	Yes/No	Access Level
IRS Employees:	<u>Yes</u>	
Users		<u>Read Write</u>
Managers		<u>Read Write</u>
System Administrators		<u>Read Only</u>

Other:	<u>No</u>	<u></u>

22a. If the contractors or contractor employees act as System Administrators or have "Root Access", does that person hold a properly adjudicated "High Level" background investigation?

23. How is access to the PII determined and by whom?

The access is determined by a OL5081 submitted by the requester through the business and the System Administrator.

24. How will each data element of SBU/PII be verified for accuracy, timeliness, and completeness?

This is done by the business when they do their annual review.

If **No**, how long are you proposing to retain the records? Please note, if you answered no, you must contact the IRS Records and Information Management Program to initiate records retention scheduling before you dispose of any records in this system.

The Electronic Tax Court System is unclassified. A request for records disposition authority for the associated records will be drafted with the assistance of the IRS Records and Information Management (RIM) Program Office. When approved by the National Archives and Records Administration (NARA), disposition instructions for database inputs, system data, outputs and system documentation will be published in the appropriate Records Control Schedule Document.

26. Describe how the PII data in this system is secured, including appropriate administrative and technical controls utilized.

Documentum's security model allows projects to define groups, roles and access controls with privileges for accessing content. The users will have to submit an OL5081 in order to grant access to the system. All users have been restricted for delete access to this system. Only CC:PA:LPD Managers and Technical Support staffs have DELETE permissions, and only for documents being processed in the Cabinets/PA/DR/WIP/ sub-folders. The data is protected by using encryption backup daily. The CC-1 SSP provides the technical controls implemented at the infrastructure level.

26a. Next, explain how the data is protected in the system at rest, in flight, or in transition.

Documentum security protects the confidentiality and integrity of information at rest through physical and logical security measures. The server is in the secure area with a lock and it's also required PIV access level to get thru. There is no external access for this system. Active directory domain permissions provide logical security protection mechanisms. Encryption is used for backups that are shipped out to a remote storage location.

27. Has a risk assessment (e.g., SA&A) been conducted on the system to ensure that appropriate security controls have been identified and implemented to protect against known risks to the confidentiality, integrity and availability of the PII? No

28. Describe the monitoring/evaluating activities undertaken on a regular basis to ensure that controls continue to work properly in safeguarding the PII.

Testing is conducted annually to ensure the selected controls are functioning correctly. When testing of a security control reveals that the control is not functioning as expected, the control deficiency is documented in the system's plan of action and milestones (POA&M). All test results are documented and reported to Business Unit (BU) Security Project Management Office (PMO). The security state of the application is then reported to the appropriate organizational officials annually as defined in Treasury Directives Policy (TDP) 85-01.

29. Is testing performed, in accordance with Internal Revenue Manual (IRM) 10.8.8 - *IT Security, Live Data Protection Policy*? Yes
