Dear _____ :

This letter is to inform you that your request to use substitute mortality tables for making computations under section 430 of the Internal Revenue Code ("Code") for the above Plan 1 has been granted with respect to the populations specified in this letter. This ruling is effective for a period of up to 10 plan years beginning with the plan years commencing January 1, 2026 for Plan 1. Your request has been granted in accordance with section 430(h)(3) of the Code and section 303(h)(3) of the Employee Retirement Income Security Act of 1974 ("ERISA").

This approval applies to the following specific populations Plan 1:

- Combined data for male and female, annuitant and non-annuitant tables

This request is made in accordance with section 430(h)(3)(C) of the Code, section 303(h)(3) of the ERISA, section 1.430(h)(3)-2 of the Treasury Regulations ("Regulations"), and Revenue Procedure 2024-32.

According to information received, Plan 7 merged completely into Plan 1, effective December 31, 2024¹. Prior to the merger, Plan 1 and Plan 7 each had been approved to use separate plan specific substitute mortality tables on October 30, 2018, for up to 10-plan plan years commencing January 1, 2018. To reflect this merger, Taxpayer requested approval from the Internal Revenue Service ("Service") to continue to use the gender-specific substitute mortality tables approved only for Plan 1, post-merger. On November 14, 2024, the Service granted approval for Plan 1 to continue using its previously approved tables, for up to 3-plan years commencing January 1, 2025. However, the Service also noted that section 12.2 of Revenue Procedure 2024-32 provides that if a substitute mortality table was first approved for use for a plan year that began before January 1, 2025, and the number of individuals covered by the substitute mortality table is less than 80 percent or more than 120 percent of the average number of individuals in that population over the 12-month periods covered by the experience study, then the substitute mortality table may not be used for a plan year beginning on or after January 1, 2026. Taxpayer's current submission for Plan 1 has been made pursuant to this requirement.

Taxpayer represents that there are no other plans subject to section 430 of the Code maintained by the Taxpayer or a member of the controlled group that was spun off from another plan within the five-year period preceding the date of this request. Taxpayer also represents that it does not sponsor a multiple employer plan.

Applicable Law

Section 430(h)(3)(A) of the Code states, in relevant part, that the Secretary shall by regulation prescribe mortality tables to be used in determining any present value of making any computation under section 430 of the Code.

¹ While not germane to this ruling, Plan 6 merged completely into Plan 2 on December 31, 2023.

Section 430(h)(3)(C) of the Code states, that upon request by the plan sponsor and approval by the Secretary, a mortality table shall be used in determining any present value or making any computation under section 430 of the Code during the period of consecutive plan years (not to exceed 10) specified in the request.

Section 430(h)(3)(C)(ii) of the Code states, in relevant part, a substitute mortality table shall cease to be in effect as of the earliest of:

- (1) the date on which there is a significant change in the participants in the plan by reason of a plan spinoff or merger or otherwise, or
- (2) the date on which the plan actuary determines that such substitute mortality table does not meet the following requirements of Section 430(h)(3)(C)(iii) of the Code.

Section 430(h)(3)(C)(iii) of the Code states, in relevant part, that a mortality table meets the requirements of this section if:

- (I) there is a sufficient number of plan participants, and the pension plans have been maintained for a sufficient period of time, to have credible information necessary, and
- (II) such substitute mortality table reflects the actual experience of the pension plans maintained by the sponsor and projected trends in general mortality experience.

Section 1.430(h)(3)-2(c)(3) of the Regulations states, in relevant part, that the base year for the base substitute mortality table is the calendar year that contains the day before the midpoint of the experience study period. Additionally, a plan's substitute mortality tables must be generational mortality tables.

Section 1.430(h)(3)-2(c)(6)(ii) of the Regulations states, in relevant part, that a plan's substitute mortality tables must not be used beginning with the earliest of:

- (A) For a plan using a substitute mortality table for only one gender because of a lack of credible mortality information with respect to the other gender, the first plan year for which there is credible mortality information with respect to the gender that had lacked credible mortality information (unless an approved substitute mortality table is used for that gender),
- (B) The first plan year in which the plan fails to satisfy the requirement that other plans and populations in the controlled group must also use substitute mortality tables unless it can be demonstrated that they do not have credible mortality information (taking into account the transition period for newly-affiliated plans),
- (C) The second plan year following the plan year for which there is a significant change in individuals covered by the plan as described in Section 1.430(h)(3)-2(c)(6)(iii) of the Regulations,
- (D) The first plan year following the plan year for which a substitute mortality table used for a plan population is no longer accurately predictive of future mortality of that

population, as determined by the Commissioner or as certified by the plan's actuary to the satisfaction of the Commissioner, or

- (E) The date specified in guidance published in the Internal Revenue Bulletin in conjunction with a replacement of mortality tables specified under section 430(h)(3)(A) of the Code and section 1.430(h)(3)-1 of the Regulations, other than annual updates to the static mortality tables issued as noted in section 1.430(h)(3)-1(c)(1)(iv) of the Regulations or changes to the mortality improvement rates under section 1.430(h)(3)-1(b)(1)(iii) of the Regulations.

Section 1.430(h)(3)-2(c)(6)(iii) of the Regulations states, in relevant part, a significant change in the individuals covered by a substitute mortality table for a plan year occurs if the number of individuals covered by the substitute mortality table for the plan year is less than 80% or more than 120% of either the average number of individuals in that population over the years covered by the experience study on which the substitute mortality tables are based, or the number of individuals covered by the substitute mortality table in a plan year for which a certification (described below) was made on account of a prior change in coverage. However, a change in coverage is not treated as significant if the plan's actuary certifies in writing to the satisfaction of the Commissioner that the substitute mortality tables used for the population continue to be accurately predictive of future mortality of that population (taking into account the effect of the change in the population).

Section 1.430(h)(3)-2(d)(2) of the Regulations states, in relevant part, that the experience study period must consist of 2, 3, 4, or 5 consecutive 12-month periods, and must be the same period for all populations.² The last day of the experience study period must be less than 3 years before the first day of the first plan year for which the substitute mortality tables are to apply. However, if the plan sponsor submits a request for approval to use of substitute mortality tables more than 1 year (and less than 2 years) before the first day of the first plan year for which the substitute mortality tables are to apply, then the experience study is not treated as failing to satisfy the rule in section 1.430(h)(3)-2(d)(2)(ii)(A) of the Regulations if the last day of the final year reflected in the experience data is less than 2 years before the date of submission.

Section 1.430(h)(3)-2(d)(4) of the Regulations states, in relevant part, that the base mortality rates are determined by multiplying the mortality rate from the standard mortality table by the mortality ratio. If the simplified rule under section 1.430(h)(3)-2(c)(2)(ii)(B) of the Regulations is used for the population, then the mortality ratio is determined only taking into account people who are at least 50 years old and less than 100 years old, but the mortality ratio is applied to all ages.

Section 1.430(h)(3)-2(d)(4)(iii)(B) of the Regulations require that adjustments be made to the standard mortality table for any 12-month period in the experience study that begins after December 31, 2019 and before January 1, 2023. Such adjustment factors are 15% increases for calendar years 2020 and 2021 and a 7.5% increase for calendar year 2022.

² If two or more plans are aggregated and not all of the plans have the same plan year, then the experience study period may be a period that is not a multiple of 12 months provided that four criteria under section 1.430(h)(3)-2(c)(5)(iii) are met.

Section 1.430(h)(3)-2(e)(1) of the Regulations states, in relevant part, that if the actual number of deaths is at least equal to 100 and is less than the full credibility threshold, then the base mortality rates are determined using a partial credibility weighting factor as calculated under section 1.430(h)(3)-2(e)(2).

Facts and Analysis

The substitute mortality tables were developed based on an experience study period from January 1, 2021 through December 31, 2023, with a base year of 2022. This satisfies the requirements under sections 1.430(h)(3)-2(c)(3) and (d)(2) of the Regulations.

The substitute mortality tables were developed by adjusting the applicable standard mortality tables in section 1.430(h)(3)-1(d) of the Regulations with the mortality ratio and credibility weighting factors shown below.

Mortality Ratio and Credibility Weighting Factor Table

	Combined male and female annuitants and nonannuitants
Mortality Ratio	
Credibility Weighting Factor	

These were determined by combining male and female annuitant and nonannuitant experience.

Note that in determining the credibility weighting factors, Taxpayer incorrectly included the adjustments to the standard mortality table for 2020, 2021, and 2022 as described in section 1.430(h)(3)-2(d)(4)(iii)(B) of the Regulations. We recognize that correcting the calculation of the credibility weighting factor for this request for this issue would have an insignificant impact on Taxpayer's proposed base substitute mortality tables and therefore, we have ruled on the Taxpayer's proposed base substitute mortality tables as provided. However, Taxpayer should be aware that other substitute mortality table ruling requests may be denied or required to be corrected if the proposed base substitute mortality tables include this incorrect calculation in the construction of the tables.

Permission is hereby granted to use the substitute mortality rates shown in the table below for Plan 1.

Substitute Mortality Tables
Approved for use beginning with the plan years commencing
January 1, 2026 for Plan 1
Base year 2022

38			78			118		
39			79			119		
40			80			120		

In granting this approval, we have only considered whether the substitute mortality rates were developed in accordance with section 1.430(h)(3)-2 of the Regulations and Revenue Procedure 2024-32. Accordingly, we are not expressing any opinion as to the accuracy or acceptability of any calculations or other material submitted with your request.

The Internal Revenue Service has reviewed the substitute mortality rates and supporting information, and has determined that based on the information submitted, the rates were developed in accordance with section 1.430(h)(3)-2 of the Regulations and Revenue Procedure 2024-32.

The above rates must be applied on a generational basis, as provided in section 1.430(h)(3)-2(c)(3)(i) of the Regulations.

Your attention is called to section 430(h)(3)(C)(ii) of the Code and section 1.430(h)(3)-2(c)(6)(ii) of the Regulations, which describe the circumstances in which the use of the substitute mortality table will terminate before the end of the 10-year period described above. In general, the substitute mortality tables can no longer be used as of the earliest of:

- (1) For a plan using a substitute mortality table for only one gender because of a lack of credible mortality information with respect to the other gender, the first plan year for which there is credible mortality information with respect to the gender that had lacked credible mortality information (unless an approved substitute mortality table is used for that gender),
- (2) The first plan year in which the plan fails to satisfy the requirements of section 1.430(h)(3)-2(c)(1) of the Regulations, regarding the requirement that other plans and populations in the controlled group must also use substitute mortality tables unless it can be demonstrated that they do not have credible mortality information (taking into account the transition period for newly-affiliated plans in section 1.430(h)(3)-2(f)(3) of the Regulations),
- (3) The second plan year following the plan year for which there is a significant change in individuals covered by the plan as described in section 1.430(h)(3)-2(c)(6)(iii) of the Regulations,
- (4) The first plan year following the plan year for which a substitute mortality table used for a plan population is no longer accurately predictive of future mortality of that population, as determined by the Commissioner or as certified by the plan's actuary to the satisfaction of the Commissioner, or
- (5) The date specified in guidance published in the Internal Revenue Bulletin in conjunction with a replacement of mortality tables specified under section 430(h)(3)(A) of the Code and section 1.430(h)(3)-1 of the Regulations, other than annual updates to the static mortality tables issued as noted in section 1.430(h)(3)-1(c)(1)(iv) of the Regulations or changes to the mortality improvement rates under section 1.430(h)(3)-1(b)(1)(iii) of the Regulations.

Section 1.430(h)(3)-2(c)(6)(iii) of the Regulations provides that the use of substitute mortality tables must be discontinued after a significant change in coverage unless the plan's actuary certifies in writing to the satisfaction of the Commissioner that the substitute mortality tables used for the population continue to be accurately predictive of future mortality of the population (taking into account the effect of the change in the population). As noted on page 4 of this letter, a significant change in coverage occurs if the number of individuals covered by the substitute mortality table for a plan year is less than 80 percent or more than 120 percent of either (1) the average number of individuals in that population over the years covered by the experience study on which the substitute mortality table is based, or (2) the number of individuals covered by the substitute mortality table in a plan year for which a certification described in section 1.430(h)(3)-2(c)(6)(iii)(A) of the Regulations was made.

The following information was submitted by Taxpayer to demonstrate stability:

Population	Average Number During Experience Study Period	Number as of 12/31/2024	Percentage Difference
Combined male and female annuitants and nonannuitants			

A certification must be provided each year that it is required under the Regulations, as described above, signed by the enrolled actuary for the plan and stating that the substitute mortality tables continue to be accurately predictive of the expected future mortality for the plan. The certification must also contain a statement that:

- a. The enrolled actuary is current with educational requirements set forth by the Joint Board for the Enrollment of Actuaries as well as any other actuarial designations asserted;
- b. The enrolled actuary was personally involved in the determination that the substitute mortality table is still accurately predictive and provides the actuary's best estimate for the Plan;
- c. In determining that the substitute mortality table is still accurately predictive, the enrolled actuary took into consideration the effect of business combinations, plan mergers or spinoffs and settlements/other risk transfers, and other events that would have similar effects on the relevant populations; and,
- d. The enrolled actuary has the specific knowledge and experience to make the judgements set forth above and attests to these representations.

All required certifications must be provided on or before the date the Form 5500 is filed for each plan year for which the certification is required and must be accompanied by the supporting information relied upon by the enrolled actuary to make that certification. To the extent possible, please also provide the following supporting information:

- (1) The number of actual deaths during the experience study period used to develop the substitute mortality tables and the beginning and ending dates of the experience study period.
- (2) A table showing the number of expected deaths and actual deaths, reported separately as of December 31, 2024 and for each plan year beginning with deaths during the plan year ending December 31, 2024 through the plan year immediately preceding the most recent actuarial valuation, and in total.
- (3) A table similar to the stability demonstration required under section 8.1 of Revenue Procedure 2024-32, showing the average number of participants in the population covered by the substitute mortality table during the experience study period and the number of participants in that population as of the end of each plan year, beginning with December 31, 2024 through the plan year immediately preceding the most recent actuarial valuation, expressed both as a headcount and as a percentage of the average number of participants in the experience study.
- (4) A table showing a comparison of (i) the average ages and (ii) percentage of the population, by the following monthly single life annuity brackets:
 - a. under \$100,
 - b. between \$100 and \$250,
 - c. between \$250 to \$500,
 - d. between \$500 to \$1,000,
 - e. between \$1,000 and \$1,500, and
 - f. \$1,500 and over,

along with the average age and average benefit amount for the population in total. This information should also be provided for the population in the experience study and at the end of each plan year, beginning with the valuation date for the first plan year that the certification is required, through the date immediately preceding the most recent actuarial valuation at the time the information is reported.

- (5) An explanation of any material changes in the population.

This information must be provided to David M. Ziegler, Manager, Actuarial Group 2 (or to another individual designated by the Service) to the following address:

Internal Revenue Service
Attn: Mr. David M. Ziegler
TE/GE: SE:T:EP:RA:T:A2
IR-6213
1111 Constitution Ave. NW
Washington DC 20224-0002

Failure to provide this information by the due date may result in a requirement that the standard mortality tables must be used for purposes of section 430 of the Code, beginning with the earlier of (1) the plan year for which the deadline for providing this information is missed or

(2) the date required for early termination of the use of the substitute mortality tables pursuant to section 1.430(h)(3)-2(c)(6)(ii) of the Regulations.

This ruling is directed only to the taxpayer that requested it. Section 6110(k)(3) of the Code provides that it may not be used or cited by others as precedent.

When filing Form 5500 for the plan years for which the substitute mortality tables are used, please note the information that is required to be attached to Schedule SB (Actuarial Information) in accordance with the instructions to that form.

Each of the plan mergers discussed earlier may require a ruling for a change in funding method, unless it meets the requirements for automatic approval under Revenue Procedure 2017-56. Please refer to Revenue Procedures 2017-57 and 2026-4 for the procedures for obtaining approval from the Service for a change in the funding method if one is required.

This letter ruling may be revoked or modified retroactively if there was a misstatement or omission of controlling facts, the facts at the time of the transaction are materially different from the controlling facts on which the letter ruling was based, or the transaction involves a continuing action or series of actions and the controlling facts change during the course of the transaction.

No opinion is expressed as to the tax treatment of the transaction described herein under the provisions of any other section of either the Code or Regulations which may be applicable thereto, as appropriate.

Pursuant to a Power of Attorney and Declaration of Representative (Form 2848) on file with this office, a copy of this letter ruling is being sent to your authorized representatives. Additionally, a copy of this letter ruling is being sent to the Manager, Classification Group 4 in Houston, Texas.

If you require further assistance in this matter, please contact Mr. (ID#) at () - .

Sincerely,

David M. Ziegler, Manager
Employee Plans Actuarial Group 2
