh, I never thought about
9 that. If I'm using the private delivery service, I
10 can't use a P.O. Box. I need a street address."

11 Another recommendation is to change the form
12 instructions. The form instructions could use the
13 street address for the private delivery service. All
14 the other addresses are included; that one is not. And
15 what the instructions do again is it refers you to the
16 website. Again, one more step that's likely to be
17 missed in that case.

18 Another recommendation is to contact the private
19 delivery service providers themselves. Our
20 recommendation is for the IRS to give a brochure to the
21 private delivery services that these are the proper
22 street addresses. So if you do get something in that's

1 going to a post office box, don't go online on Google
2 and find out the closest IRS location and send it
3 there. Then they will have the ability to very quickly
4 know that, "Oh, yes, this is a P.O. Box, can't do that.
5 Let's do a street address."

6 You could also think about the software company
7 changing their software. Maybe that's a little bit
8 more involved than they want to do, but again,
9 providing that brochure or a list of the proper
10 addresses would be very helpful.

11 The Taxpayer Assistance Centers who are receiving
12 these private delivery service payments -- and they
13 know who they are -- maybe they know the locations of
14 those delivery services, and maybe visit them again to
15 try to make them aware that they can't just use any
16 address of the IRS. It really is a specific address
17 that they need to use.

18 Communication for the individual taxpayers.
19 Again, it would be the IRS to use all the communication
20 tools they have available to them, including social
21 media, to make taxpayers aware of the private delivery
22 service street addresses. Again, they're not aware

1 that there is an issue, so they're going to continue
2 doing what they've always done.

3 The final recommendation, if they're going to
4 continue to use a paper check, if they would use
5 certified mail rather than using a private delivery
6 service. Certified mail can use a P.O. Box. So the
7 taxpayer is going to get their proof of mailing,
8 They're going to get their proof of delivery and avoid
9 the problem altogether.

10 So those are our recommendations under the Lockbox
11 system and trying to avoid those misdirected payments
12 to taxpayer assistance centers.

13 Thank you.

14 MS. KUBEY: Thank you, Pat.

15 Next, Charles Read will present on third-party
16 authentication.

17 MR. READ: Thank you, Phyllis.

18 I want to echo the comments of my colleagues and
19 appreciate all the help we've gotten from the Service
20 and all the members throughout who have just been
21 wonderfully helpful.

22 Issue 2 is Third-Party Authentication. In January

1 of 2018, the IRS instituted a new identity verification
2 process to be used by the IRS toll-free telephone and
3 walk-in assisters.

4 Third-party authorization forms must have a
5 taxpayer's information and periods for which authority
6 is being granted, signed and dated by the taxpayer.
7 These forms must also specify the third party's
8 information. Before the 2018 new identity verification
9 process, third-party callers had to provide the IRS
10 with the taxpayer's information and the information for
11 the representative.

12 However, the IRS discovered that cyber criminals
13 obtained and posted stolen electronic filing
14 identification numbers on the Dark Web as a crime kit
15 for identity thieves, who would then use the stolen
16 information to access taxpayer transcript data and
17 incorporate that data into fraudulent tax returns or
18 for other illegal purposes.

19 Realizing that the acceptance and processing of
20 third-party authorizations had not kept pace with the
21 current trends in fraud, the IRS added a third-party
22 SSN and date of birth to the information requested.

1 Practitioners, knowing the damage that could be
2 done with someone's Social Security number and date of
3 birth, expressed concern about providing their personal
4 information on any matter unrelated to their personal
5 business and when privacy is frequently not feasible.

6 The IRS is seeking to develop a process that would
7 allow a third party to enter their SSN via telephone
8 keypad, eliminating the need to provide the information
9 to the IRS verbally. The IRS anticipates having that
10 process in place by 2020.

11 IRSAC does have some recommendations. First is to
12 expedite the digital entry process. This would be
13 beneficial to the IRS, taxpayers, and third-party
14 representatives. It will also assist the CSR by
15 eliminating the need to key in the SSN.

16 Possibly revamp the entire CAF number program. If
17 the CAF number system is reworked so verification of
18 identity is required before issuing a CAF number, akin
19 to the PTIN program, stronger security would be in
20 place on a go-forward basis. In addition, layers of
21 protection like out-of-wallet security questions could
22 replace the need for personal information.

1 Another is to institute possibly an RSA token
2 option. RSA authentication mechanism consists of a
3 token, either hardware or software, and changes every
4 60 seconds to foil criminals.

5 Incorporate an authentication option tree, a tree
6 of other identifying information to authenticate a
7 third party. The tree could include PTIN, client tax
8 return data, payroll filing data, and other data points
9 accessible by CSRs, with requests for Social Security
10 number and date of birth toward the end of the tree.

11 Initiate an automated callback system through
12 Online Services. The IRS could initiate an
13 appointment-setting procedure for callbacks from the
14 IRS to a third party. The third party would go online
15 to request a callback at a specific scheduled time.

16 Six. Leverage the tax pro application. The IRS
17 could use the multifactor authentication process
18 already in place on e-services for third parties to
19 retrieve online transcripts. This could be part of the
20 tax pro application being developed.

21 CSR access to SMS codes. Provide CSRs with a
22 desktop version of the IRS To Go app using the existing

1 e-services process to send multifactor authorization to
2 the third party.

3 Highlighting the CAF77 request to third parties.
4 Publicize the ability and desirability for
5 practitioners to check and eliminate out-of-date or
6 fraudulent CAF filings. Also, the practitioner could
7 realize his CAF number had been compromised and have it
8 replaced.

9 Inform the practitioner community in much more
10 detail of the entire problem.

11 And finally, research what other organizations
12 needing to authenticate telephone inquiries are doing
13 to ensure the identity of the caller.

14 Thank you.

15 MS. KUBEY: I'll present the issue on the
16 correspondence exam Taxpayer Digital Correspondence
17 (TDC) pilot.

18 Correspondence exams obviously are a way of
19 leveraging IRS resources because they can take care of
20 examination issues with much less time and personnel
21 hours as a field exam or a TCO exam. So they're
22 usually related to a specific issue, and there is a

1 limited selection of tax return items that's involved
2 in a correspondence audit.

3 So these correspondence audits I think are ideally
4 suited to a digital communication format, and with this
5 pilot we have seen the taxpayers and the IRS personnel
6 both have a very positive response to how the pilot is
7 going. The one thing that's kind of interesting is
8 that there are a lot more contacts from taxpayers to
9 the IRS with the TDC format because I think it's just
10 easier. It's almost like, "Hey, I just thought of
11 something, so I'll just enter it in there."

12 So one of our recommendations is educating the
13 taxpayers, and perhaps the tax professionals who are
14 representing them, that it might be more efficient to
15 consolidate information and present it all in one fell
16 swoop. That kind of ties in with a theme that has gone
17 through many of our recommendations. It's so easy to
18 fall back on old habits, and to get people to try out
19 something new and embrace it and use it is tough. But
20 I think once we cross that hurdle, we'll really go
21 great guns with this program.

22 The digital correspondence ideally should

1 facilitate ease and speed from initiation to resolution
2 of the examination. Especially in the earlier stages
3 of the pilot, we found that that was not always the
4 case because there were additional contacts. But I
5 think as the second stage of the pilot has progressed,
6 we're finding that there are more positive correlations
7 and higher rates of resolution and less time than with
8 a normal snail-mail and fax-related correspondence
9 exam.

10 So we looked at the pilot, and one of the big
11 issues, of course, was that the utilization rate was
12 not high among the people who were invited to use it.
13 So looking at how we could increase usage, one thing
14 was to leverage through tax professionals. Currently,
15 the taxpayer is invited to participate. Again, it's
16 just easier not to, I think. It's easier not to go
17 through the process. So I think if we can get the tax
18 professionals involved and maybe create a way where the
19 tax professionals could ask to be part of the digital
20 correspondence audit, I think that might increase usage
21 because, obviously, we who do representation are much
22 more familiar with the process. We know how to

1 respond, we know how to use the digital services, so I
2 think it would be a natural fit. And if that is in
3 place -- the ability to request participation -- we
4 could really get the word out through the IRS
5 Nationwide Tax Forums, through stakeholder liaisons,
6 through the various tax professional organizations that
7 we all belong to.

8 Second, we thought there could be more prominent
9 highlighting of the digital option in the
10 correspondence. In the first stage of the program,
11 there was a neat little flyer that had some color. It
12 was something that caught the taxpayer's eye. So I
13 think they were probably more likely to respond than
14 once they got the letter revised to include a paragraph
15 about it. The flyer was no longer included, and it's
16 just kind of another text option.

17 So last year in our report, we looked at revising
18 some of the collection letters, and we looked at colors
19 and icons and kind of a behavioral approach to driving
20 taxpayers to the desired behavior. And I think this is
21 a program that really could benefit from that. They
22 need to be able to perceive that this is really the

1 best thing since sliced bread and that it will change
2 their lives.

3 [Laughter.]

4 MS. KUBEY: So I think there's opportunity for
5 better marketing there.

6 We also were looking -- and I was interested to
7 hear Michele talk about the online services chat option
8 because we think, in addition to the digital
9 correspondence, that there might be an opportunity to
10 do quick answers/questions through a chat option
11 through the platform, and I think that might also move
12 cases along more quickly.

13 We thought it would be good to analyze why
14 taxpayers and, if applicable, their representatives
15 begin the digital correspondence process and then drop
16 out. Obviously, a lot of it may be the authentication
17 factor, but just to kind of look at those cases where
18 people start out and don't follow through and see if
19 there's a common thread that perhaps could be
20 addressed.

21 We also, in our appendix, we suggested some
22 taxpayer-friendly guidance, just how to present the

1 information and just reminding them that basically
2 their job is to help the examiner know what they
3 already understand as the taxpayer -- what they did,
4 how they did it, and why they did it -- and that we're
5 just trying to understand what they did so that we can
6 all determine the correct amount of tax, nothing more,
7 nothing less.

8 And finally, of course, the ever-present theme of
9 balancing the security of taxpayer information with
10 accessibility to the program. And finally, and I think
11 maybe most importantly, could we consider this platform
12 for other uses. The one that really popped up in our
13 minds was the AUR Program, the Automated Underreporter
14 Program, which is usually something that requests,
15 again, a limited selection of items. Currently you can
16 respond via mail or via fax, and one of the big
17 problems is trying to figure out whether the IRS
18 actually received your information. So, of course,
19 we're all calling and tying up IRS resources. I think
20 if we could submit this information digitally and have
21 an immediate confirmation that it had been received,
22 that that would be a good thing and would free up

1 resources on both sides of the equation.

2 The other thing we thought of was could this
3 platform be used for accepting returns and paperwork
4 and submissions that are not currently filed through e-
5 file, such as the 1040-X and some of the CAA
6 application forms. If we could submit so-called paper-
7 filed documents digitally through this portal, it may
8 also save time and money and create more ease of use.

9 I think that is it for the digital correspondence.
10 We'll be happy to accept questions.

11 MS. BEARD NIEMANN: First off, I want to thank
12 everyone. You know, it's so wonderful to see the
13 passion in this room on all these tax issues, and it
14 helps to let us know if we're getting it right. So I
15 can't thank this committee enough for the time that you
16 put in and your dedication.

17 Let me just start with taxpayer digital
18 communications. It was funny that Phyllis mentioned
19 our glossy that we did with our first notice, which
20 sounded really good, but this is what really happened.
21 Everybody got that, and instead of contacting us, they
22 thought it was a scam.

1 [Laughter.]

2 MS. BEARD: The comments that we heard was it was
3 too nice for the IRS to send out.

4 [Laughter.]

5 MS. BEARD: So we had to move on to a letter. I
6 am reading through the report, and I'm hoping the third
7 time is the charm, because we have research involved
8 now, and we are going to look into doing some
9 behavioral activities and how it relates to taxpayers
10 and everything. We took your recommendation last year,
11 and we've been doing notices with collection, and it's
12 been very interesting doing behavioral studies on the
13 thought process, and it's working. It's been really
14 good. But that's the true story about the really nice
15 glossy.

16 [Laughter.]

17 MS. BEARD: You mentioned AUR. Every year we've
18 been looking at the results of the pilot, and we're
19 looking at areas we can expand into that, and that
20 definitely is on the list. I mean, this has really
21 gone well. The one thing that is interesting, Phyllis
22 mentioned that they think of something or they find

1 something, they send it to us. Okay, the time on case
2 for this program has gone up for that reason. So
3 hopefully we can start getting the taxpayers to send
4 everything together. But the feedback on it has been
5 really, really positive.

6 Let's see what else. I made some notes here.

7 Also, we're thinking of expanding it. Right now
8 it's just in Philadelphia, but we're looking to expand
9 it into some of the other campuses, and we're working
10 directly with Online Services on some improvements and
11 everything. So I think in the future you'll see more
12 of that, and David might even mention this next, but
13 Charles mentioned doing callback. We're working on
14 that. That might be sooner instead of later because
15 that would really help us.

16 So there's a lot of things out there, ideas and
17 everything, but we hope you'll keep giving us the ideas
18 because it comes down to, and I hate to say it,
19 resources. We can't really do too much more right now
20 even with the pilot because we only have so many people
21 that can answer. So I'm going to put a plug in here
22 right now, too, for IRS.

1 Speaking of resources, in case you haven't seen,
2 we are hiring. SB/SE is hiring 3,000 people this year.
3 We are on USA Jobs right now. We're probably going to
4 bring in about 800 revenue agents throughout this year,
5 and 750 ROs; also tax compliance officers, and I know
6 that Doug will also be hearing. CI has it out there.
7 So we need you to tell your family and friends it's a
8 great place to work; we don't have a recruitment office
9 because we haven't hired in so long, so we're trying to
10 roll that out real quick. So if you could just spread
11 the word.

12 That was my famous plug.

13 Another thing that's in our priority this year is
14 virtual currency. So that was very timely. I agree
15 with all the recommendations there.

16 And I also agree that we probably do need to talk
17 about -- we are all doing something, and we're doing
18 the John Doe summonses, and we're looking at the
19 results and all of that. But I think that we do need
20 to probably connect maybe a bit more than we are with
21 LB&I and CI, and doing that and getting more guidance
22 out and everything.

1 But in SB/SE, some of the priorities that we're
2 working on also is the non-filer strategy. That will
3 be big this year. We're really trying to work on some
4 areas to decrease the tax gap. You know, we keep
5 talking about it, and every year it's about \$458
6 billion. So we're looking at different ways to
7 decrease that, and we're actually going to be sharing a
8 report with Secretary Mnuchin in the next few weeks on
9 some ideas for that. So that's really impacting SB/SE
10 because I think one of the things that you brought up,
11 Sharyn, was doing some kind of doc matching for virtual
12 currency. We're trying to look into doing doc matching
13 because as long as we have that, people are usually
14 compliant. It's that percentage that we can't do that,
15 the matching and everything.

16 I think that's probably all I have to say for now.
17 I'd better give you some time. But thank you so much.

18 MR. ALITO: Good afternoon. David Alito, the
19 Deputy Commissioner for Wage and Investment. And thank
20 you all again. I want to personally thank, of course,
21 our subgroup, Phyllis, Sharyn, Charles, and Pat for the
22 wonderful recommendations.

1 As I'll touch on, as I've heard many of the
2 recommendations, a lot of those also have a touch point
3 in ways that we're dealing with some of the digital
4 services, so really absolutely appreciate them.

5 I also want to thank you all personally, too. I
6 know you've heard this, but this is volunteer time on
7 your part. You come up with the time you spend, and
8 then working with our subgroups and working with all of
9 us is extremely important to us because we're all
10 focused on the customer experience. Whether that's the
11 practitioner side, whether it's the taxpayer side, it's
12 how do we continue to improve that experience. So
13 these recommendations are valuable.

14 What I also like about the recommendations as we
15 go through them is they're a good balance for us, and
16 by that I mean we, of course, try to look for an IT
17 solution and a digital solution because that has the
18 widest breadth that sometimes causes things to move a
19 lot faster, but it also is subject to budget. So at
20 the same time you're offering us some IT solutions,
21 which we will definitely look at how we pursue, you
22 also offer us a nice balance of, given our current

1 environment and that we don't have a digital solution,
2 what are some of the things that we can do, whether
3 it's outreach and different things that we can get
4 started on in the shorter run. So I absolutely
5 appreciate those.

6 As you mentioned with IT, one thing we've learned
7 too is that when we put it out there, the taxpayer has
8 to like to use it. I think of "Where's My Refund?"
9 It's been around for a long time, but we used to have I
10 think it was a cycle chart, some horrible thing that we
11 had for years that was very confusing.

12 MS. CAUSEY: Yes, the refund cycle chart, yes.

13 MR. ALITO: When we came up with the tracker, what
14 we found is taxpayers like it. It was simple. They
15 got into it. But an interesting dynamic there is we
16 have the customer service representatives, and we get
17 millions of refund calls, or used to get millions of
18 refund calls. Of course, the first year the tracker
19 came out, people flocked to it and used it, and then
20 they turned around and called us --

21 [Laughter.]

22 MR. ALITO: -- and said, is that accurate? Is

1 that information accurate?

2 [Laughter.]

3 MR. ALITO: But what we saw is it's a slow ship to
4 turn. Customer culture change is always a little bit
5 slow. But what we saw is it trickled off a lot more
6 the next year, it trickled off even more the second
7 year, the third year. So they liked it, they used it,
8 and now, of course, with the accuracy being we told you
9 it's going to come on this day, half the time we'd get
10 comments back, "Well, it came before you said." So we
11 kind of use that as our high water mark of ease of
12 usage, because if they didn't like it -- I mean, you're
13 consumers. If you had to go buy something from a
14 company and it was so painful, my thought is, "I'm not
15 doing it here, I'll just go buy it elsewhere. There are
16 other alternatives." So we know it has to be ease of
17 use.

18 You touched on a few things. So we had asked the
19 committees to look at Free File, the use of Lockbox,
20 and third-party authentication. Dennis, Kathy, and the
21 rest of the team, I know that Free File got elevated to
22 a larger group. We absolutely appreciate the feedback

1 we heard there. As Kathy mentioned, the Free File MOU
2 was signed in November. We absolutely still hear your
3 comments. It is something we're going to look at, to
4 answer your question. Yes, we will continue to look at
5 those recommendations both on the MOU side as well as
6 the process side, because it's a strong program. A
7 little over 2.5 million taxpayers use it, and these are
8 taxpayers that it offers them a free service, and we
9 want to continue to look at how can we continue to make
10 it robust.

11 Some of the things I hope you're happy to see is
12 some of the things in the MOU about removing the links
13 to non-Free File products, the return of the taxpayer
14 to the page if they don't qualify, getting them back in
15 the Free File environment, bringing that to their first
16 option when they go on a private site, to bringing them
17 back to Free File first, and ensuring that they know
18 there's a free option.

19 We absolutely appreciate the recommendations
20 around increasing the visibility, looking at the
21 traffic. We've seen an uptick, but do people not
22 understand, looking at your recommendations, and how

1 can we make sure that it's out there, and how can we
2 use it.

3 The taxpayer experience is really very interesting
4 about something as simple as how do we survey our
5 folks, how do we know what the taxpayer experiences
6 are, what are the options there. So that, to us, was
7 really something to take a look at, looking at the
8 viability of the program. So we absolutely appreciate
9 it.

10 We hear your concerns about the timing of that,
11 and we'll take heed to those and appreciate your
12 feedback on that.

13 On the Lockbox, I had some side conversations.
14 You know, it's interesting, because when you look at
15 volume, it's not enormous, but the dollars are big. It
16 goes back to one of those things of how do we
17 communicate. Sometimes, of course, we do it to
18 ourselves. We see an uptick in electronic means, but
19 it's also a little bit slower. Someone gave me an
20 example this morning of you would like to see taxpayers
21 go the easiest route, but then you send them a piece of
22 paper where the first option is to tear off the bottom

1 and send you a check. I was, like, okay, good point.

2 So we kind of look at how we place things, where
3 we do it. We know that for most taxpayers, and what we
4 learned from Michele, they look to a search engine
5 first. They don't come -- you know, IRS sometimes,
6 we'll look at our website and go, "Well, we think it
7 follows a nice pattern, but a consumer doesn't do
8 that." How do they get their information? How can we
9 put it out there?

10 So we're really looking at how can we build on
11 that collaboration. I like the thoughts about looking
12 with the PDS companies. What's our interaction with
13 them now? How can we build on that? Of course, we
14 have a lot of discussions with the software industry,
15 the preparers, the transmitters, and are there
16 opportunities there to do it?

17 It is an easier option. We've even seen in our
18 own culture with the phone environment where it used to
19 be we would try to touch each taxpayer, go to the next
20 thing, where we've kind of paused them in the last
21 couple of years and said let's really try to spend a
22 little extra time educating them.

1 A good example, even our walk-in offices, when a
2 taxpayer -- some religiously like to come in with
3 checks every month, and that's okay, we're happy to get
4 those checks. But in the last few years we really kind
5 of paused folks and said, "Well, you might not have to
6 make this visit." Just like you don't have to go to
7 the DMV to get your tag, you can go do this, and we do
8 see folks who say, "Oh, I didn't know that," and take
9 the time to walk them through there and say, "How do
10 you do it?" Or even on the phone, when people call for
11 appointments we'll try to - "Oh, what do you want to
12 do? Do you want to make a payment? Well, do you know
13 you can go on IRS Direct Pay? Do you know you can do
14 this? Do you know you can make an ES payment that
15 way?"

16 It's a slower ship to turn, but it's those kinds
17 of inroads, along with your recommendations for how do
18 we keep bringing that awareness to it, bringing that
19 identity to it, which is really important to us.

20 On third-party authentication, you hit it on the
21 head. Absolutely our first, primary thing is do we
22 feel comfortable knowing that the person we're speaking

1 to is the person we're speaking to -- is the person who
2 they say they are -- regardless of who they represent,
3 who they work with and so forth. But it's who is the
4 person talking to us.

5 Appreciate the thoughts about IVES. I know you
6 had some folks from the Customer Account Services
7 working with Ben and Antonio's team and looking at that
8 too, because we do continue to look at how do we build
9 that authentication and look at the third parties. We
10 like the thoughts about the tax pro account. It is
11 something we want to continue to look to, and what's
12 the ability to get there. But as we looked at some of
13 the digital entry, I was very interested in the IRS To
14 Go, the desktop solution, sending the access code. You
15 mentioned the tokens, things like that, that we can do,
16 because we do work with you all quite often. How do we
17 get to the known person, create that channel? How do we
18 then get the access to the information you need?

19 Transcripts, I know, are always a hot topic, to
20 get that information, because we want to prepare you
21 not only on the collection audit side, but on the
22 customer service side you need to know what is the

1 taxpayer's situation in order to be able to address it.

2 The quicker we're able to get you that information,
3 because, of course, working with you all, it does make
4 it a quicker process. You know the right questions to
5 ask, you're helping the taxpayer navigate the process.

6 So, I agree with Lisa, absolutely pleased by the
7 recommendations. When we talk to our teams, I always
8 get great feedback on the things you bring up, the
9 ideas you bring up, the push-back on different things,
10 which is tremendously important to us because we need
11 that stakeholder thought, we need that stakeholder
12 involvement.

13 We work with our teams. We take these reports
14 back. Of course, we're already working with those
15 teams when we go back. We socialize and we look and we
16 work with our partners on the SB/SE side of the house.

17 If Doug and LB&I are creating a new product, my folks
18 are the ones that print it. So we all have to work in
19 tandem as we go, so we keep our ears out for solutions
20 that each other is doing.

21 I just want to close by saying we absolutely value
22 the partnership. We appreciate these recommendations.

1 The time that you spend on this full report -- and we
2 go through it, all the items in here. And, as I said,
3 knowing that this time is volunteer time on your
4 behalf, that you all have walks of life, you have
5 things that you're trying to do, but that commitment to
6 helping us and helping yourselves build that customer
7 experience is really important to us. So, thank you
8 all very much.

9 MR. VENTRY: Thank you, Lisa. Thank you, David.
10 Thank you, SB/SE and W&I Subgroup. You obviously had
11 the most work of all of us this year.

12 [Laughter.]

13 MR. VENTRY: So, thank you for all your hard work.

14 The next subgroup is the Office of Professional
15 Responsibility. Director Whitlock is unable to be with
16 us today, so receiving the report is going to be Mel
17 Hardy, the Director of National Public Liaison.

18 OFFICE OF PROFESSIONAL RESPONSIBILITY SUBGROUP REPORT

19 MR. HARDY: A programming note. The role of Steve
20 Whitlock will be played by Mel Hardy.

21 [Laughter.]

22 MR. KAY: Thank you, Steve.

1 He's trying to be Steve there.

2 [Laughter.]

3 MR. KAY: One other point. This will be the last
4 OPR Subgroup report. I don't think there's going to be
5 an OPR Subgroup next year, although that's still in
6 process. That's not one of the four BODs, so it's
7 probably not going to be there.

8 But I'd like to thank you, Steve, for your help.
9 You were there at all of our meetings. You provided
10 input and timely responses.

11 Brian, we want to thank you. You're always able
12 to find, with a few clicks on your computer, anything
13 since March 1st of 1913 until today that the Service
14 has done, said, or thought about that would help us get
15 to whatever we needed to get to.

16 [Laughter.]

17 MR. KAY: We discussed one of the topics this
18 morning, that being correcting and updating Circular
19 230, which is vitally important.

20 The other two topics that Jeff and I are going to
21 talk about, I'll start off with the first one, which is
22 publicizing or publishing OPR actions. To date, as we

1 speak, OPR takes a lot of actions, and some of them
2 become higher, as in suspension or censure or
3 disbarment, and those become public. We will know at
4 least some of the details, but not a lot of the
5 details; but we'll know that something is out there,
6 and we can provide statistical information. So we'll
7 know that there were X number of actions filed and
8 matters that were resolved, but we don't really know
9 much else.

10 We feel that, both for practitioners and for
11 taxpayers, it's good to know what type of activity is
12 bad and what the repercussions are for that specific
13 type of activity. In fact, probably about two months
14 ago, an announcement in 2018 was out, and that's the
15 announcement where the Service reached agreement with -
16 - I think it was like three practitioners to be able to
17 provide some details about their case, and that got a
18 lot of publicity. I mean, it was in all the tax
19 sections, there were discussions at the ABA Tax Section
20 about it. It got a lot of very positive feedback
21 because we knew more about it.

22 But what happens now is we feel that OPR can issue

1 sanitized statements of examples. The Service feels,
2 and they're probably right, that a practitioner's
3 identification information is taxpayer return
4 information that is also covered by 6103. But when
5 Congress added what's called the Haskell Amendment to
6 6103 -- the Haskell Amendment, I'm sure most of you
7 guys know, but just to refresh your recollection, the
8 Haskell Amendment to 6103 is the amendment that allows
9 the Service to provide highly sanitized, non-tax return
10 information so that they continue to issue statistical
11 data and compilations of data, which is very helpful as
12 it is -- that's how they can tell you that we had 513
13 cases last year that were resolved on various matters.

14 But we feel that they're looking at purely the
15 statistical studies part, because when we brought this
16 up, we've had a lot of good discussions with Steve, who
17 responded to this already, and he indicated that he and
18 counsel's position was that you have to have at least
19 three -- so you can't say that a practitioner didn't
20 file the return. You have to say there's at least
21 three, and I don't know where the number three came
22 from, but three was the number he used. And his

1 example would be there were 50 tax practitioners who
2 did not file their return, and the sanctions were from
3 A to B. We feel that does cover part of the Haskell
4 Amendment, the part that deals with statistical
5 studies. But it completely ignores the "or" part, the
6 "or compilations."

7 When you look at the definition of a compilation -
8 - I didn't look at every dictionary, but Google is
9 great for online quotes.

10 [Laughter.]

11 MR. KAY: So I was able to get the definition of
12 "compilation" from Google, five or six different
13 dictionary definitions, and it's all talking about
14 grouping. So, for example, the best example I can
15 give, because it's always better to understand when you
16 have examples, is fairy tales. A compilation is a
17 group of fairy tales. So you have Little Red Riding
18 Hood, you have Three Bears, and The Three Little Pigs.
19 A compilation would be you have all those three
20 stories, one following another. I've got four
21 grandchildren. That's why I picked that as an example,
22 because it was currently on my mind when I was thinking

1 about this.

2 But the statistical study part of it, which is
3 what the Service does good right now, would say that
4 there were five furry but mean animals that all
5 violated certain norms, and here are the norms that
6 they violated. But the compilation would be you would
7 have the entire story of Little Red Riding Hood. You
8 wouldn't know who Little Red Riding Hood was. You
9 wouldn't know where he or she lived or what type of
10 practitioner Little Red Riding Hood was. You would
11 just know that he or she had a grandparent, mother or
12 father, that had issues.

13 We really think that it would be much more helpful
14 to have the details. Again, you don't need to know if
15 it's a CPA or an attorney. You don't need to know if
16 they're in Washington or Florida. It would be very
17 helpful, and the example that we provided is that if
18 there was a failure to file by someone for X number of
19 years and they cooperated, here's what the agreed-upon
20 result was. If they didn't cooperate and they didn't
21 file for X number of years, here's what it was.

22 So it's not taxpayer identification information.

1 It doesn't identify anyone. It clearly comes within
2 the Haskell Amendment's guidelines, and yet it would be
3 much more helpful than just knowing that there were
4 five furry mean animals. Pigs weren't the bad guys,
5 though. There were five furry mean animals that
6 violated the rules, and there were three bears and two
7 wolves.

8 This might be why this is our last report.

9 [Laughter.]

10 MR. SCHNEIDER: Well, I don't know if I should say
11 thank you, Shelly, or follow it up with the Three
12 Bears.

13 When we decided to do cyber security, I readily
14 took it on because Florida, as some of you may or may
15 not know, is probably one of the highest states for
16 identity theft. It still is, and it's not going to
17 change. Being from South Florida, I do identity theft
18 consulting all the time, much to my chagrin.

19 So we started thinking about what do we need for
20 OPR to combat that. Now, we're not in the business of
21 protecting the Internet and the World Wide Web, but
22 what can we do? One of the things that we can do is

1 require tax practitioners to become more diligent in
2 what they're doing.

3 For example, there is one note from the Center for
4 Strategic and International Studies that came out with
5 a number of \$449 billion in losses related to identity
6 theft, and it's not going away anytime soon. We all
7 hear the stories about Target, and now Facebook got
8 targeted. But one of the biggest processes is tax
9 practitioners. And why tax practitioners? Because who
10 has all of the data for taxpayers? Social Security
11 numbers, Federal I.D. numbers, ITINs, they have
12 everything there. So what can we do about that?

13 The Gramm-Leach-Bliley Act came out and put
14 together something that's called the Safeguards Rules,
15 and there are certain things that we're talking about.

16 I wrote in my report -- I'm just going to read it --
17 that it says: denoting at least one employee to manage
18 the safeguards; constructing a thorough risk analysis
19 on each department handling nonpublic information;
20 develop, monitor, and test the program to secure that
21 information; and to change the safeguards as needed
22 with the changes in how information is collected.

1 So we took that position that it's important that
2 tax practitioners be responsible for the information
3 that they're obtaining. Whether it be through a
4 software program, through their own documents, through
5 faxes they send out, their systems can be vulnerable.
6 So we need to make sure that tax practitioners are held
7 responsible for the security of that data.

8 We're not saying how specifically. I'm not saying
9 that -- in Circular 230, we have to know what we're
10 doing, to paraphrase. But I'm not saying that we as
11 tax practitioners now have to be computer and IT
12 programmers. That's not going to happen. But they
13 need to have somebody, be it in their firm or a
14 consultant outside, to protect the data.

15 Many organizations, including the ABA, have these
16 rules. Thirty-one states have put together rules about
17 securing data. So we feel that tax practitioners, be
18 it attorneys, enrolled agents, CPAs, need to also be
19 secure. The IRS already knows this. They already put
20 together the Security Summit 101, put together
21 guidelines. They have already updated Publication 4557
22 about securing taxpayer information, what's called

1 "Safeguarding Taxpayer Information." It's important.
2 It's already known out there, but now the tax
3 practitioners need to know that if they're not doing
4 their job, they should be held responsible in some way.

5 So basically, the committee recommends that
6 Circular 230 include affirmation and disciplinary
7 language for practitioners and their firms to meet a
8 standard of competency related to technology. It's
9 there for everything else, so why not this?

10 MR. VENTRY: Thank you, OPR; and thank you, Mel,
11 for serving in Steve's capacity.

12 Our last subgroup is LB&I, and we are pleased to
13 have Commissioner O'Donnell with us. Take it away,
14 Shawn.

15 LARGE BUSINESS AND INTERNATIONAL SUBGROUP REPORT

16 MR. O'BRIEN: Great. Thank you, Dennis.

17 We're here today with the two issues, one of which
18 we covered this morning, which we were asked to provide
19 recommendations on how to increase the quality of
20 taxpayers' transfer pricing documentation, which Diana
21 did a great job of summarizing the issue and our
22 recommendations, so we're not going to repeat that

1 issue.

2 The second issue is how can LB&I use the new
3 country-by-country reports in its risk assessment of
4 taxpayers, and we did provide some recommendations,
5 although somewhat brief. But Stuart Hurwitz is going
6 to present that issue to the group.

7 MR. HURWITZ: LB&I asked the LB&I subgroup to
8 review the utility of the country-by-country reports
9 for out-bound risk assessment. We believe the country-
10 by-country reports, on a new Form 8975, provide
11 additional and very important information regarding a
12 multinational enterprise's business activities than is
13 currently required to be reported on Forms 5471, 5472,
14 and 8858. And when used with the information documented
15 on those forms, it makes such reporting more useful,
16 with a great deal of more specificity and clarity, thus
17 making risk assessment more efficient.

18 For instance, country-by-country reports inform
19 the Service for each of the multinational enterprises
20 that file the form of the number of employees per
21 country or tax jurisdiction's taxes they pay, anomalies
22 from previously reported tax returns and reports, and

1 whether the results in a jurisdiction deviate from
2 potential industry comparable and market trends. This
3 reporting provides new and comprehensive information
4 that would otherwise have to be secured after
5 committing to a lengthy and expensive audit, thereby
6 defeating the concept of early risk assessment.

7 It seems to be a more useful exercise to design
8 algorithms with existing databases and the specific
9 information provided with the country-by-country
10 reports than drafting algorithms using only the current
11 general information secured from those forms now being
12 used to assess risk.

13 Chapter 4 of the Handbook on Effective Tax Risk
14 Assessment, which the IRS helped to conceive,
15 identifies very clearly the benefits of using the
16 country-by-country reports to enhance risk assessment.
17 Frankly, it's a roadmap to the effective use of the
18 country-by-country reports to assess risk.

19 As an aside, and this is an unsolicited comment,
20 we suggest that the Service consider requiring
21 multinational enterprises not participating in an
22 advance pricing agreement to nonetheless provide an

1 annual report, as required by an advance pricing
2 agreement. This could be a suitable addition to the
3 information reported on the forms and the country-by-
4 country reports to assess risk.

5 Thank you.

6 MR. O'DONNELL: All right. Thank you, subgroup.
7 Shawn, Diana, Stuart and Dave, I really have
8 appreciated working with you and Sandy this year. I
9 think we made a great deal of progress. It was a very
10 collaborative effort to get to where we got to.

11 I also want to thank the three of you who are
12 rolling off of the subgroup this year. Thank you all
13 for your service to LB&I. It's meant a great deal to
14 us, and I think we made a lot of good progress.

15 So the recommendations, especially in the earlier
16 discussion that Diana went through, are very important.
17 What she doesn't go into a great deal of detail about
18 is the FAQs that they came up with are quite good.
19 They have very good examples of what a taxpayer should
20 be collecting and reporting to help us better
21 understand what they've done, which will enable us
22 hopefully to deselect, and we use that word a lot,

1 which is to knock it into an examination of a taxpayer.
2 So to the extent that we can avoid that, we save
3 everybody time and effort.

4 Transfer pricing consumes a lot of our technician
5 time, and we're looking for whatever we can do to not
6 get into an audit of a taxpayer that has complied and
7 only focus on those where we think that there is enough
8 risk to warrant a further look. An important part of
9 what they pointed out, and I'll draw attention to it in
10 my remarks here, is that to the extent that we do need
11 to conduct an audit, we feel like we can have a
12 streamlined examination because of the additional
13 documents that could be made available if taxpayers
14 followed FAQs.

15 So we fully agree with the recommendations in the
16 report. We will work to get these FAQs out. We may
17 adjust them a little bit, but the wording was something
18 we worked with the subgroup on, so I think it shouldn't
19 take too much effort to get there.

20 But again, I want to thank you very much. The
21 focus on improving the relationship between the
22 administration, tax administrator, representatives,

1 taxpayers, is something we take very seriously. We're
2 working very hard to improve our oversight of transfer
3 pricing issues. We did issue the five transfer pricing
4 directives at the beginning of this year, and we
5 continue to watch how that's playing out, and we'll
6 make further adjustments to our approach as we go
7 forward.

8 But really, thank you for the work, for the
9 effort, for the substantial contribution to us going
10 forward, and I look forward to continuing to work with
11 the subgroup as it is newly constituted. So, thank you
12 all very much.

13 CLOSING REMARKS

14 MR. VENTRY: Thank you very much.

15 So, we're getting close to wrapping up here.

16 Final remarks, closing remarks, first mine and
17 then Kathy's, and then Mel's.

18 What we haven't done yet is thank the National
19 Public Liaison and thank the communications team. This
20 just doesn't happen without you guys, and your
21 willingness to engage us at the very highest level is
22 very much appreciated.

1 We also haven't said thank you to two of the
2 people who are the rubber-meets-the-road kind of folks,
3 John Lipold and Anna Millikan. So thank you to the two
4 of you, and thank you to the rest of your team.

5 We've noted before and we noted in the report, and
6 I think it's worth saying that we were grateful to
7 Acting Commissioner Kautter as well for his guidance.
8 He brought the leadership team in towards the end of
9 the year and reminded us that these bodies work best
10 when they engage directly with the agency, when they're
11 independent of the agency, and when they bring a
12 critical eye. That was much appreciated.

13 Personally, my final remarks are to my fellow
14 IRSAC members who just did yeopersons work throughout
15 the year. As you guys have already acknowledged, this
16 is time away. It is volunteer time. It's five times a
17 year, two-and-a-half to three-and-a-half days. That's
18 a big ask. That's a lot of time away from the family.
19 That's a lot of time away from your primary day job.
20 And yet your commitment to tax administration is
21 incredibly appreciated by folks like all of you. I
22 mean, we are working with folks whose lives are tax

1 administration, and I'd like to think that we're making
2 progress on this. So, thank you to my team.

3 MS. HETTICK: Well, thank you, Dennis. Of course,
4 I want to reiterate the thanks to the NPL team and
5 Communications and all the IRS. It really has been a
6 great year. It's been a year where we've had some
7 tough issues to tackle, and we've come at it from
8 different perspectives, and we've come to some common
9 ground.

10 I was glad to hear Dennis make reference to Acting
11 Commissioner Kautter when he did remind us very
12 specifically how important it is to be objective and
13 independent from the IRS as the IRSAC team, because
14 that's how we can be most beneficial for the tax
15 administration. So, I appreciate that for sure.

16 I also want to just make one comment as well,
17 Dennis. In the general report this year, we did add
18 the follow-up to the 2017 recommendations. I don't
19 know if you all saw that, but super, super helpful for
20 us to get that information. I know that Anna was
21 instrumental in tracking that down. But that's really
22 essential for the IRSAC team to have. We, of course,

1 would have liked to have had it maybe a little sooner,
2 but perhaps that trend will change. But that's very
3 helpful for us to understand what the status is and
4 where things are on the plates in the different
5 divisions. So we certainly appreciate that and look
6 forward to the 2018 follow-up.

7 And then there's Dennis. I would like to
8 personally thank Dennis. He has done a tremendous job
9 this year and invested an enormous amount of time and
10 energy into every issue, not just the specific issues
11 that were on his plate. Dennis is very, very well
12 spoken, well written. He will be hard shoes to fill
13 for me, but I have learned a lot just watching and
14 observing, and Dennis is a great leader.

15 I mentioned this last night, and I'll say it again
16 for the benefit of the entire group. Dennis just has
17 impeccable integrity. The truthfulness and honesty in
18 which he functions and works is admirable, and I hope
19 to keep that trend, most certainly.

20 And then finally, I do want to say that this
21 really is an exciting time for IRSAC. I'm really
22 looking forward to next year. It's going to just

1 present a whole new opportunity for us to work
2 together. It's not going to feel the same, it's not
3 going to look the same, which is what is great about
4 it. It's a change. It's bringing in more people and
5 getting behind issues and hopefully elevating the
6 really important issues in a consistent manner where
7 there's one advisory group able to do that.

8 So I'm really looking forward to the opportunity
9 to serve next year, and hopefully we'll be in touch
10 with all of you returning members before January so we
11 kind of have a heads-up on what we're all going to
12 expect.

13 With that, I just thank you again. And, Dennis,
14 thank you for your outstanding service.

15 [Applause.]

16 MR. HARDY: So, before I make my final remarks, I
17 did take very copious notes, Shelly, during your
18 presentation earlier, and also before. I will engage
19 with Steve and let him know just what you all had to
20 say. I think it was stellar. On behalf of Steve, I
21 thank you for all of the energy that the OPR group put
22 into the report, very thoughtful, very engaging, and it

1 gives us something to really think about. So I'll be
2 sure to have a conversation with him on that.

3 I thank all of the IRSAC members for your
4 tremendous amount of energy and engagement. I've told
5 people both internally and externally that these
6 advisory groups are such a crucial part of what we do
7 in the IRS. Knowing about things like billable hours
8 and all of that, we really could not pay for the type
9 of talent and energy that all of you put into this. So
10 on behalf of NPL, C&L, I couldn't say it better than
11 Commissioner Rettig did, but we thank you, and I just
12 want to take this opportunity to thank all of my team,
13 John, Anna, everyone else, for all the hard work.

14 So with that, as Terry mentioned and Kathy said,
15 we're looking forward to the new IRSAC, to a new
16 chapter in the advisory committee. We have obviously a
17 great champion in the new commissioner. I've heard him
18 speak three or four times already, and he consistently
19 mentions the fact that he was an IRSAC chair. He holds
20 that with a great sense of pride. I think moving
21 forward, we will be in good hands under his leadership.

22 With that, thank you all for your time, your

1 commitment, and for being here. Safe travels home.

2 [Applause.]

3 [Whereupon, at 11:51 a.m., the meeting was
4 concluded.]

REPORTER'S CERTIFICATE

This is to certify that the attached proceedings
Before:

INTERNAL REVENUE SERVICE

In the Matter of:

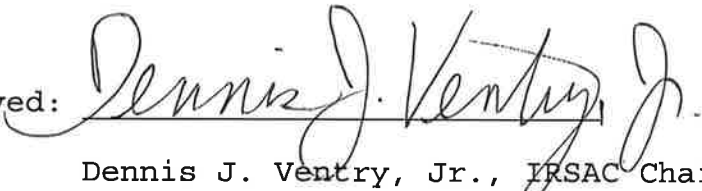

Internal Revenue Service Advisory Council (IRSAC)

Where held as herein appears and that this is the
original transcript thereof for the file of the Agency,
Department, Commission, Board, Administrative Law Judge
or the Institute.

Further, I am neither related to or counsel for
any of the party of the above proceeding.

Nathanael Riveness
Official Reporter

Date: November 15, 2018

Approved: 
Dennis J. Ventry, Jr., IRSAC Chair

Dated: 1/25/19
